With increasing quantitative and qualitative demands being placed upon national water resources, improved management practices are vitally needed. In principle, one powerful management tool is systems analysis, wherein mathematical optimizing techniques are employed to effect rational trade-offs between competing demands for water use, but this tool, in turn, rests upon the availability of methodologies for quantifying the benefits (economic value) of each water-use category. That is, systems analysis, before it can be employed, demands a knowledge of the value of irrigation, flood control, municipal water supply, etc.

Little is known of the economic implications of low flow augmentation, one of the important water-use categories. Beginning with the premise that the value of low flow augmentation is measured by sewage treatment costs avoided, the proposed research would construct a mathematical model of a typical river basin and, by simulation, would determine functional responses of sewage treatment levels and low flow augmentation conjunctively utilized to produce given levels of stream water quality. No single, universal answer would be forthcoming; rather, a generalized methodology would be established which other investigators could apply to their specific water pollution control situations.

6.0153, MANAGEMENT OF FLATWOOD SOILS

W.K. ROBERTSON, Univ. of Florida, Agricultural Experiment Sta., Gainesville, Florida 32601

The object of this investigation is to determine crop response from water control, fertilizer and depth of plowing on flatwoods soils.

Description of Work Proposed: An area approximately 4 acres of Ona and Leon fine sand (flatwoods soils) will be cleared, surrounded by a ditch 36 in. deep, and tilled with 4-in. clay tile to drain excess water. A 6-in. well will be used to supply water during periods of dry weather. Experiments will be conducted to measure the effect of controlling the water table at 18, 24 and 30 in. on the growth of crops, permanence of the hardpan, fertility, and physical characteristics of the soil. The effect of deep tillage and placement of fertilizer to depths of 20 in. on the root development and yield of crops will be studied.

6.0154, FAUNAL PRODUCTION

J.H. FINUCANE, U.S. Dept. of Interior, Biological Station, Saint Petersburg - St. Pt. Bc., Florida 33706

This project includes studies of species diversity and quantitative distribution and succession of animals involved in the production of harvestable seafood. It includes fish, crustaceans and molluscs which are produced or developed in the estuary. Abundance and diversity are associated with the physical, chemical and biological environment. The effects of engineering and contamination are studied in relation to estuarine condition and animal distribution and abundance. Methods of increasing consumable products by area and time period are also the responsibility of this project. Life history and larval taxonomy are studied to evaluate the dependence of developing forms on estuarine areas.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0155, PLANKTON ECOLOGY

J.K. MCNULTY, U.S. Dept. of Interior, Biological Station, Saint Petersburg - St. Pt. Bc., Florida 33706

A knowledge of the distribution of plankton in Gulf of Mexico estuaries and offshore areas is vital to both the Red Tide and Estuarine Research Programs at this Station. An examination of plankton succession and associated hydrology is necessary for determining the interaction of *Gymnodinium breve* with other plankters and the detection of factors responsible for triggering blooms. In the Estuarine Program plankters are to be investigated to determine their role in the ultimate production of harvestable seafood. Present and potential productive capacity is to be summarized for a number of estuarine systems.

Plankton is obtained by pumping from selected estuarine and offshore stations. The pumping rate is metered and the data treated quantitatively. Specific identification is made where necessary. Plankton volumes and types are subjected to between-station and between-season analysis.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0156, BENTHIC COMMUNITIES

J.L. TAYLOR, U.S. Dept. of Interior, Biological Station, Saint Petersburg - St. Pt. Bc., Florida 33706

The chief purpose of estuarine benthic studies is to assess the effects of hurricane barriers, dams, spoil banks, contaminants and other types of artificial alteration. The benthic species-habitat relation is under investigation to correlate fauna and flora with bottom type, salinity, depth and organic distribution. Benthic sediments and biota are obtained by steel trawls and dredges at stations located on transects in estuarine systems and neretic areas. Specimens are picked from bottom samples and identified to species. Sub-samples of bottom material are analyzed for raw weight in each size fraction of the texture, weight percent in each size fraction, and percentage of organic carbon. Mean, standard deviation, skewness, and kurtosis of size distribution are obtained.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0157, MARSH HABITAT STUDY

R.L. WILBUR, State Game & Frsh. Wtr. Fish, Tallahassee, Florida

Procedures: Marshes adjacent to Lake Griffin and Lake Weir will be sampled for shellcracker, invertebrates and water chemistry concurrent with the samples taken in the lake proper. These samples will essentially provide the same type of information as those taken in Job I.

Fish will be sampled with an electric shocker, or with rotenone if necessary. All other procedures will parallel exactly those of Job I. This will be done so that the utilization of the habitat can be compared with that of the lake.

6.0158, THE ROLE OF AQUATIC SOILS IN THE NUTRIENT DYNAMICS OF AQUATIC ECOSYSTEMS

C.E. BOYD, U.S. Dept. of Interior, Southeast Water Lab., Athens, Georgia

Studies are being initiated to obtain information on the exchange of inorganic nutrients across the mud-water interface in aquatic ecosystems. Physical, chemical, and biological mechanisms will be considered. In the initial work, attention is being given to the effect of pH on the availability of phosphorus in aquatic muds, the phosphorus fixation capacity of aquatic muds from different soil series, and changes in the various phosphorus fractions in soils subsequent to flooding. Similar studies of cobalt, molybdenum, and boron are also planned.

In order to determine the availability of various nutrients which have accumulated in the bottom mud complex, investigations on aquatic soil-aquatic plant interrelationships are being designed. Aspects under consideration are: 1) Sites of absorption of nutrients by rooted vascular aquatic plants; 2) Rates of removal of nutrients from bottom soils in closed aquatic systems containing various combinations of both rooted and free-floating aquatic plants; 3) Changes in the ionic composition of the cation exchange complex following cropping by aquatic plants and following decomposition of high nitrogenous aquatic plant residues; and 4) Methods of extracting nutrients from aquatic soils that are correlated to plant response.

6.0159, ECOLOGICAL ENGINEERING PROJECT

W.M. SANDERS, U.S. Dept. of Interior, Southeast Water Lab., Athens, Georgia

Continuous flow growth kinetic experiments were performed in order to map the three-dimensional response surface produced

6. WATER RESOURCES PLANNING

when attached slime-producing bacteria (indigenous to polluted streams) were exposed to changing velocities, temperatures and nutrient concentrations. Dependent variables such as oxygen utilization, COD utilization, CO₂ production, cell production and slime thickness were measured. In addition, mass balances, carbon balances, nitrogen balances, chemical free energy balances and C-H-N ratio changes were observed. Bacterial morphology and taxonomy studies were initiated. Test conditions for the current experimental set are: velocity range .75 to 1.5 fps; temperatures 25 deg to 35 deg C; and nutrient concentrations from 10 to 20 ppm, as nutrient broth.

An experimental stream channel section was constructed and dye dispersion studies were run at various flow rates and simulated turbulence patterns.

An isotopic current analyzer was modified for use with Bromine-82 as the tracer in order to measure water velocities at and near the mud-water interface. The bottom current analyzer was tested in an experimental channel at the University of Texas and in a natural stream in South Carolina.

Solar radiation was monitored with an ISCO Recording Spectroradiometer which recorded the intensities at various wavelengths from 380 to 1150 millimicrons.

A Varian Aerograph Chromatograph Model 1532-B was modified to receive a liquid injection for the measurements of small quantities of free CO₂. Concentrations less than 1 ppm can be detected in 5 microliters of water.

6.0161, THE DEMAND AND PRICE STRUCTURES FOR WATER IN A HUMID AREA

R.M. NORTH, Univ. of Georgia, School of Agriculture, Athens, Georgia 30602

There is an immediate need for knowledge about the demands, supplies and price structures for water in humid areas. The objectives of this project are to (1) define the market structures for water in Georgia, (2) construct demand models for water by major use classification, (3) specify the rate of response of water consumption to changes in prices, incomes and resource substitution for each use classification, and (4) use these relationships to improve consumption projections and increase efficiency in the investment in additional water supplies.

The physical data on quantities, prices, incomes, substitutes and other economic variables will be collected from existing water related agencies and firms and supplemented by data from a sample of water supplying and using firms households. These data will be analyzed with the techniques of multiple correlation and other statistical methods useful in demand-price analysis.

6.0162, A STUDY OF THE ENERGY FLOW THROUGH SELECTED COMPONENTS OF A SMALL AQUATIC ECOSYSTEM

D.C. SCOTT, Univ. of Georgia, Graduate School, Athens, Georgia 30602

The study herein proposed covers the bioenergetics of production at all important trophic levels in a farm pond ecosystem through an annual cycle. Included are production, growth and respiration of primary producers, zooplankton, benthos and nekton. Integration of the dynamics of these major components of the ecosystem will for the first time give a reasonably complete picture of the dynamics of this type of aquatic ecosystem. The results should be a contribution to basic ecology research and of considerable value to those charged with the management of this very important category of surface water.

6.0163, WATER LAW OF SOUTHEASTERN ESTUARIES

UNKNOWN, Univ. of Georgia, Inst. of Government, Athens, Georgia 30602

A comprehensive survey of the estuarine water law of Louisiana, Mississippi, Alabama, Florida, Georgia, and South Carolina. The resulting monograph of approximately 300 pages would draw conclusions as to the extent to which the law of these jurisdictions (1) protects commercial fishing and public recreational uses against deleterious competing uses such as pollution, land-fill, and dredging, (2) is related in this respect to the law of bordering states and to the federal regulatory power in marginal and territorial seas. Conclusions will be drawn as to overlaps, gaps, and conflicts of the present law. These can provide bases for remedial state and federal action to restore and preserve the estuaries of Southern states. The study can assist similar research in other regions of the United States.

6.0164, PREDICTION MODELS FOR WATER QUALITY PARAMETERS

W.W. HINES, Georgia Inst. of Technology, Water Resources Center, Atlanta, Georgia 30332

This proposal is the second phase of a project entitled 'Prediction Models for Water Quality Parameters.' Phase II will build on the results of Phase I work. Phase II objectives are, first, to quantify the feedback and control mechanisms that exist in the total water quality system of a basin or region (the qualitative feedback network is developed as a part of Phase I.); and, second, combining the quality parameter interaction (between dissolved oxygen and temperature) model from Phase I, which describes stream quality resulting from various uses and waste discharges, with the feedback control system mentioned above, general system behavior under different policies will be studied.

The need for Phase II has become clearer as Phase I has progressed. Considerable work has been done and is now in progress on various components of the total water quality system; e.g., the research being performed in Phase I on the prediction of the stream quality component. It is known that social, economic, and political conditions and attitudes influence the amount of waste discharge to streams, and the water quality standards result from needs and desires of the various public and private sectors, etc. Therefore, in order to put water quality planning and management on a more rational and more socially equitable basis, the various water quality system components must be embedded in a comprehensive system which is capable of relating the actions and decision of each segment to those of the others. This approach will be of assistance in setting water quality standards that can be reasonably attained, since the total system response can be studied and changes made in the proposed standards prior to putting them into effect.

6.0165, INTERRELATIONS BETWEEN RIVER BASIN DEVELOPMENTS AND DEVELOPMENT OF METROPOLITAN AREAS

G.J. KELNHOFER, Georgia Inst. of Technology, Water Resources Center, Atlanta, Georgia 30332

The purpose of this study is to find ways to achieve better coordination between the development of river basins and the development of metropolitan areas. The interrelations between the Chattahoochee River and the Atlanta Metropolitan Area will be analyzed as a case study.

The study will have three phases. The first will be an analysis of the improvements proposed for the Chattahoochee River by government and private agencies. The effects of these improvements on the development of the Atlanta Area will be estimated. The second stage will be an analysis of the plans of Metropolitan development prepared by public and private planning agencies in the Area. The probable effects on the Chattahoochee River of this anticipated urban development will be estimated. In the third stage the conflicts between the developments proposed for the River and those projected for the Metropolitan Area will be described and suggestions made for their resolution. Finally, changes in current planning procedures will be recommended to achieve better coordination between river basin developments and the development of metropolitan areas.

6.0166, CASE STUDY OF REMEDIAL FLOOD MANAGEMENT IN AN URBAN AREA-PHASE I

C.E. KINDSVATER, Georgia Inst. of Technology, Water Resources Center, Atlanta, Georgia 30332

Flood plain areas along Peachtree and Nancy Creeks in Metropolitan Atlanta, Georgia, have been extensively developed during the past two decades for residential, commercial, and industrial purposes. The failure of governing authorities to exercise effective planning and regulation with respect to the development of these areas has resulted in a complex of flood-related problems that are typical of the flood problems in many urban areas of the Nation.

The proposed research will be concerned with the development and testing of techniques and procedures required to evaluate alternative remedial measures in the light of social, economic, and physical criteria. Because traditional procedures have been tried and have failed, unusual alternatives, including institutional arrangements, will be considered.

In Phase I of the study, a multidisciplinary team, working in close coordination with municipal, regional, State and Federal officials, civic groups, industrial and commercial firms and private property owners, will collect and evaluate the quality and relative significance of existing information, make preliminary hydrologic, economic, demographic, and public-opinion measurements and projections, test preliminary hydrologic and economic-system models, and delineate potential alternatives. The end project of Phase I will be a design for succeeding phases of the research, including recommendations regarding objectives, procedure, funding, and schedule of work.

6.0167, MEASUREMENT OF COMMUNITY OPINION RELATING TO PUBLIC WATER SUPPLIES

C.M. YORK, Georgia Inst. of Technology, Water Resources Center, Atlanta, Georgia 30332

The need exists for better measurement techniques to determine citizen attitudes and knowledge about various domestic uses of water. Such measurements are needed to serve as a baseline for systematic evaluations of persuasive communications devices, such as films, leaflets, and speeches, which are used by water resources development agencies. This series of pilot studies exploits related behavioral research techniques developed by the Principal Investigator in previous studies.

Phase I of the research represented by this proposal will be devoted to two major tasks: (1) Reliability and validity analysis of a measure of community sentiment toward a water-related issue. These findings will serve as another source of information accumulated for decision-making by planning agencies. The refined instrument would also be available for research uses as mentioned below. (2) Feasibility study of procedures for evaluating communications with the public. The attitude-change literature and communications-effectiveness literature reveals little work related to water resources. Several pre-testing efforts will involve controlled exposure of college students to selected materials prepared as public information on water usage. A few major variables as potential determinants or correlates of attitude change will be assessed in this context.

Results of these research activities will contribute to knowledge regarding both individual and environmental factors which influence citizen response to information campaigns, proposed changes in quality of domestic water service and supply, and referenda on selected issues concerning water use. Project initiated in January 1968; to be completed December 1968.

6.0168, ATTITUDES AND ATTITUDE CHANGE RELATING TO WATER RESOURCES

C.M. YORK, Georgia Inst. of Technology, Water Resources Center, Atlanta, Georgia 30332

Attitudes, as relatively permanent cognitive-motivational states of individuals, appear highly relevant to the decision process in water management. Citizen response to proposed developments and their general predisposition toward use and misuse of natural resources enters significantly into program effectiveness. Broadly viewed, the influence process may be conceived in terms of the communication source (e.g., its perceived credibility, form and content) and audience characteristics and subsequent behavior.

The proposed research plan involves both literature searches (and a document which pulls together for water researchers the scattered evidence and generalizations) and an experimental investigation of the critical variable of source credibility within the attitude change process. Progress in undertaking these phenomena within other behavioral science context will be exploited for the water resources sector of society.

6.0169, ECONOMIC ANALYSIS OF AGRICULTURAL WATER MANAGEMENT IN THE SOUTHEAST

T. TOON, U.S. Dept. of Agriculture, Atlanta, Georgia 30309

Objectives: To determine the feasibility of supplemental irrigation as a means of increasing income on farms in the Southeast, particularly in underdeveloped regions such as Appalachia, and to estimate the optimum extent of irrigation in selected areas of the Southeast.

Approach: Current costs and benefits of irrigation of selected field and specialty crops are being developed from review and updating of previous research. Comparative advantages of selected locations for production and marketing of irrigated crops are being estimated under assumed conditions of improved transportation systems. Effects of increased production of irrigated crops on farm income are being determined.

6.0171, METHODS FOR DETERMINING THE ECONOMIC PRODUCTIVITY OF IRRIGATION WATER FOR THE PRODUCTION OF SUGAR IN HAWAII

J.R. DAVIDSON, Univ. of Hawaii, Water Resources Research Ctr., Honolulu, Hawaii 96822

The proposed research plan involves the development of methodology for determining the economic productivity of irrigation water for the sugar producing areas in Hawaii.

Physical input-output data will be collected from actual field records and from experimental data for representative sugar producing situations in Hawaii. The relationship between irrigation water applied and sugar output obtained will be developed statistically. Value functions will be derived from these physical functions and the additional value of sugar resulting from increasing amounts of water applied at various input levels will be calculated for representative sugar producing conditions.

University of Hawaii

6.0172, PHYTOCHEMISTRY OF NARCOTIC PRINCIPLES IN CAULERPA

M.S. DOTY, Univ. of Hawaii, Graduate School, Honolulu, Hawaii 96822

Seven substances obtained in pure form from *Caulerpa lamoureauxii* in addition to beta-sitosterol, cholesterol, caulerpin and caulerpicin are being accumulated in sufficient quantity for identification. Pharmacological testing of the last two compounds named is proceeding. The distribution of these compounds peculiar to *Caulerpa* among the species of the genus is being studied for biogenetic and phylogenetic leads.

Further efforts are being made via gas chromatography for following these peculiar compounds in the food chains dependent from *Caulerpa*.

Similar studies are underway with the chemical products of Dictyopteris for those cyclopropanes in addition to the already identified dictyoterpene A.

A considerable effort has been made to obtain further quantities of field samples and further field observations for analysis of the chemical contents of these and other genera of seaweeds and for the development of an understanding of their production and fate.

6.0173, OPTIMUM PATTERNS OF DIVERSIFIED CROP PRODUCTION ON THE MOLOKAI DIVERSION PROJECT

H.C. HOGG, Univ. of Hawaii, Agricultural Experiment Sta., Honolulu, Hawaii 96822

Objectives: To determine an optimum pattern of diversified crop production on the Molokai Diversion Project.

Approach: Production costs and yields will be estimated by land productivity class for crops suited to the area. The existing demand and supply for these crops will be estimated on the basis of the Honolulu market. These data will be used in an iterative linear programming model to derive the optimum allocation of land by quality to the production of the alternative crops. A price-quantity relationship for water will be derived by determining land use patterns resulting from varying prices of water.

SUPPORTED BY U.S. Dept. of Agriculture

6.0174, VALUE OF IRRIGATION WATER FOR THE PRODUCTION OF SUGAR CANE

H.C. HOGG, Univ. of Hawaii, Agricultural Experiment Sta., Honolulu, Hawaii 96822

Objectives: To determine the marginal value productivity of irrigation water for each of several distinct sugar-producing areas in Hawaii.

Approach: Physical input-output data will be collected for each sugar-producing region being considered. A statistical analysis of these data will be made to determine the relation between

6. WATER RESOURCES PLANNING

water applications and sugar production. The resulting physical function will then be interpreted in terms of a product value and a marginal relationship established. A corollary objective is to consider the costs of supplying water from several alternative sources to each sugar-producing area.

University of Idaho

6.0177, RELATIONSHIP OF PUMPING LIFT TO ECONOMIC USE OF GROUND WATER FOR IRRIGATION

G.L. COREY, Univ. of Idaho, School of Agriculture, Moscow, Idaho 83843

It is the purpose of this research to study farm size, cropping patterns, irrigation system design and farm management to define relationships between pumping lift and the price one can afford for water. The specific objectives include a determination of the optimum economic combination of resources available with respect to the price one can afford to pay for pumped irrigation water.

Modern technology allows water to be lifted greater distances than ever before. In some areas pumping from deep wells causes a lowering of the water table. The economic productivity of water used for agriculture is thought to vary significantly in some situations due to size of farm unit. Although economic considerations are not the sole criteria for allocating water, knowledge of valid comparable economic values of water within agriculture will be helpful to those allocating rights or developing plans for future use of water resources.

Primary data will be obtained by interviewing farm operators. The data required will be input costs, labor requirements, yields and prices received. From these data model farms will be developed representing given practices for a given sized farm. This will be done by means of conventional budgeting analysis. For each model operation a determination of 'reasonable pumping level' will be estimated based on costs of pumping water.

The data will be collected in the upper Snake River Basin in Idaho in areas where groundwater availability is marginal and economic balance between water costs and farm operation is critical.

University of Idaho
Idaho State Government

6.0178, ECONOMICS OF WATER TRANSFER - AN APPRAISAL OF INSTITUTIONS

K.H. LINDEBORG, Univ. of Idaho, Agricultural Experiment Sta., Moscow, Idaho 83843

6. WATER RESOURCES PLANNING

Objectives: 1. To appraise the legal-institutional-administrative devices and processes through which transfers of water between uses and users take place, and 2. To assess the consequences of these devices and processes on the economic efficiency and equity of water use, and 3. To suggest desirable modifications in these devices and processes that might enhance economic efficiency or equity in the use of water resources.

Description of Work Proposed: The legal-institutional administrative devices and processes through which transfers of water rights might take place will be investigated through an analysis of the complexity of laws and institutions which affect water rights in Idaho. This will improve a study of statutes, court decisions, constitutional requirements and limitations, and rulings of administrative agencies. In addition, a survey will be made of proposed legislative and constitutional changes in the state's water laws. This part of the study will be carried out in cooperation with the College of Law. The next step will be to estimate the marginal value product of water use in the category of users within agriculture. This will be done in an area of relatively large farms, and in an area of family farm units. The final step will be to determine the effects on the marginal value product of water that result from varying the relevant water right complex among users within agriculture. The effects of different modifications of the institutional restraints will be tested against the criterion of maximized marginal value product of water use.

6.0179, AN ECONOMIC ANALYSIS OF SOUTHERN ILLINOIS

R.I. ELLIS, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

Concurrent with the enthusiastic concentration on economic growth in general since World War II has been the realization that disparities in economic development can be almost as great within nations as it is between them. This realization, as well as the recognition that regions and areas are faced with unique problems differing in nature as well as scope from those which are purely national, has resulted in increasing emphasis by a growing body of economists on the region or area as a target for analysis. The aims of the economists are multiple, ranging from the testing of various economic theories to the formulation of policies which will foster the participation of underdeveloped or depressed regions in national economic development. Southern Illinois, for a variety of reasons, is one of the regions which has not participated in national economic development. While many of the causes of this relative stagnation are generally known, much of his knowledge is based on imprecise data or on generalizations from very limited observation. In addition, the attempt to increase the participation of Southern Illinois in national economic growth necessitates a broad knowledge of past and present trends as well as future possibilities in order to determine exactly why the region is in its current state and what can be done to alter it. The aim of this study is basically to add to the stock of knowledge of Southern Illinois in order to enhance understanding of the region's present economic status and to provide a foundation for assessment of developmental policies. More specifically, the objectives are as follows: (1) The application and, when necessary, refinement of current methods of regional economic analysis to Southern Illinois on a county by county basis, concentrating particularly on those variables which heretofore have received little if any attention; (2) A general assessment of the current economic activity of Southern Illinois, including present trends in the major variables; (3) Attempt to develop new techniques for analyzing the economic structure and development of regions.

6.0180, A PARASITOLOGICAL STUDY OF FISHES FROM THE PINE HILLS AREA

G. GAROIAN, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

Previous studies by Dr. William Lewis and his students have shown that there are some unusual populations of various cold water fishes in the springs of the Pine Hills area. Preliminary sur-

veys by the investigator and his students have shown a considerable degree of parasitism of these fishes by some groups of worm parasites unique to this area of Illinois and the Mid-West, and some are probably species heretofore undescribed. Along with this descriptive study of the various fish parasites will be a more fundamental ecological study of host-parasite relationships. The preliminary studies also indicate that there is an unusually fine opportunity for this ecological study because these fish live in very restricted and isolated areas of the springs.

Method of Operation: Fish collections and various habitat data will be collected twice weekly at Pine Hills from mid June till mid September. Parasites will be removed from the fishes for preservation. Histological preparation of the various worm parasites and their specific morphological study will be done with facilities on campus, as well as analysis of host-parasite data.

6.0183, OPERATION RIVERPORTS

A.R. MACMILLAN, Southern Illinois University, Transportation Institute, Carbondale, Illinois 62903

A collative study and compilation of river port and terminal facilities serving the inland waterways of the United States.

The compilation will include data on each established port with regard to its organization, description and summary listing of its facilities, services, charges, representative tariff listings, and principal import and export commodities. The study will also include comparative examples of barge, rail and truck rates between representative major river ports on the several river systems and the ocean ports they serve.

Additional data to be compiled for the river systems will cover average times for movement of barge tows, upbound and downbound between representative riverports and their respective ocean ports; also the total number of waterside terminals by category of use on each river system; together with total tonnages of principal import and export commodities.

The 'river systems' to be covered by this study are: Mississippi River, New Orleans to Minneapolis - St. Paul Missouri River - (9 foot navigation areas). Arkansas River - (9 foot navigation areas). Tennessee River, Paducah to Knoxville. Mobile/Warrior Rivers, Mobile to Birmingham. Apalachicola/Chattahoochee/Flint Rivers. Hudson River - N.Y. State Barge Canal, New York to Buffalo. Columbia River, Astoria to head of 9 foot navigation. Ohio River, Cairo to Pittsburgh. Illinois Waterway - complete. Sacramento/San Joaquin Rivers, S.F. to Sacramento and Stockton.

6.0185, ILLINOIS AND ITS INTERSTATE COMPACTS

M.E. RIDGEWAY, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

Examination of the interstate compacts to which Illinois is a party, their legal status, agency and institutional arrangements, administrative powers and problems. Within determined limits, comparisons of Illinois' arrangements with those of other states to ascertain areas of possible improvements in control, direction, and achievement of compact proposals and goals. This study includes three interstate water compacts: The Ohio River Valley Sanitation Compact, the Wabash Valley Interstate Compact, and the Great Lakes Interstate Compact. Auxiliary to the water question is the Bi-State Development Compact of Illinois and Missouri. This latter compact also embraces metropolitan area problems, including water and air pollution.

SUPPORTED BY Southern Illinois University

6.0186, THE URBAN SNOW HAZARD

J. ROONEY, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

Snow, like floods is responsible for ever increasing property damage and loss of life in the United States. This increase is partially due to the growth of urbanization and mobility, but more importantly to the knowledge vacuum surrounding the economic and social costs of snow, and the benefits to be gained from the various technological and non-structural alternatives available for the reduction of this hazard.

It is the purpose of this research to more accurately identify and measure the economic and social impact of snow at selected urban areas. A second and equally significant purpose is to analyze the factors affecting community adjustment to the urban snow hazard. The dividends from such research would be realized in the formulation and implementation of more efficient urban snow programs, a vital need in our urbanizing society.

6.0187, AN EXPLORATION OF THE INFLUENCE OF ATTITUDES FOR DECISION-MAKING IN WATER MANAGEMENT

G.F. WHITE, Univ. of Chicago, Graduate School, Chicago, Illinois 60637

This proposal is for a supplement to a grant which was made in January 1965 and supplemented in December of 1965. The purpose of the project is to identify and analyze the situations in which attitudes toward water resources may play a significant role in management decisions, review present understanding of those attitudes, and outline ways in which this understanding can be deepened. This work grows out of path-breaking research on perception of, and attitudes toward, flood hazard done at the University of Chicago under Professor White's direction. Substantial progress was made under the previous grant and draft reports on various parts of the research have been prepared. These deal with both conceptual matters and empirical findings based on experiments with Navy corpsmen coming from diverse parts of the country and interviews with water managers. Preliminary results of part of these studies were presented in Professor White's paper

at the RFF Forum in March. The preliminary findings are intriguing and suggest that important contributions to theory in social psychology and geography, and important insights into water management decision-making might result from a small amount of additional work on the data gathered in connection with studies done under the previous grants. The reports drafted so far could be published in journals of geography and social psychology, but additional work over the next year could produce a truly integrated book-length report. To this end the principal investigators would conduct a seminar based upon the winter quarter at the University of Chicago. The authors would then collaborate in the production of a volume to be ready for publication shortly thereafter.

6.0189, COMPARATIVE STUDIES OF COMMUNITIES IN ILLINOIS

P.J. CAMPISI, Southern Illinois University, Graduate School, Edwardsville, Illinois 62025

With the kind support of Mississippi Valley Investigations, a continuing program of comparative community studies has been underway for the past three summers. Five communities, four in southern and one in northern Illinois (all about the same size, roughly 10,000 in population) have been studied with regard to the social and political decision-making-structure of the community. This work continues this summer with the completion of the study of a northern community and the commencement of the study of a southern Illinois community in the St. Louis Metropolitan area. In addition to obtaining typical power-structure and other related social data, we expect to get a sample of 'leaders' opinions on the decision making process as it relates to community water problems.

SUPPORTED BY Southern Illinois University

6.0190, ECONOMIC EVALUATION OF NAVIGATION IMPROVEMENTS

L. MOSES, Northwestern University, Econometrics Research Center, Evanston, Illinois 60201

Objective: To achieve a more highly developed, yet empirically realistic, basis for evaluating the benefits and costs of inland waterways investment projects.

Study Plan:

1. Develop a proper basis for evaluating benefits: examine whether rates or costs are valid as measures of benefits. a. Formulate analytical models for dealing with problems of jointness in costs and benefits, and the concept of transportation as social overhead. b. Analyse the effect of externalities on optimal pricing. c. Develop principles governing the optimal use of resources and optimal pricing under conditions in which fixed and variable costs can be defined with respect to output and/or time.
2. Prepare a comprehensive statement on the methodology of benefit studies for public investment projects in the internal navigation area.
3. Develop information regarding the general character of long run incremental costs of alternative modes of transport. The research will also investigate possible directions of technological change as these impinge upon the costs of alternative forms of transportation.
4. Analyse the degree of intermodal competition and price response. The present and likely future influence of regulatory bodies on rates and costs will also be studied.

6.0192, ENVIRONMENTAL GEOLOGY OF MCHENRY COUNTY, ILLINOIS

J.E. HACKETT, State Geol. Survey, Urbana, Illinois

At the request of the McHenry County Regional Planning Commission, the Geological Survey has undertaken studies involving geology and mineral economics to aid in land-use planning. The initial studies deal with: (a) physiographic analysis of the major physiographic units, (b) relation between surficial geologic units and soil series units, (c) subsurface stratigraphy of unconsolidated deposits, (d) occurrence and character of glacial drift and bedrock aquifers, (e) geologic feasibility for water resource management programs, (f) occurrence and character of construction materials including sand and gravel, rock products, and borrow materials (g) characteristics and potential uses of clay deposits, (h) economic value of mineral resources, (i) engineering characteristics of geologic units, and (j) geologic evaluation of surface reservoir conditions and of proposed reservoir sites. These studies will provide a basis for interpretive maps that grade areas as to their suitability for specific land uses and as sources of mineral or rock materials.

SUPPORTED BY Illinois State Government

6.0193, ENVIRONMENTAL GEOLOGY OF THE SPRINGFIELD-DECATUR AREA

K. PISKIN, State Geol. Survey, Urbana, Illinois

The objective of the study is to provide information on geology and mineral resources to facilitate planning for urban development. The study will include maps and information on surficial geology, physical properties of shallow earth materials, groundwater conditions, mineral resources and conditions related to specific land uses.

6.0194, FISH POPULATION MANIPULATION AT RIDGE LAKE

G.W. BENNETT, State Natural History Survey, Urbana, Illinois

During four years of stable water levels, the bluegills in the bass-bluegill-warmouth-channel catfish population of Ridge Lake in Fox Ridge State Park near Charleston expanded from 59 per acre to 5,400 per acre -- this in spite of predation by bass. Growth rates of bluegills were slowed when more than 1,000 per acre were present.

Largest populations of large bass and excellent bass fishing resulted from draining the lake at two-year intervals and removing from the fish population all of the bass of less than 8 inches and bluegills of less than 6 inches. Under this system, bluegills were unable to build up excessive populations, and there was artificial selection for the fast growing bass.

Lowering the lake level in early September to reduce the surface area by 35 percent resulted in a reduction of the bluegill population from about 4,000 to approximately 1,000 per acre and increased the survival of small bass in the spawning season that followed. This was a simple and effective method for bluegill population control. Details of this 22-year investigation are given

in a paper, 'The Largemouth Bass and Other Fishes in Ridge Lake, Coles County, Illinois Under Several Systems of Management,' now in the hands of the Survey editor.

By combining annual September drawdowns at Ridge Lake with supplemental feeding of bluegills with prepared pelleted fish food (32 percent protein) we have increased the hook-and-line yield of these fish to exceed any taken in the past 25 years and have doubled the average size of the bluegills caught by fishermen. This program costing \$11.22 per acre per season for prepared fish food appears to have wide application in bluegill management. A paper titled, 'The Dynamics of a Bluegill Population Fed on a Prepared Food and Subjected to an Annual Fall Drawdown,' has been mimeographed for distribution.

6.0195, HYBRID SUNFISH STUDIES

W.F. CHILDERS, State Natural History Survey, Urbana, Illinois

During May 1967 eggs stripped from a female largemouth bass were fertilized with sperm from males of smallmouth bass, rock bass, green sunfish, bluegills, and red-ear sunfish. A high percentage of each of the five different kinds of hybrids hatched; however, all of the rock bass x largemouth hybrids died shortly after they hatched. Approximately 75 percent of the red-ear x largemouth hybrids and 25 percent of the green x largemouth hybrids were deformed. Almost all of the smallmouth x largemouth hybrids appeared to be normal.

Small numbers of each of the four kinds of viable hybrids were kept in the laboratory and the rest were stocked in ponds as soon as they developed into free-swimming fry. The few red-ear x largemouth hybrids which were held in the laboratory died shortly after they became free-swimming and none of those which were stocked in a pond were recovered when the pond was poisoned during the fall.

One group, the bluegill x largemouth hybrids, stocked in a pond were lost when the owner added some smallmouth bass.

The green x largemouth hybrids stocked in a pond grew well during the summer. A few individuals were collected by seining at various times in June and July.

Smallmouth x largemouth stocked by themselves in a small pond grew rapidly, and by fall these hybrids ranged from 6 to 10 inches in length.

The smallmouth x largemouth, bluegill x largemouth, and green x largemouth hybrids which were retained in the laboratory are continuing to survive and grow. These fishes will be used in making morphological comparisons between the hybrids and their parent species.

6.0196, BIOLOGICAL CONTROL OF AQUATIC VEGETATION

W.F. CHILDERS, State Natural History Survey, Urbana, Illinois

The capability of *Tilapia mossambica*, a vegetation-eating chichlid from Africa, to control aquatic vegetation in Illinois lakes and ponds has been tested during the past six summers.

When tilapias were stocked during mid May at the rate of 50 per acre in a pond containing no other fishes, the population expanded rapidly and was capable of eliminating all submergent aquatic vegetation and algae in less than six weeks. In another season predation on tilapias by an excessive population of largemouth bass prevented an expansion of tilapias and resulted in the failure of the survivors to control the vegetation. In still other years, a light to moderate population of largemouth bass or largemouth bass and bluegills allowed an expansion of tilapias which either eliminated the vegetation or prevented it from reaching nuisance levels.

According to experiments made in 1967, 211 adult tilapias per acre (average total length 6.8 inches) were capable of eliminating the vegetation in this pond and preventing its return during the entire summer. Previous results (1964) established that 121 tilapias per acre (average total length 5.8 inches) were unable to eliminate the vegetation, but they did control it so that it never reached nuisance levels.

The results of this study to date suggest that if tilapias longer than 5 inches were stocked at the rate of approximately 150 per

6. WATER RESOURCES PLANNING

acre in a pond containing bass and bluegills, they would control and perhaps eliminate the submergent aquatic vegetation.

SUPPORTED BY Illinois State Government

6.0197, DEPTH DISTRIBUTION OF FISH IN LAKE GLENDALE

D.F. HANSEN, State Natural History Survey, Urbana, Illinois

The depth distribution of bluegills and largemouth bass was determined by using trotlines suspended vertically from floats and supplied with hooks 1 foot apart. Some lines were fished in the littoral (weed) zone in water 10 feet deep and some in the open water beyond the zone of weed growth at depths of 18 to 20 feet. A record was kept of the depth at which each fish was caught.

Larger bluegills were more abundant in the open water than at the deep edge of the weed zone, and bluegills under 5 inches almost never were caught in the open water.

Larger bluegills were taken in open water at depths of 1 foot to 20 feet below the surface (bottom), but most often they were taken at depths of 8-15 feet. Largemouths were rarely taken below 12 feet.

Food studies made in conjunction with the depth distribution study have indicated that bluegills fed extensively on a large midge larva, *Chironomus plumosus*, which occurs only on the lake bottom where oxygen is low (usually less than 1 ppm) and where rooted weeds are absent. Since the same bluegill stomachs often contained chironomid larvae from deep water and foods such as snails and dragonfly larvae that occur only on weeds, it is evident that the bluegills move back and forth from shallow water to deep water in the collection of food.

6.0198, LAKE MICHIGAN WATER QUALITY MODEL

R.L. EVANS, State Water Survey, Urbana, Illinois

The specific objective of the project is to develop a mathematical water quality model for Lake Michigan. Model formulation will be primarily based upon information regarding dissolved conservative mineral substances. The data will be from records that are available and will pertain to the chemical quality of rainfall, natural and man-made discharges, and waters of the lake. Changes in content as expressed by the model in relationship to economic growth, population shifts, etc., will serve as an instrument for water quality management.

SUPPORTED BY Illinois State Government

6.0199, ALGAL GROWTH POTENTIAL OF ILLINOIS WATERS

R.L. EVANS, State Water Survey, Urbana, Illinois

The objective of the study is to develop the methodology that will permit the use of algal growth potential (AGP) as a meaningful index of water quality. The experimental phase of the undertaking will be an evaluation of expressing AGP in terms of carbon fixation capacity using liquid scintillation procedures. Other methods for expressing productivity will also be investigated. Sensitivity, reproducibility, and minimum detectability are the major factors to be examined. After methodology and optimum environmental conditions have been established, a general survey of Illinois water will commence. Preliminary results should permit tentative classification of the waters based upon their potential for algal growth. The final phase of the study will relate to the applicability of bench observations to field experience.

6.0201, WATER RESOURCE DEVELOPMENT AND MANAGEMENT MODEL

R.H. HARMESON, State Water Survey, Urbana, Illinois

This project involves the creation of a detailed water resource development and management model that will serve state and local planners in meeting present and future water needs. A systems analysis approach is being used so that all elements of water resource development are input for the model. Thus, principal elements (supply sources, treatment, storage, transmission, distribution, disposal, and reuse) can be viewed as a whole and in relation to each other. From detailed analyses of each element, the model will provide alternative schemes of development and management on the basis of the available water resource, present and future demands for water, and costs.

6.0202, ADVANCED METHODOLOGIES FOR WATER RESOURCES PLANNING

V.T. CHOW, Univ. of Illinois, School of Engineering, Urbana, Illinois

The proposed research plan is to investigate a number of advanced concepts of water resources planning which are of basic importance but have not been generally introduced into practice. These concepts include mainly stochastic analysis and dynamic programming.

Three stages will be proceeded in the investigation. The first Stage is to ascertain the feasibility of the application of various stochastic methods of hydrology to hydroeconomic system analysis and of the application of dynamic programming for stochastic system optimization. The second state is to develop working procedures of stochastic dynamic programming to actual problems.

In the investigation, mathematical formulations will be programmed for computer analysis and data from river basins in Illinois will be tested in the working procedures to be developed.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Res.
University of Illinois

6.0203, STOCHASTIC ANALYSIS OF HYDROLOGIC SYSTEMS

V.T. CHOW, Univ. of Illinois, School of Engineering, Urbana, Illinois

The proposed research project aims to develop practical methods which will utilize mathematical models to simulate the stochastic behavior of hydrologic systems with an ultimate goal to extend the application of the methods so developed to hydroeconomic systems for the analysis and planning of actual water resources systems. The mathematical models will be stochastic and nonlinear in nature and will be applied to river basin systems particularly in Illinois, although the concept of this mathematical simulation will be equally applicable to other kinds of hydrologic systems.

The procedure for the proposed investigation will consist of three steps: (1) to formulate mathematical models for simulating the stochastic behavior of hydrologic systems; (2) to analyze and improve the models by numerical analysis and computer technology; (3) to verify and apply the improved models to actual river basin systems.

6.0209, AN APPRAISAL OF FLOOD REGULATIONS IN THE STATES OF ILLINOIS, INDIANA, IOWA, MISSOURI AND OHIO

W.M. KEITH, Univ. of Illinois, Graduate School, Urbana, Illinois

The proposed research involves data collection and field investigations to analyze and determine the effectiveness of flood plain regulations as a tool in flood plain management in the states of Illinois, Iowa, Missouri, Indiana and Ohio. The essential object will be (1) to determine whether statutes and flood plain zoning are effectively used, (2) to determine what other alternative preventive methods are available, (3) to analyze and appraise these other alternatives.

Collected Data will be used: 1. To determine types of regulations, who administers them, and how they are administered. 2. To determine goals and values. 3. To establish a priority scale.

Field investigations will involve setting up case studies showing the effect of flood plain regulations where they exist and where they do not exist. It is the intent to show the effectiveness of proper planning controls.

6.0212, ANALYSIS OF LITERATURE ON THE RECREATIONAL ASPECTS OF WATER RESOURCES RESEARCH

E.H. STOREY, Univ. of Illinois, Graduate School, Urbana, Illinois

A. The objective of this project is

(1) to determine the status of research on recreational aspects of water resources through identification, retrieval and critical analysis of pertinent literature;

(2) to summarize knowledge, and identify gaps in knowledge, of recreational aspects of water resources planning, use and management; and

6. WATER RESOURCES PLANNING

(3) to develop a research program on recreational aspects of water resources planning, use and management.

B. Procedure

The procedure to be followed in the study will be as follows:

- (1) An intensive retrieval program on literature pertinent to recreational aspects of water resources will be carried out.
- (2) Development of a classification system for this literature.
- (3) Critical analysis of the literature and summarization of existing knowledge about recreational aspects of water resources, including use, management and planning.
- (4) Identification of gaps in knowledge of recreational aspects of water resources.
- (5) Development of a research program on planning and management of water resources for recreational use.

6.0213, ECONOMIC ANALYSIS OF WATER USE IN ILLINOIS AGRICULTURE

E.R. SWANSON, Univ. of Illinois, School of Agriculture, Urbana, Illinois

Estimates will be made of the profitability of the irrigation of corn and other high-profit crops in selected areas of Illinois. In order to place decisions concerning irrigation within the context of the total farm business the analyses will be performed with linear programming methods. The influence of a number of price, cost, and technical factors upon the profitability of irrigation will be examined.

On rented farms the adoption of irrigation will be conditioned by the leasing arrangement. Alternative leasing methods will be compared with the objective of finding those lease types which facilitate adoption of irrigation. Since the equity of leasing arrangements depends on land values, the influence of irrigation on land values in Illinois will also be studied.

6.0216, HYDROLOGIC, THERMAL AND TEXTURAL PROPERTIES OF SOILS

H. KOENKE, Purdue University, Agricultural Experiment Sta., Lafayette - West Lafayette, Indiana 47907

- (1) To determine the effects of moisture content and structure of various soils on their thermal conductivity and diffusivity;
- (2) To determine the interrelation between texture, specific surface and the moisture retention in the dry range for various soils;
- (3) To determine the degree of availability of soil moisture for plants at various levels of total moisture tension, for water held matrically and osmotically.

Soils selected for individual studies under this project will be analyzed for a number of important properties including mechanical composition, predominant clay types, exchangeable cations, moisture retention curve, organic matter content and aggregation. Thermal diffusivity, heat capacity, specific surface, availability of soil water and molar free energy of this water will be determined for the soils in question and related to the first group of properties in order to achieve the stated objectives. Modern instrumentation including thermal probes, transistors, and a microcalorimeter, will be used in these studies.

6.0217, EFFECTS OF WATER PROPERTIES IN THIXOTROPIC CLAY SYSTEMS ON BIOLOGICAL ACTIVITY

P. LOW, Purdue University, School of Agriculture, Lafayette - West Lafayette, Indiana 47907

Bernal has suggested fine clay sediments as a site for the early polarizations and condensations for various primordial compounds. Clay seems to absorb selectively certain molecules and could have served as a concentrating mechanism by means of which protein molecules could have appeared in sufficient concentration in the early seas. The specific objectives are as follows: 1) to determine the effects of the sol-gel transformation of the properties of water in a clay suspension, 2) to determine the effect of the sol-gel transformation on the activity of organisms in a clay suspension.

Experiments will be conducted on the structure-sensitive properties of water and clay sols and gels and on changes that occur in these properties during the sol-gel transformation. In particular, the apparent and partial specific heat of the water will be studied by means of an ultra-sensitive calorimeter. Then using the same calorimeter, the thermal kinetics of bacteria and suspensions in two physical states will be investigated. If the results of the initial experiments are promising, additional experiments will be designed.

a. Progress Report to June, 1967 - Preliminary results show that the minimum of clay required for gelation is 4 percent. A new osmometer with improved sensitivity has been developed. Biological activity is definitely influenced by differences in water properties of the gel and sol state. *Streptococcus faecalis* replaced lettuce seeds used in preliminary work since it was desirable that the organism affected by the water be surrounded by it, hence selection of an anaerobic non-gas forming organism. Minimum nutrient found to be 0.1 percent of casamino acid and glucose and 0.01 percent of yeast extract and arginine, based on total weight of clay-water paste. Thermograms using microcalorimetry were obtained from the difference in heat produced by the microorganisms during cell division and metabolism in pastes of varying concentration.

6.0222, PHYSICAL AND ECONOMIC ANALYSIS OF WATERSHEDS AS RELATED TO SOIL AND WATER CONSERVATION

C.E. BEER, Iowa State University, Agricultural Experiment Sta., Ames, Iowa 50010

This is a cooperative venture between physical and social scientists and is concerned with the continuing updating and refining of physical inputs which are needed for the solution of various economic problems of soil water and land use on a

watershed basis. Economics methodology studies include use of linear programming and computer techniques and various adaptations of cost-benefit analyses.

Physical studies in progress or planned include studies of the effect of plant cover and cultural practices on defined segments of the hydrologic cycle on water sheds which range in size from about 2 to 500 acres.

6.0223, STREAM BIOLOGY AND ITS RELATION TO FISH PRODUCTION

K.D. CARLANDER, Iowa State University, Iowa Coop. Wildlife Res. Unit, Ames, Iowa 50010

1. Biochemical indicators of fish growth. F. Bulow, Grad. Asst. Ribonucleic acid (RNA) and desoxyribonucleic acid (DNA) ratios were lowest in starved golden shiners and increased with higher feeding levels and faster growth rates. Samples of various organs and tissues are being prepared for analyses. Initiated in 1966 and anticipated completion date is 1969.

2. Distribution of bottom fauna and its utilization by fish in the Fort Madison section of Pool 19, Mississippi River. Judé and R. Ranthum. Grad Assist. Seasonal changes in the bottom fauna and fishes of Pool 19, Mississippi River were determined throughout 1967. Special emphasis was placed upon the ecology of the fingernail clam. Laboratory studies indicate its rapid growth and reproduction. Seasonal and environmental differences in fish distribution were indicated by the yearly sampling program. Master of Science theses will be written on fish distribution in 1968 and the data on the bottom fauna will be completed in 1969.

6.0224, DYNAMICS OF FISH POPULATIONS IN NATURAL LAKES

K.D. CARLANDER, Iowa State University, Iowa Coop. Wildlife Res. Unit, Ames, Iowa 50010

1. Life history of yellow bass in Clear Lake, Iowa. M. S. thesis completed by Gary Atchinson in May 1967 reported little change in growth rates of yellow bass following mass mortalities in 1965 and 1966. Sexual development and spawning study of yellow bass initiated in 1966 will be completed by R. Bulkley in 1969.

2. Food preferences and feeding of black bulhead, carp and walleye in Clear Lake. R. Baur, I. Effendie, and F. Jernefcic. Examination of captured free-ranging fish as well as controlled feeding experiments were initiated in 1967 and will be completed in 1969.

3. Water temperature dynamics of Clear Lake. water temperature relationships for the period 1950 to 1965 during ice-free periods were computed by 10-day rolling sums of maximum plus minimum air temperatures. Project was completed with submission of M.S. thesis in May, 1968.

6.0225, IOWA ECONOMETRIC MODEL

K.A. FOX, Iowa State University, School of Agriculture, Ames, Iowa 50010

This study focuses on the preparation of a 117-sector input-output model of the Iowa economy and the adaptation of the model for use in water resources planning in Iowa. In addition, a series of economic and population projections for the water resource regions of Iowa for the period 1960 to 2020 will be prepared. Procedures for correlating these projections with similar estimates for the Missouri River and Upper Mississippi River Basins will be formulated.

SUPPORTED BY Iowa State Government

6.0226, AN ANALYSIS OF THE ECONOMIC IMPLICATIONS OF THE PERMIT SYSTEM OF WATER ALLOCATION

N.E. HARTL, Iowa State University, Graduate School, Ames, Iowa 50010

The proposed research project involves both theoretical and empirical analysis of the economic implications of the permit system of water allocation with particular emphasis upon the effects of the permit system on economic growth, income distribution, and economic stability. The study would examine the economic efficacy of the permit system as an administrative, non-market method of resource allocation.

The theoretical analysis phase would involve construction of an appropriate economic model for testing and analysis of the economic operation of the permit system.

The empirical phase would entail gathering of data relating to Iowa on regulated water use, non-regulated water use, and non-approved requests for water use; projection of water supplies and demands to a future date, and an identification and quantification of inefficiencies in resource allocation resulting and likely to result from continued operation of the permit system.

The final phase would be concerned with articulation of alternative means to improve water allocation from an economic standpoint.

6.0227, WATERFOWL POPULATIONS AND RECREATIONAL USE PATTERNS IN THE PROPOSED SAYLORVILLE RESERVOIR AREA AS RELATED TO PRE-IMPOUNDMENT CONDITIONS

A.D. HAUGEN, Iowa State University, School of Agriculture, Ames, Iowa 50010

Summary of Proposed Work: This study comprises the first phase of what should be considered a two-phase study to determine the impact of the alteration of an environment on waterfowl populations and recreational use patterns at the Saylorville impoundment now under construction on the Des Moines River in central Iowa. The impoundment is expected to dramatically affect wildlife habitat in the area. A measure of these changes and subsequent changes in wildlife recreational use pattern of the areas are major goals of this study.

Use of the area as it now exists, its accessibility, major recreational values and use patterns, and the origin and other characteristics of users will be obtained through field checks, time-lapse cameras, pneumatic car counters, and through questionnaire and interview techniques. The Iowa State University Statistical Laboratory will aid in setting up a sampling system.

Automatic recording devices will record data on daily, weekly and seasonal cycles and fluctuations in recreational activities. Data secured should be of use for planning zoning or other regulations needed to minimize friction between different types of users on similar impoundments elsewhere.

6.0228, PHYSICAL, LEGAL AND ECONOMIC ASPECTS OF ASSESSMENT OF COSTS AMONG DRAINAGE DISTRICTS

H.P. JOHNSON, Iowa State University, School of Engineering, Ames, Iowa 50010

The primary objectives of the proposed research project are (1) to investigate the effects of stream modifications on flood flow characteristics and backwater curves as related to drainage districts contiguous to a common waterway, (2) to correlate the flood flow characteristics and backwater with property benefits and damages such that a procedure or guideline can be developed to assist in the assessment of construction and maintenance costs of drainage districts and (3) to study the existing laws of Iowa and other states in order to determine the optimum framework for evaluating the economic and engineering results.

6. WATER RESOURCES PLANNING

The courts in the state of Iowa are presently involved in litigation dealing with the problem of equitable assessments among drainage districts which often lasts for long periods of time and does not arrive at a solution to the problem. Recent testimony presented to an Iowa Drainage Laws Study Committee by persons concerned with drainage problems and Iowa's drainage law conveyed the need for more work and legislation in this area.

Field situations involving drainage districts common to a natural stream and a constructed drainage ditch will be utilized in the study. Pertinent field data will be gathered and the computer will be used for all laborious computations involved in determining the effects of stream modification on flood flows and stages.

6.0229, ECONOMIC AND LEGAL FACTORS IN PROVIDING, USING AND MANAGING WATER RESOURCES IN AGRICULTURE

J.F. TIMMONS, Iowa State University, Agricultural Experiment Sta., Ames, Iowa 50010

Project Objectives - (a) To develop an economic basis for allocating water among competing uses and users, considering both quality and quantity of water; (b) To investigate possibilities of structural means for developing water resources and sharing costs and benefits in the allocation process with quality and quantity of water by uses considered.

Work Proposed - Uses of water from particular supply sources, i.e., aquifer, or impoundments, will be identified. Productivities of water in various uses will be determined. Competitive and complementary ranges of uses will be identified. Effects on water quality by uses will be investigated with the costs of maintaining quality of water for re-use.

6.0230, POST CONSTRUCTION AUDITS OF THE ECONOMIC PERFORMANCE OF PUBLIC WATER RESOURCES INVESTMENT

R.H. HAVEMAN, Grinnell College, Undergraduate School, Grinnell, Iowa 50112

Objective: To develop a methodology for checking the actual economic performance of public water investments against that projected when the investment was analyzed by benefit-cost analysis in the original planning. The principal problems dealt with are the uncertainties concerning the original basis of evaluation and the stochastic nature of the events against which many projects are built, especially storage and flood structures.

SUPPORTED BY Resources For The Future Incorporated

6.0231, ECONOMIC ANALYSIS OF ALTERNATIVE WATER POLLUTION CONTROL MEASURES

J.R. BARNARD, Univ. of Iowa, Graduate School, Iowa City, Iowa 52240

The purpose of this study is: (1) to develop methodological procedures for translating economic projections of population and industrial output into future water pollution abatement needs, (2) the formulation of an economic model for determining the most efficient means of meeting and maintaining specified stream quality standards, (3) the empirical implementation of cost models to determine the optimum combination of treatment facilities. Phase I of this project will be concerned with items 1 and 2 above and will be completed during the 1967-1968 fiscal year. Phase II, the empirical implementation of the model will be undertaken in fiscal year 1968-1969.

6.0232, TRACE ELEMENT CHEMISTRY OF A SMALL POND IN RELATION TO PRODUCTIVITY

K.B. ARMITAGE, Univ. of Kansas, Water Resources Institute, Lawrence, Kansas 66045

6. WATER RESOURCES PLANNING

The relation of oxygen conductivity, temperature, alkalinity, nitrogen, phosphate and selected trace elements (Ca, Mg, Sr, Zn, Co, Fe, Mn, Mo, B, HCO₃, Na and K) to abundance of chlorophyll A and seasonal cycles of zooplankton populations will be investigated in a pond in northeastern Kansas. These relations between the physicochemical and biotic parameters will be analysed by the use of multivariate statistics. It is hoped that we can determine how much, if any of a change in population can be attributed to temperature, conductivity, trace elements, etc. Additionally correlations among the chemical factors may be determined to ascertain if any patterns of occurrence and distribution occur among the different elements under study. Each species of zooplankton will be analysed to determine size, age, sex structure, and reproductive capacity of the population. Community structure of the zooplankton will be analysed.

6.0233, ECONOMIC AND LEGAL FACTORS IN PROVIDING, USING, AND MANAGING WATER RESOURCES IN AGRICULTURE

E.S. BAGLEY, Kansas State University, Agricultural Experiment Sta., Manhattan, Kansas 66504

Objectives of the Regional Project are: 1. To determine the economic considerations that affect use and management of water in agriculture and competing uses. 2. To identify and describe rights in water and the administrative arrangements that regulate water use in the several states. 3. To analyze the economic consequences of different systems of water law with particular emphasis on the laws of the states in the North Central Region but including comparisons with legal systems in use in other regions. 4. To develop principles which will serve as guidelines in efforts to bring about optimum management and use of water resources.

The Kansas phase of the project is concerned with the appropriation doctrine of water rights and currently under way is an investigation of the feasibility of ground water districts under the appropriation doctrine for regions where ground water stock is large but recharge is negligible.

6.0234, MODELING AND OPTIMIZATION OF WATER RESOURCES SYSTEMS

E.S. LEE, Kansas State University, School of Engineering, Manhattan, Kansas 66504

This proposal is for the mathematical modeling and optimal management of water resources systems. The primary purposes of the investigation are to establish realistic mathematical models for these systems and to develop best management policies over a period of time for complex water resources systems based on the models.

It is proposed that the dynamic modeling and optimization of the management of large water resources systems be approached; considering all available model building and optimization techniques but with special emphasis on linear filtering and prediction, quasilinearization, invariant imbedding, dynamic programming, maximum principle, and the function gradient techniques.

The following three basic water resources models will be studied: (1) a single reservoir with multiple purposes, (2) multiple reservoirs, each reservoir with a single purpose, and (3) multiple reservoirs with multiple purposes. Results for the modeling and optimization of the first two models and a fairly realistic model for the third model will be obtained.

6.0235, THE ECONOMICS OF LAND UTILIZATION

R.D. MCKINNEY, Kansas State University, Agricultural Experiment Sta., Manhattan, Kansas 66504

To make economic analyses of present and possible land uses and practices from the viewpoints of individual farmers and society. These analyses would include the economic effect of: (1) Conservation and watershed practices and programs; (2) changes in land uses in areas of the state (such as Great Plains); (3) Soil Bank and similar programs on the profitable uses of land; (4) irrigation on costs and returns and land utilization; (5) converting land from intensive to extensive use (cropland to grassland) or vice versa. These studies will be made in terms of cost and returns over time and their effects upon rural institutions and the individual in light of the goals of people.

Description of Work: A study of the economics of soil conservation is being made within the boundaries of three watersheds located in east central and northeast Kansas. Data are being gathered each year on the cultural practices of crops, conservation measures applied and crop yields within these watersheds and analyzed for measurable economic benefits to the resource holder on a farm firm basis. Data are obtained yearly on all the fields in one watershed and on a random sample in two watersheds. The data are obtained from the same sample each year.

A study of sediment and runoff in association with the economic study is being conducted on the Sabetha Lake watershed. Budgeting and linear programming will be used in analysis of data.

6.0236, VALUE OF WATER FOR IRRIGATION IN THE KANSAS RIVER VALLEY

W.H. PINE, Kansas State University, Graduate School, Manhattan, Kansas 66504

Irrigation is the most highly consumptive use of water in Kansas. Irrigation is increasing rapidly in Kansas where water supply (and precipitation) is limited. This project will estimate the value of water for irrigation along the Kansas River in eastern Kansas with precipitation ranging from 31 to 35 inches and with much of the land suitable for irrigation. Urban and industrial development are growing in the valley providing an expanded need for water. Competition for water is increasing. The estimated value of water for irrigation, costs for land preparation, installation and equipment costs, and operations costs. From this information the net returns from irrigation under different conditions will be estimated and used to determine the value of water for irrigation.

6.0237, IMPLICATIONS OF IRRIGATION TO THE MARKETING OF SPECIALTY CROPS

O. SORENSON, Kansas State University, Agricultural Experiment Sta., Manhattan, Kansas 66504

1. To provide farmers with information on the opportunities which exist in the marketing of specialty crops. 2. To determine the availability of market outlets for expanded specialty crop production and needed changes in market structure to handle increased output of these crops in Southwest Kansas.

DESCRIPTION OF WORK PROPOSED -- The procedure envisaged for this study is as follows: 1. To determine the extent to which specialty crops are now being produced under irrigation in Southwest Kansas and the availability of markets and marketing facilities for present crops. 2. To determine the extent to which the supply of alternative specialty crops is likely to be expanded in the future. This would consist of determining the competitive advantage of specialty crop production within the area specified, and the extent to which market demand will absorb potential increases in supply. 3. To study needed changes in the marketing structure for specialty crops in S.W. Kansas and make recommendations which will improve the efficiency of marketing specialty crops.

6.0238, A SYSTEMATIC STUDY OF RESPONSES TO IMPENDING INUNDATIONS AND THE DIRECTIONS OF IMPELLED POPULATION MOVEMENT

R.J. BURDGE, Univ. of Kentucky, Graduate School, Lexington, Kentucky 40506

The proposed research investigates the problems of social adjustment of a group of persons faced with forced migration due to impending inundation of their residences and community. Factors inherent with social change are investigated from the standpoint of community and family decision making. Finally, the study will investigate individual attitudes and responses to the forced migration from the standpoint of anticipated adjustment after migration.

To obtain information for the objectives of the study the following procedures will be employed. 1) A series of personal interviews will be administered to persons directly affected by the inundation 2) Participant observer techniques will be used to investigate the processes of community decision making

Data obtained from interviews will be analyzed to obtain information on factors involved in forced migration and recommendations regarding forced migration will be provided.

University of Kentucky

6.0239, ANTHROPOLOGICAL ANALYSIS OF SOCIAL AND CULTURAL BENEFITS AND COSTS FROM STREAM-CONTROL MEASURES

H.F. DOBYNS, Univ. of Kentucky, Graduate School, Lexington, Kentucky 40506

The proposed research would initiate policy science type anthropological baseline studies of three river watershed study units in central Kentucky where stream-control measures are anticipated within a few years.

Field research will focus on river watersheds, highway routes and roadsides, settlements and counties as units for data collection and analysis. A photographic record of man-made structures and their contents, settlement patterns, tools and machinery, vehicles, styles of clothing and occasions for their use, interpersonal interaction patterns, etc., will be emphasized. Data will also be systematically obtained by interviewing residents, by participant-observation of their activities, search for archival and newspaper documentation of social indicators supplemented by special records of local activities compiled by resident research aides.

Preliminary analysis will focus upon institutional differentiation of settlements, but will seek to identify ethnic group, social class, voluntary association and age distributions, and to begin to describe their characteristics, activities, and goal values.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch
University of Kentucky

6.0240, TAXONOMY AND PHYSIOLOGY OF PROTOZOA IN CAVE STREAMS AND POOLS

S.M. GITTLESON, Univ. of Kentucky, Graduate School, Lexington, Kentucky 40506

The proposed research involves laboratory and field investigations of taxonomy and physiology of protozoa in cave streams and pools. Preliminary studies in Pine Hill Cave Kentucky indicate that: 1) numerous species of protozoa do occur in significant forms in streams and pools that sink into the cave; 3) many of these protozoa have never been described.

This data suggests that knowledge of the role of protozoa in the ecosystem is important for understanding problems concerning the ecological impact of water development, ground water purity and effects of pollution on groundwater.

Investigations primarily at the Mammoth Cave National Park, Kentucky, will include study of samples from cave streams, pools and surface water related to: 1) identification of protozoa; 2) distribution of protozoa; 3) chemical analysis (ions, gases, total inorganic and organic carbon) and physical analysis (tempera-

ture, conductivity, viscosity; specific gravity) of the water; and 4) study of how peculiar conditions of caves - low temperature and absence of light effects type, number, survival, growth and motile behavior of protozoa.

SUPPORTED BY University of Kentucky

6.0241, THE ECONOMIC IMPACT OF FLOOD CONTROL RESERVOIRS

L.D. JAMES, Univ. of Kentucky, Water Resources Institute, Lexington, Kentucky 40506

The consequences of four flood control projects in Kentucky will be examined in detail on a post audit basis in order to determine whether costs and benefits actually realized correspond to those predicted during project planning. Specific topics to be studied include: 1. Deviations between planning and historical costs, 2. Effect of project construction on local employment, 3. Historical operation and maintenance, 4. Right-of-way costs and cost incidence, 5. Project build-up period, 6. Project effect on local economic activity and local economic structure, 7. Project effect on public facilities and community services, 8. Local public attitude concerning project, 9. Non-flood-control benefits, 10. Project effect on local tax revenues.

6.0242, A PRELIMINARY RECONNAISSANCE OF AREAS TO BE IMPOUNDED IN THE SALT RIVER BASIN OF KENTUCKY

L.A. KRUMHOLZ, Univ. of Louisville, Graduate School, Louisville, Kentucky 40208

A preliminary reconnaissance of the three areas to be impounded in the Salt River Basin will be made during the early spring of 1968. The three areas concerned are the proposed sites for Taylorsville Reservoir, Camp Ground Reservoir, and Howardstown Reservoir as outlined by the U. S. Army Corps of Engineers.

Particular emphasis will be placed on the reconnaissance of the Taylorsville site since it is the first to be built. The entire length of the main stem of the Salt River in the area to be impounded will be cruised on foot, and preliminary selection of sites for permanent collecting stations made. The stream beds of the principal tributaries will also be cruised on foot and sites for collecting stations recommended.

The entire main stem of the Salt River above the proposed flood pool will be inspected to determine characteristics of the stream bed as compared with the areas to be impounded. Sites for the other proposed impoundments will be inspected in as much detail as time permits.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch
University of Louisville

6.0243, A PRELIMINARY RECONNAISSANCE OF AREAS TO BE IMPOUNDED IN THE SALT RIVER BASIN OF KENTUCKY

6.0244, A PRELIMINARY ECOLOGICAL STUDY OF AREAS TO BE IMPOUNDED IN THE SALT RIVER BASIN OF KENTUCKY

L.A. KRUMHOLZ, Univ. of Louisville, Water Resources Laboratory, Louisville, Kentucky 40208

Three flood control reservoirs are proposed for the Salt River Basin of Kentucky. The first of these, Taylorsville Reservoir, has been authorized, and construction of the dam will begin in 1971. Construction on the second and third will begin at about three-year intervals. These reservoirs will be within an hour and a half driving time from Louisville and its metropolitan population of about a million people.

The overall project will include detailed studies of the impact of the impoundments on the biological, sociological, agricultural, and economic characteristics of the areas under the immediate influence of a large urban population. The biological phases of the study will include limnological and ecological studies of the aquatic environment and the contiguous terrestrial areas. Sampling and collection of data will commence in July 1968 and will continue at biweekly intervals at about 25 stations throughout construction of the dam and clearing of the Taylorsville Reservoir site and for at least five years after impoundment. Changes in water quality will be documented as they occur.

This project covers only the initial year of the biological phase of the study. Other phases of the study will begin no later than 1970.

6.0245, MANAGEMENT OF FOREST AND FARM GAME HABITAT - FISH POND MANAGEMENT

B.A. BATEMAN, Louisiana State University, Agricultural Experiment Sta., Baton Rouge, Louisiana 70803

Proposed work will center on: 1. Changes in habitat conditions caused by various cultural practices in the forest and on the farm; effects of shifts in crop production; effects of herbicides. 2. The recovery of heavily browsed forest in the Tensas Delta following a deer population reduction. 3. The effects of controlled fire on the food available for quail, turkey and deer. 4. The control of undesirable aquatic weeds in farm ponds.

SUPPORTED BY Louisiana State Government

6.0246, AN ECONOMIC EVALUATION OF THE TOLEDO BEND RESERVOIR PROJECT

W.J. STOBBER, Louisiana State University, Graduate School, Baton Rouge, Louisiana 70803

The Toledo Bend Reservoir is a project that is unique in that it has been jointly undertaken by the States of Louisiana and Texas without the assistance of Federal funds. The principal purpose of the reservoir is to store water for hydropower generation; and, consequently, construction has been financed by the sale of revenue bonds which are secured by long-term contracts with three electric utility companies. Recreational benefits as well as flood control benefits are also supposed to result from the project.

The proposed study would: (1) examine the political, legal, and financial arrangements that were necessary to bring the project to fruition; and (2), investigate the value of the benefits relative to the costs of the project, giving due consideration to the available alternatives. Because of its political and financial arrangements, the project represents an interesting case for study. Benefits and costs that enter into a decision of state governments do not necessarily coincide with the total social benefits and social costs, as state governments may be able to transfer part of the costs to non-residents. The primary purpose of this study is to measure the total benefits relative to total costs and to examine their distribution between residents and nonresidents.

6.0247, THE MANAGEMENT OF SHALLOW-WATER IMPOUNDMENTS FOR WATERFOWL

T. JOANEN, Rockefeller Wildlife Refuge, Grand Chenier, Louisiana 70643

In 1954 an intensive waterfowl habitat development program was begun on the 86,000-acre Rockefeller Refuge in Southwestern Louisiana. Since that time 13 impoundments or management units have been constructed with areas totaling 27,000 acres.

In order to devise methods of managing the impoundments for maximum waterfowl food production a study was begun in 1958. The purposes of the study were to determine the factors affecting the establishment of natural stands of vegetation and to develop methods of establishing certain species while controlling others.

The study involved monthly checks of the water level and salinity in the impoundments and control areas and annual sampling of the vegetation in the areas.

No termination date has been set for this study.

SUPPORTED BY Louisiana State Government

6.0248, EXPANDED AQUATIC PLANT CONTROL PROJECT

F.W. ZURBURG, Univ. of Southwestern La., School of Engineering, Lafayette, Louisiana 70506

A comprehensive study of a means for destroying alligatorweed through the use of chemicals. Biological study of the vegetation to determine what factors prevent translocation of herbicides. Development of a non-toxic spray which will destroy alligatorweed either by foliage applications or underwater attack on the submerged portions of the weed. Develop means of increasing the translocation of herbicides throughout the entire plant to include the buds located at the nodes of the plant from which secondary growth springs. Evaluation of water conditions as they apply to the plant. Examination of various products with respect to their possible use as a means for destroying the pest growth. Conduct of field tests under actual growing conditions to determine effects of various materials on the vegetation.

To date, the research workers at the University of Southwestern Louisiana have found that there is translocation throughout the plant from the leaf to the root; that the buds located at the nodes of the plant appear to be protected from the chemical which otherwise moves through the plant and are the source of regrowth under certain favorable conditions; discovery that certain materials when added to known herbicides appear to provide a means of penetrating into the buds and lead to their ultimate destruction. This latter development is under intensive study at the present time and will be reported on in the future as data is assembled.

Based on success of early experiments, studies now include use of some food acids as stimulants to action of 2,4-D.

Examination of herbicides for control of submersed vegetation is now in progress with early tests showing good promise on certain aquatic plants.

University of Southwestern Louisiana

6.0249, OYSTER LEASE CONTROL MONUMENTS - BAY ADAM, BASTIAN BAY AND SANDY POINT BAY AREAS

J.W. LAY, State Wildlife & Fish Comm., New Orleans, Louisiana

Objectives: The overall objective is to establish control monuments throughout the oyster growing areas of coastal Louisiana at 1/2 mile spacings on the land from which surveys of waterbottoms for oyster leases could be coordinated as a specific reference point. This work will be performed on a compartmental basis, working in each particular area until the job is completed as permitted by weather and tidal conditions. Each area will be selected on the basis of the greatest need; however, proximity of such areas will be carefully coordinated insofar as possible.

6. WATER RESOURCES PLANNING

Procedure and Work Schedule - 1. Monuments are to be set in place around the bays at approximately 1/2 mile spacings. 2. A Traverse Line will then be run, beginning from a known location of a U. S. C. G. Triangulation Station and joining all monuments together, and then tied into another U.S.C.G.S. Triangulation Station. 3. All oyster leases will then be tied into the designated base line monument.

6.0250, DISPOSAL OF PAPER MILL EFFLUENT THROUGH IRRIGATION OF BOTTOMLAND HARDWOOD UNDER LOUISIANA CONDITIONS

C.W. WILSON, Louisiana Polytechnic Inst. , School of Agriculture, Ruston, Louisiana 71270

The objective of the proposed research is to determine the economic and technical feasibility of disposing of paper mill waste water through irrigation of hardwood forests under Louisiana conditions.

A system for delivery of the waste water to the forest area to be irrigated will be designed. The probable increase in timber yield from irrigation will be determined. The waste water, stream conditions, and forest conditions will be studied. From this information, economic and technical feasibility will be determined. The effect of diverting paper mill waste water on water quality of Dugdemona River will be predicted.

The results of this study should be applicable to other waste water supplies in Louisiana.

6.0254, A RECONNAISSANCE STUDY OF THE CHEAPEAKE BAY

P.R. FARRAGUT, Regional Planning Council, Baltimore, Maryland 21202

The report discusses present and future problems confronting the region's shoreline. It synthesizes many of the narrowly focused technical studies completed in the past and presents them in a form which should be of interest to decision makers.

The study recognizes the many important relationships that exist along the bay shoreline at the interface of the land and water resource. The focus in this report is the water resource while a future publication will examine the land resource.

The report discusses physical problems associated with the regional shoreline such as erosion, sedimentation, tidal flooding and water characteristics such as excessive nutrients, polluted shellfish areas, thermal pollution, plant and animal nuisances, the importance of wetlands, and the Susquehanna River.

A separate chapter on water quality contrasts present conditions with the standards called for by the State's Water Quality Standards.

Finally, a functional listing of agency responsibilities and studies that may be of interest is listed under the various problem areas discussed in the text as well as certain economic indicators of the bay fishery, hunting activities, and the sport fishery.

Development

6.0255, RELATIONSHIP OF WATER AND LAND MANAGEMENT TO MOSQUITO BREEDING IN WATER IMPOUNDMENTS AND IRRIGATED FARM AREAS

C.H. SCHMIDT, U.S. Dept. of Agriculture, Beltsville, Maryland

Object: To study the bionomics and control of mosquitoes in relation to land and water management practices, with special reference to irrigated areas in the western States.

Plan of work: Biological, ecological, and control studies will be made of different species of mosquitoes found associated with mosquito breeding in irrigated lands, impoundments, mountain pools or swamps in order to relate mosquito production to specific soil and water management, and to develop ways to manipulate conditions or practices to inhibit mosquito production. Where this is not practical or feasible, insecticides, biological agents, etc. will be explored. Information will be developed on the taxonomy, distribution, seasonal succession, flight range, overwintering sites, egg laying sites, and autogeny of different species in relation to moisture, temperature, etc. This information will be used as a guide in developing soil and water management procedures that will create unfavorable breeding environments. Attention will be given to finding, evaluating and rearing parasites and pathogenic organisms that might be used in control. New insecticides will be evaluated as larvicides or adulticides, with particular attention to situations where resistance has rendered currently available insecticides ineffective.

6. WATER RESOURCES PLANNING

SUPPORTED BY U.S. Dept. of Agriculture

6.0256, ENHANCEMENT OF RECREATIONAL USES OF ESTUARINE WATERS THROUGH STUDY OF POTENTIAL CONTROL METHODS FOR STINGING SEA NETTLES

D.G. CARGO, Univ. of Maryland, Natural Resources Institute, College Park, Maryland

Sea nettles, with trailing tentacles heavily armed with stinging cells, seriously interfere with swimming, diving and boating in the Chesapeake Bay and other estuaries. In years of abundance, they are seriously detrimental to the economy of the resort areas and to the recreational activities of the public.

Research will be undertaken by the Chesapeake Biological Laboratory to complete the imperfect knowledge of the principal species, evaluate the role of these organisms in the ecology of the estuaries, examine the relationships which appear to exist between water quality and nettle abundance, and develop and test potential chemical and biological methods for reducing their abundance and the damage they inflict on individuals and the economy of affected areas.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch University of Maryland

6.0257, DESIGN CRITERIA FOR LIVESTOCK FARMSTEAD WATER SYSTEMS

E.E. JONES, Univ. of Maryland, Agricultural Experiment Sta., College Park, Maryland

Object: To determine engineering design criteria for livestock farmstead water systems.

Plan of Work: Determination will be made of the amounts and rates at which water is required at various points on the farmstead by each type of livestock enterprise, production processing area, and also to some extent in the farm home. The amount and rate of water use will be measured automatically by electronic equipment using remote recording meters installed in the water lines as sensing devices. Usage data for all branches of the water system will be simultaneously recorded on tape. Data on the hydraulic characteristics of existing farmstead water distribution systems will be analyzed to determine the effect of corrosion, scaling and other water quality factors on the pressures and flow rates in the distribution system, as well as on the service life and materials of the system. Where need is indicated, design criteria will be developed to allow for or correct these effects. Water demand patterns and rates will be analyzed for their effect on labor efficiency and design criteria studied to maximize this factor. Intermediate storage will be studied as a means of enabling low yielding sources to satisfactorily meet high peak requirements. Design criteria established in this study will be made available to manufacturers of water systems equipment.

6.0258, THE EFFECTS OF THERMAL LOADING AND WATER QUALITY ON ESTUARINE PRIMARY PRODUCTION

J.A. MIHURSKY, Univ. of Maryland, Natural Resources Institute, College Park, Maryland

The proposed research plan involves field and laboratory investigations directed towards determining the effects on estuarine primary production and standing crops by a) steam electric station operation, and b) nutrient additions. In addition, field studies will also examine the ecological role of fresh tidal marshes with regard to the utilization of nutrients from domestic sources.

Field investigations will include routine determinations of: (1) primary production by carbon-14 uptake (2) chlorophyll a (3) temperature (4) conductivity (5) salinity (6) methyl orange alkalinity (7) pH (8) inorganic PO₄ (9) total PO₄ (10) NH₃ (11) NO₂ (12) NO₃ (13) dissolved organic nitrogen (14) particulate nitrogen (15) particulate carbon (16) dissolved carbon (17) particulate carbohydrate. The above determinations will be made on a tidal system ranging from fresh water to about 15 parts per thousand salinity.

Laboratory investigations will examine (1) the effects of temperature changes on natural estuarine and uni-algal populations held in specially designed incubation chambers and thermal gradient blocks and (2) the effects of nutrients viz. NO₃, PO₄ etc. on primary activity of natural estuarine and uni-algal populations. Measurements of photosynthetic activity under laboratory conditions will be made by the carbon-14 technique, chlorophyll a content and density estimates by packed cell volume.

6.0259, DEMAND FOR AND AVAILABILITY OF LAND AND WATER ORIENTED RECREATION FACILITIES IN MARYLAND - ECONOMIC ANALYSIS

D.F. TUTHILL, Univ. of Maryland, Agricultural Experiment Sta., College Park, Maryland

1. To assess the existing facilities in Maryland for land and water recreation purposes. 2. To evaluate the present and future need for recreation facilities in Maryland, based on land and water resources, and analyze the economic potential for the state. 3. To collect cost data for construction and operation of recreation enterprises, particularly those suitable for the farmer or small businessman.

For Objective 1 - Available material on recreation facilities and use will be used and supplemented as necessary to provide the resource base information for recreation development. For Objective 2 - National information on population and income trends, expected increase in leisure time, and changing preference for recreation activities will be interpreted for Maryland conditions to help predict future need for and use of recreation facilities in Maryland. For Objective 3 - Costs and returns for recreation enterprises will be determined from existing data, or collected in field surveys of operating units. These costs and returns will help in decision-making of farms and business units, or for programming procedures in selecting optimum enterprise combinations.

SUPPORTED BY Maryland State Government

6.0260, AN INVESTIGATION OF FACTORS AFFECTING THE INTENSITY OF USE OF WATER RECREATION FACILITIES

D.J. VOLK, Univ. of Maryland, Graduate School, College Park, Maryland

The construction of new recreation facilities during the coming decades will require that careful attention be paid to their location if they are to be of maximum usefulness. Surprisingly little is known, however, about locational preferences of recreationists as reflected in their willingness to travel the distances necessary to make use of various types of recreation areas. This study is proposed to try to determine how far people are willing to travel to various types of recreation facilities, and to assess the importance of factors other than distance.

Data will be gathered on the place of residence of visitors to various recreation areas. Analysis of the data by multiple regression techniques will be undertaken to determine the effect not only of distance, but also of other social and economic factors such as income, urbanization, mobility, and the availability of competing facilities at comparable distances.

The study should be of value not only in estimating the potential demand for various proposed recreation areas, but also as a necessary preliminary step in some techniques for estimating recreation benefits.

The study is essentially complete and report is to be published in fall 1967.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch University of Maryland

6.0261, THE POTOMAC RIVER BASIN DEMONSTRATION PROJECT IN GEORGES CREEK

R.W. WIRGALL, Frostburg State College, Graduate School, Frostburg, Maryland 21533 (67-014-005)

6. WATER RESOURCES PLANNING

Objective NO. demonstrate how people in the Potomac Basin can be effectively involved in solving the problems and achieving multifaceted and interrelated objectives of the Potomac River Basin.

Objective No. or state plans for the Potomac to be ultimately effective must be based on a more precise and thorough knowledge of the critical resources at the local level, i.e., Georges Creek.

Objective No. authorities and local citizenry alternative solutions and proposals.

Objective No. how major problems and opportunities confronting George Creek can begin to be solved by action or implementing programs.

Objective No. to identify the sources of technical and financial assistance for the conduct of this demonstration project.

Frostburg State Teachers College

6.0262, RELATIONSHIP BETWEEN MOURNING DOVE PRODUCTION AND WATER DISTRIBUTION IN THE SONORAN DESERT

L.H. BLANKENSHIP, U.S. Dept. of Interior, Mig. Bird Population Station, Laurel, Maryland 20810

Objectives: 1. To determine the possible effect of changes in water availability to dove production in the Sonoran Desert. 2. To determine if the present distribution of water impoundments is sufficient to provide for mourning dove water requirements during the entire breeding season. 3. To determine the relative success of doves nesting near temporary and permanent water impoundments. 4. To determine if doves nesting near temporary impoundments (that dry up during the summer) will either cease to nest or move to more favorable water areas. 5. To determine how far doves may move to renest if local impoundments go dry.

Procedures: 1. Locate four permanent and four temporary impoundments in southern Arizona and establish these areas as study plots. 2. Visit each study plot at regular intervals to locate and maintain records on all nests. 3. Establish census routes at each study plot and also on an area devoid of water to help determine local nesting densities. 4. Mark nesting doves around temporary impoundments to determine movement and distances moved when impoundments go dry. 5. Count numbers of doves visiting each impoundment during specific daily time periods at regular intervals throughout the nesting season. 6. Keep records on general condition of impoundments, such as depth of water, livestock use, etc.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0263, DISTRIBUTION, LIFE HISTORY, AND ECOLOGY OF EURASIAN WATERMILFOIL

J.H. STEENIS, U.S. Dept. of Interior, Patuxent Wildlife Res. Ctr., Laurel, Maryland

Eurasian watermilfoil, an introduced submerged aquatic plant, is being found to be spreading rapidly throughout North America.

Studies on distribution, life history, and ecology of Eurasian watermilfoil are being intensified on the Chesapeake Bay area.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0264, SHELLFISH MORTALITY - CHESAPEAKE BAY

C.A. FARLEY, U.S. Dept. of Interior, Biological Laboratory, Oxford, Maryland

An investigation into the possible causes of shellfish (oyster) mortality in Chesapeake Bay has been initiated.

Intensive sampling of several areas in the Maryland portion of Chesapeake Bay indicated that relatively high mortality levels and MSX (multinucleate sphere of unknown taxonomic position) incidence occurred with regularity in the higher saline waters of Chesapeake Bay near the Virginia-Maryland boundary. Consequently, biweekly monitoring of this area for oyster mortality levels and disease incidence in sampled oysters, as well as to record ecological conditions was begun in April 1961, and continues to present.

Laboratory projects include histological comparisons between the normal and pathological conditions of sampled oysters; isolation and culture of protistan parasites, transmission experiments, identification and life cycle studies of heretofore unrecognized or unidentified pathogens, and histochemical studies aimed toward the elucidation of the biochemical changes that occur in both the parasite and host tissues during infection, and to discover possible rapid and differential diagnostic techniques for parasites in shellfish tissue.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0265, COMPARATIVE BIOCHEMICAL AND MORPHOLOGICAL CHARACTERISTICS OF MARINE FUNGI FROM SHELLFISH

S. GOLDSTEIN, U.S. Dept. of Interior, Biological Laboratory, Oxford, Maryland

Appropriate histological, histochemical, and cultural methods are used to determine the presence of fungal parasites in shellfish. With the use of conventional and laboratory prepared and modified media, isolations and clones are made of the fungi present in tissues. Physical and physiological parameters necessary for the growth and reproduction of the organisms isolated are established. Morphological properties and nutritional requirements of the isolates grown in vitro are described. Appropriate chemical and biochemical analyses are carried out on the isolates and supporting media so as to permit adequate characterization, possible identification, and to establish the taxonomic position of the isolates. The work is being undertaken at Brooklyn College.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0266, PACIFIC OYSTER MORTALITY STUDIES

A. ROSENFELD, U.S. Dept. of Interior, Biological Laboratory, Oxford, Maryland

Efforts are being made to identify or discover those factors, particularly disease agents, responsible for shellfish mortalities on the west coast of the United States and Canada. Epizootologic and pathologic studies are being conducted to determine timing, patterns, and possible causes of mortalities, and to determine pathogenicity of disease agents. Shellfish from exotic and domestic 'seed' supply areas are screened for micropathogens or disease organisms before introduction or importation of these shellfish into west coast growing areas.

Shellfish from several Far East potential 'seed' sources have been and are being examined microscopically for the presence of microparasites, micropathogens, and disease conditions. Many previously unobserved or unreported microparasites and disease conditions have been seen in these specimens. Reports and appropriate recommendations are sent to pertinent Pacific Coast state agencies, and when deemed necessary, recommendations for quarantines or embargoes on shipments are given.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0267, CULTURE OF SHELLFISH IN ARTIFICIAL AND NATURAL SALT PONDS

W.N. SHAW, U.S. Dept. of Interior, Biological Laboratory, Oxford, Maryland

Early in 1964, four one-quarter acre artificial ponds were completed near the laboratory at Oxford, Maryland. Studies are being conducted on the growth and survival of oysters in these ponds. Studies are being conducted in one of the ponds for catching oyster set and fattening oysters. Attempts to fertilize the ponds to increase productivity are underway.

Studies are planned on the growth and survival of oysters suspended from a rigid structure in the Tred Avon River adjacent to the laboratory. Preliminary studies indicate that the river is favorable for good oyster growth. Strings of oysters will be suspended and their growth and survival studied.

6. WATER RESOURCES PLANNING

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0268, ECOLOGY AND DISTRIBUTION OF OYSTERS AND CLAMS

W.N. SHAW, U.S. Dept. of Interior, Biological Laboratory, Oxford, Maryland

The natural populations of commercial shellfish in local areas have been delimited. Zooplankton and phytoplankton levels in shellfish producing areas are being determined and the organisms involved are being identified. The effects of physical and chemical factors on plankton, and on larval, juvenile, and adult stages of commercial shellfish are being determined. Qualitative and quantitative observations are being made on the invertebrate animals in local areas, and numbers and living habits related to effects on commercial species. Food webs, within the small estuarine tributaries of Chesapeake Bay, are being established. Ecological studies in large man-made salt water ponds have been undertaken, and all information, from natural and artificial situations, will be related to maintenance of shellfish in these ponds.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0269, GROWTH, CONDITION, AND SURVIVAL OF SHELLFISH

W.N. SHAW, U.S. Dept. of Interior, Biological Laboratory, Oxford, Maryland

In recent years the oyster industry in Chincoteague Bay has been importing oysters from other regions into the bay to hold for future marketing. At present, studies are being conducted to see if these oysters adapt to this new environment. Oysters from low salinity waters are suspended in trays in Chincoteague Bay. Their growth, condition, and survival are monitored.

Monthly, a comparative analysis is made on the conditions, percentage of solids, of oysters on two natural bars--one in broad Creek and one in the Tred Avon River. At each locality the effects of crowding and fouling are being studied.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0270, SURFACE TEMPERATURE STUDIES USING RADIOMETRY TECHNIQUES

C.C. BATES, U.S. Navy, Oceanographic Institute, Suitland, Maryland

Objective: To investigate large and small scale temperature variations in the apparent surface temperature of the world ocean using passive radiometric sensing techniques covering the IR and microwave bands. To analyze and correlate radiometric data from aircraft, spacecraft, and ground observations, for delineating major water masses, currents, river discharge patterns, ice distribution and movement, and rate of heat flow from ocean surface for air/sea interaction studies.

Approach: Use known relationships to design radiometer experiments over the water surface. Conduct aircraft flights with NASA, MW and IR sensors and correlate records with ground data. Conduct data analyses to identify and discriminate oceanographic phenomena which contribute to sea surface temperature.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0271, TEST SITE INSTRUMENTATION

UNKNOWN, U.S. Navy, Oceanographic Institute, Suitland, Maryland

OBJECTIVE: To utilize results of IITRI test site study by initiating a surface observational system at key test sites. To acquire the appropriate instrumentation for the near surface observations at oceanographic calibration test sites;

Approach: To compile a work statement for soliciting assistance of industry via request for proposals.

Status: Work statement partially prepared.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0272, APPLICATIONS STUDIES RELATED TO SEA SURFACE TEMPERATURE

UNKNOWN, U.S. Navy, Oceanographic Institute, Suitland, Maryland

Objective: To evaluate Nimbus IR data for ocean sea surface temperature distributions. To develop techniques to utilize satellite data for observing and predicting sea surface thermal gradients, cloud cover and ocean surface relationships, and the physical principles involved. To write a computer controlled program for full automatic utilization of integrated IR equipment in Apollo and future Earth Resources Spacecraft.

Approach: Utilize Nimbus, Tiros, NASA aircraft, and surface ship data for detailed thermal correlations. Perform calibration analysis between satellite data, ship data, and meteorological soundings to relate cloud data to ocean surface parameters.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0273, OCEANOGRAPHIC USES OF RADAR

UNKNOWN, U.S. Navy, Oceanographic Institute, Suitland, Maryland

Objectives: To investigate the accuracy attainable for measuring displacements of sea surface by radar altimetry and scatterometry for oceanographic applications (currents, storm surges, slide levels, and wave heights). To develop computer programs and procedures for improving wind field and wave forecasts from spaceborne radar data.

Approach: Analyze all radar data forwarded from the NASA and Navy remote sensing aircraft. Conduct theoretical studies based on nationwide capabilities in altimetry and scatterometry. Develop computer programs for spaceborne radar data input to already developed wave prediction programs.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0274, RADAR DATA ACQUISITION OVER OCEANOGRAPHIC TEST SITES

UNKNOWN, U.S. Navy, Oceanographic Institute, Suitland, Maryland

Objective: To obtain, process and analyze radar backscatter data over a variety of sea states and multifrequency, multipolarization radar imagery over the North Atlantic iceberg regions and over the Arctic test site at Pt. Barrow, Alaska with controlled surface data conditions. To obtain ocean sea state information from photographic records of the sea surface and develop statistical techniques to describe the sea surface in terms of its optical luminance.

Approach: To utilize the experience and expertise of the Wave Preparation Branch, Electronics Division, Naval Research Laboratory to determine the optimum frequencies, optimum polarizations, data processing techniques, power and antenna requirements and optimum orbit characteristics for most effective identification and discrimination of oceanographic phenomena. To utilize the variation of sea luminance cause by sea state (waves and white caps) to obtain and establish the functional description of various surface conditions and the corresponding luminance modulators.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0275, OIL SLICK ANALYSES

UNKNOWN, U.S. Navy, Oceanographic Institute, Suitland, Maryland

Objectives: To obtain reflectivity signatures by spectroscopy for various fish oils and vapors in laboratory, to extend spectroscopy technique to airborne instrumentation and investigate feasibility of oil slick and vapor detection from spacecraft.

Approach: Identify various fish and mineral oils and vapors with lab spectro-correlator, extend techniques to airborne sensor and finally to spaceborne sensors.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0276, DEPTH CONTOURING BY COLOR SEPARATION

UNKNOWN, U.S. Navy, Oceanographic Institute, Suitland, Maryland

Objective: To develop photographic masking techniques to provide photographic film density contours.

Approach: Utilize available spacecraft photographs taken over ocean areas of known depths, adapt the 'unsharp' photo-

graphic masking techniques to separate, and display areas of constant color tone (or photographic density). Evaluate the techniques and develop operations techniques to develop a rapid system to display water depth contours when they can be related to water 'colors'.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0277, SATELLITE SEA ICE STUDIES

UNKNOWN, U.S. Navy, Oceanographic Institute, Suitland, Maryland

Objective: The determination of rates of change of ice cover/water ratio, the relative distribution and rate of movement of ice for data usable by meteorological, shipping, and fishing organizations.

Approach: Utilization of presently available ESSA and Nimbus arctic imagery showing ice pack units, pack fringe widths, ice cover, areas of melt, ice pack movement, turbulent eddy cells, meandering, size, curl, and net ice transport, etc.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0278, DOUBTFUL HYDROGRAPHIC DATA

UNKNOWN, U.S. Navy, Oceanographic Institute, Suitland, Maryland

Objectives: (1) Identify features and conditions detectable from aircraft and spacecraft. (2) Determine electromagnetic frequency of sensor(s) which will provide results desired. (3) Substantiate theoretical approach with some field data. (4) Provide sufficient aircraft ground truth data to qualify techniques arrived at in first phase.

Approach: Develop theoretical approach to factors required to detect hydrographic features from spacecraft and test theory with surface and aircraft data.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0279, ANALYSIS OF MANAGERIAL, FINANCIAL, AND REGULATORY FUNCTIONS OF REGIONAL WATER RESOURCES AUTHORITIES AND OTHER INSTITUTIONAL ARRANGEMENTS

H.D. MESSER, Booz Allen Applied Res. Inc., Washington - Bethesda, Maryland

The purpose of this study is to analyze the managerial, financial, and regulatory functions of regional water resources authorities and other institutional arrangements and to analyze the impact of water rights doctrines on the practice of water management. The results of this analysis will provide a basis for the establishment of mechanisms for water resources management. Research results will be useful in improving management effectiveness through lessening of conflicts, uncertainties, and confusion among claimants to the resource. The major steps in this program will be: 1. Identification, collection, and organization of an appropriate information base 2. Analysis of functions of water resources authorities 3. Development of functional standards for regional water resources authorities 4. Analysis of functions of existing water resources authorities using standards developed 5. Development of alternative functional patterns of regional water resources authorities.

The study will be carried out by requesting information from water resources authorities by letters of inquiry, indexing this information, and using the resultant classification to accomplish the stated objectives.

6.0280, A METHODOLOGY FOR PLANNING OPTIMAL REGIONAL WASTE MANAGEMENT SYSTEMS

D.D. ADRIAN, Univ. of Massachusetts, School of Engineering, Amherst, Massachusetts 01003

A regional system of waste management encompasses several communities lying on the watershed of a stream which is used for effluent disposal. These communities may at present have various types of treatment plants. Regional planning is an attempt to maintain or to upgrade stream quality by expanding or adding

6. WATER RESOURCES PLANNING

new facilities while considering the region as whole rather than on a piecemeal, community by community basis. The expected outcome of this type of planning is the pooling or sharing of some facilities thereby significantly lowering the cost of meeting stream standards.

The overall objective of this research is to develop a practicable methodology for regional waste water management planning employing economic optimization techniques. It is proposed that this be done as follows:

A. Form a research team drawing personnel from several disciplines. B. Develop for each sub-system of the regional plan quantitative expressions defining and describing: 1. Physical relationships among variables. 2. Significant constraints on the sub-systems. 3. Cost functions. C. Construct over-all mathematical model integrating the above relationships. D. Adapt and develop techniques for model analysis and optimization. Code these techniques for a computer. E. Devise methods for testing the model in the absence of existing regional waste management plans and test the model in accordance with these methods.

6.0281, PROGRAMMED SELECTION OF OPTIMUM USES OF A SMALL WATER RESOURCE SUBJECTED TO COMPLEX SIMULTANEOUS DEMAND STRESSES

C.A. CARLOZZI, Univ. of Massachusetts, School of Agriculture, Amherst, Massachusetts 01003

The objectives of the total study are as follows: 1. To develop methods for relating the demand-supply information to determine present or anticipated stress on the water resource; 2. To simulate alternative use schedules and management inputs and test for optimum economic choices under various theoretical management and use schemes; 3. To develop methods for the graphic interpretation on watershed maps of probable sequential changes in the supply-demand relationships among the major water users by public and private economic sectors, geographic location, demographic features, and management inputs to 1977; 4. To develop methods for expressing the graphic information derived as a series of alternatives for choice in integrated watershed planning; 5. To develop a computer graphics program that has applicability to integrated watershed planning generally and that can present complex multivariate economic and statistical data in form easily assimilable and meaningful to planners and decision makers in public and private roles.

The purpose of the project is to develop an improved method for attaining optimum use of a small water resource by analyzing and synthesizing diverse data on water demand and related supply through the tools of computer graphics and multivariate systems simulation. This integrated project will draw information on water use and management from several disciplines: forestry, fisheries, wildlife ecology, resource planning, economics, engineering, business management and recreation.

6.0282, ENHANCEMENT OF ECOLOGIC AND AESTHETIC VALUES OF WETLANDS ASSOCIATED WITH INTERSTATE HIGHWAYS

C.A. CARLOZZI, Univ. of Massachusetts, School of Agriculture, Amherst, Massachusetts 01003

The objectives of the study are as follows: (1) To develop design and management criteria for protecting coastal wetlands and developing small water impoundments in conjunction with Federal Interstate Highway Construction in relation to wildlife and fish habitat improvement in Massachusetts and Southern New England. (2) To develop visual-aesthetic design and management criteria for such impoundments and wetlands in relation to highway beautification. (3) To examine existing statutory, institutional and administrative provisions and their application and improvement in order to create a procedure for implementing the design and management proposals in the interstate Highway program.

The purpose of this study is to examine the ecological and aesthetic characteristics of water resources formed or altered dur-

6. WATER RESOURCES PLANNING

ing the construction of major highways in order to derive approaches for purposefully using such water bodies to enhance wildlife and fisheries potentials and landscape beautification.

This will require research in two distinct but intimately related parts. Part one will involve the nature of the biological and physical changes consequent and subsequent to highway construction. Part two will examine the legal, institutional bases relating to the implementation of highway construction plans and the administration of resources resulting for multiple purpose highway development.

6.0283, A COMPENDIUM OF WATER LAW AND ECONOMICS IN NEW HAMPSHIRE

R.H. FORSTE, Univ. of Massachusetts, School of Agriculture, Amherst, Massachusetts 01003

The considerable body of statutory and common law relating to water rights in New Hampshire exists in a diffused form throughout state statutes and in court decisions over a period of more than 150 years. Some of these statutes and decisions have relevance to water law and use today; other statutes and laws that have been in effect for over a century may impose adverse effects on the economic efficiency of water use and the distribution of income associated with particular water users. The objectives of this study, therefore, are: (1) to describe relevant existing statutory and common law as it relates to water resources in New Hampshire; and (2) to assess the economic effects of these laws on water users and use patterns in qualitative terms, in areas of water quality, diversion, accessibility, multiple use, and so forth.

Legal research is being performed mainly at the law offices of Alexander J. Kalinski, 51 High Street, Manchester, New Hampshire.

6.0284, INSTITUTIONAL PATTERNS FOR EVOLVING REGIONAL PROGRAMS FOR WATER RESOURCE MANAGEMENT

I. HOWARDS, Univ. of Massachusetts, Bureau of Government Research, Amherst, Massachusetts 01003

Greater research emphasis on the institutional aspects of water resources planning and development is considered necessary if we are to maximize on the potential contribution of the various public and private interests involved, and at the same time minimize the conflicts among them. Such conflicts, arising frequently after detailed planning has taken place and alternative solutions proposed, constitute a real and recognized barrier to more rational and efficient planning and administration. This research project proposed is designed to overcome such barriers.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch
University of Massachusetts

6.0285, THE USE OF AERIAL PHOTOGRAPHS TO EVALUATE THE RECREATIONAL RESOURCES OF A RIVER

W.P. MACCONNELL, Univ. of Massachusetts, Agricultural Experiment Sta., Amherst, Massachusetts 01003

Objectives: (a) To develop and test the use of aerial photogrammetric techniques as a tool for identifying and classifying river-based recreation sites, (b) to examine and map a large river by these methods and make recommendations for its recreational use, and (c) to determine the land use changes which have taken place along a portion of the river since it was last photographed in 1952.

The river to be studied is the Connecticut River. Refinement of analytical techniques will be based on a study of the River in Massachusetts; later the entire river will be studied from its source in northern N. H. to its mouth in Connecticut. The entire length of the river will be photographed in a swath at least 500 inches wide on either side. These photographs will be examined photogrammetrically with frequent ground checks to determine

what can be detected with respect to (a) the land bordering the river -- accessibility, locations for parking, camping, and picnic areas, scenic overlooks and other picturesque sites, soil drainage, and characteristics of vegetation, (b) the shoreline-- beach sites, dock sites, shoreline fishing and hiking, and (c) the river itself -- water depth, flood level, currents, nature of the bottom, physical obstacles, navigational landmarks, aquatic vegetation.

A classification system for recreational use of a river will be developed and the entire river will be analyzed, mapped, and classified.

6.0286, THE ECONOMICS OF WATER SUPPLY AND QUALITY

R. DORFMAN, Harvard University, Graduate School, Cambridge, Massachusetts 02138

The objective of this research is to develop improved methods of planning water resource developments in situations where municipal and industrial water supply and pollution problems are significant.

This work is comprised of three essential parts. First is the study of the economics of water pollution abatement at the waste source and the construction of functions which reflect the losses and benefits associated with alternative abatement measures such as low flow augmentation, long-distance waste transport and in-stream treatment. Second is the study of the economics of municipal and industrial water supply and the development of improved benefit and loss functions for water system performance. Finally these economic functions will be incorporated into simulation models of the Delaware River basin and estuary with the objective of developing improved methods for planning water supply and pollution abatement policy.

SUPPORTED BY U.S. Dept. of Interior - F. Water Pol. Ctl

6.0287, OPTIMUM LINEAR SYNTHESIS IN URBAN HYDROLOGY

P.S. EAGLESON, Mass. Inst. of Technology, School of Engineering, Cambridge, Massachusetts 02139

The goal of this research is to develop and evaluate a new method for the prediction of the entire hydrograph of surface runoff given the time-distribution of rainfall excess. The method is to have an accuracy and to involve a computational effort which are compatible with its incorporation into algorithms for the optimal design of urban drainage systems.

Development of the method will involve systematic investigation of the errors introduced into analytical models of surface runoff systems by linearization and by lumping of systems which are inherently distributed and non-linear. These aspects of the research results will be of equal value in the development of improved analytical models for forecasting the surface runoff component of streamflow in rural areas also.

6.0288, SYSTEMS METHODOLOGY FOR WATER-RESOURCE PLANNING IN A REGIONAL DEVELOPMENT CONTEXT

R.T. MCLAUGHLIN, Mass. Inst. of Technology, School of Engineering, Cambridge, Massachusetts 02139

Research on the use of mathematical models and systems analysis in planning for comprehensive development of water resources in river basins or other hydrologic units. The relationship of such developments to the social and economic activity of the region in which the unit is located is also being considered. Simplified mathematical models are being investigated for possible use in obtaining approximate answers in the early stages of a planning study. The results of the simplified models are being checked against results of simulation.

6. WATER RESOURCES PLANNING

SUPPORTED BY Massachusetts Institute of Technology

6.0289, BIOLOGY AND CHEMISTRY OF MARINE PLANKTON POPULATIONS

B.H. KETCHUM, Woods Hole Oceanographic Inst., Woods Hole, Massachusetts 02543

The short term changes which proceed during the growth of plankton populations are to be studied in the Gulf of Maine. A parachute drogue attached to a radio buoy is used to identify a particular patch of water and observations are made close to the buoy. The objectives of this program are to evaluate quantitatively the turnover rates of the nutrients and to study rates of decomposition in situ. It has been postulated that in situ recycling of elements maintains the level of productivity in parts of the world throughout much of the year, but no useful estimates of recycling rates have been available. Additional studies include the changes in the vertical distribution of chlorophyll and the rate of sinking of particles, the changes in the ratio of elements in particles as they sink and decompose in the water column, and diurnal variations in the rate of photosynthesis as a function of the chlorophyll content of the water. Studies of the vertical distribution of the zooplankton are included since a substantial part of the regeneration of elements may result from the phytoplankton respiration and zooplankton consumption and digestion of particulate matter in the sea.

SUPPORTED BY U.S. Atomic Energy Commission

6.0290, PHYSIOLOGY AND BEHAVIOR

T.A. EDSALL, U.S. Dept. of Interior, Biological Laboratory, Ann Arbor, Michigan

Laboratory and field studies are underway to determine the potential productivity of Lake Michigan for intermediate and top carnivores. Recent biological changes in Lake Michigan that have altered the lake's trophic structure are under investigation. Analysis of food chains and energy flow within and between trophic levels will include studies of food preference, food competition, and the efficiency of utilization. The effects of the chemical and physical factors of the environment on the physiology and behavior of native and exotic species are being investigated. Special emphasis will be placed on determining the role of these factors as controlling mechanisms in energy flow and productivity in the ecosystem.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0291, ECOLOGY OF C. BOTULINUM IN THE COMMERCIAL FISHERIES ENVIRONMENT

J.T. GRAIKOSKI, U.S. Dept. of Interior, Technological Laboratory, Ann Arbor, Michigan

In studies concerning the ecology of *C. botulinum* in the fisheries environment, the distribution, types and relative numbers in fish, bottom sediments, water, contiguous soils, and in the cycle of handling and processing of fish and fishery products is being determined. Areas of interest are the Great Lakes Region and commercial fishing areas of the North and South Atlantic fisheries not being surveyed by other groups under similar programs. Organisms obtained in these studies are being identified and classified according to classical methods and immunoserological techniques. Field studies, specifically in the Great Lakes region, are being directed towards looking for reservoirs of botulinum spores and the preformed toxin, including the possibility of a cycle of transfer of the organism and the preformed toxin from elements of the fishery food chain to fish and to waterfowl.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0292, RESEARCH ON THE MACROBENTHOS OF THE GREAT LAKES

J.K. HILTUNEN, U.S. Dept. of Interior, Biological Laboratory, Ann Arbor, Michigan

The objective of this project is to determine the kinds of bottom dwelling invertebrates and their ecology in offshore areas of the Great Lakes.

Research on freshwater macrobenthos can yield data on the availability of fish food organisms and provide insights into the relationships between species and water quality. Studies of bottom fauna currently undertaken include Lakes Ontario and St. Clair and the Apostle Islands region of Lake Superior. In Lakes Michigan and Erie benthological research is confined mostly to taxonomy and ecology of microdrile oligochaetes. Among aquatic invertebrates, populations of oligochaetes are generally the best indicators of pollution.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0293, LAKE SUPERIOR EXPLORATIONS

N.J. REIGLE, U.S. Dept. of Interior, Exptl. Fish & Gear Res. Base, Ann Arbor, Michigan

The decline of high-value, food fish species and increases in populations of low-value fish stocks have left the Lake Superior fishermen with little chance to earn satisfactory incomes with traditional gill nets, trap nets and pounds nets. Systematic exploratory fishing operations are being conducted for locating and assessing the potential commercial yield of additional or alternate fish stocks; introducing existing gear from other areas or improved or new methods and equipment to allow efficient and economical harvest of these populations; surveying the physical characteristics of Lake Superior to ascertain suitability for various types of fishing gear; and determining the seasonal availability of various species in order to stabilize production and counteract the effects of seasonal gluts.

Otter trawls are being evaluated to determine the effectiveness of this gear for more economical exploitation of the abundant species such as chubs, smelt and suckers. Continuing studies will provide the basis for sound management of the available resource and permit economical, year-round utilization of underutilized species.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0294, DISTRIBUTION AND ABUNDANCE OF ZOOPLANKTON IN LAKE ERIE

J. REYNOLDS, U.S. Dept. of Interior, Biological Laboratory, Ann Arbor, Michigan

This project is aimed at obtaining good estimates of relative abundance and standing crop of common species of zooplankton in Lake Erie. Such estimates require a knowledge of the variation in catch contributed by factors causing other than real changes in biomass (i.e., apparent changes due to sampling). Initially, a restricted area in Lake Erie will be sampled to determine the extent of sampling error. Subsequent experiments will attempt to quantify those ecological relationships which significantly mask the real changes in zooplankton abundance. Considering present knowledge of zooplankton ecology, some of the factors studied will be light, oxygen, temperature, diurnal movement, and horizontal distribution. Proper treatment of the data will require multiple regression analysis and multiple analysis of variance using the high-speed computer. Inclusion of any significant ecological factors as an adjustment in estimation would increase the precision involved in detecting real changes in zooplankton abundance. Hopefully, these improved estimates may give additional meaning to the relation between density of zooplankton and survival of certain species of fishes in Lake Erie, particularly young-of-the-year. The project will begin during May 1967.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0295, EARLY LIFE HISTORY OF COREGONIDS

L. WELLS, U.S. Dept. of Interior, Biological Laboratory, Ann Arbor, Michigan

Little or nothing is known about the early life history of coregonids, and of related ecological events and requirements. This study is exploring means of locating and collecting juvenile coregonids from hatching through their second year. Only recently has it been possible to collect larvae and fry in limited numbers, but methods to locate and catch young from the middle of their first year until the start of their third year have not been found. Once satisfactory means of collection have been

6. WATER RESOURCES PLANNING

developed, studies will be directed to their distribution, growth, and mortality in relation to the physical, chemical, and biological characteristics of the environment. The results of this study will be used in making estimates of recruitment and early mortality in population studies.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0296, DECISION MAKING UNDER UNCERTAINTY - ECONOMIC EVALUATION OF STREAMFLOW FORECASTS

A. BRINSER, Univ. of Michigan, Graduate School, Ann Arbor, Michigan

Research is intended to develop a model of estimating the net benefits to selected classes of users of water services from successive increments of improvement in the reliability of water supply forecasts; to develop improved criteria for comparing the value of incremental increases in the reliability of water supply forecasts with that of incremental increases in total usable supply obtainable from weather modification or watershed treatment, as these values are assessed by several classes of users; and to suggest an appropriate level of intensified operational activity and research effort directed toward technologically feasible improvements in streamflow forecasting techniques.

A product of the research will be a model for estimating the value of increased certainty of streamflow, together with empirical tests of the model, based on data gathered in the field in selected basins.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0297, COMPUTER SIMULATION OF EFFECTS OF LAND MANAGEMENT AND WEATHER MODIFICATION ON WATERSHED ECOSYSTEMS

C.F. COOPER, Univ. of Michigan, Graduate School, Ann Arbor, Michigan

Objective: To develop improved computer simulation models for preliminary evaluation of the effects of land use and weather modification on watershed ecosystems and on the quantity, quality, and timing of water yields.

Procedures: (1) Review existing simulation models. (2) Test multivariate statistical techniques for mathematical description of ecosystem structure. (3) Develop preliminary simulation model of a small forested catchment. (4) Test and refine preliminary model against observed data. (5) Determine response of hypothetical ecosystem to changes in weather inputs. (6) Define gaps in existing data programs and analytical procedures.

SUPPORTED BY U.S. Dept. of Agriculture

6.0298, URBAN WATER POLITICS AND DECISION MAKING IN THE DETROIT METROPOLITAN REGION

W.R. GABLE, Univ. of Michigan, Institute of Public Admin., Ann Arbor, Michigan

The proposed research program involves both literature and field investigations designed to understand and develop a conceptual structure for the decision making process relating to water resources in The Detroit Metropolitan Region.

Institutional relations as they affect water resource actions provide the central focus for investigation. The main approach is to study the political process as it provides the interlinkages among institutions, and thus motivate and condition decisions that will be made by each.

Literature investigations will include that relating: (1) decision making with respect to water management and/or metropolitan government, and (2) conditions and actions regarding water resources in the study region.

Field investigations will rely primarily upon interviews with principal actors and other 'water influentials' in the metropolitan area. Interviewing strategies will be adapted to different needs. It is anticipated that questionnaires will be employed in surveying differences of perceptions of the various interests in water resources.

An information-political 'model' will be developed for one river basin in the metropolitan fringe to illustrate political interac-

tions between water interests in the fringe area and the water interest in the metropolitan core.

Political decisions and arrangements in water affairs will be identified and evaluated in terms of criteria for optimal water use.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0299, INFRARED IMAGER STUDIES

D. LOWE, Univ. of Michigan, Institute of Sci. & Technology, Ann Arbor, Michigan

Objectives: Develop experiment techniques for interpretation of infrared data. To provide instrument and interpretation support to various users of infrared data returns. Determine experimental goals that can be achieved with Infrared Imaging instrumentation as applied to discovery of minerals, water resources, oceanographic features, etc.

Approach: Conduct studies for instrumentation covering the emitted and reflected IR spectral band. Define instrument parameters required to accomplish various user discipline objectives. Conduct an investigation to determine optimum signal processing techniques.

Status: Completed evaluation of IR scanner for an early Earth Resources mission. Conducting conceptual design studies for space instrumentation. Evaluating signal studies for space instrumentation. Defining experimental goals that can be achieved with imaging instrumentation.

SUPPORTED BY U.S. Natl. Aero. & Space Adm.

6.0300, FARM FISH POND MANAGEMENT

R.C. BALL, Michigan State University, Agricultural Experiment Sta., East Lansing, Michigan 48824

Estimate production of plants and animals per unit area or volume of water in farm type ponds, and natural ponds. Determine to what extent fertilization of ponds will increase production of fish food (plankton, insects) and fish. Devise practical management programs for farm ponds; this includes the number of fish to plant and harvest. Detect and measure possible detrimental effects of use of fertilizers in fish ponds.

Description of Work: Measurement of release of stored nutrients in the subaqueous soils by addition of chelating (EDTA, etc.) materials to the waters will be made by chemical methods.

Evaluation and tracing of the paths of nutrients added to the waters will be possible through the tagging of the nutrients with radioactive tracers (p32), and the fate of these in bottom deposits.

The rates of fixation of nutrients and accumulation of organic material (basic productivity) will be measured by the C-14 light-and-dark bottle technic. This will be correlated by light-and-dark bottle methods of determining of production of oxygen and pond-biota respiration. Input of solar radiation will be measured by Eppley pyrheliometer and submarine photometer.

Michigan State Government

6.0301, DYNAMIC SYSTEM MODELING AND SIMULATION OF A RIVER BASIN

G.A. COULMAN, Michigan State University, School of Engineering, East Lansing, Michigan 48824

The dynamic phenomenological characteristics of a segment of a river basin are to be mathematically described. The system will provide a detailed hybrid computer simulation for study of the variation in time of the significant variables of the river. Once firmly proven to accurately represent the system, the simulation will provide a facility for deterministic and stochastic response studies of projected regional changes and natural occurrences.

During the initial period of this work, it is expected that a major portion of the model will be developed and justified.

6.0303, STUDIES ON PLANTED BROOK TROUT IN RELATION TO NUMBERS PLANTED, LIMNOLOGICAL CONDITIONS AND FOOD SUPPLIES IN UNFISHED LAKES

H. GOWING, State Res. & Dev. Division, Lansing, Michigan 48926

Objectives: To investigate the population of stocked brook trout in lakes closed to angling when stocked at various numerical levels; to determine the extent that these fish utilize or ignore sources of available food; to learn if methods can be devised to increase the growth and/or survival rates of the planted fish.

Procedures: In the fall of 1965, six lakes on the Pigeon River Fisheries Research Area were stocked with fin-clipped 5 to 6 inch brook trout at levels of 50, 100, and 500 fish per acre. The mortality rates of these fish in the absence of angling has been followed, and will be followed, by spring and fall population estimates. From 10-20 fish collected monthly, growth is measured, and stomach samples are obtained for food habits analysis.

Detailed bottom food sampling is done 4 times yearly in West Lost Lake to estimate the types of bottom food available, and the crayfish population of this lake is estimated to measure the abundance of this food form. Tests of correlation between the above data and the growth records and food studies should provide some measure of the amount of use of the available trout foods. Water chemistry and temperature data on all experimental lakes are recorded at regular intervals.

6.0304, HYDROLOGY OF RIVER-BASED RECREATION

G.E. HENDRICKSON, U.S. Dept. of Interior, Geological Survey, Lansing, Michigan

Purpose: To analyze the hydrologic factors related to use of cold-water rivers in a glacial terrain, to provide guidelines for assessing the potential recreational value of such rivers, and to determine how development by man in the watersheds affects the recreational value of the streams.

Methods: On the basis of streamflow and water quality records, geology, topography, and amount of development, select representative rivers in northern Michigan. Assemble information regarding streamflow characteristics, stream morphology, water temperature, ground-water levels, and areas of ground-water discharge. Obtain information on recreational potential of rivers, including fish populations and present and future use for fishing, boating, and camping. Interpret relationships of recreational uses to hydrology of the watershed. In developed watersheds obtain information on surface and ground water withdrawals, disposal of sewage and other wastes, regulation by dams, and indirect controls by timber-cutting and other changes in land use in the watersheds. Report on relationships of characteristics of stream-

flow, water quality, and stream morphology to river-based recreation.

6.0305, ECONOMICS OF FLOOD CONTROL STRUCTURES IN THE LOWER MINNESOTA RIVER WATERSHED DISTRICT

L.E. SAMSTAD, Lower Minn. Rivr. Wat. Dist., Burnsville, Minnesota

The purpose of this study is to provide (a) a survey of existing flood control structures, (permanent and temporary) protecting towns and industries in the Lower Minnesota River Valley; (b) a tabulation of costs of these structures; (c) a tabulation of the savings which accrue from these structures; (d) a study of the indirect benefits of flood proofing; (e) an objective economic appraisal of these flood control structures based on existing conditions.

The Lower Minnesota River Watershed District encompasses several towns (Carver, Chaska, Shakopee, Savage, Burnsville, Bloomington, Mendota Heights and Mendota, Minnesota) all lying along the banks of the Minnesota River at its terminus or confluence with the Mississippi River. Many flood control structures have been erected to protect these towns as well as large industries such as Cargill, Inc.; Northern States Power; and American Crystal Sugar, Inc.

These flood control measures in the lower reaches of this river valley have not been evaluated as to effectiveness in harnessing the ravages of severe floods.

This study would detail the existing flood control measures. Costs of this flood protection measures (permanent and temporary) would be tabulated. A determination would be made of all direct savings from these structures based on past floods. The investigators would evaluate the economic advantages and disadvantages of all types of flood proofing encountered.

An analysis of existing methods would lead other investigators to help evaluate their success, from engineering and economic stand points, and hopefully lead these investigators to new and improved methods of flood proofing in similar river valleys.

6.0306, HYDROLOGIC ASPECTS OF WATER LAWS IN MINNESOTA

W.C. WALTON, Univ. of Minnesota, Water Resources Research Ctr., Minneapolis, Minnesota 55455

Perhaps the greatest concern felt by water users in Minnesota is the apparent uncertainty and variability of their water rights. Our entire system of water is based on uncertain tenure arrangement subject to administrative water permits and regulations and judicial determination of reasonable and beneficial public use. Both surface and groundwater property rights are incident to the ownership of land. To operate effectively the water right must be capable of coping with the physical uncertainty of water resources, the fugitive and fleeting nature of water resources which creates problems of commonality or spillover effects of use, technical aspects of the hydrologic cycle, and diversions of water resources from one basin to another. This research is directed toward fully understanding water laws in Minnesota and their relation to hydrologic cycle events and improving water laws to make them hydrologically sound.

Office investigations will include: 1) collection of data on all direct and indirect water laws in Minnesota; 2) Collection of available data pertaining to the hydrologic cycle and water use in Minnesota; 3) collection of data on water resources institutional environment in Minnesota; 4) study data to identify advantages and disadvantages of current water laws with respect to hydrologic cycle events; and 5) formulation of hydrologically sound water laws.

6.0307, HYDROLOGIC PARAMETERS CONTROLLING RECREATIONAL USE OF MINNESOTA RIVERS

R.F. BROWN, U.S. Dept. of Interior, Geological Survey, Saint Paul, Minnesota

Purpose - To determine the effect of hydrologic parameters - streamflow, water quality, geology, stream morphology - on recreational use of selected rivers in Minnesota.

Methods - Selected Minnesota rivers have been designated by the State as 'Wild Rivers' and knowledge of the geologic and hydrologic environment of these streams is required by conservationists and recreation managers and planners to evaluate their recreational use. Available records of streamflow, water quality and geology will be evaluated in terms of the controlling influence of these parameters on the present and future recreational value of the rivers. Longitudinal profiles of streams will be made, channel morphology will be studied, and additional measurements of streamflow and water quality parameters will be made and their relation to recreational use will be evaluated.

SUPPORTED BY U.S. Dept. of Interior - Geological Survey
Minnesota State Government

6.0308, VALUE PRODUCTIVITY OF WATER IN AGRICULTURE

J. BURNS, Univ. of Minnesota, Agricultural Experiment Sta., Saint Paul, Minnesota

Objectives: To estimate the value productivity of water in agricultural uses, and analyze the economic effects of technological improvements in the efficiency of water use in agriculture.

Approach: Data describing water use for irrigation and other agricultural uses will be collected and analyzed to determine value productivity. The analyses will devote special attention to the effects on water use efficiency from improvements in water supply and use technology. Estimates will be made of marginal value products of resources used in irrigated and nonirrigated farming in Minnesota and other North Central States. Existing techniques for estimating demand for irrigated acreage in the United States will be examined and modified on the basis of the estimates of value productivity of water and other resources used in irrigation farming.

6.0309, ECOLOGY AND MANAGEMENT OF BOUNDARY WATERS CANOE AREA CAMPSITES

S.S. FRISSELL, Univ. of Minnesota, Graduate School, Saint Paul, Minnesota

This project is designed to provide the basic data necessary for the development of a program of wilderness campsite management in the Boundary Waters Canoe Area of the Superior National Forest, Minnesota. The study is divided into five sub-projects to investigate the following: 1. The supply of currently used campsites, their physical characteristics, location with respect to potential campsite areas, and the possibility of shifting use from over-used sites to new sites; 2. The form and severity of changes in the wilderness environment on campsites in areas with different geology, soil type, and vegetative cover; 3. The rate of change which takes place with use; 4. The effectiveness and acceptability of techniques for closing over-used campsites; and 5. The effectiveness and acceptability of various techniques for rehabilitating over-used wilderness campsites.

SUPPORTED BY U.S. Dept. of Agriculture
University of Minnesota

6.0310, ECONOMIC PROBLEMS IN THE USE, ALLOCATION, REGULATION AND PRICING OF WATER

P.M. RAUP, Univ. of Minnesota, Agricultural Experiment Sta., Saint Paul, Minnesota

To estimate supply and demand for water for agriculture and competing uses, currently, and for years to come; explore economic consequences of existing laws and doctrine; examine

economic issues involved in competition for water among agricultural, recreational, municipal, and industrial uses; appraise alternative forms of organization for conservation, use, and regulation of water resources; and study data bearing on conflicts between public and private rights in control over water resources.

Description of work: Supply and demand for water in Minnesota will be determined; and adequacy of current legislation regulating permits by Division of Waters and Department of Conservation will be tested, and method evaluated. Conflict between public and private interests, and ownership rights will be studied and economic issues examined. Cost of development; division of costs and benefits among users, and delineation of public and private interests will be determined. Detailed research procedures will be developed through joint investigations by economists and law students and professors, and actual research will also be conducted by them. After two years, research will be coordinated with neighboring states making similar investigations to obtain maximum value.

SUPPORTED BY U.S. Dept. of Agriculture
Minnesota State Government

6.0311, ECONOMICS OF WATER QUALITY CONTROL IN THE UPPER MISSISSIPPI RIVER (MINNESOTA)

J.J. WAELTI, Univ. of Minnesota, School of Agriculture, Saint Paul, Minnesota

Objectives: The overall objective of the project is to formulate an economic optimizing model for water quality control and sewage disposal on selected stretches of the upper Mississippi River. The model will be designed to serve as a useful basis for public policy decisions in Minnesota with respect to both the water quality standards adopted on particular segments of the River and for least-cost-methods of attaining given standards. The methodology developed would be expected to be adaptable to water quality problems elsewhere.

Specifically, the model would be useful in answering such questions as: 1. What is the least-cost strategy of attaining given water quality parameters, taking into account-a. Natural assimilative capacity of the river; b. Variations in flow; c. Alternative levels of treatment; d. Alternative locations of treatment; 2. What are the economic benefits associated with alternative standards? Taking into account the above, 3. What are the costs and benefits associated with raising or lowering water quality standards on particular stretches of the River? 4. What are the policy implications for stream standards versus uniform effluent standards for all waste dischargers?

6.0313, THE IMPACT OF RESERVOIRS ON LAND VALUES - A CASE STUDY

D.C. WILLIAMS, Univ. of Southern Mississippi, Graduate School, Hattiesburg, Mississippi 39401

This project studies the effect of reservoir construction on land values. Land values in the area around the reservoirs and

6. WATER RESOURCES PLANNING

determined for periods before and after construction and compared with settlement values where land was taken as part of the reservoir.

The case study method is employed and the Ross Barnett Reservoir in central Mississippi was selected for study. Land values will be determined from records of land sales and personal interview with buyers and sellers. These data are to be collected on a sample basis. An analysis of results is included.

Although this is a case study of only one reservoir, it is felt that some general conclusion may be drawn because of the size and location of the reservoir. Similar studies at other reservoir sites may be undertaken after completion of this study.

Mississippi State University

6.0317, AN ANALYSIS OF PRICING PRACTICES AND POLICIES OF WATER SERVICE UTILITIES IN SMALL COMMUNITIES IN MISSISSIPPI

G.T. PEDEN, Mississippi St. University, Graduate School, State College, Mississippi 39762

During the first three to six months, the members of the Bureau staff assigned to the project will collect data on water rates from municipalities having populations of between 2,500 people and 10,000 people. It is felt that the water service utilities in these towns will be small enough to be subject to inadequate price policies, but large enough so that a good price policy could have a marked effect on the financial structure of the water service utilities.

After all the information is collected, an analysis will be made of each community's pricing practices using economic and financial principles as criteria. Then the most widely accepted practices among the communities will be selected to formulate the representative pricing practices of the communities.

The final step will be to develop a set of pricing procedures or practices commensurate with the average plant size and general community objectives with the aim or goal being a generally applicable pricing model that the communities could apply in determining their water rate structure.

University of Missouri

6.0322, AN ECONOMIC ANALYSIS OF THE PUBLIC WATER SUPPLY DISTRICT

C.G. MCNABB, Univ. of Missouri, School of Agriculture, Columbia, Missouri 65202

The overall purpose of this project is to describe and analyze certain economic and social aspects relating to the growth, development and operation of the public water supply district. Data will be secured from records of the supervising agency, records of local districts and from interviews with members of local organizations.

The specific objectives will be (1) to develop concepts and provide information about the growth and development of the public water supply district, (2) to identify problems associated with their development and operation and (3) to identify and analyze economic and social factors associated with sound planning, financing and management of the public water supply district.

6.0323, ECONOMIC AND LEGAL FACTORS IN PROVIDING, USING, AND MANAGING WATER RESOURCES IN AGRICULTURE

F. MILLER, Univ. of Missouri, Agricultural Experiment Sta., Columbia, Missouri 65202

Objectives: The objectives of the regional project relate to both qualitative and quantitative aspects of water use problems in the North Central Region. The objective of the Missouri contributing project is to determine the economic considerations that affect use and management of water in agriculture and competing uses.

Description of work proposed: Economic returns to investments in supplemental irrigation in Missouri will be estimated. Results from this analysis will permit estimation of the value that can be imputed to water used for irrigation. This value can then be compared with that in competing uses.

6.0324, COLORADO COMPREHENSIVE PLAN FOR OUTDOOR RECREATION

W.R. CHENEY, Midwest Research Institute, Kansas City, Missouri

Objectives of this project are to develop local participation data from primary sources to be used in updating the Demand, Supply, Needs, and Action portions of the Comprehensive Outdoor Recreation Plan for Colorado. Data from a study of the Economic Impact of Hunting and Fishing Activities by resident population are also being collected for use in a separate study as well as inclusion in the plan. The study is proceeding approximately on schedule. The data produced will provide a statewide mapping system on transparent overlays: county boundaries; highways, cities and towns and water courses, base map coding system with recreation inventory plotted, and topography at a scale of 1:250,000. This information is to be made available at the cost of reproduction to all agencies requesting data.

Procedure: Personal household interviews are being conducted on a statewide basis. Households are selected on the basis of a random sampling plan stratified by county, region, and S.M.S.A. Data will be projected on the basis of current population studies to the years 1970, 75, 80, 90, 2000, 2010 and 2020, for the Recreation Study. These projections when compared with measures of existing and potential supply will be used as the basis for needs statements now and in the future. The project was started in fiscal year 1967-68.

6.0325, DEVELOPMENT OF A STATE WATER PLANNING MODEL

D.W. BOYD, Montana State University, School of Engineering, Bozeman, Montana 59715

The State of Montana Water Resources Board has been charged by the State Legislature with developing a State Water Plan. In fulfilling its mission, the Water Board inevitably will have to cope with and evaluate innumerable proposals and requests from all quarters. The Water Board, therefore, urgently needs a specially structured simulation model which will permit the rapid evaluation of a proposed river basin treatment and determination of the probability of achieving the desired goals.

The systems approach will be applied to the design of a State Water Planning Model, by implementing orderly systems engineering methodology based on the thesis that the dominating factor in the complex system is the large quantity of information involved. The Model will incorporate such Operations Research techniques as simulation and input-output analysis. A Sigma 7 digital computer will be utilized in the simulation of various management policies.

Development of a single watershed model for the Yellowstone River basin will proceed concurrently with the decomposition, analysis and structuring of the state-wide system. The Yellowstone model will then be interacted with other aspects of the system, and will form a unit of the State Water Planning Model.

6.0326, A STUDY OF WATER RESOURCES RESEARCH NEEDS IN MONTANA

C.C. BRADLEY, Montana State University, Graduate School, Bozeman, Montana 59715

This is a one-year project (July 1, 1968 - June 30, 1969) with the objective of identifying the major water problems of Montana as a basis of establishing goals, directions, and priorities for the Montana Joint Water Resources Research Center.

The procedure envisions the creation of several task forces involving about five faculty members each, coordinated by a

6. WATER RESOURCES PLANNING

council composed by task force chairmen under the leadership of the principle investigator.

The mission of the task forces will be to identify the major water related problems of the state, and to break these down into an integrated group of research-size packages, which in turn become specific attainable goals for faculty members and other research personnel working directly or indirectly with the Montana WRRRC.

The project will start at Montana State University and later will be expanded to include the University of Montana and Montana College of Mineral Sciences and Technology.

The work of the task forces and coordinating council will be organized into a report at the end of the project period.

6.0327, THE ECONOMICS OF WATER TRANSFER - AN APPRAISAL OF INSTITUTIONS

H.C. HOLJE, Montana State University, Agricultural Experiment Sta., Bozeman, Montana 59715

(1) To appraise the legal-institutional-administrative devices and processes through which transfers of water between uses and users take place and (2) To assess the consequences of these devices and processes on the economic efficiency and equity of water use and (3) To suggest desirable modifications in these devices and processes that might enhance economic efficiency or equity in the use of water resources.

To describe the functional structure of the selected water right complex vis-a-vis the marginal value product of water use in each category of use. Appraise the results from such alternative modifications against the criterion of maximized marginal value product to water use. To conclude as to the hypothetical ideal of efficiency and the political ideal of attainability relative to each of the programmed modifications. Regional synthesis of the findings will be undertaken in one or more regional publications.

6.0329, SOCIAL CHANGE IN A WATER RESOURCE DEVELOPMENT AREA - SOCIAL ASPECTS OF THE CONSTRUCTION PHASE OF LIBBY DAM

H.J. TURECK, Montana State University, Graduate School, Bozeman, Montana 59715

The small town of Libby, Montana (population in 1965 was slightly over 4,000) is the site of the construction of Libby Dam. This project is to take five years and will bring about 15,000 newcomers into the area during construction. The objectives of this research are concerned with establishing 'benchmark' attitudes regarding the construction, displacement of some residents, present recreational patterns, recreational potentials represented by the reservoir, and social changes brought about by increased population and economic development. Longitudinal study will then catalogue changes in these attitudes during the construction period. The impact of the rapidly changing problems of communi-

ty development will also be studied during the construction period. The overall objectives of the research are: (1) to gather information about changing attitudes, values, and social interactions in a small community undergoing high social impact, and (2) ultimately to provide useful information to decision-makers in the area of water resource development.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0330, EFFECTS OF DEWATERING ON A TROUT POPULATION

A.H. WIPPERMAN, State Fish & Game Department, Helena, Montana

The purpose of this project is to determine if reduced stream flows affect a trout population, and if so, what flows are required to sustain a trout population of value to recreational fishing. A second objective is to determine how dewatering affects the physical features of the stream.

An artificial dewatering system was constructed on Blacktail Creek in Southwestern Montana in the spring of 1965. A diversion canal and diversion structures were constructed so that various reductions in flow could be made in three consecutive stream sections.

The study plan for 1967 will involve dewatering the entire study area 90 percent below low normal summer flow. Dewatering will begin in early June and terminate in early September. The fish population will be inventoried with the aid of shocking gear prior to and at the conclusion of the dewatering period. Fish traps will be maintained at each end of the dewatered area to determine fish movements in or out of the area.

Physical features of the stream channel will be measured at low normal flow and at the dewatered flow. Measurements will include widths, depths, volume, cover, and velocities. These physical features will be correlated with the fish population at normal flows and at dewatered flows.

Work and data collection will be conducted during the summer of 1967. Report writing will follow completion of data collection.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0331, ECONOMIC SURVEY OF BEAVERHEAD COUNTY, MONTANA

M.C. JOHNSON, Univ. of Montana, Graduate School, Missoula, Montana 59801

An economic study of Beaverhead County, Montana, in 1964 prior to utilization of water from the Bureau of Reclamation's East Bench Unit project. This project will provide full irrigation services for 21,800 acres of land not previously irrigated and supplemental water for 28,000 acres that were under irrigation before construction of the project.

An interim study of secondary data will be performed in 1971 following the availability of 1969 Census of Agriculture and 1970 population census. A final study and evaluation to measure the effects of the irrigation project on Beaverhead County and surrounding trade centers will be conducted in 1975 and 1976. This will represent a 10-year time span essentially coinciding with the end of the development period and will also permit the full utilization of 1974 census of agriculture data.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

6.0332, WATER AND RECREATION USE, BLACKFOOT RIVER DRAINAGE, WESTERN MONTANA

C. MALOUF, Univ. of Montana, Graduate School, Missoula, Montana 59801

This study will concentrate on the recreational uses of the Blackfoot River system, in western Montana. The objectives are three-fold: 1) Use of portions of the river course for recreation by local residents, and by visitors. Visitors come from three large communities on three sides of the drainage area. 2) To study the extent of seasonal uses for recreation through summer and winter, fall and spring. 3) To establish new uses for the area and to determine its recreational potential.

6. WATER RESOURCES PLANNING

The communities nearby which make wide use of the river system are Great Falls on the east, Missoula on the west, and Helena on the south. To the northward are primitive areas and Glacier National Park. Use by people from outside the regions mentioned will also be determined. The drainage includes high mountain ranges, many lakes capable of supporting boating facilities and fishing, forest and parklands, and some sizeable rivers. There are at present no ski reports here.

Data will be collected which can be tabulated. The investigators will make samplings during various seasons by contacting people who are making current use of the recreation offerings in this region.

University of Montana

6.0333, LEGAL RESEARCH, WRITING AND DRAFTING TOWARD IMPROVING MONTANA WATER LAWS

A.W. STONE, Univ. of Montana, Joint Water Resour. Res. Ctr., Missoula, Montana 59801

Previous allotments resulted in an initial draft of a comprehensive surface and groundwater code for Montana which was completed in time to be used during the 1967 legislature. It needs further work on its organization and on some of the drafting, as well as revision of parts of that draft.

There is a need for legal research on the background at common law and in Montana law of the public interest in the use of waters, hopefully leading to a clarification of that interest as well as a basis to support legislation on the subject.

Water Conservancy District Legislation has been considered by state agencies, the legislature and private organizations. No such law has been enacted. Legal work on this is needed, and will be pursued with the Montana Conservation Council.

6.0334, SAUGER AND WALLEYE INVESTIGATIONS IN THE MISSOURI RIVER

L. MORRIS, State Game & Parks Commission, Lincoln, Nebraska 68509

The objectives of this job are to determine the daily and seasonal activity patterns of sauger and walleye adults which congregate during the spring immediately below Gavins Point Dam. Their population sizes will be determined also.

When these fish congregate immediately below Gavins Point Dam in the spring they constitute an important sport fishery; however, their movements and habits during the remainder of the year are largely unknown. This segment, as in the two previous segments, we will tag a large number of adults when they are congregated below the dam. The movement information gained from sport fishermen's return of tags will be added to that already gathered in order to discern movement patterns. The determination of movement patterns by returned tags has been slow but each year's information improves our understanding of both distance and time of movements. Fish tracking transmitters, if they are available, may be used to facilitate this determination.

In addition, we will estimate the population size (modified Schnabel Method) in the stilling basin in order to determine the size of the resource.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.
Nebraska State Government

6.0335, FLATHEAD CATFISH INVESTIGATIONS IN THE MISSOURI RIVER

L. MORRIS, State Game & Parks Commission, Lincoln, Nebraska 68509

The objective of this study is to improve our understanding of recent flathead catfish population changes in the Missouri River.

Previous work done under this job suggests that the flathead catfish population has declined since 1964 expressed primarily as a sharp decline in numbers of fish over 13 inches. During this segment we will attempt to pinpoint the year of life and size at which flathead catfish numbers decline. To accomplish our objective we

will study flathead catfish environmental requirements through the use of radio transmitters, and their age, rate of growth, and food habits. We will also investigate the amount and availability of food organisms of the flathead catfish.

The data to be collected during this segment will be analyzed and compared with the flathead catfish life history information from earlier segments. In this manner we hope to determine precisely both the reasons for and the time of life at which flathead numbers decline.

It is expected that the collection and analysis of data will be largely the responsibility of a graduate student, Mr. Delmar Holz, of the University of Missouri.

6.0336, INPUT-OUTPUT ANALYSIS OF WATER USE FOR NEBRASKA INDUSTRIES - WATER RESOURCE PLANNING - WATER DEMAND

A.W. EPP, Univ. of Nebraska, School of Agriculture, Lincoln, Nebraska 68508

We plan to determine the input-output relationship for water for each major segment of industry in Nebraska including agriculture. We will study the water use interrelationships among industries and the possibilities for multiple use of water. Further studies will be made to determine the opportunities for locating industries to obtain maximum benefits from the available water. It appears possible to develop a programming model that will permit electronic computation of optimal allocation of the available water resources to the various uses. This project will be started in fiscal 1966 and should be completed in fiscal 1968.

6.0337, THE OPTIMUM RELEASE POLICY FOR A MULTIPURPOSE RESERVOIR USING STOCHASTIC HYDROLOGY

W.S. BUTCHER, Univ. of Nevada, Desert Research Institute, Reno, Nevada 89507

For a multipurpose reservoir with realistic constraints, and using the historical streamflow record this project will develop an optimum release policy to give maximum expected annual benefits and will determine the risk and uncertainty associated with these returns.

The method will be developed using one or more particular projects as examples. Monthly streamflow will be regarded as a non-stationary Markov Chain and will use dynamic programming to determine the optimal release policy.

Using synthetic hydrology, Monte Carlo methods will be used to determine the risk associated with the annual returns when the optimal policy is used as an operating policy.

The method to be developed on this project will be able to be used in planning studies to determine direct benefits possible from a multi-purpose facility. In addition the method will produce a release policy capable of being used in real time operation of a reservoir.

University of Nevada

6.0339, RESEARCH AND ANALYSIS TO PLAN, DEVELOP, AND MANAGE A GROUND AND SURFACE WATER SUPPLY

P.A. DOMENICO, Univ. of Nevada, Water Resources Research Ctr., Reno, Nevada 89507

This research has four objectives: 1) to analyze sources of ground and surface water supplies and determine the optimal methods of integrating these supplies, 2) to determine the optimal institutional arrangements for planning, implementing, and managing selected alternative supply integrations, 3) to determine values of water for alternative uses, and 4) to analyze pricing policies and their effects for various uses.

The area of Las Vegas Valley, southern Nevada, was chosen because its problems apply to other arid and semi-arid regions. The problems are acute in that ground-water recently has been over-developed, which has precipitated surface-water importation from Lake Mead. The area is the fastest growing urban region in the United States. Thus, how a new and rapidly growing population plans and organizes for optimal water management is crucial to all arid and semi-arid regions.

Minimizing total annual costs is the objectives function, and mathematical programming will be used to determine optimal water supply integrations. Present and proposed institutional arrangements and water laws will be analyzed through legal research and field interviews. Economic and statistical models will measure values of water in alternative uses, and selected pricing schemes will be investigated to determine water use effects.

6.0340, APPLICATION OF SIMULATION THEORY TO WATER RESOURCES PLANNING AND MANAGEMENT

G.B. MAXEY, Univ. of Nevada, Water Resources Research Ctr., Reno, Nevada 89507

This research is directed toward development of criteria whereby manifestations of various types of management decisions affecting the optimization of a complex river system may be analyzed and evaluated. Secondly this research is directed toward a detailed study of a) the feasibility of applying a recently developed hydrological simulation technique on a large and very complex hydrological system, and b) the effectiveness of such a technique as a guide in water resources planning.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0341, STATE WATER LAW ORIENTATION TOWARD SCIENTIFIC AND TECHNOLOGICAL BASES FOR EFFECTIVE PLANNING AND MANAGEMENT

J.C. OHRENSCHALL, Univ. of Nevada, Desert Research Institute, Reno, Nevada 89507

This research has four objectives: (1) analysis of one or more systems of Western state water laws to determine the historical and socio-political bases for legal classifications and doctrines; (2) determination of the extent to which decision-makers must ascertain common sources of supply; (3) investigation and resolution of conflicts in Western water legislation with the desirability for planning and management purposes of treating all water resources and rights uniformly on a scientific basis; and (4) preparation of recommendations for the water law systems selected for study.

Comprehensive river basin planning and management depend upon allocation of water rights; these depend upon state laws. A model state system of water law should encourage maximum development and security of water rights. The first step is to accommodate state water laws to scientific and technological reality. How to accomplish this step is crucial to all regions of the nation, particularly to the West where water is a regional scarcity and has already become an over developed resource.

Present and proposed institutional arrangements and water laws, including allocations of water among states, will be analyzed through legal research, field interviews, and hydrologic applications in Nevada and similarly-situated neighboring states.

6.0344, TEMPERATURE TOLERANCE OF MARINE ANIMALS THROUGH BEHAVIORAL RESPONSES

D.W. BRIDGES, U.S. Dept. of Interior, Sandy Hook Marine Lab., Highlands, New Jersey

Introduce acclimated and non-acclimated marine organisms into waters of various temperature regimes; observe and measure behavioral patterns such as rate of feeding of fishes, cirral activity of barnacles and pumping rate of bivalves. Diagnose range of temperature in which experimental animals are able to maintain normal behavior as well as determine the thermal death point(s) for these organisms.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0345, DISTRIBUTION OF YOUNG STAGES OF COASTAL FISHES

J. CLARK, U.S. Dept. of Interior, Sandy Hook Marine Lab., Highlands, New Jersey

A survey is to be made of the continental shelf from Cape Cod, Mass. to Cape Lookout, N.C., utilizing the research vessel Dolphin. The goal is to determine relative abundance of young of the major game species in the open estuaries, along the coast, and seaward onto the continental shelf. A series of 14 transects will be established; each extending from the shore to at least the 50-fathom contour. Eight cruises will be made at approximate 1-1/2 month intervals throughout one year. Collecting stations will be spaced along the lines at approximate 10 mile intervals; somewhat closer near shore. At each station along the survey transects a 30-minute oblique tow will be made with 1) a modified Gulf III sampler for larvae and 2) a special 20 foot mid-water trawl for juvenile fish. All fishes taken will be identified to species and isometric chart. of abundance of eggs, larvae, and juveniles will be drawn.

6. WATER RESOURCES PLANNING

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0346, INFLUENCE OF THE PHYSICAL ENVIRONMENT ON DISTRIBUTION OF YOUNG STAGES OF COASTAL GAME FISH

R. STONE, U.S. Dept. of Interior, Sandy Hook Marine Lab., Highlands, New Jersey

The fate of critical young stages of coastal migratory fish is governed largely by conditions of the physical environment. Physical measurements of the continental shelf waters will be concurrent with the collection of ichthyoplankton (see 2541-01- in an attempt to relate the distribution of young stages of fish to physical conditions in the environment. Hydrographic stations will be made on each of eight cruises from Cape Cod, Mass., to Cape Lookout, N.C., along 14 transects. Observations will include temperature, salinity, oxygen content and turbidity. Drift bottles and bottom drifters will be released at each station.

6.0347, AN ENGINEERING-ECONOMIC STUDY OF THE INDUSTRIAL GROWTH POTENTIAL OF THE UPPER PASSAIC RIVER BASIN

A.H. SPINNER, Stevens Institute of Technol, Graduate School, Hoboken, New Jersey 07030

New Jersey's eminence as an industrial state has been due in part to industry's settling and growing along its waterways, such as the Passaic River. The complexion of industry has changed as water requirements, river characteristics, and social, political and legal constraints have altered. Further changes in the complexion of industry along the Passaic River can be expected as a result of the promulgation of new water quality standards. It is hoped that the guidelines developed in this study will assist in an orderly industrial growth. Of perhaps equal importance are the methodology and simulation model which will be available for other similar river studies.

The objective of this study is to develop a plan to attain preferential growth patterns for industrial development in the Upper Passaic River Basin given multi-purpose use of the river.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch Stevens Institute of Technology

6.0348. EFFECT OF WATER QUALITY ON RESIDENTIAL LOCATION DECISIONS

J.L. BEYER, Rutgers The State University, School of Agriculture, New Brunswick, New Jersey 08903

An exploratory project to investigate the probability of finding enough information to warrant an intensive study of the economic effects of water quality--or changes in water quality--on residential location decisions. with deterioration in the quality of surface waters, as this deterioration affects the aesthetics of the environment, seems a reasonable one to make. There are few data, however, from field studies to support the assumption. It would be useful to explore the perception of those engaged in buying, renting, selling, or taxing land and homes with respect to the values they attach to pleasant water environments. The hope here is that a measure can eventually be made of the costs of not maintaining such an environment and their willingness and/or ability to pay is also part of the study.

The Raritan River Basin is suggested as the locus of such a preliminary study. It is a well-defined physical unit with a range of occupance patterns from rural to heavily industrial. Studies of pollution have progressed to the point where adequate information is now available about the actual quality problem for the Raritan and many of its tributaries. Access to developers, real estate dealers, residents, potential buyers, farmers, tax assessors, and conservation workers (watershed association members, etc.) is possible and anticipated.

This preliminary study will be useful primarily in determining the need for more intensive research in an area of decision making which has many implications for planning and future development in a rapidly urbanizing area of New Jersey.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch Rutgers The State University

6.0349, THE EFFECTIVENESS OF GOVERNMENTAL ACTION FOR WATER POLLUTION CONTROL IN NEW JERSEY

P.H. BURCH, Rutgers The State University, Graduate School, New Brunswick, New Jersey 08903

The objective of this research is to determine the factors which contribute to the effectiveness of governmental action for the control of water pollution. The factors in a given watershed which lead to the development of a pollution problem will be analyzed; the pertinent aspects of government in the watershed will be assessed; and both will be correlated with measurements of the effectiveness of pollution control activities. The study will proceed from an initial phase involving a survey of the literature and interviews with experienced water pollution control personnel, through the development of hypotheses, the testing of the hypotheses in a number of case studies of New Jersey watersheds, and the development of generalized conclusions and recommendations for public policy.

6.0350, A STUDY OF THE DEMAND FOR OUTDOOR RECREATION BASED ON THE ANALYSES OF THE NATIONAL RECREATION SURVEYS OF 1960 AND 1965

P. DAVIDSON, Rutgers The State University, Graduate School, New Brunswick, New Jersey 08903

The Bureau of Outdoor Recreation initiated a supply inventory for public recreation facilities throughout the United States. In 1960 the Outdoor Recreation Resources Review Commission sponsored a National Recreation Survey for each quarter of 1950; this was followed up by a similar Survey of Outdoor Recreation Participation by the Bureau of Outdoor Recreation in 1965.

The purpose of this project is to analyze the interactions of demand and supply variables which jointly determine participation patterns of different cross section segments of the population for different activities. A theoretical as well as an empirical model will be used to test different economic hypotheses for different factors, which determine participation in Outdoor Recreation.

The water based outdoor recreation activities have been considered primary activities in this study. This is true because they are important from the demand side because of the vast numbers of participants and from the supply side because of the extensive data that the B.O.R. has inventoried disaggregating recreation water by quantity and quality.

SUPPORTED BY U.S. Dept. of Interior - Bu. Outdoor Rec.

6.0351, URBANIZATION AND ITS EFFECT ON WATER RESOURCES

M. MARCUS, Rutgers The State University, Graduate School, New Brunswick, New Jersey 08903

The proposed research is intended to identify, describe, and project major processes of urbanization in relation to land use and water pollution aspects of water resource development. The study will define urbanization in terms of industry and households as the two major urban water user groups.

Dr. Marcus proposes to analyze the aggregate area (New Jersey) economy as a set of industries in which urbanization characteristics can be examined and for which projections can be attempted. Existing industry, employment and population data will be used. The analysis will be organized to describe anticipated changes in the economic dimensions of newly urbanized areas and project industrial growth into the future.

Dr. Newling proposes to analyze the spatial structure of urban population and areal growth on the basis of a simple urban growth model which uses a density-distance relationship. The technique will be applied to selected test areas using parameters developed from available census and residential land use data. Test projections of increased population and densities will be made for periods of 10 to 20 years in duration.

6. WATER RESOURCES PLANNING

Dr. Genetilli proposes to study the development of the raw organic pollution load over a period of years in three key watersheds, i.e., the Millstone-Stony Brook, the Raritan, and the Passaic. Following this, a statistical analysis and correlation will be carried out to determine the relationship between growth of pollution load on one hand and growth of population and of specific types of industry on the other. These parameters will then be applied to economic and demographic projections to determine what growth of raw organic pollution load may be expected in key river basins of the state up to the year 2000.

6.0352, THE IMPACT OF SUBURBAN DEVELOPMENT ON THE WATER RESOURCES OF NEW JERSEY.

B. NATHAN, Rutgers The State University, Agricultural Experiment Sta., New Brunswick, New Jersey 08903

OBJECTIVES: To compare the water balances of small watersheds occupied by properly managed farms and/or woods to those of matched watersheds occupied by suburban developments.

To determine the practices which will best contribute to proper conservation of existing water and soil resources in agricultural areas undergoing suburban development.

WORK PROPOSED: Rainfall will be measured in a network of standard gauges. Evaporation will be determined with standard pans. Elevations of the water table will be recorded with observation wells and stage recorders. Runoff will be determined in appropriate locations by standard flumes. Stream flow will be determined and recorded by electric velocity probes and current meters and standard hydraulic procedures. Soils will be sampled and moisture contents determined periodically by standard methods. Records of temperature and relative humidity will be kept.

6.0353, IMPROVEMENTS TO THE BOROUGH OF NEW PROVIDENCE SEWAGE PUMPING STATION AND TREATMENT FACILITIES

J.T. MCCANN, New Providence Government, New Providence, New Jersey 07974

It is proposed to install two high rate trickling filters designed to accommodate the extreme range of flows which occur during periods of rainfall, one trickling filter would be constructed with a plastic filter medium; the other would be provided with conventional trap rock or stone filter medium. Following the filters, facilities will be provided to add polyelectrolytes and other chemicals to improve sedimentation efficiency in the final settling tank, also a part of this project. Chlorination facilities will be provided to disinfect the final effluent.

This project will also include the necessary evaluation required to meet the demonstration program objectives. A monitoring program will be pursued, designed to thoroughly evaluate the operation and effectiveness of the separate treatment units as well as the overall effectiveness of the entire installation. The system operation shall be varied so as to develop the most effective and economical plant operation to achieve the desired results.

6.0354, ESTUARINE DREDGE HOLE INVESTIGATIONS

W.S. MURAWSKI, State Div. of Fish & Game, Trenton, New Jersey

Objectives: To summarize our studies on the ecology of submarine estuarine dredge holes, especially in regard to finfish habitation.

Procedure: Information relative to the location of estuarine dredge holes, their area, depth and other physical characters gained during the course of four years of field work will be analyzed and brought together in a final report.

6.0355, DETERMINE ECOLOGICAL CHANGES RESULTING FROM IMPOUNDMENT

W.E. SHOEMAKER, State Div. of Fish & Game, Trenton, New Jersey

Objectives: To determine ecological changes resulting from impoundment and record the appearance of new vegetation on the dikes with special reference to undesirable vegetation.

Procedures: Prepare cover type maps of the impoundments and establish permanent transects to determine changes in major vegetative types. Record species of vegetation within the impoundments, both submerged and emergent; their densities by estimated percentages; and their heights. Make note of any undesirable vegetation which becomes established on the dikes or within the impoundments. In addition, cost figures will be recorded for maintaining desired water levels.

6.0356, PATTERNS OF POLICY MAKING IN WATER RESOURCES DEVELOPMENT

H. INGRAM, Univ. of New Mexico, Graduate School, Albuquerque, New Mexico 87106

This study aims to set up a model of how the political system in an arid Western State responds to the problems raised by water being a scarce natural resource. The model is to represent the process through which consensus is constructed and maintained on a water policy, and how disagreement which threatens consensus building is handled in the decision making process. Propositions are deduced from the model relevant to the behavior which can be expected of certain actors under certain circumstances. These propositions are tested in a specific instance of water policy making. A case study is made of New Mexico's role in the Colorado River Basin Development controversy. The usefulness of the model is assessed on the basis of the validity of the propositions as tested.

6.0357, PROJECTING THE DEMAND FOR AND SUPPLY OF WATER

N. WOLLMAN, Univ. of New Mexico, Graduate School, Albuquerque, New Mexico 87106

Significance: The nation is faced with numerous problems associated with meeting current and prospective demands for water use. One of the most difficult tasks that has been faced by policy makers and the public generally in dealing with these problems is that of securing a reasonably accurate picture of the water demand-supply outlook. Over the past several years Resources for the Future has supported a series of studies aimed at providing a foundation for a better assessment of the national water situation. The first of these efforts was a study conducted by Professor Wollman under the sponsorship of Resources for the Future and with the cooperation of the Senate Select Committee on National Water Resources and the federal agencies. This study was published as a report of the Senate Select Committee on National Water Resources in 1960. Because of the tentative nature of the results, Resources for the Future has made additional grants to the University of New Mexico for continuation of this line of study under Professor Wollman's direction. Although the further work advanced the methodology of this kind of appraisal, it has not been possible in view of the complexities and difficulties encountered to bring the research to a satisfactory conclusion.

Specific Aims and Expected Results: The general purpose of the study would be to further the development of a methodology for appraising from a national point of view the water demand-supply situation in the United States. The specific objectives would be to: 1. Devise, demonstrate and test a methodology for projecting water supply and demand by regions of the United

6. WATER RESOURCES PLANNING

States. 2. Provide an up-to-date and greatly improved set of water supply and demand projections for the 22 major river basins of the United States. The major emphasis in the study would be upon the development of analytical models, the appraisal of the suitability of available data for making projections, and the determination of data deficiencies.

6.0358, CULTURAL AND MANAGEMENT STUDIES FOR GRAIN SORGHUM ON THE HIGH PLAINS OF EASTERN NEW MEXICO

N.R. MALM, New Mexico State University, Agricultural Experiment Sta., Clovis, New Mexico 88101

Objectives: 1. To determine the effects of plant spacing in single and double rows on yield of grain, plant height, test weight, tillering, grams of seed per head, and other agronomic characters under irrigated conditions. 2. To determine the effects of iron and zinc applied as a foliar treatment on the production of grain sorghum. 3. To determine the effects of several micro-nutrients on the production of grain sorghum. 4. To determine the production of grain sorghum as affected by various water management practices.

Description of Work Proposed: Four experiments will be conducted to determine the effect of: 1) various plant populations; 2) foliar treatment with iron and zinc; 3) micro-nutrients; and 4) irrigation treatment on grain production and other agronomic characteristics of grain sorghum. Other agronomic characteristics noted in addition to yield will be flowering date, plant height, exertion and test weight. For the micro-nutrients experiments, iron, zinc, boron, copper, and manganese and molybdenum will be applied to plots receiving near-optimum nitrogen and phosphorus. All experiments will be irrigated.

6.0359, DECISION MODELS FOR MINIMIZING COST OF INFORMATION OR ERROR IN ESTIMATING BENEFIT-WATER RELATIONSHIPS IN IRRIGATION. (ABBREV)

R. DARGE, New Mexico State University, Water Resources Research Inst., Las Cruces - University Park, New Mexico 88001

One of the most critical elements required for the application of mathematical models to water resource systems is the estimation of the relationships between quantity and/or quality allocations, and the resulting net benefits generated. The application of incremental benefit measurements to allocation problems has not been explored to determine their reliability and the cost of gaining the necessary information as compared with the present means of developing models. It is contemplated that existing systems methods can be utilized with some alterations to develop alternative sets of decision rules. Net benefit functions will be developed and tested.

6.0360, IRRIGABLE ACREAGE IN NEW MEXICO AND PROJECTED DEMANDS FOR IRRIGATION WATER

M.L. HANSON, New Mexico State University, Water Resources Research Inst., Las Cruces - University Park, New Mexico 88001

Irrigated and potentially irrigable land areas of New Mexico will be classified according to physical and economic feasibility of irrigation. Crop enterprise budgets will indicate production alternatives for potential irrigation development. Projections of irrigable acreage will proceed assuming unlimited availability of capital, labor and water.

Productivities of additional water supplies to maintain or increase irrigation development in all areas of the state will be estimated when allocated to highest agricultural uses based on projected production coefficients, price relationships, and discount rates. The demands for irrigation water will be estimated in the context of economic development or growth.

6.0361, LAND AND WATER VALUES IN EASTERN NEW MEXICO

D.C. HENDERSON, New Mexico State University, Agricultural Experiment Sta., Las Cruces - University Park, New Mexico 88001

The objective of this study is to calculate guidelines for determining depletable irrigation water costs in Lea, Roosevelt, Curry and Quay counties. Data will be collected on land sales from a date of about 1948 to present in the study area to determine: (1) at what point in time a price differential began between land with underground water supplies suitable for irrigation and land without such supplies. (2) an allocation of the original purchase price between the land including all improvements and the depletable ground water supply. Any value attributable to non-farm uses must be excluded. Guidelines will be constructed by homogeneous areas for percent of irrigated land value attributed to irrigation water, maximum values for the depletable water cost base and minimums for the dryland value. Guidelines will be verified with knowledgeable people in each area.

SUPPORTED BY New Mexico State Government

6.0362, A COMPREHENSIVE WATER RESOURCES ANALYSIS OF A TYPICAL OVERDRAWN BASIN IN AN IRRIGATED SEMIARID AREA - PECOS RIVER BASIN, NEW MEXICO

C.E. JACOB, New Mexico State University, Graduate School, Las Cruces - University Park, New Mexico 88001

The objectives of this project are: (1) To develop basic physical and sociological data. (2) Analyze the surface and sub-surface hydrologic system by use of digital and analogue computations using techniques of systems analysis and linear programming. (3) Develop a mathematical decision-model for the design and operation of an overdrawn water supply system. (4) Establish primary land classification and cost and returns information for guiding the present and future agricultural uses of water. (5) Develop a method of economic and legal analysis appropriate for a region with surface and groundwater for the maximization of the region's economic welfare.

This interuniversity-interdisciplinary project is bringing together the many factors into an overall analysis as well as refining the information for each disciplinary segment. The decision model, the gross systems analysis and the economic legal analysis will combine the several factors for analysis on the basis of the whole basin, and its interrelated problems, rather than considering each segment separately.

6.0363, ECONOMICS OF WATER SUPPLY-PORTALES VALLEY, NEW MEXICO

R.B. LONG, New Mexico State University, Agricultural Experiment Sta., Las Cruces - University Park, New Mexico 88001

Objectives: 1. Evaluate the past, present and future water supply of the Portales Valley and its current and future influence on the economy of the area. 2. Evaluate the new proposals to bring water to the valley from nearby wells and from the Ute Reservoir, and the impact of these alternatives on the agricultural economy of the area.

Description of Work Proposed: The work to be conducted will be separated into two parts. First, secondary historical data will be secured from the State Engineer, County, A.S.C. office, etc., to determine: water use for agriculture, municipalities, and industry; precipitation; water levels in observation wells; thickness of the water bearing strata; and population. Secondly, data will be collected to determine the cost of water from sources outside the valley, farm size and crop structure, and budgets for the major crops and livestock enterprises in the valley. These data will then be analyzed, and the proposed publications prepared.

6.0364, EFFECTS OF RESTORATION AND MANAGEMENT OF THE SAN SIMON MARSH ON ITS UTILIZATION BY MEXICAN DUCKS

F.W. MARTIN, New Mexico State University, Agricultural Experiment Sta., Las Cruces - University Park, New Mexico 88001

Objective: To assist the Bureau of Land Management in a program to preserve Mexican duck habitat by gathering basic facts concerning effects of restoration and management of the San Simon marsh on the development of a self-sustaining population of Mexican ducks.

Work Proposed: Four impoundments, one acre or less in size and from four to five feet deep will be constructed. Two of these impoundments will be fenced to exclude livestock. These ponds will be interconnected and will contain islands for nest and loaf sites. The aquatic and upland vegetation will be mapped and vegetation important for nesting or food may be introduced if this appears desirable and feasible. Studies will be conducted on species of waterfowl use, distribution, number of broods and effects of normal grazing on utilization of habitat.

6.0365, EFFECT OF RATE OF SEEDING AND THE APPLICATION OF AGRICULTURAL CHEMICALS ON YIELD AND QUALITY OF ALFALFA SEED

B.A. MELTON, New Mexico State University, Agricultural Experiment Sta., Las Cruces - University Park, New Mexico 88001

1. To determine optimum seeding rates and planting methods for alfalfa seed production. 2. To investigate the effects of rates and frequencies of irrigation on alfalfa seed yields. 3. To evaluate the effects of the number and time of forage harvests on the yields of alfalfa seed. 4. To evaluate new and promising herbicides, growth regulators and desiccants for alfalfa seed production (as they become available through preliminary evaluation tests).

Description of Work Proposed: Selected seeding rates from 1/2 to 20 pounds per acre will be evaluated in 12-inch rows, 24-inch rows, 40-inch beds with 2 rows per bed, and in broadcast plantings. The effects of time and number of forage harvests on yields of alfalfa seed will also be evaluated. The rate and frequency of irrigation will be evaluated for efficiency of water utilization and effects on seed yields. Promising herbicides, growth regulators and desiccants will be evaluated for possible use for seed production as indicated by preliminary screening conducted within other projects.

6.0366, A COMPREHENSIVE WATER RESOURCES ANALYSIS OF A TYPICAL OVERDRAWN BASIN IN AN IRRIGATED SEMIARID AREA - PECOS RIVER BASIN, NEW MEXICO

H.R. STUCKY, New Mexico State University, Water Resources Research Inst., Las Cruces - University Park, New Mexico 88001
WOLLMAN

An interdisciplinary-interuniversity research project, which includes a unified approach on the part of the University of New Mexico, Albuquerque; New Mexico Institute of Mining and Technology, Socorro; and New Mexico State University, University Park, New Mexico, in a water basin which has problems, the solution of which have local, state, regional and national significance.

The Pecos River Basin in New Mexico is a typical river basin in the irrigated West. This project includes a gross-systems analysis by Civil engineers, a general economic and economic land classification (as affected by water supplies and as it would effect water use) by economists and agricultural economists; a digital and analog computation based on known facts about the surface and subsurface hydrology, and a legal study. These will assist in bringing together a total resources analysis to the end that the available and exploitable water resources analysis may be put to optimum use. This will be done with proper regard being given to the hydrologic and geologic phases as well as the agronomic, biologic, economic and legal phases.

There are many basic facts available on the numerous and complex problems such as overpumping, saline water encroachment, increasing total water demands, and water laws and regulations.

The hoped for success in sharpening and refining the water balances, based on this research, will be of great assistance to the over-all future economy of the New Mexico portion of the river basin, as well as to the section of the Pecos River in the State of Texas. The Pecos River Compact signed in Santa Fe in December 1948, provides for the regulation and division of the Pecos waters between the two states.

6.0367, TURFGRASS MANAGEMENT

C.E. WATSON, New Mexico State University, Agricultural Experiment Sta., Las Cruces - University Park, New Mexico 88001

Objectives: 1. To determine the effect of varying amounts of nitrogen, phosphorus, potassium, and minor elements in turfgrass growth and quality. 2. To determine weed control, residual effects and damage to turf by various herbicides when used against cool or warm season and annual or perennial weeds. 3. To determine the resistance to compaction, percolation or water and water holding capacity of various soil mixtures, and growth of grass with and without soil amendments or conditions. 4. To observe new varieties and strains of cool and warm season turfgrass plants for adaptation to climate, soils, and to determine turf quality under southern New Mexico conditions.

Description of proposed work: The fertilization phase will include 20 treatments with the three major elements of nitrogen, phosphorus and potassium. Iron, zinc and manganese will be the only minor elements considered. Studies will include chemical methods of weed control, testing will include various soil and sand mixtures, and the effect of amendments and conditioners on soils. Observations will be made on new varieties, strains, and species of promising plants for use as turf.

SUPPORTED BY New Mexico State Government

6.0368, EVALUATION OF MARINE AND ALKALI TOLERANT SPECIES INTRODUCTION IN THE LOWER PECOS RIVER

W.J. MCNALL, State Dept. of Game & Fish, Santa Fe, New Mexico

Procedures: Orangemouth corvina, sargo, and bairdiella, gifts from California, will be taken from the Salton Sea and introduced into the Pecos River from Malaga Bend southward and the Bottomless Lakes. Sacramento perch, a gift from Nebraska, will be released in alkaline waters of southeastern New Mexico where game fish populations are limited due to the alkalinities. Survival, migration, and reproduction will be determined by standard population sampling. Chemical phenomena will be determined from U.S.G.S. data and field analysis. Harvest, when such occurs, will be determined from conservation officers' creel census records.

New Mexico State Government

6.0369, EVALUATION OF IRRIGATED PASTURE GRASSES

D.H. WILLIAMS, New Mexico State University, Agricultural Experiment Sta., Tucumcari, New Mexico 88401

Objectives: 1. To determine the performance of selected sudangrass-sorghum crosses, hybrid sweet sudangrasses and millets grown under irrigation in northeastern New Mexico. 2. To determine the performance of six selected grass pasture crops grown with three rates of nitrogen fertilization under irrigation in northeastern New Mexico.

Description of work proposed: Sudangrass and millet varieties, crosses, hybrids and/or strains will be fertilized with three applications of nitrogen and their adaptability for possible use in this area as temporary summer pasture crops will be evaluated. Measurements will be made on their green, air-dry yields, recovery after cutting and other related factors.

6. WATER RESOURCES PLANNING

Six grasses - Midland, Coastal, Common, N.K.37, WS-300 Bermuda grasses and Blackwell Switchgrass - will be grown with three levels of nitrogen fertilization. All plots will be overseeded with Hairy Vetch each fall. Measurements will be recorded on green and air-dry yields, stand, recovery after cutting and other characteristics.

SUPPORTED BY New Mexico State Government

6.0370, REGIONAL COMPREHENSIVE MULTI-PURPOSE WATER RESOURCES PLANNING STUDIES

F.W. MONTANARI, State Conservation Department, Albany, New York 12226

Each study involves an inventory of the water resources, quantity and quality, of the basins under investigation; an assessment of present needs (including recreation, irrigation, public water supply, low flow augmentation, fish and wildlife, power, navigation, etc.) in terms of water resources development; and a projection of future needs and identification of means and preparation of plans for meeting them. An economic base study is made to determine present economic make-up of the area, and to make the necessary projections of population growth, industrial change, etc.

Hydrologic and economic information are obtained from analysis of existing data and intensive data collection using field observation, interviews, and mail questionnaires.

At present, regional studies under six water resources planning and development boards are underway. The Erie-Niagara Basin investigation under one board was begun in 1963 and will be completed in 1968. The Upper Seneca portion of the Oswego River Basin is being studied under two boards. This study was initiated in 1964 and will end in 1970. The Eastern portions of both the Susquehanna River Basin and the Oswego River Basin are being studied under two boards created in 1967; an Allegheny Basin board was also created in 1967. During fiscal year 1968-69 studies of several other regions will be started. These include the Western Susquehanna, the Delaware, the Black, the St. Lawrence, and the Genesee Basins.

A non-salaried seven-man Board composed of local leaders appointed by the Water Resources Commission, is responsible for the conduct of the study and for evolving comprehensive plans for development of each region. Office space, equipment, technical, legal, engineering, clerical and other personnel and services are provided by the Commission. The Commission is composed of the heads of seven State Departments--Conservation (Chairman), Agriculture and Markets, Commerce, Health, Law, Transportation and the Office For Local Government.

6.0371, PHYSICAL & CHEMICAL PROPERTIES OF WATER & SOILS OF MARSHES AS THESE PROPERTIES RELATE TO THE SUCCESS OF WATERFOWL FOODS & COVER.

J.D. LATHWELL, State Div. of Fish & Game, Albany, New York 12226

Procedure: Procedures under this job may be catalogued under three heads: biological, chemical and physical. 1. Biological a. Throughout the growing season changes in growth and color of established plantings will be noted. At the end of the growing season air-dry weight will be obtained for the growth in each plot, intensity of seed production will be determined, and if possible, seeds will be analyzed for nutrient content. b. Unwanted vegetation will be removed from between the plots by mowing and within the plots by hand weedings. 2. Chemical a. Analyze for dissolved oxygen by the Winkler and Oxygen meter methods of water taken at the surface, and at one foot intervals to and including the bottom. Samples to be obtained in vegetated and non-vegetated areas. b. Using the Tarow indicator, analyze water samples for total alkalinity obtained at the same locations and at the same time water is collected for dissolved oxygen determinations. c. Measure the pH of the surface and bottom water by using a Beckman pH meter. d. Determine the concentrations of carbon dioxide by using a nomograph. e. Using spectrophotometer, analyze water samples from main marsh and from selected 1/10 acre marshes for nutrient content. This will show the nutrient

level for 13-15 major components of the water. f. Using techniques defined by Greweling and Peech, soil samples obtained from each one-tenth acre area will be analyzed for nitrogen, phosphorus, potassium, calcium, magnesium, iron, aluminum and manganese. Soil organic matter and soil pH will also be determined. Samples will be obtained quarterly. In addition soil samples will be obtained from selected marshes throughout the growing season to study in detail quantities and forms of iron and manganese present in various layers of the soil. In addition forms of inorganic nitrogen will be determined. Oxygen consumption as a measure of biological activity will be measured on selected soil cores. These data will be used in an attempt to predict the state of oxidation or reduction of the soils as they may be related to vegetative growth. 3. Physical a. Maintenance of proper water levels. b. Maintenance of weather station. c. Measurements of soil temperatures. d. Measurements of surface temperatures of the water. e. Measurements of water transparency. 4. Appraisal -- Preparation of a publication documenting plan, objective and status of studies with recommendations for the future.

6.0372, EFFECT OF LIMNOLOGICAL CHANGES ON SURVIVAL OF YOUNG FISH IN ONEIDA LAKE

R.L. NOBLE, State Div. of Fish & Game, Albany, New York 12226

Objectives: Determine aquatic plant and bottom fauna distribution and abundance and compare with surveys conducted in 1916-1918 to determine if major ecological changes have occurred; monitor annual fluctuations in zooplankton and bottom fauna abundance; develop procedures for measuring zooplankton production and its utilization by young fish.

Procedure: A. Repeat survey of Lower South Bay (Paker, F.C. 1918. The productivity of invertebrate fish food on the bottom of Oneida Lake with special reference to mollusks. N.Y.S. College of Forestry Tech. Pub.9) 1. Complete analysis of 120 bottom samples taken in Lower South Bay during 1967 and summarize data comparing aquatic plant distribution in 1916 and 1967. 2. Review biological and water quality data collected since 1916 by various agencies (4 surveys). 3. Determine extent of changes in limnological parameters which have been measured; their possible relation to rapid urbanization of the watershed, and future effect on the fishery. B. Establish sampling program to monitor annual changes in plankton and bottom fauna. (The U. S. Geological Survey is currently conducting an intensive limnological survey on Oneida Lake and this segment of the project will not be initiated until the USGS program is terminated in 1969.) C. Measurement of zooplankton abundance and utilization by young yellow perch. 1. Estimate zooplankton density from samples taken at weekly intervals with Isaacs-Kidd sampler during May through July. 2. Obtain estimates of zooplankton consumption by rearing young perch on known quantities of plankters. 3. From estimates of young perch density obtained under Job I-b compute portion of zooplankton standing crop utilized by perch production.

6.0373, THE USE OF SYSTEMS ANALYSIS IN THE DEVELOPMENT OF WATER RESOURCES MANAGEMENT PLANS FOR NEW YORK STATE

A.C. TEDROW, State Div. of Water Resources, Albany, New York 12226

The proposed research is intended to develop tools of systems analysis for use in the water resources planning studies undertaken by New York State. The study will provide techniques for use with current information levels in on-going planning surveys as well as pointing the way to more fruitful data collection efforts for providing better inputs to higher levels of analysis.

The research will be conducted concurrently with an on-going planning study. It will start with the development of rudimentary mathematical models and simulation techniques and then will proceed to higher levels as more information becomes available.

At each level of development, an evaluation will be made as to the benefits derived from that particular mode of analysis and the implications on the collection of data.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Reh

6.0374, STOCHASTIC BASIS FOR COMPREHENSIVE RIVER BASIN PLANNING

F.G. HAAG, Union College & University, Graduate School, Albany, New York 12208

Systems analysis and stochastic methods will be utilized to identify optimum river basin plans. In particular Monte Carlo probability simulation will be applied. Wherever possible known probability frequency distributions will be used for the physical parameters that are significant to water resources. However, where probability frequency distributions do not exist they will be developed analytically and correlated with available data. The overall mathematical model for the physical variables of a river basin will be developed and programmed for the digital computer. The results obtained when the model is applied to the Hudson River system will be compared against data that is available from New York State and the U.S. Geological Survey.

Economic data will be developed to permit relating the cost of alternate water development plans (e.g. waste treatment plants, water storage, and water transmission facilities) to the relative economic benefits to alternate users (e.g. recreation, industrial, commercial fishing and transportation).

The physical and economic models will be coupled and optimization techniques will be applied to evaluate various performance criteria. The use of stochastic methods will permit more realistic decision making by water resources management because the uncertainty will be described quantitatively in terms of confidence levels.

6.0375, SOCIAL CONSEQUENCES OF VARIATION IN AGRICULTURAL IRRIGATION

B. PASTERNAK, State University of New York, Graduate School, Buffalo, New York 14214

This research promises to determine the social and political consequences of modifying an irrigation system in such a way as to equalize or disqualify access to water. Attention will be especially focused upon the relationship between irrigation and local patterns of conflict and cooperation. The general hypothesis which will be tested to achieve this objective is that disqualification of access to irrigation water will result in an intensification of conflict over water; an expansion and formalization of local cooperative networks; and less intensive labor demand peaks. Where access to irrigation water is equalized, on the other hand, the opposite results will ensue.

The methodology will be controlled comparison. New data to be collected in a village on the Chianan Plain of Formosa (a disqualifying irrigation setting) will be compared with that collected earlier in a village on the Pingtung Plain (an equalized irrigation setting). The technique of participant-observation, interview, and historical inquiry will be used in the field to collect new data. The proposed project is intended to provide comparative data on relevance to a more general, long-range study of the relationships between local water managerial systems and specific forms of social and political organization. A clearer appreciation of such relationships would be of predictive value to those involved in the alteration or modification of irrigation systems, particularly those concerned with the possible social consequences of such changes.

SUPPORTED BY U.S. National Science Foundation

6.0376, STUDY OF EXCRETORY PATTERNS IN CRAYFISHES

M.L. SHARMA, State University of New York, Graduate School, Fredonia, New York 14063

Crayfishes are freshwater crustaceans. On a few occasions, they have been reported from slightly brackish waters. They have also survived for long periods in water of relatively high salt con-

tent. The applicant acclimated specimens of *Orconectes rusticus* to 50% sea water. The environmental osmotic stress brought about a reversible shift toward ureotelism in their mode of nitrogenous excretion. This shift toward ureotelism by the adult ammonotelic crayfishes is neither related to phylogeny nor does it serve as a water-conserving device. In the latter respect, it is at variance with the widely accepted view of Needham. Therefore, it appears that the ureotelism exhibited by *Orconectes rusticus* differs from those so far reported in the literature. This raises questions about the sources of this increased urea production, its utility, and the mechanism of its synthesis. Further, since it does not act as a water-conserving device, it raises the possibility that the changes in the pattern of nitrogenous excretion under osmotic stress are not necessarily related to the availability of water but may be triggered by some other factor. These questions were partly investigated during the summer of 1967. One paper is in press and another will be submitted very shortly. It is proposed to further the project by undertaking the following studies: (a) the determination of the contribution, if any, of purine degradation to increased urea production; this will involve the estimation of the activity of uricolytic enzymes. To begin with, the estimation of urease and uricase activity will be undertaken. (b) a determination of total nitrogen excreted and its partition into various excretory products.

In view of the interesting results obtained so far, it is proposed to extend the project on a comparative basis. For this purpose, the applicant will apply for a federal grant next year.

SUPPORTED BY State University of New York

6.0377, RHEOTAXIS IN ALGAL METABOLISM AND PHOTOSYNTHESIS

K.G. WOOD, State University of New York, Graduate School, Fredonia, New York 14063

Rheotaxis of algae has been a neglected area of study despite the fact that growth of the sessile alga, *Cladophora*, has become a major problem along the wave-swept shores of Lake Erie and other eutrophic lakes. This alga lives in areas of intense water movement, but breaks away during storms to wash ashore and forms rotting masses of vegetation to the detriment of recreational use of the shore. The proposed study will be part of a continuing investigation of the physiology of this alga.

Two questions are involved in this study: (a) Does rheotaxis augment the rate of respiration and/or photosynthesis? (b) If the results of part (a) are positive, does rheotaxis act through mechanical stimulation per se or does it merely provide a steeper diffusion gradient between the cells and their environment?

The biological parameters to be investigated will be carbon dioxide uptake in the light and carbon dioxide output in the dark. Algae enclosed in full containers of water will be subjected to various shaking procedures. The carbon dioxide content of the water will be determined gasometrically at the beginning and end of the experiments. In addition, the isotope method with carbon-14 will be employed simultaneously to yield an independent estimate of the photosynthetic rate. This dual approach in the photosynthetic studies will improve greatly the validity of the results as shown by the applicant (Wood, in press). Nutrient levels will be increased in some experiments in an attempt to lessen the diffusion gradient required by the algae. There may be an equivalence between nutrient level and rheotactic effect.

6.0379, A STUDY OF POTENTIAL INSTITUTIONAL ARRANGEMENTS FOR WATER POLLUTION CONTROL IN THE HUDSON-MOHAWK RIVER BASIN

L.B. DWORSKY, Cornell University, School of Engineering, Ithaca, New York

Basin or sub-basin wide solutions to water pollution problems are technologically feasible considering existing technology and are possible conceptually using new and developing technology. Such solutions are expected to result in economies of scale operational efficiency and the establishment of an improved priority basis for scheduling and pollutional control efforts.

A major obstacle to the development of basin or sub-basin wide solutions has been the lack of modernization of governmental institutional arrangements to stimulate and encourage the early and efficient utilization of existing and newly developing technology for the public benefit.

The research proposes to develop alternative institutional arrangements for the Hudson-Mohawk River Basin, or appropriate sub-basin units, to achieve a substantially improved water pollution control program for the study basin.

The plan of research will consider basin history, geography and culture; current water pollution control programs of state, federal, compact and local agencies; government organization affecting water pollution control; water pollution control plans; preliminary type engineering-economic studies of alternative pollution control measures; formulation of criteria to consider in the development of regional institutional arrangements for pollution control; the relation of alternative institutional arrangements for water pollution control to local water and waste water utility services, and to multi-basin and multi-purpose water and related land resources development programs in the northeastern United States. The research will conclude with a synthesis, recommendations and supporting references.

6.0380, WATER RIGHTS & WATER LAW & THE EFFECTS OF THESE ON THE DEVELOPMENT & UTILIZATION OF THE WATER RESOURCES OF NY STATE (AB-BREV)

W.H. FARNHAM, Cornell University, Graduate School, Ithaca, New York

In general, the scope of the project is concerned with adjusting and improving the legal structure for the more effective use of known or newly developed technology. This will insure an adequate supply of water at the proper time in the proper place and of the right quality in New York State to serve all human requirements. Cornell University Water Resources Center together with the New York Temporary State Commission on Water Resources Planning proposes to study (1) the question as to whether the state of New York has proprietary rights or rights as trustee for the public in the waters of the State, as distinct from its police and navigation powers over such waters, and (2) the question as to whether the state, if it has such rights, is by virtue thereof, authorized to modify riparian rights in furtherance of the public interest. In addition, the investigation will include studies of such questions as the following: What changes should be made in the constituent rules of an administration of the riparian doctrine which in New York and in other eastern states has for many years determined rights and privileges with respect to streams? What changes should be made in the New York law governing the use of an interference with the flow of surface and percolating waters and in the administration of that law?

6.0381, RESEARCH ON DECISION MAKING AND RELATED MANAGERIAL ASPECTS OF BRITISH WATER RESOURCES PROGRAMS

E.S. FLASH, Cornell University, Graduate School, Ithaca, New York

Under the social science aspects of the research program of the Cornell University Water Resources and Marine Sciences Center, this project will investigate and analyze the processes of policy development and implementation operating in British water resources programs carried out under the Water Resources Act of 1963. To determine the impact of relevant substantive, political, and administrative factors, the research will focus on the relationships between political executives and professional experts as they participate in the creation and execution of particular programs related to development in the South East Region of England. By providing a valuable basis for comparative analysis, this research will contribute to the solution of managerial problems associated with American water law and institutions. Research on particular decision-making situations will be accomplished by review of public and available official documents and by interviews with officials of national and local organizations including river authorities, business executives, academicians, and private citizens. The entire project will be conducted by Professor Flash. He will work in England and have access to the facilities of the London School of Economics and Politics, and, on a temporary basis, to those of the University of Glasgow. He will also make such field trips as necessary.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch Cornell University

6.0382, MATHEMATICAL MODELS OF HYDROLOGIC SYSTEMS

J.A. LIGGETT, Cornell University, School of Engineering, Ithaca, New York

The overall objective of this research is to contribute to the economic design of water resource systems. In particular we are considering systems which require the description of complete flow hydrographs for design purposes such as urban and rural storm drainage systems, river systems involving unsteady discharges from dams, hydro power plants, and sewage outfalls, and estuaries. In each of these cases the water quality aspects may be very important and, in general, a good description of water quality involves knowledge of quantities. A physically sound description of flow in channels or over surfaces is provided by shallow water theory. At present the equations of shallow water theory are of limited use to engineers because their solution is very complex. However, these equations can be solved on the digital computer; many of the solutions can be put in table or chart form for ready use. Thus calculations involving the unsteady flow of water with a free surface can be made accurate through use of exact physical analysis.

The overall objective must be pursued in a sequential manner. We have selected as the first objective of this project the development of shallow water theory in a manner such that it can provide a practical tool for research and design.

Subsequently we propose to investigate the design process itself and to develop general techniques and procedures for the design of hydraulic structures. These procedures will involve the physical processes investigated under the first objective as well as economic theory and may utilize systems analysis techniques.

6.0383, STOCHASTIC MODELS FOR WATER RESOURCES MANAGEMENT

D.P. LOUCKS, Cornell University, School of Engineering, Ithaca, New York

Analytical methods are to be developed which incorporate the complex stochastic nature of streamflow and runoff into

6. WATER RESOURCES PLANNING

models for defining alternative policies for managing both the quantity and quality of water within a developed river system. The solutions of these stochastic programming models will indicate the daily reservoir releases and the quantities of water that should be allocated to each water use, so as to best achieve some physical or economic management objective and at the same time, satisfy all the requirements that are imposed upon the system. The study will begin in Fiscal Year 1968 and span a two-year period.

6.0384, IMPACT OF WATER BASED RECREATION

D.J. ALLEE, State University of New York, School of Agriculture, Ithaca, New York 14850

The general problem is how to relate the capacity of water and related land resources to provide recreation services with the growing demand for those services in the context of comprehensive water resources planning. Specifically, selected aspects of relevant biological processes and physical features will be studied to describe the production function for recreation services of one of the New York Finger Lakes and two old flood control reservoirs which have just recently been partly converted to recreation use. Included in this will be a specification of substitution relationships with other water uses, and a review of public and private inputs including institutional changes. In turn these production relationships will be related to estimates of the demand for recreation services and its growth in the service areas of these bodies of water. Measurements and projections of both direct and indirect benefits will be attempted. The objective is to develop and test, theoretically sound operational planning procedures while adding to our meagre fund of knowledge about water based recreation, its economics and its technology.

Cornell University

6.0385, SUPPLY AND DEMAND FOR WATER

D.J. ALLEE, State University of New York, Agricultural Experiment Sta., Ithaca, New York 14850

This is a part of the C. U. Water Resources Center project of the same title. It will contribute to the technology of projecting of water use by user type and for relevant use regions by 1) developing overall methodology to delineate such regions and make projections, 2) identifying the weak links in such methodology and attempting to devise means of strengthening them. Water supply projection techniques require the identification of the means of satisfying the use projections. The Northeastern United States is the current focus.

DESCRIPTION OF WORK - A transportation model, one type of linear programming, appears to provide an organizing framework as it envisions a series of supply points and use points (regions), can be adapted for supply and demand schedules, and includes transfer cost relationships. It lends itself to the segmentation of the problem, allowing any one researcher to work on a single part, for example the use of water by a single industry. An examination of water use overtime and space is expected to include the reaction of use to cost (price) as well as population, income, sector output and changes in technology. Agricultural Economics will develop demand relationships for selected water use sectors. Initial emphasis will be on pulp and paper products, livestock, food processing, recreation, and irrigation. Also general assistance will be given to the general handling of demand.

SUPPORTED BY New York State Government

6.0386, WATER RIGHTS AND WATER LAW

D.J. ALLEE, State University of New York, Agricultural Experiment Sta., Ithaca, New York 14850

Within the overall Cornell University Water Resources Center project personnel from these two departments will relate findings of law to specific water use situations with special attention to rural areas. They will also identify areas of uncertainty which water users have encountered that relate to the law. Particular aspects of the law which will be studied include, 1) The State's proprietary rights as distinct from police or navigation

powers and the relation of these to riparian rights and in turn to allocation powers of the State, 2) changes in administration, eg. permit system, 3) effect of a permit system on existing users, 4) alternatives for adjudication of conflicts, 5) operation of a reasonable use doctrine, 6) implication of the legal distinction between stream, surface and percolating water.

DESCRIPTION OF WORK -- On the one hand the unique circumstances of water use in New York State will be studied and on the other hand the existing law of the state, in other states and experience in other states will be examined. A synthesis of these will be made in order to prepare alternative recommendations and reasons for each. Particular attention will be given by these departments to the application of the current status of the law as it now affects rural water users.

SUPPORTED BY New York State Government

6.0387, EFFECT OF INCUBATION TEMPERATURE ON SURVIVAL OF LARGEMOUTH BASS EMBRYOS

A.W. EIPPER, State University of New York, School of Agriculture, Ithaca, New York 14850

Objectives of this project are 1) To determine if egg age, acclimation, or both factors produced mortality differences between acclimated and non-acclimated embryos observed during 1966 at temperatures above 25 C and below 12.5 C, 2) To observe the effects of sudden temperature shifts on bass eggs of various known ages, 3) To determine the developmental stage at which non-acclimated embryos are most critically affected by sharp temperature changes. Water temperature control facilities were expanded to permit precise control of temperature in 20 50-gallon aquaria, and a method for collection of spawning bass with an electric shocker was devised. Experiments were begun in 1967 to determine the effect of temperature on mortality of largemouth bass embryos. Artificially-fertilized eggs were obtained by mixing gametes of a pair of spawning bass caught with the electric shocker. Embryos were divided into lots of 20 per container, and all embryos started at 20 C. At 5 hr. intervals, some embryos were subjected to sudden temperature changes, and others reached final incubation temperatures from 10 C to 30 C via acclimation rates of 0.3 C and 1 C. Total mortality, determined three days after hatching, indicated no evidence of a 'critical' temperature-sensitive period. There was indication of a broad temperature tolerance zone between 15 C and 25 C, within which mortality varied relatively little. Mortalities occurring at the extreme temperatures (10 C and 30 C) decreased slightly with age, regardless of acclimation. The effect of temperature alone seems insufficient explanation of high mortalities observed by earlier workers in nature during the early life of the bass. Experiments were repeated during the bass spawning season in 1968, and analysis of data is in progress. Mr. Swallow's thesis, which reviews literature on the effect of water temperature on survival of fish eggs, is in final stages of preparation. This project was begun in 1965 and will be terminated in 1970.

6.0388, CONSERVATION AND DEVELOPMENT PLANNING FOR THE ESTUARINE ZONE (A CASE STUDY IN THE TOWN OF SOUTHOLD, LONG ISLAND)

L.S. HAMILTON, State University of New York, School of Agriculture, Ithaca, New York 14850

The estuarine zone, where fresh and salt water meet, is probably as rich in situations where one man's actions can inadvertently affect another man's welfare as any in the world of natural resources. Dredging, waste disposal, filling and bulkheading, silt and the like, can lay waste to the spawning grounds for fin fish, shellfish beds and areas of unique ecological significance. Important commercial, recreational and esthetic values can be quickly lost. Planning, controls and public investment decision processes have been developed to specifically solve these types of problems in other environments, but little has been done here. New institutions and approaches are required.

This project proposes to study the estuarine zone of an important part of Long Island in an attempt to identify the

6. WATER RESOURCES PLANNING

mechanisms by which problems arise, to determine the existing and potential roles of public agencies, and to develop an approach--essentially a planning methodology--suited to the evaluation of the public interest in the estuarine zone in meaningful policy and program terms. This project will seek positive means whereby local governments can both promote new economic development and still enjoy the fruits of this rich marine resource.

6.0389, A CASE STUDY OF WATER RESOURCES DEVELOPMENT - AN ANALYSIS OF A PROPOSED PROJECT ON THE MISSOURI RIVER

L.S. HAMILTON, State University of New York, School of Agriculture, Ithaca, New York 14850

The objective of this study is a detailed analysis of the 'Joint Report on water and related land resources development for the Missouri River, Fort Peck Reservoir to the vicinity of Fort Benton, Montana,' released by the U.S. Department of the Interior and the U.S. Army Corps of Engineers in June, 1963.

The Joint Report proposed eleven alternative plans for development of the 200 mile reach of the Upper Missouri River. The plans ranged from total protection of the reach as a National Wilderness Waterway to total inundation by reservoirs designed almost exclusively to produce hydroelectric power. Of the eleven plans, plan 04 which called for 2 dams was preferred by the Corps of Engineers and the Bureau of Reclamation because it exhibited both the highest benefit-cost ratio and the greatest excess of benefits over costs. The National Park Service felt that plan 04 would be incompatible with their National Wilderness Waterway proposal and thus preferred either plan 06 (one dam) or plan 07 (no dams).

It is intended to analyze the Joint Report from four major aspects: 1) As an example of a comprehensive water and related land resources development plan. 2) To ascertain the sensitivity of the overall economic feasibility of the project when certain variables and adjusted within a range of reasonableness; instead of being accepted as constants. 3) To apply those changes that have occurred over the past five years since the Joint Report was released. These changes include legislation passed by Congress, Executive Directives, changes in construction costs, changes in thermal electric power generation technology. 4) The analysis will also attempt to consider the development schemes from their social/economic impact. What is the current status of the region? How valid is the choice of region? What impact would the projects have on the people and the economy of the area?

6.0390, MULTIPLE PURPOSE WATER RESOURCE INVESTIGATIONS

L.S. HAMILTON, State University of New York, Agricultural Experiment Sta., Ithaca, New York 14850

To investigate critical multiple-use problems with respect to New York's surface waters, so that information is made available on which to base both private and public policy with respect to the use and development of this vital resource.

Description of Work: Water-use conflicts are becoming increasingly severe even in the humid East. New York State already is experiencing conflict between irrigation, navigation, recreation, power production, pollution, municipal water supply, industrial use and flood control. Some of these conflicts will be examined as case studies with the goal of criteria for water allocation and policy formulation. The initial case study will be an analysis of municipal water supply reservoirs in New York, focussing on the degree of multiple use of the water and watershed lands.

6.0391, PLANNING ANALYSIS FOR THE NON-MARKET VALUES OF WATER RESOURCES WITH PARTICULAR EMPHASIS ON RECREATION

R.J. KALTER, State University of New York, School of Agriculture, Ithaca, New York 14850

Based upon sample surveys taken both for this specific study and national surveys taken by the Bureau of Outdoor Recreation this project will construct a model of the demand for water based recreation. This model, hopefully, will reflect such factors as the inter-action between supply and demand, the developing preferences of young people, shifts in income and population. It will be carried through to the point of actual projection and will be integrated into the planning programs for the Finger Lakes Region of New York State. The basis for benefit estimates will be included. Both through the development of the model and through ancillary studies the project will attempt to lay the basis for improved management of the lakes and other waters of the region and their environment. Policy guides which relate the network of environmental influences to institutions for management will be developed.

6.0392, SYSTEMATIC STUDY AND DEVELOPMENT OF LONG-RANGE PROGRAMS OF URBAN WATER RESOURCES RESEARCH

M.B. MCPHERSON, Amer. Soc. of Civil Engrs., New York, New York

This project is a continuation of a project by ASCE to assist in outlining, developing and initiating a coordinated national program of urban water resources research. The first year of the project had the objective of providing guidelines for initiating and expanding a program of long-range studies on urban water problems. This included; (1) Conduct a prefeasibility study to determine the possible effectiveness, cost, and time requirements for a comprehensive systems engineering analysis of all aspects of urban water. (2) Conduct a prefeasibility study to determine the possible effectiveness, cost, and time requirements for a general economic analysis of costs and pricing parameters of all aspects of urban water. (3) Conduct a state-of-the-art study of for analyzing urban rainfall-runoff-quality processes. (4) Study requirements for assessment of drainage damage and explore alternatives to direct storm water runoff, such as the utilization of recharge basins or other storage schemes. (5) Study political, economic, legal and social problems related to urban water management with recommendations for further work. (6) Prepare appropriate reports of the research results of the project suitable for publication in engineering and professional journals.

In addition, this project was conducted along with a parallel project sponsored by the USGS to conduct a study of 'Research and Analysis of National Basic Information needs in Urban Hydrology' with special emphasis on the assessment or definition of data needs, data devices and data networks. Continuation of this parallel project will lead to development of a Metropolitan Water Intelligence System.

6.0393, BENEFITS FROM INTEGRATED WATER MANAGEMENT IN THE NEW YORK METROPOLITAN REGION

L. ZOBLER, Columbia University, Graduate School, New York, New York 10027

The main objective of the research effort is to determine the increase in the effective water supply of the New York Metropolitan Region that can be attained as a result of integrating the management of the separate water systems presently responsible for the procurement, treatment, and distribution of water within the area. The expansion of supply is to be attained without the development of new source areas.

6. WATER RESOURCES PLANNING

The research plan is to be carried out in the following steps: 1. Assemblage of the basic water facts. 2. Analysis of operations of the region's separate water producing units. 3. Design of a simulation model. 4. Preliminary suggestions for a water authority.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0394, PONSAR REGULATING SIPHON

E.E. HULT, New York City Dept. Pub. Works, New York, New York

The project is the installation and evaluation of a unique flow regulating device called the Ponsar Regulator. The function of the regulator is to deliver a predetermined maximum volume of combined sewage to the interceptor sewer from the drainage area collection system. The regulator operates on a siphon principle wherein the flow is proportional to the sum of the hydrostatic and differential pressure heads. The device is so constructed that the total pressure difference will remain constant after a predetermined hydrostatic head has been reached and surpassed. In addition, an adjacent existing regulator will be monitored for direct comparison of performance under like conditions.

6.0395, ECOLOGY OF YEASTS IN LAKE CHAMPLAIN

W.L. COOK, State University of New York, Graduate School, Plattsburgh, New York 12901

The yeast population of Lake Champlain has never been determined. This makes it imperative that the normal yeast population be determined before pollution, which usually follows increasing human utilization, changes the environment. Yeasts could possibly be used as indicators of pollution.

Beginning February 1968, monthly water samples are being taken from two selected sites in Lake Champlain. Yeasts are collected with Cobet Sterile Water Samplers, concentrated with a Millipore filter, isolated and identified by standard biochemical and morphological means. The water samples are further analyzed for temperature, oxygen, carbon dioxide, alkalinity, pH and conductivity.

6.0396, ECOLOGICAL STUDIES OF LARVAL TREMATODES AND THEIR SNAIL-HOSTS IN THE LAKE CHAMPLAIN WATERSHED

R.H. SUDDS, State University of New York, Graduate School, Plattsburgh, New York 12901

This project was designed to obtain two types of information. The first phase of the study involves a survey of the aquatic mollusks in the northwestern Lake Champlain watershed to determine what mollusks are present in this area (such a survey has never been done). The second phase of this study is concerned with the relationships which develop between larval digenetic trematodes and the mollusks of this area that serve as intermediate hosts for these parasites. Information being sought concerning host-parasite relationships includes the effect of environment upon both the snail host activities and the activities of the parasite, location of the snail-hosts by free swimming trematode miracidia, and the effect of snail size, age, feeding habits, and species upon the ability of the larval trematodes to utilize the snails as intermediate hosts.

Both field and laboratory experiments are being employed.

SUPPORTED BY State University of New York

6.0397, RESEARCH ON DATA AND ANALYTICAL SYSTEMS FOR PREPARING NATIONAL WATER ASSESSMENTS

J.W. WILKINSON, Rensselaer Polytechnic Inst., Graduate School, Troy, New York 12181

Water-resource data-collection programs and the techniques for development of coordinated and integrated data (informa-

tion) systems will be examined and evaluated, and computational modeling techniques and analytical systems appropriate for water-resource data interpretation and reporting will be examined and evaluated, both with a view to selecting from among alternative information-analytical systems an approach or approaches to methodology for a national water assessment by water-resource regions.

The elements of a selected model must reflect present and projected water quantity and water quality conditions, including statistical probabilities of excesses and deficiencies in physical terms. These elements will identify present and future water supply and requirements problems, water quality problems, and flood and drought problems.

Subsequently, the development and testing of physical assessment systems from this investigation and selection stage will be coupled with economic analyses for water-resource policy, planning, development, and management decisions at Federal, State and local levels. Therefore, the incorporation of economic variables will be given some consideration in these investigations.

6.0398, ECOLOGICAL STUDIES AT THE KAINJI LAKE BASIN, BEFORE, DURING AND AFTER INUNDATION

A. IMEVBORÉ, Univ. of Ife, Ife, Nigeria

Firstly, to study in detail the fundamental limnological changes occurring as the river becomes a lake, and secondly to measure the productivity of the water during the initial period of maximum change. The quantitative and qualitative determinations of the changes in chemical composition and physical properties of the water, and the micro-organisms it supports, will provide valuable data to complement the applied pre-investment studies to be undertaken by the UNDP/FAO Kainji Lake Research Project, which deals primarily with lake fisheries.

SUPPORTED BY Rockefeller Foundation

6.0399, COLLECTION AND APPLICATION OF INFORMATION ON THE USE OF FOREST RECREATION FACILITIES AND RELATED RESOURCES

G.A. JAMES, U.S. Dept. of Agriculture, Asheville, North Carolina

Object: To develop principles and guides to enhance recreational use benefits from forests and other wild lands of the Southeast.

Plan of work: A major phase of work involves improvement of methods for collecting and processing information on area and site characteristics, and use. Planned work includes the design and testing of a system to compile, store and retrieve facility and use data for all National Forest recreation lands. Maximizing the use of fish and game resources will be explored. This will involve an analysis of the availability and use of access roads and trails. Means of predicting future facility needs will be sought and the effects of regulatory measures on hunting and fishing evaluated. Study of the cold water fishery resource will involve an assessment of its nature, amount and worth in significant areas. The surveys of resources will be complemented by studies of the relationships between resource availability, fishing pressure, and enjoyment of the sport. Improvement of the selection, design and management of recreation sites will be sought by: (1) development of vegetation, and restoration of problem sites. Measurement of the carrying capacity of sites will be explored, as will the choice of horticultural materials for enhancing and restoring sites. (2 pmy per yr.)

6.0401, SURVIVAL REQUIREMENTS OF JUVENILE AND ADULT BLUE CRABS

M.E. TAGATZ, U.S. Dept. of Interior, Biological Laboratory, Beaufort, North Carolina 28516

The project has three phases, which will be undertaken in the order in which they are listed.

Phase 1. Determine the nature of, and the capacity for osmotic and ionic regulation in juvenile and adult blue crabs.

Phase 2. Determine factors affecting length of intermolt period and percentage increase in size at time of molt.

Phase 3. Analyze responses of juveniles and adults to environmental stresses such as salinity, temperature, pH, dissolved oxygen, etc., under controlled laboratory conditions, to establish parameters within which survival is possible. Within these parameters, determine optimum conditions for growth and reproduction.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0402, ADAPTING THE WATER RESOURCE PLANNING PROCESS TO PROBLEMS AND NEEDS OF METROPOLITAN AREAS

M.M. HUFSCMIDT, Univ. of North Carolina, Graduate School, Chapel Hill, North Carolina 27514

Investigation of changes required in existing water resource planning theory, process, technique and practice to adapt water resource planning to meet emerging needs and problems of metropolitan areas and their natural resource hinterlands. The approach will be (1) establishment of a conceptual public investment model for water resources in an urban metropolitan context, (2) analysis of applicability of the model to actual cases such as Washington, D.C.- Potomac River basin, and Philadelphia-Delaware River basin, and (3) refinement of model and development of specific, detailed methodology for water resource planning in conjunction with comprehensive metropolitan planning, with associated criteria, standards and techniques.

Conceptual research will involve and interdisciplinary approach and use systems analysis insights.

Testing applicability of models will be done by literature analysis and intensive on-the-spot investigations involving interviews with practitioners and public officials, and participant-observation research.

Research results, in the form of refined conceptual models, statements of planning methodology, techniques and organization and administrative constructs will be published initially as progress reports and finally as a report on the entire research project.

6.0404, A PRELIMINARY STUDY OF THE ECOLOGY, PRESENT AND ALTERNATIVE FUTURE LAND USE PATTERNS IN THE DISMAL SWAMP AREA OF NORTH CAROLINA

A.W. COOPER, Univ. of North Carolina, School of Agriculture, Raleigh, North Carolina 27600

Wetlands in the United States are subject to numerous pressures for alteration and development. Clearing, drainage, stream channelization, and real estate development are several of the pressures facing our wetlands. North Carolina is confronted with a major wetland problem in the Dismal Swamp in the northeastern part of the state. Here lumbering has been the major past commercial use. Now, real estate development and strong pressure for conversion of organic soils to agriculture threaten the area. In addition, conservation and wildlife interests wish extensive portions of the swamp preserved. This research project is a preliminary evaluation of the effects and relative values of the various proposed land use practices in the Dismal Swamp. Existing data on the ecology of the area, augmented by field studies, will be synthesized. The present land use pattern will be determined. The various future land use proposals for the Dismal Swamp will be evaluated and, insofar as data permit, judgments as to effects on the ecology of the region will be made. If the data warrant, a full-scale project will be developed for an intensive study. The work will be coordinated with the Virginia Water Resources Research Institute.

North Carolina State University

6.0405, EXPLORATORY STUDY OF SOCIOLOGICAL ASPECTS OF WATER RESOURCES RESEARCH

A.C. DAVIS, Univ. of North Carolina, Graduate School, Raleigh, North Carolina 27600

The current phase of the project is exploratory in nature, designed to develop a theory and methodology for investigation of a processual model of adjustment to alterations which might occur in the social psychological composition and social structure of a community as a consequence of imposed sociocultural changes. Adjustment will be conceived as an interplay of internal response to external force, resulting in a patterned sequence of events moving essentially from opposition to accommodation. Developed theory in fields such as community structure, power and influence, identification, value systems, and response to frustration and conflict should be productive but not limiting. Information from related studies catalogued in the Science Information Exchange should be useful when received.

The anticipated investigative research proposal is perceived as one incorporating a sequence of stages, each adapted to a unit in the model of adjustment to be involved. Each stage will constitute a distinct research project which will in turn integrate into a wholistic investigative interpretation of the model.

6.0406, DEVELOPMENT OF A SYSTEM OF DETERMINING THE CAPACITY OF WATER RESOURCES TO SUP-

PORT VARIOUS TYPES AND COMBINATIONS OF RECREATION USE

G.A. HAMMON, Univ. of North Carolina, Graduate School, Raleigh, North Carolina 27600

The general purpose of the proposed research is to formulate concepts and practical methodology for estimating or predicting the volume of recreation use which can be properly supported by various types of waterbodies in the state of North Carolina. More specifically, it is proposed to:

1. Define the statistical population and develop parametric descriptions of component elements and groups. 2. Establish criteria based on observable or predictable characteristics of typical population elements, or groups of elements, as a basis for recognizing the degree to which significant characteristics and attributes are present. a. Minimize the effect of subjective reasoning through a dichotomous sequence of alternative/consequence decisions. b. Express the effect of decisions in numerical terms to facilitate comparison of typical sets of circumstances and combinations of characteristics. 3. Develop a simple appraisal technique which will yield a quantified estimate of the capacity of any individual waterbody under a specified set of conditions and management assumptions. Validate methodology in typical situations. Express capacity in meaningful units of time, area, and patron presence.

6.0407, A FIELD AND LABORATORY STUDY OF FLUORIDE UPTAKE BY OYSTERS

J.E. HOBBS, Univ. of North Carolina, School of Agriculture, Raleigh, North Carolina 27600

The project is designed to answer the following questions about fluoride in North Carolina estuaries: 1. Is there evidence for an increase in levels of fluoride in oysters due to effluents from phosphate mines? 2. What is the effect of the phosphate effluents on growth and fluoride levels of oysters? 3. Are these levels potentially dangerous to humans?

Techniques used will be linear growth and meat-shell ratio measurements as well as a spectrophotometric determination for fluoride in soft tissues following oxidation and diffusion of HF.

The project will involve measurements of the fluoride levels in natural populations, transplant of oysters into effluent areas to see if fluoride is concentrated, and laboratory studies in high fluoride environments to follow growth and concentration effects.

6.0408, ECONOMIC EVALUATION OF CHANGES IN LAND USE OF A MUNICIPAL WATERSHED AS A GUIDE TO DECISION-MAKING

T.E. MAKI, Univ. of North Carolina, Graduate School, Raleigh, North Carolina 27600

The proposed research involves two major phases, the first of which consists mainly of photogrammetric analysis of six sets of photos taken at varying intervals over a 30-year-period, supplemented by field investigations, to delineate the nature and extent of changes in land use over the past forty years on the 168-square mile Lake Michie municipal watershed near Durham, North Carolina. Concomitantly, the Lake Michie reservoir records would be examined and compiled to provide data on variation in yield, quality, and treatment costs of the water over the same 40-year period. The data on land use changes and on weather factors would comprise the variables against which the reservoir water records would be assessed and correlated by appropriate statistical techniques.

The second major phase consists of an appraisal of research results at several hydrologic stations where vegetative cover manipulation has been studied in relation to streamflow. Relevant treatments would be selected and applied hypothetically in kind and degree to cover types on the Lake Michie watershed after a detailed field investigation of the composition and condition of the existing vegetative cover of the watershed to determine what increases in streamflow can be effected through alternative

6. WATER RESOURCES PLANNING

treatments and what the net benefits from such treatments would be.

Finally, an attempt would be made to develop guides that would be helpful to managers of municipal watersheds in decision-making.

6.0411, EFFECTS OF IRRIGATION DEVELOPMENT ON TRADE PATTERNS AND INCOME GENERATION

A. HERTSGAARD, North Dakota State University, Agricultural Experiment Sta., Fargo, North Dakota 58102

Objectives: 1. To identify business expenditure patterns in the New Rockford and Warwick-McVile irrigation areas in North Dakota. 2. To project changes in the levels of income, by economic sector, that result from irrigation development in the New Rockford and Warwick-McVile irrigation areas. 3. To provide primary data that will describe existing and changing patterns of economic activity in an area during the initial stages of irrigation development.

Description of work proposed: 1. Delineate a study area including the proposed irrigation areas and assemble data on expenditures of economic units within the area. 2. Apply income multipliers (obtained in this and previous research) to the expenditures associated with irrigation development to obtain projections of the changes in income that will result within the area. 3. Collect and compile auxiliary economic data that will be useful for the research and for planning resource development programs.

This project (OWRR number B-003-NDak and N.D. Agr. Expt. Sta. number S-3-16, entitled 'Effects of Irrigation Development on Trade Patterns and Income Generation') is funded under

6. WATER RESOURCES PLANNING

the matching grant program of the Office of Water Resources Research and will constitute the initial research effort of the North Dakota Agricultural Experiment Station toward Objective 2 of NC-88, 'Economic Development in Rural Communities'.

SUPPORTED BY North Dakota State Government

6.0412, EFFECTS OF IRRIGATION DEVELOPMENT ON TRADE PATTERNS AND INCOME GENERATION

T.A. HERTSGAARD, North Dakota State University, State Water Resources Inst, Fargo, North Dakota 58102

This study will measure the level of economic activity in each of the economic sectors in an area prior to the initiation of an irrigation development project in that area. Gross receipts multipliers obtained from previous research will be applied to the changes in income that result directly from irrigation development in order to estimate the indirect changes in income that are likely to result from irrigation development.

An input-output model will be employed as the analytical framework in this study. The interdependence coefficients to be used in the projection of indirect income changes will be those which are associated with marginal rates of income change in each sector rather than those based upon average expenditure patterns.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch North Dakota State University

6.0413, ECONOMIC IMPACTS OF WATER RESOURCE DEVELOPMENT

T.A. HERTSGAARD, North Dakota State University, Agricultural Experiment Sta., Fargo, North Dakota 58102

Objectives: To test the hypothesis that secondary income generated by water resource development can be explained and predicted on the basis of measurable characteristics of the community.

A multi-county functional economic area will be selected for study and classes of similar economic activity will be delineated as economic sectors. Data will be collected on the expenditures of economic units in each sector to each of the other sectors. These data will be aggregated to obtain a total expenditures matrix for each of several subareas within the area studied. A set of trade coefficients will be computed for each of the subareas and these coefficients will be compared for differences.

6.0414, PRIMARY PRODUCTIVITY, AND STANDING CROPS IN RELATION TO WATER QUALITY IN LAKE ASHTABULA RESERVOIR, NORTH DAKOTA

J.J. PETERKA, North Dakota State University, Graduate School, Fargo, North Dakota 58102

The relationships of productivity of phytoplankton and standing crops of zooplankton and bottom fauna to water quality will be studied in Lake Ashtabula reservoir in southeastern North Dakota.

Field studies will involve measurements of 1. phytoplankton production measured by the light- and dark- bottle oxygen change technique and phytoplankton standing crops measured by chlorophyll 'A', total numbers, dry weights; 2. zooplankton standing crops; 3. bottom fauna standing crops; and 4. measurements of temperature, total alkalinity, O₂, SO₄, NO₃, NO₂, NH₄, pH, and total dissolved salts. Measurements will be taken throughout the year at a permanent station established a short distance above the dam.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch North Dakota State University

6.0415, A PHYSICAL AND ECONOMIC ANALYSIS OF ALTERNATIVE IRRIGATION METHODS IN A SUB-HUMID CLIMATE

E.C. STEGMAN, North Dakota State University, School of Agriculture, Fargo, North Dakota 58102

The objective of this project is to evaluate alternative methods of irrigation for the purpose of identifying the design or designs which maximize returns to resources in a sub-humid climate. The results of this study will provide information needed by irrigators to make decisions regarding the method and size of irrigation system needed to realize the optimum economic potential or irrigation in the new irrigation districts in North Dakota.

Description of Work Proposed: A. Available crop water use data will be analyzed to develop suitable soil moisture accounting model. B. Available crop yield and associated climatic data will be analyzed by means of the soil moisture accounting model to develop production functions for potentially irrigable crops. C. Artificial irrigation programs will be synthesized for significant periods of climatic record to estimate the yield response distributions attainable with discrete irrigation system design capacities as applied to a range of farm unit sites, soil moisture storage capacities, and crop rotations. D. Linear programming techniques will be utilized to identify the system designs which maximize irrigation returns to selected resources given specific combinations of the factors considered.

6.0416, DISTRIBUTION AND ECOLOGY OF RIVER MOLLUSKS IN CENTRAL AND WESTERN NORTH DAKOTA

A.M. CVANCARA, Univ. of North Dakota, School of Engineering, Grand Forks, North Dakota 58202

This investigation has two objectives, 1) to determine the distribution and ecology of mollusks in the rivers of central and western North Dakota, and 2) to determine the effects of water pollution in the rivers of this area as indicated by these mollusks.

This study is to be initiated and completed before natural drainages are altered by the Garrison Diversion Unit of the Missouri River Basin Project. The diversion project will effectively mix the waters of the Missouri River and Hudson Bay Drainage basins.

Ecologic factors affecting mollusk distribution, once known, can be further evaluated by ecologic impact studies after the natural drainages are altered physically or by possible water pollution. Also, present ecologic data can be related to paleoecological conditions of Pleistocene mollusks. Distribution data of the mussels may be applied to tracing former stream confluence in central and western North Dakota.

Numerous sampling stations will be established on each river system, with at least five stations on each minor tributary. At each station, all species of mollusks will be collected and their relative abundance estimated. Light penetration, turbidity, water temperature, dissolved oxygen, alkalinity, hardness, chloride content, nitrate and nitrite content, pH, and other factors will also be analyzed.

6.0417, THE LIMNOBIOCHEMISTRY OF DEVILS LAKE, NORTH DAKOTA

J.K. NEEL, Univ. of North Dakota, Graduate School, Grand Forks, North Dakota 58202

This proposed study is aimed at determination of the physical, chemical, and biological nature of the highly saline Devils Lake environment and energy exchanges between the water, bottom sediments, and atmosphere as brought about through the life processes of plankton, benthos, nekton, and outside predators.

Investigations will involve the following: 1. Analyses of water, plankton, seston, and bottom sediments to show annual patterns of productivity and nutrient exchanges and energy among these divisions. 2. Determination of benthos composition and concentration and how it and energy conservation are affected by insect emergences and repopulations. 3. The role of vertebrates (nekton) in energy cycles as related to their utilization of plankton and benthos and their removal by predation and migration (salamanders).

6.0418, THE IMPORTANCE OF THE FOOD CHAIN IN BOTULISM INTOXICATION AMONG WATERFOWL LAKES AND SLOUGHS OF THE DEVILS LAKE REGION IN NORTH DAKOTA

J.R. REILLY, Univ. of North Dakota, Graduate School, Grand Forks, North Dakota 58202

This information is designed to investigate the importance of the food chain in the initiation and continuance of epornitics of botulism intoxication among waterfowl and to evaluate possible control methods.

Investigations will involve the following: 1. Examination of natural outbreaks of botulism to determine the type involved, the sources of intoxication and the mechanism of transmission, via the food chain. 2. Determination of the mode of entrance of the organism and its toxin into the food chain. 3. The role of invertebrates in the intraspecific transfer to vertebrates. 4. The possible use of marsh inoculation with *B. licheniformis* as a control measure to reduce or eliminate botulism epornitics.

6.0419, INTENSIVE COOPERATIVE INVESTIGATIONS OF SELECTED POTHOLE ON MISSOURI COTEAU IN DICKEY, WARD AND STUTSMAN COUNTIES, NORTH DAKOTA

W.S. EISENLOHR, U.S. Dept. of Interior, Northern Pr. Wlfe. Res. Ctr., Jamestown, North Dakota

The purpose of these studies is to describe and evaluate factors causing water loss and water-replenishment in potholes, and to determine the relationship of water-levels to marsh and aquatic plant associations and to waterfowl use. Hydrological factors being investigated include evapotranspiration, bottom seepage, inflow and outflow, surface runoff, ground water influence, and size, topography, vegetation and land-use of watersheds. Instrumentation on each pothole includes a water stage recorder for pond level with two margin pens-one for a tipping bucket rain gage and the other for recording miles of wind movement, anemometers mounted 12 feet above water surface, water temperature recorders and ground water wells. Comparative data are obtained from both open-water ponds and heavily vegetated ponds. The information concerning varying rates of water loss and water replenishment should be useful in evaluating potholes that are being considered for management or acquisition. The Geological Survey is responsible for the hydrological investigations, while correlative biological relationships are being studied by the Bureau of Sport Fisheries and Wildlife. This project was initiated in FY 1961 and field work was completed in FY 1968. A number of reports have been published and project will be completed in FY 1970.

6.0420, DISTRIBUTION AND DENSITY OF BREEDING WATERFOWL POPULATIONS AS RELATED TO QUANTITY AND QUALITY OF WETLAND HABITAT IN NORTH DAKOTA

R.E. STEWART, U.S. Dept. of Interior, Northern Pr. Wlfe. Res. Ctr., Jamestown, North Dakota

Objectives: (1) To identify and describe types of wetlands occurring in important waterfowl producing areas of North Dakota and determine their numerical and areal distribution, (2) to determine the distribution and density of waterfowl breeding populations and production as related to number, acreage and distribution of wetland types in each area, (3) to evaluate the importance of each area to breeding populations and production of waterfowl, (4) to determine the use of different wetland types by breeding waterfowl and broods as related to various physical and environmental factors, (5) to compare relative use of man-made and natural basin wetlands by breeding waterfowl and broods, (6)

to obtain information useful in developing a classification for man-made and riparian wetlands, and (7) to determine if the sampling system established for breeding waterfowl population investigations may be suitable for analyses of other important facets of long-term regional ecological studies.

Procedures: The more important prairie wetland area of North Dakota has been grouped into four natural strata based upon physiographical, biogeographical and ecological factors. For pair counts a total of 194 randomly selected 1/4-square-mile quadrats will be optimally allocated among these strata on the basis of variance estimates in 1967. For pilot brood counts a total of 32 1/2-square-mile quadrats will be randomly selected on one of the four strata. Information recorded for each wetland occurring in a quadrat will include class, subclass, cover interspersed type, size, dominant vegetation, water levels and conditions and the land use of its basin and related watershed. Water samples will be collected for chemical analyses. Separate waterfowl pair and brood counts will be made so as to include the peak nesting and brood periods for early, mid and late breeding species. Records will be kept of travel and equipment requirements.

6.0421, COMPUTERIZED DESIGN AND SYSTEMS ANALYSIS OF WASTEWATER TREATMENT PLANTS

R. SMITH, U.S. Dept. of Interior, Water Research Laboratory, Cincinnati, Ohio 45226

Development of technology which will make it possible to predict by means of theoretical or empirical relationships the performance and cost of individual wastewater treatment processes or systems of one or more processes. Calculated performance and cost estimates must be sufficiently valid to act as a basis for making decisions concerning the most economic plant design which can be used to convert the influent wastewater stream to an effluent stream of sufficient quality to satisfy the needs of the user or the receiving stream. Models for individual processes will be devised using theoretical relationships wherever possible and empirical relationships or performance factors when necessary to account for the lack of adequate physical, chemical, or biological theory.

A common stream vector will be used in developing all models in order that any effluent stream from a process can be used as an influent stream to any other process. Models or unit calculations for each process will be programmed for the digital computer as a subroutine. An executive program will be developed which will make it possible to compute performance and cost for any system of processes.

6.0422, A SOCIO-ENVIRONMENTAL STUDY OF A RIVER VALLEY

M.R. ZAVON, Univ. of Cincinnati, School of Medicine, Cincinnati, Ohio 45221

This project will study the feasibility of establishing a long-term surveillance of the interactive effects of man and his environment in a single river valley complex. The Great Miami River Valley includes large cities, small towns and farmland. Animals and man living in the Valley produce sanitary waste and the products of daily living; industries in the Valley contribute heavily to the overall burden of waste which must be disposed of by the air, the water, or put on the land. The people in this Valley complex came from different geographical sources with differing cultural and social backgrounds. Their heritage predisposes them to certain ways of solving problems and to the organization of their social fabric.

The project represents an approach to research in which the social, biological, and physical sciences contribute data to a centralized facility. During the phase supported by the present grant, three individual research investigations will be carried out at the same time the central project office will determine whether research conducted in this context may be done at less cost, more productively, and more meaningfully than similar research done without the unifying concept proposed.

6.0424, COLONIZATION RATES OF BENTHIC INVERTEBRATES IN AN OHIO RESERVOIR

W. DUDROW, Ohio State University, Graduate School, Columbus, Ohio 43210

During the summer water levels of reservoirs are lowered and littoral areas are exposed to the atmosphere. The purpose of this study is to estimate the rate invertebrates colonize the drawdown areas as water levels are raised in the spring and fall. A transect method is being used to sample natural populations. Artificial substrates are being used to estimate colonization rates on clay, sand and gravel. Representative littoral areas will be sealed off from fishes to estimate the impact of fishes on colonization.

6.0425, COMMUNITY REACTIONS TO WATER RESOURCES PROBLEMS IN RELATION TO PLANNING

R.R. DYNES, Ohio State University, Graduate School, Columbus, Ohio 43210

The proposal views flooding, water pollution and depletion as different forms of objective collective stress. It is suggested here that those types of collective stress which develop over long periods of time are more difficult to perceive and, therefore, it becomes more difficult to initiate planning and action to cope with them. The study focuses on interviews with a sample of community decision makers in five different communities. The five communities will be selected on the basis of having experienced different types of collective stress. In each community, the definition of the salience of such problems for the community will be determined. In each community the types of adaptation in terms of planning and inaction will be determined. Various social factors will be related to the differential perceptions and adaptations of each community.

6.0426, A SYSTEMS ANALYSIS OF THE WESTERN BASIN OF LAKE ERIE

G.P. HANNA, Ohio State University, Water Resources Center, Columbus, Ohio 43210

The purpose of the research is to conduct a systems analysis of the Western Basin of Lake Erie and adjacent areas that will combine on-shore economic relationships with in-lake ecological relationships. The connections are viewed in both directions. Pollutants generated by economic growth in the drainage area of the Western Basin have given rise to biological phenomena in the lake. Pollutant controls, intended to improve water quality, will impose costs on the economic community. The system that this research proposes to develop will be designed to measure the effects of abatement costs, imposed in various ways, on the affected industries, on employment in the region and on other attributes of the local economy.

The proposed research will (1) establish the economic relationships relevant to the problem and (2) integrate the results of other water resources research projects that are already under way in the area. Included in the latter are studies of pollutant effects on biological processes in the lake. The system is visualized as comprised of two major subsystems, the economy of the Detroit Toledo Metropolitan Area, and the in-lake ecological sub-system; and two related subsystems, the geological effects and recreational demand. Linkages between these subsystems are envisioned as mainly the pollutants, and the resulting water quality. Special studies are proposed to determine pollutant costs and markets of the products that give rise to pollutants. Costs of municipal sewage treatment and the impact of municipal taxes are other special studies that will be investigated.

Ohio State University

6.0427, THE ECOLOGIC IMPACT OF THE INTERACTIONS AMONG MICROORGANISMS AND AQUATIC CONTAMINANTS IN LAKE ERIE

R.M. PFISTER, Ohio State University, Graduate School, Columbus, Ohio 43210

Particulate matter in Lake Erie water will be examined on a physical, chemical, and biological basis, and this matter will be characterized using density gradient centrifugation, electron microscopy, and certain chemical analyses. Microbial portions of the Lake Erie ecosystem will be characterized on the basis of physiological types (not identification). Primary productivity, chlorophyll distribution and photosynthesis-pigment relationships will be examined to obtain information pertinent to particulate and bacterial interactions. Algae will be collected and treated to remove physically associated bacteria. Cultures of bacteria obtained from the algae will be examined in the same manner (e.g., determine physiological types) as the non-algal associated bacteria in water. Surface tension and water content of selected chemicals will be experimentally altered to study the effects on microbial populations (physiological types) and on types of particulates found in the water. Data from these experiments will be correlated in an attempt to establish cause-and-effect relationships.

Ohio State University

6.0428, PUBLIC INVESTMENT CRITERIA FOR WATER-ORIENTED RECREATION IN THE LAKE ERIE BASIN

R.A. TYBOUT, Ohio State University, Graduate School, Columbus, Ohio 43210

The project has three parts: 1) The measurement of demand for water-oriented recreation at numerous sites. 2) Analysis of costs of pollution abatement and recreation facilities at the same sites. 3) Evaluation of the relative merits of alternative public investments for recreation enhancement and of selected financial policies.

Each part is assigned a year of research time. Demand will be measured by a simultaneous-origin adaptation of the Hotelling-Clawson method. Shifts in demand due to pollution and income changes will be measured and, in fact, play an important part in the determination of benefits from abatement. The analysis of costs of pollution will seek to relate marginal pollution contributions at recreation sites to costs of abatement. The third, or final part of the analysis will explore the implications of combining the results of the first two parts in a cost-benefit framework with various methods of financing, including pollution taxes, user charges and other revenue sources.

6.0429, ECONOMIC AND LEGAL FACTORS IN PROVIDING, USING, AND MANAGING WATER RESOURCES IN AGRICULTURE

W.A. WAYT, Ohio State University, Agricultural Experiment Sta., Columbus, Ohio 43210

6. WATER RESOURCES PLANNING

Objectives: To determine the economic considerations that affect use and management of water in agriculture, and competing uses.

To identify widely used systems and sources of providing for farm water supply needs in different parts of the state.

Procedures: Costs and capital requirements data will be assembled from various sources regarding materials costs, construction of facilities costs, etc., to develop supply costs for different existing farm systems compared to costs of providing water by alternative centralized facilities.

SUPPORTED BY U.S. Dept. of Agriculture
Ohio State Government

6.0430, MINIMUM WATER CONCENTRATION OF ENVIRONMENTAL WATER CAPABLE OF SUPPORTING LIFE
G.W. WHARTON, Ohio State University, Graduate School, Columbus, Ohio 43210

Objective: a. Problem: To determine the minimum concentration of water than can support terrestrial life and make an estimation of the theoretical limit for any type of life based on protoplasm. b. Application: Information gained through the proposed research can be used to predict the concentration of water required to sustain life on other planets. c. Water is necessary for life, but the minimum concentration of water required to sustain life is unknown. It is known that a sufficiently high concentration must be present to be available to protoplasm, but this varies depending on the organism.

Approach: It is proposed to investigate polyhydric alcohols, sugars, and amino acids at temperatures and pressures within the biologic range. Concurrently the same methods will be used to determine the ability of organisms to extract water from unsaturated air and then from dilutions of molecules in equilibrium with the vapor content of the lowest relative humidity (R.H.) from which the organisms can extract water.

Progress: a. 01 05 66 to 30 04 67. b. The screening of fungi and lichens for their ability to take up water from low R. H. atmospheres continues. A green alga failed to show significant water uptake at low water activities. Five lichens were screened and one shows potential for growth in environments of low water activity.

Four Scientific papers are in preparation dealing with water exchange under equilibrium and non-equilibrium conditions and the fine structure of the cuticle of the mite. The fourth paper is concerned with the question of the paradox raised by the studies indicating that while water is essential for terrestrial life, living systems should be able to use essentially all of the water in an environment and yet, the deserts of the world are characterized by limited faunas and floras.

6.0431, THE ALGAE AND ZOOPLANKTON OF PROTECTED AND EXPLOITED LENTIC HABITATS IN NORTHEASTERN OHIO
G.D. COOKE, Kent State University, Graduate School, Kent, Ohio 44240

A long-term survey of the species composition, distribution, and ecology of algae and aquatic microcrustacea in four representative bodies of water in Northeastern Ohio has been initiated. Two of the study sites (a lake and a reservoir) were selected on the basis that they have not been subjected to sewage or septic tank effluents or other pollutants, and the other two sites (strongly eutrophic lake and reservoir) were selected for comparative purposes.

The major objective is to prepare comparative species lists based on extensive seasonal collecting in pelagic and littoral areas. This information is to be compared with the ecological and cultural history of each body of water. This project is part of a larger study of the trophic typology of Ohio lakes.

6.0432, THE INCORPORATION OF C14 BICARBONATE INTO PIGMENTS OF A NATURALLY OCCURRING BLUE-GREEN ALGAE COMMUNITY WITH RESPONSE TO WAVELENGTH

J.H. MORRISON, Kent State University, Graduate School, Kent, Ohio 44240

Oscillatoria rubescens is enclosed in dark and light bottles at depths of known wavelength and exposed for 6 hours to Sodium - C14 bicarbonate. The pigments are separated into chlorophyll, carotene, and phycobilin fractions by extractions. Seasonal ratios indicate a shift in the phycoerythrin/phycoecyanin ratio by isotope incorporation studies. Further evidence of metabolic change due to wavelength variation is indicated.

SUPPORTED BY Kent State University

6.0433, THE INCORPORATION OF C14-BICARBONATE INTO THE PIGMENTS OF BLUE-GREEN ALGAE POPULATION

J.H. MORRISON, Kent State University, Graduate School, Kent, Ohio 44240

This study deals with the diurnal and seasonal variations in the distribution of labelled carbon into the different photosynthetic pigments of *Oscillatoria rubescens* in Lake Hodgson, Portage County, Ohio.

Radioactive sodium bicarbonate is added to four liter light and dark bottles, and the bottles are incubated in the lake for four hours, beginning at 2400 hours and extending for 24 hours. Light penetration and temperature are measured. In the laboratory the four liter samples are divided and the following measurements made: cell density and total cell volume, total radioactivity, carbon-14 incorporation in phycobilin, and carbon-14 incorporation into chlorophylls and carotenoids. At intervals during the project, in situ enrichment studies will be conducted along with the carbon-14 study. These nutrient investigations may reveal depletion states and associated alterations of biosynthetic pathways.

SUPPORTED BY Kent State University

6.0434, A SURVEY OF PHYTOPLANKTON IN AND OLD AND A NEW RESERVOIR

R. RHODES, Kent State University, Graduate School, Kent, Ohio 44240

The object of this study is to qualitatively compare the summer phytoplankton of Mogadore Reservoir and the newly formed West Branch Reservoir, Portage County, Ohio.

Limnetic algae are collected, species identified, and dominant species counted. Routine limnological measurements are also made at the time of collection.

SUPPORTED BY Kent State University

6.0435, THE ROLE OF TEMPERATURE AND ILLUMINATION IN THE BIOLOGY OF OSCILLATORIA RUBESCENS

R. RHODES, Kent State University, Graduate School, Kent, Ohio 44240

Seasonal changes in the density and activity of a population of *Oscillatoria rubescens* in Lake Hodgson, Ohio will be investigated. Particular emphasis will be placed on the importance of water temperature and illumination in the regulation of bio-activity of this species. Laboratory populations will also be studied under experimentally controlled conditions of temperature and light.

SUPPORTED BY Kent State University

6.0436, FLORISTIC AND FAUNISTIC SURVEY IN THE CUYAHOGA RIVER WATERSHED

R.G. RHODES, Kent State University, Graduate School, Kent, Ohio 44240

The major objectives of this study are twofold. The first objective is to develop for the Ohio Biological Survey a detailed list

6. WATER RESOURCES PLANNING

of algal and fish species in waters of the upper Cuyahoga River Basin. The second objective is to compare floral and faunal surveys made at selected Cuyahoga River stations above and below the East Branch Reservoir. An effort will be made to detect and assess biotic changes associated with the East Branch Reservoir and with the inflow from a tributary of the Cuyahoga River. Complete physical data will be collected at each station.

This project is a part of master plan which will involve the prosecution and integration of long-term surveys of flora and fauna in this river system and determination of the effects of pollution water impoundment, and tributary inflow on the indigenous biota.

SUPPORTED BY Kent State University
Ohio State Government

6.0437, COMPARATIVE STUDY OF PHYTOPLANKTON IN NEW AND RECLAIMED ACID MINE DRAINAGE PONDS C.V. RILEY, Kent State University, Graduate School, Kent, Ohio 44240

The purpose of the project is threefold: to compare the algal flora of new (very acid) and reclaimed (near neutral) strip mine ponds, to evaluate the role of algae in the reclamation process, and to study the nutrition of algae in an extremely acid ecosystem.

Water samples are taken weekly in both pond types and phytoplankton species identified and enumerated. Routine limnological measurements of pH, dissolved oxygen, hardness, alkalinity, and plant nutrients are also made.

Control and experimental columns of water are isolated in transparent polyethylene bags and resuspended in the ponds. Plant nutrients are added to the experimental bags to determine those ions which may be in limiting concentration in the ponds. The importance of chelators is to be carefully evaluated.

In an effort to estimate the importance of algae in the reclamation process, laboratory algal populations are cultured under semi-natural conditions and changes in water quality with time are studied.

SUPPORTED BY Kent State University

6.0438, ROUTINE SAMPLING AT SEVEN INDEX STATIONS

V.C. APPELEGATE, U.S. Dept. of Interior, Biological Station, Sandusky, Ohio

Early work conducted by the R/V Cisco in Lake Erie in 1957 indicated the desirability of establishing regular sampling stations in the western basin of the lake for collecting both fishery and limnological data. Relatively rapid changes in both the environment and the fisheries that were known to be occurring could only be identified and defined on a long-term basis by such a program.

In 1958 and 1959, seven stations in the western end of the lake were visited in the spring, summer, and fall. Since 1960, only the summer visit to each station has been made due to limitations of funds, personnel, and equipment.

At each visit to each station, physical and chemical limnological data and plankton and bottom samples are collected by conventional procedures. Larger fish are collected by trawling and fry are sought with tow nets. Limnological data and plankton and bottom samples are turned over to the Biological Laboratory's Environmental Research Unit for analysis. Fish and fry collections are retained at the Sandusky Biological Station for current and future studies. Ultimately, all fishery and limnological data will be integrated by the two groups to demonstrate relationships that may exist between them.

6.0439, LIFE HISTORY AND ABUNDANCE OF THE YELLOW PERCH

H.D. VANMETER, U.S. Dept. of Interior, Biological Station, Sandusky, Ohio

The abundance of year classes, rate of growth, and the effects of exploitation are determined from data collected from fish captured in experimental and commercial nets. Information on food, spawning habits, distribution, competition with other species,

and other life history aspects are obtained from collections of fish taken in experimental gear. Environmental factors--oxygen, water temperature, bottom organisms, plankton, water currents, seiches, and the interrelations with other species of fish are determined from limnological and fish-population data obtained with the fish collections.

Current studies nearing completion include the age and growth, abundance, and history of the commercial fishery for this species from 1949 through the calendar year 1966, spawning and fry development, age and size at maturity, fecundity and food habits. Studies of the effects of environmental conditions upon this species are described elsewhere as separate projects.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0440, LIFE HISTORY AND ABUNDANCE OF THE WALLEYE

D.R. WOLFERT, U.S. Dept. of Interior, Biological Station, Sandusky, Ohio

The abundance of year classes, rate of growth, and the effects of exploitation are determined from data collected from fish captured in experimental and commercial nets. Information on food, spawning habits, distribution, competition with other species, and other life history aspects are obtained from collections of fish taken in experimental gear. Environmental factors -- oxygen, water temperature, bottom organisms, plankton, water currents, seiches, and the interrelations with other species of fish are determined from limnological and fish-population data obtained with the fish collections.

Current studies nearing completion include the age and growth, abundance, and history of the commercial fishery for this species through the calendar year 1961, the food habits and food preferences of young-of-the-year walleyes, and the type and degree of parasitic infections of young-of-the-year and yearling fish. Studies of the effects of environmental conditions upon this species are described elsewhere as separate projects.

6.0441, EVALUATION OF NATURAL RIVER ENVIRONMENTS

M. MORISAWA, Antioch College, Undergraduate School, Yellow Springs, Ohio 45387

Objective methods for identifying and assessing comparative values of rivers in their natural states will be developed. Biological, geological and esthetic aspects of two wild or natural rivers will be compared with these same qualities in a developed river. Pertinent geological factors will include discharge and stream regimen, channel morphology and composition, soil types and profiles and the relations of these to biotic communities. Biological factors will include community types and compositions and methods of judging successional status. We will attempt to identify relations of geologic and biotic processes that are pertinent to present and future river qualities. Methods and criteria will be organized around the problem of judging over-all value of a river system in relation to human requirements. These criteria will be reported as an aid to agencies concerned with selection and management of rivers for wild, scenic, or recreational status.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0442, MULTISTRUCTURAL DEMAND MODELS FOR WATER REQUIREMENT FORECASTING

G.W. REID, Univ. of Oklahoma, Research Institute, Norman, Oklahoma 73069

Design and construction of municipal industrial water facilities require knowledge of future needs. Water supply facilities must be properly planned and executed or dis-economy of scale 'managerial efficiency' can develop prematurely. Generally system design involves principles and phenomena not altogether understood; as a consequence, resulting mathematical models are very complex. With computers, mathematical models can be constructed which integrate socio-economic factors in perspective.

This research proposes to develop appropriate models of future demands for municipal industrial water. The methodology will be applicable to other essential services.

6. WATER RESOURCES PLANNING

The need is to utilize new notions in urban economics, 'banal' concepts of economic spaces, and the socio-economic forces determining their projections. The generation of these future values will use a supply base concept, not the more traditional demand base. Socio economic projects and constraints will be incorporated in the modes and system analysis of forecasts performed.

More specifically, the model will proceed from a macro level by disaggregation procedures, or step-down techniques to a micro level. The macro level will use a supply base concept with special distribution based on the concept of limiting or optimal resource. The intra regional distribution will continue to use the supply base concept but will be tempered by the interaction of individual mixes and reference to the export concept.

6.0443, LAND AND WATER USE, CONSERVATION, AND DEVELOPMENT IN OKLAHOMA WATERSHEDS

D.D. BADGER, Okla. St. Univ. of Agr. & Sci., Agricultural Experiment Sta., Stillwater, Oklahoma 74075

(1) To determine the actual and potential changes in use of flood plain land by farmers as a result of reduction in flooding afforded by the upstream watershed development programs (2) To develop alternate predictive models of flood plain land use change following flood protection (3) To estimate the effect of watershed development upon farm real estate values and prices (4) To determine the potential value of the water supply created by the floodwater retarding structures for irrigation purposes (5) To estimate the local secondary effects of the watershed development programs (6) To determine feasible institutional arrangements and probable costs of developing alternative recreational facilities.

A survey of about 200 farm operators with flood plain land in the watersheds of the Washita River Basin will be made for the purposes of obtaining basic land resource and type of farming data and of identifying changes in use of land following flood protection. Data from secondary sources will be used to identify major trends in the use of upland and bottomland in counties of the Washita Basin. Information on land values and market prices will be obtained in the survey of farmers in the watershed. Local and total multiplies effects of increases in agricultural revenue due to watershed development in the county will be estimated by mathematical techniques, and methods of adapting the results to other local areas will be developed.

6.0444, ECONOMIC EFFICIENCY IN THE ALLOCATION OF IRRIGATION WATER OVER TIME

V.R. EIDMAN, Okla. St. Univ. of Agr. & Sci., School of Agriculture, Stillwater, Oklahoma 74075

The purpose of this project is to estimate the primary benefits from irrigation on the economic development of an area for alternative methods of water-use regulation. The study pertains to the portion of the Ogallala aquifer between the Canadian and the Arkansas Rivers.

The procedure involves programming optimum plans for representative farms using varying quantities of water to estimate the demand schedule for water for irrigation. These results will be aggregated to estimate the area demand. Estimates of both the annual recharge and quantity of water in storage will be obtained from the U. S. Geological Survey studies of the area. This demand and supply information will be used to evaluate alternative methods of regulating water-use for irrigation. The evaluation will be made on the basis of the method's effect on the representative farm organization, net returns to the farmer's fixed resources, the quantity of the major agricultural products that will be produced and water availability in future years. Results from these analyses will be used to determine the primary economic benefits from irrigation and its impact on the economic development of the area.

6.0445, WATER RESOURCES PLANNING STUDIES - OKLAHOMA AND ARKANSAS

A.F. GAUDY, Okla. St. Univ. of Agr. & Sci., School of Engineering, Stillwater, Oklahoma 74075

It is proposed to collect, correlate, and summarize all available hydrologic and water quality data pertinent to the Arkansas River and its tributaries as they affect the water resources of Oklahoma and Arkansas. The data will be utilized to determine, predict, and/or recommend the allowable conservation storage which may be equitably apportioned to each state in light of the present and future water requirements. A parallel proposal for the water resource in Arkansas is being submitted by the University of Arkansas. The approach will be to estimate the present total water production and quantity at the state lines by streams contributing to the Arkansas River Basin resource. After obtaining the most complete picture which is possible of present characteristics of the appropriate streams, existing federal, state, and private agency plans for future stream development will be analyzed. Also, in the course of the study, additional possibilities for reservoir sites may be considered. Using the present water production figures and assuming potential reservoirs are in operation, and assuming the needed releases for existing and predicted water requirements, the effect of the assumed proposed reservoir operations can be analyzed to determine if the usable supply is ample for all estimated needs, and if surplus water remains.

6.0446, A PRELIMINARY ANALYSIS OF THE IMPACT OF THE ARKANSAS WATERWAY ON LAND TENURE AND VALUE IN OKLAHOMA

L.B. WARNER, Okla. St. Univ. of Agr. & Sci., Graduate School, Stillwater, Oklahoma 74075

This work proposes to identify changes in land tenure and value associated with the Arkansas waterway in an area in Oklahoma bordering the waterway. Emphasis will be on major transactions, and the period of examination will be from 1957 to the present. The obstacles to obtaining such data are numerous; thus an implicit objective of this pilot project is to determine whether such information can be obtained in a sufficiently systematic manner so that reasonably valid inferences can be made. Since this is a pilot project, the investigator will maintain contact with a geographer and a business logistics expert who have already expressed interest. Future expansion of the project would involve such an interdisciplinary team.

6.0447, ECOLOGY OF SPRING CHINOOK SALMON

W. BURCK, State Fish Commission, Clackamas, Oregon 97015

The work encompasses a complete ecological early life history study of spring-run chinook salmon (*Oncorhynchus tshawytscha*) in Lookingglass Creek, Grande Ronde River, near Elgin, Oregon. Principal objectives are to determine the following: 1. Productivity of a given stream area by complete adult upstream enumeration and by sampling of downstream fingerlings and smolts. 2. The physical and biological factors affecting production by monitoring physical factors and by studying all aquatic biological populations. 3. Kinds of significant mortality which occur and stream population densities or carrying capacities at different time periods. 4. Develop behavior patterns for spring chinook in natural conditions to provide information on basic environmental needs of this species.

SUPPORTED BY Oregon State Government

6.0448, FACTORS INFLUENCING THE FRESHWATER RESIDENCE OF JUVENILE FALL CHINOOK SALMON

P.E. REIMERS, State Fish Commission, Clackamas, Oregon 97015

6. WATER RESOURCES PLANNING

This study is investigating factors influencing the length of freshwater residence of juvenile fall chinook salmon in coastal streams. The study is being conducted primarily in the Sixes and Elk Rivers. Main segments of the investigation are concerned with documenting the early life history of fall chinook in relation to length of residence in streams and estuary, timing of seaward migration, physiological adaptation, and basic life history in streams concerning growth rate, population, scale pattern, movement, and behavior. The role of aggressive behavior is being studied in the natural stream environment and in two artificial environments (an observation aquarium and two identical observation troughs). An analysis of the study will include the phases of genetics, population density, and physiological adaptation.

6.0449, LIMNOLOGY AND MANAGEMENT OF OREGON FARM PONDS AND SMALL IMPOUNDMENTS

C.E. BOND, Oregon State University, Agricultural Experiment Sta., Corvallis, Oregon 97331

1. To formulate suitable management practices for rearing fish in Oregon farm ponds and irrigation impoundments. 2. To provide basic limnological knowledge for small bodies of water.

Progress to Date: Toxicity to fish of several pesticides, mainly herbicides, has been studied by static water bioassay, 90-day tank experiments, and other methods.

Considerable time has been spent in evaluating the effect of trifluralin upon fish, which has been found in laboratory tests to be extremely toxic to salmonids.

Pond production experiments have been carried out with largemouth bass and channel catfish stocked both as young adults and juveniles.

Data have been gathered for a comparison of invertebrate production in ponds fertilized by organic and by inorganic fertilizers.

6.0450, OREGON FISHES - THEIR CLASSIFICATIONS, DISTRIBUTIONS AND LIFE HISTORIES

C.E. BOND, Oregon State University, Agricultural Experiment Sta., Corvallis, Oregon 97331

Objectives: In general, to provide basic information concerning Oregon's fish fauna. Immediate objectives involve compilation of faunal lists, keys to Oregon marine fishes and studies of the Zoogeography and speciation of freshwater fishes. A special investigation will assess populations of certain estuarine fishes.

Work Proposed: A. Freshwater studies: Collection, cataloging, and ecological analysis will be continued in order to provide faunal lists and Zoogeographical Information. Collections of lampreys from inland as well as coastal areas must precede studies of speciation in this group. B. Marine studies: For lists and keys, additional collection, cataloging and taxonomic studies will be necessary. Populations of bay fishes will be studied by mark-and-recapture methods.

6.0451, ECONOMIC CONSEQUENCES OF INTERBASIN WATER TRANSFERS

W.G. BROWN, Oregon State University, School of Agriculture, Corvallis, Oregon 97331

It is proposed to develop a theoretical framework which will relate the economic consequences of both direct (primary) and indirect (secondary) economic benefits resulting from interbasin water diversion projects. However, the empirical research on this project will be concentrated on estimating the direct (primary) benefits which could be expected from interbasin water diversion projects. These direct benefits play a crucial role in evaluating the necessary conditions for water transfer. For reliable computations of direct economic benefits from interbasin water transfer, the marginal value productivity of water in its least valuable use in the area of origin and in the area of destination must be estimated. The empirical research on this project will be focussed on the esti-

mation of these marginal value productivities. These estimates will depend crucially upon the costs and returns from various irrigated crops and present and projected acreages of these crops.

Once direct economic benefits have been identified and estimated, it should be possible to isolate the conditions under which indirect (secondary) benefits are likely to arise. Alternative methods for empirically estimating these indirect benefits will be evaluated.

6.0452, ECOLOGICAL STUDIES OF RADIOACTIVITY IN THE COLUMBIA RIVER ESTUARY AND ADJACENT PACIFIC OCEAN

W.V. BURT, Oregon State University, Graduate School, Corvallis, Oregon 97331 (AT(45-1)-1750)

PEARCY

Neutron-induced radionuclides, originating primarily from the nuclear reactors at Hanford, Washington, are continually introduced into the Columbia River estuary and adjacent Pacific Ocean. The presence of Zn65, Cr51, Sc46, Mn54, Co60, and several other radionuclides in dilute, but often measurable concentrations, permits studies of the cycling of these elements.

Studies in the estuary which have already been defined show that the levels of radioactivity and distribution of radionuclides in water, sediment, and biota will concentrate on specific activities (activity of radionuclide per gram of total element) in various components of the ecosystem to determine reservoirs, routes, and rates of transfer.

In offshore areas, planktonic and nektonic organisms will be collected from discrete depths using electrical cable to monitor depth and actuate opening and closing devices. A special study will be made of vertical migrations of euphausiids. Radioanalysis and stable element analysis of midwater and benthic animals from various depths will enable estimates of vertical changes in radionuclide levels and vertical transport rates. Comparisons between specific activities of zinc in animals and water will be attempted in the plume region. Study of seasonal and regional variations of gamma emitters in albacore, tuna and salmon, which have provided insight into the migratory behavior of these species will be completed.

The radioecology of benthic organisms on the continental shelf and slope is being studied along the northern Oregon coast. Stomach contents will be analyzed and food webs will be delineated and related to radionuclide distribution. A deep-sea camera linked to a sediment sampler will help relate bottom topography to the sediment and infauna. Animal-sediment relationships, which have already been shown to be important aspects of benthic radioecology, will become more meaningful when viewed in terms of specific activities.

6.0453, AN ESTIMATION OF THE THERMAL POTENTIAL FOR GROWING IRRIGATED CROPS ON OREGON'S DRYLAND

R.H. CALLIHAN, Oregon State University, Agricultural Experiment Sta., Corvallis, Oregon 97331

Objectives: 1. Develop a technique based on climatological, phenological and yield data to predict a crop-growing risk and relative productivity in irrigable dryland areas in Oregon. 2. Identify dryland areas in Oregon having thermal potential for increased productivity through irrigation using the above technique. 3. Identify, via the above technique, crop species best adapted to those areas if irrigated. 4. Publish an information source for persons interested in the agricultural potential of Oregon's irrigable dryland areas.

Description of work proposed: Summarize, analyze, and interpret available topographic, soil, and weather data to identify Oregon's irrigable drylands and their thermal characteristics, and available phenologic and yield data to determine the response of various crops to thermal regimes. Prepare mapped isograms of thermal adaptation areas for crops, heat unit probabilities, cold-spell probabilities, and other information which will enable a better assessment of potential agricultural productivity.

SUPPORTED BY Oregon State Government

6.0454, AN ECONOMIC EVALUATION OF WATER POLLUTION CONTROL, YAQUINA BAY, ORE

E.N. CASTFL, Oregon State University, Agricultural Experiment Sta., Corvallis, Oregon 97331

OBJECTIVE: (1) Identify the items of economic value that will be sacrificed if pollution is not controlled in a particular case study situation. (2) Insofar as possible, determine the unit prices and physical quantities of those items of economic value identified in (1) above. (3) Determine the cost of alternative engineering plans designed to provide for varying degrees of pollution control. (4) Relate the above variables in a mathematical model that will permit the unknown physical, biological and economic data to be isolated. (5) Relate the unknown variables in (4) above to needed research in the physical, biological and economic fields. This work will involve the establishment of a complete mathematical model which will relate all monetary elements of benefits and costs. It will be necessary to make quantitative determination of so many of the benefits and cost items as possible. It will then be necessary to solve for the crucial range of values for the unknown variables. The results of this case study will then be related to the more general problem of benefit-cost analysis in water pollution control.

SUPPORTED BY Oregon State Government

6.0455, APPRAISAL OF WATER MANAGEMENT INSTITUTIONS-SURVEY OF OREGON WATER LAW

C.D. CLARK, Oregon State University, Water Resources Research Inst., Corvallis, Oregon 97331

Object. 1. To conduct a survey study of Oregon water law. 2. To evaluate the adequacy of selected portions of Oregon water law, such as pollution controls. 3. To assess the vitality of common law principles expressed in early Oregon decisions. 4. To identify for further research legal problems of water resources management important to the Northwest.

Description of Work: Analysis will be made of Oregon court decisions, constitutional and statutory provisions, and Attorney General opinions regarding the use of the various water resources, surface and underground, of the state. This survey study will trace the historical development of Oregon water law, synthesize and evaluate existing Oregon water law, critically compare it with water law in other Western states, and otherwise seek to attain the objectives stated above.

6.0456, SIMULATION AS A MEANS OF STUDYING RESOURCE ALLOCATIONS

A.N. HALTER, Oregon State University, School of Agriculture, Corvallis, Oregon 97331

Objectives: 1. To build mathematical models of the environment and decision-making processes of various resource allocating units (firm, industry, agency, both public and private). 2. To operate and test these models on digital computers. 3. To design and test alternative decision-making criteria and processes.

Progress to Date: A computer simulation model of a relatively small river basin has been developed that is capable of comparing sizes of reservoirs, channel capacities, water use priorities, operating procedures, and other management policies that come within the economic framework.

SUPPORTED BY Oregon State Government

6.0457, SOCIO-CULTURAL IMPACTS OF WATER RESOURCE DEVELOPMENT IN THE SANTIAM

T.C. HOGG, Oregon State University, Graduate School, Corvallis, Oregon 97331

This project is to examine the effects of Santiam water resource development projects on social organizational (behavioral) and cultural (attitudinal) patterns of Santiam inhabi-

tants. It is to focus on such effects just following the construction phase of the Foster and Green Peter Reservoirs and to test a socio-cultural model of a water resource development project in its institutional phase.

The research will make use of written documents and interview data to ascertain the social and attitudinal characteristics of the people of the Santiam as they relate to the dams. Checks on interview data are to be obtained through the use of a participant observation technique in special community settings.

Comparisons are to be made with on-going and proposed projects in the Western Region. These will include aspects related to the project's developmental cycle, i.e., planning, construction, institutionalization, and evaluation, and those of public recreation and education, political restructuring and economic reorientation, and social and attitudinal adjustments.

6.0458, ECOLOGY OF RECREATIONALLY IMPORTANT ESTUARINE FISHES IN OREGON

H.F. HORTON, Oregon State University, Agricultural Experiment Sta., Corvallis, Oregon 97331

The first objective of this project is to provide fundamental understanding of the ecological factors which influence the abundance and well being of the recreationally important fish species in Oregon estuaries. The second objective is to develop the understanding of the ecology of the various species into recommendations for management practices for the conservation of populations of estuarine fishes. Immediate objectives are: (1) To study the movements and migrations of Oregon's estuarine fishes in relation to the factors of their environment. (2) To estimate the periodic abundance and angler yield of the various populations of estuarine fishes. (3) To study the growth and mortality factors which may influence the maintenance of populations of estuarine fishes.

Intra-estuarine and coastal movements of the recreationally important fishes will be determined by the analysis of recoveries of tagged specimens. Estimates of population size and angler yield will be determined by use of the capture-mark-release-and-recapture technique. Growth rates will be determined by scale analysis, length-frequency distributions and empirical data on length recorded at periodic intervals. Mortality factors will be determined by fecundity, longevity and angler yield data. Environmental factors as temperature, salinity, tidal cycle and associated fauna will be recorded and related to the factors listed above. Based on the relationships developed, recommendations for management will be made.

SUPPORTED BY Oregon State Government

6.0459, HYDROSTATIC PRESSURE-TEMPERATURE, AS ENVIRONMENTAL PARAMETERS, ON GROWTH, BIOCHEMISTRY AND PHYSIOLOGY OF MICROORGANISMS

R.Y. MORITA, Oregon State University, Graduate School, Corvallis, Oregon 97331

Objective - a. Problem: The study of metabolic processes under the environmental extremes of temperatures near 0 degrees C and between 50 and 100 degrees C under hydrostatic pressure. b. Application: To determine whether the maximum growth temperature (at 1 atm.) can be elevated by manipulation of hydrostatic pressure and temperature. c. Specifically, interpretations of growth processes will be made at the molecular level to determine the general and specific mechanisms through which temperature-pressure interaction influences or controls these reactions.

Approach - Pressure between 1 and 1,100 atmospheres (17,600 psi.) and temperatures near 0 degrees C and 50 to 100 degrees C will be employed. In vitro studies concerned with the molecular volume and conformational changes of hot and cold marine microorganisms will furnish data concerned with the precise concept and mechanism of the pressure-temperature interrelationship that can happen in vivo.

Progress - a. 30 04 67 to 01 05 68 b. Research indicates generally that microorganisms (terrestrial and marine) coming

6. WATER RESOURCES PLANNING

from environments close to 1 atm. cannot tolerate pressures greater than 600 atm. Certain organisms have been isolated from deep sea environment but in the laboratory have not been shown to withstand elevated pressures from where they were isolated. Three types of organisms have been categorized according to their pressure sensitivity: 1) Cultures able to survive 4 weeks at 1,100 atmos. 2) Cultures able to survive 1 week at 1,100 atmos. 3) Cultures not able to survive 1 week at 1,100 atmos.

6.0460, DEVELOPMENT OF A MODEL RESOURCE ANALYSIS FOR RANGE WATERSHEDS C.E. POULTON, Oregon State University, Agricultural Experiment Sta., Corvallis, Oregon 97331

Objectives: (1) Develop and field test a practical method of resource analysis for use by B.B.M. personnel. (2) Demonstrate how the information may be interpreted and used in management decisions. (3) Coordinate field testing throughout the western region and revise the procedures as necessary to meet locally varying conditions. (4) Provide specialized technical training of personnel as needed to insure successful application of the new method.

Description of Work: On sample areas selected to represent different kinds of range, apply knowledge from the tri-state contribution to W-25, 'Ecology and Improvement of Brush-Infested Ranges,' in an improved method of resource analysis. Refine aerial photo interpretation as a tool in analysis. Base field mapping on existing conditions not on interpretations. Map both vegetation and the physical environment. Mapping intensity will be such as to map pure, homogeneous types or no more than three different types within a single delineation. Where complexes are mapped, the percentage of each component will be estimated and they will be written up separately. Interpretations will be made on overlays or on photo mosaic copies. Detailed instructions will be prepared. Objectives 3 and 4 will be undertaken as subsequently determined.

SUPPORTED BY Oregon State Government

6.0461, EXPERIMENTAL REARING OF SALMON AND STEELHEAD IN BRACKISH WATER IMPOUNDMENTS H.J. RAYNER, Oregon State University, State Game Commission, Corvallis, Oregon 97331

1. To determine the feasibility of rearing salmon and steelhead fry to smolts in brackish water impoundments. 2. To determine optimal stocking intensities, survival rates, mortality cause, and environmental control procedures that produce the largest return of adult fish.

Progress to date: Fall chinook fry, coho fry and steelhead fingerlings are introduced into the pond which is usually filled with fresh water. As the salinity tolerance of the fish increases, seawater from Alsea Bay is added. The growth rate of the fish at various stocking densities is closely watched. Differential marking and adjustment of the point of release is being used to test the homing imprint of saltwater-reared smolts. The size of fish released and the location of release will be tested at the time of return of marked adults.

Limited supplemental feeding is planned for fall chinook reared in brackish water in 1969. An investigation is under way of the saltwater fish disease, *Vibrio anguillarum* Type C, that has become a problem in pond rearing.

SUPPORTED BY Oregon State Government

6.0462, WATER NEEDS FOR IRRIGATION IN OREGON M.N. SHEARER, Oregon State University, Agricultural Experiment Sta., Corvallis, Oregon 97331

Objectives - To estimate the water needs for the ultimate development of irrigated agriculture in Oregon.

Procedure - 1. Criteria for determination of lands suitable for ultimate irrigation will be restricted to factors of soil, climate, and topography. 2. Determine the acreage in each soil class suitable for irrigation for the designated 17 river basins. 3. Stratify for climate as needed within each river basin to determine the poten-

tially irrigable land. 4. Estimate for the potentially irrigable land an annual water requirement equal to a 'full season' crop. 5. Adjust the net water requirement for anticipated conveyance and application efficiencies. 6. Determine the estimated water use and supplemental needs on presently irrigated land. 7. Summarize the estimates of water needs for irrigation for the years 1980, 2000, 2020, and 2070 for each of the river basins.

SUPPORTED BY Oregon State Government

6.0463, GENERAL SOIL MAPS OF REGIONS IN OREGON WITH POTENTIAL FOR IRRIGATION G.H. SIMONSON, Oregon State University, Agricultural Experiment Sta., Corvallis, Oregon 97331

1. To prepare general soil maps of those major regions of the state that have potential for irrigation development. 2. To estimate the area of soils with various degrees of suitability for irrigation. 3. To develop descriptive material about the soils so that the maps will be useful as a general information source and inventory of the soils in each region.

Progress to Date: High altitude aerial photographs have been obtained for all areas where needed and field work completed in several areas totaling nearly 8,000 square miles. In some instances it was necessary to set up and describe unnamed taxonomic units.

Typical profiles of the major units have been sampled for laboratory analysis including determination of salt and alkalinity.

6.0467, AN OPTIMAL WATER MANAGEMENT PLAN FOR THE MIAMI VALLEY

H.J. DAY, Carnegie Mellon University, School of Engineering, Pittsburgh, Pennsylvania 15213

The objectives of this study are twofold: (1) to develop an optimal plan for conjunctive use of surface and ground water in the lower valley of the Great Miami River in southwestern Ohio, and (2) to develop systems analysis techniques appropriate for study of alternatives in other regions faced with similar conjunctive use water resource problems.

The Miami River was chosen because of the possibility of examining a number of interesting alternatives which show some promise for meeting future water demands in the Miami Valley. These include:

1) Examination of the feasibility of using dams as combined flood control and groundwater recharge devices 2) Examination of the feasibility of using surface water and groundwater interactions for low flow augmentation.

The aquifer in the Miami Valley is heavily used, well defined, and relatively well documented. Systems analysis techniques such as dynamic programming, linear programming, geometric programming and simulation will be applied in an attempt to evaluate all feasible alternatives and select an optimum.

6.0468, A CONTINUATION OF THE STUDY TO DETERMINE THE COSTS OF WATER IN INDUSTRIAL USES

H.C. BRAMER, Cyrus William Rice & Company, Pittsburgh, Pennsylvania 15205

This investigation seeks to acquire, evaluate, and correlate data with which the costs of water in industrial uses can be quantified. The industries to be studied are those not included in the present research study being completed for the Office of Water Resources Research under Contract No. 14-01-0001-1581. Data is to be determined according to industry classification, quantities of water used, within plant uses, raw water sources and qualities, geographical distribution, and value added by the industry. The secondary objective of the investigation is to refine and thoroughly test the model developed as a result of the current research, to computerize the model, and to generate data on industrial water values through the use of the model on the basis of available information. The results of the research would be expected to be a highly developed and reliable technique for the determination of the costs of water in general industrial uses and a compilation of data which would be of immediate use to water resources planners and industrial users.

6.0469, STUDIES ON THE PRODUCTIVITY OF VASCULAR HYDROPHYTES AND THEIR ROLE IN MINERAL CYCLING IN AQUATIC ECOSYSTEMS

R.T. HARTMAN, Univ. of Pittsburgh, Graduate School, Pittsburgh, Pennsylvania 15213 (AT(30-1))

The relationships between the intensity and spectral quality of light reaching submersed aquatic plants and the photosynthetic efficiency of these plants and the photosynthetic efficiency of these plants will be investigated. Spectroradiometric measurements of available radiation will be used, in calculating these efficiencies in field studies. Attention will be given to factors responsible for previously observed changes in these efficiencies throughout the day. Field study will be supplemented by laboratory investigations using a high intensity monochromator or transmission filters.

Measurements will be made on the rate of release of tagged carbon dioxide released through respiration by surface-floating duckweeds while the plants are fixing ¹⁴-carbon photosynthetically. Information on rates of recycling of newly fixed carbon compounds can aid in the interpretation of results from the application of radiocarbon tracer methods.

The uptake mineral elements by rooted aquatic plants will be studied. Radioisotopes of selected nutrient elements will be supplied to isolate root and shoot systems and the effect of different types of substrates, in various degrees of oxidation and reduction, will be observed. Work will continue on the preparation of a mineral budget for a small pond in which submersed vascular plants are the most important primary producers.

SUPPORTED BY U.S. Atomic Energy Commission

6.0470, STUDY OF METHODS FOR CONTROLLING AQUATIC GROWTH AT PYMATUNING RESERVOIR AND CONNEAUT LAKE, PENNSYLVANIA

C.H. MCCONNELL, Univ. of Pittsburgh, Graduate School, Pittsburgh, Pennsylvania 15213

To conduct studies and prepare reports on various methods of controlling aquatic vegetation growth; to make recommendations and to furnish technical advice as may be required from time to time, to assure an orderly development of a program to control these growths.

SUPPORTED BY Pennsylvania State Government

6.0471, RURAL LAND USAGE

R.A. BARTOO, Penn. State University, Agricultural Experiment Sta., University Park, Pennsylvania 16802

Develop the framework for a research program to investigate the problems of rural land usage. Devise methods and select criteria for measuring the economic and social values which can be attached to alternative uses of rural land. Devise methods of measuring the compatibility of rural land uses so that the relative desirability of proposals for single use or combination of uses may be evaluated.

SUPPORTED BY U.S. Dept. of Agriculture
Pennsylvania State Government

6.0472, ECONOMIC IMPACT OF WATER RESOURCE DEVELOPMENT ON LAND USE

J.C. FREY, Penn. State University, Agricultural Experiment Sta., University Park, Pennsylvania 16802

1. To measure changes in land use, land value and business enterprises in selected rural areas where water reservoirs have been developed. 2. To measure quantitatively the extent to which variations in rates of development can be explained by characteristics of the water reservoirs and other relevant variables. 3. To develop methods of estimating the probable impact of water resource development projects on economic growth. 4. To determine optional organization and management programs for business enterprise attracted by water resource development projects.

An inventory of land use, land value and business enterprise will be undertaken in selected rural areas of Pennsylvania where water reservoirs have been constructed. Types of development at the various reservoir sites will be classified, trends in development will be established, and levels of development will be compared. Regression analyses will be used to isolate factors which are relevant in explaining variation in rates of development. From these analyses, equations for estimating growth at reservoir sites will be derived. Input-output analysis of community accounts will be undertaken to ascertain the influence of new enterprise development on community income and employment. Mathematical programming techniques will be employed to develop optimum income producing models for representative enterprises attracted to the reservoir sites.

6.0473, STREAM POLLUTION AND RECREATION

H.B. GAMBLE, Penn. State University, Inst. For Res. on Land & Water, University Park, Pennsylvania 16802

The basic hypothesis in the proposed research is that there is a negative correlation between the degree of pollution and the intensity of recreational use of streams. The major objective is to examine a number of streams in Pennsylvania in order to derive

6. WATER RESOURCES PLANNING

estimates of one of the social costs of pollution - that of recreational development and use foregone.

Field investigations will include the selection of a number of streams or stretches of streams throughout Pennsylvania showing varying degrees of recreational use. Variables other than pollution which affect recreational use and development along any given stream will have to be accounted for. A detailed study of the degree and kinds of pollution will be made, and will involve physical and chemical testing of the waters as well as development and application of schematic scaling techniques for the aesthetic and nonbiochemical qualities of the water and environs. Detailed data will be gathered through field interviewing as to the amount and kinds of expenditures by recreational users of streams.

Regression analysis will be the statistical tool employed to describe the relationship between direct and indirect expenditures from recreationists and kind of stream pollution and the control factors.

Pennsylvania State University

6.0474, WILDLAND RECREATIONAL MANAGEMENT

J.L. GEORGE, Penn. State University, Agricultural Experiment Sta., University Park, Pennsylvania 16802

(1) Develop, evaluate, and compare various combinations of uses of timber, wildlife, water, and land resources to determine the degree of compatibility of such use with the economic and social needs of our society and the interests of the landowner. (2) Explore the possibilities of developing unique recreational activities in the use of a wildland area, introducing new game species, and devising new techniques or methods of harvesting wildlife and timber resources on a wildland area. (3) Determine the characteristics of the demand curve for various recreational uses of a wildland area at different user fee rates. Relate the demand curves to production functions and cost analysis resource combinations for recreational purposes.

To be conducted on Quehanns, 40,000 acre wilderness area in conjunction with state action agencies relating to forests and water, game, and fish.

SUPPORTED BY U.S. Dept. of Agriculture

6.0475, CRITERIA FOR DETERMINING ECONOMIC PRIORITIES IN AWARDED SEWAGE FACILITY CONSTRUCTION GRANTS

J.D. JANSMA, Penn. State University, Inst. For Res. on Land & Water, University Park, Pennsylvania 16802

The State of Pennsylvania uses a point system to determine relative needs in assigning priorities for awarding sewage facility construction grants. The relative needs considered are water pollution control (50 points), per capita costs (10 points) and financial need (40 points). The major objective of this research is to develop economic indices which measure financial need and per capita costs. Factor analysis will probably be the technique employed to group the various measures of a community's economic-well-being and thus provide the basis for the index of financial need. Alternative approaches for setting priorities will be evaluated in terms of economic efficiency and equity.

Pennsylvania State University

6.0476, SOCIOLOGICAL IMPACT OF A FLOOD-CONTROL RESERVOIR

S.M. LEADLEY, Penn. State University, School of Agriculture, University Park, Pennsylvania 16802

The social organization of a community adjacent to a new flood control reservoir is under pressure to change. This research proposes to measure (1) the nature of perceptions of the flood-control reservoirs by influentials, (2) the more significant sociological and social psychological variables related to influentials' perceptions, and (3) the consequences of influentials' perceptions on community governmental and formal voluntary organizations. This study is an attempt to relate ecological change to shifts in both individual perceptions and organizational structures and processes.

Existing Guttman and Likert scales for measuring individual perceptions will be utilized. Influentials to be interviewed will be selected using purposive sampling techniques. Additional longitudinal data from previous community studies (complete household enumerations) in 1937, 1949, and 1960 will be used in order to establish bench modes of individual perceptions and social structural variables. Current organizational information will be obtained from key informants from within the community and specific organizations.

Recommendations will be made regarding procedures for central office and field staff personnel in the areas of reducing social costs of adjustment and assisting community organizations in their attempts to maximize the multiplier effect of the ecological change.

6.0477, A WATER SUPPLY-DEMAND ANALYSIS IN CLINTON COUNTY, PENNSYLVANIA - A STUDY IN ECONOMIC HYDROLOGY

D.L. RAPHAEL, Penn. State University, School of Engineering, University Park, Pennsylvania 16802

For a given region, water, in many ways, can be likened to the flow of money into, through and out of the economy. Economics has developed a model that simulates the flow of money through a regional economy. This type of model has already been utilized for the economic study of Clinton County, Pennsylvania. This Leontief type input-output model was constructed and programmed on a large capacity digital computer. The model has already been tested and proven feasible.

The data for the water portion of the model will be obtained or reasonably approximated from existing sources of data. This will essentially consist of an approximated water balance for Clinton County. The hydrological data is used only to implement the study of the methodological goal and is not intended to reflect a detailed water balance of the study area. The water flow model will then be related to the existing Clinton County microregional model by means of water use functions. The nature of those empirical water use functions is the primary goal of this stage, and they will relate levels of water usage with levels of economic activity. Finally, impact studies of the effects of economic change in the region on water usage will be conducted. This will include a study of the water resource as a constraint on economic activity. However, water availability as a generator of economic activity per se will not be considered in this study but will be dealt with later in subsequent studies.

In the first phase of this study the effort was centered on dealing with the water resource only in quantitative terms. It will be the objective of the continuation phase to explore the direct and indirect relationship between water usage and economy of a microregion with respect to water quality. This emphasis on water quality will also include attention to an adequate definition of water quality in the context of the general study.

6.0478, COMPARATIVE STUDY OF THE BENTHIC MICROBIAL BIOTA IN SOME COASTAL AREAS OF PUERTO RICO

E. ANGEL, Univ. of Puerto Rico, Water Resources Research Inst., Mayaguez, Puerto Rico

Three marine areas of the Southwest coast of Puerto Rico supposedly affected or not by chemical or animal residues are to be studied. (1). The characteristic bacteriological biota of the neritic benthic zone is going to be studied in order to find the actual population. (2). The standard physical and chemical characteristics of sea water are going to be studied in the three different areas. (3). Comparative studies will be conducted in order to establish relations between pollution and physical change to bacterial population changes, and to establish which are the believed 'normal' bacterial population (unaffected areas) and 'abnormal' bacterial population (affected areas).

6. WATER RESOURCES PLANNING

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch
University of Puerto Rico

6.0479, RELEVANCE OF SELECTED ECOLOGICAL FACTORS RELATED TO WATER RESOURCES & SOCIAL ORGANIZATION OF FISHERMEN VILLAGES IN PUERTO RICO (ABBREV)

F. BLAY, Univ. of Puerto Rico, School of Engineering,
Mayaguez, Puerto Rico

This study aims to discover some relevance, if any, between fishing products as an aspect of water-resources, and the structure, processes and changes of some fishermen communities in Puerto Rico. The impact of changes in the availability of this water resource upon the culture, the social relationships and the personality of fishermen will be observed.

Three fishermen villages of Puerto Rico will be selected that would show differences as to the past, actual and potential availability of the water resource to be studied - fishing products.

Personal interviews and questionnaires and other statistical methods to a sample of the population and direct observation will be used to gather the data. Reliable information already obtained by government agencies might also be used. Proper statistical analysis will determine the relevance between the variables.

Practical application of these results would be useful in development programs of International, local, private and government agencies interested in bringing desirable changes to fishermen villages.

A contribution to the ecological approach in the sociological theories is expected by this research.

6.0480, THE MANAGEMENT AND CONTROL OF WATER IN PUERTO RICO

J.A. CORDERO, Univ. of Puerto Rico, Water Resources
Research Inst., Mayaguez, Puerto Rico

This study seeks to discover some of the problems involved in the management and control of water in Puerto Rico.

The subject will be discussed under the following topics -- irrigation, Hydroelectric Power, Domestic and Industrial Water Supply, Water Pollution, Flood Control, Drainage and Wildlife and Recreation.

The principal objectives of the study are: 1) To bring together a summary of data in the management and control of water in Puerto Rico. II) To examine and analyze the data in respect to management and control of water. III) To offer recommendations where necessary for the improvement in the management and control of water in Puerto Rico. Data will be gathered from both public and private water related agencies. Upon completion of the study, the project is expected to provide valuable information to the said agencies and the Institute.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0481, HUMAN FACTORS INVOLVED IN THE DEVELOPMENT OF A WATERSHED PROJECT IN YABU-COA, PUERTO RICO

F. DELRIO, Univ. of Puerto Rico, School of Engineering,
Mayaguez, Puerto Rico

This study aims to determine the present social, economic and cultural situation of an area in the southeastern coast of Puerto Rico in which plans are underway for the establishment of a watershed project. (Guayanes Watershed Project)

The specific objectives of this study are to: 1. Determine some of the personal characteristics of farmers in terms of age, education, main occupation, income and levels of living. 2. Determine the knowledge, attitudes, and opinions of farmers toward the Guayanes River Watershed Project. 3. Determine the farming situation in relation to land tenure and other variables as stated in objective 1. 4. To arrive at conclusions and make suggestions that may help for the program planning and evaluation of the watershed project.

Information will be secured from a sample of around 200 farm operators through personal interviews by the investigators and through the administration of a questionnaire by trained interviewers.

The findings and conclusions of this study are expected to provide for both the program planning and evaluation of the Guayanes River Watershed Project.

6.0482, STUDIES WITH BARBADOS OR WEST INDIAN CHERRY (MALPIGHIA PUNICFOLIA, L)

G.C. JACKSON, Univ. of Puerto Rico, Agricultural Experiment
Sta., Mayaguez, Puerto Rico

To determine the adaptability of selected West Indian cherry varieties for production in the different regions of Puerto Rico and develop optimum agronomic techniques to be utilized in their production.

Description of work: The screening of seedling trees for high yielders of ascorbic acid will be continued. Material will be propagated from these trees and will be established in experiments to study effects of irrigation on cropping cycle, fruit yield, and ascorbic acid content. The effects of pruning in respect to ascorbic acid yield of this economic crop will be investigated.

6.0483, THE DEMAND FOR WATER BASED RECREATION IN SOUTHWEST PUERTO RICO

R.B. RAMGOLAM, Univ. of Puerto Rico, Water Resources
Research Inst., Mayaguez, Puerto Rico

This study will be centered on an estimation of the present and future demand for water based recreation in the southwestern area of Puerto Rico. The primary objectives of the study are: 1) to evaluate the use of water based recreational facilities. 2) To determine people's willingness to pay for the use of the areas and facilities. 3) To examine the characteristics of recreational uses and the effect of these characteristics on demand for various areas and facilities. 4) To determine the satisfaction of visitors with the areas and facilities. 5) To make recommendations, if any, for the improvement of existing areas and facilities and the establishment of new ones.

A questionnaire will be designed to acquire the relevant data by random sampling of use of water-based recreation areas. The data collected will be arranged for analysis by computer to prepare the findings and conclusions for study.

University of Puerto Rico

6.0484, QUANTITATIVE ANALYSIS OF WATER USE PATTERNS IN PUERTO RICO

A.S. VAZQUEZ, Univ. of Puerto Rico, School of Engineering,
Mayaguez, Puerto Rico

The objectives: (1) To inventory the past and present water use situation in Puerto Rico. (2) To estimate major future trends on residential, commercial, industrial and agricultural water uses.

Plan of work for Objective (1) - To conduct a survey to obtain data on water uses for residential, industrial, commercial and agricultural purposes. Data will be used to determine present water consumption patterns. Statistical experiments will be designed and conducted cooperatively with the Puerto Rico Resources Authority and other Agencies.

Plan of Work for Objective (2) - To project trends and estimate effects of new technology and the socio-economic changes for future uses in residential, industrial, commercial and agricultural purposes. Survey data will be subject to mathematical analysis in order to identify major trends in water use.

The research will be conducted by stages, with residential water uses past, present and future patterns being the first stage.

6. WATER RESOURCES PLANNING

University of Puerto Rico

6.0485, SOCIO-ECONOMIC STUDY OF NARRAGANSETT BAY, RHODE ISLAND

N. RORHOLM, Univ. of Rhode Island, Agricultural Experiment Sta., Kingston, Rhode Island 02881

To identify, measure and evaluate the economic and social values of the marine resources of the Bay to the State of Rhode Island. The project will be based on secondary source information currently available to the University of Rhode Island with additional surveys or interviews being made as necessary to supplement existing data. To identify, measure and analyze economic and social trends in Rhode Island which would be significant in terms of water pollution control or land use regulation of the Bay and that portion of the watershed which is significant in determining the quality of the estuarine water resources.

To explore how benefit cost analysis techniques may be best applied to determine the effects of various combinations of beneficial uses on the estuarine resources. To identify and recommend needs for future studies or basic data systems which would be useful in obtaining optimum public benefits from use of the Bay resources.

SUPPORTED BY Rhode Island State Government

6.0486, ANALYSIS OF SOCIAL AND MOTIVATIONAL CHARACTERISTICS ASSOCIATED WITH SELECTED OUTDOOR RECREATIONAL ACTIVITIES IN RHODE ISLAND

I.A. SPAULDING, Univ. of Rhode Island, Agricultural Experiment Sta., Kingston, Rhode Island 02881

Objective: To analyze social and motivational characteristics of participants in selected outdoor recreational activities using Rhode Island resources; priority is given to participants in boating, hunting and fishing, and hiking.

Procedure: Through Rhode Island's registries and licensing agencies for power boats and hunting and fishing, samples of power boat owners and licensed hunters and fishers will be secured. Questionnaires will be used to secure data pertaining to social characteristics, motivation, and responses to participation. Hiking club, will be contacted, and relevant data will be secured by questionnaire and/or interview from members or samples of members. When desired, intensive case studies will be made.

SUPPORTED BY Rhode Island State Government

6.0487, THE FRESHWATER ALGAE OF SOUTH CAROLINA - FLORISTICS AND ECOLOGY

G.E. DILLARD, Clemson University, Agricultural Experiment Sta., Clemson, South Carolina 29631

Objectives: 1. To identify the species of freshwater algae occurring in South Carolina. 2. To study the ecology of the individual species of algae of both lotic and lentic habitats in the state.

Procedure: Initial efforts will involve extensive algal collections over the state as a whole and intensive collections in one or two upper Piedmont stream habitats. As suitable equipment can be acquired the ecological requirements of the various species will be determined. The project will require revision and delineation of more specific objectives after 2 to 3 years.

SUPPORTED BY U.S. Dept. of Agriculture
South Carolina State Government

6.0488, IRRIGATION AND FERTILIZER ON UPLAND FOREST

W.H. MCGREGOR, Clemson University, Agricultural Experiment Sta., Clemson, South Carolina 29631

1. To determine the relative importance of (a) moisture stress and (b) mineral nutrient deficiency in restricting growth on an upland mixed hardwood-pine stand by measuring increased growth when supplemental water and mineral nutrients are supplied.

2. To determine what changes in understory vegetations take place when supplemental water and nutrients are supplied.

A ridgetop site of mixed upland hardwood-shortleaf pine will be selected on the Clemson Forest and sprinkler-irrigated from a nearby stream. There will be four irrigated and four non-irrigated 1/4 acre plots. Vegetation will be sampled before and for at least 8 years after irrigation. Growth of tree species will be measured each year. Fertilizer will be added to one-half of each plot approximately two years after initiation of the study. Weather data will be recorded on the plots.

6.0489, STUDY OF COSTS OF TREATING TEXTILE WASTES IN MUNICIPAL AND INDUSTRIAL SEWAGE PLANTS

J.M. STEPP, Clemson University, Water Resources Research Inst., Clemson, South Carolina 29631

The textile industry, which is concentrated and still growing in the Carolinas and Georgia, is a major user and polluter of water while at the same time requiring high-quality water for dyeing and finishing operations. The liquid wastes from such operations are strong, complicated, variable, and difficult to remove from wastewater. The public interest requires effective treatment of industrial wastes; hence it is in the interest of the general public, the textile industry and the people and communities supported by it to obtain information on methods, problems and costs of treating textile wastes, and the relation of such costs to other components of the cost and income structure of the plants.

The study will cover all of the 32 seweried South Carolina municipalities which accept and treat textile wastes in their municipal sewage plants, and a substantial number of the 89 South Carolina wet-process textile manufacturing plants which operate waste-treatment facilities. Data will be obtained from the managers of the sewage systems and plants by means of questionnaires, from published reports, from the records of public agencies, and from consulting engineering firms which specialize in the design and operation of waste-treatment systems. The municipal phase of the study will precede the industrial phase.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch
Clemson University

6.0490, A STUDY OF SOUTH CAROLINAS STATE LEGISLATION, POLICIES AND PROGRAMS PERTAINING TO WATER AND RELATED LAND RESOURCES

J.M. STEPP, Clemson University, Agricultural Experiment Sta., Clemson, South Carolina 29631

1) To compile a statement of the statutory authority and the operating policies, procedures and programs of South Carolina state agencies concerned with water and related land resources. 2) To list and summarize the functions of federal agencies in South Carolina which have water resource responsibilities; 3) To evaluate South Carolina's water-related laws, policies, programs, and procedures in relation to the experience of other states.

The State constitution and State statutes concerning water will be studied in order to determine South Carolina's official policies relating thereto. Detailed study of court decisions is beyond the scope of this project. State and federal agencies that are concerned with water and related land resources will be visited, and their programs and policies in regard to water and related land resources will be ascertained. Data obtained in this study will be compared with similar data that are available from other states. Advantages or deficiencies in South Carolina's laws, policies, or programs will be determined and specified. Ways for improving South Carolina's position on water and related land resources will be evaluated.

South Carolina State Government

6.0491, ECONOMIC ANALYSIS OF THE SANTEE-COOPER PROJECT - A RETROSPECTIVE STUDY UTILIZING CURRENT EVALUATION STANDARDS

J.M. STEPP, Clemson University, Agricultural Experiment Sta., Clemson, South Carolina 29631

6. WATER RESOURCES PLANNING

Santee-Cooper is a state-owned, multipurpose reservoir, located in the Coastal Plain of South Carolina, which was completed in 1942 at a cost of approximately \$64 million. The facilities include two lakes (connected by a diversion canal) which cover 160,000 acres, a hydroelectric plant, a thermal electric plant, and electricity distribution facilities. In recent years the lakes have achieved a growing popularity with sports fishermen.

The objectives of this study are: (1) to discover and describe the economic assumptions and estimates of those who promoted and planned the project in the 1930's; (2) to evaluate estimated primary and secondary benefits in light of present benefits and costs of the project; (3) to determine the nature and extent of discrepancies between the predicted and the actual benefits and costs of the project; (4) to propose methods by which these discrepancies might be reduced in future projects.

Procedures will include documentary research, study of records of operation of the project, and interviews with project officials.

SUPPORTED BY South Carolina State Government

6.0492, LEGAL ASPECTS OF WATER USE AND CONTROL IN SOUTH CAROLINA

C.H. RANDALL, Univ. of South Carolina, Graduate School, Columbia, South Carolina 29208

This research proposes to evaluate the present law applicable to water use and control in the State of South Carolina, as well as making suggestions for the clarifying and amendment of the law. Consideration will be given to all aspects of legal control and regulation of water. Judicial and legislative trends in water law throughout the United States, and their potential for the laws of South Carolina, will be investigated.

The specific objectives of the study are as follows: (1) to analyze and report on the scope and extent of Federal law governing the use and control of water resources within the State of South Carolina; (2) to analyze and report on existing statutes, constitutional provisions and judicial decisions of the State of South Carolina affecting water use and control, as well as laws and activities of neighboring States affecting water flow in which the State of South Carolina has an interest; (3) to survey the important developments in the law, both judicial and legislative and regulatory, relating to water use and control throughout the United States; (4) to give critical consideration to proposed additions to or amendments of the laws of South Carolina relating to water use and control.

6.0493, THE MODIFICATION OF A PREDICTIVE RIVER BASIN MODEL

R.P. COVERT, South Dakota State University, School of Engineering, Brookings, South Dakota 57007

The proposed research plan involves the modification of and verification of a systematic reach analysis of a predictive river basin model. The original model was designed to predict the effects of economic activity on the Blackwater River Basin in Central Missouri. Although every effort was made to keep the model general, it is expected that this model has features that make it applicable only to that basin. The true generality of the model can be determined only by testing it in another basin and making the necessary modifications and generalizations. Further, this verification will provide an indication of the manhours and procedures necessary to use this model on any other basin.

Since the basic model is developed, the majority of the effort can be expended on securing the best possible correlation between the model and the segments of the river basin under study. The basin selected is ideal for these purposes since it contains a metropolitan area as well as agriculture economic activity.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Reh
South Dakota State University

6.0494, THE IMPACT OF IMPOSING A WATER QUALITY STANDARD ON A LIVE STREAM

J.N. DORNBUSH, South Dakota State University, School of Engineering, Brookings, South Dakota 57007

This proposed study involves an evaluation of the impact of imposing quality standards on a stream which is presently being considered for multipurpose development through reservoir construction.

Water resources development frequently requires long-range decisions involving huge expenditures; however, these decisions are often made without complete consideration of existing information. It is the purpose of this study to appraise information for decision-making regarding beneficial uses including flood control, recreation, irrigation, fish propagation and quality control.

The approach will be to evaluate statistically existing information in order to relate the proposed quality requirements to the projected uses. The case study will consider the interrelationships of existing and projected stream quality, the frequency of low stream flows, the pollution abatement requirements, the effect of river impoundment and the need for flow augmentation.

6.0495, HIDDEN COSTS OF USING SUBSTANDARD QUALITY WATER, AS EXPERIENCED BY WATER USERS IN WEBSTER, SOUTH DAKOTA

A.J. MATSON, South Dakota State University, Graduate School, Brookings, South Dakota 57007

A survey is being conducted of residential, institutional, commercial, and industrial water users in Webster, South Dakota. The object is to determine the hidden costs associated with the use of substandard quality water formerly supplied, as compared with the present use of the product water from OSW's Saline Water Conversion Demonstration Plant. A breakdown of comparative costs incurred before and after the change-over from brackish to potable water service is being prepared.

In addition, the project is to include a number of other cities using substandard water in the same state, correlating the retardation of economic growth with the use of water high in mineral content, quantifying economic losses, and assessing the benefits which might accrue.

SUPPORTED BY U.S. Dept. of Interior - Off. Saline Water

6.0496, ECONOMIC ANALYSIS OF IRRIGATION SYSTEMS APPLICABLE TO THE NORTHERN GREAT PLAINS

G.D. ROSE, South Dakota State University, Graduate School, Brookings, South Dakota 57007

The proposed research plan involves cooperative efforts with agricultural engineers, soil scientists and agronomists to identify economically feasible irrigation systems for Northern Great Plains conditions. The main approach is a linear programming analysis of selected bench-mark farms to determine optimum combinations of alternative irrigation systems and farming enterprises to meet the economic objectives of individual farm firms. A prime consideration will be the opportunities and investment strategies necessary for shifting from privately developed water sources to publicly developed sources as such are developed.

6.0498, GROWTH AND MORTALITY RATES OF YOUNG YELLOW PERCH IN OAHE RESERVOIR

L.G. BECKMAN, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Yellow perch is the most abundant game fish in Oahe Reservoir, S.D., and an important food for both young and adult predatory fishes. Because of its apparent key role in the ecology of the reservoir, information on the dynamics of juvenile stocks has been accomplished since 1964. Measures of apparent abundance in selected nurseries, along with estimates of growth and mortality rates, provide the vital statistical data used to assess the annual status of juvenile stocks.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0499, ABUNDANCE OF YOUNG-OF-THE-YEAR FISHES IN OAHE RESERVOIR

L.G. BECKMAN, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Measures of the relative apparent abundance of larval and juvenile fishes in Oahe Reservoir have been obtained from standardized haul seine and trawl catches since 1964. These measures not only provide estimates of the initial success of annual spawning but also furnish information on the future status of individual game fish populations. Estimates of the first year's growth and mortality rates of selected species are derived from these data.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0500, DISTRIBUTION AND RELATIVE ABUNDANCE OR POPULATION OF YOUNG FISHES IN LAKE SHARPE RESERVOIR

J. ELROD, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Measures of the relative apparent abundance of larval and juvenile fishes in Lake Sharpe, S. D., are obtained from standardized haul seine and trawl catches to determine the distribution of young and success of annual spawning. Estimates of the first year's growth and mortality rates of selected species are derived from these data.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0501, ABUNDANCE AND COMPOSITION OF ADULT FISH STOCK IN LAKE SHARPE

J. ELROD, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Measures of the relative apparent abundance of the adult fish stock in Lake Sharpe, S.D. have been obtained from standardized gill net catches since 1964. The purpose of the study is to describe changes in species composition and the size, age, and sex composition of the individual species populations following impoundment. Estimates of recruitment, growth, and mortality rates of selected species also are derived from the data.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0502, VITAL STATISTICS OF NORTHERN PIKE IN LAKE SHARPE

J. ELROD, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Northern pike is a much sought-after game fish in Lake Sharpe, S.D. To provide current information on the status of the population, annual estimates of recruitment, growth, and mortality rates are derived from catch per-unit-effort data (gill net), and independent estimates of these parameters will be sought from mark and recapture data.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0503, VITAL STATISTICS OF WALLEYE IN LAKE SHARPE

J. ELROD, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Walleye constitutes a sizeable game fish population in Lake Sharpe, S. D. To provide current information on the status of the population, annual estimates of recruitment, growth, and mortality rates are derived from catch per-unit-effort data (gill net), and independent estimates of these parameters will be sought from mark and recapture data.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0504, RELATIVE ABUNDANCE OF ADULT FISH IN LAKE FRANCIS CASE

C.R. GASAWAY, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Studies on adult fish are conducted bi-annually using gill nets and trap nets. Nets are fished in June, July, and August in lower, middle, and upper areas of the reservoir. Species and age composition, relative abundance, year-class strength, growth rates, and maturity are determined from collected samples.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0505, YOUNG-OF-THE-YEAR FISH IN LAKE FRANCIS CASE

C.R. GASAWAY, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Sampling of young-of-the-year is conducted from July through October to determine year-class strength, growth, and mortality rates. Environmental factors are measured to determine cause and effect relations. Sampling is conducted in the lower, middle, and upper areas of the reservoir, using seines, bottom trawls, and mid-water trawls.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0506, EARLY LIFE HISTORY OF WALLEYE IN LAKE FRANCIS CASE

C.R. GASAWAY, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Walleye have increased in number in Lake Francis Case during the past 5 years. Studies will be conducted to determine time and location of spawning, environmental factors influencing survival of embryos and larvae, and vital statistics of young-of-the-year. Initial work will consist of exploratory sampling to find spawning areas. Eggs will be collected with a suction device. Adults will be collected with gill nets and electric shocker.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0507, EFFECTS OF TEMPERATURE AND SILT ON NORTHERN PIKE DEVELOPMENTS IN THE LABORATORY

T. HASSLER, U.S. Dept. of Interior, North Cen. Reservoir Inv., *Yankton, South Dakota*

Empirical results of field studies of survival rates of young northern pike in relation to specific environmental factors are to be tested under controlled conditions in the laboratory. Initial studies will deal with effects of water temperature and silt on artificially-fertilized embryos, yolk-sac larvae, and larvae.

6. WATER RESOURCES PLANNING

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0508, EFFECTS OF TEMPERATURE AND SILT ON YELLOW PERCH DEVELOPMENT IN THE LABORATORY
T. HASSLER, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

Empirical results of field studies of survival rates of young yellow perch in relation to specific environmental factors are to be tested under controlled conditions in the laboratory. Initial studies will deal with effects of water temperatures and silt on naturally fertilized embryos, yolk-sac larvae, and larvae.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0509, EFFECTS OF TEMPERATURE AND SILT ON WHITE BASS DEVELOPMENT IN THE LABORATORY
T. HASSLER, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

Empirical results of field studies of survival rates of young white bass in relation to specific environmental factors are to be tested under controlled conditions in the laboratory. Initial studies will deal with effects of water temperature and silt on artificially-fertilized embryos, yolk-sac larvae, and larvae.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0510, ENVIRONMENTAL FACTORS AND YOUNG NORTHERN PIKE SURVIVAL IN RESERVOIRS
T. HASSLER, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

To determine if variable survival of northern pike young is related to specific environmental factors, naturally-occurring and artificially-fertilized embryos are placed in rearing trays and pens at selected spawning sites. Survival of embryos and yolk-sac larvae is compared with variations in silt, wind, water temperature, and substrate.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0511, ENVIRONMENTAL FACTORS AND YOUNG YELLOW PERCH SURVIVAL IN RESERVOIRS
T. HASSLER, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

To determine if variable survival of young yellow perch is related to specific environmental factors, naturally-spawned embryo clusters are placed in rearing pens and trays at selected spawning sites. Survival of embryos and yolk-sac larvae is compared with variations in silt, wind, water temperature, and substrate.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0512, ENVIRONMENTAL FACTORS AND YOUNG WHITE BASS SURVIVAL IN RESERVOIRS
T. HASSLER, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

To determine if variable survival of white bass young is related to specific environmental factors, naturally-occurring and artificially-fertilized embryos are placed in rearing trays and pens at selected spawning sites. Survival of embryos and yolk-sac larvae is compared with variations in silt, wind, water temperature, and substrate.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0513, EFFECTS OF PLANTING TERRESTRIAL VEGETATION ON EXPOSED RESERVOIR BOTTOM ON AQUATIC BIOTA
P.L. HUDSON, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

About 50% of the bottom of Lake Francis Case is exposed each fall by a drawdown. The timing of the drawdown prevents aquatic or terrestrial vegetation from being established. Preliminary trials with 8 commercially available varieties showed that

sorghum-sudan hybrid seed planted in early August on exposed bottom reached 5 feet by the end of the growing season. These plantings held the foliage during winter and may be inundated this spring. Other varieties showed promise. The effects of vegetation on plankton, benthos, and fish (spawning sites and feeding area) will be measured. Additional plant varieties will be tried and new plantings made. Seeds will be distributed by airplane and by normal cultivation methods. The South Dakota Department of Game, Fish and Parks assists in the work.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0514, BENTHOS IN LEWIS AND CLARK LAKE
P.L. HUDSON, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

Chironomids (Diptera) and Hexagenia (Ephemeroptera) comprise numerically over 95% of the benthos in this lake. We have extensive knowledge on abundance and distribution of both groups and we monitor a 3,500 acre study area each spring. Past work has been concerned principally with physical and chemical factors and future work will emphasize biota interrelationships. The analyses will include species diversity, predator-prey relationships, production, movement, and fish predation. Recent work on chironomids will allow us to work at the species level.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0515, BENTHOS IN LAKE FRANCIS CASE
P.L. HUDSON, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

Water levels of Lake Francis Case (Ft. Randall Reservoir) fluctuate greatly due to normal water management operations. Past studies of drawdown effects show that large numbers of benthic invertebrates are stranded and habitat for burrowing forms is destroyed. The trophic dynamics of the benthic communities will be studied and related to primary productivity and zooplankton work. Measurements and analyses will include production rates, species succession and diversity, predator-prey relationships, and fish predation.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0516, GENERAL HYDROGRAPHIC FEATURES OF OAHE RESERVOIR AND LAKE SHARPE
F.C. JUNE, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

To provide measures of environmental changes following impoundment of Oahe Reservoir and Lake Sharpe, S. D., periodic cruises, begun in 1966, are made during the open-water period. Routine station observations include water temperature, turbidity, conductivity, and oxygen, along with phyto and zooplankton samples. Measures of major chemical ions, elements, and compounds also are obtained periodically.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0517, LIMNOLOGICAL FEATURES LAKE SHARPE IN RELATION TO COLD-WATER FISHES
F.C. JUNE, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

Preliminary studies of Lake Sharpe, S. D. indicate that cold water entering through Oahe Dam essentially establishes a cold-water environment during the warm months. To determine the suitability of the impoundment for cold-water fishes, studies will be made of the annual water temperature regimen, current pattern, available food, and potential spawning habitats in relation to the requirements of several cold-water species.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0518, VARIATIONS IN SPAWNING OF FISHES IN RELATION TO TEMPERATURE
F.C. JUNE, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

6. WATER RESOURCES PLANNING

A preliminary study of the reproductive cycle of 19 common fishes in Oahe Reservoir and Lake Sharpe, South Dakota, showed marked variability in the onset of maturation and spawning within species. Maximum spawning of every species, however, was associated with specific water temperatures, and temperature anomalies appeared to be a cause of spawning failure (retention of eggs) in some species. To investigate these apparent relationships further, measures of water temperature and the maturation and release of ovarian ova are obtained at selected sites during the spawning period.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0519, COMPOSITION OF THE SPAWNING STOCKS IN OAHE RESERVOIR AND LAKE SHARPE

F.C. JUNE, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

To determine the relation between changes in the biological characteristics of the spawning stock and variations in annual spawning success, studies are conducted of fecundity, attainment of sexual maturity, sex ratio, and the age and size of spawners of selected species in Oahe Reservoir and Lake Sharpe, S. D. ,

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0520, SEXUAL MATURATION AND SPAWNING OF NORTHERN PIKE

F.C. JUNE, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

Marked annual variations in the spawning success of northern pike have occurred since impoundment of Oahe Reservoir, S. D. Studies based on an examination of ovaries are conducted of the times and places of spawning to determine the relation between egg deposition and the spring water regimen.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0521, SPAWNING OF YELLOW PERCH

F.C. JUNE, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

Annual variations in the spawning success of yellow perch have occurred since impoundment of Oahe Reservoir, S. D. Studies based on an examination of ovaries are conducted of the times and places of spawning, to determine the relation between egg deposition and the spring water regimen.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0522, EARLY LIFE HISTORY STAGES OF OAHE AND BIG BEND RESERVOIR FISHES

F.C. JUNE, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

The identity of embryos and larvae of many reservoir fishes is imperfectly known and is basic to early life history studies to be conducted in Oahe and Big Bend Reservoirs. The work will involve collection of young with plankton nets, seines, trawls, and electrical shocker; rearing of eggs and larvae in captivity; and the preparation of taxonomic keys and descriptions, using meristic, morphometric, pigmentation, and other anatomical characteristics. Fish species to be studied in detail initially include yellow perch, northern pike, and crappies.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0523, LIFE HISTORY OF RESERVOIR FISHES, SPAWNING OF OAHE AND BIG BEND RESERVOIR FISHES

F.C. JUNE, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

Time and place of spawning, size and age at maturity, developmental stages of ova, and fecundity will be determined in Oahe and Big Bend Reservoirs for yellow perch, northern pike, and crappies. Ovaries will be collected throughout the year from experimental, sport, and commercial fish catches. Verification of the times and places of spawning will be made from plankton collections of embryos and newly-hatched larvae. Biological infor-

mation will be collected concurrently, and observations on spawning behavior will be conducted when possible. The project will be expanded to include other species after 2 years.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0524, PRIMARY PRODUCTIVITY IN LAKE FRANCIS CASE

D.B. MARTIN, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

The carbon 14 light and dark bottle technique will be used to measure primary productivity in St. Phillips Bay (3 miles from dam) and in a mid-lake station adjacent to the bay. Measurements will also be taken of organic matter sedimentation, inorganic phosphorus, chlorophyll, and phytoplankton standing crop. This work will be related to studies on benthos and fish in the same area.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0525, PRIMARY PRODUCTION IN LEWIS AND CLARK LAKE

D.B. MARTIN, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

This work will describe the difference in photosynthetic rates in 6 stations of the reservoir and the causes of these differences. The carbon 14 light and dark bottle method is used to measure primary productivity. Concurrent measurements are taken of chlorophyll concentrations, phytoplankton standing crop, light penetration, turbidity, nitrogen, phosphorus, and sedimentation of organic matter. The primary productivity of the entire reservoir will be estimated and areas of low and high production will be delineated.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0526, PLANKTON POPULATIONS IN LEWIS AND CLARK LAKE AND LAKE FRANCIS CASE

J.F. NOVOTNY, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

Automatic plankton samplers are installed in powerhouses of both reservoirs and they screen an average of 11,000 liters of water per week. Only the No. 10 screen is now used for sampling zooplankton. Weekly grab samples of 10 liters of water are used for sampling phytoplankton and rotifers. The samples are analyzed by species, number, and weight. Comparisons are made with plankton and fish studies in the reservoirs.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0527, LIFE HISTORY OF CYCLOPS BICUSPIDATUS

J.F. NOVOTNY, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

Cyclops bicuspidatus accounts for over 50% of the annual numerical standing crop of cladocerans and copepods in Lewis and Clark Lake and Lake Francis Case. Birth rates, productivity rates, population structure, and mortality rates will be related to food, temperature, and water chemistry. Both field and laboratory studies will be conducted.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0528, LIFE HISTORY OF WHITE BASS IN LEWIS AND CLARK LAKE

R.E. SIEFERT, U.S. Dept. of Interior, North Cen. Reservoir Inv. , Yankton, South Dakota

Since introduction of white bass in Lewis and Clark Lake (1959-61) this species has become an important sport fish. Studies will be conducted to determine (1) age and rate of growth; (2) spawning history; (3) food habits in relation to food availability; (4) mortality rates; (5) factors affecting strength of year class.

Early life history stages will be emphasized. The work will determine time and location of spawning, and mortality and growth during the first year of life.

6. WATER RESOURCES PLANNING

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0529, FISH POPULATION OR ABUNDANCE STUDIES IN LEWIS AND CLARK LAKE

C.H. WALBURG, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

Studies on young-of-the-year are completed annually in June, July, and August to determine year-class strength, growth, and mortality rates. Physical and environmental factors are measured to determine cause and effect relations. Sampling is conducted in two areas near the center and one area in the upper end of the reservoir. These areas are representative of the various reservoir habitats. Gears used include seines, bottom trawls, and small-mesh frame nets.

Studies of adult fish are conducted annually in September and October. Sampling is conducted for 30 days with trap nets and gill nets. Information on relative abundance, growth, mortality, and other vital statistics are obtained from collected data. Strength of year-classes estimated from young-of-the-year and adult collections will be compared to determine accuracy of sampling methods.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish

6.0530, LIFE HISTORY OF CHANNEL CATFISH IN LEWIS AND CLARK LAKE

C.H. WALBURG, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

Channel catfish abundance in Lewis and Clark Lake has declined 50% since early years of impoundment. This study will include: (1) larval growth, feeding, and mortality; (2) age composition; (3) growth; and (4) environmental factors influencing the above vital statistics. Work will be conducted in the reservoir and in aquaria.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0531, FISH POPULATION IN TAILWATER OF LEWIS AND CLARK LAKE

C.H. WALBURG, U.S. Dept. of Interior, North Cen. Reservoir Inv., Yankton, South Dakota

The decline of sport fishing success in the tailwater has paralleled the decrease in abundance of fish stock in Lewis and Clark Lake. It is known that large numbers of young fish and some adults move through the powerhouse during summer. This project will determine the relations between the reservoir and tailwater fish stocks.

Fish sampling in the tailwater will be conducted biweekly, for one year, using gill nets and seines. Data are available from the lake. The analyses will include species and age composition of the fish populations, movement, and food habits of selected species.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0532, A FORECAST OF AGRICULTURAL DEVELOPMENT IN THE IRRIGATED AREAS OF SPAIN

A. ZORILLA, Inst. Nac. De Inv. Agron., Madrid, Spain

Object: The objective of this study is to determine the optimal uses of irrigation water for crops in Spain taking into consideration technical factors which may affect future farm productivity and such environmental factors as population growth, per capita food consumption trends, crop patterns, food production in the non-irrigated areas of Spain, and foreign competitive factors all of which will have a bearing on the future potential demand for farm products to be produced in the irrigated areas.

Plan of work: Macro data on population, trade, industrial activity, and income will be used in determining future potential demands for agricultural products. The cost functions for various alternative crops under irrigation will be determined by economic analysis of field trials conducted by the Instituto Nacional de Investigaciones Agronomicas that associate the volume of water used with final yields under differing agronomic conditions. When necessary, new trials may be conducted to supplement those al-

ready fulfilled. Thus, it will be possible to establish the most economical patterns of crop production in the irrigated areas and further to provide a basis for determining cost and benefit relationships for new irrigation projects. The data obtained will also be arranged into tables that will be utilized for advising farmers through the Extension Service about the use of water.

SUPPORTED BY U.S. Dept. of Agriculture

6.0533, INVESTIGATION OF LINKAGES OF WATERFRONT MANUFACTURING

M.I. FOSTER, U.S. Tennessee Valley Auth., Knoxville, Tennessee

Using publicly available data, a method was developed to trace the inputs and outputs of the Tennessee River waterfront manufacturing plants. The method permits the estimating of the number of jobs required to provide the chief inputs and to utilize the outputs of new finished goods. Input-providing and output-using industries were identified at the 4-digit level.

For a selected waterfront community, case study methods were applied to trace local linkages of waterfront manufacturing plants with other manufacturing and service industries.

SUPPORTED BY U.S. Tennessee Valley Auth.

6.0534, THE DEVELOPMENT OF METHODS USED IN EVALUATING RECREATIONAL BENEFITS OF MULTIPLE-PURPOSE WATER RESOURCE PROJECTS

H. HINOTE, U.S. Tennessee Valley Auth., Knoxville, Tennessee

This study traces the treatment of outdoor recreation as an economic good in a benefit-cost analysis. Methods proposed and/or utilized in evaluating recreational benefits are examined in detail. The methods examined are: (1) expenditures method or gross volume of business method, (2) value-added by recreation expenditures method, (3) national income or gross national product method, (4) cost method, (5) market value method, (6) methods based on a consumers' surplus, (7) monopoly revenue method or Clawson's demand curves, (8) discriminating monopoly revenue method. Major extensions of the monopoly revenue and discriminating monopoly revenue methods are examined.

The study concludes that the market value method is the commonly accepted technique for evaluating recreational benefits; however, because of its inherent weaknesses, alternative methods based on demand curve analysis using travel cost data as a proxy for price has been proposed. The proposed alternative methods are discussed in detail.

Finally the study presents some suggested areas of additional research so that recreational benefits can be given equivalent status with other types of benefits in the benefit-cost analysis.

SUPPORTED BY U.S. Tennessee Valley Auth.

6.0535, HIGH ANALYSIS FERTILIZER INVESTIGATIONS - FISHERIES

B.D. JACO, U.S. Tennessee Valley Auth., Knoxville, Tennessee

A comprehensive test of the effect of high-analysis plant nutrient application on fish production, particularly sport fish reproduction and survival, in limited areas of large TVA reservoirs. This project completed; results show:

Increasing sport fishing in selected coves of a deep reservoir through application of inorganic fertilizer during one growing season does not appear to be practical. The fertilizer produced little lasting increase in nutrients in the water of the coves. Most of it presumably sank into the mud or was sluiced out of the coves.

Fertilization increases the number of bottom organisms and zooplankton but there was no significant change in numbers, size, species composition, or survival of fish. Temperature and oxygen profiles coupled with the physical characteristics (directional axis of coves in relation to main creek and cove depth and length) suggest that the age of the water may be very significant in increasing production in coves.

The exact effect of fertilizer still remains unknown since the amount of fertilizer loss to sinking and sluicing could not be measured. But one thing seems clear: the measured increase in

6. WATER RESOURCES PLANNING

production was due to only a small fraction of the total application.

SUPPORTED BY U.S. Tennessee Valley Auth.

6.0536, PINE TREE BRANCH WATERSHED RESEARCH P.C. SPATH, U.S. Tennessee Valley Auth., Knoxville, Tennessee

Research started in 1941 to determine the effects of intensive reforestation and simple erosion control measures upon hydrologic factors, including runoff, erosion, and underground storage and movement of water, in small watersheds of highly erodible soils. The 88-acre watershed is located in Henderson County in western Tennessee. The plan involved changing the watershed from many years of row-crop cultivation to well-managed pine forest cover. Fine sandy loam soils of the Mississippi Embayment physiographic province were seriously eroded to depths up to 10 feet. Hydrologic observations include precipitation, streamflow, sediment and ground-water levels.

Treatment in 1945-1946 included erosion-control measures and extensive reforestation. Construction of a network of logging roads was begun in 1963 and special devices were installed to measure erosion losses due to road construction. Selective cutting of pine stands was carried on in 1966. The watershed was reinventoried in the fall of 1966. Cull and other poor quality, inoperable hardwood trees were killed in the spring of 1967. The study is continuing.

Analyses of results show large reductions in peak discharges, surface runoff volumes, and sediment yield, some loss in annual water yield, and increased evapotranspiration. A comprehensive report has been published entitled, 'Reforestation and Erosion Control Influence Upon the Hydrology of the Pine Tree Branch Watershed 1941-1960.'

SUPPORTED BY U.S. Tennessee Valley Auth.

6.0537, THE EFFECT OF WATER RESOURCES ON ECONOMIC GROWTH IN THE TENNESSEE VALLEY C.B. GARRISON, Univ. of Tennessee, Graduate School, Knoxville, Tennessee 37916

The proposed study involves a statistical investigation of the effect of water availability on the location of manufacturing activity in the Tennessee Valley Region. The region, consisting of 201 counties in seven states, includes all of the Tennessee Valley and part of the Cumberland Valley. Shift analysis will be used to determine the competitive rate of employment growth by four-digit industrial classification for each county during the period 1959-1967 (a distinction will be made between 'water-intensive' and all other industries). The region was chosen because of the availability of high-quality employment and streamflow data on a county basis. The statistical approach is the rank correlation test of independence. This technique requires less stringent assumptions than the analysis of variance, and its efficiency relative to the latter is quite high. Further, this technique permits observation of the effect of water availability in conjunction with other location variables (e.g., labor availability, market access).

The importance of the study is derived from the fact that both the Congress and water resource agencies have viewed 'regional development' as a goal of water resource projects (in addition to the orthodox 'efficiency' goal). The proposed study will provide policy-makers with an improved understanding of the relationship between water resource projects, water availability, and economic growth.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Res. University of Tennessee

6.0538, USE OF WATER ON FEDERAL IRRIGATION PROJECTS

UNKNOWN, U.S. Dept. of Interior, Bureau of Reclamation, Amarillo, Texas

The purpose of this Bureau-wide study is to document historic use of irrigation water and to obtain data from selected projects to determine present use and efficiency as well as possible improvements in efficiency in both existing and future projects. The first phase of the study, which is the updating of the 1952 report,

'Use of Water on Federal Irrigation Projects,' is complete. The second phase, the collection and analysis of more detailed data from selected areas, was begun in F.Y. 1964 and will be conducted for a period of five years.

The Region 5 detailed study is being conducted on seven selected irrigated fields, 40 - 60 acres each, located in the Merced Division of Lower Rio Grande Rehabilitation, Weslaco, Texas. The fields are operated by private farmers under their normal farming schedules while data are collected on irrigation diversions, precipitation, surface runoff, water table elevations, soil moisture depletion, climatic conditions, crop growth, and cultural operations. Preliminary annual summary reports will be made in addition to a final report on completion of the study about 1970.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

6.0539, FLATHEAD CATFISH STUDY R.M. BAMBERG, State Parks & Wildlife Dept., Austin, Texas

Procedures: 1. Monthly surveys will be made on Lake Kirby, except during the spawning season, when additional surveys will be conducted. Experimental gill nets will be used for collecting flathead catfish. Those fish collected will be dissected and their stomach content recorded. 2. Fish collected will be sexed and their sexual maturity noted. 3. Fish collected will be weighed, measured and the coefficient of condition ('K' factor) calculated. The age of the fish will be determined by the use of length - frequency studies. Some of the fish collected will be tagged and released. 4. Samples will be taken from all habitat types to attempt to locate preferred habitat and to determine a seasonal distribution patterns.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish. Texas State Government

6.0540, EVALUATION OF CLEARED SEINING AREAS E.W. BONN, State Parks & Wildlife Dept., Austin, Texas

Procedures: Four areas were cleared by the Corps of Engineers in Pat Mayse Reservoir in Lamar County to serve as collection sites. These areas were cleared at the request of the Texas Parks & Wildlife Department. The areas will be marked with offset markers so that they may be located after they are inundated. Trawl, beach seine and net collections will be made on the sites and compared with similar collection efforts in uncleared areas in order to determine the value of clearing such areas on future reservoir projects.

Schedule: First year of a three-year study.

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish. Texas State Government

6.0541, WALLEYE AND NORTHERN PIKE STUDY J.E. CRABTREE, State Parks & Wildlife Dept., Austin, Texas

1. Monthly collections of various sizes of fish will be made utilizing gill nets, frame nets and seines. Collections will be made more often during periods of particular importance such as the spawning period. The stomach contents of specimens taken will be analyzed. Fish foods will be identified to Species and invertebrate foods to Order, if possible.

2. Determination of spawning sites and time will be made through observations and sampling with nets and seines. Fecundity and age at maturity will be determined from samples taken in number 1 above.

3. Samples taken under number 1 above will be weighed, measured and K-factors figured. Age will be determined by scale annuli counts and by length-frequency studies. Fish of known age will be marked to aid in age-growth determination and in determining longevity.

4. Seasonal distribution will be determined by collecting in each ecological habitat during each month. Records of re-release sites for marked fish, in number 3 above will be recorded and compared with returns to determine movements of the marked fish.

5. All samples taken will be examined grossly for the presence of parasites.

6.0542, FISH STOCKING EVALUATION

B.J. FOLLIS, State Parks & Wildlife Dept., Austin, Texas

PPS Objectives: To assess the practice of supplementary stocking of hatchery produced fish as a management tool.

Procedures: The method of application, necessary equipment, and successfulness of various mass marking techniques will be studied to determine their adaptability to the needs of this job.

The selected equipment will be purchased. Project personnel will be familiarized with the operation of equipment, proper methods of application and means of identifying recaptured marked fish.

The effects and duration of the selected marking method or methods will be determined by marking known numbers of small game fish (including largemouth bass, channel catfish and sunfish) and releasing them in hatchery ponds. Collections will be made periodically with seines. The survival and retention of the mark will be recorded. This will be continued as long as deemed necessary (maximum time thought to be one year).

SUPPORTED BY U.S. Dept. of Interior - Bu. Sport Fish.

6.0543, THE EFFECTS OF ENGINEERING PROJECTS ON THE ECOLOGY OF JONES BAY

R.B. JOHNSON, State Parks & Wildlife Dept., Austin, Texas

Objectives: To study the ecology of Jones Bay prior to alteration and to evaluate the effects of the proposed Hitchcock extension of the Texas City Hurricane Protection Levee.

Procedures: The study will include description of the area, an analysis of bottom sediments, chemical and physical water quality, and species composition and abundance. The extent and quality of nursery habitat will be evaluated.

Representative stations will be established and sampled systematically in affected areas and in control sites. Catch per unit effort records will be maintained so that all work can be duplicated and compared. Sampling procedures will compare to those used in estuarine research by the Texas Parks and Wildlife Department and the Bureau of Commercial Fisheries Laboratory at Galveston.

6.0544, THE EFFECTS OF ENGINEERING PROJECTS ON THE ECOLOGY OF MOSES LAKE

R.B. JOHNSON, State Parks & Wildlife Dept., Austin, Texas

Objectives: To study the ecology of Moses Lake and compare data accrued prior to the construction of the Texas City Hurricane Protection Levee, and to evaluate the effects of levee alterations in progress.

Procedures: The study will include description of the area, an analysis of bottom sediments, chemical and physical water quality, and species composition and abundance. The extent and quality of nursery habitat will be evaluated.

Representative stations will be established and sampled systematically in affected areas and in control sites. Catch per unit effort records will be maintained so that all work can be duplicated and compared. Sampling procedures will compare to those used in estuarine research by the Texas Parks and Wildlife Department and the Bureau of Commercial Fisheries Laboratory at Galveston.

6.0545, USE OF NEW ANALYTICAL METHODS FOR WATER RESOURCES DEVELOPMENT

C.S. BEIGHTLER, Univ. of Texas, School of Engineering, Austin, Texas 78712

The objective of this research is to apply recently developed analytical techniques to the problem of planning for optimal water resource development. An optimal plan with regard to the size and location of proposed reservoirs is that physical configura-

tion which provides the greatest net economic benefit to the people of the region while meeting future water needs. Optimizing a water resource system is difficult, since the output from each reservoir provides an input to all downstream reservoirs, and the streams form nonserial (branched) inputs.

Reservoir design in a river basin system may be formulated as a branched multistage decision process. In such processes, the decisions made at each stage (potential reservoir site) affect the circumstances under which all subsequent decisions in the system must be made. Under certain favorable circumstances, small branched systems may be formulated and solved as complex nonlinear programming problems. However, the intercoupled staging structure of such problems may be exploited by means of recently developed decomposition techniques, permitting the analysis of the large systems which are met in practice. These new methods can be used to break down the nonserial process into a sequence of simple serial problems which are then amenable to solution.

6.0546, A STUDY OF SELECTED CHEMICAL AND BIOLOGICAL CONDITIONS OF THE LOWER TRINITY RIVER AND THE UPPER TRINITY BAY

R.J. BALDAUF, Texas A & M University System, School of Agriculture, College Station, Texas 77843

The Galveston Bay System of Texas serves as an essential nursery area for commercial shrimp and certain fishes. The System serves in this capacity because of the discharge of fresh water from the Trinity River and the subsequent mixing of this water with the saline waters of the Gulf of Mexico. Available data suggest that a reduction in the flow of water will cause the System to become more saline and thus unable to serve as a nursery area.

The Texas Basins Project, the proposed dredging of the Trinity River for navigation, and the current construction of the Wallisville Dam just above the Trinity River Delta will influence the chemical, physical, and biological conditions of the System. The purpose of this project is to determine the nature of this influence.

Samples of fishes, crustaceans, and water will be collected from above and below the proposed site of the Wallisville Dam to determine (1) the chemistry of the water, (2) the fish and crustacean fauna, (3) the salinity tolerances of the animal species collected, (4) the role of a dam on the flow of nutrients into a major bay system, and (5) the population dynamics of the fauna.

6.0547, A STUDY OF THE ECOLOGY OF THE NAVASOTA RIVER, TEXAS

W.J. CLARK, Texas A & M University System, Graduate School, College Station, Texas 77843

The project proposes a study of the physical, chemical and biological characteristics of the Navasota River, Texas. The Navasota River is a 100 mile long tributary of the Brazos River, and joins the Brazos 30 miles south of Texas A&M University.

The study will provide information about a relatively undisturbed stream. This information will be beneficial in understanding the effects of stream development, and will provide a firm basis for evaluating the effects of the impoundments which are soon to be built on the Navasota River.

Plankton and water chemistry will be studied by bi-monthly sampling at four stations spaced along the river. Zooplankton will be sampled with a No. 20 net. Phytoplankton will be separated by centrifuge or by millipore filtration.

Fishes and benthic organisms will be sampled throughout the drainage. The fishes will be collected by seining, trapping and electrofishing. The benthos will be sampled by dredges or grab samplers.

Physical data are collected at four U.S. Geological Survey Stations and chemical data as well at one of them. Project personnel will collect supplementary data where necessary, including some trace element analyses.

6.0548, INTRODUCTION OF RISK AND UNCERTAINTY CONCEPTS TO OPTIMIZATION OF WATER RESOURCE SYSTEM DESIGN

R.J. FREUND, Texas A & M University System, Graduate School, College Station, Texas 77843

The proposed research plan is directed at the evaluation of water resource system design under conditions of hydrologic and economic risk and uncertainty by applying operations research techniques. The specific objective of the investigation is to provide mathematical models capable of incorporating elements of risk and uncertainty into the solution of optimal water resource system design.

The research methodology will involve examination and modification of basic system design models. The various factors or parameters in the models will be further examined to see if they are subject to risk and/or uncertainties. Final model modifications will be made, as necessary, depending on various assumptions to be made regarding underlying probability distributions and desired optimization criteria.

Various methods presently being proposed in the literature for handling risk and uncertainty in programming models will be examined for possible application to the above outlined models. Solution procedures for the models used will be obtained and solutions provided using data from a specific watershed. A simulation study will be set up to enable comparative studies to be made of the behavior of the derived solutions and of the solutions obtained from presently available methods.

6.0549, THE EFFECTS OF FERTILIZATION ON PRODUCTIVITY OF FARM PONDS

J.M. INGLIS, Texas A & M University System, Agricultural Experiment Sta., College Station, Texas 77843

OBJECTIVES: 1. To determine how the gross productivity of pond waters is affected by application of varying amounts of selected kinds of fertilizers. 2. To determine how seasonal changes in physical pond environment influence the effect of fertilization in ponds. 3. To evaluate the effect of fertilization of ponds on bottom-dwelling organisms and game fish that eat them. 4. To develop fertilization recommendations relative to amount and ratio of nutrients for farm ponds on the Lufkin-Susquehanna soil types of Central Texas. 5. To make preliminary evaluations of the economics of recommendations prior to extensive field testing based on research results.

WORK PROPOSED: This study is designed to provide basic information about the normal patterns of physical conditions in farm ponds, the kinds and rates of fertilizers best suited for their management and the biological effects of these fertilizers on productivity of different trophic levels in them.

The studies will be conducted on ponds located on the Tex A&M University Range and Forestry Area and will provide management data applying to typical ponds in the lower Post Oak Belt of Texas.

6.0550, THE EVALUATION, BREEDING AND IMPROVEMENT OF LETTUCE VARIETIES FOR TEXAS

P.W. LEEPER, Texas A & M University System, Agricultural Experiment Sta., College Station, Texas 77843

Objectives: Test the adaptability of lettuce varieties and strains for commercial production in Texas. Develop varieties of superior quality which will produce higher yields under commercial production through a program of selection and breeding. Incorporate resistance to downy mildew and to other diseases into commercially desirable types. Determine the proper plant spacings, irrigation levels and nutrient levels for new varieties developed in this program.

6.0551, APPLICATION OF SPECIALIZED OPTIM TECH IN WATER QUANTITY & QUALITY MANAGEMENT WITH RESPECT TO PLANNING FOR THE TRINITY RIVER BASIN

W.L. MEIER, Texas A & M University System, School of Engineering, College Station, Texas 77843

A multistage optimization approach to planning for the optimal beneficial use of water resources within a river basin will be developed. Techniques will be developed which permit formulation of a complex water resource system as a multistage decision problem. Using this approach, an existing complex macrosystem can be decomposed into more manageable parts for subsequent analysis. An algorithm will be developed and coded for computer solution in the course of the study.

A unique feature of this algorithm will be its provision for incorporating water quality management into a general water resource planning problem. The computational algorithm developed in this study will permit objective analysis of alternatives regarding (1) the interrelation between waste treatment and low-flow augmentation for quality control, (2) the influence of water quality on other beneficial uses of water, and (3) the consideration of water quality control as a competing beneficial use of water.

An actual river basin in Texas, the Trinity, will be used as a testing ground for determining the applicability of the method developed.

6.0552, WATER RESOURCE SYSTEM OPTIMIZATION BY GEOMETRIC PROGRAMMING

W.L. MEIER, Texas A & M University System, School of Engineering, College Station, Texas 77843

Techniques useful in the optimization of water resource system design problems will be developed in this research. A new and powerful optimization method, geometric programming, will form the basis for this study. Using geometric programming, highly nonlinear problems may be solved with relative ease.

In this investigation, the geometric programming optimization technique will be applied to a variety of water resource design problems to tests its usefulness in design optimization. Two such problems are concerned with the optimal design of waste treatment units and pipelines. A computer algorithm will be developed to make the geometric programming available for use by water resource analysts.

6.0554, ECONOMIC IMPACT OF WATER IMPOUNDMENT - VALIDITY TESTING OF A COMPARATIVE PROJECTION MODEL

J.E. PEARSON, Texas A & M University System, Graduate School, College Station, Texas 77843

The proposed research plan involves the accuracy testing of a comparative-projection model designed to measure the economic impact of water impoundment. The model is unique

6. WATER RESOURCES PLANNING

since it contains three time/action phases and uses empirical local data as the basic inputs. A now-being-completed impoundment project in central Texas is to be the primary study area. The projections established for this impoundment project through an earlier study are to be evaluated as data are collected. The projections are to be compared to a synthetic index which has been established earlier for this purpose. An analysis of the economy surrounding the reservoir will be made to detect certain economic developments which can affect the accuracy of the model.

In completing the second phase of the study, a generalized testing of the model will be undertaken. Established impoundment projects across the state of Texas will be selected for testing the model and the results are to be compared to the synthetic index. Modifications and adjustments will be made to the model as needed in order to obtain a generalized form with adequate predictive value.

A recreational phase will be conducted concurrent with the above. This part is to involve on-site interviewing of recreators at reservoirs. The purpose of this phase is to strengthen the third phase (post-fillup) projection of the model.

6.0555, AN ECONOMIC STUDY OF CROP PRODUCTION PRACTICES AND THE USE OF FARM EQUIPMENT ON THE HIGH PLAINS OF TEXAS

W.B. ROGERS, Texas A & M University System, Agricultural Experiment Sta., College Station, Texas 77843

Objectives: The general objective will be to determine the most effective cropping practices as a means of reducing production costs of both irrigated and dryland crops. More specifically, the objectives are: 1. Evaluate various preplanting practices, including the kind of operation and the type of tool used together with the time when each operation is performed in preparing a seed bed for both dryland and irrigated crops. Particular attention will be given to conservation of soil moisture, control of soil blowing, crop residue management and proper tillage correlated with soil type. 2. Determine the cost and benefits occurring from the use of special planting attachments. Also, evaluate other practices associated with establishing both irrigated and dryland crops correlated with soil type. (see project statement).

6.0556, AN ECONOMIC ANALYSIS OF THE DEMAND FOR LAND AND/OR WATER-BASED OUTDOOR RECREATION IN TEXAS

I.W. SCHMEDEMANN, Texas A & M University System, Agricultural Experiment Sta., College Station, Texas 77843

OBJECTIVES: 1. To construct demand functions and to estimate structural coefficients for those types of outdoor recreation which require the use of land and/or water. 2. To analyze consumer preferences for outdoor recreation activities and facilities and to measure the effects of factors which affect those preferences.

DESCRIPTION OF WORK: Estimates of demand and consumer preferences generally will be for those activities and facilities located in recreation areas falling into Marion Clawson's classification of (a) intermediate, (b) resource-based. Data for the analyses will be obtained from participants in recreation areas and from populations classed as (a) rural, (b) urban, (c) metropolitan. The estimates of demand for outdoor recreation activities will be expanded to represent the demand for outdoor recreation from the population groups mentioned above. Preference data pertaining to activities and facilities will be extended to provide solutions to acceptance problems facing both the private and public sector of the state. Cooperation will be continued with Texas Parks and Wildlife Department, USDA and other Federal agencies charged with responsibilities in outdoor recreation.

6.0557, DEVELOPING AGRICULTURAL LAND IN RECREATIONAL USES UNDER PRIVATE OWNERSHIP OPPORTUNITIES IN A TEXAS ECONOMIC AREA

I.W. SCHMEDEMANN, Texas A & M University System, School of Agriculture, College Station, Texas 77843

Research was conducted to determine the effects of selected factors upon the intensity of recreational use of Texas lakes. Factors analyzed were grouped into four categories (1) Physical Characteristics, (2) Location of Lakes, (3) Demographic Characteristics of the Surrounding Populations, (4) Types of Recreational Facilities Provided at the Lakes. A representative sample was selected from lake sizes ranging between 10 and 500 surface acres being used for recreational purposes. Regression analysis showed that four independent variables, distance to nearest lake with comparable facilities, size of lake, picnic facilities, and Swimming significantly influenced recreational use intensity at the .10 level. They had a coefficient of multiple determination of .52.

Those lakes that were publicly administered were found to receive more recreational use than those which were privately administered. This contrast in recreational use was attributed to (1) Poor Quality Facilities, (2) Poor Management, (3) Improper Location, and (4) Insufficient Advertising in the private sector.

It was found that non-club lakes received more recreational use than did club lakes in the study. This was attributed to the fact that people hold memberships in club lakes to escape the crowding existing in public areas and to associate with people of a given social status. One, therefore, would not expect use rates at club lakes to be as high as those at non-club lakes.

6.0558, EVALUATION OF RESOURCE USE AND ECONOMIC EFFECTS DUE TO IRRIGATION WATER AVAILABILITY IN TEXAS

F.A. SCHMER, Texas A & M University System, Water Resources Institute, College Station, Texas 77843

The State of Texas is presently developing a State Water Plan which is to become a basic guide for water development through the year 2020. The objective of this research is to evaluate the total effect of the water plan on the Texas agricultural industry. The availability of water to agriculture in the future and its effect on the Texas economy as set forth by the plan is of utmost importance to Texans considering the relative merit of this plan.

To develop meaningful projections of water requirements which could be used in planning for water resource development, four models of agricultural resource requirements and production will be analyzed. Each model will contain (1) assumptions of restrictions on production and marketing of products; (2) assumptions relative to resource availability and use, and (3) estimates of output with the specified employment of resources. These models will illustrate the potential of Texas agriculture to produce food and fiber as effected by various restrictions on resource availability and marketing potential.

Analysis techniques by computer will be developed to evaluate the different restraints imposed on resource availability and market limitations and project the effect of these restraints into the future.

6.0562, INSTITUTIONAL FACTORS INFLUENCING WATER DEVELOPMENT IN TEXAS

W.L. TROCK, Texas A & M University System, School of Agriculture, College Station, Texas 77843

The proposed research involves (1) identification of institutional factors which have influenced important water developments in Texas, (2) evaluation of the impacts of these factors on development, allocation and subsequent uses of water, and (3) determination of possible changes in institutions or ways of dealing with institutional factors which will facilitate planning and developmental efforts concerned with water resources.

Identification of significant institutional factors will require examination of issues which have been publicly debated, counsel-

ing with expert witnesses, and interviews with individuals affected by developments. Impacts of factors will be measured in terms of time requirements for development, litigation needed, changes in resource use, added costs of resource development attributable to institutional factors, and other terms appropriate to the measurement of impacts.

Determination of relationships of institutional factors to water resource developments will provide a basis for suggestions for improving authorizations and procedures in developmental activities.

6.0565, EXPERIMENTAL SEEDING (SHRIMP AQUACULTURE PROGRAM)

T.J. COSTELLO, U.S. Dept. of Interior, Biological Laboratory, Fort Crockett - Galveston, Texas

Following a 3-year study of the ecology of the waters in Florida Bay and Keys, it is apparent that only a portion of the suitable nursery areas are used by shrimp. Project objectives are to rear large numbers of shrimp from eggs spawned in the laboratory and seed underutilized nursery grounds.

Selected areas will be enclosed and stocked with laboratory-reared postlarvae. By systematic measurements of shrimp populations and physical features, rates of growth and survival of shrimp in different population densities will be related to physical conditions. The ultimate goal will be to determine the carrying capacities of nursery grounds and maintain an optimum level of shrimp population by seeding.

6.051, ECONOMIC ANALYSIS OF ALTERNATIVE WATER USE TECHNIQUES IN PRODUCTION OF COTTON, GRAIN SORGHUM & RELATED CROPS - SOUTHERN HIGH PLAINS OF TEXAS

H.W. GRUBB, Texas Technological College, School of Agriculture, Lubbock, Texas 79409

(1) To develop analytical procedures to be used in selecting optimum combined precipitation and irrigation water use plans in

the Southern High Plains of Texas. (2) To develop input-output information (Production coefficients) for farm enterprises produced with recently developed water savings production techniques. (3) To develop water-value-maximizing farm plans for alternative water precipitation plus groundwater) saving techniques. Economics models will be formulated for the purpose of evaluating alternative investments in water conserving and water saving techniques. The analytic procedures will relate alternative water conserving techniques in terms of investment and maintenance costs and productivity in terms of crop yield values through time. The study area will be subdivided into homogeneous irrigation water supply sub-areas. The analysis will be done for typical farms of each sub-area. The economic analysis will utilize yield and cost data obtained from land modification research at the South Plains Research and Extension Center, yield and cost data from studies or irrigation techniques, data obtained from selected farmer interviews, and data from secondary sources. Records of precipitation in the study area will be analyzed for the purpose of estimating precipitation available for crop production. Engineering-economic evaluation techniques will be used to establish physical input requirements and costs of water conserving projects. Farm enterprise budgets will be used to estimate costs and returns of alternative crops produced on modified lands. Dynamic Linear Programming techniques will be utilized to estimate long-range farm plans for optimum combined precipitation and groundwater use.

6.0575, APPLICATION OF OPERATIONS RESEARCH TECHNIQUES FOR ALLOCATION OF COLORADO RIVER WATERS IN UTAH

C.G. CLYDE, Utah State University, Utah Ctr. For Water Resour., Logan, Utah 84321

The State of Utah, through its commitment to develop a State Water Plan, has the responsibility of allocating the available water supplies in such a manner as to provide for the most beneficial control and utilization of the supplies within the various basins of the State. In this responsibility, the State of Utah is faced with a problem common to all of the states.

The objectives of the proposed research are to assist the State of Utah in particular and the other states in general by formulating a methodology for optimal allocation of available waters. More specifically, the objectives are: 1. To formulate a mathematical model with the appropriate constraints for the water resource system composed of the portion of the State of Utah which feasibly could receive Colorado River waters either directly or by transfer. 2. To solve the mathematical model using an appropriate optimizing algorithm to determine the least-cost allocation of Colorado River waters in the State of Utah. 3. To carry out optimizations for various assumed operating rules. 4. To evaluate the usefulness of the analytical approach for state water planning.

In carrying out the intended research, preliminary screening will be necessary to define the actual study area. Physical features as well as legal characteristics of the area and the limitations imposed by the Colorado River Compact will be formulated as system constraints. Various water costs associated with the alternative sources and demands will be determined and an appropriate objective function will be established. Alternative operating rules and assumptions will also be established. Optimal allocations for the alternative operating rules and assumptions can be determined then by use of the linear programming algorithm or some other suitable optimizing method. The optimal allocations of Colorado River water on an interregional basis will yield information of great value to subsystem projects composed of tributary river basins.

6.0577, THE ECONOMICS OF WATER TRANSFER

B.D. GARDNER, Utah State University, Agricultural Experiment Sta., Logan, Utah 84321

1. To identify and describe the legal, institutional and administrative structures, processes, and techniques currently used in Utah that effect transfers of water or act to deter them.

2. To appraise these legal, institutional, and administrative devices and processes with respect to: (a) the degree of flexibility in water allocation they permit leading to efficiency in use, and (b) the permanency of tenure they bestow as a stimulant to investment and economic growth.

3. To study the markets for water rights and water rentals in Utah and to evaluate their adequacy in permitting water transfers and in promoting economic efficiency and equity.

A survey and analysis will be made of the roles and functions of water law, water markets, state administrative agencies, such as the State Engineer's Office, Water and Power Board, and local organizations such as the metropolitan water districts, water conservancy districts, and irrigation companies. The focus will be on the ease or difficulty of water transfer; and the resulting impact on economic efficiency and wealth redistribution brought about by transfer.

SUPPORTED BY U.S. Dept. of Agriculture
Utah State Government

6.0578, THE POTENTIAL DEMAND FOR WATER AND LAND IN SELECTED AREAS OF UTAH

B.D. GARDNER, Utah State University, Agricultural Experiment Sta., Logan, Utah 84321

Objectives: 1. To determine the value productivities of water in competing uses. 2. To identify and determine the relative importance of factors which affect the amount of water demanded by various user types. 3. To compute rates of return to various investment practices associated with water conservation, quality maintenance, and storage. 4. To gauge the impact of water transfers on income and wealth distribution between individual users and between affected geographical regions.

Procedure: Farms, households, and industrial firms will be surveyed to determine how much water is used and the factors that are thought to be important in determining use. Regression analysis will then be used to indicate the importance of each factor. Costs and returns information will also be collected that relate to investment in storage facilities, water conserving practices, and maintaining water quality. This will permit calculation of rates of return on investment. Aggregate county census information will be used to determine average net income for various classifications of water users. Then as assumed water transfers are made to different uses and to different regions, the impact on area income and economic activity can be estimated.

SUPPORTED BY Utah State Government

6.0579, STATE WATER PLAN INVESTIGATIONS

F.W. HAWS, Utah State University, Utah Water Research Laboratory, Logan, Utah 84321

Water supply and water use determinations and projections are being made according to major hydrologic areas of the state. All hydrologic information is evaluated and analysed in terms of frequency occurrence. The total flow picture from headwater reaches to final stream disposition is being pieced together so that the effects of development and management can be traced throughout the balance of the hydraulic system. Basic data evaluation and interpretation are made with view toward planning requirements in which alternative development possibilities must be tested.

This work was begun in 1961 and will continue to hydrologic subdivisions until all areas of the state have been thus studied and reports prepared. Reports to be published in 1968 include: Water Related Land Use in the Provo River Divisions, Land Use in the Weber River Drainage Systems, Land Use in the Bear River System, Hydrologic Budgets have been completed for Provo, Weber, Bear river system and the Uinta Drainage area.

6.0580, THE EFFECTS OF DIELDRIN ON MALLARD DUCKLING BEHAVIOR

P.N. LEHNER, Utah State University, State Coop. Wildlife Res. Unit, Logan, Utah 84321

Objective of this project: To determine if various levels of dieldrin affect the ability of juvenile mallards to discriminate wavelength (color).

Procedures: Adult Mallards will be fed 0, 1.6, 4 and 10 ppm of dieldrin in their feed. The eggs will be collected and artificially incubated. Ducklings will then be placed either on clean feed or on feed at the same dosage level as that fed their parents.

Ducklings will be raised to approximately 50 days of age and then tested on their ability to discriminate color. Automated psychological testing equipment will be used to produce stimulus generalization gradients for each duckling. Measurements of inter and intraducklings effects will be made by graphic comparison.

Whole brain analyses of dieldrin residues will be made on all ducklings tested and on a sample of the parent population at the termination of the study. These will be correlated with the stimulus generalization gradients.

6.0581, HOME RANGE AND BREEDING BIOLOGY OF SHOVELERS (ANAS CLYPEATA) IN THE ALBERTA GRASSLAND

J.B. LOW, Utah State University, State Coop. Wildlife Res. Unit, Logan, Utah 84321

A four-year study of the breeding ground home range and biology of the shoveler (*Anas clypeata*) was undertaken on a small tract of agricultural land in the grassland of southern Alberta. Three objectives of the study were: (1) to study the movements of shovelers using the home range concept, (2) to investigate the function of a shoveler's home range, and (3) to study the breeding biology of shovelers. Work is being done in the Strathmore study area near Strathmore, Alberta, Canada.

6.0582, WATER QUANTITY AND QUALITY REQUIREMENTS ON WESTERN SALINE MARSHLANDS

J.B. LOW, Utah State University, State Coop. Wildlife Res. Unit, Logan, Utah 84321

The basic objective of this research was to supply the State Engineer with factual information on the quality and quantity of water required for effective operation of Waterfowl Management areas. Allocations to wildlife areas are important because of water resources of Utah are rapidly being developed for agriculture and industry. This study, begun in 1960 through the cooperation of the Utah State Department of Fish and Game, the Engineering Experiment Station at Utah State University and the Utah Cooperative Wildlife Research Unit, has operated on two phases of the subject; (1) the actual water required (quantity) to operate efficiently a marshland and (2) the quality of water needed to propagate the desirable marsh and aquatic plants needed as food and cover by waterfowl. The study area selected was the 700 acre State area known as Howard Slough Waterfowl Management Area.

Field work completed; bulletin in manuscript form, but not published.

SUPPORTED BY Utah State University
Utah State Government

6.0583, FOOD AND FOOD ENERGY REQUIREMENTS OF WILD DUCKLINGS

J.B. LOW, Utah State University, State Coop. Wildlife Res. Unit, Logan, Utah 84321

Objectives of this study are to: (1) determine the composition of the diet of four species of flightless young ducks using the same habitat, (2) determine the abundance of animal and plant foods in the habitat and relate it to duck use as determined in objective '1', previous, (3) investigate factors which influence food

use by ducklings, (4) determine nutritional composition of natural duck foods, (5) determine food energy requirements of growing ducks, using species considered in objective '1'.

Over a three-year period, samples of each age class of flightless young of lesser scaup, baldpate, and pintail, will be collected on the study area. Tentative minimum sample size has been set at 70 usable gullets more or less evenly distributed among the several classes of flightless young. Birds will be collected during the period they are normally abundant for a given species or age class.

The relative abundance of aquatic invertebrates will be measured at each duck collecting site by means of 'sweep' and bottom sampling.

Vegetation at duck collecting sites will be measured by a modification of the line point method. Plants will be sampled with a square-foot frame divided into 0.01 sq. ft. squares by a wire grid.

Analyses for the major nutrients of important foods will be contracted to the Provincial Analytical Laboratory. Foods to be analyzed will be collected on the study area. In order to measure daily food intake of growing ducklings, four groups of 3 or 4 ducks each will be used for feeding trials with natural foods provided ad libitum. The factorial method involves determining the requirements for maintenance, daily activity, and growth, which together make up the net energy requirements. Use of the two methods for determining food energy requirements of growing wild ducklings will provide an excellent check. Work being performed in the Strathmore study area, Strathmore, Alberta, Canada. Work started fiscal year 1966 and will terminate fiscal year 1970.

6.0584, EFFECTS OF REGULATED GRAZING ON WATERFOWL PRODUCTION

V.R. PANCAKE, Utah State University, Graduate School, Logan, Utah 84321

The proposed study is designed to determine the effects of regulated grazing on waterfowl production in a salt grass-bulrush marsh. This will be done by correlating variations in production of waterfowl with the amount of cover removal on plots receiving different grazing pressures. During the first grazing season, (winter, 1968-69), there will be heavy grazing on two acre 'pilot' plots. These will serve as guides in establishing grazing intensities for the 1969-70 grazing experiments. During this season, grazing will be at light, medium, and heavy intensities, but will include controls and a pair of plots which will be grazed according to practices of local cattlemen. These plots will be 25 acres with 2 replications for each treatment. Nesting censuses will be conducted over the whole marsh, by quadrat sampling, in the spring of 1969. The 1970 nest census will be restricted to the 25 acre plots.

6.0585, APPLICATION OF AN ELECTRONIC ANALOG COMPUTER TO THE SIMULATION OF THE TOTAL HYDROLOGIC-ECONOMIC FLOW SYSTEM

J.P. RILEY, Utah State University, Utah Ctr. For Water Resour., Logan, Utah 84321

Efficient management of water resources involves a consideration of interacting hydrologic and economic variables, and, therefore, requires an examination of the system as a whole. The overall approach requires the integration of the many system components, and to this end the electronic analog computer is well suited. The validity of the analog simulation approach to hydrologic problems has already been demonstrated by the results of recent research at Utah State University. Under the proposed study this background experience will be applied to the development of a fundamental model of the hydrologic-economic flow system. Both the engineering and the economics disciplines are involved.

Briefly, the major objectives of the research proposal are to (1) develop, improve, and evaluate basic relationships which link the hydrologic and economic flow systems, and (2) investigate the feasibility of using an electronic analog computer to synthesize

6. WATER RESOURCES PLANNING

ize fundamental hydrologic and economic processes into a working model of the total hydrologic-economic flow system.

The model will be verified by simulating a prototype basin for which both hydrologic and economic data are available.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch
Utah State University

6.0586, THE DEVELOPMENT OF A SIMULATION MODEL FOR THE BEAR RIVER BASIN

J.P. RILEY, Utah State University, Utah Ctr. For Water Resour., Logan, Utah 84321

The overall objective of this study is to apply analog computer simulation techniques as a planning and management device for the water resources of the Bear River system. This is an interstate stream in a water-short area. Distribution of the available water supplies among the multiplicity of demands will require the consideration of many alternative plans of development.

The study will proceed by assembling available hydrologic data and formulating a mathematical model based on previous experiences and equipment developments. The mathematical model will then be tested and verified on the analog computer. The utility of the model will be demonstrated by examining various alternative management possibilities within the Bear River basin.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0587, A STUDY OF THE INTEGRATION OF THE WATER RESOURCES OF THE BEAR, WEBER, AND JORDAN RIVERS IN NORTHERN UTAH

J.P. RILEY, Utah State University, Utah Water Research Laboratory, Logan, Utah 84321

The overall objective of this study is to determine the magnitude and variations in the quantity of water that might be feasibly exchanged between the Bear and Jordan River systems, using the waters of the Weber River as the exchange medium. In view of the scope of this objective, the simulation approach to the problem seemed particularly applicable. Through the formulation of computer models of the physical system, it is possible to consider quickly the influence of a wide range of constraints and input functions. The electronic analog computer is the primary computational device being applied in the formulation of the models.

SUPPORTED BY Utah State Government

6.0588, WATERFOWL UTILIZATION OF SAGO PONDWEED (POTAMOGETON PECTINATUS) ON A SELECTED MARSH IN NORTHERN UTAH

M. STERLING, Utah State University, Graduate School, Logan, Utah 84321

The utilization of sago pondweed will be determined by the establishment of 48 sets of study plots from which comparisons of productions of sago pondweed tubers, vegetation, and seedheads will be made. Each set of study plots will consist of (1) an enclosed plot, (2) a plot available to carp and waterfowl use, and (3) a plot available only to carp. Water levels and soil depths will be recorded in conjunction with the tuber sampling to determine what effect these two variables had on waterfowl utilization of sago pondweed tubers.

The effect of waterfowl utilization on sago pondweed production will be determined by the establishment of fifteen, 50 by 50 foot pens. These pens will be stocked with semi-domestic mallard ducks at specific rates to simulate the desired densities of use. Samples of sago pondweed vegetation, tubers, and seedheads will be taken after utilization periods to determine the effect utilization had on production of these elements.

6.0589, FARM ADJUSTMENT TO LIMITED IRRIGATION WATER WITH REFERENCE TO CENTRAL UTAH PROJECT

C.E. STEWART, Utah State University, Agricultural Experiment Sta., Logan, Utah 84321

The general objective is to determine the most profitable individual farm adjustments to conditions of inadequate irrigation water supplies and to appraise the effect on farm incomes and on other criteria of economic success of incremental changes in water supply to individual farms. The analysis is oriented to relevant market, climatological, and physical resource conditions.

The study is focused primarily on conditions of inadequate irrigation water supplies. What adjustments are desirable from the standpoint of the individual farmer? What is the most profitable and efficient use he can make of the available supply? What is the value of an increment of water from the water from the standpoints of individual farmers and of the public?

Economic data have been collected for 140 farms on Strawberry Valley Project and for 60 farms in Ashley Valley. Detailed input data were collected on about 400 fields of crops on these farms. Work remaining is entirely analytical. A large portion of the data has been coded; this job will soon be completed. Data will then be punched on IBM cards and analyzed by budgeting and linear programming techniques to estimate the most profitable combinations of resources and farm adjustments under limited supplies of irrigation water. Value of increments of irrigation water will be estimated.

6.0590, SOILS, PESTICIDES, AND THE QUALITY OF WATER

S.A. TAYLOR, Utah State University, Agricultural Experiment Sta., Logan, Utah 84321

Objective : 1. To establish whether movement through the soil constitutes a significant source of the pesticides found in surface and ground water. 2. To identify the properties of pesticides and of soils that control the extent of movement of pesticides in and through soils. 3. To ascertain the solubility characteristics of pesticides sorbed on soil particles and hence the effect of suspended soil on the concentrations of pesticides in water. 4. To ascertain the effects of management of pesticides and land on the transport, by all means, of pesticides to water supplies.

This Utah project is devoted to furthering above Objectives 2 and 3. Adsorption, flow, and thermodynamic properties of a variety of pesticides will be studied in connection with montmorillonitic and kaolinitic types of clays, sand, and complete soil. Specific compounds will be selected to give carboxyl, carbonyl, amine, amide, and double bonded oxygen, sulfur, or phosphorus positions that may interact with clay or exchange with cations present in the colloidal complex of soil materials. Thermodynamic properties of systems consisting of various soil materials and water will be studied. Organic pesticides will then be adsorbed onto the soil solids and the thermodynamic properties will again be studied. In this way the change in properties will be evaluated.

6.0591, IMPACT OF RECREATIONISTS ON SELECTED SITES

J.K. TOCHER, Utah State University, Agricultural Experiment Sta., Logan, Utah 84321

Objectives: 1. Establish initial impact of recreationists on vegetation and soils on previously unused sites. 2. Relate changes in low level vegetation to treatment by irrigation and fertilization, amount of use, and site factors. 3. Study responses of growth rate of overstory trees in camp to pair trees outside camp.

Description of Work: 27 0.064 acre plots have been laid out, mapped and measured. Treatment effectiveness will be tested by vegetation responses and changes in rates of infiltration. Selected plots will be irrigated and fertilized. Regressions analysis will relate vegetation to use, facility location and site factors.

SUPPORTED BY Utah State Government

6.0592, METHODOLOGY FOR DETERMINING VALUATIONS OF WATER FOR ALTERNATIVE USES

E.B. WENNERGREN, Utah State University, Agricultural Experiment Sta., Logan, Utah 84321

1. To develop economic models designed to estimate marginal values for water in its alternative uses in the Intermountain West. 2. To develop economic models designed to estimate marginal value relationships for water in its alternative uses and levels of use in the Intermountain West.

Water use classification systems will be developed. Methods of measuring water input-output relations for economic analysis will be explored. Alternative economic 'choice indicators' will be studied. Types of water markets will be determined. Methods for determining the present economic efficiency of resource allocation within and among water-using industries will be developed. Also, the direction of resource reallocation to increase water use efficiency will be established conceptually. Economic models developed will be tested on a diminutive scale for selected water use complexes.

6.0593, RECREATION VALUE OF WATER FOR THE PRODUCTION OF WATERFOWL

R.S. WHALEY, Utah State University, Graduate School, Logan, Utah 84321

The proposed research has the following objective: To develop and test methods that can be used for valuing on-site and off-site benefits originating from the production of waterfowl at selected Utah waterfowl refuges and state marshes.

There are fundamentally three steps in the procedures for this project: (1) Defining the kind and distribution of benefits resulting from particular refuges; (2) estimating the amount of use of the varied kinds of recreation opportunities offered by the operation of the refuge; and (3) placing value estimates on these uses.

Utah State University

6.0594, UPDATING AND REPUBLICATION OF FACTORS INFLUENCING THE RESTORATION AND DEVELOPMENT OF OGDEN BAY REFUGE

N.F. NELSON, State Div. of Fish & Game, Salt Lake City, Utah 84116

Objective: To determine ecological changes as they occur on saline marshes and to determine the impact of these changes on waterfowl habitat and use.

Status: This is the second year of a proposed three year study to update and revise a previous W-290R publication on the ecology of saline marshes. Project plans call for formal publication in the form of a Department bulletin.

Justification: The ecology of saline marshes is of extreme interest to waterfowl technicians throughout western North America. Continuing ecological studies of these areas are critical in view of today's increased demand for total utilization of existing water supplies. The impact that changes in water supplies will have on ecology of any waterfowl area will directly affect waterfowl production and use of saline marshes in the Great Basin. Publication and revision of this manuscript will satisfy the increasing demand for copies of the original publication which is out of print, and at the same time enlarge our knowledge of saline marsh ecology.

Procedures: Relocation of original study areas and transects on the Department's Ogden Bay Waterfowl Area; establishment of new transects wherever ecological change has altered the original study area; reading of these transects at established intervals; summarization and tabulation of new data; comparison of ecological change with patterns of waterfowl use during production and migration periods; comprehensive review of the original manuscript; consolidation of new data with the original manuscript; and formal publication of this consolidation.

6.0595, THE EFFECT OF LIVESTOCK UTILIZATION ON WATERFOWL HABITAT AND PRODUCTION

UNKNOWN, State Div. of Fish & Game, Salt Lake City, Utah 84116

Objective: To determine the impact of unregulated livestock utilization of wetlands on waterfowl habitat and production.

Status: This the first year of an estimated three year study to determine the impact of cattle on waterfowl production and wetland habitat.

Justification: Livestock interests in Utah continually pressure the Department for grazing privileges on State-controlled waterfowl areas. With one exception these areas are not currently utilized by livestock. The Department feels that livestock use on waterfowl areas is not compatible with the basic purpose of the development; however, no evaluation of this problem has been attempted in the State. This study will endeavor to determine specific effects of livestock on waterfowl production, the effect of cattle on wetland habitat, and the effect of cattle on habitat quality.

Procedure: Establishment of ground transects on the Department's Locomotive Springs (study) and Salt Creek (control) Waterfowl Management Areas. These areas are both spring fed saline marshes similar in all respects with the exception that cattle are allowed to utilize Locomotive Springs. Cover mapping of both areas has been accomplished. Transects will be established in similar cover types and read at regular intervals throughout the spring, summer, and early fall. A comparison as to waterfowl use, habitat development, and production of the two areas will be made. This comparison will indicate the impact of cattle on waterfowl and waterfowl production and will be evaluated in an effort to formulate management recommendations.

6.0596, THE BIOLOGY AND CONTROL OF TABANIDAE IN MARSHLANDS ALONG THE EASTERN SHORE OF THE GREAT SALT LAKE, UTAH

D.M. REES, Univ. of Utah, Graduate School, Salt Lake City, Utah 84112

Object: To survey marshlands along the eastern shore of the Great Salt Lake to determine most favorable breeding areas for tabanids, to determine life cycle under existing conditions, and to devise water and land management schemes to minimize breeding of tabanids.

Plan of Work: Collections of larvae and adults of tabanids will be made along the eastern shore of the Great Salt Lake by soil sampling, emergence cages, light traps, car traps, and animal bait traps. Samples of larvae and adults collected from suspected breeding areas will be used to determine species present, preferred egg laying sites, life cycles, and preferred hosts. Adult collections will also be used to determine ecology, dispersion and flight patterns and habits of various species. Observations will be made on the seasonal cycles and succession of adults of different species and their habits in relation to meteorological and other environmental factors. The micro environment of favorable larval breeding habitats will be determined. Current water and land management practices at Salt Lake will be evaluated for their effect on the production of tabanids.

SUPPORTED BY U.S. Dept. of Agriculture

6.0597, ECONOMIC EFFECTS OF WATER ALLOCATION AMONG ALTERNATIVE INDUSTRIAL (NON-AGRICULTURAL) USES

G.S. THOMPSON, Univ. of Utah, Graduate School, Salt Lake City, Utah 84112

The demands for water in Utah have expanded more rapidly than the total supply available. If the state's growth is to continue, wise allocations of water among competing uses must be made.

6. WATER RESOURCES PLANNING

The allocation process is complicated by the rapid transformation of the state from a rural, agricultural to an urban, industrial-commercial economy.

Objectives: The primary purpose of the proposed research is to assemble data and undertake analysis which will attempt to determine the marginal productivity and the economic effects of water allocation among alternative industrial or non-agricultural uses.

Procedures: A dual approach will be used. 1. An industrial complex will be selected based on a Utah mineral and composed of a series of related dependent industries. Information will be collected from each segment of the industry complex which when processed and applied to an economic model will indicate the marginal productivity of water for each segment of the industry as well as for the total complex. 2. The second approach is to calculate the number of jobs per acre foot (or per gallon) of water which exists in mining and manufacturing industries within the state and determine the contribution to total state income of such employment and water use.

The first approach will be intensive in nature and will stress methodology; the second will attempt to obtain useful information over a broader range of industries in order to offer immediate assistance in water allocation decisions. The techniques developed will be useful to other regions.

6.0598, AN EVALUATION OF THE LAMPREY IN LAKE CHAMPLAIN

J.K. ANDERSON, State Fish & Game Department, Montpelier, Vermont

Objectives: To determine the size of the lamprey population in Lake Champlain and to locate their principal spawning streams. To determine the extent of their predation upon fish in Lake Champlain and to determine fishes most readily attacked.

Procedures: Spawning streams will be located utilizing electro-fishing gear to sample adults and to locate ammocoetes. These streams will be catalogued with reference to spawning locations and the approximate size of the lamprey population utilizing it as a spawning site. All fish collected in Lake Champlain studies will be examined for lamprey scars and records kept of such scars. These records will be used to evaluate the lamprey predation upon each species of fish and to determine the susceptibility of each species to lamprey predation.

6.0599, CLIMATOLOGICAL FACTORS AFFECTING WATER USE IN AGRICULTURE

R. BAJWA, U.S. Dept. of Agriculture, Arlington, Virginia

Objectives: To develop improved methods for incorporating climatological factors into analyses of water use in agriculture.

Approach: A study of techniques for computing consumptive water use requirements by agricultural crops will be undertaken to determine reliability for use in estimating such requirements in various regions of the United States. Estimates will be made of consumptive use of water by various crops in selected regions of the United States. These estimates will be combined with data describing water supplies and irrigable soils in the selected regions to derive estimates of irrigation potential and the total water requirements needed to realize the potential.

SUPPORTED BY U.S. Dept. of Agriculture

6.0600, ECONOMIC INVENTORY OF AGRICULTURAL WATER USE IN THE UNITED STATES

C. DICKASON, U.S. Dept. of Agriculture, Arlington, Virginia

Objectives: To formulate and maintain a systematic and continuing economic inventory of agricultural water use in the United States.

Approach: The formulation and maintenance of this inventory will be accomplished by collecting and analyzing data from Federal, State and local organizations such as irrigation, drainage,

conservancy and soil conservation districts will also be included as sources of data. The research will include appraisal of current and prospective economic demands for water by agriculture in relation to current and prospective economic supplies of water. Analyses of economic aspects of agricultural water use and development and the relationships between water development or conservation programs and various agricultural problems will also be included. The inventory will include pertinent facts on quantity, quality and uses of water; comparative expenditures for major uses, including demand and supply relationships; and trends in use.

SUPPORTED BY U.S. Dept. of Agriculture

6.0601, ECONOMICS OF IRRIGATION, DRAINAGE AND RELATED PROBLEMS IN THE NORTHWEST

G.A. PAVELIS, U.S. Dept. of Agriculture, Arlington, Virginia

Objectives: To conduct economic analyses pertinent to: (1) Measurement of irrigation water values; (2) use of irrigation return flows; (3) alternative drainage methods; and (4) water quality management.

Approach: Experimental and survey data will be used in production function analyses and mathematical programming techniques to determine values of water in irrigating selected crops. Irrigation return flows data will be collected from the Northwest Hydrology Research Watershed for use in economic studies of transfer of this water to other uses in other locations. Initially, economic analyses of drainage methods will depend upon an experimental research program at Oregon State University for data. This will be followed by an economic analysis of drainage methods in the Willamette Valley. An input-output framework is being used in selecting a suitable water quality management policy for the Yaquina Bay Area in Oregon. Welfare economics will provide the selection criteria and the analysis will include various interest groups represented as economic sectors.

6.0604, ECONOMIC ANALYSIS OF RECREATIONAL USE OF RESERVOIRS CONSTRUCTED BY PRIVATE POWER COMPANIES

A. DEGN, Virginia Polytechnic Institute, Agricultural Experiment Sta., Blacksburg, Virginia 24061

6. WATER RESOURCES PLANNING

Objectives: Determine practices, problems and opportunities associated with recreational use of reservoirs, explain recreational use of reservoirs, determine impact of reservoirs on local economies.

Description of Work: In depth interviews with power company officials to identify problems of recreational use of reservoirs, role of public agencies in providing recreational facilities on private reservoirs. Survey of users of reservoirs to determine their social and economic characteristics and expenditure patterns to be used in projecting future use of these reservoirs. Inventory recreational facilities associated with private reservoirs. Survey of recreational establishments to determine cost and returns in order to determine their contribution to the local economy in terms of gross volume of business, employment, payrolls and taxable investment.

SUPPORTED BY Virginia State Government

6.0605, PERCEPTION OF WATER RESOURCE PROBLEMS - A PILOT STUDY C.A. IBSEN, Virginia Polytechnic Institute, Graduate School, Blacksburg, Virginia 24061

The proposed research plan is a pilot study directed at gaining insight into the relationship the perception of water problems by the public and the attempts of the water expert to deal effectively with water problems. The study will deal with the following research questions: 1. What are the factors related to the public's perception of water problems? 2. To what extent does the public view water as a problem and what is the basis of a problem perception? 3. What action does the public feel should be taken toward the solution of the problems perceived?

A random sample of 500 will be selected and these respondents will be interviewed by telephone. The interview will gather data on the characteristics of the respondent, his perception of water problems, the source of these perceptions, and his feelings about what could be done to solve the perceived problems. This data will then be analyzed according to the significance of differences between types of respondents and their perceptions of lack of perceptions of water problems, source of perceptions, and suggested solutions. The interpretation of findings of the pilot study will be made as hypotheses to be tested in a larger research effort.

Virginia Polytechnic Institute

6.0606, WATER RIGHTS RELATED TO WATER QUALITY STORAGE W.R. WALKER, Virginia Polytechnic Institute, Water Resources Research Ctr., Blacksburg, Virginia 24061

In the early 1960's, Congress amended the Federal Water Pollution Control Act to permit Federal agencies to give consideration to the inclusion of storage for regulation of streamflow for the purpose of water quality control. To date, little consideration has been given to the claims which might be made on this water under various state laws after it has been released from the reservoirs. This study proposes to define the rights of both riparian owners and appropriative users to this water in the states which now have, or soon will have, impoundments with water quality storage. If the investigation reveals a conflict of interest, the research should suggest alternative solutions in forms of compacts, uniform laws, or federal legislation.

SUPPORTED BY U.S. Dept. of Interior - F. Water Pol. Ctl

6.0607, UTILIZATION OF PHYSICAL AND MATHEMATICAL MODELS IN ESTUARINE WATER RESOURCES RESEARCH AND MANAGEMENT W.J. HARGIS, Virginia Inst. of Marine Sci., Gloucester Point, Virginia 23062

Increased use of hydraulic and mathematical models in research, planning engineering and conserving estuarine and coastal environments is important. The proposed project will utilize VIMS hydraulic model of the tidal James system and analogue, digital and hybrid mathematical modeling capabilities

in a program of research designed to evaluate and improve the capabilities of each technique. Thus, the accuracy, precision and capabilities of all likely will be improved, or at least clarified.

It is expected that improved ability to predict the changes which will result in such biologically, economically, socially and politically important environmental factors as salinity distribution, currents sedimentation, bottom scour and shore erosion will result.

This program is relevant to the projected Chesapeake Bay Hydraulic Model.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

6.0608, THE IMPACT OF FEDERAL WATER LEGISLATION AT THE STATE AND LOCAL LEVEL K.A. HAMMOND, Central Washington State Coll., Graduate School, Ellensburg, Washington 98926

The proposed project would identify the reasons for, and assess the implications of, the actual impact of federal water resource legislation. Study would include institutional adjustments, financial arrangements, and the long-term physical and economic implications of development in selected case areas. Interrelationships between the dedication of water to a particular use and the effect on related resource use would be explored.

The initial focus is on the Land and Water Conservation Fund Act as it operates in the State of Washington. Attention would subsequently be given to other laws and other areas. This phase of study would be directed toward the Federal Water Projects Recreation Act and the Water Quality Act of 1965.

Findings of actual impact would be compared with what was anticipated by those who framed the legislation. It is hoped that conclusions would prove useful both in the implementation of existing legislation and the development of new water policy.

Central Washington State College

6.0609, SOME EFFECTS OF WATER IMPOUNDMENTS ON WATERFOWL POPULATIONS AND REPRODUCTION ON THE SNAKE RIVER, WASHINGTON I.O. BUSS, Washington State University, Graduate School, Pullman, Washington 99163

Aim: To study the ecology and reproduction of waterfowl (mainly Canada goose and mallard) of the Snake River between Clarkson and Central Ferry for comparison with similar data obtained subsequent to impoundments created by Lower Granite and Little Goose dams. Secondly, to study the physiological pattern of reproduction in the mallard, and to study the migratory pattern of waterfowl on the Snake River prior to impoundment of water between Clarkston and Central Ferry.

Description: Continue investigations of nesting sites including density of breeding populations and ecological changes in islands used by waterfowl (primarily geese). Study behavior of Canada geese netted with cannon nets (with cooperation of State Game Department) and marked with conspicuous plastic neckbands. Ascertain percentage of neck banded geese nesting on islands and the percentage nesting on canyon ledges, by direct observation. A cooperative banding study will be conducted with biologists of the State Game Department and the Atomic Energy Commission (W. C. Hanson and B. L. Browning) to enhance nesting and migration studies. During the waterfowl hunting season, hunters will be checked to obtain bands and other data on movements and population phenomena of the local breeding population.

This investigation would be of considerable importance from the standpoint of waterfowl management both locally and nationally. Valuable information would be provided for elucidating our present knowledge of waterfowl reproduction, supplemental information would be provided on behavior, ecology, physiology of waterfowl. Finally, information obtained prior to impoundment of water would be provided for comparison with post-impoundment information.

6.0610, MAXIMIZING PRODUCTIVITY OF WATER USED FOR IRRIGATION OF AGRICULTURAL LANDS

W.R. BUTCHER, Washington State University, School of Agriculture, Pullman, Washington 99163

The proposed research involves empirical and theoretical determinations of the relations between water-use and agricultural output. The purpose is economic analysis of alternative use patterns to determine opportunities for gains through more efficient water-use patterns and to suggest criteria for use in water allocations among crops, farms, and areas.

The procedure emphasizes construction of economically valid valuation and choice processes. Some data on the relevant water/plant yield relationships are available from past studies. Models will be constructed, using these data, to portray the relevant relationships and the decision process. Solutions from these models will indicate the principles involved and disclose the most critical data needs for a more complete analysis of water productivity in the State.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch
Washington State University

6.0611, PRUNE ORCHARD MANAGEMENT

E.L. PRIEBSTING, Washington State University, Agricultural Experiment Sta., Pullman, Washington 99163

1. To study response of Early Italian prune to varied soil nitrogen and water management practices. 2. To investigate the nature and causes of internal browning of Early Italian prunes. a. Develop practices that will reduce losses from this disorder. 3. To investigate further the effect of reduced fruit load on the functioning of fruit and foliage.

1) Nitrogen will be applied at different rates over a period of years. Moisture stress will be induced at critical periods. Effects on yield, size, maturity, and quality will be measured. 2) Internal browning will be studied from numerous angles: weather, post-harvest temp. and atmos., growth regulators, relation to maturity. 3) Gumspot- leaf curl will be induced by defoliation and modification by soil moisture and growth regulator manipulations will be attempted.

6.0612, ESTIMATION OF RECREATION WATER REQUIREMENTS - ULTIMATE NEEDS STUDY (OREGON)

M.H. KARR, Battelle Memorial Institute, Richland, Washington 99352

As one of several contractors for Oregon's ultimate needs study, BNW is developing recreation water demands for the years 2020 and 2070 utilizing population projections made by another contractor. The study identifies recreation demand for various activities, and associated water requirements including consumptive use at parks and camps and evaporation from the needed lakes and reservoirs. Demand and water use analysis techniques developed for this study have application in any area where water-based recreation is of significance. Factors utilized include income, mobility, education, leisure time, and local regional recreation habits.

SUPPORTED BY Oregon State Government

6.0613, COLUMBIA RIVER ECOLOGY

R.E. NAKATANI, Battelle Memorial Institute, Richland, Washington 99352 (AT(45-1)1830)

The comprehensive ecological study of the Columbia River has as its principal areas of interest, mineral cycling in the river ecosystem using reactor produced radionuclides as tracers, clarification of the role of the biota in river transport of radioisotopes, and study of the effects of physical and chemical factors on population dynamics and radionuclide cycling.

Highest levels of effluent isotopes in many river organisms are in the early fall when river conditions of light and temperature are most favorable and flow minimal. Zn-65 and P-32 are the dominant nuclides in most organisms, Cr-51 in plankton and algae. The 6-week reactor shutdown this summer markedly altered radionuclide patterns in the biota, a decrease of one to two orders of magnitude in lower trophic levels; loss by adult fish as well as uptake after startup was not so rapid. Zn-65 uptake was studied in peryphyton in the laboratory. The number of fall Chinook salmon nests was a 20-year high. Upstream dispersion of adult caddis flies labelled by reactor-produced Zn-65 was up to 16 km.

SUPPORTED BY U.S. Atomic Energy Commission

6.0614, EFFECT OF SUPERSATURATION OF DISSOLVED NITROGEN ON MIGRATING SALMONIDS

W.J. EBEL, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

Supersaturation of dissolved nitrogen in the Columbia River can be a significant factor in the survival of migrating salmonids. Measurements of nitrogen levels from the estuary to the upper Columbia River have indicated that highest levels were reached in the spring when large volumes of water were being spilled at dams. Nitrogen concentrations, which were sufficiently high to produce gas bubble disease in fish, did not equilibrate in reservoirs between dams. Migrant salmonids using fishways or passing through shallow areas that force them near the surface may suffer mortality from high nitrogen levels.

In conjunction with current fish behavior studies on the Columbia River, experiments are in progress to examine the effect of nitrogen levels on survival of migrating adult salmonids. Salmon in fishways are being inspected for evidence of gas bubble disease, and systematic searches of the river system are being made to obtain samples of moribund fish for clinical examination. Laboratory experiments are planned to determine the effects of nitrogen saturation at different pressures and temperatures on survival of young and adult salmon.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0615, FISH BEHAVIOR AND PHYSIOLOGY

A.B. GROVES, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

The essential purpose of this work is to acquire a knowledge of intrinsic physical and sensory abilities of fish which relate to specific environmental factors encountered in migration and fish passage situations. A broader purpose is to assess the adaptive ranges of these capacities in different migratory fish stocks. This information will be applied to help predict or anticipate the effects on migrant fish of various river and estuarine development programs which are creating numerous changes in the environments of native stocks of commercially valuable species.

Specifically the work is with salmonids and involves measurements of fish capacities against selected environmental variables. This includes measurements of swimming performance abilities of juvenile and adult fish and activity patterns and responses of salmonid species. Studies also are made of sensory responses which may relate to migration and homing behavior, of physical and hydraulic factors that can injure fish in power turbines, of responses that may aid in diverting fish away from dangerous areas in turbines, and of effects on migrants of thermal shock such as that encountered by passing through heated effluents from thermal power plants.

The work is now in the laboratory but is directed to the idea that the derived information can be applied directly to field problems.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0616, RELATION OF RIVER-RUN IMPOUNDMENTS TO SALMON PRODUCTION

A.J. NOVOTNY, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

This program seeks to develop a self-sustained, mobile field laboratory, designed for maximum flexibility, which will provide a

6. WATER RESOURCES PLANNING

working base for unlimited aquatic environmental studies in navigable impoundments, and eventually in marine bays and estuaries. Primary emphasis is being placed on studies related to changes in the environment induced directly or indirectly by human activities and the effects of these environmental changes on salmon. These studies will include on-site experimental control of water quality to determine the feasibility of 'carrying' salmon through critical phases of their life cycle in river-run impoundments. Parameters of control include temperature, filtration, sterilization, dissolved gases, and waste products.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0617, PREDICTION OF ENVIRONMENT

G.R. SNYDER, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

A chain of reservoirs is rapidly replacing the remaining free flowing areas of the Columbia and Snake Rivers. Freshets and floods which played a major role in the transport of fingerling salmonids to the sea are being controlled. Temperature regimes that govern rates of growth and maturation are being modified, and in the changed environment, new predator-competitor and disease relationships are being established that greatly affect the survival of the migrant salmon. Studies are in progress to predict future environments in rivers and reservoirs. Work is nearing completion on the prediction of the physical and biological environment of John Day Reservoir in the Columbia River.

Studies are under way and planned to determine the feasibility of lowering water temperatures in the Upper Columbia and Middle Snake Rivers by tapping cool waters at the bottom of lakes and reservoirs. If thermal controls carry into downstream areas of these rivers, environmental conditions for survival of salmon could be measurably improved during the hot summer months. Potential benefits from timed releases of stored waters also are being evaluated in the light of proposed thermal-nuclear power developments in the Columbia Basin.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0618, FISHWAY RESEARCH (BONNEVILLE LABORATORY)

C.R. WEAVER, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

These studies are designed to provide information applicable to the improved efficiency of fish facilities at Corps of Engineers projects in the Columbia Basin. The investigations are carried out in the Fisheries-Engineering Research Laboratory at Bonneville Dam. Financing is by the Corps and direction of research is under supervision of the Corps Technical Advisory Committee.

A large laboratory area permits construction of full-scale fish facilities for study of the performance and behavior of adult migrating salmon that can be diverted from an adjoining fishway at the dam. Current and proposed studies include examination of the responses of salmon to various jet velocities, submerged orifice flows, temperature conditions, and barrier facilities. Techniques for T.V. monitoring of fish passage are being explored and developed for use in remote control counting of fish at dams. Special aspects of the behavior of juvenile salmon in turbine intakes are also being examined.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0619, GRAVEL PERMEABILITY IN SALMONID SPAWNING BEDS

M.C. BELL, Univ. of Washington, Graduate School, Seattle, Washington 98122

Research on the effect of siltation on gravel permeability in salmonid spawning beds to determine cementation effects of the fine materials and the flows which would be required to remove such materials when deposited.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0620, ESTUARINE ECOLOGY

D.E. BEVAN, Univ. of Washington, Graduate School, Seattle, Washington 98122

The specific objectives of the current Estuarine Ecology Project are: 1. To develop a mathematical model of important physical and chemical processes of the Duwamish Estuary, including rates of dilution of pollutants. 2. To investigate the ecology of pelagic and demersal fishes in the estuary and nearshore marine environments affected by industrial and domestic waste discharges. This investigation includes studies of the estuarine and early marine life of immature chinook salmon (*Oncorhynchus tshawytscha*), including mortality, distribution, and growth; the estuarine life of migrant adult chinook salmon; and the ecology of resident demersal species of the Duwamish Estuary. 3. To record some of the parameters of the water quality in the Duwamish Estuary and compare them with the known environmental requirements of salmon and other fishes of economic importance.

Emphasis in the study is being placed on the Duwamish Estuary and Elliott Bay because a wealth of physical and chemical data has been collected. The Municipality of Metropolitan Seattle (METRO), a local organization concerned with sewage abatement, and the United States Geological Survey (USGS) have maintained three telemetry stations in the estuary and another station in the Duwamish River above saline influence since 1964. These stations record pH, dissolved oxygen, water temperature, conductivity, and turbidity every hour and send the data to the central station at METRO headquarters. The data, together with streamflow and other physical parameters, are transferred on magnetic tape for computer screening and subsequent analysis by Estuarine Ecology Project personnel.

U.S. Dept. of Interior - F. Water Pol. Ctl

6.0621, VARIED RECREATIONAL USES OF FOREST LANDS FOR TIMBER PRODUCTION IN WESTERN WASHINGTON

C.F. BROCKMAN, Univ. of Washington, Graduate School, Seattle, Washington 98122

Objectives: Investigation of the compatibility and/or conflicts between: (1) relationships of the nature of public recreational uses and facilities to deteriorations of recreational interests. (2) different recreational uses of forest lands, (3) various recreational uses of forest lands with different silvicultural systems and current logging practices, and (4) study of methods of minimizing or eliminating conflicts between recreational use and timber production with a view to perpetuating maximum esthetic, cultural and economic returns.

Description of work proposed: The complexity of recreational research, together with the variety of information necessary to conclusions relating to the broad overall objective of this project, necessitates specific attention to various pertinent limited objectives as qualified workers are available. It is intended, first, to (1) measure relative increase of land values due to forest recreation focal points (lakes, streams, ski areas etc.) on forest lands and, based on trends and impact indicated from these data, develop a theoretic model for simulating recreation value implications in forest management and (2) determine, through ecological analysis of vegetative associations (using series of quadrats and/or transects) the impact of public use on various types of recreational areas.

SUPPORTED BY U.S. Dept. of Agriculture

6.0622, STUDY OF RED SALMON IN THE NUSHAGAK DISTRICT

R.L. BURGNER, Univ. of Washington, Graduate School, Seattle, Washington 98122

Investigations of Wood River system red salmon have been in progress since 1946. Until 1959 funding was accomplished chiefly through the Alaska Salmon Industry. Since 1959 a portion of the work has been performed under contract to the Bureau of Commercial Fisheries.

The principal objective here, as in the other systems in Bristol Bay, is to determine optimum escapement levels. The Wood River program includes a variety of studies. Length measurements, scales, and otoliths are collected annually from spawning red salmon from several of the more important spawning grounds to determine racial differentiation. Detailed

6. WATER RESOURCES PLANNING

data concerning physical and chemical features of spawning areas are obtained regularly to ascertain spawning area requirements. Tow nets and echo sounders provide a means of indexing the abundance of young.

Limnological studies include: (1) determination of primary productivity; (2) chlorophyll determinations; (3) water analysis; (4) zooplankton identification and measurement of abundance.

Special studies recently instituted include: (1) a study of the life history of the Alaska blackfish; and (2) the effects of digestion after death on char stomach contents.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0623, OPTIMUM ESCAPEMENT STUDIES OF CHIGNIK SOCKEYE SALMON

R.L. BURGNER, Univ. of Washington, Graduate School, Seattle, Washington 98122

The Chignik River system, which consists of two physically and biologically dissimilar lakes, supports the largest run of sockeye salmon (*Oncorhynchus nerka*) on the south side of the Alaska Peninsula. Extensive analysis of historical records and preliminary studies conducted since 1955 have provided a basis for managing the runs to the two lakes separately. These studies have also led to the hypothesis that competitor species in the lake nursery areas are inhibiting return per sockeye spawner. Increased emphasis will now be placed on the ecological association of young sockeye and competitor species in the two lakes to evaluate the influence of sockeye year classes of different magnitude in control of the ecosystem. Studies will include: (1) Continuing beach seine and surface trawl sampling of both lakes to determine the growth, abundance, mortality, and distribution of juvenile sockeye salmon and associated species. (2) A study of the food supply and food habits of sockeye salmon and resident fishes to determine the manner in which the species compete for food. (3) Continuation of statistics of the adult salmon runs including age composition. (4) Preparation of a forecast for the 1969 sockeye run. The studies will be conducted in cooperation with the Alaska Department of Fish and Game.

6.0624, FERN LAKE MINERAL METABOLISM PROGRAM

L.R. DONALDSON, Univ. of Washington, Graduate School, Seattle, Washington 98122 (AT(45-1)-2050)

Since 1958, Fern Lake and the surrounding watershed have been the object of a detailed ecological study to investigate the fundamental processes governing productivity in an undisturbed watershed.

Because of the size, type of soil, and climatological characteristics of the watershed, Fern Lake is flushed repeatedly every winter and thus kept in a mineral-deficient state. Terrestrial studies indicate the glacial till, high in sand and gravel content and low in organic matter, allows sufficient runoff to dilute the lake water during the rainy period. Consequently, steelhead trout production is low--approximately 22 pounds of fish per year per surface acre.

Results: To increase productivity a carefully planned addition of minerals was made to the lake in the summer of 1965. The responses to the fertilization in primary, secondary, and tertiary production were measured and the physical and chemical characteristics of the lake water and sediments were assessed. Production in the lake showed a marked increase. Heavy rains during the winter have differentially diluted the elements added; some minerals were completely flushed out, while others were retained. Work is now concentrated on the dynamics of the movement of phosphorus in the lake and the special problems of the measurement of the orthophosphates.

SUPPORTED BY U.S. Atomic Energy Commission

6.0625, AQUATIC COMMUNITIES

W.T. EDMONDSON, Univ. of Washington, Graduate School, Seattle, Washington 98122 (AT(45-1)-2044)

The object is to analyze the mechanisms that control productivity and population characteristics in aquatic communities. The first stage consists of improving our knowledge of conditions as they exist in natural communities. The basic data consist of measurements of abundance, population structure, rates of activity and relevant environmental features. Much of the work will be carried out in lakes that have been altered in distinctive ways; e.g., the saline lakes in the lower Grand Coulee which have been diluted with fresh water from irrigation projects. These field experiments will be backed up by appropriate experiments in the laboratory, as suggested by correlations found in the field data. Inevitably, considerable attention will have to be given to food relations.

A large body of information has already been obtained in previous investigations. Some has been published, and some is in advanced stages of preparation for publication. Much of the information concerns the way the fauna of the saline lakes has changed with dilution, and measurements have been made of the osmotic pressure of blood of invertebrates held in different concentrations of the lake water.

SUPPORTED BY U.S. Atomic Energy Commission

6.0626, THE ANALYSIS OF THE WATER RIGHTS REGISTRATION ACT AND ASSOCIATED LEGISLATION OF THE 1967 WASHINGTON SESSION LAWS

R.W. JOHNSON, Univ. of Washington, Graduate School, Seattle, Washington 98122

The proposed project involves the analysis of the Water Rights Registration Act and related legislation enacted by the Washington Legislature in 1967. The study would provide a natural continuation and sequel to O.W.R.R. Project 0A-002-Wash., 'Uncertainty in Washington Water Rights,' which influenced the 1967 Legislation. The analysis would involve a review of the problems that the 1967 legislation was designed to alleviate and a consideration of how effectively it is accomplishing its purposes. The legislation is unique and will be compared with the experiences of other states in attempting to solve the problems of unrecorded water rights. In addition the legislation should be related to the statutory water rights adjudication procedures. It is anticipated that one of the results of the study may be to suggest amendments to the 1967 legislation which would enable the legislation to better achieve its goals in this area. Further, the study would have an important bearing on the water rights problems common to all of the western states.

U.S. Dept. of Interior - Bu. Comm. Fish.
Association of Pacific Fisheries

6.0628, OBSERVATIONS ON RED SALMON IN THE KVICHAK RIVER SYSTEM

O.A. MATHISEN, Univ. of Washington, Graduate School, Seattle, Washington 98122

The Kvichak studies are funded in part by the Bureau of Commercial Fisheries via contractual arrangements with the Fisheries Research Institute. Additional support for the program is received from the Alaska Salmon Industry and the University of Washington.

While the red salmon runs to the Kvichak system have undergone marked cyclic fluctuations in abundance, the Kvichak

6. WATER RESOURCES PLANNING

SUPPORTED BY U.S. Dept. of Hlth. Ed. & Wel. - P.H.S.

drainage has led and continues to lead all other systems in the production of red salmon. The principal objective of the research on the Kvichak has been to determine optimum escapement levels. The overall program consists of a variety of studies designed to establish the carrying capacity of spawning and/or nursery areas and to determine what factors limit production in each environment.

Surveys are conducted annually to determine the distribution and racial differentiation of spawning groups. Indices of young fish abundance through use of tow nets and echo sounders have been developed to provide a measure of the success of reproduction. Determinations are made regularly of zooplankton abundance and distribution, the quantity of dissolved nutrients, and primary productivity. Currently, emphasis is directed upon comparison and evaluation of survival rates in off and peak years of the cycle.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0629, ECOLOGICAL STUDIES OF CHUM AND COHO SALMON AT BIG BEEF CREEK

E.O. SALO, Univ. of Washington, Graduate School, Seattle, Washington 98122

Although long range objectives of this University field station are to study the natural ecology of chum and coho salmon, preliminary investigations will be concerned with the effect of an artificial water impoundment in the stream.

A cabin on the site has been remodeled into living quarters and office. The studies of 1966 centered on enumeration and distribution of the smolt and adult populations and growth of the fingerlings throughout the stream system. The newly formed lake allowed for the examination of transition, plants, changes in water chemistry and alteration of streamflow patterns. Limnological studies are being continued.

SUPPORTED BY Washington State Government
University of Washington

6.0630, STUDIES IN OYSTER PATHOLOGY

A.K. SPARKS, Univ. of Washington, Graduate School, Seattle, Washington 98122

All oysters collected in the mortality investigations of the Washington Department of Fisheries and the Oregon Fish Commission are processed for histological examination in our laboratory. Three slides are prepared from each oysters; the slides are examined in our laboratory for the presence of disease organisms or pathological conditions. One slide is retained in our collection, one returned to the initiating agency along with the diagnosis, and one sent to the Bureau of Commercial Fisheries Shellfish Laboratory at Oxford, Maryland for confirmatory examination.

SUPPORTED BY University of Washington
U.S. Dept. of Interior - Bu. Comm. Fish.

6.0631, EPIZOOTICS IN EXPERIMENTAL MARINE SHELLFISH POPULATIONS

A.K. SPARKS, Univ. of Washington, Graduate School, Seattle, Washington 98122

Maintenance of experimental populations of Pacific oysters, native oysters, and bay mussels in float and bed stations will be continued in California, Oregon and Washington for determination of mortality and growth rates in the various species at the different locations. Living and dying bivalves will continue to be fixed and processed for microscopic examination for the presence and pathological effects of possible pathogenic organisms and a more sophisticated computer program will be utilized to determine the relationships of possible pathogens and mortalities.

Attempts will be made to culture in vitro the microorganisms, probably *Vahlkampfia* sp., responsible for heavy mortalities of Pacific oysters in Humboldt Bay, California to elucidate its life history, facilitate specific identification, and enable us to initiate infection experiments. Life history studies, through in vitro culture, of *Mytilicola orientalis* will be continued, particularly to determine the infective stage.

6.0632, A COMPARATIVE ANALYSIS OF AMERICAN AND CANADIAN GOVERNMENTAL DEVELOPMENT OF REGIONAL WATER POLICY IN THE COLUMBIA RIVER BASIN

R. WARREN, Univ. of Washington, Graduate School, Seattle, Washington 98122

This study will have four main objectives: 1. To gather information in order to identify, compare and evaluate the governmental structures by which policies concerning the use and development of water resources are determined in the American and Canadian portions of the Columbia River Basin. 2. To specify and compare the national and international linkages of the American and Canadian regional systems in the Columbia River Basin which effect regional organization and policies. 3. To develop hypotheses about the relationship of the formal structure of government within a region concerning water policy, the behavioral tendencies of water related public enterprises within a region, and external regional linkages to the performance of the regional system for developing and administering water policy, i.e., the degree to which: social, economic and political consequences of a regional scale can be taken into account in policy choices on the part of regional decision makers; innovative policies can be developed; and plans can be developed with appropriate time horizons for the development and utilization of regional water resources. 4. To develop criteria for choosing among alternative formal regional governmental arrangements and/or externally determined incentives as means of producing policies and behavior within a region which will respond to regional and national values.

6.0633, FORECASTING WATER DEMAND - AN INTER- AND INTRA-COMMUNITY STUDY

R.J. SAUNDERS, West Va. University, Graduate School, Morgantown, West Virginia 26506

The three primary objectives of this study are: 1. Identify those factors which are most closely associated with, or 'determine', the level of demand for water, both in an inter community and intra community context. 2. Construct several predictive models which will be of use in the forecasting of water demand in urban areas. 3. Examine the projected degree of sensitivity of urban area water demand to changes in both the magnitudes of the individual explanatory factors and in the parameters of the resulting models (parameter variations based on assumptions about changes in consumer taste, area development, technology, etc.).

It is proposed that the results of this study will provide a specific analytical framework which can be used to project specific urban area and intra area demand for water allowing for specified degrees of latitude in the assumptions concerning the probable future economic, demographic, and sociological structure of the urban community.

6.0635, MONITORING FISH STOCKS AND ENVIRONMENTAL CONDITIONS

M.M. BAILEY, U.S. Dept. of Interior, Research Station, *Ashland, Wisconsin*

Optimum utilization of the fishery resources of Lake Superior can be achieved only through a knowledge of the biological characteristics of the various stocks and their environment. Systematic collections of basic data on stocks of Lake Superior fish should provide information on changes in distribution and abundance as related to environmental factors.

Current research is confined to systematic sampling of environmental conditions at pre-selected locations in western Lake Superior and the collection of data on size, age, maturity, and sex composition of commercially landed species and of associated species taken in experimental gear fished by the Bureau's research vessel *Siscowet*. Analyses of the data are kept current to detect changes in the biological community which may signify needs for special inquiry.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0636, ASSESSMENT OF LAKE SUPERIOR LAKE TROUT

R.L. PYCHA, U.S. Dept. of Interior, Research Station, *Ashland, Wisconsin*

Control of the sea lamprey and large-scale plantings of lake trout in Lake Superior have brought about a rapid buildup of lake trout stocks. Close surveillance of the changes in the juvenile, legal sized, and spawning stocks is required for rational utilization in the future. Data currently utilized are collected by contract fishermen using conventional commercial gear and by the Bureau's research vessel *Siscowet* using experimental gill nets and trawls.

Present research, designed to assess the rehabilitation of the lake trout, includes inquiry into: changes in abundance of the size groups of the commercial portion of the artificially propagated lake trout to the commercial catch and the relative success of various hatchery plants; changes in age structure and growth rates of the populations; comprehensive evaluation of the effect of hatchery-reared fish on the juvenile and spawning populations; differences in the habits and distribution between hatchery-reared and native lake trout; the identities and biological features of discrete offshore populations; and the relationship between lamprey predation and the size of the lamprey population. Data on food habits and other features of the life history are collected incidentally to other studies.

Techniques and findings of research on lake trout in Lake Superior should aid similar studies on Lakes Michigan and Huron.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

6.0637, IMPACT OF LAGOONS AND SAND BLANKETS ON FISH, AQUATIC LIFE AND WATER QUALITY

D.A. BRATLEY, State Dept. of Nat. Resources, *Madison, Wisconsin* 53701

Phase one, nearly complete, involves assembling Public Service Commission records on characteristics and extensiveness of lagoons and sand blankets in inland Wisconsin lands. Phase two will involve field research on Lake Winnebago and southeastern Wisconsin lakes to determine the effects of encroachments upon species composition, density, and dominance of aquatic vegetation, fish, bottom organisms and plankton. Water Quality stations will also be monitored in connection with this work. Lakeshore encroachments are presently being checked to determine their potential as study areas for the second phase of the project.

SUPPORTED BY Wisconsin State Government

6.0638, WILD RIVERS ECOLOGY STUDIES

J.W. MASON, State Dept. of Nat. Resources, *Madison, Wisconsin* 53701

The Wisconsin State Legislature in 1965 designated the Pine, Popple and Pike Rivers in northeastern Wisconsin as wild rivers.

In 1966, a project was developed to study the ecology of these three wild rivers, in order to inventory the resource, document its current status, and provide a guide for planning and management in the future. Work now in progress includes fish population studies (species present and relative abundance, growth rates and reproductive success of game fish, evaluation of fish management techniques, harvest and angling pressure on opening weekend); an aquatic plant survey (species composition, relative abundance, and relationship to environment); and a study of the invertebrate fauna (species composition, relative abundance and ecological significance). Water quality and quantity is being measured in cooperation with the United States Geological Survey (temperature, flow, Do, pH, conductivity, alkalinity, major nutrients and major elements).

SUPPORTED BY Wisconsin State Government

6.0639, WATER QUALITY MONITORING STUDIES

J.W. MASON, State Dept. of Nat. Resources, *Madison, Wisconsin* 53701

A statewide program is under way to detect and document changes in water quality which may occur in various lakes and streams as a result of changing use patterns (shoreline development, recreational development, dam construction, dredging, ditching, irrigation, etc.). In the waters selected for monitoring, the following parameters are measured four times yearly: temperature and oxygen profiles, pH, alkalinity, water clarity, resistivity, nutrient concentrations, and other elements. Biota changes, if any, are noted (fish populations, vegetation, etc.). Streams are also being monitored for any chemical changes that may occur, and in addition continuous temperature recordings are being made. In situations where fish populations are suspected to be affected by development they are studied intensively (dam constructing, ditching, irrigation, land cover changes). Lakes and streams which man-made changes are not expected to affect are being monitored as 'benchmark' waters.

SUPPORTED BY Wisconsin State Government

6.0640, WALLEYE FRY - ZOOPLANKTON RELATIONSHIPS IN SOUTHEASTERN WISCONSIN LAKES

UNKNOWN, State Div. of Conservation, *Madison, Wisconsin* 53701

Procedures: Walleye spawning runs are sampled by fyke nets to obtain information on the size of the run, dates of spawning, sex ratios, incidence of marked fish in the run, and to obtain fish for growth and maturity data.

Spawning grounds are observed to determine when eggs are laid, to follow their development, and determine time of hatching.

Plankton samples are collected, starting with the date of walleye hatching or fry stocking, and then at four-day intervals for the next three weeks. Two tows are made at both the 6 and 12-foot levels. The individual collections are diluted to known volumes, 1 cc. samples placed in a Sedgewick-Rafter cell, plankters identified and counted, the number determined for the collection, and the number per one revolution of the Clarke-Bumpus sampler determined. The four collections for each date are combined and averaged to give a plankton abundance value per revolution for the date. This value is used to show fluctuation in abundance.

Data on dates of natural hatches, fry stockings, strength of year classes, and plankton abundance values are analyzed to see if a correlation exists between plankton abundance and year class strength.

The stocking rate is 2,000 per acre in LaBelle and 5,000 per acre in the other lakes. To determine if there is a substantial mortality of walleye fry soon after stocking, three lots of 100 fish will be placed in muslin enclosures at the time of stocking each study lake. One enclosure will be removed from each lake at regular intervals (24, 48, 72 hours) to learn of initial losses. Small numbers of walleye fry will be placed in aquaria and observed until all are dead, to yield information on how long the fish lives on the yolk sack and how long it will live before it starves to death. This information will be useful in developing the plankton abundance - year class strength relationship.

6.0641, FLOOD PLAIN DELINEATION - DRD - USGS, COOPERATIVE STUDY

T.M. LEE, State Div. of Env. Protection, Madison, Wisconsin

This cooperative project, provides for the U.S.G.S. to perform flood plain delineation studies with the aid of Division of Environmental Protection's water surface profile computer program for the Rock River in Rock and Jefferson Counties, Wisconsin. This project will: 1. Result in U.S.G.S. preparation of computer control cards for Division of Environmental Protection's encroachment studies needs, thus eliminating need for future D.E.P. duplication of this effort. 2. Provide basis for Rock River flood plain regulation in Rock and Jefferson Counties. 3. Provide model U.S.G.S. delineation report reflecting state flood plain criteria which would have state-wide use as an example.

6.0642, LAW AFFECTING INSTITUTIONAL DESIGN FOR WATER QUALITY MANAGEMENT

P.N. DAVIS, Univ. of Wisconsin, Graduate School, Madison, Wisconsin

This is a tripartite legal study to investigate the legal and constitutional constraints on proposed broadening of powers of state agencies to regulate water quality and to operate pollution abatement works. The three areas of research are: (1) Common law of pollution in action - What influence if any does the common law riparian concept of 'reasonable use' have on the behavior of polluters? Field interviews will be conducted with riparian owners, and practicing attorneys. Local court records will be examined. Library research will determine the procedural and evidentiary problems in civil pollution actions. (2) Law affecting effluent charges -- Library research will determine the legal and constitutional limitations on various effluent charge schemes proposed by economists. (3) Operation of pollution abatement works by the State of Wisconsin -- Library research will determine the legal and constitutional constraints to broadening state agency powers to regulate water quality in a river as a single system and to operate pollution abatement works.

6.0643, THE APPLICATION OF RADIOISOTOPES TO STUDIES OF AQUATIC ECOSYSTEMS

A.D. HASLER, Univ. of Wisconsin, Graduate School, Madison, Wisconsin

Studies will be continued to determine the amounts and relative nutrient value of trace elements and organic compounds of biological importance in water.

Investigations will be initiated to examine the changes that occur over a 24 hour period in the composition of benthos on a small section of substrate in Lawrence Creek, Adams Co., Wisconsin. Sections of substrate will be enclosed by metal frames and the organisms contained therein labelled with P-32. Qualitative and quantitative analyses will be made of drift samples collected downstream from the experimental areas in an attempt to elucidate the influence of such factors as changing light intensity, stage of development, and population densities, on benthic turnover and drift rates.

6.0645, IRRIGATION TRENDS AND POTENTIALS IN THE NORTH CENTRAL STATES

D. MASSEY, Univ. of Wisconsin, Agricultural Experiment Sta., Madison, Wisconsin

Objectives: To indicate the extent to which irrigation will compete for available water supplies and must be considered an integral element of water resources planning in the North Central States.

Approach: Information from past and current studies and Census reports will be analyzed and correlated to complete a regional appraisal of irrigation trends and potentials for major resource regions and subregions within the North Central States. Historical trends in irrigated acreage will be estimated using appropriate time series techniques including such factors as sources of water and methods of application. Corresponding data on rates of water use per irrigated acre will also be derived, analyzed, and evaluated for possible intertemporal change resulting from improved irrigation technology, weather variations, and changes in crops irrigated. Physical limits to irrigation potential will be estimated on the basis of soil suitability and water availability. Projections of future irrigation development will be made for specific dates in the future, considering future technology of irrigation, long-term drought probabilities, and costs and returns from irrigation activities. Water rights and other legal restrictions will also be considered in this role of either restricting or permitting irrigation development.

SUPPORTED BY U.S. Dept. of Agriculture

6.0646, ECONOMIC AND LEGAL FACTORS IN PROVIDING, USING AND MANAGING WATER RESOURCES IN AGRICULTURE

R.J. PENN, Univ. of Wisconsin, Agricultural Experiment Sta., Madison, Wisconsin

Objectives: (1) To determine the economic considerations that affect use and management of water in agriculture and competing uses (2) To identify and describe rights in water and the administrative arrangements that regulate water use in the several states.

Procedures: Multiple regression analysis of data collected from 60 artificial lakes in Wisconsin and an analysis of consumer behavior relating recreation to income, size of family, age of family, place of residence, occupation and other selected characteristics. Update an existing bibliography of publications concerning water rights and related topics which will serve as a reference source for related research efforts. Provide a method by which economic effects of state and federal water-based recreation projects on the economies of local political subdivisions can be determined; and illustrate the use of the model developed to analyze the adequacy of present and proposed public decision-making institutions relating to the development and expansion of water-based recreation areas from the viewpoint of economic considerations. (Predictive input/output model for a selected case county in Wisconsin.)

6.0647, PHYSICAL TECHNIQUES AND INSTITUTIONAL MECHANISMS FOR INTEGRATED ADJUSTMENT IN THE FLOOD PLAIN THROUGH SOIL SURVEYS

D.A. YANGGEN, Univ. of Wisconsin, School of Agriculture, Madison, Wisconsin

The major thrust of this project is to develop practical and relatively inexpensive methods for public control of flood plain

6. WATER RESOURCES PLANNING

occupancy in rural areas. The proposed research would be done through a series of interrelated steps as follows:

A. Development and Testing of New Techniques for Delineation and Description of Flood Plain Characteristics.

Detailed soil surveys made as a part of the National Cooperative Soil Survey appear to be resource inventory with high potential for use in delineation of flood plain boundaries in non-urbanized areas. A determination will be made of the correlation between soil mapping units and an array of flood flow values ranging from low volume events which occur frequently through the maximum flood of record and the standard project flood to the maximum probable flood. The resulting product will be a delineation of flood plains into areas of various intensities of flood hazard by standard methods which can then be compared with soil mapping units to determine degrees of correlation.

B. Analyze Alternative Public Methods for Influencing Flood Plain Development.

C. Prepare Model Provisions for Local Flood Plain Regulations.

D. Develop Economic Guidelines for Evaluating Alternative Uses of Flood Plain Lands.

E. Evaluate the Techniques Developed After Testing in a Pilot County.

6.0648, RELATIONSHIP OF CERTAIN BIOLOGICAL, CHEMICAL AND GEOLOGICAL PARAMETERS TO THE ENVIRONMENT OF THE BOISE BRULE WATERSHED, WISCONSIN

A.B. DICKAS, Wisc. State University, Graduate School, Superior, Wisconsin 54881

Functioning under an interdisciplinary format, a research team will conduct studies to determine qualitative and quantitative interrelationships of the vegetative cover, geology, soil and bedrock type, bedload sediment evaluation, and water chemistry, on the total environment of the Boise Brule watershed and their effect as a system on the quality of Lake Superior.

The investigation within the project will follow four major phases: 1. Ecological - Vegetation types will be studied by selecting from the communities as delineated on maps in Fassett (1944), from aerial photographs, and from field surveys. Vegetation types will also be selected with reference to drainage patterns of the total watershed. 2. Chemical - A relationship of the water properties to the surrounding environments of the river will be investigated by the sampling and analysis of selected water quality parameters. 3. A comparative study will be undertaken following the comprehensive geological survey of 1942 by Bean and Thompson (1944) to quantitatively define the changes that have occurred during the past 26 years. 4. Geographical - Information resulting from the above three phases will be collated and mapped to provide a unified view of the study area. Aerial photographs will be used to aid in the interpretation and correlation of the data.

6.0650, VALUE OF THE GAME AND FISH RESOURCES IN RELATION TO THE FUTURE UTILIZATION OF THE WATER OF THE GREEN RIVER DRAINAGE IN WYOMING

G.T. BAXTER, Univ. of Wyoming, Graduate School, Laramie, Wyoming 82071

The evaluation of the game and fish resources of the Green River, and their potential value under different types of future water utilization, particularly as anticipated under either the Wild Rivers Act or prospective State or Federal developments including irrigation, industrial, trans-basin diversions, etc. This study will be essentially a refined inventory of the Green River, to include lengths of stream, water surface areas, stream classification, fish and game populations, general productivity, land ownership status, review of flow records as they pertain to fisheries, and present utilization of sportsmen. Various aspects of water quality - present and anticipated - will be analyzed. A prediction of the effects of various types of water utilization on the game and fish resources will be made on the basis of the data obtained during the course of the study.

Field work will be undertaken near Pinedale, Wyoming. All other portions of the study will be on the campus of the University of Wyoming.

6.0651, THE ECONOMICS OF WATER RESOURCE DEVELOPMENT

R.I. CLARK, Univ. of Wyoming, Agricultural Experiment Sta., Laramie, Wyoming 82071

Objectives 1 and 2 -- Data on supplies of water will be compiled from secondary sources, and note will be taken of areas where increased competition for such supplies appears imminent. Attention will be given to shifts in use as these relate to economic growth.

Objective 3 -- Legal and institutional arrangements or processes presently governing transfer of water rights will be examined.

Objectives 4 and 5 -- Adequacy of the above arrangements and processes will be appraised, with goals of efficiency, economic growth, equity; etc. as criteria, and alternative arrangements will be recommended where such appear to be in order.

This study will be both descriptive and analytical. It will be descriptive in that present water uses will be noted as well as arrangements relating to transfer of water among uses. It will be analytical in that it will investigate the relation of water use to efficiency and to equity.

7.0001, A GROUNDWATER QUALITY SUMMARY FOR ALASKA

C.E. BEHLKE, Univ. of Alaska, Inst. of Water Resources Res., College, Alaska 99735

Presently available groundwater quality information for the State of Alaska is being centralized and punched on cards for data retrieval and analysis purposes. The punched information will be suitable for analysis in preparation of a ground water quality atlas for the State.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch University of Alaska

7.0002, A WATER QUALITY COMPUTER MODEL OF COOK INLET (PHASE ONE - THE HYDRAULIC MODEL)

R.F. CARLSON, Univ. of Alaska, Inst. of Water Resources Res., College, Alaska 99735

The proposed research will develop a computer model of the water quality behavior of Cook Inlet. Phase one of the study will develop the hydraulic portion of the overall study. The hydraulic model output is the solution of the two-dimensional equations of flow as specified by the velocity and water surface elevations as functions of time and location. Phase two will develop the water quality portion of the study as an extension of phase one.

The hydraulic model will furnish the main flow parameters to the water quality model. The solution of the water quality model is specified by the time and location history of the concentration of a substance. The solutions of both the hydraulic and quality models will be checked with field data. The results of the field check will be examined and used to indicate modifications of the model.

7.0003, AERIAL MEASUREMENT OF HYDROLOGIC PHENOMENA

H.E. SKIBITZKE, U.S. Dept. of Interior, Water Resources Division, Phoenix, Arizona

Ways to accelerate and improve collection of data desperately needed in the analyzation of the roles of nature and of man in community problems involving floods, droughts, and water supply are constantly being sought. Recent and potential developments in aerial film, sensing devices and camera equipment, give evidence of heralding the long needed collection techniques.

Through the use of aircraft maximum advantage will be taken of natural light reflected from the earth, of heat radiated from the land surface, and of moisture vapor migrating through the air away from evaporation areas. Photography with black and white, color, in the right wavelength range, detect heat radiation in the temperature range of interest; and a thermistor-type sensing element responds electrically to the moisture vapor present in the atmosphere along the path of the aircraft.

The object of this project is to procure, design, construct, and assemble the sensing and recording equipment necessary for the aerial measurement of hydrologic factors, or the aerial collection of data pertinent to such factors. To evaluate, through preliminary field trials and demonstration, the utility to the hydrologist of aerial measurement and data-collection techniques.

7. RESOURCE DATA

7.0004, EFFICIENCY OF DATA COLLECTION SYSTEMS IN HYDROLOGY AND WATER RESOURCES FOR PREDICTION AND CONTROL

C.C. KISIEL, Univ. of Arizona, Graduate School, Tucson, Arizona 85721

The overall objective of this research is to contribute to our methodology for determining the worth (in the economic and information-theoretic sense) of hydrologic and water resource data for prediction and control of water resource systems. A hybrid computer will be employed to simulate a range of hydrologic situations in Central Arizona where data is available. The simulation model is to be formulated in the spirit of recent developments in stochastic and parametric hydrology and will employ operations research techniques as necessary. Data analyses requisite to such modeling include time series analysis (power spectra, coherence, phase, frequency response, stationarity, and probabilistic character of input and output sequences, linearity and stationarity of the system behavior) and regional analyses (multivariate analysis, space-time ergodicity). The time series include precipitation, streamflow, ground water levels and evaporation. By simulation the efficiency of current streamflow forecast procedures and ground water models will be studied on single and multiple-watershed systems. To this end, probabilistic models of precipitation, snow-melt, ephemeral streamflow, natural recharge and ground water fluctuations will be investigated. The cost of data collection and analysis (cost of thinking) will be related to the benefits assignable to the data.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch University of Arizona

7.0005, DIGITAL SYSTEMS FOR ON-SITE DATA COLLECTION FOR WATER QUALITY ANALYSIS

M.K. TESTERMAN, Univ. of Arkansas, Graduate School, Little Rock, Arkansas 72005

The proposed work is concerned with the development of an electronic digital system for on-site data collection in water resources research and control programs. System design objectives include (1) data recordings directly readable by computer input devices, (2) a selectable number of measurement channels within a design maximum, (3) system operation either independent or in synchronism with other equipment of the same type, (4) provisions for interfacing with telemetry packages or data modems for transmission over communication networks (e.g. Bell System Dataphone).

The work would involve establishing data acquisition requirements and sources of error, data system requirements and performance constraints, and system equipment design.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch University of Arkansas

7.0006, A CONTINUOUS MULTIPARAMETER WATER QUALITY MONITOR

M.K. TESTERMAN, Univ. of Arkansas, Graduate School, Little Rock, Arkansas 72005

The object of this investigation is to study, perform necessary research and develop an unattended portable, self-contained unit capable of measuring and recording parameters of interest in the study of water pollution. Concurrent measurement and recording of at least four parameters of flowing streams, such as pH, conductivity, temperature, and dissolved oxygen, by a single station should be feasible.

Consideration will be given to weight, time of operation, required cost, and accuracy. For those parameters to be considered, suitable methods of measurement must be developed and studied. Modular design will be used to provide the possibility of changing transducers in order to allow recording of different parameters while using the same basic electronic and recording unit. In order to allow unattended operation for considerable periods of time, very careful consideration must be given to the

7. RESOURCE DATA

question of power sources and the power drain required by the electronic, programmer, and recorder units. Provisions for internal standardization and validity checks, in so far as possible, should also be included.

A versatile instrument, capable of recording a number of stream parameters at a minimum cost per recording station, would make available long-term data defining general aspects of water quality and the extremes of particular chemical constituents of interest. Without a device of this type, it is impossible to study pollution transients by current techniques.

7.0007, INDUCED ELECTRICAL POLARIZATION AND GROUND WATER

S.H. WARD, Univ. of California, School of Engineering, Berkeley, California 94720

Applications of an electric field to rock or soil containing clay minerals leads to electrical polarization in the rock or soil. This polarization may be detected by measuring the change in apparent resistivity of the subsurface as the frequency of electrical excitation is changed. This measurement can be of value in location and evaluation of natural ground water reservoirs.

We have investigated the applicability and limitations of the induced electrical polarization method in the location and evaluation of natural ground water reservoirs in the State of California.

Clay horizons and other clay-bearing unconsolidated sediments are potential sources of induced polarization anomalies. If such anomalies may be detected above system noise, then the induced polarization method may be of value for in-situ classification of unconsolidated sediments encountered in hydrological projects. One such project exists in Santa Clara County where near-surface unconsolidated sediments are frequently considered as potential recharge areas. Of four areas surveyed with induced-polarization apparatus in Santa Clara County, only two yielded significant frequency-effect anomalies, and in each of these two the frequency effects were of the order of 3 percent. These anomalous frequency effects may be related to clayey gravels. The dipole-dipole array, with spreads of 10 ft. and 20 ft., was typically used in the study.

7.0008, SACRAMENTO-SAN JOAQUIN DELTA ANALOG MODEL STUDIES

C.A. WERNER, Univ. of California, School of Engineering, Berkeley, California 94720

Problem: Simulate the hydraulics of the complex estuarine system of an inverse Delta (Sacramento-San Joaquin Delta) composed of over 700 miles of meandering interconnected sloughs and waterways.

Solution: Construct and verify an electrical analog model of the system: Analogy; tidal stage; discharge; water surface area; cross sectional area with gravitational acceleration; frictional resistance; voltage above ground; current; capacitance; inductance per unit length of channel; resistance.

Special square law resistor units are employed to simulate nonlinear characteristics of the hydraulic system. Direct current simulates 'net' flows. The tidal effect is duplicated by using alternating current at different frequencies corresponding to the solar and lunar components of the tide.

The analog model has been verified and is operational for normal hydrology conditions, and is now in the verification stage for flood conditions. It is located in Sacramento, California. For information write Department of Water Resources, P.O. Box 388, Sacramento, California, Attention: Wayne Haas.

7.0012, PLANNING ALGORITHMS FOR REGIONAL WATER RESOURCE SYSTEMS

W.G. KECKLER, Stanford Research Institute, Menlo Park, California

The size, complexity, and expense of regional water resource systems have made computer-based decision techniques of central importance. Methods are being sought to provide planners with the capability of determining the least costly means of providing water to meet system demands at a specified future date within prescribed physical, legal, financial, and contractual constraints. Methods providing the optimal sizing, sequencing, and timing of system additions from the present to the termination of the planning interval are also being developed.

The primary emphasis of this research is the development of computer algorithms capable of meeting the above objectives. Thus far dynamic programming and its extensions have been successfully applied to the optimal operation and planning of natural-gas pipeline networks, electrical power planning, and the short-term optimal dispatching of a multipurpose reservoir system. These methods and other specialized dynamic programming techniques, such as branch compression and absorption, k-best trajectories, and successive approximations, will be used to obtain the required algorithms.

7.0014, NUMERICAL MODELING OF GENERAL CIRCULATION OF EARTH'S ATMOSPHERE

A. KASAHARA, Natl. Center For Atmosph. Res., Boulder, Colorado 80302

A mathematical model of the general circulation of the earth's atmosphere is being developed for studying the various processes at work, for experiments in prediction and for simulation of atmospheric modification. A computer is used to solve by numerical methods the equations governing the motions and processes of the atmosphere. The current version of the model uses a grid network of seven height levels reaching from the earth's surface to the top of the atmosphere and covering the entire globe with a horizontal spacing of 5 degrees in both latitude and longitude. The surface friction layer is included by incorporating the horizontal and vertical eddy exchange processes for momentum, water vapor, and heat. Heating due to incoming solar insolation and cooling due to long-wave radiation are included. Distribution of sea-surface temperature is taken from climatological records but land temperature distribution is computed, based on a balance condition of heat flux at the ground. The distribution of orography is taken into account through lower boundary conditions. As the initial approximation, the effect of release of latent heat of condensation is included by assuming the atmosphere to be saturated by water vapor. However, the amount of latent heat release is adjusted by a factor determining the rate of condensation. Next, the hydrological cycle will include vertical and horizontal transports of water vapor, precipitation, runoff and evaporation. At present many short-term (10 to 30 days) and long term (80 to 100 days) integrations are being made on the Control Data 6600 computer by changing the magnitudes of parameters within their reasonable limits. The results of integration are compared with climatological data of the atmosphere. The response of the model to varying parameters is studied and the model is adjusted accordingly.

7.0015, REMOTE SENSING OF WATER VAPOR

R.E. MCGAVIN, U.S. Dept. of Commerce, Wave Propagation Laboratory, Boulder, Colorado 80302

The variability of received electromagnetic signals is a function of the variations of the refractive index which is in turn controlled mainly by temperature and water vapor fluctuations. Radio distance measuring equipment, an auxiliary optical probe and standard weather instruments will be used to measure the turbulence of water vapor over arbitrary paths and surfaces to determine the nature of water vapor transport.

A radio phase measuring system with an auxiliary optical probe has been developed and tested.

SUPPORTED BY U.S. Dept. of Commerce - E.S.S.A.

7.0016, INSTRUMENTATION FOR ENERGY BUDGET EVAPOTRANSPIRATION STUDIES

C.R. DAUM, U.S. Dept. of Interior, Water Resources Division, Denver, Colorado

A means for measuring the diurnal flow characteristics of water within the trunk of a tree would aid in determining the atmosphere plant-soil relationship. This method measures the radial heat entering or leaving the water stream from the outside of the tree, the heat lost or gained by the water from the inactive xylem, and the vertical temperature differential of the stream. From these data, the water flow may be calculated.

A detailed study of natural heat flow as evidenced by temperature gradients within the trunk of a tree along with its physiology provides the basis for this project. The temperatures are measured and recorded using small copper-constantan thermocouples (size 30 wire) embedded within the tree. The depth is determined by the physiological section to be studied, i.e., the active or inactive xylem. Commercial heat flow plates are embedded under the bark of the tree and outside the cambium layer, to provide a measurement of incoming or outgoing heat.

SUPPORTED BY U.S. Dept. of Interior - Geological Survey

7.0017, TECHNIQUES FOR USE OF RADIOISOTOPES IN TRACING RESERVOIR LEAKAGE

R.L. HANSEN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The Bureau is vitally concerned with developing new methods of investigations of reservoir sites where the problem of leakage from reservoirs might exist. Investigations and actual tests by others have shown that definite advantages can be attained by the use of radioisotopes for detecting and tracing such leakage. In many cases where contamination by ground water or ancient water has occurred, the radioisotope method, at this time, is the only practical means of deriving volumetric and directional flow information. For tracing leakage in complex and faulted or cavernous strata such as may occur in foundations and abutments, the radioisotope method is an excellent method as it can be adapted to continuous reading by detecting the actual movement of the tracer past the point of measurement.

This is a program, in part, funded by a contract with the Atomic Energy Commission.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

7.0018, BOREHOLE GEOPHYSICS AS APPLIED TO GEOHYDROLOGY

W.S. KEYS, U.S. Dept. of Interior, Water Resources Division, Denver, Colorado

Borehole geophysics is one of the most important techniques for deriving information from drill holes. It can provide accurate in situ data on the geometry and physical characteristics of aquifers and adjacent rocks, and chemistry and movement of the contained fluids, in both cased and uncased holes. Exploratory drill holes constructed to investigate a ground-water environment are often very costly. Means of improving the quality and increasing the quantity of data obtained are necessary if full use of these drill holes is to be realized.

Geophysical techniques currently in use in the petroleum industry, e.g., gamma-gamma, neutron, and sonic logs and in-hole tracer tests will be applied to ground-water investigations. The conventional gamma ray, electric, temperature, caliper and flow-meter logs will be evaluated in a variety of geologic terranes. Procedures for improving log interpretation as related to geohydrology are being investigated and recent advances in equipment technology will be utilized. Considerable progress can be made in all of these phases of borehole geophysics by utilizing knowledge available in the petroleum industry.

SUPPORTED BY U.S. Dept. of Interior - Geological Survey

7.0019, INSTRUMENTATION, DATA ACQUISITION, AND COMPUTER TECHNIQUES

J.C. SCHUSTER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Modern instrumentation is studied to find how the quality and quantity of data acquired from laboratory investigations can be improved. The study emphasizes a continuous review of the instruments offered by various manufacturers. Information is assembled to aid in providing instrument groups compatible with

7. RESOURCE DATA

computer methods of analysis at a reasonable cost. The study includes transducers for pressure, temperature, velocity, vibration, and acceleration to match the data recording and computing systems. Each system is designed for use in the laboratory but made adaptable as required for field use.

Hydraulics Branch personnel are being trained in the efficient use of computer systems and in the utilization of these systems in the solution of routine hydraulic problems. Application is being made of both digital and analog computers.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

7.0020, PHYSICAL CHEMISTRY OF RADIOELEMENTS - RADIOMETRIC METHODS OF ANALYSIS

L.L. THATCHER, U.S. Dept. of Interior, Water Resources Division, Denver, Colorado

The objective of this project is to improve existing analytical methods and develop new analytical methods for the determination of trace concentrations of natural and synthetic radionuclides in water. Also, to make preliminary studies of determinations of trace concentrations of stable elements by activation analysis. Analytical techniques such as alpha and gamma spectrometry are used extensively. Frequently used chemical processes include ion exchange, solvent extraction, coprecipitation, and electrodeposition.

SUPPORTED BY U.S. Dept. of Interior - Geological Survey

7.0021, ELECTRONIC EQUIPMENT DEVELOPMENT

J.E. EDDY, U.S. Dept. of Interior, Water Resources Division, Washington, District of Columbia

The objective of this project is to design and develop equipment (largely electronic) for use in ground water studies. Included in the plans are the development of a magnetic switch and counter for the deep well current meter, equipment for measuring differential head of aquifers using pressure sensitive transducers, and an angular measurement device to determine the direction of current flow by the use of potentiometers.

7.0022, BLACK CANYON OF THE GUNNISON, COLORADO

W.R. HANSEN, U.S. Dept. of Interior, Geologic Division, Washington, District of Columbia 20242

Detailed geologic mapping of 4 - 7 1/2-minute quadrangles along the Gunnison River in Southwestern Colorado. The geology consists of Precambrian granite, gneiss and schist, Triassic red beds, Jurassic Morrison formation, Cretaceous Dakota sandstone, Mancos shale, Mesa Verde sandstone, and Tertiary volcanic rocks. The Morrison formation contains uranium deposits in this general area. Tuff breccias and tillites of the area may be aquifers.

SUPPORTED BY U.S. Dept. of Interior - Geological Survey

7.0023, PHOTOMAPPING

J.W. PUMPELLY, U.S. Dept. of Interior, Topographic Division, Washington, District of Columbia 20242

Purpose: To develop published maps which, by using orthophotomosaics in areas of steep terrain or controlled mosaics in areas of low relief, show the detail contained in aerial photographs and portray this detail in colors representative of the ground, vegetation, water features, etc., and to overprint such standard map information as is required to facilitate use of the map.

Procedure: Three lithographically reproducible continuous tone negatives are prepared to print the photographic imagery.

A tint representative of the ground color is printed first. By masking technique the various portions of one negative (low contrast) are next printed in color appropriate for the type of feature. Over these an accent image (edge-isolated) negative is used to accentuate all line-type features contained on the photographs. Selected maps lettering and certain line symbols are added to facilitate the identification of important roads, places, or other features.

Results: Orthophotomaps have been processed through publication. Results are sufficiently satisfactory that 16 photomaps covering the Florida-Georgia Okefenokee Swamp have been prepared for public sale. Research and experimentation in the production of similar maps for numerous other areas is progressing rapidly.

SUPPORTED BY U.S. Dept. of Interior - Geological Survey

7.0024, TAXONOMY AND ECOLOGY OF INSHORE MARINE MICROBIOTA

J.B. LACKEY, Individual Grants, Florida

This envisages publication of an illustrated account, with keys, of inshore marine and brackish water protozoa and microscopic algae, both planktonic and benthic. Their commonness or rareness, cosmopolitan or restrictive distribution will be covered by ecology, especially with reference to pollution, nutrient richness and water poor in nutrients. Regions covered to date are the Atlantic Coast, Florida to Woods Hole, Massachusetts; The Florida Gulf Coast, the California coast, the Island of Oahu and Guanabara Bay, Brazil.

SUPPORTED BY U.S. Dept. of Interior - F. Water Pol. Ctl

7.0025, A METHOD OF DETERMINING AND MAPPING THE HYDROLOGIC RESPONSE OF UNGAGED WATERSHEDS IN THE SOUTHEAST

J.F. WOODRUFF, Univ. of Georgia, Graduate School, Athens, Georgia 30602

The research will determine the quantitative relation between hydrologic response of small watersheds (20 square miles or less) and a selected small number of geomorphic and land use factors. Hydrologic response is defined as the ratio direct runoff/gross precipitation, averaged over a season or year. Direct runoff is defined quantitatively by an equation developed and tested in a previous study. The derived relation will be used to map a test area in detail, showing the source and volumes of potential flood waters produced by different areas in an average year.

Drastic differences in hydrologic response of various terrains and regions is generally concealed in records of precipitation and streamflow published by the Weather Bureau and the U. S. Geological Survey. Gaging stations are too far apart to map response accurately and methods are needed to convert hydrologic, soil, topographic and serial maps into response maps, revealing at a glance the varying capacity for land areas to produce storm flows. This project will attempt to show the ungaged areas can be mapped and that hydrologic response maps are potentially valuable tools in water resources education, planning and management.

Response ratios will be calculated according to methods already developed by one of the investigators. The ratios will be related by multivariate analysis to certain precipitation and watershed factors. Data will be secured from government publications and from various maps and recorded data. Analysis will be chiefly by 7094 computer.

7.0027, DEVELOPMENT OF MULTIPLE-USE PRODUCTION/OUTPUT INFORMATION FOR OWNERS OF SMALL WOODLANDS IN THE CENTRAL HARDWOOD REGION
R.I. BEAZLEY, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

Analysis of the need for physical input/output information concerning water in all its aspects except navigation and irrigation. Of particular interest is input-output information as to erosion control effects in this region.

SUPPORTED BY Southern Illinois University

7.0028, EXPERIMENTAL INVESTIGATION OF HYDROLOGICAL PARAMETERS OF AQUIFERS THROUGH ELECTRICAL RESISTIVITY MEASUREMENTS
H. PFANNKUCH, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

Fundamental concepts of resistivity measurements of saturated porous rock are investigated. They will be applied to the geophysical determination of hydrological parameters of aquifers by electrical measurements in the well or bore hole.

Complete equations are developed containing terms for conductance of the saturating pore fluid, the solid matrix, and the double layer at the solid-liquid interface. In normal operations, developed from oil field practices, the two last terms are neglected. This is not warranted, however, for high resistivity liquids such as ground water of high purity.

The proposed equations will be tested experimentally in the laboratory and empirical relations will be derived from the analysis of field samples.

7.0030, SOUTHERN ILLINOIS REGIONAL ECONOMIC DATA SYSTEM
A.E. PRELL, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

This project involves the establishment of data banks on important industrial variables. One of the variables to be analyzed, evaluated and catalogued is the water resources of the area as they relate to business and industry. This would include the industrial requirement for water, the possibilities of developing water

resources into recreation industries and the relationship of water as a factor in the development and growth of business and industrial communities.

SUPPORTED BY Southern Illinois University

7.0031, A REGIONAL STUDY OF THE CHANGING OCCUPANCY AND DEVELOPMENT OF AN ALLUVIAL LOWLAND

T.H. SCHMUDDE, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

The purpose of the study has been to analyze the present occupancy of a portion of the Mississippi alluvial lowland and the agricultural system by which the area has been developed and is being developed. Special emphasis was focused on the space organizing aspects of this development. From such an analysis the attempt will be to construct a model of regional development in this area. Such a model could be expected to have important implications for guiding development in other areas.

Relevant to water resources research the occupancy of the Lower Mississippi alluvial lowland can be viewed as a struggle toward better water resource management. Fundamental to the development of this area for agricultural as well as other forms of settlement has been the need to organize spatially institutions and individual enterprises in order to manage the problems of too much water on the land (drainage organization), too little water on the land at critical times (irrigation organization) and the Mississippi River itself (flood control and improved navigation). Spatial organization is an inherent part of water management since the control over movement of quantity and quality of water horizontally is the essence of water management. Once such organization is established, however, the institutions can serve either directly or indirectly for other forms of spatial organization, which is so essential for area development. Thus an appreciation of the spatial dimension of water resource management problems in the area is an important result of the study.

An atlas of relevant distributions concerning water resources, land resources and agricultural and economic factors is nearing completion and could be published if funds were available.

7.0032, DEVICE FOR FIELD DETERMINATION OF HEAVY METALS IN NATURAL WATERS
R.E. VANATTA, Southern Illinois University, Graduate School, Carbondale, Illinois 62903

The proposed investigation involves the design, construction, and testing of a simple, portable, self-contained device suitable for in situ analysis of natural waters for copper, lead, cadmium, nickel, chromium, and zinc; simultaneous determination of dissolved oxygen may also be feasible. A modification of a conventional DC polarographic device is proposed.

Laboratory investigations would involve the following: (1) Development of fundamental electrical circuitry for simplicity of field operations, while permitting the desired accuracy. (2) Development of suitable electrolyte and electrode systems for field application. (3) Adaptation of circuitry and electrolyte-electrode systems to concentration levels present in natural waters.

Field studies would include testing of the proposed device through the analysis of various types of natural waters, i.e., lakes, rivers, ground water, wells, etc. Confirmation of performance would be made through appropriate laboratory analysis of the same waters with modern laboratory techniques and facilities.

7.0037, STATISTICAL ANALYSIS OF WATER CONSUMPTION

S. CSALLANY, State Water Survey, Urbana, Illinois

Purpose of this study is to determine the influence of various factors on municipal water consumption in Illinois.

To collect the basic data questionnaires were sent to all public water works (incorporated places) in Illinois. The questionnaire was designed to obtain information on the date of daily pumpage metered, average daily pumpage subdivided by number of persons served by the water works, and percent of total pumpage treated. The collected basic data were tabulated and grouped according to source (groundwater, surface water). The effects of these factors on water consumption were studied. Outside of the Chicago region the most important factors influencing water consumption are percent of public distribution, persons per service, population, and commercial and industrial water use. In the Chicago region the most factors are the percent of services used by commercial and industrial firms; percent of water used for commercial and industrial purposes, and the age of the water works.

SUPPORTED BY Illinois State Government

7.0038, PERMEABILITY OF UNCONSOLIDATED AQUIFER MATERIALS

T.A. PRICKETT, State Water Survey, Urbana, Illinois

The statistical analysis of the permeability of unconsolidated aquifer materials versus geohydrologic controls is continuing. All hydrologic and geographic data have now been put on punch cards and several correlations made with geologic parameters.

A special study is being made of the valley train and alluvial deposits contained in the bedrock valley coincident with the present Mississippi River from Alton to Cairo. Data are available from approximately 2500 measurements of permeability along this valley system. With this data it is hoped to determine to what limits permeability variation can be predicted. The results of this special study will form the basis for determining the reliability of other valley system predictions.

7.0045, R.I.-LIQUEFACTION OF SAND DUE TO LONG TERM, SMALL AMPLITUDE VIBRATIONS

V.P. DRNEVICH, Univ. of Kentucky, School of Engineering, Lexington, Kentucky 40506

The objective of this research will be to study liquefaction of saturated cohesionless soils under restricted drainage conditions due to long term, relatively small amplitude vibratory shearing strains. The number of load repetitions necessary to cause liquefaction will be determined as a function of ambient effective stresses, relative density, and shearing strain amplitude. For this study, a special torsional resonant column device will be used. It applies essentially uniform vibratory shearing strains to a hollow cylindrical specimen acted upon by static confining pressures. Shear modulus and energy dissipation will be measured as a function of the number of cycles of vibration.

SUPPORTED BY U.S. National Science Foundation

7.0046, AUTOMATION OF GROUND-WATER RECORDS

W.E. WEBB, Johns Hopkins University, State Geological Survey, Baltimore, Maryland 21218

The objective is to organize and prepare a feasible operating system of ground-water data storage and retrieval. The approach used is to identify the types of data to be stored, assign priorities for their entry into the system, determine the storage media and format, and finally enter data accumulated into the system.

7.0054, SOME ASPECTS OF THE MARINE SPORT FISHERY OF MASSACHUSETTS WITH SPECIAL EMPHASIS ON SURVEY DESIGN AND BASIC ECONOMIC ATTRIBUTES

J.A. MCCANN, Univ. of Massachusetts, School of Agriculture, Amherst, Massachusetts 01003

Federal and state agencies have recently realized the importance of collecting reliable marine sport fishery statistics and of determining the impact of the marine sports angler on local economy. A study has recently been undertaken to obtain data on the identity of the marine sport fisherman, his needs and preferences, and his impact on the economy of Massachusetts.

Major emphasis thus far has been upon literature review and method evaluation. Data will be collected this summer (1968) which should provide some insight into problems related to survey design and division of labor in future work. These data will be solicited from certain business establishments and captains of sport fishing vessels, as well as the fishermen themselves, and will deal primarily with fishermen residences, preferences as to methods, localities, and fish species, and average daily expenditures. Questionnaires in post-card form will be made available to fishermen at randomly selected bait and tackle shops, and some limited personal interviewing is anticipated. A large-scale fisherman interview program is planned for 1969 and will follow some type of stratified design.

These preliminary observations will provide a foundation for the principal survey of 1969, especially with regard to nonresident sampling. A tentative statistical scheme employing several survey methods is being considered for in-state sampling. This may take the form of a latin square whereby treatments (survey methods) are assigned randomly to cells within the overall pattern. Several assumptions underlying this method will have to be tested prior to its actual implementation.

7.0056, HYDROLOGIC MEASUREMENT SYSTEMS

P.S. EAGLESON, Mass. Inst. of Technology, School of Engineering, Cambridge, Massachusetts 02139

Use of concepts from information theory to develop generalized criteria for the design and evaluation of hydrologic instruments, networks and measuring programs. Conventional, tipping-bucket raingages are shown to be inadequate for many problems of urban hydrologic analysis. When estimating long-term average areal rainfall the error of estimate is often quite insensitive to the use of more than two point measuring stations.

SUPPORTED BY Massachusetts Institute of Technology

7.0057, RAIN SCAVENGING STUDIES - DATA ANALYSIS, SYNTHESIS AND INTERPRETATION

A.N. DINGLE, Univ. of Michigan, Graduate School, Ann Arbor, Michigan (AT(11-1))

The proposed work has for its objective the collection and interpretation of fundamental data on the scavenging of atmospheric particulate matter by rain systems and investigation of the rain systems themselves.

This work is basic to the understanding of the natural mechanisms by which the air is cleaned and to the intelligent use of our atmospheric reservoir.

Our procedure is to use the natural and artificial chemical content of rain water to trace the natural cleansing processes. This is done through the collection and analysis of sequential rain samples from individual storms and observations of rain to the detail of raindrop size distributions and tipping bucket rainfall rates. The data collection is located and timed for maximum benefit from the extensive facilities of the National Severe Storms Laboratory, Norman, Oklahoma.

A new and potentially valuable technique, now in the pilot phase, is the investigation of convective storm and precipitation processes through the introduction of artificial tracers.

Results to date indicate that the techniques developed over the past few years are capable of yielding new knowledge in such areas as natural air cleansing mechanisms, convective storm circulations and structure, weather modification by cloud seeding, and the efficiency of convective precipitation.

7.0058, CHARACTERISTICS OF RIVER BANKS RELATED TO VEHICLE PERFORMANCE WHEN ENTERING & EXITING STREAMS

W.L. HARRISON, Univ. of Detroit, Graduate School, Detroit, Michigan 48221

The current study will investigate or establish the following:
a. Definition of the Problem: This will be established by collecting statistics on river characteristics such as: frequency of accuracy of streams and specific stream characteristics. This will determine if the problem to be solved is one of modifying the vehicle or the stream and which part of the problem area should receive emphasis.
b. Mathematical Models: Establish mathematical functions which will predict vehicle thrust developed and a vehicle moves from a totally buoyant state through the soil-water transition area to a totally soil supported state.
c. Experimental Tests: Scale model tests will be used in the establishment of vehicle-river exit equations and full scale tests will be conducted to verify the final equations.

The studies are being conducted under contract with the University of Detroit using the River Simulator located at the Land Locomotion Laboratory, ATAC.

7.0061, COOPERATIVE GULF OF MEXICO INVENTORY AND STUDY (AREA DESCRIPTION)

J.Y. CHRISTMAS, State Marine Conserv. Comm., Biloxi, Mississippi

OBJECTIVES: (1) To determine the physical characteristics of Mississippi Estuaries. (2) To develop a state atlas describing these estuaries. (3) To make the state atlas available, in cooperation with the other Gulf States and the Bureau of Commercial Fisheries, for inclusion in an atlas of Gulf of Mexico estuaries.

PROCEDURES: (1) Locate and compile existing data describing physical, geological and industrial features of Mississippi estuarine areas. (2) Acquire necessary additional data using techniques and procedures recommended by the Estuarine Technical Coordinating Committee of the Gulf States Marine Fisheries Commission. (3) Collect, analyze and prepare data in a state atlas in a form which will be available for incorporation as a section in an atlas of the estuaries of the Gulf States in cooperation with members of the Gulf States Marine Fisheries Commission and the Bureau of Commercial Fisheries. (4) Prepare and publish additional notes and papers as necessary.

7.0062, INSTRUMENTATION IN EMBANKMENTS AND FOUNDATIONS

C.R. FURLOW, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to collect and study instrumentation practices for earth dams and foundations by all USAE Divisions and other agencies. Selected devices are subjected to laboratory and field investigations to determine their precision and reliability in regard to their use by Corps of Engineers' offices. The results of these studies will be disseminated in a series of reports and will eventually culminate in an Engineer Manual.

SUPPORTED BY U.S. Dept. of Defense - Army

7.0063, HYDRAULIC INSTRUMENTATION

J.E. GLOVER, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to develop special laboratory and field measuring equipment or techniques to increase the ac-

curacy and efficiency of measurements. Current efforts are concerned with turbulence meters, model hawser stress transducers, water level indicators for prototype lock tests, water-surface measuring equipment for model use, and miscellaneous model and field testing equipment.

SUPPORTED BY U.S. Dept. of Defense - Army

7.0064, DEVELOPMENT OF HYDROLOGIC EQUIPMENT

F.P. HANES, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to develop an adapt instruments an equipment for hydrologic purposes, including raider facilities, when such needs cannot be satisfactorily met through normal procurement methods. This project will also assemble information regarding characteristics and cost of equipment available for hydrologic use, and conduct certain investigations and studies to improve or adapt such equipment to best serve the requirements of the Corps of Engineers.

It is the intent of this project to provide qualified professional personnel within the Corps to act as consultants in planning, designing, and installation of telemetering networks. Progress and accomplishments are reported on an unscheduled basis, but usually once a year, by means of Project Bulletins issued by USAE Waterways Experiment Station.

SUPPORTED BY U.S. Dept. of Defense - Army

7.0065, EFFECTS OF SCALE AND OPERATING TECHNIQUE ON HARBOR MODELS

R.Y. HUDSON, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to determine the effects of model scale and the techniques of model operation on the accuracy of model results. Tests will be conducted to establish the bases of model design, operation, and analysis of test results. Studies to be made are wave filters for harbor models and wave flumes, wave attenuation due to bottom friction, and design of ripple tank and appurtenances.

SUPPORTED BY U.S. Dept. of Defense - Army

7.0066, DESIGN OF RUBBLE WAVE ABSORBERS

A.M. KAMEL, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this study is to investigate the wave reflecting and transmitting characteristics of rubble-mound breakwaters, rubble wave absorbers, sand beaches, wave traps, and resonators.

SUPPORTED BY U.S. Dept. of Defense - Army

7.0067, EVALUATION OF SOIL MECHANICS LABORATORY EQUIPMENT AND TESTING PROCEDURES

B.N. MACIVER, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to develop and evaluate laboratory equipment for use by USAE Division Laboratories and to investigate laboratory testing procedures to determine beneficial improvements.

Under this continued study, evaluations have included consolidometers, pore pressure devices, procedures for performing direct shear tests, etc. During FY 68, work included evaluation of the back-pressure consolidometer and investigations of the methods for preparing test specimens of cohesive soils and the effect of strain rate on R triaxial shear strength. The study of strain rate will be continued in FY 69 and several new studies will be initiated, including evaluation of the direct simple-shear apparatus, investigation of the effect of various apparatus features on the results of triaxial tests, and development of methods for performing undrained annular shear tests.

7. RESOURCE DATA

SUPPORTED BY U.S. Dept. of Defense - Army

7.0068, VIBRATION OF LOW-CREST SPILLWAYS

E.B. PICKETT, U.S. Army, Waterways Experiment Sta. ,
Vicksburg, Mississippi

The objective of this project is to investigate low ogee spillway crest vibrations resulting from flow instabilities occurring with operating heads exceeding design heads. The study includes determination of intensity and dominant frequencies of possible fluctuations in the hydrodynamic load in the fixed spillway and consideration of the elastic and inertial properties of the vibratory system.

SUPPORTED BY U.S. Dept. of Defense - Army

7.0069, THE USE OF LIGHT-WEIGHT SPHERICAL PARTICLES FOR DISCHARGE MEASUREMENT IN OPEN CHANNELS

H. LIU, Univ. of Missouri, Water Resources Research Ctr. ,
Columbia, Missouri 65202

Experimental results of the current project study have indicated that accurate flow measurement in open channels for velocities below 0.1 ft/sec is feasible through the use of light-weight spherical particles (the integrating-float method). More studies are planned in this proposal. These include an extension of the present study to uniform flows of higher velocities, a study of the technique under nonuniform-flow condition and a study of the influence of turbulence on the accuracy of the technique. All proposed tests will be conducted in a 2 ft x 1 ft laboratory flume.

7.0070, INFORMATION PROCEDURES IN ENVIRONMENTAL CONTAMINATION

M.L. PETERSON, Comm. For Environ. Information, *Saint Louis, Missouri 63108*

This is a project for developing and evaluating methods for communicating technical information on environmental contamination to scientists and interested laymen. The problems of environmental contamination encompass such a wide range of scientific disciplines, and are in such rapid change, that it is increasingly difficult for individual scientists not professionally concerned with these problems to acquire a grasp of their general significance and scientific background. It is correspondingly difficult for scientists, generally, to transmit such information to the interested public.

We expect to develop methods for collecting and distributing objective information about a series of specific problems in air pollution, water pollution and other environmental contamination such as pesticides, noise, etc.

The CEI Scientific Division reviews relevant scientific journals and reports, prepares continuing bibliographies, status reports, and the articles for publication in the journal 'Scientist and Citizen' relevant to each of the indicated topics. The close collaboration between the scientists and a Readers Advisory Board ensures both objectivity and readability.

Coordinated publication, radio and news coverage, and school or other public lectures are continually being used and evaluated as effective ways for scientists to impart necessary information to the public. Study of the best means to involve larger number of scientists, reaching a wider citizen audience is in progress.

7.0073, EVALUATION OF HYDROLOGIC INSTRUMENTATION ON MAYNARD CREEK WATERSHED

T.T. WILLIAMS, Montana State University, School of Engineering,
Bozeman, Montana 59715

This study involves the evaluation of automated equipment for the recording and transmission of hydrologic phenomena. The Electronics Research Laboratory at Montana State University has developed (as a separate project) a centrally located data acquisition facility which will receive information via radio or data-phone, and convert it into a form suitable for input to a digital computer. The research conducted herein is aimed at evaluating, testing, and calibrating a variety of new types of automated equipment for measuring, transmitting, and recording hydrologic phenomena.

The study began in July 1965. Data collection is scheduled to terminate on December 1, 1967, with completion of the project scheduled for June 1968.

7.0074, GENERAL STUDIES RELATED TO CODING GROUND-WATER APPROPRIATIONS & BASIC DATA FOR INFORMATION, STORAGE & PROCESSING SYSTEMS

S.L. GROFF, Montana Coll. of Min. Science, Graduate School,
Butte, Montana 59701

The objective of this research project is a basic study of the coding of all ground water data on IBM type cards and the development of an actual system for filing and retrieval of ground water legal data.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch
Montana College of Mineral Science & Tech.

7.0075, HYDROLOGICAL DATA ACQUISITION THROUGH REMOTE RECONNAISSANCE SYSTEMS

F.L. GERLACH, Univ. of Montana, Graduate School, *Missoula, Montana 59801*

This research is a continuation of work conducted during 1965-66. The purposes include (1) testing the apparent relationship between surface soil moisture and middle-range infrared radiation using ground data and airborne sensor imagery of selected areas, (2) applying multi-sensor image analysis in the preparation of soil moisture maps of selected areas, (3) observing radiation-temperature characteristics of selected terrain features for ground verification of these characteristics, and (4) testing the application of multi-sensor image analysis to the acquisition of hydrologic data. Study areas have been located containing a variety of terrain features. Ground data including surface soil moisture, surface reflectance, and surface radiation temperature will be related to aerial photographic and thermographic imagery during selected diurnal periods. Supplemental environmental data will be obtained.

7.0076, A COMPREHENSIVE ANALYSIS OF THE TULAROSA BASIN SALINE WATER RESOURCES - THEIR AVAILABILITY AND POTENTIAL ECONOMIC DEVELOPMENT

H.R. STUCKY, New Mexico State University, Water Resources Research Inst., Las Cruces - University Park, New Mexico 88001

The objectives of this study are: (1) to assemble pertinent information on the saline water resources of the Tularosa Basin and make a summary report on the quantities, qualities and depth by locations. (2) develop a prospectus on the potential industry, recreation and agricultural uses of the basin's saline water, and (3) to outline further investigations which may be required to develop these resources.

The Geological Survey, Office of Saline Water, and the Office of Water Resources Research are cooperating with the New Mexico State Engineer Office, and the New Mexico Water Resources Research Institute in the conduct of the various phases of this research effort. A group of electrical generating companies are interested in these saline water resources for a large scale generating plant, possibly in combination with a desalinization plant powered by coal or atomic fuel.

One phase of this project will be an investigation of the resources by the U. S. Geological Survey, a second will be research on the hydrology of the Lucero Lake area and its relation to the resources of the area, while a third with the economic analysis of the potential users.

7.0078, TO EVALUATE THE UTILITY OF EXISTING AUTOMATIC CHEMICAL ANALYSIS EQUIPMENT FOR WATER QUALITY SURVEILLANCE UNDER COMPUTER CONTROL

J.E. OBRIEN, Health Research Incorporated, Albany, New York

The utility of existing automatic equipment designed to collect and analyze water samples for 12 specified parameters of water quality will be evaluated. The equipment will be capable of analyzing samples on a continuous or intermittent basis, and will include atomic absorption spectrophotometry. An electronic 'memory' system for storage and retrieval of data output of the automatic chemical analysis equipment, a system for periodic data scanning and a system for computer control of the instrument will be provided and evaluated.

7.0079, THE ROLE OF FOOD IN THE MORTALITY OF LARGEMOUTH BASS LARVAE

C.A. CARLSON, State University of New York, School of Agriculture, Ithaca, New York 14850

The objectives of this project are 1) To determine how long the caloric content of yolk supplies enough energy to meet the

requirements of developing largemouth larvae, 2) To establish the exact age and size of larvae at onset of feeding, 3) To establish feeding rates of larval bass on mixtures and pure cultures of plankters at different temperatures, light conditions, and population densities, and to determine importance of specific plankters in larval bass diets, and 4) To study starvation of largemouth larvae. Two energy budget and metabolism experiments have been conducted. In one, oxygen consumption was used as a measure of catabolism, and the ratio of larval tissue to remaining yolk was used as a measure of catabolism, in the other. Condition factor was determined in groups of larvae fed at three different densities of plankton and in a group of starved larvae. An experiment to determine the effect of dissolved organic matter on the survival and development of embryos and larvae through the yolk-sac period was also conducted. A swimming speed experiment was used to obtain a quantitative measure of starvation in largemouth bass larvae. Data from these experiments are currently being analyzed. Experience has been gained in use of radioisotopes which will be used in future determinations of food preferences and feeding rates. This project was begun in 1968 and is expected to continue until 1971.

7.0080, PREDATION ON LARGEMOUTH BASS DURING THEIR FIRST YEAR OF LIFE

C.A. CARLSON, State University of New York, School of Agriculture, Ithaca, New York 14850

Objectives of this project are 1) to observe behavior of and predation on largemouth bass larvae under natural conditions, 2) to observe effectiveness of suspected predators in aquaria, and 3) to identify and quantify predation on larvae by use of radioactive tags. During the summer of 1967, preliminary experiments on marking of young largemouth bass with radioisotopes were conducted at Cornell's Radiation Biology Field Laboratory (New York State Veterinary College). Initial attempts to study uptake of ^{85}Sr by newly-hatched larvae met with little success because of difficulty in handling larvae. New methods employed in a temporary radioisotope lab at the Fishery Laboratory during the 1968 spawning season were successful, and preliminary data on ^{85}Sr uptake by newly-hatched bass larvae were obtained. Uptake of ^{85}Sr by larger young-of-the-year bass was studied in the summer of 1967, and acceptable methods and preliminary data were generated. Experiments on uptake by green algae (food for cladocerans) have also been initiated as the first step in studies to determine food preferences and feeding rates of largemouth larvae. A scintillation counting system was recently acquired, and a permanent radioisotope laboratory to house this research is under construction at the Fishery Laboratory. Experiments to obtain information about predation on bass larvae by aquatic insects were begun during the 1968 spawning season. Larval bass of various ages have been placed in aquaria with suspected insect predators, and feeding rates at different predator and prey densities have been observed. This project was initiated during 1968 and will continue indefinitely.

7.0081, DEVELOPMENT OF MARKING METHODS FOR SMALL FISH

A.W. EIPPER, State University of New York, School of Agriculture, Ithaca, New York 14850

The objective of this research is to devise and evaluate methods of marking small fish. Investigation of effectiveness of fin cautery, dye-marking, and four types of tags for marking young largemouth bass was continued in F.Y. 1968. Fish were held in 1/5-acre man-made ponds after marking. Fin tips removed with a high-frequency electro cauterizing iron had completely regenerated after four months. Use of a jet injector to inject dye (National Fast Blue) into fins apparently did not affect survival or growth and produced marks recognizable a year after marking. Marks on anal and pectoral fins were retained better than marks

7. RESOURCE DATA

on mandibles or dorsal or caudal fins. Four types of tags consisting of a small plastic pennant connected to a stainless steel device anchored between the interneural bones below the spinous dorsal fin were evaluated. Tags similar to the 'Sphyrion' tag of Scarratt and Elson, but containing a soft-temper stainless steel wire between anchor and pennant, showed best retention. Tagging mortality was not appreciable with any of the tags. Rigid filaments produced less external tissue irritation than semi-flexible filaments. Experiments with dye marks and tags on smaller bass and on other fishes are planned for the future. This project was begun in 1964 and will continue indefinitely.

7.0082, FOOD HABITS OF LARGEMOUTH BASS LARVAE

A.W. EIPPER, State University of New York, School of Agriculture, Ithaca, New York 14850

The objectives of this research are 1) to determine food habits of largemouth bass in their first ten weeks of life in man-made ponds and 2) to compare food habits with composition of pond plankton to identify any food selectivity which might exist. Following is a brief summary of Mr. Mathur's M.S. thesis which is in final stages of preparation. Stomach contents of larvae collected from three ponds at the Cornell Fishery Laboratory during the summer of 1966 were analyzed. Zooplankton abundance was determined for each pond and compared to food of larval bass. Cladocerans (including Chydorus, Daphnia, Bosmina, and Ceriodaphnia) and Cyclops and Diaptomus were the most abundant organisms in stomachs of larval bass. Copepods and immature insects were more common in stomachs of older larvae. Rotifers and copepod nauplii were the most abundant constituents of the pond zooplankton. Electivity indices indicated that Chydorus and Daphnia were consistently preferred by the bass larvae. Since these were the smallest and largest available cladocerans, there appeared to be no selectivity on the basis of size. Copepods were consistently rejected by bass larvae. Ivlev's electivity index was found to be rather unrealistic when forage organisms were present in very small quantities in the plankton or in larval stomachs, but not in both, and when changes in plankton abundance occurred during sampling periods. This project was initiated in 1966 and will be terminated in 1969.

7.0083, CONTINUATION OF WORLD DATA CENTER A - GLACIOLOGY

W.O. FIELD, Amer. Geographical Society, New York, New York

It is proposed to continue the operation of IGY World Data Center A: Glaciology, along its present lines of activity. The World Data Center has as its principal tasks 1) the collection, exchange among other relevant World Data Centers, and the archiving of data with a suitable cataloging to make the collection effectively known to the scientific community, 2) serving of the scientific community by providing copies of glaciological and related data on request, and 3) serving as a source of information about glaciological research in progress around the world. In order to make known new data in the files of the Data Center, a quarterly bulletin, Glaciological Notes, will continue to be published, listing new acquisitions. Some increase in the cataloging function is required. For example, many of the photographs taken of areas affected by the great Alaskan earthquake of 1964 have not yet been integrated into the Data Center files.

Maintenance of World Data Center A is essential to many long range as well as short range studies in glaciology. The records of events which change with time are basic to such a large number of glaciological and related studies that the need for photographic and other documentation goes without question. In particular, the global nature and possible world-wide cause-effect relations in glaciology demand records that can best be obtained and maintained by the World Data Center.

SUPPORTED BY U.S. National Science Foundation

7.0084, LAKE EFFECT SNOW SITUATIONS, EASTERN LAKE ONTARIO AREA

R.B. SYKES, State University of New York, Graduate School, Oswego, New York 13126

So far activity has primarily concerned gathering of information relating to snow situations particularly identified with circumstances to the lee (southeast and east) of Lake Ontario. This comparatively small scale effort began in the winter of 1962/63 with a trial meso-scale network of microbarographs for air pressure records. During the next three years network was expanded in area to include the land peripheral around eastern Lake Ontario and inland 30 to 40 miles to the east of the lake. Wind and temperature instrumentation was included; detailed surface and reconnaissance observations were added. Since winter of 1965/66 the meso-network has been largely one for atmospheric pressure with about 65 microbarographs located within the land arc around the eastern third of Lake Ontario. Data are filed and cataloged by days. Data have been used in conference presentations and for preparation of status reports except that one major publication was produced in 1966 based upon a 1965 locally heavy snow situation to the lee of the Lake. Such snows appear to be complex composites of air mass temperature and stability, moisture content, flow at 4000 feet and below, orography, temperature of the lake, water-ice relations, nuclei, and electrical charge factors to mention the more obvious.

The main surface weather observations are made near the College, but the recorded data are acquired over an area of a couple thousand square miles.

Activities started in FY 1963 under funding auspices of SUNY ASRC with termination of current data collection phase expected by the end of FY 1971; except operations will phase into FY of the International Hydrological Decade for Lake Ontario.

University of North Carolina

7.0086, EXPLORATORY STUDY ON THE APPLICATION OF NEUTRON ACTIVATION ANALYSIS TECHNIQUES TO WATER RESOURCES RESEARCH AND MANAGEMENT

J.R. BOHANNON, Univ. of North Carolina, School of Engineering, Raleigh, North Carolina 27600

Objectives: The major objectives of this research program are to determine the applicability of the use of neutron activation analysis in water monitoring and investigation of specific water and pollution problems.

Perspective: Once the applications of N.A.A. in this area of research are clear, a report to and contacts with North Carolina Industry and agencies will be made. In doing this, the areas of N.A.A. that prove feasible and practical to water resource control and in the implementation of present programs of analysis, will be outlined.

Procedures: 1. Complete extensive literature survey on present research of N.A.A. along lines of project to determine local and national levels of involvement. 2. Visit with State agencies, laboratories and industry to establish objectives, extent and priority of their present programs to insure future co-operation in confirmation of N.A.A. techniques. 3. Based on identity of areas of known or potential use of N.A.A. begin laboratory check and

7. RESOURCE DATA

confirmation of methods and techniques by working in close liaison with Pesticide Research Lab and N.C. Water Resources Laboratory.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

7.0087, DESIGNING AND TESTING A WATER MONITORING SYSTEM FOR PESTICIDES IN NORTH CAROLINA *T.J. SHEETS, Univ. of North Carolina, School of Agriculture, Raleigh, North Carolina 27600*

General pesticide use patterns in North Carolina will be determined and related to river drainage systems. Procedures for sampling rivers and estuaries for pesticides will be outlined and tested on one major river and estuarine system in North Carolina (Tar-Pamlico River and Pamlico Sound). Testing of sampling procedures will include location and number of sites, position of sampling in the river and sound, and frequency of sampling.

Extraction and cleanup procedures will be selected from the literature and adapted for use on this project. Electron capture gas chromatography will be employed for detection. Two chlorinated hydrocarbons p,p'-DDT and endrin) will be measured routinely, but concentrations of other pesticides will be recorded when convenient. At the completion of one year's work, judgement will be made of the need for additional research on sampling and of the adaptability of the procedures to routine monitoring by another State Agency.

North Carolina State University

7.0088, BIBLIOGRAPHY ON FLUORIDATION OF PUBLIC WATER SUPPLIES *I.R. CAMPBELL, Univ. of Cincinnati, School of Medicine, Cincinnati, Ohio 45221*

The primary purpose of the project is the publication at such intervals as are deemed desirable, of evaluated summaries of selected, scientifically reliable literature bearing on the safety, effectiveness and significance of fluoridation of public water supplies. The first of these publications, 'The Role of Fluoride in Public Health: The Soundness of Fluoridation of Communal Water Supplies,' was published in 1963. The publications for inclusion in these reviews are chosen, with the assistance of an Advisory Editorial Board, from a continuing comprehensive survey of the world literature. Informative abstracts are prepared of publications dealing with the following aspects of inorganic compounds of fluorine: occurrence, biochemistry, physiologic and pharmacologic observations on man and animals; all aspects; methods of analysis and pertinent chemical properties. The abstracts, together with author and subject indexes, are made available on a limited basis and at nominal cost to interested scientists and libraries.

7.0089, INSTRUMENTATION DEVELOPMENT FOR HYDROLOGIC DATA COLLECTION *H. WIRES, U.S. Dept. of Interior, Water Resources Division, Columbus, Ohio*

New developments in equipment and instrumentation suitable for use in water resources investigations, surveys and research need to be evaluated. Advancements in electrical, electronic, and mechanical devices and components should be investigated. Designs for new devices to improve, supplement or replace present equipment are needed.

The purpose is to design, develop, and test new equipment and instruments for use in field, laboratory, or office studies. Specifications, drawings, and test procedures for procurement use will be prepared. Manuals for installation and service of new equipment will be assembled as necessary.

SUPPORTED BY U.S. Dept. of Interior - Geological Survey

7.0090, ACCUMULATION OF CLIMATOLOGICAL DATA *J.B. JONES, Ohio Agric. Res. & Dev. Ctr., Wooster, Ohio 44691*

1. To determine daily maximum-minimum air temperature, precipitation and maximum-minimum temperature in the plow layer. 2. To determine weekly soil temperature and moisture at specific depths below plow layer. 3. To observe and record the date of first leaf and flower emergence, last date of flowering and last date of leaf drop of Chinese lilac plants (to conform to NC Regional Weather Project, NC-26).

Moisture blocks, thermistors, and soil thermometers were installed at Canfield, Carpenter, North Baltimore, Ripley, Wooster, and Columbus in order to gather weekly and daily soil moistures and soil temperatures. Blocks and thermometers are to be installed also at South Charleston later this year. Lilac plants are at Carpenter, North Baltimore, Ripley, Wooster, and Columbus. Data taken from these plants are to be forwarded to the Nebraska Station for evaluation.

SUPPORTED BY Ohio State Government

7.0091, SUBSURFACE BRINES CONTAINING VALUABLE AND STRATEGIC MINERALS *A.G. COLLINS, U.S. Dept. of Interior, Petroleum Research Ctr., Bartlesville, Oklahoma*

The analytical data of subsurface brines from selected areas are subjected to automatic data processing using techniques such as principal component analysis or cluster analysis. The results are interpreted to determine the potential value of the brines and their geochemical relationships to the environment from which they were obtained.

SUPPORTED BY U.S. Dept. of Interior - Bureau of Mines

7.0092, STUDY SOCIAL VALUE OF RECREATIONAL FACILITIES RESULTING FROM IMPROVED WATER QUALITY *P. DAVIDSON, Univ. of Pennsylvania, Graduate School, Philadelphia, Pennsylvania 19104*

Specific Aims and Expected Results: The proposed research would utilize data from the Michigan Survey Research Center, from the National Recreation Survey conducted by the Bureau of the Census, and from other sources such as the Corps of Engineers and the Tennessee Valley Authority to extend and improve the previous study in several ways.

One addition will be to explore the way people respond to an improvement in recreational opportunity. As improvement takes place, recreational experts have found that the number of users and kinds of use increase as people have to learn how to engage in the new activities and acquire the necessary equipment. The ordinary projections of recreation participation neglect this dynamic aspect and often underestimate the demand which improved water quality will bring forth. A second aspect of recreation demand which has not been studied previously and which will be investigated is the possibility that an 'option' demand may be important. People may place a value on the fact that facilities are there to use should they want them even though they rarely if ever use them. The previous study revealed that such a demand does exist and that conventional means of recreation evaluation miss it completely. The proposed study would utilize the newly available data to shed light on this problem. Several journal articles or a book length study should result from this project.

SUPPORTED BY Resources For The Future Incorporated

7.0093, FEEDING PATTERNS OF THE FRESHWATER ISOPOD LIRCEUS BRACHYURUS *E. COOPER, Penn. State University, Graduate School, University Park, Pennsylvania 16802*

Reason for Study: Animals considered to be scavengers, such as *Lirceus brachyurus*, are uniquely important in the energetic relationship of ecosystems, particularly where they represent a significant portion of the biomass. This species represents a major component of polluted portions of some streams in central Pennsylvania. There is a wide variety of possible foods available and much uncertainty as to the exact nature and quantities of these that are actually consumed. It is also probable that the efficiency of the isopod in utilizing the various foods consumed may

7. RESOURCE DATA

vary from one food type to another. A study of its feeding patterns will clarify the nature of this species as a scavenger, expand the knowledge of energy flow pathways and add to our understanding of the biotic response to water pollution.

Objectives: 1. To rate preference for the various food types naturally available to the isopod. 2. To determine the rate of consumption of each food type for a 24-hour period and variations of the consumption rate during a 24-hour period. 3. To determine the growth rate of *L. brachyurus* on each food type. 4. To correlate laboratory studies on food selection with the relative abundance of the isopod on each food type in a polluted stream.

Design of Project: To study food selection, the response of the isopods to different combinations of food types fastened to specific locations in a chamber will be observed. To determine growth rates, radioisotopically labeled food materials will be used. To determine feeding rates, isopods will be grown for several weeks on single food types and their ash free dry weight increase during this interval will be calculated.

To correlate laboratory studies on food selection with the relative abundance of the isopod on each food type in a polluted stream, samples will be taken from stream locations having a predominance of each of the food types.

7.0094, RELATIONSHIPS BETWEEN DRIFT DENSITY AND PRODUCTION, GROWTH, CROPPING EFFICIENCY AND CONSUMPTION IN A NATURAL BROOK TROUT POPULATION

E. COOPER, Penn. State University, Graduate School, University Park, Pennsylvania 16802

Reason for Study: Production within a fish population is largely dependent upon the quantity and availability of food. Basic information is needed on how changes in feeding opportunity influence cropping efficiency and ultimately production of natural populations of fish. So little is known about this aspect of production that such information may go far in increasing or understanding of natural production. The emphasis of this study will be placed on differences in prey density and how it relates to fish growth, production and cropping efficiency.

Objectives: 1. Measure differences in growth and production of brook trout in two streams having different prey densities. 2. Determine cropping efficiency at different levels of prey density. 3. Estimate total consumption of two populations of brook trout. 4. Compare field studies with feeding experiments conducted in the laboratory.

Design of Project: Sections of two small Pennsylvania brook trout streams differing in productivity will be isolated with weirs. Fish will be captured and individually marked. Prey density will be measured with stationary drift nets. Diurnal and seasonal fluctuations in drift will be recorded.

The drift will be sampled at both ends of the study area at approximately 10-day intervals for two consecutive days. During the first day fish will be in the stream. The second day the fish will be removed and held in live boxes. Percentage changes in drift will be recorded. Additional studies will be conducted to determine the amount of drift added per unit area and the total estimated consumption in the study sections. The trout will be weighed, measured and sampled live for stomach contents. Separate studies will be conducted in the laboratory to determine growth rate with a range of known catch sizes.

7.0095, WATER RESOURCES SITUATION IN PUERTO RICO - A BIBLIOGRAPHY OF PUBLISHED INFORMATION

A.S. VAZQUEZ, Univ. of Puerto Rico, School of Engineering, Mayaguez, Puerto Rico

This study will be primarily centered on collection and organization of past and current information in conjunction with the preparation of a comprehensive report of the present water resources situation in Puerto Rico.

The objectives of the study are to: (1) Collect all published information on water resources of Puerto Rico. (2) Classify and

organize the said information in respect to areas of study related to Water Resources. (3) Compile a list of references accompanied by a summary of the procedure, objectives and findings of the respective references. (4) Prepare a report of the current water resources situation in Puerto Rico based on the collected and compiled information.

Data for this project will be collected from all federal, insular and private organizations on the island. The results of this study will be of immeasurable benefit upon completion to all water resources institutions in Puerto Rico.

7.0096, AUTOMATIC VHF RADIO HYDROLOGIC DATA REPORTING SYSTEM

R.A. FLDER, U.S. Tennessee Valley Auth., Knoxville, Tennessee

Information on rainfall, streamflow, and related data required to operate the TVA system of 32 reservoirs must be collected and transmitted daily to the operating staff. To provide rainfall and streamlevel data from stations in remote areas of the Tennessee Valley, an automatic VHF radio hydrologic data reporting system has been operated and maintained for the past 13-14 years. However, this equipment is approaching the end of its useful life.

During the past two years, a new system has been redesigned to replace the old system. The new system which will be completely operational by December 1968 is designed to:

1. Increase system dependability through the use of solid state components, 2. Make station operation independent of commercial power, 3. Decrease data transmission time, and 4. Provide narrow band system operation, as required by the Federal Communications Commission (FCC) by 1967.

With the new system, each station will report automatically every two hours, but any station may be called on at any time for additional reports. A complete report takes from seven to ten seconds per station. The new system can be easily expanded to a larger number of stations, can be coupled directly to the digital computer for data processing, and can be modified easily to report other variables such as temperature, wind speed, etc.

Because of the use of solid-state electronics, the average power required by a gaging station is so small that the power from thermoelectric generators using LP gas will be sufficient for many months of operation.

SUPPORTED BY U.S. Tennessee Valley Auth.

7.0097, REGIONAL CORRELATIONS IN HYDROLOGIC VARIABLES

J.E. CAFFEY, Univ. of Texas, School of Engineering, Arlington, Texas 76010

Collection, reduction and assembly of basic hydrologic data of rainfall, runoff and evaporation sufficient to support the teaching endeavor and provide base data for hydrologic research investigations. After sufficient data has been processed more detailed research into the character of inter-station correlations in annual precipitation and in annual river flows is to be done. Attempts will be made to identify local factors affecting the general patterns in inter-station correlation coefficients. If sufficient evaporation data is available, a first look will be taken at regional patterns in interstation coefficients for evaporation. Patterns are defined by fitting three dimensional surfaces to observe inter-station correlation coefficients.

7.0098, ENVIRONMENTAL GEOLOGY STUDY OF DALLAS-FORT WORTH METROPOLITAN REGION

R.L. TUCKER, Univ. of Texas, School of Engineering, Arlington, Texas 76010

A preliminary study of environmental and engineering geological aspects of the Dallas - Fort Worth Metropolitan Area is being conducted. The first phase includes obtaining and assembling data available from numerous agencies and firms. Needs of potential users of survey results are being determined. Special

7. RESOURCE DATA

purpose maps and reports will be developed in the future. It is expected that the results of the project will be useful in delineating regions of possible foundation problems, natural resources and groundwater sources.

SUPPORTED BY University of Texas

7.0099, STREAMFLOW TEMPERATURE INVESTIGATION, TEXAS

J. RAWSON, U.S. Dept. of Interior, Water Resources Division, Austin, Texas

This research is part of the program of water resources investigations conducted by the U. S. Geological Survey in cooperation with the State of Texas.

Purpose: To determine whether the temperature being collected at gaging stations is representative of the stream temperature. To determine the range of fluctuations of temperatures, particularly in pools and riffles, between gaging stations in the lower reaches of the Colorado and Guadalupe Rivers.

Methods: Profiles will be measured at stream cross sections using the thermistor thermometer at 13 gaging stations. The surveys will be repeated six times during the year so that seasonal and rate of flow differences will be observed.

An investigation will be made of the thermal changes in the Colorado River from Austin to the mouth and in the Guadalupe River from near Gonzales to the mouth. A pilot study will first be made by boat on the Colorado between Austin and Bastrop. Temperature measurements will be made along this reach to determine the range of fluctuations, particularly in riffles and pools. The results of the pilot study will be used to determine the details of the remainder of this phase of the study, specifically whether it will be necessary to continue with the surveys by boat or whether surveys made at each road crossing will be sufficient.

7.0100, TEXAS GEOLOGIC ATLAS PROJECT

V.E. BARNES, Univ. of Texas, Bureau of Economic Geology, Austin, Texas 78712

This project, which was undertaken with the support and cooperation of various professional geological societies and oil companies of Texas, is the compilation of a new geologic map of Texas. The map will be issued as a geologic atlas consisting of 37 individual sheets. Geologic information from published sources, unpublished theses and dissertations, oil company files, aerial photographs, and current field mapping is being compiled on Army Map Service base maps, drawn on a scale of 4 miles to the inch (1:250,000). The areas of outcrop of various rock units indicated on the map sheets will provide basic information for ground water studied.

The Tyler, Texarkana, Lubbock, Sherman, Palestine, Beaumont, Houston, Plainview, and Van Horn-EI Paso sheets have been published and color separation has been finished for the Amarillo sheet. Scribing has been completed for the Texas portion of the Tucumcari sheet and is in progress for the Abilene, Beeville-Bay City, and the Texas portion of the Perryton and Dalhart sheets. Field checking has been completed on the Dallas, Waco, and Brownsville sheets and is in progress on the Austin, Seguin, Brownwood, Big Spring, and Texas portion of the Clovis, Brownfield, and Hobbs sheets.

7.0102, DEVELOPING COMPUTER PROGRAMS FOR SOLUTION OF HYDROLOGIC PROBLEMS RELATED TO SMALL WATERSHEDS

L.J. GLASS, Texas A & M University System, Agricultural Experiment Sta., College Station, Texas 77843

Objectives: 1. Develop procedures whereby hydrologic data from experimental watersheds can be quickly analyzed by electronic computers giving correlation of the effects of various physiographic and climatic characteristics. 2. Develop computer programs for predicting hydrographs for small watersheds based on probabilities of any combination of physiographic and climatic factors existing at any given time.

Description of Work Proposed: Computer programs will be developed for analysis of hydrologic data from small watersheds. Also, computer methods will be developed to make predictions of watershed yields at future dates if possible. This is not an experimental research project, but instead a project for development of procedures for rapid systematic handling of hydrologic data to obtain the greatest and most general use of the physical data possible. The project does not require the collection of additional experimental field data.

7.0103, DEVELOPMENT AND EVALUATION OF IMPROVED TECHNIQUES TO MEASURE WATER-CONTENT OF SNOW

D.G. CHADWICK, Utah State University, Utah Ctr. For Water Resour., Logan, Utah 84321

Snow pressure pillows used for determining water-content of snow are both large and expensive. A new type of snow pressure pillow is being designed which holds about 1 percent of the alcohol commonly used in the conventional pillows. This newly designed low-displacement type pressure pillow, if successful, could cut pillow acquisition and installation costs to 15 percent of present costs.

Several types of the low-displacement pressure pillows will be evaluated. Also, several types of electrical pressure sensors will be evaluated by aid of a telemetering system which will remotely monitor and transmit hydrologic data on command.

7.0105, ELECTRONIC ANALOG SIMULATION OF THE SALINITY FLOW SYSTEM WITHIN THE UPPER COLORADO RIVER BASIN

J.P. RILEY, Utah State University, Utah Water Research Laboratory, Logan, Utah 84321

Efficient management of water resources involves a consideration of interacting quantity and quality variables, and therefore, requires an examination of the system as a whole. The overall approach being applied under this project requires the integration of the many system components, and to this end the electronic analog computer is well suited. In addition, through analog simulation of a complete flow system, this project will demonstrate a means of better understanding the various parameters involved in describing water quality.

Briefly, the major objectives of the research study are to: (1) Simulate the complex hydrologic and salinity flow systems of a river basin, and (2) Evaluate various management possibilities for a water supply of a given quantity and salinity.

7. RESOURCE DATA

Fundamental equations which describe the joint hydrologic and salinity system of a drainage area will be programmed on the analog computer. The demonstration unit selected is the Upper Colorado River Basin, and a computer model of the hydrologic and salinity system within this basin is being developed. When verified, the applicability of the model as an aid in water resources management will be demonstrated.

7.0106, APPLICATIONS OF ANALOG COMPUTER SIMULATION TECHNIQUES FOR RUNOFF PREDICTIONS WITHIN THE REYNOLDS CREEK WATERSHED

J.P. RILEY, Utah State University, Utah Water Research Laboratory, Logan, Utah 84321

The overall objective of this cooperative study is to examine the applicability of analog computer simulation techniques for investigating basic hydrologic processes and for establishing runoff predictions. Data will be obtained from the Reynolds Creek experimental watershed near Boise, Idaho. As far as possible, models will incorporate basic, fundamental expressions for describing the various hydrologic processes. Large and small increments in both the space and time dimension will be applied, with the range site being considered as a minimum space unit.

It is anticipated that it will be possible to examine the influence upon the model of each of the hydrologic parameters included as input quantities to the system. In addition, the study will help to indicate a direction of emphasis for the continuing data collection program on the Reynolds Creek Watershed.

SUPPORTED BY U.S. Dept. of Agriculture

7.0107, FEASIBILITY OF RATING CURRENT METERS IN A VELOCITY FIELD

G.V. SKOGERBOE, Utah State University, Utah Water Research Laboratory, Logan, Utah 84321

The Towing Tank method of rating current meters is widely accepted. The primary disadvantage of this technique is the length of time, and consequent cost of this time, required to establish the rating for a current meter.

The advantage of rating current meters in a velocity field is the rapidity with which the ratings can be acquired. Once the velocity field is established, one current meter after another can be placed in the moving fluid.

The primary objective of this study is to investigate the feasibility of rating current meters by placing them in a submerged jet emanating from a contracting cone section. Model cones will be constructed based upon both published design criteria and theoretical analysis. The model cones will be evaluated for uniformity of the velocity field and the effects of placing a pygmy meter in the jet. The results of the model studies will form the basis for designing a prototype system, which will also be evaluated.

SUPPORTED BY Utah State University

7.0108, STATISTICAL INFERENCE AND MODELS

E.J. GILROY, U.S. Dept. of Interior, Water Resources Division, Arlington, Virginia

An investigation is being made to determine the effect of the geometry, cross-sectional areas and volumes, of tree growth on time trends in sequences of annual ring widths. A statistical model for the time trend is needed to facilitate computer operations for trend removal in an observed sequence of ring widths.

The application of spectral analysis to describe the fluctuations of ground-water levels as they respond to storms and such factors as barometric pressure and earth tides is being investigated. The analysis is aimed at determining the response function of an aquifer and as a tool for filtering out frequencies for certain causative factors.

A Markov binomial model is being used to determine the probability distribution and the associated moments for the number of peaks in a partial duration series. The use of a Markov model provides a simple and direct means of accounting for the lack of independence among the peaks.

7.0111, COOPERATIVE STUDIES WITH FEDERAL AND STATE AGENCIES

W.J. BECK, U.S. Dept. of Hlth. Ed. & Wel., Pac. Nw. Marine Hlth. Sc. Lab., Gig Harbor, Washington 98335

Assistance will be provided to the Washington State Health Department on hydrological and microbiological surveys associated with sanitary surveys of Willapa Bay and Grays Harbor estuarine areas. Assistance will be provided to the Alaska Health Department in assaying shellfish for paralytic shellfish poisons.

SUPPORTED BY U.S. Dept. of Hlth. Ed. & Wel. - P.H.S.

7.0112, OCEANOGRAPHIC DATA COLLECTION - MIDDLE PUGET SOUND

W.J. BECK, U.S. Dept. of Hlth. Ed. & Wel., Pac. Nw. Marine Hlth. Sc. Lab., Gig Harbor, Washington 98335

Collection of oceanographic data for temperature, salinity and bacteriology at future laboratory site in Middle Puget Sound will be continued. Continuous recordings of temperature and salinities will be continued. Pacific oysters will be used to determine the potential uptake of metals by bivalves at this location.

SUPPORTED BY U.S. Dept. of Hlth. Ed. & Wel. - P.H.S.

7.0113, WETLANDS ECOLOGY LITERATURE REVIEW

S.J. KLEINART, State Dept. of Nat. Resources, Madison, Wisconsin 53701

To develop a bibliography on wetlands in the categories of hydrology, biology, ecology, management and economics. This bibliography will be used in determining gaps in knowledge about wetlands values which must be filled by future research and will form the basis for a statewide wetland ecology program which will include research and planning.

The bibliography will be published in 1968. This bibliography will be kept current each year as part of the Wisconsin Wetland Ecology program.

SUPPORTED BY Wisconsin State Government

7.0114, BIOPOTENTIAL OF NATURAL WATERS

J. KOONCE, State Dept. of Nat. Resources, Madison, Wisconsin 53701

Objectives: A research program will be initiated to explore various modifications of techniques of measuring primary productivity to find a method suitable for acid bog lakes. While most of the methods (14C assimilation, O2 evolution and CO2 uptake) have been applied to oligotrophic and eutrophic lakes,

the dystrophic lakes have neither been adequately explored, nor have reliable methods been developed to measure their primary productivity. In conjunction with this major emphasis, seasonal variation of phytoplankton biomass and major nutrient levels (phosphate, nitrate, and the cations: calcium, iron, manganese, and sodium) will be observed. This study will, therefore, develop methods for and provide useful data on the primary trophic level of acid bog dystrophic lakes.

Procedures: At intervals during the summer, water samples from selected stations in the study lakes will be taken for chemical analysis and biomass determination. If the techniques prove fruitful, year round observations may be initiated. Productivity measurements will also be made in situ using a modified ^{14}C assimilation method and CO_2 uptake rate method. Water samples will be returned to the Trout Lake Laboratory where colorimetric analysis of phosphate and nitrate will be conducted. Some samples will be fixed and returned to Madison for atomic absorption spectrophotometric determinations of calcium, iron, manganese, and sodium content. Phytoplankton biomass will be determined with the Uttermohl sedimentation technique and major species will be identified to the species level.

7.0115, DEVELOPMENT AND IMPROVEMENT OF INSTRUMENTATION AND SAMPLING GEAR FOR USE IN LIMNOLOGY AND FISHERY BIOLOGY

J. MAGNUSON, State Dept. of Nat. Resources, Madison, Wisconsin 53701

Objectives: To increase the accuracy, precision, and ease of use of new and traditional instruments and sampling gear where a need is indicated.

Background: Relatively little attention has been paid to the improvement of instrumentation and standard sampling gear which has been traditionally utilized in limnological and fisheries research for biological sampling and data recording. Such improvements are needed and recent development in electronics technology suggest that they are entirely feasible.

Procedures: Experimentation will be initiated to design and construct a towable plankton counter for in situ measurements of zooplankton distribution and abundance. Work will continue on the development of an electronic scale reader. New circuitry will be developed for the ultrasonic white bass tag which will allow monitoring the depth of swimming and swimming movements. One study will center on the effects of this internal tag on fish behavior. The larger ultrasonic tags will be modified to reduce weight while maintaining greater range for use in tracking fishes such as the salmon or trout. A rolling vertical gill net will be designed and developed for use in Palmetto Lake and other oligotrophic lakes to investigate distributions of the pelagic fishes. Field aquaria will be developed for in situ measurements of oxygen tolerances of fishes in bog lakes during the winter.

8.0005, SCOUR AT RELIEF BRIDGES

E.M. LAURSEN, Univ. of Arizona, School of Engineering, Tucson, Arizona 85721

Laboratory investigation to find the effect of sediment size and velocity of flow on the limiting depths of clear-water scour in simple relief-bridge geometries. Long contractions and abrupt contractions will be studied. The experimental data will be compared to an approximate solution of the problem previously published by the principal investigator.

SUPPORTED BY University of Arizona

8.0006, SHEAR CHARACTERISTICS OF UNDISTURBED WEAK CLAY

H.B. SEED, Univ. of California, School of Engineering, Berkeley, California 94720

The objective of this project is to investigate the influence of pore water pressure on the strength characteristics of undisturbed weak clays with particular reference to the applicability of the results to the design of embankments resting on such clays.

Prior to FY 68, emphasis in this project was placed on the methods for measuring the shear strength of weak clays. The effects of sampling disturbance were evaluated as were the influences of anisotropy, plane strain versus axially symmetric strain conditions, reorientation of principal stresses, cap and base restraint of test specimens, etc. In FY 68, finite elements methods of stress analysis were developed to permit application of strength and stress-deformation characteristics of weak clays to stability analyses of embankment foundations.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0007, CHARACTERISTICS OF SOILS UNDER SUSTAINED STRESS

H.B. SEED, Univ. of California, School of Engineering, Berkeley, California 94720

From a review of literature, it is apparent that the creep and creep strength behavior of soils is dependent on a large number of inter-related factors. We need more information on this subject to insure that the strength of soil, at least under some conditions may not be less than that determined by current procedures. This has led to a program of research to identify and clarify the factors of controlling response of artificially prepared sand-clay mixtures and of natural disturbed clays to the action of sustained stress, with particular reference to time-dependent deformation, pore-water pressures, and the phenomenon of rupture at stress levels lower than required to cause failure in normal strength tests.

After a thorough critical review of all available literature on this subject, a detailed experimental test program will be conducted with the following variables: clay type, size distribution and texture of the granular phase, relative proportions of sand and clay, water content, density, and structure. Also, the following test variables will be included: age of specimen, preconsolidation pressure, confining pressure, deviator stress intensity, duration of creep, and type of loading in strength test.

California State Government

8.0009, CALIFORNIA AQUEDUCT, NORTH SAN JOAQUIN DIVISION, FISH PROTECTIVE FACILITY

A.R. GOLZE, Univ. of California, Graduate School, Davis, California 95616

Work consisted of hydraulic model studies to evaluate the hydraulic performance of various features of the Fish Protective Facility located on the California Aqueduct intake channel from the Sacramento-San Joaquin River Delta. Reasonably uniform flow throughout the absence of nonflow areas in the structures is necessary to assure efficient fish collection by this louvered guidance principle facility.

Model tests were conducted to determine the length of inlet and outlet training walls required to attain uniform velocities of flow in separate 21-foot channels and various combinations of channels across a 160-foot-wide, 200-foot-long reinforced concrete waterway at depths varying from 20 to 25 feet and with velocities varying from 1.5 to 3.5 fps.

Another phase of model testing was to determine the most feasible configuration to achieve uniform velocity of flow through a transition from two 4-foot-diameter pipes to a 10-foot-wide reinforced concrete channel at depths from 4 to 10 feet with velocities varying from 1.5 to 3.5 fps. The 1:7.5 scale model included 6-inch clear plastic pipes with simulated gate and butterfly valves and flexiglass walls and roof on the transition to permit visual observation of flow. An acceptable flow was achieved by alteration to the slope of the transition roof.

The final phase of model testing determined the need for and the required positioning of flow guide vanes in a fish bypass intake structure. This structure transitions flow from a 25-foot-deep, one-foot-wide intake into a 4-foot-diameter pipe. University of California at Davis Water Science and Engineering Papers Nos. 1012 and 1019 have been published giving the results of the above tests.

SUPPORTED BY California State Government

8.0010, DRAINAGE DESIGNS AS INFLUENCED BY CONDITIONS IN THE VICINITY OF THE DRAIN LINE

J.N. LUTHIN, Univ. of California, School of Engineering, Davis, California 95616

Exit gradients causing movement of sands and silts into drain pipes will be determined for a variety of conditions including: drain pipe diameter, size and geometry of gravel envelope, condition of backfill, relative hydraulic conductivity of the gravel envelope with respect to the surrounding soil, depth to impermeable layer, soil stratification. Theoretical analyses utilizing existing equations and with solutions prepared by the computer for cases not covered by present theory will be used to study conditions affecting the flow into the drain pipes. Experiments will be run on field scale laboratory models and on smaller models for the purpose of determining the optimum size of the gravel envelope. The effect of crack width on the flow into conventional drains will be studied. The optimum spacing of perforations in plastic drains will also be studied.

8.0013, THE EFFECT OF HIGH CONFINING PRESSURE ON THE DEFORMATION OF SOIL

K.L. LEE, Univ. of California, School of Engineering, Los Angeles - U.C.L.A., California 90024

The present trend in the design and construction of earth dams is toward dams of progressively increasing heights with correspondingly increasing stress on elements of soil in and near the foundations. The satisfactory performance of these structures requires a clear knowledge of the engineering properties of soil at these high confining pressures. Preliminary investigations have produced data which suggests that some of the important design properties may be adversely affected to a considerable degree by high confining pressures but present knowledge does not allow definite conclusions to be made. This study is intended to supply sufficient basic fundamental data to clarify the effect of high pressures on the strength and deformation properties of soil to guide the detailed design investigations for future major earth dams.

SUPPORTED BY U.S. National Science Foundation

8.0014, PROTOTYPE ANALYSES - STRUCTURAL BEHAVIOR

W.L. BERTSCH, U.S. Army, Engineer District, Sacramento, California 95814

Purpose is to determine if use of a 'Linometer' will improve accuracy of measurement of concrete dam alignment at Corps dams. The 'Linometer' is a new surveying instrument in which a beam of light can be projected between monuments at ends of dam. This beam of light serves as a reference axis from which deviation of any point along the axis may be measured. Only piece of equipment that is moved is device which measures distance of intermediate markers from light beam. Device must be set on each marker in much the same fashion as the micrometer caliper target must be in present system. By use of 'Linometer', entire reference line is fixed for duration of particular survey, enabling deviations to be read from line at any point.

District completed, by contract, one precise alignment survey on Pine Flat dam in FY 1967 and tentatively scheduled second survey at Table Rock Dam, Little Rock District, for FY 1969. Contracts include adaptation of instruments for use with present type of monuments at dams. 'Linometer' surveys to coincide as practical with appropriate district's regularly scheduled precise alignment surveys. District will prepare a report on accuracy, characteristics, costs, and suitability of new method.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0015, ADHESIVE PROTECTION FOR CONCRETE

E.J. BOYD, U.S. Army, Engineer District, Sacramento, California 95814

Location: Pine Flat Dam, Kings River, California. Objective: Determine effect of epoxy resin applications in reducing erosion, or damage from cavitation in concrete conduits subject to high velocity flows. Applications were made in November 1957. Following types of epoxy resin foundations were used: 1. Epoxy adhesive, consisting of 100 parts of epoxy resin to 27 parts reactive catalytic agents. 2. Epoxy mastic coating, consisting of 100 parts epoxy resin, 27 parts inert filler and 25 reactive catalytic agents. 3. Epoxy mortar, consisting of 100 parts epoxy resin, 300 parts sand and 54 parts reactive catalytic agents.

Tests of epoxy applications were made in 1958, 1961, 1963, 1964, and 1967. Reservoir water surface elevations and demand for irrigation water did not produce conditions suitable for further testing in 1965, 1966, or 1968. Applications have been tested at full gate opening under heads from 334 feet to 379 feet and at partial gate openings under heads from 71 feet to 250 feet.

Partial gate opening tests will be continued at progressively higher heads until damage to conduits occurs or until a head of approximately 400 feet has been reached.

None of the areas treated with epoxy resin mastic has been damaged during periods of testing or normal operation.

8.0016, SHEAR STRENGTH OF ROCK FILL

G.E. BERTRAM, U.S. Army, Engineer Division, San Francisco, California 94111

The purpose of this study is to determine the shear strength, stress-strain, and volume change characteristics of materials such as crushed rock, quarry-run gravels, siltstones, sandstones, limestones and mixtures of such materials used to construct rockfill dams. These granular materials will be compacted by vibration to expected placement densities and at varying gradations and sheared under triaxial compression using 12' and 5' diameter specimens. Confining pressures generally range from 60 to 500 psi and maximum particle size in the 12' specimen is 3' and in the 45' specimen is 8'. Specimens are also loaded in one-dimensional consolidometers having a diameter of 12' to determine volume change characteristics under extremely high pressures.

8.0017, ACCESSIBILITY OF PORES IN POROUS MEDIA

F.A. DULLIEN, Univ. of Waterloo, School of Engineering, Waterloo - Ontario, Canada

Systematic determination of the accessibility of pores, i.e., the fraction of pore space occupied by relatively large pores that is accessible only through narrower ones.

If Alpha, which is a function of delta, is the pore size distribution function, then the accessibility, alpha prime, which is a function of delta and delta sub e, gives the fraction of alpha, which is a function of delta, that is accessible through pores having diameters between delta sub e and delta sub e plus the differential of delta sub e.

SUPPORTED BY Amer. Chemical Society

8.0018, DRAINAGE SYSTEMS - PIPE AND FILTERS

A.J. AISENBREY, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Research work has been and is being conducted for pipe drainage systems for irrigated agricultural lands by many different agencies throughout the world.

A need exists for an assembly and evaluation of this work culminating with a presentation in a form for use by designers.

Filter materials, efficiency, and gradation limits for granular filters performing under various hydraulic gradients with various soil base materials will be investigated. Materials used for pipe, size, and location of apertures, friction factor, and structural strength, are also of special interest.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0019, SITE TESTS TO DETERMINE STRUCTURAL PROPERTIES OF ROCK FOUNDATIONS

F.A. ANDERSON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

In order to gain useful information on the characteristics of foundation rock in the area of large dams, underground powerplants and tunnels, and the means of stabilization of this rock, the Bureau of Reclamation is working in the following areas:

Equipment has been designed and fabricated and procedures have been developed to determine the in situ shear strength of foundation rock. Tests have been conducted utilizing foundation rock from Morrow Point damsite, and further tests will be conducted at Glen Canyon Dam utilizing this equipment.

Development of a lightweight assembly for field jacking tests is underway to allow earlier testing in remote areas where large hydrostructures are planned. This basic considerations of the design are the unit weight of the components and the loading capacity.

Tests of various proprietary rock bolt anchorage types have been conducted to determine those types which are most effective in varying types of foundation rock. Further testing will be done as additional anchorage systems become available. The

8. ENGINEERING WORKS

results should provide the basis for rational design criteria of underground structures.

Status: shear tests have been completed at Glen Canyon, light weight field jacking tests have been completed at two Forks damsite, Colorado, and radial jacking tests are to be done at Two Forks Colorado, and at Auburn damsite, California, future work will be done at project sites as needed.

8.0020, STRUCTURAL ANALYSIS

H.W. ANDERSON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Since electronic computers are available for use in solving complex structural analysis problems, new and different methods of structural analysis compatible with computer usage should be considered.

The following investigations shall be continued: 1. search of scientific literature for new ideas and methods and serious study given to their applicability in solving particular design problems. 2. Some of the particular solutions being considered and used are: a. Elastic frame analysis; b. Stability analysis; c. Slab analysis d. Stress analysis by finite elements method; e. Trial load method of analysis; f. Concrete beam design; g. Concrete column design; h. Concrete volume computations

8.0021, DETERMINATION OF IN SITU STRESSES BY STRAIN-RELIEF METHOD

W.G. AUSTIN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Test methods, instrumentation, and procedures for measurement of 3-dimensional stress within structures will be developed to evaluate structural conditions. This research also provides a means of determining when and if rehabilitation is necessary on older structures such as concrete dams.

Currently used methods for in situ combined stress determinations using the 3-dimensional bore hole gage will be improved. Also, other types of instrumentation and procedures for obtaining strain-relief measurements will be investigated for later inclusion in the research program to increase accuracy and economy of in situ stress determinations.

8.0022, POURBAIX DIAGRAM FOR CORROSION EVALUATION

T.E. BACKSTROM, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The use of the Pourbaix diagram for evaluating the corrosivity of soils and waters will be studied, with the view of developing a standard test for corrosivity evaluations. This application could provide a suitable soil or water parameter for determination of corrosivity.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0023, CORROSION OF METALS IN CONCRETE

T.E. BACKSTROM, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The object of this program is to determine the effects of the common parameters such as chloride concentration and steel stress level on the corrosion of steel embedded in concrete. To be studied are the effects of chloride ion concentration, prestressing levels, and concrete composition on the corrosion process. Tests will be pointed toward problems of immediate interest to the Bureau.

The effect of crack width in concrete on the corrosion of embedded steel is the area of immediate concern to the Bureau.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0024, NEW DEVELOPMENTS IN CATHODIC PROTECTION AND CORROSION STUDIES

T.E. BACKSTROM, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

This is a continuing study of corrosion and corrosion control. Current projects are (1) determination of the influence of cathodic protection on protective coatings, and (2) investigation of the use of platinized titanium anodes for cathodic protection.

Standard Bureau protective coatings are being evaluated for resistance to various levels of cathodic protection. The use of platinized titanium wire for providing cathodic protection to the interior of wells and well metalwork is being studied. Further applications will be found in protection hydraulic structures in which commonly used anodes are not practicable due possibly to geometrical, size, or safety considerations.

Standard Bureau protective coatings are being evaluated for resistance to various levels of cathodic protection. 8.0025, ALLOY SELECTION FOR CAVITATION RESISTANCE

T.E. BACKSTROM, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The program is designed to determine a suitable test procedure for alloy selection for cavitation resistance; a new parameter for evaluating the order of alloys as to cavitation resistance has been developed. Testing will be performed to determine the applicability of the parameter to cavitation in hydroturbines.

Tests will be made to evaluate the cavitation intensity levels experienced in turbines and in accelerated test devices, and tentative recommendations for a suitable turbine material made.

A field test program to determine the applicability of the laboratory test results to operating turbines will be made.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0026, DRAFT TUBE SURGES

C.G. BATES, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

A large percentage of hydraulic turbines have draft tube surges which cause noisy operation, vibration, and power surges. These problems are usually overcome by the admission of air and/or by the installation of baffles on the draft tube liner. However, occasionally a tube will not take air, or baffles do not help. Additional research on the phenomena is desired to assure success of original and modified designs.

Several venting schemes recommended by manufacturers and one scheme recommended by this office have been tried with only partial success. Vented splitters installed in the draft tube have stopped surging but not without loss of capacity and efficiency. Further attempts will be made to find corrective and preventive designs.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0027, GLASS FIBER REINFORCED PLASTIC MORTAR PIPE FOR PRESSURE IRRIGATION DISTRIBUTION SYSTEM

B.P. BELLPORT, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The 1/2-mile-long experimental test section using 15-inch-diameter glass reinforced plastic mortar (Techite) pipe in Lateral 7-9.5S of Westlands Water District will be instrumented in part to record strains and deflections. In addition, 10-foot long sections will be removed at 6-month intervals for tests and evaluation. The studies are part of a program for determining service, charac-

8. ENGINEERING WORKS

teristics, suitability, and possible benefits of using this new type of pipe for Bureau work. The Westlands installation will provide severe conditions and will indicate the direction for possible future studies of much larger sized pipes.

This research program will consist of monitoring the field test instruments and recording the results, removing and examining the 10-foot sections and recording the results, making engineering evaluations based on these results, and preparing reports that discuss the tests test results, and the conclusions and recommendations reached. The program will be integrated with studies being made in Denver.

8.0028, SEDIMENTATION AND WATER SALVAGE STUDIES-SOIL AND MOISTURE PROGRAM

W.M. BORLAND, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Sedimentation Studies. In a continuation of sedimentation studies, field data collected on the aggradation and degradation upstream and downstream from existing diversion dams will be analyzed; studies based on this data and observed conditions will be utilized to gain a better understanding and provide a solution to the problem, and on-site field observations and studies of stream channels will be made toward (1) predicting the maximum scour at siphon structures and (2) recommendations for the stabilization and protection of channel banks.

Transportation by Phreatophytes and Other Nonbeneficial Vegetation. This study is for the purpose of developing reliable methodology for evaluating the transpiration of the phreatophyte growth and the water savings that can be salvaged by eradication, control, or conversion by determining importance of depth to water table and density of growth on rate of use, and effectiveness of existing and potential eradication projects, and establishing criteria for selection of eradication methods, resulting costs and effectiveness. Data obtained from areas in Arizona and New Mexico and eradication projects on the Rio Grande and Pecos Rivers will be analyzed using the newly developed Jensen and Haise solar radiation consumptive use method for establishing transpiration rates and indexes.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0029, STRENGTH OF ROCK MASSES

J.R. BRANDON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Strength of rock mass studies include, in part, the effect of shear and joint planes on the rock mass stability. To investigate this problem, shear tests on rock samples are required.

To accomplish the above, a three phase undertaking is proposed: (1) developing shear testing equipment at U. S. Bureau of Reclamation laboratories, (2) University of Illinois will study effect of shear stresses on lubricated and grouted shear planes and joints, (3) Colorado School of Mines will develop a theoretical and experimental approach to a bolted rock structure to see what effect joints and shear planes have on a rock mass restrained by bolts or other means.

Phase (1) design completed - equipment to be fabricated FY 69 if funds available, (2) and (3) to continue into FY 69 under contracts if funds available.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0030, ULTIMATE STRENGTH DESIGN

H.O. BROUGHTON, U.S. Dept. of Interior, Structural & Arch. Branch, Denver, Colorado 80225

Numerous changes were made in the latest revision of the ACI Building Code and serious consideration should be given to use of all these revisions on the heavy construction used in hydroelectric structures.

Preliminary investigations indicate that load factors specified in 'Building Code Requirements for Reinforced Concrete, ACI 318-63' for ultimate strength design are satisfactory for small pumping plant structures.

Further investigations will be restricted to study of the recommended load factors for ultimate strength design when applied to heavily loaded massive structures.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0031, DESIGN OF UNDERGROUND POWERPLANTS

G.L. BROWN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The following investigations have been undertaken in the field of rock mechanics: 1. Determine the torque-tension relationship in rock bolting. Development of a lightweight hydraulic ram for true tension installation. 2. Determination of in situ stresses by bore-hole gage technique. Unidirectional bore-hole gages are adequately covered in Bureau of Mines publications-Bulletin 587 and RI-5881. Presently working on development of a three-dimensional bore-hole gage and will ultimately extend this to development of a three-dimensional bore-hole gage. 3. Development of 'finite element' solutions for stress problems and programmed for electronic digital computer. The two dimensional analysis of the stress concentration around an underground opening including effects of jointing, altered zones due to blasting, faults, variation of rock type and rock properties, and other physical features of the rock mass is reported in the paper 'Morrow Point Underground Powerplant' by W. H. Wolf et al, Proceedings ASCE Power Division Specialty Conference, Denver, Colorado, August 13- 20, 1965, pp. 493-534 and is to be further reported by the papers 'The Influence of Discontinuities on the Stability of an Underground Opening' by I. G. Taylor and 'The Finite Element Solution Applied to Rock Mechanics' by H. W. Anderson and J. S. Dodd, in the forthcoming First International Congress of the International Society of Rock Mechanics to be held in Lisbon September 25 through October 1, 1966.

8.0032, STRUCTURAL RESPONSE, DYNAMIC LOADS

G.L. BROWN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The paramount dynamic load considered for hydroelectric plants is an earthquake loading. With the availability of electronic computers, characteristics of vibration can be computed for structures and typical dynamic load patterns applied. The following investigations should be made.

1. Continue review of current literature on the following subjects:

a. Methods of analysis for computer application. b. Effects of geology and foundation on earthquake response spectral. c. Damping factors for heavy concrete rigid structures such as powerplants.

2. Determine the number of modes of vibration which should be considered to insure adequate design for the structure. Study is complete. Results are summarized in final designs for visitor facilities at San Luis Pumping-Generating Plant.

3. Investigate the effects of the extreme stiffness inherent in the main body of hydroelectric powerplants. Study complete, see San Luis final designs.

4. Have adopted methods of analysis using response spectra adjusted for a particular site and actual dynamic properties of the structure.

Write a computer program for analysis of structural dynamic properties and application of response spectrum curves to analysis of structures for earthquake damage resistance.

8.0033, STRUCTURAL PROBLEMS ASSOCIATED WITH CONCRETE PIPE

L.H. BURTON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

As outlined in Report No. CB-3, 'Study of Earth Pressures on Rigid Pipe,' field tests of buried rigid pipe are proposed. Results of these tests will be studied and revisions in design criteria, if indicated, developed and reported. Studies have been underway to find a better approach to watertightness in concrete pipes. An ap-

8. ENGINEERING WORKS

proach involving width-of-crack criteria is being pursued. A large number of hydrostatic tests, on various head classes of concrete pipe, are necessary to improve the validity of data used in this study. As results of these tests become available they will be evaluated and design criteria developed and reported.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0034, FACTORS AFFECTING STABILITY OF ARTIFICIAL AND NATURAL CHANNELS

E.J. CARLSON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

These studies are concerned with field and laboratory investigations of stable channel shapes as well as boundary shear (critical tractive forces) for cohesive soils.

Field tests at lower than design discharge have been made on experimental reaches of trapezoidal channels with 1-1/2:1 side slopes constructed on less than critical, critical, and greater than critical hydraulic slopes for stability. These test reaches are all in cohesive soils. The boundary shear is measured with a Preston tube. Tests will be concluded with a set of field measurements in the experimental reaches at design discharges and will include velocity distribution, boundary shear, water surface slope, and vane shear tests on the soil.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0035, INVESTIGATION OF EROSION AND TRACTIVE FORCES ON CANALS--OPEN AND CLOSED CONDUIT RESEARCH PROGRAM

E.J. CARLSON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The purpose of the investigation is to correlate performance of soils in unlined and earth-lined canals with soil characteristics and hydraulic conditions. Based on criteria developed in the study of about 50 Bureau canals, three field test sections on a new unlined canal in a loessial soil area have been established to check the criteria. One section was designed with a slope sufficient to cause erosion, the second with a slope to cause the soil to be on the point of eroding, and the third section with a slope such that the canal would not be expected to erode. Laboratory tests to determine soil characteristics have been conducted on representative soil samples from the field test sections. During the 1965 irrigation season it is expected that hydraulic measurements will be made on the field test sections. A correlation of the soil and hydraulic properties and the performance of the test sections with respect to erosion will be made so that an adjustment of the present criteria for erosion can be made, if required.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0036, FIELD TESTS OF POWER TRANSMISSION EQUIPMENT

G.W. CLEAVELAND, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

By means of the main mobile power systems laboratory and its smaller mobile auxiliary, tests are made of basic power system parameters, the characteristics and adequacy of prototype power system apparatus, the requirements of future designs, and the characteristics of limitations of existing apparatus. The work that is currently proposed for investigation includes tests of coordination of transmission line protective relaying on the Colorado River Storage Project. Other work for investigation includes tests of EHV system switching surges, line reclosing capability, adequacy of excitation control including time constants of control components and capability of circuit interruption.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0037, GATES, VALVES, AND ORIFICES

D. COLGATE, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The objective of this project is to study the hydraulic features of control devices with the view of improving their design and operating characteristics. The seating, sealing, and extrusion prop-

erties of rubber gate seals under prototype heads to 600 feet are being investigated. Comparative operational data on several different seal designs have been obtained and tests are continuing. The basic parameters for air requirement relationships in gate structures using prototype and model measurements are being studied. An analytical study of the air requirements of an emergency penstock gate was completed. The discharge coefficients for orifice plates located in unusual settings and for circular openings in pipe walls are being measured and evaluated.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0038, FLOW SURFACE PROTECTION

D. COLGATE, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The objective of this study is to determine the cavitation potential of surface roughnesses or misalignments subjected to high velocity flow. Misalignments or roughnesses can take several forms, including offsets, waviness, depressions, protrusions, bug holes, and surfaces that slope curve too rapidly away from the flow.

Laboratory tests have been completed for the design of an aeration slot to admit air into the stream in a tunnel spillway to prevent cavitation erosion. Selected hydraulic structures in which cavitation damage has occurred will be observed as opportunities arise.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0039, TRANSIENT FLOW IN OPEN CHANNELS

C.C. CRAWFORD, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

When the flow in an open channel is suddenly changed, surges are set up in the channel. These surges may be caused by starting and stopping pumps, operation of turnouts and checks, or operation of siphons. Currently available methods of analysis of such open channel transients need refinement and further development in order to provide the design engineer with better analytical tools. Methods of analysis should be able to account for shape of channel cross-section, bottom slope, surface slope, changes in cross-section, branch connections, dead ends, and side channel spillways.

Presently available methods of computing open channel transients will be reviewed and evaluated. The method of characteristics adapted for digital computer will be pursued.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0040, PROTECTION OF ERODIBLE CHANNELS AND SURFACES WITH GRAVEL OR RIPRAP

M.E. DAY, U.S. Dept. of Interior, Canals Branch, Denver, Colorado 80225

The protection of erodible channels by gravel or riprap is essential to reduce scour and for the protection of structures. The study of channel protection is necessary to insure the use of sufficient material at minimum cost, since protective materials are expensive and often difficult to obtain. The collection of data on the field performance of gravel and riprap will continue. Information desired for various types and sizes of structures on canals and cross-drainage channels and at diversion dams, and for various flow conditions, includes location, extent, size, number of layers, bedding and foundation material. Field and laboratory data will be compared and existing design procedures and instructions will be examined to improve design criteria and to establish standards where appropriate. Related areas of study include underseepage control, reverse filter design, integration with various types of lining, hydraulic action of flowing water, ground water and waves, energy and the protection of earth fills.

8.0041, EXPLOSIVE EXCAVATION IN THE DEVELOPMENT OF WATER RESOURCES

M.E. DAY, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

8. ENGINEERING WORKS

The Plowshare Program of the U.S. Atomic Energy Commission is established to develop the technology required for the peaceful applications of nuclear energy. Excavation by nuclear explosions is one phase of the Plowshare Program. Among the primary purposes are the development of design data and the improvement of related investigative techniques. The Bureau is interested in this program as it relates to the current rapid excavation research devoted to finding ways to speed up excavation work and reduce the cost. Test and research includes the use of chemical explosives. Possible uses of excavation by explosion include: Canal excavation, reservoir excavation, construction of earth and rockfill dams including cofferdams, development of underground water supply and storage, and conversion of tunnel schemes to open cut excavation. Design research by the Bureau will include the following activities: (a) Study the literature to keep abreast of developments; (b) establish and maintain contact with other agencies to determine new developments in related fields and possible applications to Bureau work; (c) observe tests by other agencies.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0042, PIPELINE AND TUNNEL HYDRAULICS

R.B. DEXTER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The studies are concerned with surges in pipelines and friction losses in various types of pipes and tunnels. Frequently, long pipelines are separated into sections by pipe checks or pipe stands which eliminate the need for high pressure piping. This type of system has the disadvantage that, unless properly proportioned, excessive surging will occur. With the aid of a hydraulic model of a pipeline that included seven pipe checks in series and a flow control valve that provided uniform increments of discharge change with respect to time, an ADP program has been developed to compute surges for various pipeline operations. A hydraulic performance test of a 115 mile-long portion of the Canadian River Aqueduct, Texas, has been performed to define pressure surges in the system in relation to discharge changes. Data were also obtained to define hydraulic frictional resistances in long reaches of precast concrete pipe with diameters of 72 inches, 66 inches, and 54 inches. Analytical and experimental studies were made to investigate the type and magnitude of surges which can develop with steady inflow into a pipe system containing a series of check structures.

The performance of previously constructed conduits is a reliable guide for predicting the performance of new designs. Therefore, a field testing program is being continued to evaluate hydraulic resistance coefficients of large water conduits. Installation of test facilities is in progress in large diameter concrete-lined pressure and free flow tunnels to permit measurements of hydraulic friction heads.

8.0043, FACTORS INFLUENCING THE DURABILITY OF CONCRETE

J.T. DIKEON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Work has been conducted on (1) correlation of freeze-thaw data obtained from field and laboratory concrete specimens; (2) correlation of tests for sulfate resistance and uncombined calcium hydroxide with performance of cement-asbestos pipe. The study of silicons, epoxies, and other agents as surface treatments for improving the durability of concrete is active. Investigation of maximum permissible sulfate content of curing water for concrete is underway. Results of tests with concentrations of sulfate in mixing water for concrete are in Report C-1258. Data are collected from longtime, outdoor storage specimens to determine the effect of pozzolan on the durability of concrete. An extension of initial tests, which have been reported are scheduled to investigate the effect of freezing fresh concrete on its strength and durability. Nearing completion is an investigation into effects of various factors on air void systems of mortars and concretes.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0044, FACTORS INFLUENCING THE RESISTANCE OF CONCRETE TO SULFATE ATTACK

J.T. DIKEOU, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The use of Type V cement or other special cements low in tricalcium aluminate will usually provide adequate protection against sulfate deterioration. However, other factors such as cement content, water-cement ratio, and admixtures in the form of accelerators, retarders, air-entraining agents and pozzolans have a pronounced influence on the rate and degree of sulfate attack. These factors are investigated through use of concrete specimens subjected to an accelerated wetting and drying cycle sulfate test, and a continuous soaking test. Both tests utilize a 2.1-percent solution of sodium sulfate. Other concentrations and types of sulfate solution are used in special investigations and research projects. Rate of deterioration is determined by periodic length change measurements. Work in this area includes (1) evaluation of special cements and admixtures submitted for testing, (2) correlation of results between the accelerated and soaking tests (3) analysis of test data obtained from longtime tests of concrete specimens stored in alkali ponds at the Columbia Basin Project, Washington; and (4) investigating the effect of fly ash pozzolan on sulfate resistance of concrete containing Types I and V cements (5) Effect of Absorption of concrete Drain Tile.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0045, THE DEVELOPMENT OF CONCRETE-POLYMER MATERIALS

J.T. DIKEOU, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

A research and development program is being sponsored by the Bureau of Reclamation, the Atomic Energy Commission, and the Office of Saline Water to study the formation of concrete-polymer materials. Brookhaven National Laboratory and the Bureau of Reclamation are cooperating in the investigative phase of this program. Experiments have been conducted to determine the feasibility of the impregnation and in-situ polymerization of monomers in preformed concrete and the inclusion of monomers as part of the formulation of a fresh concrete mix followed by polymerization. Two modes of initiating polymerization- gamma radiation and thermal-catalytic-are being studied. Results to date show remarkable improvements in properties of concrete, including increased strength, durability, abrasion resistance, cavitation resistance, resistance to chemical attack and to hot distilled water, and reduced permeability, absorption and creep.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0046, EFFECT OF RETARDING ADMIXTURES ON PROPERTIES OF CONCRETE

J.T. DIKEOU, U.S. Dept. of Interior, Div. of Research, Denver, Colorado 80225

Freeze-thaw tests are being performed on concretes containing four different commercial water-reducing, set-controlling admixtures. These admixtures were combined with four distinctively different aggregates to determine the effect of the admixtures on the durability of concrete. The effect of several different commercial admixtures on rate of air loss and slump loss has been studied. A report correlating these variables will be forthcoming.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0047, DEVELOPMENT OF NX BOREHOLE INSTRUMENT FOR DEFORMATION MODULUS

M. DUCKWORTH, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Exploratory drill holes (NX-3-inch hole) are used to secure cores, geophysical data, and geological data at proposed project sites. In situ small scale deformation testing would provide early statistical data on deformation modulus needed for preliminary

8. ENGINEERING WORKS

design. Instrumentation to be developed would be inserted in the exploratory drill holes at various depths and deformation tests performed even below the water table. Various instruments are available for use in soils and low modulus material. Instruments are needed which can be used in medium and high modulus material. Initial work will consist of evaluating previously developed commercial equipment. Final phase will adapt or modify instrument to fulfill Bureau needs.

8.0048, INVESTIGATION IN THE DEVELOPMENT AND IMPROVEMENT OF SPECIAL CEMENTS

R.J. ELFERT, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Concretes having improved strength, durability, elasticity, and volume change characteristics are needed. Likely means of achieving these objectives are changing the characteristics of the cement during manufacture or altering the hydration products by additives or curing environment.

A study will be made of the effect of various additives and curing environments on the hydration products of portland cement. Physical, chemical, differential thermal analysis, and X-ray methods will be used to examine the nature and effect of the resulting binders.

This project will also include a limited investigation of the potential use of expansive cements in Bureau of Reclamation concrete.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0049, PERFORMANCE OF WATER-REDUCING SET-CONTROLLING ADMIXTURES IN CONCRETE, MORTAR AND CEMENT PASTE

R.J. ELFERT, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Some water-reducing set-controlling admixtures behave erratically with certain cements. Construction difficulties from slump loss occurs due to incompatibility of cement and admixtures.

Performance of cement from selected sources will be analyzed to isolate characteristics which might cause abnormal behavior and admixtures. Also cement clinker of different compositions will be ground with calcium sulfate to study the interrelationship of cement composition, form, and amount of calcium sulfate and the admixture with respect to the setting characteristics of the cement.

8.0050, HARD SURFACE LININGS--LOWER COST CANAL LINING PROGRAM

L.M. ELLSPERMAN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Hard surface linings being investigated are asphaltic concrete and portland cement concrete. For asphaltic concrete an attempt is being made to find an economical material for the maintenance of older asphaltic concrete linings in existence. Material is needed for filling cracks which develop in this type of lining to protect the lining from further deterioration. Several field test sections of asphaltic concrete linings requiring maintenance have been selected. Various products proposed by manufacturers for treating the lining surface and filling the cracks are being used in the test sections and the performance of the materials evaluated.

Seepage through portland cement concrete lining is considered to be almost entirely through cracks and joints in the lining, and an investigation of various materials for sealing the cracks and joints is underway. Field test sections have been established in which joint and crack sealing materials are being field tested to determine performance. An evaluation of these materials will assist in formulating specifications for more effective joint and crack sealers, better maintenance of existing linings, and in construction of new linings.

A laboratory investigation is being started to determine the feasibility of reducing seepage through joints in concrete canal

lining by the application of a gel with a controlled time of set through the joint. The purpose of this would be to fill the voids in soil beneath the joint and thereby reduce seepage.

8.0051, MEMBRANE LININGS-OPEN AND CLOSED CONDUIT RESEARCH PROGRAM

L.M. ELLSPERMAN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Plastic film lining of polyethylene and polyvinyl chloride as buried membranes and butyl rubber as both a buried and an exposed membrane are being used in field experiments. Periodic field observations and a few field seepage tests are being conducted to determine performance and effectiveness in reducing canal seepage. Laboratory tests are conducted to evaluate these linings as improvements are made by manufacturers. Also, specifications for these linings are being developed.

To better evaluate hot-applied buried catalytically-blown asphalt membrane linings, a laboratory procedure was developed to determine the percentage of phosphorous in the asphalt lining material. Phosphorous pentoxide is a catalyst used in producing the best type of cationic asphalt for membrane linings and it is possible that the performance of the lining could be correlated with the amount of residual phosphorous in the asphalt.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0052, CIRCUIT BREAKER RESEARCH

B. EVANS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Direct current (DC) transmission at high voltage (HV) and extra high voltage (EHV) promises substantial economic benefits over alternating current (AC) transmission for long distances and large blocks of power. DC transmission by cable circuits is also attractive, even for relatively short distances and moderate amounts of power.

Networks with interconnections of HVDC and EHV DC will be necessary to utilize the full potential and economy of DC transmission. This will require the development of a DC circuit breaker since none is available for switching HV and EHV power circuits. A DC circuit breaker may also find important application to future AC systems. The benefits of DC transmission and the need for DC circuit breakers are indicated in the February 1968 Transmission Study 190 Report.

The Electric Research Council (ERC) established a task force about a year ago, with the Bureau and BPA representation, to evaluate a proposal by Hughes Aircraft Company for development of a HV DC circuit breaker. The ERC task force has recommended that the proposed Hughes program be supported. In FY 1969 a program will be detailed and an agreement executed between ERC and Hughes. The Bureau will participate in the ERC effort as one of several contributors and will by itself or jointly with BPA, contract with Hughes to provide funds.

The Hughes development program for FY 1969 will include the further study and experimental verification of the sequential switching concept they have proposed. Circuit configuration, linear and nonlinear switching resistors, the crossed field tube and other types of interrupters will be evaluated.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0053, CHANNELIZATION STUDIES

R. FIFE, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Work is being done on the Middle Rio Grande Project, New Mexico, from Cochiti Diversion Dam to Elephant Butte Reservoir. The three original features of the program are: (1) the evaluation of river channel improvement by jacks /structural shape/; (2) the evaluation of channeling water through low-flow conveyance channels; and (3) the determination of the efficiency of settling basins for sediment control.

8. ENGINEERING WORKS

8.0054, HIGH-VOLTAGE D-C TRANSMISSION INVESTIGATIONS

R.R. FILLENBERG, U.S. Dept. of Interior, Bureau of Reclamation, *Denver, Colorado 80225*

The unprecedented use in this country of high-voltage d-c power transmission for economy in large capacities, flexibility of control, and ability to operate between power systems not in synchronism requires investigation. There has been no three-terminal application made. A laboratory scale model suitable for control study and for combination with an A-C Network Analyzer has been designed and the prototype model pole has been assembled and evaluated. The prototype model may be expanded to a three-phase, four-pole (two each per terminal) representation employing silicon controlled rectifiers to represent the performance of the mercury rectifiers to actual installations. The d-c line model may be used as an educational and training tool, to assist in the development of parallel dc-ac power system digital computer programs, to investigate combination ac-dc system interconnections, to investigate variable frequency operation of motors and generators for improved efficiency and stability and ac-dc-ac system stabilizing schemes. A Bureau design engineer has been assigned to work with the project staff of the AC/DC System Operation Research Program (EEI Project RP56) for a period of 1 year. The major efforts in the program have been the design and construction of an intermediate power-level system model now in operation in a research laboratory in Philadelphia and the development of a digital program for study of parallel dc-ac systems using the model to verify program results.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0055, CAPACITOR SWITCHING DUTY EVALUATION

R.R. FILLENBERG, U.S. Dept. of Interior, Bureau of Reclamation, *Denver, Colorado 80225*

Conventional power circuit breakers on capacitor switching service frequently experience difficulty in clearing due to high magnitude and rate of rise of recovery voltages. This condition frequently results in multiple reignitions and restrikes on clearing. Severe overvoltages during reignitions or restrikes may be damaging to connected equipment. Field tests of simulated capacitor switching have been conducted to determine the characteristics and magnitudes of capacitor switching transients in control circuit cables and to evaluate methods of limiting coupled voltage which could damage control equipment. Results are given in Research Report EP-19. Control circuit transients have been recorded for field tests of actual system capacitor bank switching and a report is in progress. Increased use of solid-state devices with less overvoltage capability than former vacuum tubes and relay devices require tighter limitation of induced voltage in control circuits.

8.0056, HIGH-VOLTAGE A-C TRANSMISSION

R.R. FILLENBERG, U.S. Dept. of Interior, Bureau of Reclamation, *Denver, Colorado 80225*

Extra-high-voltage a-c power transmission continues in contemporary development and application with EHV d-c transmission. EHV d-c transmission at present is essentially an express power link between geographically widely separated terminals. Serving as backup and providing enroute load and supply taps are EHV a-c transmission systems. Long a-c transmission lines require high percentage series capacitive compensation to provide for economic loading and stable operation. Analytical techniques are needed to predict EHV a-c line performance under abnormal loads and fault conditions. It is proposed to develop analog computer, digital computer and model procedures and programs to study EHV a-c transmission dynamic and transient performance, and related transformer, switch apparatus and protective system requirements. Infrared detection studies are being conducted in cooperation with the Air Force. Additional investigations include the measurement and evaluation of corona loss on EHV lines and measurement of earth cur-

rent flow through transformers and transmission system as a result of high sunspot activity, and measurement of high-voltage switching surges. Corona loss and high-percentage compensated line studies are being conducted by a summertime research arrangement with the University of Colorado using graduate students in electrical engineering.

8.0057, SEISMICITY OF FAULTS - ENGINEERING GEOLOGIC EVALUATION

W.I. GARDNER, U.S. Dept. of Interior, Bureau of Reclamation, *Denver, Colorado 80225*

Develop and evaluate a rapid method for determining the seismicity of faults occurring at the site of a proposed engineering structure such as a dam, reservoir, or tunnel. The engineering geological method would be a seismic detection system which would record the occurrence of micro-seismic events along a fault-little earthquakes too small to be felt or even recorded on ordinary seismographs.

The number of micro-events recorded over a short period of days or weeks would provide a factual basis, when compared against a rating curve for evaluating the degree of activity or probability of earthquakes. It would be particularly applicable to faults in damsite which could not, by other means, be confidently defined as 'live' or 'dead.'

The micro-seismic rating approach fills the gap between historical data on recorded epicenters and geologic data such as displaced river terraces or fault scarps. Major items of equipment exist and the principle stops for developing an operating procedure are evident.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0058, HYDROGEOLOGIC INVESTIGATION TECHNIQUES

W.I. GARDNER, U.S. Dept. of Interior, Bureau of Reclamation, *Denver, Colorado 80225*

The rapid increase in water demand is overtaking surface and ground-water supplies of many areas. The supplies are approaching exhaustion, becoming inadequate due to high storage and conveyance losses, or diminishing in quality and quantity due to pollution, climatic changes, and other factors. Engineering planning must consider increased use of leaky conveyance structures and reservoirs and more competent waterloss estimating is required.

Intensive research is essential to develop reliable hydrogeologic investigation methods--field methods and data analysis procedures--for estimating reservoir water-holding capabilities, effects of proposed projects on ground-water basins, and the possibilities of controlling losses or recovering the water for later use. Present methods of geologic and ground-water investigation yield erratic results.

All existing procedures of determining the subsurface geologic and ground-water regimen of an area, and locating and estimating water loss in proposed reservoirs will be reviewed and collated. Specific attention will be given to distinguishing between important and unimportant parameters with respect to time-cost of securing the data and influence on reliability of final product, i.e., seepage estimates.

Investigation and analytical methods applicable to different typical geologic environments--volcanic layered sedimentary, fractured rock masses, glacial--will be outlined.

8.0060, APPLICATIONS OF RESEARCH TO VARIATIONS IN SHEAR AND CONSOLIDATION TESTING

H.J. GIBBS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The relationship of volume and the pore air pressure in partially saturated soils has been established to behave according to the physical laws of pressure, temperature, and solubility for gases. The most recent work has developed test procedures to measure the equivalent capillary effects of the pore water and the relation to volume change. These measurements are important because they significantly affect the test values of soil strength used for structures. The improved pore fluid measurements have given impetus to determining the relationship of effective stress to volume change in soils.

The purpose of this investigation is to fully apply the results of recent research by the Bureau and by others to shear and consolidation testing on a broad range of soil types.

This study requires the use of a range of tests, such as the isotropic consolidation, one-dimensional consolidation, triaxial shear, and a modified triaxial test which limits the lateral strain to zero. Data will be obtained to sustain current theory on the effective stress-volume change relationship. This will be done through application of the pore fluid measurement techniques to soils with a variety of plasticity characteristics. The studies would include regular triaxial tests as well as special tests. Final shear and consolidation tests procedures involving the latest developments in pore pressure measurements are to be completed. Additional work should be done to increase the uniformity of density, and moisture content conditions in soil specimens for better reproducibility of results.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0061, EFFECTS OF EARTHQUAKES ON SOIL PERFORMANCE

H.J. GIBBS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The soil foundation is an important consideration in the design of structures resistant to earthquake damage. The investigation of damage after major earthquakes has shown that some soils, particularly fine-grained, saturated sands and sensitive clays, may become unstable during shocks from earthquakes. Laboratory and field test procedures need to be improved to better indicate soil conditions that are susceptible to instability and to produce results that can be used for the design of the most economical structures.

Current literature on this subject has been reviewed.

Laboratory test equipment has been modified to conduct triaxial shear tests on soil specimens during the application of pulsating loads alternately in tension and compression. Tests with this equipment have been conducted on a few soils of particular interest in current Bureau projects.

Through a contract with the University of New Mexico, a graduate student is using Bureau laboratory test facilities to measure pore pressures on a variety of soils subjected to dynamic loads. If required to improve quality of measurements, he will attempt to modify existing laboratory equipment.

8.0062, EVALUATION OF CONCRETE AND RELATED MATERIALS FOR USE IN DESALINATION PLANTS

J.R. GRAHAM, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

This investigation, being performed for the Office of Saline Water, is divided into five parts, each under a principal investigator as numbered above, as follows: 1. Evaluation of concrete both

natural and limestone coarse aggregate under a variety of temperature-pressure-brine concentration conditions. 2. Wall section model studies. 3. Selection and evaluation of accessory coatings, sealants, and polymeric products (Note: Some of the tests on these materials will be conducted concurrently and under the same exposures as the concrete in Item 1). 4. Concrete reinforcement materials (corrosion studies). 5. Concrete microstructural investigations.

Concrete and related materials are being exposed to hot synthetic seawater and hot distilled water ranging from 100 degrees F to 290 degrees F. Strength, elastic properties, microstructural changes, and corrosion potential of reinforcement steel are being determined.

8.0063, EVALUATION OF CONCRETE PROPERTIES OF CORES FROM OLD STRUCTURES

J.R. GRAHAM, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Various properties of concrete such as compressive strength, modulus of elasticity, Poisson's ratio, specific gravity, etc., are determined from tests conducted on cores taken from new and old Bureau dams. Cores are usually extracted at predesignated intervals from the time the structure is new until it is perhaps 20-25 years old, or even 40-45 years old if need be. Occasionally, situations arise that require the extraction of cores from old structures having no previous core drilling program. Sampling and testing at intervals provide data early in the life of the concrete which can be used to help ascertain possible future economies. It also provides a method of monitoring chemical, physical, and microstructural changes in the concrete.

Long-time concrete evaluation investigations have, in the past, been programmed for Shasta and Friant Dams, now over 25 years of age, and Hungry Horse Dam, now over 13 years of age. Similar programs are now actively underway for Glen Canyon, Flaming Gorge, Yellowtail, and Morrow Point Dams. Cores have been tested and evaluated to establish the structural integrity and conformance with present design standards of: Wild Horse Dam, 30 years old; Horse Mesa Dam, 40 years old; Warm Springs Dam, 48 years old; and American Falls Dam, 40 years old. From time to time, laboratory reports covering the aforementioned evaluations are published.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0066, RADIOISOTOPE GROUND WATER MEASUREMENTS IN SMALL DIAMETER DRILL HOLES

R.L. HANSEN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Radioisotope technology is continually advancing in the field of ground water measurement in drill holes. In order to keep the costs of ground water investigations to a minimum, it is desirable to use the smallest size drill hole diameter possible. This leads to the need for improved instrumentation and techniques to work in the small size drill holes.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0067, MODEL STUDY OF UNDERGROUND OPENINGS

M.L. HAVERLAND, U.S. Dept. of Interior, Office of The Chief Engr., Denver, Colorado

In the construction of Reclamation Dams and water tunnels, there are discrepancies concerning visco-elastic properties of rock. Little definite information is available by which effects of joints, faults, bedding planes, and other foundation irregularities can be accurately included in the design of underground openings. Fundamental data on the basic properties of rock are being analyzed to evaluate various methods of determining the structural behavior of a geologic formation surrounding a tunnel or at a foundation site for a dam. A structural model program will supplement field investigations to increase our knowledge in this field. The program will be progressive, starting with the construction and testing of a solid foundation and continuing through investigations of various openings and foundation irregularities.

A model foundation will be constructed containing predetermined irregularities. The test program will consist of various loading conditions for determining the transmission of forces in the foundation with no opening. A small pilot bore will be drilled, instrumented and tested. This will be followed by 'boring' a tunnel. Test will be conducted with the tunnel both unlined and lined.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0068, COMPRESSIVE CREEP TESTS OF CONCRETE

K. HICKEY, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Creep characteristics of concrete (deformation due to long-time load) must be known to correctly evaluate the strain and stress behavior of structures from readings obtained with embedded instruments. Some test specimens are being retained 20 and 30 years under continuous load to verify extrapolation of creep based on 1- and 2-year creep measurements. Current and proposed research includes studies to determine the effects on creep of specimen and aggregate sizes, sealing methods, types of loading systems and strain measuring gages, moisture conditions of the concrete, load intensity, and the range of stress in which strain is linearly proportional to stress.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0069, STABILIZATION OF SLOPES

M.E. HICKEY, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

There is a need for economical stabilization of unstable or erosive-type soils often encountered in slope excavation or embankment construction on Bureau projects. Also needed are methods of sealing or waterproofing clay areas in slope or tunnel excavations to prevent slaking and slide problems. Testing is necessary to evaluate the stabilizing and sealing capabilities of various petrochemical materials such as plastic resins, asphalt cutbacks and emulsions, proprietary type products. This study is scheduled for completion in FY 70.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0070, FIELD PERFORMANCE OF ASPHALTIC CONCRETE

M.E. HICKEY, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

To guide future design work and field control for better asphaltic construction, a study is being made to evaluate asphaltic dam facings, linings, and pavement installations of varying service ages. When opportunity arises, inspections are made of these installations and samples are obtained for analyses in the laboratory. Samples from both the better and poorer installations are studied to determine short-comings of current specifications and construction methods. The current study is scheduled for completion in FY 70.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0071, STABILITY OF EARTH SLOPES

J.G. HOFFMAN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

A means of accurately assessing the stability of earth slopes is a requisite to the design of earth dams, large canals, and other earth structures associated with the development of water resources. Numerous procedures for evaluating the stability of earth slopes are currently available, but all fall short of an adequate solution.

Research will be conducted with the goal of developing improved methods of stability analysis which will provide results of desired accuracy with a minimum expenditure of time and money. Particular attention will be devoted to the effects of earthquakes, surface cracking, seasonal and long-term variations in shear strength, pore pressures, rapid drawdown, and stresses imposed by structural loads. Activities will include:

1. Collection of relevant data from existing earth structures.
2. Review of pertinent technical literature.
3. Development of improved techniques of stability analysis which will, where possible, overcome the inaccuracies incurred in the mechanical procedures currently employed and provide for adequate treatment of all factors that significantly affect the stability of earth slopes.
4. Development of statistical procedures for evaluating the stability of long canals where soil parameters vary throughout the length of the channel.
5. Adaption of analysis procedures to the electronic computer.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0072, SOIL PRESSURES ON FLEXIBLE STEEL PIPE

A.K. HOWARD, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

More information is needed on the soil pressures which are developed on pipe in various embankment and trench conditions in order to arrive at the most economical design for the pipe. Therefore, large-scale laboratory tests are under way to more accurately determine the soil pressures and any pipe deflections. The tests are conducted on instrumented pipe sections buried in a large soil container with surcharge loads being applied by a large laboratory testing machine.

Prior to conducting tests on pipe it was necessary to select a soil pressure cell that could be installed in the pipe. The pressure cell selected for this purpose was a modification of the no-flow pressure cell used in triaxial shear tests.

The first series of tests were completed on 18-inch diameter rigid concrete pipe. Six different soil conditions around the pipe were investigated; these ranged from a uniform compressible soil to a condition in which the pipe was resting on a very firm soil foundation. From the test results it was possible to plot graphs showing the variations in pressure surrounding the pipe. The shape of the pressure curves was largely determined by the relative firmness of the soils beneath the pipe.

Recently four of a series of 18 proposed tests have been completed on flexible steel pipe. The test equipment and procedures are similar to those used for concrete pipe. The test results are showing the soil pressures on the pipe and deformation occurring under different soil and loading conditions.

8. ENGINEERING WORKS

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0073, DETECTION OF SUBSURFACE CAVITIES OR CONDUITS IN FOUNDATIONS OF PROPOSED RESERVOIRS AND ENGINEERING STRUCTURES

W.H. IRWIN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Reservoirs in soluble rock terrain are being proposed with increasing frequency by water resource planning engineers. New and more reliable engineering geologic methods of locating subsurface cavities, conduits, and open-joint systems are essential.

Basic investigations are in progress to compare, define, and evaluate the capability of various investigation methods to locate subsurface openings. Geologic and geophysical techniques as well as the use of testing procedures and principles from other scientific disciplines are being studied and evaluated for possible testing at a selected field proving ground for engineering geologic investigation methods. The techniques being studied are: Gravimetric surveys, geothermal gradient, radioisotope and dye tracers, water dating (tritium), infra-red scanning and photography, geophysical and TV-drill hole logging, seismic fan shooting and potential-drop-ratio surveys, thermal capacity (heat sink) measurements. Results are being checked against subsurface data derived from reservoir operation and standard geologic studies and drilling.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0074, ENGINEERING GEOLOGIC BEHAVIOR OF FOUNDATIONS IN RESERVOIRS IN GYPSUM-LIMESTONE TERRAIN

W.H. IRWIN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Engineering geologic criteria will be developed to guide judgment on rate of deterioration--due to factors such as solution, creep--of foundation rock for engineering structures.

Special laboratory tests of solution rates (over periods of 1 month to 1 year) will be compared with geologic observations (periods of geologic time--5,000 to 20,000 years), and with foundation service histories (periods of 20 to 100 years). The resulting criteria will be used in geologic investigations for planning and design purposes to evaluate probable rates of change (due to gradual solution) in strength, permeability, rate of ground water circulation, consolidation of proposed foundations over periods of project life (150-200 years). Comparative analytical calculation will be made to establish maximum-minimum rates and related laboratory and field observations.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0075, CONCRETE CURING COMPOUND INVESTIGATIONS

H. JOHNS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Resin base curing compounds are being evaluated to establish their moisture retention properties and the value to the Bureau of their broader use as finish coatings and as bases for other coatings, tile, or other treatments. When confirmed, satisfactory performance should enable early form removal, better concrete curing, elimination of water curing and/or sand-blast cleaning, and possibly other consequences which will importantly facilitate both the work and scheduling in the construction of power and pumping plants. Jointly with the Concrete and Structural Branch, the study is being extended to include use of the compound on up- and downstream surfaces and internal joint surfaces of dams.

Moisture retention, bond to concrete, and outdoor weathering have been tested. Concrete finish and repair materials to be used in conjunction with these compounds have been evaluated. Tentative procedures for application of the resin compound to interior walls of power and pumping plants were established. A progress report of the above tests, including 46 compounds, was prepared (ChE-63).

The next phase of the program will be initiated to develop more data regarding the suitability of resin base compounds as a

base for paint and tile. As part of a joint program with the Concrete and Structural Branch, the cleanability, weathering resistance, and color stability of resin base compounds will be tested.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0076, INVESTIGATION OF GROOVE AND CRACK SEALING MATERIALS

H. JOHNS, U.S. Dept. of Interior, Office of The Chief Engr., Denver, Colorado

Effective sealing of grooved joints in concrete canal linings is one of the more difficult jobs to accomplish, particularly when high heads are involved. Leakage results in loss of considerable water, and can cause damage to the canal by washout of the subgrade or from expansion due to wetting expansive subgrades. Effective sealing of dams, powerplants, pumping plants, and other structures is also necessary, but similarly not easy to accomplish. These problems are recognized by the sealant industry and many new materials and systems are produced each year. These new materials are being evaluated and the overall problems are being studied. Considerable effort was expended in laboratory evaluations of new, machine-grade coal-tar polysulfide sealants, and a field test was made including this material in a variety of applications. The program to evaluate the effectiveness of placing rapid-set polysulfide sealer in fresh concrete has been completed. A laboratory report on the results of these tests is being prepared. Further studies were conducted on cast-in-place, plastic, joint forming and sealing strips. Several new designs were established and experimental quantities produced. Limited tests on a polyethylene strip designed to form a groove for the placement of polysulfide rubber sealant in the contraction joints of concrete-lined canals were conducted. The tests demonstrated the degree of concrete consolidation required to permit removal of part of the strip, and the sealing capabilities of the remaining part. Tests were continued on 66 joint-sealing materials and caulking compounds, and completed on four materials. Testing the new joint sealers and sealant systems and new caulking compounds will be continued. Further laboratory testing of plastic joint forming and sealing strips is planned and a field test will be started soon. Contacts with industry will continue.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0077, TURBINE AND PUMP TESTING

G.H. JOHNSON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Accurate determination of the quantities - power, head, and discharge are necessary to accurately determine the performance of turbines and pumps.

Through research work in connection with this project an attempt is being made to develop new methods, equipment, and techniques for measuring these quantities more accurately.

Report No. HM-3 covers accomplishments to date in the area of head measurements and determination of specific weight of water at the test site.

Work in the area of flow measurement by the Salt Velocity method has progressed to the point where criteria for the design of an adequate mixing section (i.e., injection station to first electrode) has been developed but not proven. The new criteria requires the use of a turbulator downstream of the injection station in most installations to provide sufficient mixing energy.

Future work will consist of verification of these new criteria in every way possible. Flow measurement by the pressure-time principle (Gibson Method) will also be investigated from the standpoint of using modern components for obtaining the required diagrams.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0078, NEW ROOFING SYSTEMS

B.V. JONES, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Many new roofing systems, especially in elastomeric products are being introduced by major material manufacturers.

8. ENGINEERING WORKS

There is a need for more durable roofing construction on Bureau projects. Therefore, it is important that new and better roofing materials be evaluated to provide data for upgrading Bureau specifications for roof construction. Both laboratory and outdoor exposure tests are conducted to evaluate the various new roofing systems. This study is scheduled for completion in FY 72.

8.0080, PORE-PRESSURE MEASURING REFINEMENTS IN SOILS FOR SHEAR AND CONSOLIDATION *C.W. JONES, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225*

Within the past few years, a new method of measuring capillary (negative pore) pressures has been developed. Such pressures are important because they influence the strength developed in soils when external loads are applied. Measurements obtained by this method are now used in triaxial shear tests, and the analysis of results better simulate actual field conditions. Present research is being devoted to refinements in test procedure to further improve the test results.

Pore-pressure measurements made near the top, middle, and bottom of cylindrical test specimens of cohesive soils have shown that the pressure distribution was not as uniform as desired. An attempt is being made to modify the current method of compacting the soil specimen to produce a more uniform density which affects pore pressures. Also the contacts between the specimen ends and the measuring system are being improved.

8.0081, EVALUATION OF ROCK RIPRAP AND DEVELOPMENT OF SUBSTITUTES *C.W. JONES, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225*

Laboratory methods are developed to better determine the suitability of rock for use as riprap by providing basic information on rock properties that affect quality and durability. A program has been outlined and rock specimens prepared for a comprehensive correlation of petrographic characteristics and the effects of freezing and thawing, wetting and drying, and heating and cooling. A study of rock fractures and their effect on the stability and resistance to weathering of rock used for riprap was started.

In some areas where earth embankments are constructed, suitable rock is not available for riprap to protect the slopes against erosion from water-wave action. Soil-cement is proving to be one of the most effective and economical substitutes. The performance of field installations of soil-cement is closely observed, and this will be continued. Petrographic examination and related physical tests of soil-cement specimens representative of five different field installations have been completed. In a cooperative laboratory testing program, chemical tests were conducted in the development of a rapid, field, control test for the determination of the cement content of fresh soil-cement.

On several field installations where soil-cement has been used as a riprap substitute, a lack of bond between layers at their edges has been detected. This is now being investigated for possible improvement in future soil-cement construction.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0082, RAPID SOILS EXCAVATION

C.W. JONES, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The development of methods to improve excavation in terms of speed and economy is needed both for surface and subsurface applications. Advancements are being made in equipment development for rapid and continuous excavation systems. Also, other agencies are exploring possibilities of explosive excavation either by chemical or nuclear charges. We are participating in furthering advancements where possibilities exist for future benefits to the Bureau.

Activity is now largely devoted to literature review and contacts with others to keep abreast of new developments in rapid excavation that might be applicable in Bureau work. The Corps of Engineers project REDSOD on the development of an explosive excavating machine has been closely followed. Meetings with representatives of the Atomic Energy Commission have been held to explore the possibility of using nuclear explosives in future Bureau work. Representatives witnessed an experiment by the Corps of Engineers in which a ditch was excavated in Bearpaw shale near Ft. Peck, Montana, using chemical explosives. Financial support is being given to the NAS-NAE Committee on Rapid Excavation and there is a Bureau representative on the committee.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0083, FILTER CRITERIA FOR DRAINS AND WATER WELLS

C.W. JONES, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The purpose of this program is to establish criteria for the grading of granular filter materials used for packing around perforated casing in water-producing wells. This material needs to have a suitable gradation to prevent excessive infiltration of soil fines from the surrounding aquifer into or through the filter and yet allow a free flow of water to be pumped from the well. Such infiltration is sometimes caused by the violent hydraulic action occurring during well development which is needed to open water passages to the well and remove drilling fluid deposited during well-drilling operations.

Laboratory tests will be made with typical aquifers and with various gradings for filters subjected to the action of water similar to that occurring during well development. observations, the range of filter gradings resulting in the required performance can be established. The effect of drilling fluid normally used in well excavation on the performance of the well will also be studied.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0084, DEVELOPMENT OF SOIL TESTING PROCEDURES AND ANALYSIS OF RESULTS

C.W. JONES, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

There has been a continual effort to improve testing equipment and procedures for laboratory soil testing and field sampling and in situ testing. This includes the evaluation of commercially produced equipment and the development of equipment for special tests where commercial equipment is not available. Equipment for the following tests are of particular concern at this time: high-pressure, triaxial shear for gravelly soils; high-range, direct shear for soil-cement and soft rock; plain-strain shear; soil compaction by laboratory mechanical compactors; and field vane shear. Also double-tube augers and piston samplers for undisturbed soil samples are being investigated.

New testing procedures are developed, often in cooperation with other organizations, such as the American Society for Testing and Materials.

Petrographic methods for examining soils are developed and used in some research programs, particularly those involving clay-type soils.

8. ENGINEERING WORKS

Computer methods are being applied to save time and labor for the computation of test data and in the analysis of complex soil problems such as slope stability.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0085, EVALUATION OF CANAL SEALANTS -OPEN AND CLOSED CONDUCT RESEARCH PROGRAM

C.W. JONES, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

This project involves a search for materials, particularly chemicals, that can be economically applied as canal sealants to accomplish seepage reduction. Of particular interest is a water-borne type sealant that can be introduced into canal water in a ponded or flowing condition so that the water will distribute the sealant to areas of seepage and seal the soil to an effective depth.

An attempt has been made to interest industry in developing canal sealants. After companies have completed at least initial development of prospective sealants, the Bureau conducts tests to evaluate them. These tests are first made in small-scale laboratory permeameters. Later, for those sealants that appear to be promising, larger laboratory tests under flowing water conditions in laboratory flumes are conducted. For a few sealants, the investigation has been carried forward in field tests on Bureau canals requiring seepage control.

Tests made to date on canal sealants have shown considerable promise, and are useful under certain conditions where a partial and temporary seepage reduction would be economical. Efforts are continuing to find sealants that will have greater ability to penetrate canal soils and provide a more lasting water barrier.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0086, BINDERS OF CONCRETE RESISTANT TO SALINE WATER AT ELEVATED TEMPERATURES

G.L. KALOUSEK, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The overall objective is to determine what combinations of cementitious materials will form the most resistant binders for concrete in concentrated sea water at elevated temperatures. Portland cements, fly ash, slag and gypsum in different proportions have been prepared as pastes and cured at different temperatures. A calcium aluminate cement is included in similar tests. The samples were first screened by x-ray diffraction and differential thermal analysis for desirable and undesirable phases. The more promising mixes were cast as pastes, cured at representative temperatures and tested for strength. Twenty-four selected mixes were cast as small cylinders and bars and immersed in concentrated sea water at 250 F. The specimens are examined periodically for phases, length change and dynamic modulus of elasticity. The most recent examinations (after 111 days of exposure) indicate satisfactory resistance by all mixes.

SUPPORTED BY U.S. Dept. of Interior - Off. Saline Water

8.0087, PROTECTIVE LININGS FOR WATER PASSAGE SURFACES OF FERROUS METALWORK

J.L. KIEWIT, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Protective linings for water passage surfaces of ferrous metalwork are being studied in several distinct programs. Linings with good erosion resistance are needed when sand- or silt-laden waters are conveyed in a piping system. Specific materials for these applications are being studied in a laboratory test which simulates sand and silt erosion in field exposure. Other selected lining materials, which performed successfully in screening tests, and which are not expected to be affected by certain service conditions that would damage coal-tar enamel or cement-mortar linings, are also being field tested. Forty-two materials in 36 systems are being tested in siphon piping on the Southside Canal, Collbran Project, Colorado, with companion specimens being tested in the laboratory. Field tests on epoxy coal-tar and modified phenolic linings are being conducted in turbines at Spring Creek Powerplant, California, and at Flaming Gorge Powerplant, Utah. Erosion resistance of a neoprene paint is being

field tested on pump-turbine runners at Chandler Pumping-Generating Plant, Yakima Project.

Erosion tests were completed on 16 specimens. All of these were shop-applied by the manufacturers. Four field test linings placed in Coulee outlets were inspected for resistance to high-velocity flows.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0088, DESIGN IMPROVEMENTS--GATES AND VALVES

W.H. KOHLER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Investigations and research are continuing on various design and operating features of gates and valves for the purpose of simplifying designs, reducing manufacturing costs, improving reliability and minimizing maintenance requirements. The following principal features and equipment are currently being studied: 1. Rubber Gate Seals- Various types of rubber seals are currently being tested to establish design criteria and pressure limitations for such seals. 2. Gate Wheels--Investigations have been completed and designs are being prepared with corrosion-resistant wheel rims. 3. Gate Roller Trains--Evaluation of data and preparation of a report covering tests of friction and operation of roller trains is in process. 4. Butterfly Valves--A review of available design and operating data has been made to establish areas which merit further tests and study to establish more definite and reliable design information. 5. Stainless Steel Fluidway Linings--Galvanic corrosion problems which have arisen in the use of stainless steel clad plates have been carefully studied, so that serious damage to gate fluidways which are lined with such plate will be minimized. 6. Gate Testing--A broad program of operating tests is in process to insure that the guard gates and valves for hydraulic turbines will be close under emergency conditions.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0089, ARCH DAM ANALYSES BASED ON THE MATHEMATICAL THEORY OF ELASTICITY

A.T. LEWIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Mathematical stress analyses for arch dams include several fundamental assumptions which have been necessary to reduce the complexity of the computations. With the use of electronic computers it is now possible to have a direct application of the mathematical theory of elasticity. This will eliminate the necessity of some of the important simplifying assumptions and improve the accuracy of stress analysis in both the dam and foundation.

The basic mathematical concepts have been developed and necessary relationships prepared to provide a general solution for three dimensional stresses in any arch dam and its foundation. Future research will consist of preparation of programs for the solution of large numbers of equations resulting from this approach, testing these programs, and checking the results of solutions.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0090, STUDY OF POLYCENTERED, PARABOLIC, AND OTHER SHAPES FOR ARCH DAMS

A.T. LEWIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Because of the simplicity in laying out and constructing arch dams with circular faces, this shape has been adopted for practically all arch dams built in the United States. Actually the most efficient shape is one in which the line of thrust follows the centerline of the arch.

Research will be continued to determine the most efficient shape for horizontal arch section. A three-centered arch dam has been designed, analysed and compared with circular faced arches. Parabolic, elliptical, and possibly other shapes will be studied as time permits. Both theoretical and applied analyses will be required to determine the most desirable shape. It is expected that more efficient use of material, better stress distribution, and a more direct approach to the abutment rock can be obtained by the use of other than circular shapes for arch dams. Structural models are being constructed and tested to check theoretical analyses.

8. ENGINEERING WORKS

8.0091, ABUTMENT PADS FOR ARCH DAMS

A.T. LEWIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Concrete pads between arch dams and their abutments may be used to reduce the intensity of pressure and distribute it more uniformly on the foundation rock. They also provide a means of reducing the effects of foundation irregularities and obtaining symmetry for the arch shell.

Investigations will include determination of the most efficient sizes and shapes of abutment pads; effects of pads on the stresses in both the dam and foundation; and advantages, if any of a perimetrical joint between pad and the dam. This research will require several mathematical analyses, probably of the trial-load type, and possibly some photoelastic or other structural model studies.

The initial structure for study is a symmetrical thin arch dam in a non-symmetrical site. Concrete pads have been designed and the analysis is presently underway.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0092, EFFECTS OF CRACKING IN ARCH DAMS

A.T. LEWIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Tensile stresses are often the limiting criteria in the design of thin arch dams. A method for including the effects of cracking in cantilever elements was developed many years ago, but is now considered inadequate. A method is to be developed to evaluate the effects of cracking in arch dams and incorporate it into our computerized trial load method of analyzing arch dams. Such a procedure is very important in determining the safety of old dams as well as layouts of new dams.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0093, REINFORCEMENT OF OPENINGS IN MASSIVE CONCRETE STRUCTURES

A.T. LEWIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

In general, the required reinforcement around openings in massive concrete dams has been determined from tensions developed with photoelastic models or analytically by theory of elasticity. In many instances the strain capability of the concrete is not sufficient to stress the steel to more than a few thousand psi. In cases where the dam stresses are all compressive, any cracks due to tensile stresses adjacent to openings propagate only a short distance whether or not reinforced.

Where appurtenant structures are attached to and restrained by the dam, the interrelation of temperature stresses, cracking, and reinforcement requires clarification.

This study will include analytic analyses only.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0094, MASSIVE-HEAD BUTTRESS DAMS

A.T. LEWIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Buttress type dams are well adapted to wide valleys with variable foundation conditions. Hollow buttress dams compared to gravity dams reduce uplift, minimize temperature problems, and require much less material. This investigation will include design layouts, stress studies and economic investigations to evaluate the feasibility of massive head buttress dams in the United States. Data available from technical publications and magazines will be collected and evaluated.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0095, DESIGN OF DOUBLE-CURVATURE MULTIPLE-ARCH DAMS FOR USE IN WIDE VALLEYS

A.T. LEWIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

One of the principal economic deterrents to multiple arch dams is the necessity of reinforcing areas of high tensile stress in

the arch shell. Double-curvature designs will be developed to eliminate or reduce tensile stresses. Multiple-arch dams offer an effective means of combining spillways and powerplants with the dam to provide an economical hydroelectric unit. It is believed that this type of structure will permit savings over other conventional types of dams in some wide valleys. This research is to include design layouts, stress analyses, and economic investigations to evaluate the feasibility of double-curvature multiple-arch dams in wide valleys.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0096, EARTHQUAKE THEORY AS APPLIED TO DAMS AND APPURTENANT STRUCTURES

A.T. LEWIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Based upon the premise that earthquakes are capable of producing resonance in thin arch dams, a method has been developed for computing dynamic loadings. The earthquake response spectra concept was used. The first two arch modes were considered and frequencies computed for them. Damping rates were assumed.

To substantiate computations and provide needed information on the dynamic properties of arch dams, field tests have been completed on Monticello Dam in California, using exciters, owned by the California Department of Architecture. Natural frequencies damping, and the deflected shape of the crest and three vertical elements were measured for the first five modes. Data reduction and evaluation are now in progress.

To improve and refine the proposed earthquake loadings, electric analogy methods will be used to determine the effective mass of water that is accelerated by arch dams vibrating in the first and second modes. Analytical studies of the dynamics of arch dams are being pursued.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0097, DRILL PERFORMANCE MONITOR

M. LOGAN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

In oil well drilling, continuous measurements of various aspects of drilling operations are customary. Small-scale equivalents of such measured instruments have not been developed for foundation exploration drilling. Continuous records of controlled foundation drilling may provide means of defining or assessing the 'natural design' of foundation rock. For example, accurate recording of the variations in drill fluid loss might indicate drilling through open joints, and the amount of loss would be an indication of the extent of the fractures.

Various portions of the drill performance monitor will be designed and fabricated and tested in the laboratory. Individual units passing laboratory tests will be field tested in actual foundation drilling operations. Study and design of a drill bit sensing device for relaying pressures, temperature, and other facets of drill performance to the operator at ground level will be continued.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0098, ENGINEERING GEOLOGIC PROPERTIES OF ROCK

M. LOGAN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Current and anticipated design and planning problems require provision of more comprehensive and exacting engineering geologic data on actual subsurface rock conditions in proposed foundations.

The development and integration of new field investigation methods such as the drill performance monitor and TV drill hole camera; the evaluation of the capability of geophysical drill hole logging devices in foundation exploration - an entirely new field of application; and the comparison of results of the various methods, such as infrared scanning and camouflage aerial photography, are essential to the formulation of multipurpose engineering geologic exploration programs and the effective use of the

8. ENGINEERING WORKS

results in engineering studies. These data will yield criteria for judging, for example, need of tunnel supports, foundation and reservoir seepage rates, stability of natural earth and rock masses, recognition of faulting and structural patterns in lithologically similar rock strata with extensive savings in excavation costs, and the use of rock bolts, reinforcing steel, and concrete.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0099, INTAKES, ENTRANCES, AND TRANSITIONS

H.M. MARTIN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Hydraulic laboratory investigations are being performed to determine optimum configurations for intakes, entrances, and transitions for penstocks and outlet pipes. Entrances are normally streamlined and made as large as practicable to minimize entrance losses, to maintain positive pressures throughout, and to prevent formation of vortices which may reduce the capacity and entrain objectionable quantities of air. Economic considerations dictate that these entrances should be as small as possible in keeping with good hydraulic performance. Tests are planned to determine the actual losses at entrances of different sizes and configuration. These tests will extend to include studies of pressures and of vortex formation to determine minimum submergence required to maintain adequate wall pressures and to prevent vortices, and to determine the pressure variations and velocity distribution in penstocks as affected by bends and a symmetrical approaching flow.

Surging in draft tube transitions has resulted in poor operational characteristics for many powerplants, and in some cases has restricted power output. The basic properties of swirling flow in a cylinder will be investigated initially. The research will be expanded to explore the effects of draft tube length and inlet swirl on amplitude and frequency of surging. Various surge suppressor configurations will be tested in the facility to determine remedial corrections for existing facilities.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0100, BEHAVIOR OF STRUCTURAL ELEMENTS OR MODELS UNDER TEMPERATURE AND DYNAMIC LOADS

R.M. MCCAFFERTY, U.S. Dept. of Interior, Office of The Chief Engr., Denver, Colorado

The effects of vibrations and earthquakes on structures are a field in which little testing has been conducted. Much research must be completed before economical design of earthquake resistant structures can be accomplished.

Through the use of a hydraulic vibration test system, specimens will be subjected to vibratory forces. The system's force rating will be 25 tons vector force with a frequency range from DC to 400 cps.

Many different materials will be tested to determine their dynamic properties. Structures, structural components, or models, depending upon the size of the prototype, will be tested to determine their characteristics due to sinusoidal and earthquake type forces.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0101, EVALUATION AND DEVELOPMENT OF SPECIFICATIONS AND TEST METHODS FOR CEMENT AND POZZOLAN

R.L. MCKISSON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

To assure that high quality and economic construction is obtained on Bureau projects, continual evaluation and development are made of specifications and test methods.

Practical maximum-minimum specification limits on the physical properties and compound composition of portland cement will be determined. Such limits are desirable because the maximum or minimum limitations in current specifications cannot be relied upon to provide the desired uniformity in concrete and mortar.

This program will consist of statistical evaluation of data on cement uniformity obtained by the Bureau of Reclamation and

similar information reported by other groups. Of primary interest is the variability of compressive strength as related to the physical and chemical properties of the cement and the degree of uniformity that can reasonably be expected in cement production.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0102, GENERAL ROCK MECHANICS INVESTIGATIONS

D.L. MISTEREK, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The physical properties and the structural action of a rock mass which includes various joint systems and other discontinuities are not well known. Studies are needed to more clearly define which of the rock properties are required to predict the structural action of a rock mass, how the properties can be determined most easily, and how the data should be included in designs. Special attention will be directed toward stability of rock slopes, stability and support of openings in rock, and deformability of dam foundations.

Published literature will be reviewed. Results of Bureau of Reclamation tests will be reviewed and compared with existing theory.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0103, ANALYSIS OF LENGTH CHANGE OF CONCRETE

L.J. MITCHELL, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Design of concrete structures with proper crack control requires consideration of numerous factors influencing drying shrinkage. Extensive data are available, indicating that aggregate composition can be responsible for excessive drying shrinkage and occasionally may be responsible for structural failures. Some project data indicate extremely high shrinkage where graywacke constitutes a significant proportion of the aggregate. Drying shrinkage considerations are increasingly more important as thin arch dams and prestressed or precast concrete units are used for smaller structures.

Recent developments have increased our knowledge on effect of specimen size and maximum aggregate on shrinkage of concrete. These data, along with other information concerning effect of aggregate composition are being tabulated and evaluated to produce a method in which preliminary estimates of potential drying shrinkage of concrete may be possible.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0104, STUDY OF TUNNEL LININGS AND REINFORCEMENT

J.W. MORRIS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The requirement for lining water conveyance tunnels is often a problem for planners and designers of water development projects. Studies will be made to determine the limits of practicability of unlined tunnels and to establish the feasibility of tunnels that are partially lined. Efforts will be directed toward establishing criteria for use of unlined and partially lined tunnels.

For many years there has been a need to establish better guidelines for the use of reinforcement in linings of pressure tunnels. A study is underway which will attempt to outline the conditions under which reinforcement should be provided. The results of lining behavior measurements will be applied in this program where they are applicable.

Programs utilizing automatic data processing equipment are being developed for combining the various loading-restraint conditions that may exist at a given location. These programs will facilitate the determination of stresses at different locations of the tunnel section for various assumed lining thicknesses.

8. ENGINEERING WORKS

8.0105, CHANGES IN PHYSICAL CHARACTERISTICS OF ASPHALT MATERIAL

W.R. MORRISON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The service life of asphaltic concrete used in dam facings, linings, and pavements and of asphaltic roofing and various waterproofing applications depends to a large degree on the resistance of the asphalt cement to hardening or aging. Asphalt cements from different sources, being of a different base stock and produced by different refineries vary considerably in aging characteristics. Measurements of the penetration, ductility and softening point properties before and after exposure to 140 degrees F for 14 days and 325 degrees F for 5 hours will indicate a degree of susceptibility of an asphalt to aging in service. To make possible the selection of the best asphalts possible for durable construction, it is important to evaluate the physical properties of asphalt cement samples under accelerated aging conditions.

Correlation between accelerated laboratory aging and field aging for several asphalt cements is described in Water Resources Report No. 12 entitled 'Buried Asphalt Membrane Canal Lining' and which was published in FY 68. Test results for the laboratory accelerated aging studies is scheduled for publication in FY 69.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0106, ASPHALT BINDING OF COBBLES FOR RIPRAP

W.R. MORRISON, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

In some construction areas, there is a lack of rock suitable for riprap for erosion control of earth embankments which necessitates costly importation of riprap or application of other methods of slope protection. Often in these areas, cobbles up to 12 inches in diameter are available and could be placed for riprap protection provided some method could be devised for anchoring the cobbles in place. One possibility that warrants investigation is binding the placed cobbles together with a grouting application of asphalt or an asphaltic sand-mastic. Hydraulic laboratory testing will be conducted to evaluate different asphalts and asphalt mixtures for binding cobbles sufficiently for use as riprap.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0107, EFFECT OF PROPERTIES OF FRESH CONCRETE ON FORM PRESSURES

E.L. ORE, U.S. Dept. of Interior, Div. of Research, Denver, Colorado 80225

Many concrete forms have been over- or underdesigned because information on lateral pressures is sparse or incomplete. Of interest in this study is the effect of variables such as cement hydration, slump, rate of placement, admixtures, and temperature. Also, an attempt is being made to establish the influence of each ingredient, such as sand and coarse aggregate, upon the lateral pressure of concrete. A model form having inside dimensions of 1- by 3- by 10- feet high is being used in the study. Gloetzel cells have been adapted to measure pressures exerted on the form.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0108, REVIBRATION OF CONCRETE AND MASONRY

R.R. OWEN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

In recent years, some research has been conducted to determine the value of revibration in improving the physical properties of concrete and masonry, but due to the inconsistency of the findings, the need for additional studies is evident. An investigation of available data on this subject is being conducted in an effort to arrive at some definite conclusions. Laboratory experiments may then be required to verify the accuracy of these conclusions. If revibration is found to be of definite value in improving the physical properties of concrete, its use should be incorporated into Bureau designs and specifications.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0109, DEVELOPMENT OF THREE-DIMENSIONAL PHOTOELASTIC TECHNIQUES

H.B. PHILLIPS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The development of epoxy resins which are suitable for photoelastic stress analysis has expanded the field of possible studies to include three-dimensional models of complex engineering structures that cannot be studied by two-dimensional models. However, except for planes of symmetry, the interpretation of the stress patterns is a much more complex procedure. Initial investigations under this research project will be directed toward the basic problems associated with three dimensional photoelasticity. These investigations will include: 1. Studies of mix proportioning to obtain consistent and desired properties of the cast epoxy. 2. Development of proper casting techniques to obtain stress-free, clear, and otherwise suitable models. 3. Procedures for loading and freezing of stresses within the model. 4. Development of methods and procedures for evaluation of stresses by either slicing or coring procedures.

8.0111, EFFECT OF THE MAGNITUDE OF COMPRESSIVE STRENGTH OF CONCRETE AT VARIOUS AGES ON THE STANDARD DEVIATION AND COEFFICIENT OF VARIATION

J.S. PIERCE, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

This study includes concretes with and without pozzolan, at various water-cement ratios from which specimens will be cast for compressive strength tests at ages up to 1 year. A statistical analysis will be made upon the results of these tests to determine the effect of the magnitude of compressive strength upon the standard deviation and the coefficient of variation.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0112, DEVELOPMENT AND EVALUATION OF TEST PROCEDURES FOR DETERMINING REACTIVE EXPANSION, AIR AND WATER PERMEABILITY, AND BONDING EFFICIENCY

L.C. PORTER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Improved methods of determining reactive expansion are needed. Current research related to reactive expansion is directed towards determining the nature of reactive expansion in old concretes, particularly the duration and conditions necessary to promote the reaction in concrete which is known to contain potentially reactive materials. Expansions developed to date suggest that reactive potential is present in concretes even after many years in service.

8. ENGINEERING WORKS

With methods presently used for measurement of air and water permeability, various irregularities are encountered. Therefore, development of a sensitive means of measurement of vacuum-treated, oven-dried, or routinely-cured specimens has been undertaken. For air permeability, measurement of inflow will be made either by displacement of water at atmospheric pressure, or by change in absolute pressure due to air flow into an evacuated container.

The repair of cracks, spalled, and eroded areas is a continuing problem in the maintenance of concrete structures. Epoxy resin type adhesives are the most prominent of the many bonding agents available for repair work. Investigations are conducted to determine the application of the various bonding agents to the necessary repair conditions, as well as special techniques for application and curing requirements.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0113, CONCRETE TEST VESSEL

M.C. REDMOND, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The overall objective is to supplement data obtained in the laboratories of the USBR on the feasibility of concrete as the principal construction material in large desalination plants; to study openings in the concrete shell and methods of sealing such openings; to determine structural behaviour of the vessel and its component parts when subjected to rapid heating and cooling attending the startup and shutdown of the main test module to which the vessel is attached. Specifically, (1) the effects of flow velocity, (2) corrosion of the concrete and reinforcing steel due to exposure to hot sea water and/or distilled water, (3) behavior of coating and sealing materials and microstructural changes will be determined. These tests, except for (2) are visually evaluated. The structure is highly instrumented to provide data on its structural behavior.

The test vessel located at the OSW San Diego test facility has been constructed and fully instrumented to obtain the data necessary to achieve the objectives outlined above. The data acquisition system is scheduled to be installed by the middle of August 1968. After this installation the vessel will be ready to go on stream.

8.0114, ENERGY DISSIPATORS

T.J. RHONE, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The objective of these studies is to develop many types of energy dissipators so that future investigative work on individual structures will be a minimum. The studies include tests with sudden enlargements in pipelines, vertical stilling wells, vortex basins, chute blocks, slide gate stilling basins, surges in stilling basins, and energy dissipators for low-head conduits and road culverts.

Models are used to obtain basic data used in the development of the various structures. From these data a correlation between the model and the prototype is found for such variables as the Froude number, discharge, gate opening, operating head, and energy dissipated. Pressure transducers and electronic recording equipment are used to assist in measuring impact forces and pressure fluctuations.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0115, REGION 2 - WEED CONTROL

J.D. RICHARDS, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The Bureau of Reclamation's concrete mix design procedure has been derived from laboratory investigations and past experience. Currently, mix designs are based on information obtained prior to the prevalent use of water-reducing, set-controlling admixtures in concrete. One result of the use of such admixtures in concrete is a reduced water requirement, and hence, higher compressive strengths for a given water-cement ratio when compared with concretes without the water-reducing, set-controlling agent.

This study will investigate two types of water-reducing, set controlling admixtures; namely, a lignosulfonate and a hydroxylated carboxylic acid. Both agents will be used, at different dosages, in concretes with water-cement ratios varying, by 0.05 increments, from 0.35 to 0.70. It is also anticipated to measure the effects of the aggregate by using two different types, each with maximum sizes of 3/8, 3/4, 1-1/2, 3, and 6 inches.

Upon completion of the testing, mix design tables in the Bureau's Concrete Manual will be replaced utilizing the new data. Also, new constants for Abram's equation, S equals A over B to the X power, will be determined for different ages through use of electronic data processing.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0116, ULTRASONIC TESTING OF ROCK AND CONCRETE

H.C. RIFFLE, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Ultrasonic testing techniques have the potential of providing a positive and rapid means to check materials for quality control in the laboratory and the field. The test is nondestructive, can be performed on either samples or rock and concrete in-situ, and in many cases provides a more rapid test than other methods. Characteristics of rock and concrete that should be obtainable by ultrasonic testing include moisture content, physical soundness deterioration, location of internal cracks, faults, and uniformity of material.

Investigations are being made of the feasibility of testing rock in-situ for cracks and faults by means of reflected waves or by surface waves. Direct transmission tests are being conducted with concrete samples to evaluate ultrasonic techniques when applied to heterogeneous material. Particular attention is being given to the determination of proper pulse frequency ranges with regard to energy level attenuation during transmission through a very heterogeneous medium. Suitable ultrasonic transducers are being developed to produce useful signal propagation in rock and concrete. Development work is done where required to produce specialized equipment needed. Evaluation will be made of ultrasonic test data to correlate it with that obtained by other standard tests.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0117, SLAB ANALYSIS

W.H. FOTH, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The only methods now available for designers to accurately determine the stress distribution in flat slabs are rigorous and complicated. In the interest of economy, the designer uses approximate methods, such as coefficients or modified frame analyses, rather than the more time-consuming, expensive methods.

We propose to make studies which will lead to an electronic data processing program for flat slabs. This program will produce moments and shears in slabs of varying as well as uniform thicknesses, with various edge conditions and loadings and openings in the slab.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0118, BASIC ROCK PHYSICS

S. RUBENSTEIN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

By the observation, petrographic classification, description, and laboratory testing of a wide variety of rocks it is believed the physical properties and the engineering performance characteristics for various rock-type groups can be more firmly established on a petrographic basis. Values from the physical observations and variations from these values can be studied and related to the petrographic characteristics of individual samples for each group. With the knowledge of which rock properties are characteristic, it may be possible to quantitatively assess the effects of weathering, fracturing, and other alterations of a rock as related to the petrographic features.

8. ENGINEERING WORKS

Two new petrographic methods of evaluating rock for foundation and riprap were investigated. One method related the area of the micro-fractures to the total volume of rock. The other determines a ratio of the weathered or altered minerals to quartz in the total rock. It has already been shown that both of these procedures have significant bearing on the quality of rock for engineering purposes. With further investigation, it is believed the results of these procedures will give another parameter to rock testing which can be related and coordinated with the elastic and strength properties.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0119, PETROGRAPHIC INVESTIGATIONS

S. RUBENSTEIN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Petrographic techniques which investigate the microstructure, composition, and physical and chemical properties of materials are used in the solution of many engineering material problems; the development of uses for new manufacturers substances and in gaining a better understanding of the engineering behavior of materials necessary for more efficient and advanced design and O&M of Bureau projects. Petrography is especially important in the study of rocks and soils and can be a powerful approach in the investigation of any crystalline material where microstructure is of significance. Materials research and studies of new laboratory techniques which show promise and require extensive further work in physical and chemical testing methods include impact hammer, sonic velocity measurements, investigation of concrete deterioration from various causes.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0120, POWER TRANSMISSION STRUCTURES, NEW TYPES

R.S. SALIMAN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Transmission structures comprise a large percentage of the cost of transmission facilities. To achieve economy of construction, improvement in efficiency, and lowest possible operation and maintenance charges, a continuing search for new types and refinements of existing types of structures for transmission lines and substations are needed.

Data will be collected on a variety of materials which might be used for transmission line structures.

New structural forms and modifications of structural forms now in use will be studied to gain improvement in appearance.

Data and illustrations from technical publications, magazines, meetings, and conferences will be collected and evaluated as they become available.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0121, REACTOR SWITCHING DUTY EVALUATION

F.R. SCHLEIF, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

For circuit breakers in reactor switching duty specifications requirements on a performance basis discourage manufacturers. Technical requirements which could be factory tested would be preferable but such data have not been available. Practical performance of oil circuit breakers on reactor switching duty has been characterized by excessive carbon sludge formation and the need for frequent maintenance. This project is to obtain basic data to better adapt circuit breakers to this application. Field investigations that have been conducted include the examination of circuit breaker performance when switching reactor circuits with and without modification by surge suppressors. Effectiveness of oil filtration equipment is being investigated. Model tests, using a circuit breaker simulator, and field tests are being conducted to determine effective locations and configurations of surge suppressors, develop protective relay schemes and determine internal reactor transients when switching with a circuit breaker in the reactor neutral. These phases of the research are being conducted under a summertime research contract with the University of Colorado using a graduate student in electrical engineering.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0122, RELAY, CONTROL, AND METERING CIRCUIT INVESTIGATIONS

F.R. SCHLEIF, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

More reliable relaying, control and metering systems and devices are needed to accommodate specific design limitations and to correct special operating problems. Investigations are conducted to improve design, reduce maintenance, and increase reliability of relay, control and metering devices, circuits and systems. Typical projects researched are ground relaying systems, influence of stray capacitance on large battery installations and surge suppression in d-c control circuits. Experimental determination of comparative accuracy for two-element and three-element metering on grounded wye systems with phase unbalance existing from untransposed transmission lines is given in Report No. EP-24. High-speed power flow prototype relay systems are being investigated for protection of power system interties to achieve controlled sectionalization when needed during severe and unusual disturbances. The objective is rapid sectionalization so each of the separated systems will retain stability with sufficient generation to independently serve the local area loads. Prototypes of a power swing relay and auxiliary have been designed, assembled, calibrated and placed in service on the East-West ties. Power flow, rate of change of power flow, power flow bias, blocking for nearby system switching, pretrip alarm and high-speed tripping at a favorable time are some of the salient features incorporated in the prototype relay. High sensitivity in a narrow band near a critical power system oscillation with tripping near a point of oscillation quiescence is provided in the prototype auxiliary. System performance data are being evaluated and other applications are under study.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0123, UNDERGROUND TRANSMISSION AND EQUIPMENT DIELECTRICS--SOLID, LIQUID, AND INERT GAS

F.R. SCHLEIF, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Influence of dielectric absorption or polarity reversal upon dielectric strength of underground cables and equipment insulation will be evaluated. Possible utilization of polarity reversal in cable as a testing technique is proposed. Many new systems of insulation are being offered with widely different characteristics, and a practical means of evaluating insulations to meet the users' applications is needed, taking into consideration initial and aging characteristics of dielectric properties, and mechanical properties and ease of handling. A corollary part of the solid insulation problem is that the evaluating insulations after various stages of service to permit scheduling of repair or replacements as needed, but yet utilize the maximum service life indicated to be available. Evaluation systems employing power factor and power factor tip-up measurements proved to be influenced by nonlinear corona control paint applied to the ends of machine stator coils. Furthermore, in electric machines these measurement techniques require isolation of each coil before measurement. Evaluations of coil conditions by ionization measurements have shown some capabilities of avoiding these difficulties. The winding of a machine is being evaluated by each of the techniques for comparison and for refinement of an evaluation technique for field use. Investigation also includes application of in-place repair techniques for generator stator coils. Inert gas atmosphere for oil insulated equipment is being evaluated. A portable high-voltage d-c power supply specially designed for insulation testing is being developed.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0124, GOVERNOR REGULATION FOR SPEED AND SYSTEM CONTROL

F.R. SCHLEIF, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

8. ENGINEERING WORKS

The increasing interconnection of systems makes the former approximate experimental system of governor adjustment more difficult, yet the needs are for still more accurately coordinated adjustment. The procedure for calculation of adjustments evolved by computer studies has been applied. This investigation includes correlation of calculated settings with actual response, development of a field test and adjustment procedure to achieve the desired settings, and means of reconciling the diverging requirements of governor adjustment for speed control and response of a governor to tieline control signals. A scheme of simulating isolated operation of a generator under normal system load has been developed for adjusting governors. Optimum system performance is achieved by machines so adjusted. Refer to IEEE Paper No. 31 PP 67-22. Electrical control schemes have been developed for application on hydromachine mechanical governors. Two different prototypes of supplementary fringe control have been used at Grand Coulee Powerplant to improve system stability. Fringe control study results are given in Report EP-13. A prototype electronic governor auxiliary for a mechanical governor is being operational tested at Grand Coulee Powerplant. Hydro-machine actual response time is decreased and tieline and frequency regulation improved by the electronic auxiliary. Prototype supplementary excitation control systems have been assembled and placed in service at Glen Canyon and Yellowtail Powerplants. Analog computer studies and application results of supplementary excitation control are given in Reports EP-16, EP-18 and EP-25. Further studies are being conducted to optimize the excitation control and its coordination with governing systems.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0125, ELECTRICAL MACHINERY TEMPERATURE CONTROL

F.R. SCHLEIF, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

This investigation assumes importance because of the trend to more extensive load peaking with hydro and to centralization of power control to necessarily conserve manpower. A prominent deleterious effect on electrical machinery is produced by thermal cycling. Use of automatic temperature control is an evident means of relief. Applications to steam turbine units have been fairly common, but few applications have been made on hydro units. Beyond the need to minimize deleterious effects on the machine itself, there is also a need to eliminate manual control operations to facilitate centralization of control. An automatic temperature control installation has been designed to compare the performance of several different type sensing systems. The sensing systems employed for comparison include stator resistance temperature detector, a bulb-type sensing element inserted under the stator slot wedge, and a bulb-type sensing element attached to the end section of the coil. Preliminary results showed good performance of control apparatus driven by the resistance temperature detector. Subsequent phases of the study are to continue examination of capabilities of the more rugged and less expensive bulb-type detector with associated controllers to achieve the desired control function of limiting the temperature cycling range. Control of temperature to a constant value is not the object of the control.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0126, COORDINATION OF PLANT FREQUENCY, D-C TRANSMISSION AND SYSTEM CONTROL

F.R. SCHLEIF, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The new technique of a-c/d-c conversions offers promise of flexibility which may not only relieve the confinements of speed at generators and of pumps under varying head and gate conditions, the conversion technique may also yield valuable flexibility for control for system stabilization along with its advantages in d-c transmission, both overhead and underground. This project is concerned with evaluation of the potential of the techniques of a-c/d-c conversions, particularly by solid-state devices, for relieving these prominent problems singly or in combination. If the study phase results are sufficiently promising, the work would continue with acquisition and evaluation of prototype apparatus.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0127, OPEN CHANNEL HYDRAULICS

J.C. SCHUSTER, U.S. Dept. of Interior, Hydraulics Branch, Denver, Colorado 80225

Minimum head losses in canals and canal structures are essential for an economical and efficient transportation of irrigation water. Canal structures include drops, turnouts, wasteways, overchutes, culverts, transitions, bifurcations, side channel weirs, and other structures. Verification of model investigations with field tests are required on a number of individual designs. These include research on culverts, transitions, drops, and bifurcations.

Research is continuing on different sizes of uniform riprap and of graded riprap to relate the rate of flow of water to a stable size of riprap.

Studies of canal surges was terminated with the publication of the Hydraulics Branch Report Hyd-575, 'Attenuation of Surge Waves by a Side Weir in a Trapezoidal Channel.'

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0128, WATER MEASUREMENT

J.C. SCHUSTER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Commitment of more and more of our water resources compels us to improve water measuring methods, to increase measuring accuracy, and to supply information to people measuring the water. Distribution of water from older systems of canals and pipelines needed only an understanding of relatively simple measuring devices. Newer distribution systems demand a much greater knowledge of many complex measuring devices and water controls. The expected increased automation of water control and its measurement will raise the level of knowledge needed to account for water into and out of the system. Studies in progress and planned are to increase our knowledge of both old and new devices.

The studies include evaluation of acoustic dye, momentum, and thermal methods of discharge measurement, and the capabilities of new controls and indicators.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0129, STUDIES OF EQUATIONS FOR SEEPAGE LOSS FROM CANALS

M.W. SCRIVNER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Numerous equations have been developed for computing seepage losses from canals. These equations were based on certain idealized assumptions such as uniform soil permeability and that seepage is not affected by ground water or subsoil stratifications. Such ideal conditions are rarely encountered in practice. Seepage loss equations are required which will accurately predict seepage by application of measured values of permeability and other measurable properties of the soil in which the canal is to be built.

Published literature on seepage losses will be reviewed to assist in selecting or developing equations which would permit a more accurate prediction of seepage losses and needs for canal lining. Seepage rates obtained from ponding tests on Bureau of Reclamation canals will be compared to the published equations. Permeability and other laboratory measured properties of soil samples from the canals will be examined for possible correlation with seepage rates measured by ponding tests in the field.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0130, STUDIES OF CANAL HYDRAULICS

M.W. SCRIVNER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Economic design of canal systems depends on accurate determination of the head losses that will occur in each component part of the systems. Wide variations between the losses allowed for in design and measured in prototypes indicate a need for information as to the cause of these variations.

8. ENGINEERING WORKS

A program for measuring head losses in Bureau of Reclamation canals began in 1957 will be continued. Tests will be made in cooperation with other programs on Bureau of Reclamation canals. Tests will include measurements in earth and lined sections of various sizes and on typical canal structures.

Data collected under this and other programs will be analyzed for useful information. Data from technical publication and magazines will be collected and evaluated as they become available.

Data collected will be used to aid in determining the relative influence of size, shape, slope, alignment, surface roughness, aquatic growths and deposits on friction coefficients for open channel flow. Data from structure measurements will be analyzed to determine the effects of piers, transition bends, etc. on overall structure losses.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0131, COATING TECHNOLOGY

C.E. SELANDER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Each year there are many new developments related to protective coatings and sealers which are not covered by other specific research items. Many of these are of potential value to the Bureau and are being investigated. These investigations may include new techniques of surface preparation or application and the evaluation of coating materials for use in humid or wet and low temperature situations, as well as performance surveys and service estimates. Studies of the relationships of certain properties of coatings to actual field performance under various exposure conditions are expected to provide information to better understand differences in performance in various geographic areas. The results from these studies are used in upgrading and improving specifications. General surveillance of the protective coating field continued. A computer program is in use for analysis of coating performance data from paint screening tests.

Maintenance painting, an evergrowing problem as Bureau structures age, usually proceeds under adverse physical conditions and a stringent time limitation. In recent years, developments in the properties of coating materials may permit or at least improve their applicability in humid or wet, low-temperature situations. Variations on surface preparation and application techniques with such materials are being investigated to enable selecting those most suitable to specific O&M problems. New projects and procedures which show promise and warrant a major effort will be investigated further in separate programs.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0132, PLASTIC PIPE AND TUBING

C.E. SELANDER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

One of the most active and expanding of the industries is that related to plastic pipe, and the industry appears to be redirecting its efforts to water service. Plastic pipe produced under suitable standards can withstand exposure to many severe environments. Recent developments, particularly in reinforced plastic mortar (RPM) pipe, now make available most any size of pipe desired. Samples up to 96 inches in diameter have been furnished to the laboratory. Plastic pipe, properly selected, can replace metal pipe which requires unusual protection or it is not suitable because of environmental conditions. Developments in RPM pipe make this type of piping competitive with concrete or asbestos-cement pipe in various sizes up to 54 inches diameter on a regular basis. The only major unanswered questions concerning this pipe are related to its durability under service conditions. Laboratory and field evaluations are being conducted with excellent cooperation by industry and in association with the Open and Closed Conduit Systems (OSSC) program to answer these questions.

Developments in plastic drain pipe which may result in substantial savings in large-scale drainage systems are being studied. Sections of the field test pipe from Westlands Irrigation District, California will be tested in the laboratory after delivery from the project and thereafter at 6-month intervals as planned. The Concrete and Structural Branch is cooperating closely in this study. Monitoring of the field installation will continue.

Samples of other plastic pipes were received for preliminary examination and numerous meetings were held with industrial representatives.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0133, PLASTICS TECHNOLOGY AND ENGINEERING APPLICATIONS

C.E. SELANDER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Specific engineering applications of a variety of plastic materials are being investigated. Oftentimes, certain specific properties govern the uses of plastic materials under particular service conditions. Materials and their properties are being studied. New materials and uses not specifically covered by other research programs are investigated to establish if there is potential value to the Bureau. Preliminary studies in this program are useful in determining whether separate research programs for detailed and comprehensive investigations are justified. Technical developments and engineering advances are monitored by review of technical publications and frequent contacts with industry, Government, and technical groups.

Environmental testing of certain plastics was continued with periodic evaluation. Minor miscellaneous tests were conducted as needs dictated, but no new major studies were undertaken because of higher priority work. Report No. ChE-73 on a study of impact and tensile strengths of two polyethylenes and Report No. ChE-74 on moisture absorption of one type of nylon are planned.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0134, CORRELATION OF JOINT DENSITY AND ROCK LOADS--INSTALLATION OF TUNNEL SET LOAD CELLS IN DIVIDE TUNNEL, COLORADO

E.J. SLEBIR, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Correlation of joint density and rock loads remains an important unknown in the design of underground openings. Instrumentation of tunnel sets will be performed using load cells. Correlation of underground and surface joints with loads on tunnel sets in a specific rock type will be studied. Particular evaluation will be made of Terzaghi's formula for estimating rock loads based on joint density in a special rock type.

Status--All data have been furnished to Graduate Student L. A. Brown. Data will be incorporated in PhD thesis. Target date for thesis--1968.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0135, VIBRATORY COMPACTION OF COHESIVE SOILS

D.A. TIEDEMANN, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

A research investigation is being conducted to determine the effects of vibratory compaction on the properties of cohesive soils. Although vibratory equipment has successfully compacted cohesionless soils, its effect on cohesive soils, particularly in dams, has not been established. Equipment company representatives and contractors have claimed that vibratory rollers are more economical than conventional-type rollers on cohesive soils and that they can effectively compact this type of material. This research is designed to gather data which will serve as a basis for our engineers to allow or disallow the use of vibratory equipment in the compaction of cohesive soils, particularly for water barriers.

Equipment has been acquired to study the dynamic properties of soils subjected to vibratory action, both under field and laboratory conditions. Vibration records have been obtained from a test embankment of lean clay compacted by a vibratory roller. These records are being analyzed preparatory to establishing a laboratory test program. This program will consist of a series of vibratory tests on samples of different cohesive soils to determine the mechanics of the compaction process and the properties of the soil compacted in this manner.

8. ENGINEERING WORKS

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0136, DESIGN CRITERIA FOR OPEN CHANNELS

P.J. TILP, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

To secure maximum project benefits, it is essential that water distribution and drainage systems be designed with adequate capacity. Experience shows that under capacity in open channel portions of canals has resulted in costly modification work after original construction. Criteria used in the design of open channels should result in a system that is economical to construct, operate, and maintain and should account for all factors which will have a significant effect on their capacity.

Criteria for the design of open channels will be revised as required to account for factors which have been shown to have significant effect on capacity. Activities will include:

1. Review data from canal hydraulic tests and other information on hydraulic performance of Bureau of Reclamation canals.
2. Assemble and evaluate data from other agencies on hydraulic tests and performance of open channels.
3. Analyze data and formulate criteria which will be reliable for use in design of future canal systems.
4. Revise existing design aids and devise new aids to assist in applying the adapted design criteria.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0137, EARTH AND ROCKFILL DAM DESIGN PRACTICES

F.C. WALKER, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

A continuing program to improve Earth Dam Design practices is being pursued through evaluation of construction performance, structure performance measurements, operation and maintenance experience and review of literature. Collected data is evaluated from time to time and compared to previously established design practices. Modifications are then introduced in the design practices, data collection procedures, measuring apparatus, or methods of analysis and evaluation to reflect the effect of accumulated experience.

Current operations include: Improved piezometer design to register negative pressures and reduce failure in installations. Statistical appraisal of construction variation in compaction of materials and establishment of conditions for testing. Development of standards for earthquake hazard evaluation. Improvements in stability analysis.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0138, AUTOMATION OF CANAL SYSTEMS

L.F. WEICE, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

The trend in management and operation of canal systems is toward more automatic controls. Many existing automated installations have been developed by local entities and many have been modified to solve local operational problems. The factors responsible for conditions which make modification of simple controls necessary are not defined. Design engineers and canal operating personnel require definition of these factors to provide satisfactory automatic control of canal systems.

A review of literature on existing automated installations was begun in 1966 and will be continued. Information obtained from this review will be used to determine (1) the operational capabilities of each type of installation, (2) the suitability of the electrical and mechanical components of each installation, and (3) the factors which require special consideration in the modification of simple controls. Automation of individual structures as well as complete systems will be included.

Related studies will include equipment and methods of monitoring and controlling rates of flow and water surface elevations, as well as capabilities for remote control and supervision.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0139, HYDRAULIC AND STRUCTURAL DESIGN - SPILLWAYS AND OUTLET WORKS

R.W. WHINNERAH, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

Further investigations of prototype performance of existing selective level outlet works with the objective of improving future designs. Development of programs to speed conversion of various design and estimating computations from manual to ADP procedures will continue. Data collection on high head gates and valves will soon be completed. Study of cavitation and abrasion of concrete flow surfaces will continue. Initiation of research in the following areas is proposed: 1. Application of the finite element theory to counterfort design. 2. Effects of ultimate strength design on hydraulic structures. 3. Simplification of structural outlines to reduce form costs. 4. Efficacy of repairs of concrete flow surfaces. 5. Methods of splicing 14S and 18S reinforcing bars. 6. Establishment of uniform standards in determining hydraulic head losses.

8.0141, PRECAST CONCRETE FORMS

W.H. WOLF, U.S. Dept. of Interior, Bureau of Reclamation, Denver, Colorado 80225

As part of continuing efforts to improve quality and reduce costs, investigations are being made of the utilization of precast reinforced concrete units as construction forms and permanent protective facing for reinforced concrete structures, particularly hydroelectric powerplants. The initial phase involves study and correlation of available data and information on the subject, after which preliminary designs and economic studies will be prepared to determine the structural elements, the types and sizes of structures, and the various construction site factors for which the use of precast concrete forms will prove most advantageous and economical. These determinations will involve study of equipment and methods used in the manufacture and installation of the units. Modifications of designs and details of structures to better adapt them to precast concrete forms will be investigated. Finally standardized designs and specifications for the various types of precast form units found to be economically feasible will be prepared along with recommendations as to the conditions most favorable to their use.

Special research into some phases of the development will be undertaken as the need becomes apparent.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

8.0142, UNSTEADY FREE SURFACE FLOW IN LONG STORM DRAIN

A.H. BARNES, Colorado State University, School of Engineering, Fort Collins, Colorado 80521

Three numerical methods have been developed for digital computer solution of the two partial differential equations explaining gradually varied unsteady flow. These are the diffusing method, the Lax-Wendroff method, and the method of characteristics. The Lax-Wendroff is the preferred for its superior stability. Unsteady flow observations were made for base discharges,

8. ENGINEERING WORKS

peak flows, boundary conditions, initial conditions, and lateral flow conditions. Energy losses through junction boxes were determined for steady flow conditions. These were in agreement for observations taken on a 3-ft diameter pipe and a 6 1/4 in. pipe. Computer wave forms were compared with observations made in England. Good agreement was attained.

Reports issued: A development of a numerical solution to a system of partial differential equations, W. B. Frye, thesis, June 1966. Free surface flow energy losses in a 90-degree junction box, W. L. Lorah, thesis, June 1966. Hydraulic roughness of free-surface flow in a smooth steel pipe, F. M. Yevdjovich and A. H. Barnes, Aug 1966. Solution of the unsteady free surface flow in a storm drain by the method of characteristics, S. Pinkayan, Sep 1966. Velocity distribution factors in a circular cross-section, A. H. Barnes, Oct 1966. Comparison of mathematical versus experimental flood wave attenuation in part full pipes, J. S. Mitchell, Nov 1966.

8.0145, ENGINEERING INVESTIGATION PERTAINING TO FLOOD PROTECTION OF BRIDGES AND CULVERTS

D.B. SIMONS, Colorado State University, School of Engineering, Fort Collins, Colorado 80521

This research is to develop design criteria required to establish methods and the physical requirements of materials necessary to control erosion downstream of highway culverts, contracted bridge sections, and other hydraulic structures. Scope: Laboratory facilities will be utilized to initially study the flow phenomenon, the forces acting on bank stabilization materials, and design criteria for selecting and placing material for scour prevention.

SUPPORTED BY U.S. Dept. of Transportation - Public Rds.

8.0146, HYDRAULICS LABORATORY

D.B. SIMONS, Colorado State University, Agricultural Experiment Sta., Fort Collins, Colorado 80521

A. A study of sediment transport in alluvial channels. B. A study of the mechanics of turbulence and its effects on flow in open channels. C. A basic study of fall velocity--the fall velocity of porous particles.

Objectives of Project: A. Improve the theory of sediment transport in open channels. B. Develop techniques of measuring the turbulence of water in open channels. C. Improve the concept of fall velocity of particles.

Sediment data are being collected in both the laboratory and the field. A new recirculating flume is being built in the new hydraulics laboratory for further study. A special fall velocity tube and associated photographic equipment will be used for fall velocity studies.

8.0147, REVERSE FILTER EROSION PROTECTION

C.J. POSEY, Univ. of Connecticut, School of Engineering, Storrs, Connecticut 06268

Paving with concrete, asphalt, or other impermeable materials, as commonly done to protect the bed and banks or drainage ditches and canals from erosion, is not only expensive, but hastens the flow away with minimum opportunity for replenishment of groundwater. It has been shown recently that more dependable protection can be obtained with a pervious lining having the properties of a reverse filter. Economical designs and placement methods need to be developed and tested in a wide range of soils. Work is starting at the Hydraulics Research Laboratory of the University of Connecticut, with support from the Connecticut State Highway Department, and should be completed by 1969.

8.0148, COASTAL WORKS EVALUATION FOR CHECKING, IMPROVING AND DEVELOPING DESIGN RELATIONSHIPS AND CONSTRUCTION TECHNIQUE

J.V. HALL, U.S. Army, Coastal Engin. Res. Center, Washington, District of Columbia 20016

Data are obtained and studied on the behavior of shore improvement projects during and after their construction. The data are obtained in cooperation with appropriate field offices insofar as practicable. Protective works studied include beach fills which serve to rehabilitate and/or nourish shore segments, as well as gravity or cantilever type shore structures of both monolithic and rubble construction.

Projects currently being followed also involve sand bypassing at improved inlets, permeable and impermeable groins, jetties and breakwaters, and reconstruction of protective sand dunes. Utilizing the collected data, applicable design relationships, both functional and structural, are evaluated. Study objectives are improvement of existing design relationships and construction techniques, or development of new ones.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0149, PROTOTYPE ANALYSIS-STRUCTURAL BEHAVIOR

J.A. RHODES, U.S. Army, Office of The Chief of Engrs., Washington, District of Columbia

Mass Concrete Temperature Summaries (ES 627.1) - Temperature histories of mass concrete and related parameters affecting heat generation and temperature changes, measured during and subsequent to construction at large concrete gravity dams, are collected, summarized, and presented in a series of reports. To date 12 summaries have been published.

Uplift Studies - Flood Walls (ES 627.6) - Piezometer and well point devices, installed at three Ohio River flood wall sites, are observed at high stage periods to determine hydrostatic pressures and flow nets in the underlying pervious strata.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0150, WAVE ACTION ON STRUCTURES

T. SAVILLE, U.S. Army, Coastal Engin. Res. Center, Washington, District of Columbia 20016

The action of all types of waves on various types of structures will be studied in the laboratory using experimental models, in the field making prototype measurements, and by analytic theoretical

8. ENGINEERING WORKS

approach. In particular such things as wave run-up, wave overtopping, wave forces, and structure stability are planned for investigation.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0151, STRUCTURAL DESIGN OF SHORE STRUCTURES

T. SAVILLE, U.S. Army, Coastal Engin. Res. Center, Washington, District of Columbia 20016

This project involves continuing review of literature on the design of shore structures, field tests on wave action on structures, and model tests on wave action on models of various coastal structures.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0152, EFFECTIVENESS OF WEB REINFORCEMENT IN REINFORCED CONCRETE BEAMS SUBJECT TO AXIAL FORCES

UNKNOWN, U.S. Army, Office of The Chief of Engrs., Washington, District of Columbia

The purposes of the research are to obtain a fundamental understanding of the action of web reinforcement to resist shear in reinforced concrete beams when axial forces are present and to develop expressions for shear strength of such beams. No data are presently available on this subject.

Investigation will be made of the behavior of a series of reinforced concrete beams with web reinforcement when subject to various combinations of shear and axial force. The variables will be axial stress, amount of web reinforcement, concrete strength, amount of longitudinal reinforcement and the ratio of moment to shear.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0153, UTILIZATION OF RADIOACTIVE TRACERS IN BEACH STUDIES

G.M. WATTS, U.S. Army, Coastal Engin. Res. Center, Washington, District of Columbia 20016

The feasibility of utilizing radioactive and fluorescent tracers in beach studies is being followed and investigated. Preliminary tests familiarizing staff personnel with such techniques are carried out. Study is made to utilize and alter laboratory techniques for field application.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0154, DEVELOPMENT OF OFFSHORE SOURCES OF SAND SUITABLE FOR BEACH RESTORATION AND NOURISHMENT

G.M. WATTS, U.S. Army, Coastal Engin. Res. Center, Washington, District of Columbia 20016

This study is to locate and quantitatively assess those offshore deposits which contain sediments suitable for beach restoration and/or nourishment. The present geographical limits of the study are from New Hampshire to the Florida Keys along the Atlantic Coast in water depths of 15 to 100 feet below low water datum. The method of exploration is twofold: (1) Geophysical (acoustic) surveys of the bottom and shallow subsurface strata in selected areas; and (2) The extraction of short (10-15 feet) cores of the unconsolidated sediments. These data are analyzed to develop two and three dimensional maps delineating areas of usable sediments which may be exploited economically. Concurrent studies are in progress to develop and refine methods of offshore dredging and delivery of the material from the dredge to the shore.

8.0155, DEVELOPMENT OF CRITERIA FOR ARTIFICIAL BEACHES

G.M. WATTS, U.S. Army, Coastal Engin. Res. Center, Washington, District of Columbia 20016

The study is to develop beach fill design criteria, and to establish a systematic procedure for the investigation of the characteristics of littoral material. Program involves 2 steps: (1) Develop design criteria for beach fill through application of statistical principles to special test data; (2) Reexamination studies of completed artificial fill projects to obtain data for comparative evaluation of developed design criteria. Data which have been derived under the functional study of fill projects are utilized in step 2 procedures of developing the criteria for artificial beaches. Studies through contracts with educational institutions are being carried out regarding the use of statistical principles by repetitive collection of field data at one location. High speed computers are utilized in the analysis of the field data.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0156, RUBBLE-MOUND PROTOTYPE STUDIES

G.M. WATTS, U.S. Army, Coastal Engin. Res. Center, Washington, District of Columbia 20016

Prototype rubble-mound structures, including structures with pre-cast armor units, are subjected to programmed surveillance for damage or movement of armor units by wave action in order to correlate such data as are obtained with that previously obtained from hydraulic model and theoretical studies. Armor units at selected positions in the structure are permanently tagged, positioned by survey measurement, and subsequently checked semi-annually, or after each major storm, to determine the degree of movement of the units. Wave gaging instrumentation is installed to provide continuous sampling of incident wave action, and survey measurements of adjacent beach and bottom are also taken periodically. Data are currently being measured at three locations on the Pacific Coast which include a rubble-stone jetty; a jetty with pre-cast quadripod armor units, and a shore-connected breakwater constructed with a rubble-stone stem and monolithic concrete head.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0157, CORROSION MITIGATION

G.M. WATTS, U.S. Army, Coastal Engin. Res. Center, Washington, District of Columbia 20016

The investigation is to involve the collection and presentation of data showing the corrosion rate in sea water of various shapes of steel piling and of the stressing steel in pre-stressed and post stressed concrete piling. The corrosion rates are to be determined from piling installed at locations having various climatic, tidal and contamination conditions. The objective is to furnish information to aid in determining the life expectancy of steel used in piling installations.

8.0159, DEVELOPMENT OF HYDRAULIC DESIGN PROCEDURES FOR STRUCTURAL PLATE PIPE AND PIPE-ARCH CULVERTS USING RESISTANCE FACTORS FROM RECENT RESEARCH

H.G. BOSSY, U.S. Dept. of Transportation, Bureau of Public Roads, Washington, District of Columbia

Design aid for selection of a structural plate pipe-arch culvert (new section of 31-in. corner radius) adequate for a given design flood peak is being developed and made available to highway engineers. This will be supplemented by data on resistance factors for all sizes and types of corrugated metal culverts.

8. ENGINEERING WORKS

SUPPORTED BY U.S. Dept. of Transportation - Public Rds.

8.0160, COASTAL ENGINEERING STUDIES RELATED TO FLORIDAS SHORELINE AND BEACH EROSION PROBLEMS

R.G. DEAN, Univ. of Florida, School of Engineering, Gainesville, Florida 32601

The proposed program represents a long-range investigation to define the causes of and solutions to Florida's shoreline and beach erosion problems. The emphasis during the first year of the project will focus attention along the lower southeast coast from Jupiter Island south to Government Cut. In subsequent years, attention will be directed to other segments of the State's coastline. The primary objectives of the study are described in the following paragraphs.

Inlets. shoreline problems will be investigated. Special consideration will be given to the hydrographic features and sand bypassing processes at the various inlets.

Nearshore Sand Resources. define near-shore sand resources suitable for beach nourishment purposes.

Susceptibility of General Coastline to Wave Attack. refraction techniques will be employed to identify areas that are particularly vulnerable to storms originating from various directions. Erosion-deposition occurrences for particular storms will be correlated with these results.

Coastal Construction. types of coastal structures and practices will be assembled and interpreted in order to document the most effective solutions to Florida's coastal problems.

SUPPORTED BY Florida State Government

8.0161, SAND TRACING AT SPECIFIC INLETS AND AREAS ON THE LOWER EAST COAST OF FLORIDA

J.A. PURPURA, Univ. of Florida, School of Engineering, Gainesville, Florida 32601

The purpose of this tracing program is to determine the pattern of the natural as well as artificial sand bypassing that is occurring at three inlets and to study the longshore and transversal littoral drift of the shoreline between two of the inlets. It is hoped this data will be useful in determining the most practical way(s) of stabilizing and/or protecting beach area adjacent to inlets.

Natural, native sand in large quantities is coated with a fluorescent pigment. The coated sand is placed at different locations throughout the study area. After placement, a comprehensive sampling program is carried out. Results are then analyzed and correlated with measured physical parameters.

8.0162, SILVEX PERSISTENCE IN WATER AND HYDROSOIL

H.P. NICHOLSON, U.S. Dept. of Interior, Southeast Water Lab., Athens, Georgia

Methodology has been developed for the differential analysis of the propylene glycol butyl ether esters of silvex and silvex acid in water and the underlying hydrosoil. The persistence of the esters and acid of silvex in water and hydrosoil have been determined in the laboratory. Soil types involved were: Cecil sandy clay loam of the Piedmont Plateau of Georgia, Lakeland loamy sand from the Coastal Plain of Georgia, and Brighton muck from Florida. These studies are being extended, under field conditions to Louisiana soils of the Olivier Calhoun-Loring Association. The Louisiana tests involve applications to three natural ponds.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0163, TWO-PHASE FLOW IN A VERTICAL BEND

M.R. CARSTENS, Georgia Inst. of Technology, Water Resources Center, Atlanta, Georgia 30332

The proposed research is designed to contribute to a general understanding of two-phase (air-water) flow in enclosed conduits involving a vertical shaft, an elbow, and a horizontal discharge leg. Special attention will be paid the transition from a bubbly

mixture in the vertical leg to stratified (open-channel) or plug flow in the horizontal leg.

Generalized conclusions regarding important design and performance parameters will be based on an experimental investigation in which the following variables will be considered: (a) air concentration, (b) radius of curvature of the bend, (c) length of the horizontal conduit, and (d) Froude Number of the flow in the horizontal conduit.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch Georgia Institute of Technology

8.0164, UNSTEADY FLOW OF DILUTE AQUEOUS HIGH POLYMER SOLUTIONS IN PIPES

P.G. MAYER, Georgia Inst. of Technology, Water Resources Center, Atlanta, Georgia 30332

The proposed research plan involves mathematical and experimental studies of unsteady pipe flows of dilute aqueous solutions of high polymers. The main purpose of the studies is to formulate mathematically and to verify experimentally the progress of slugs of water having changed physical properties due to polymer additives. The mathematical study involves solutions to hydraulic transients due to changed fluid properties. Numerical methods and electronic digital computers are to be employed.

The experimental study involves measurements of pressure transients in controlled laboratory experiments. Different concentrations of polymeric substances are to be injected and the progress of the slug and its effect on the system are to be observed.

The mathematical study and the laboratory investigation would be correlated to suggest practical applications of polymer injections to improve water distribution systems.

8.0165, CIVIL ENGINEERING STRUCTURES IN THE OCEANS

P.G. MAYER, Georgia Inst. of Technology, School of Engineering, Atlanta, Georgia 30332

Engineering structures in the ocean involve forces and constraints which demand attention to the interrelationships between the soil dynamics of the ocean floor, the hydrodynamics of wave action and of the viscous damping, and the structural response characteristics. These interrelationships must be understood as random phenomena and must be treated by probabilistic methods.

The present study involves the formulation of a structural model based on continuous mass distribution, an analysis of the wave force spectrum using the theory of random processes as applied to structure and the ocean, and an analysis of foundation conditions. The synthesis of the above will be attempted by numerical methods. (Ph.D. thesis.)

SUPPORTED BY Georgia Institute of Technology

8.0166, TURBULENT FLOW SPECTRAL ANALYSIS

P.G. MAYER, Georgia Inst. of Technology, School of Engineering, Atlanta, Georgia 30332

Boundary layer turbulence creates random pressure fluctuations. This pressure fluctuation creates noise and structural vibrations. Many engineering structures are subjected to random force applications and their response characteristics are closely related to noise problems. In fluid mechanics, pressure fluctuations are responsible for large drag forces and structural fatigue.

Design of hydraulic structures should include an analysis of the turbulent flow spectra.

U.S. Dept. of Agriculture

8.0168, AQUATIC PLANT CONTROL

A.B. MONTGOMERY, U.S. Dept. of Interior, Bureau of Sport Fish. & Wlfe., Atlanta, Georgia 30323

The ever-increasing demands on water resources of this country are being severely curtailed by the rapid encroachment of obnoxious aquatic plants. This has resulted in the necessity for control of interfering aquatic weed infestations. Such is most effectively accomplished through the use of chemicals. However, the chemicals must be harmless to aquatic organisms and safe for uses associated with human water supply.

The objectives of the investigation are to determine the effects of herbicides, used in the control of obnoxious aquatic plants, to fish and related organisms and their environment. Pre-, during and post-treatment data will be collected from field study areas which are treated under operational procedures. Standard fisheries collecting equipment and methods will be used. The studies will include acute and chronic toxicities of the chemicals, as well as residues which are accumulated in the various tissues and organs of the organisms, bottom muds and the water. Laboratory studies will be conducted as are deemed necessary and beneficial. In addition, the good or bad effects of alteration of the habitat through plant removal will be evaluated. This is a continuing study and will consider different plants, environments, and chemicals.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0169, INVESTIGATION EVALUATION AND DESIGN OF OPEN AND CLOSED CONDUIT SYSTEMS AS IT RELATES CONVEYANCE AND DISTRIBUTION SYSTEMS

UNKNOWN, U.S. Dept. of Interior, Bureau of Reclamation, Boise, Idaho

Review, evaluate and consolidate presently available studies and information, study operating costs of controlling and delivering water including justification of water control features such as meters, automation and remote control facilities, study maintenance costs, including amount and kind of personnel and equipment required to operate the system, from the information obtained develop models of closed conduit irrigation systems. This program replaces the Lower-cost Canal Lining Program.

8.0170, OBSERVATION AND EVALUATION OF INSTRUMENTATION IN THE FOUNDATION AND EMBANKMENT OF MORAIN STATE PARK DAM

C.H. MCCONNELL, Individual Grants, Illinois

To install piezometers in the foundation and embankment of dam to monitor the stability of lacustrine clay deposits in foundation during construction; to monitor stability of abutments after filling of reservoir and check effectiveness of Wakefield Sheet Piling and upstream blankets; and to monitor uplift pressures in bedrock and check effectiveness of grouting. Settlement plates will be installed and observed for foundation settlement during construction of dam embankment.

SUPPORTED BY Pennsylvania State Government

8.0171, GREAT LAKES, PORTS AND SHIPPING SYSTEM

A.R. MACMILLAN, Southern Illinois University, Transportation Institute, Carbondale, Illinois 62903

Purpose of Work: The purpose of this research is to: (1) to assemble under one cover technical and non-technical information regarding all phases of activities in Great Lakes ports; (2) to show the influence of the St. Lawrence Seaway in forming and reforming the ports and their waterborne directed functions; (3)

to give complete details on a great many economic matters affecting a large number of Great Lakes ports, including investigation of territorial regions and zones tributary to such ports; and (4) the opportunities available for the American Merchant Marine.

Scope of Work: The basic purpose of this work is to compile a large amount of new diversified port and shipping data into a single volume. The Contractor is making a complete analysis of the present port system including the fundamental trends in land and water transportation. There is a growing need for a solid representation of the position of the Great Lakes ports and their data relevant to the economy of this vast coastline particularly to the promotion of the United States Merchant Marine.

8.0172, CORROSION MITIGATION -CATHODIC PROTECTION OF WATER-IMMERSED STEEL STRUCTURES

F.W. SHANKS, U.S. Army, Engineer District, Rock Island, Illinois 61201

Objectives. To investigate the technical and economic feasibility of cathodically protecting water-immersed steel structures of the Corps of Engineers and to develop practical cathodic protection designs for such structures.

Current and Proposed Investigations. The technical and economic practicability of cathodically protecting water-immersed steel components of Corps of Engineers waterways projects has been under study for several years. Numerous cathodic installations both of the galvanic anode type and impressed-current type have been designed and evaluated on practical structures. Factors which complicate the satisfactory application of cathodic protection are: (1) The components (usually gates of some type) move during operation. (2) The surface configuration is frequently complex. (3) Anode assemblies are generally subject to physical damage by turbulent water, ice, debris and water-borne vehicles. (4) Surfaces to be protected may be immersed only in part and only part of the time. (5) Competitive methods of protection, primarily coatings, are being continually improved and do not require the continuing surveillance inherent in cathodic protection installations. Currently a survey of cathodic protection experience on waterways projects is being conducted on a Corps-wide basis. The direction of future work will depend largely on the survey findings.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0173, PAINT TESTS

F.W. SHANKS, U.S. Army, Engineer District, Rock Island, Illinois 61201

Objectives. To conduct an investigative program designed to provide the greatest overall economy in protective coatings for Corps of Engineers structures, with primary emphasis on the metal components of hydraulic structures which are subject to water immersion.

Current and Proposed Investigations. This investigation has been in progress for many years and has led to the coating systems now used throughout the Corps on hydraulic structures and appurtenant works. In general, the investigation is designed to keep abreast of progress in the rapidly changing paint industry by formulating basic new film-formers and other new ingredient materials, or new combinations of accepted materials, into finished coatings which are evaluated on test panels and eventually on practical structures. Current and proposed work is designed to: (1) Improve the characteristics and further evaluate the performance capabilities of the standard coal tar-epoxy paint system used in the Corps. (2) Develop a zinc-rich primer best suited for use under standard vinyl type paint systems employed on water-immersible surfaces. (3) Continue the improvement of the Corps' vinyl systems for water-immersed steel. (4) Update previous studies of epoxy and urethane coatings. (5) Update previous studies relative to the ability of paint coatings (on steel) to resist damage by cathodic current. (6) Carry on cooperative test work with other independent agencies.

8. ENGINEERING WORKS

8.0181, TURBULENT BOUNDARY LAYERS IN PRESSURE GRADIENTS

J.M. ROBERTSON, Univ. of Illinois, School of Engineering, Urbana, Illinois

Near separations and in flows along surface of appreciable curvature (in flow direction) the pressure distribution across a turbulent boundary layer is not uniform, as predicted by elementary boundary layer theory. Integral equation analysis of layer development is able to cope with a pressure difference across the layer if it is known. Present phase of general turbulent boundary-layer studies is concerned with an evaluation of transverse pressure occurrences.

SUPPORTED BY University of Illinois

8.0182, FLOW IN ECCENTRIC ANNULAR PIPES

J.M. ROBERTSON, Univ. of Illinois, School of Engineering, Urbana, Illinois

Motivated by an interest in the effect of an inserted pipe on the flow capacity of sewers, this study is concerned with the effects on flow capacity and friction factor of the eccentricity and diameter ratio. Experiments have been conducted on two diameter ratios at several eccentricities in the turbulent pipe-flow regime. In the second phase of work the occurrences over a wider range of variables are being evaluated with the aid of the computer.

Appreciable deviations have been found from the common hydraulic assumption of no effect on friction factor.

8.0183, MICROSCOPIC INVESTIGATION OF TRACTIVE FORCE DISTRIBUTION IN OPEN CHANNEL

H.G. WENZEL, Univ. of Illinois, School of Engineering, Urbana, Illinois

Tractive forces for the case of three dimensional subvertical turbulent flow in open channels are determined using a microscope to observe the motion of small particles suspended in the flow. The small depth of field of the optical system permits velocity determinations to be made at various planes in the sublayer region. High speed photography is employed to record the particle motion. Velocity profiles near the boundary are used to compute the tractive force. A small glass walled channel is being employed with the depth of flow approximately one-half inch. Smooth and rough boundaries will be studied.

8.0184, STUDY OF LIQUEFACTION OF SATURATED SANDS

S. PRAKASH, School of Res. & Trn. Equake., Roorkee, India

8. ENGINEERING WORKS

Loose sands may get liquefied if subjected to earthquake shocks. The variables affecting liquefaction are relative density of sand, vibration characteristics i.e. amplitude, frequency and acceleration of motion, time of vibrations and type of sand.

Studies of all these variables was undertaken for Obra Dam sand. Obra Dam is proposed to be 100 ft. high earth dam on 80 ft. deep deposit of loose to medium sand. The maximum earthquake acceleration to which the samples were subjected on a steady state vibration table was 10% g. It was found that the Obra sand was too coarse to liquefy. However, the maximum settlement under no super load was about 10%-15% of the height of sample. Settlement of this order may cause damage to slopes of the earth dam.

Blasting tests were performed at the proposed site, in order to verify the applicability of laboratory data to field problem. 60% gelatin was fired at a depth of 6m below the river bed. The quantity of charge varied from 1 kg to 3 kg. Pore pressure, settlement and surface acceleration (both in the vertical and horizontal direction) were measured.

It was found that results of laboratory could be extended to field conditions and Obra sand did not liquefy under simulated earthquake conditions.

Settlements of foundation were predicted under anticipated ground shocks in future and remedial measures suggested.

SUPPORTED BY Scientific & Industrial Research Council

8.0185, LIQUEFACTION STUDIES OF TENUGHAT DAM SAND

S. PRAKASH, Univ. of Roorkee, Roorkee - Uttar Pradesh, India

Tenughat Dam is proposed to be 165 ft. high earth dam on 50 ft. deep deposit of loose to medium sand. Loose sand may get liquefied and experience large settlements if subjected to earthquake shocks. The variable factors, the effect of which was studied on this sand, were (i) frequency (ii) acceleration (iii) number of cycles and (iv) effective surcharge under fully drained condition.

Saturated sand samples of 26 cm height were tested on a steady state horizontal vibration table. Pore pressures at 6 cm, 15.5 cm and 25 cm depth were measured. The settlement of the deposit was also recorded. It was found that Tenughat sand did not liquefy at anticipated ground motion and the maximum settlement under no super load was about 4 to 5% of the height of sample. When the surcharge was increased to 0.23 kg/cm² the settlement & rise in pore pressure was reduced considerably.

Blasting tests were performed at proposed site to verify the applicability of laboratory data to field problem. 80% special gelatin was fired at a depth of usually 6 m below the river bed. Pore pressure, settlement, surface acceleration were measured. It was found that results of laboratory could be extended to field conditions. Settlements of foundations were predicted under anticipated ground shocks in future.

SUPPORTED BY Scientific & Industrial Research Council

8.0186, LIQUEFACTION STUDIES OF UKAI DAM SAND

S. PRAKASH, Univ. of Roorkee, Roorkee - Uttar Pradesh, India

Ukai Dam is proposed to be 265 ft high earth dam. In the river portion there remains a standing pool of water 12' to 15' deep. An under water sand fill will be constructed and will have 22 ft of maximum depth. Problem of excessive settlement and liquefaction in earthquakes of this loosely filled sand is being studied.

Saturated sand samples are planned to be tested on steady state horizontal vibrations table. Pore pressures of three different heights will be measured.

8.0189, FLOW REGIMES IN POROUS MEDIA

R.A. GREENKORN, Purdue University, School of Engineering, Lafayette - West Lafayette, Indiana 47907

The immediate objective of this proposal is to study the pressure response of fluid-filled porous media to determine predominant flow regimes as a function of the frequency of input pressure oscillations. The effects of property variation (heterogeneity) of the media, property variation of the fluids, and variation of pressure level will also be included. The initial mathematical model selected for the experiments is the linear wave equation for a viscous, fluid-filled porous medium. Four possible flow regimes, including the Darcy regime (creeping flow), have been deduced from this model for various combinations of the frequency of the input pressure, of fluid properties, and of media properties. The existence of these regimes and the parameters delineating these regimes will be determined by measuring the pressure response to input pressure oscillations in rigid and elastic capillaries, in homogeneous porous media and in heterogeneous porous media, all containing several different fluids. Measurements of the pressure response of fluid-filled porous media will be made at several pressure levels such that the compressibilities of the fluids and of the media may change. The wave equation model and the results of the experiments in rigid media, will be compared to determine the dynamic range of the regimes. Results of the experiments at higher pressure levels will be compared with models for elastic porous media. This project started in 1968 and completion is anticipated in 1972.

8.0191, FLUCTUATION OF RESERVOIR LEVELS AND THE RELATED CAUSE OF LANDSLIDES (THE OHIO RIVER VALLEY)

M.E. HARR, Purdue University, School of Engineering, Lafayette - West Lafayette, Indiana 47907

The specific objective of the project is to develop solution procedures whereby an assessment can be made of the potential instability of earth (soil or rock) slopes abutting bodies of water whose surfaces fluctuate with time. Such slopes may be natural or man-made. The earthen material may exhibit varying degrees of homogeneity and anisotropy with respect to permeability and strength.

Current procedures assume that seepage conditions are steady state; however, this state of affairs seldom is realized and is

8. ENGINEERING WORKS

almost never critical. A computer solution will be developed to provide the location of the phreatic surface within the slope at any time. Of particular importance is the phenomenon of 'rapid drawdown', wherein a lowering of the water surface greatly leads the change within the earthen body. This condition is believed to be responsible for the recent failures in the Markland Dam Area on the Ohio River. These failures are to provide input for developing and checking the analytical procedures produced in the study.

The assessment capability will be developed at two scales: (a) general or regional and (b) detailed, or for a specific site.

8.0192, THE CHARACTERIZATION OF OVERLAND FLOW ON VERY ROUGH SURFACES

L.F. HUGGINS, Purdue University, School of Agriculture, Lafayette - West Lafayette, Indiana 47907

The objective of the proposed research is to determine the hydraulic relationships which govern the mechanics of shallow fluid flow over very rough surfaces. Such conditions characterize the majority of overland flow on natural surfaces where the flow geometry is composed of a myriad of small interconnected rivulets and channels rather than a continuous film or sheet of fluid.

The primary emphasis of the proposed research will be a comprehensive laboratory study of shallow flow over a variety of surface roughness conditions. This investigation will utilize equipment capable of applying controlled surface flow and artificial rainfall to a 12 foot square, variable sloping flow table. Results of the experimental investigation will be used to develop flow analysis techniques to describe the composite flow pattern on the basis of a statistical characterization of the flow surface rather than a complete mathematical description of the boundaries of each individual flow channel.

8.0193, DEVELOPMENT AND CALIBRATION OF A PITOT SPHERE

G.H. TOEBES, Purdue University, School of Engineering, Lafayette - West Lafayette, Indiana 47907

A need exists for directionally sensitive mean flow measuring devices and a 5-hole pitot sphere is being developed. Used in conjunction with pressure transducers it will, when ultimately hooked up to the planned campus-wide hybrid computer, provide the possibility to map three-dimensional vector fields.

SUPPORTED BY Purdue University

8.0194, DESIGN OF INSTRUCTIONAL EQUIPMENT FOR LABORATORY DEMONSTRATIONS IN FLUID MECHANICS

G.H. TOEBES, Purdue University, School of Engineering, Lafayette - West Lafayette, Indiana 47907

The preliminary design for the equipment of a Towing Tank 150 feet long by 11 feet wide has been completed.

Final design of a research wind tunnel is being completed. Actual use of the equipment is scheduled in the fall of 1969.

SUPPORTED BY Purdue University

8.0195, PERFORMANCE CHARACTERISTICS OF LARGE SCALE HYDROMECHANICS LABORATORY EQUIPMENT

G.H. TOEBES, Purdue University, School of Engineering, Lafayette - West Lafayette, Indiana 47907

Under design are a 35' x 1.5' x 3' and a 90' x 6' x 3' tilting glass-lined flumes. The larger flume will accommodate sediment recirculation. A number of design problems are being studied which will be verified upon completion of the equipment. The main problems are: uniformity of inflow from headbox; residual turbulence in inflow; the boundary layer development in free surface flow and the length of flow establishment. The smaller flume is completed and measurements are being started using pressure transducers and hot-wire equipment.

8.0197, DESIGN REQUIREMENTS FOR MUNICIPAL DIATOMITE FILTERS

P.E. MORGAN, Iowa State University, School of Engineering, Ames, Iowa 50010

This study was undertaken to determine the characteristics of municipal applications in which diatomite filters may be used successfully, to study the effect of various variables on filtration economy and effectiveness, and to outline a procedure for designing a plant to operate with maximum economy. A theory of diatomite filtration has been proposed and verified for use in designing plants for the filtration of raw and chemically treated water. In the current work, a computer program is being developed that will be used for determining the characteristics of a filter to operate at least cost. A truck mounted diatomite water treatment plant is being operated in the field to gather design data for typical municipal water applications: iron removal, surface water filtration, coagulated water filtration, and filtration of limesoda ash softened water. These data will be fed into a computer to determine the economics of filtering such waters with diatomite filters.

Laboratory studies are being made to determine the hydraulic characteristics of filter cakes used in the removal of kaolin, montmorillonite, and other clays from water. The evaluation of coagulant and polyelectrolyte coatings for filter aids will be extended to determine the effects of pH and other factors on their removal of biological organisms and turbidity and on their hydraulic characteristics.

8.0198, EFFECTS OF RIVER CURVATURE ON RESISTANCE TO FLOW

E.M. OLOUGHLIN, Univ. of Iowa, School of Engineering, Iowa City, Iowa 52240

Bed-form characteristics developed in a flow over cohesionless beds in straight and curved laboratory channels will be analyzed with the purpose of identifying readily measured and reproducible measures of stream-bed roughness. The roughness measures so derived will be incorporated into resistance relationships, and the effects of channel curvature upon the resistance equations will be examined.

Data will be obtained in the laboratory with the use of an ultrasonic depth recorder whose output is digitized by an IBM 1800 Data Acquisition and Control System.

Similar field data are being collected on the Missouri River under a cooperative research agreement with the Omaha District of the U. S. Corps of Engineers.

8.0200, UNSTEADY FLOW PARAMETERS IN HYDRAULIC DESIGN Y. YU, Univ. of Kansas, School of Engineering, Lawrence, Kansas 66045

The purpose of this research project is to investigate experimentally and theoretically the characteristics of unsteady, incompressible flow involving the interaction between a conduit and a reservoir or other non-uniformities of boundary configuration.

The test system consists of a reservoir from which water flows through a conduit. Flow is varied by controlling a quick-acting valve. We propose to measure transient pressures with pressure transducers and transient velocities in the outlet conduit and reservoir with a hot-film anemometer or from high-speed movies.

Existing theoretical solutions will be compared with the experimental results and extended to other cases.

8.0201, STUDY OF ENGINEERING PRACTICES OF IRRIGATION IN KANSAS G.R. TENEYCK, Kansas State University, Agricultural Experiment Sta., Manhattan, Kansas 66504

Objectives: The objectives of the project are to study (1) the factors limiting crop production on bench leveled land, (2) the factors that control the design of irrigation systems on sloping land, (3) the distribution of water on irrigated farms, (4) methods of irrigating orchards, and (5) the effects of tillage tools and time of tillage operations on crop production.

A contour bench has been leveled. Various fertility and cropping treatments are being carried out to determine the best method of bringing the area into irrigated crop production. Feasibility of bench leveling will be determined by comparing bench leveling with contour irrigation and sprinkler irrigation. Open ditches with portable and permanent structures and gated pipe to deliver water to level and sloping fields are being evaluated. An orchard has been established with trees growing in terrace channels. Irrigation water is applied in these channels. Additional trees will be planted on bench leveled land to determine a good method for irrigating trees along with the spraying operations that must be carried out. Roto tillers, moldboard plow and lister will be compared to determine their effects on crop yields and soil structure.

SUPPORTED BY Kansas State Government

8.0202, OPTIMAL DESIGN OF WASTE TREATMENT SYSTEMS L. TSENGFAN, Kansas State University, School of Engineering, Manhattan, Kansas 66504

The primary purpose of this investigation is to develop optimal designs and methods that lead to optimal designs for a variety of waste treatment systems. The research will begin with an analysis, optimization, and process design study of the conven-

tional activated sludge process and the complete mixing activated sludge process. Optimal designs of these two systems will be developed and the designs will be experimentally verified by operating pilot-scale models of the optimal systems.

Efforts will also be made to optimize other biological oxidation processes, entire waste treatment systems and advanced waste treatment systems (those involving adsorption, electro dialysis, etc. which are designed to provide reusable water).

A second objective of this research will be to illustrate how modern optimization techniques such as dynamic programming and the generalized version of the maximum principle can be used to develop optimal designs and optimal operating conditions for waste treatment processes.

8.0203, SIPHON TYPE TRICKLE TUBE FOR FARM PONDS AND RESERVOIRS

H.J. BRAUD, Louisiana State University, Agricultural Experiment Sta., Baton Rouge, Louisiana 70803

The design and field testing of siphon type trickle tubes for water level control in a pond or reservoir.

Design, fabricate and test in the laboratory several types of siphon pipes. Install an experimental siphon tube on a dam of a reservoir suitable from the hydraulic standpoint for evaluating the water level control achieved.

Alter and improve tube design as indicated by performance of field installation.

1. To design and test a siphon type trickle tube for maintaining a regulated water level in a reservoir. 2. To observe the performance of several siphon tube installations to determine life expectancy and problems encountered in actual field installations over a several year period.

SUPPORTED BY Louisiana State Government

8.0204, ENVIRONMENT CONTROL FOR ORCHARDS AND FIELDS

H.J. BRAUD, Louisiana State University, Agricultural Experiment Sta., Baton Rouge, Louisiana 70803

Objectives: 1. To develop and evaluate practical methods for protecting citrus trees against damage due to windborne freezes. 2. To develop and evaluate practical methods for reducing hot weather stress on fruit and vegetable crops.

A citrus orchard is instrumented to study the effectiveness of water spray for preventing cold damage to trees. Several application methods will be evaluated. The use of irrigation spray for reducing hot weather stress on strawberries will be studied.

8.0209, FREE DROP WATER CONTAINER

R.L. WOODBURY, U.S. Army, Limited War Laboratory, Aberdeen Proving Ground, Maryland 21005

Tech Objective: To develop a water container which will survive a free fall drop from low flying aircraft. This container will provide a convenient means of water resupply to units operating in remote areas.

Tech Approach: The free drop water container is an eight inch tube, fifty-two inches long and holds 3 gallons. The tube is made of eight thicknesses of five mil modified polyurethane material, one inside the other. The external bag is international orange in color. The container is filled with three gallons of water and each tube is tied by means of a simple overhand slipknot. The filled bag is inserted in a corrugated carton 4-1/2' x 5-1/2' x 38'. The filled container ready for free drop weighs approximately 27 pounds. Empty tubes weigh 1 lb 10 oz and the corrugated carton weighs 1 lb 15 oz.

Progress: Development through successful South East Asia evaluation has been completed. The U. S. Army Materiel Command (U.S. Army Natick Laboratories) is currently processing operational requirements for the item.

8.0210, METHODS FOR CONTROLLING ALLIGATOR-WEED AND OTHER WEEDS IN CANALS, WATERWAYS, AND ADJACENT WATERS IN THE SOUTHEASTERN U. S.

F.L. TIMMONS, U.S. Dept. of Agriculture, Beltsville, Maryland

Research is conducted under laboratory, greenhouse, and field conditions to develop chemical and biological methods for the control of alligatorweed and other aquatic weeds such as waterhyacinth, waterlettuce, naiad, and others which clog navigation channels, irrigation and drainage ditches, and other waters in the Southeastern States and which interfere with boating, fishing, hunting, and other recreational activities. The research is conducted by the U. S. Department of Agriculture in cooperation with the Departments of the Army; Interior; and Health, Education and Welfare; the Florida U. S. Department of Agriculture in

cooperation with the Departments Agricultural Experiment Station; Central and Southern Florida Flood Control District; Florida Fish and Game Commission, and other interested agencies including chemical companies. New and promising herbicides are evaluated for their effectiveness in controlling difficult-to-kill aquatic weeds in relation to environmental influences and including studies on factors affecting the absorption, translocation, and effectiveness of the chemicals and their disappearance pattern in water. The above studies and research on the Marisa snail and other biological control agents for aquatic weeds are conducted in Florida and adjoining states.

Work is also conducted in South America to find insects with sufficient specificity in their feeding habits to suppress alligatorweed and waterhyacinth without causing any damage to beneficial ornamental plants, crop plants, or other valuable plants.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0211, USE OF ATTERBERG LIMITS IN APPLIED SOIL MECHANICS

A. CASAGRANDE, Harvard University, Graduate School, Cambridge, Massachusetts 02138

The objective of this project is to develop a comprehensive set of guides which can be used to prevent errors and ensure reliability of Atterberg limits test results and applicability of these tests for defining other soil characteristics.

During previous fiscal years, the instruments and procedures for determining Atterberg limits were investigated, and laboratory tests were performed to measure physical properties of soils for correlations with Atterberg limits. Additional correlations were made between Atterberg limits and other engineering properties of cohesive soils. During FY 68 and FY 69, residual shear strengths of overconsolidated clays and clay shales are being determined to complete correlations.

8.0212, EMBANKMENT AND FOUNDATION MOVEMENTS ON THE INSTRUMENTED SECTIONS OF THE EAST ATCHAFALAYA BASIN PROTECTION LEVEE, ST. MARTIN PARISH, LOUISIANA

T.W. LAMBE, Mass. Inst. of Technology, School of Engineering, Cambridge, Massachusetts 02139 (DACW29-68-C-0016)

Soils research including analyzing and predicting embankment and foundation movement on the Instrumented Sections of the East Atchafalaya Basin Protection Levee which requires efforts in the areas of computer programming, analysis of field performance data and soil test data, soil testing, study of new data, field inspections, coordination with Government soils and levee design engineers, and preparation of reports summarizing work performed and results. The purpose of this research is to review, refine and confirm results of testing performed by personnel of the U. S. Army Corps of Engineers, New Orleans District, on the Instrumented Sections of the E.A.B.P.L. Extremely poor foundation conditions characterized by very soft subsurface soils which cause extreme settlement and shear failures have made it difficult to raise the guide levees of the Lower Atchafalaya Floodway which are deficient in grade and section. The instrumented sections were constructed to obtain data on settlement, stability and pore water pressures, prior to, during and after construction of stability berms and levee enlargement to determine the best methods of construction and the minimum factor of safety to use in design all in order to improve and accelerate levee construction in the Atchafalaya Basin.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0213, A GENERALIZED COMPUTER LANGUAGE FOR HYDROLOGIC AND HYDRAULIC ANALYSIS

F.E. PERKINS, Mass. Inst. of Technology, School of Engineering, Cambridge, Massachusetts 02139

Specifically it is proposed to develop a set of computational routines which are of general interest to hydrologists and hydraulic engineers, and to integrate these through a common data base and command structured language. It is proposed that this work

8. ENGINEERING WORKS

be placed into a broad engineering context by making it a compatible part of the Integrated Civil Engineering System (ICES) which is presently under development by the Civil Engineering Department at M.I.T.

This would permit then the development of an extremely flexible data structure for integration of the routines and a convenient problem oriented language for the user. In addition it would place the hydraulic/hydrologic language in a system which is expected to find wide use by practicing engineers.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch

8.0214, SNOW DISTRIBUTION MAPPING FROM SATELLITE PHOTOGRAPHY

A.F. FLANDERS, Allied Research Assoc. Inc., Concord, Massachusetts 01742

Satellite snow-mapping techniques for plain's areas, developed under Contract No. Cwb-11209 with Allied Research Associates, subsequently have been tested under Contract No. E-162-67(N) with ARA. It has been deemed desirable by the Office of Hydrology of the Weather Bureau and the Environmental Sciences Group of the NESG to extend satellite snow-mapping to mountainous areas. The purpose of the proposed contract is to adapt the techniques previously developed for non-mountainous areas or, as is more likely to be necessary, develop new techniques for snow-mapping in the type of terrain characteristic of the western third of the United States.

TIROS and ESSA satellite pictures from the winter and spring months of 1964-1968 will be used to generate a representative sample of cloud-free days over the western third of the United States. After snow covered areas have been identified by techniques developed in previous studies, maps of snow cover distribution will be prepared, and the satellite snow mapping will then be compared with that done with conventional ground data.

SUPPORTED BY U.S. Dept. of Commerce - E.S.S.A.

8.0215, EXPLORATORY DEVELOPMENT OF WATER PROPULSION FOR COMBAT VEHICLES

Z.J. JANOSI, U.S. Army, Tank & Automotive Command, Warren, Michigan

The current study will investigate the following: a. Systems Analysis: A systems analysis will be initiated which ultimately will encompass all aspects of the military vehicle river crossing problem. The first phase of this study will be to establish the significance of various degrees of water performance, including swimming, fording, entry, and exit capabilities. Extensive river survey work will be conducted to identify the river characteristics and these data will be used as inputs to the systems analysis study. b. Mathematical Models: A mathematical model of the mechanics of river crossing will be established. This model will include the river environment, the pertinent vehicle characteristics and the mathematical relationship between them. c. Propulsion Systems: Various propulsion and control systems will be studied and experimentally evaluated to determine their performance and applicability for providing a significant improvement in swimming speed and maneuvering capabilities of future military vehicles.

8.0216, HYDRAULIC DESIGN OF STRUCTURES FOR WATER USE AND CONTROL IN THE CORN BELT

K. YALAMANCHILI, U.S. Dept. of Agriculture, Minneapolis, Minnesota

Object: To develop new and improved structures for water use, disposal, conveyance, and control; and to determine the hydraulic criteria for their safe, efficient, and economical design.

Plan of Work: This research seeks to establish principles and develop dimensionless designs for various water control structures which can be adapted to various site situations and size requirements on individual farms and ranches and in up stream watersheds. Studies are carried on principally by means of model studies at the St. Anthony Falls Hydraulic Laboratory, Minneapolis, Minnesota, and in close coordination with related research at the Outdoor Hydraulic Laboratory, Stillwater, Oklahoma.

SUPPORTED BY U.S. Dept. of Agriculture

8.0217, MODEL STUDY OF CONTROL STRUCTURES FOR FOOTHILL FEEDER TUNNELS

A.G. ANDERSON, Univ. of Minnesota, School of Engineering, Minneapolis, Minnesota 55455

These model studies are being carried out to examine the operating characteristics of several proposed control structures to be used to regulate the flow through the Foothill Feeder tunnel. This tunnel, 18.5 ft. in diameter, will receive water from the California water project and distribute it to the metropolitan area of Southern California. The control structures are needed to provide the proper hydraulic gradelines throughout the system and to provide for discharge rejection and distribution of the flow to various branches. The study is being carried out by the use of transparent models at a scale of 38.3:1. The principal objective is the development of the operating characteristics and to examine the efficacy of the proposed designs. The fluctuating pressure on the gates and piers are measured by pressure transducers and estimates are made of any potential cavitation. The project was started in January 1966 and its termination is expected by December 1968.

California State Government

8.0218, MODEL STUDY OF SEWER DROPSHAFT

A.G. ANDERSON, Univ. of Minnesota, School of Engineering, Minneapolis, Minnesota 55455

This project is an investigation of the hydraulics of flow in vertical conduits or drop shafts having a length of the order of 200 ft. This discharge is variable and air is entrained at the inlet and separated from the flow at the downstream exit. The flow of air-water mixtures at atmospheric pressures with entrainment in the direction of flow is the subject of interest. The project involves the experimental design of drop shafts for use in the proposed sewer system to accommodate surface runoff. The study was started in February 1967 and terminated in July 1968.

SUPPORTED BY Harza Engineering Company
Chicago City Government - Illinois

8.0219, LAKE ERIE DIKE

E. SILBERMAN, Univ. of Minnesota, School of Engineering, Minneapolis, Minnesota 55455

The Bethlehem Steel Corporation at its Lackawanna, New York plant proposes to contain the slag and other waste products previously dumped freely into Lake Erie by enclosing the waste area within a dike. It is the purpose of the investigation to determine the optimum outline and structure of the dike to (1) limit interference with navigation into Buffalo Harbor by wave reflection and refraction and (2) prevent contamination or silting of the several adjacent water intakes, especially the Erie County Water Authority and the City of Buffalo intakes. Other objectives may include a study of a larger enclosure to contain public wastes and a means for providing a ship docking facility. The study will be made by means of a physical model of the east end of Lake Erie at a distorted scale of 1:600 horizontal and 1:60 vertical. The research will take about one year from July 1968.

SUPPORTED BY Bethlehem Steel Corporation

8.0220, ENGINEERING PHASES OF SOIL AND WATER MANAGEMENT

C.L. LARSON, Univ. of Minnesota, Agricultural Experiment Sta., Saint Paul, Minnesota

Cooperation with ARS-USDA is proposed on the following objectives: (1) To study characteristics of rainfall, infiltration, percolation, and runoff as related to soil and water management. (2) To determine what methods of drainage are best suited to soils of West Central and Northwestern Minnesota. (3) To develop amounts of and methods of irrigation needs in Western Minnesota. (4) To develop methods of controlling soil erosion.

8. ENGINEERING WORKS

SUPPORTED BY Minnesota State Government

8.0221, DURABILITY OF CONCRETE DRAIN TILE AND IRRIGATION PIPE

P.W. MANSON, Univ. of Minnesota, Agricultural Experiment Sta., Saint Paul, Minnesota

Description: 1. To develop a crushing strength test requirement where no absorption test is required, that will accurately measure whether or not a concrete drain tile meets the 'Extra Quality' specification. 2. To improve the type of the bearing head now used in making the crushing strength test of pipe.

SUPPORTED BY Minnesota State Government

8.0222, THE FLOW OF WATER IN FLUMES AND CANALS

J.C. MCWHORTER, Mississippi St. University, Agricultural Experiment Sta., State College, Mississippi 39762

The most commonly used basic equations for describing the flow of water in open channels suffer from some deficiency such as lack of dimensional homogeneity, improper assumptions of intensity of shear or some other reason. This project proposed to develop more reliable relations for describing the turbulent flow of water in certain man-made canals and flumes.

The study will be accomplished in three steps: (1) a dimensional analysis using the physical quantities necessary to describe the turbulent flow of water in prismatic open channels, (2) a collection of the reported data from the flow of water in man-made structures of various materials and cross-sectional shapes, and (3) an evaluation and relation of parameters through which the flow in channels of various materials and cross-sectional shapes may be described.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch Mississippi State University

8.0223, CORROSION OF UNDERGROUND STEEL PILING

E.H. ARDAHL, U.S. Army, Lower Miss. Valley Div., Vicksburg, Mississippi

Objectives: 1. To investigate corrosion of underground steel piling by field inspection. 2. To develop criteria for the application of corrosion mitigation means to underground piling installations.

Procedures: The corrosion of underground steel piling in different soil environments is being studied by excavation of test holes at piling installations and by extraction of piles, where possible. Soil samples are obtained for classification and for electrical resistivity and pH determinations. Steel rod and pipe corrosion specimens have been placed at four select sites to compare the corrosion in disturbed and undisturbed soils with that of piling. Polarization curves are run periodically on the corroding specimens using a bridge-type circuit.

8.0226, DEVELOPMENT OF HYDRAULIC DESIGN CRITERIA

R.G. COX, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of the program is the analysis of hydraulic data, theories and procedures; the development of design criteria therefrom; and the dissemination of this information in the form of Hydraulic Design Criteria to insure adequate capacity, economy of design and construction and safe and satisfactory operation of the large hydraulic structures being designed, built and operated by the Corps of Engineers. Data sources include hydraulic model and prototype studies of all Federal Government agencies, domestic and foreign university work and professional periodicals and literature.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0227, MODEL STUDIES OF MASS CONCRETE STRUCTURES

H.G. GEYMAYER, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to select and/or develop instrumentation and techniques for the investigation of three dimensional stress fields in mass concrete structures by the use of small-scale microconcrete models. The initial phase consists of a thorough review and evaluation of small embedded strain (and stress) measuring devices, now being used in the United States and foreign laboratories in order to select or develop suitable model instrumentation. The second phase comprises materials studies and preliminary tests on basic concrete models to develop adequate model materials and techniques and to select optimum scales for subsequent studies on different scale models of existing and well investigated prototype structures.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0228, HYDRAULIC PROTOTYPE TESTS

E.D. HART, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The general objective of prototype tests is to obtain experimental results from field tests on problems which cannot be solved by laboratory tests. The objective of this project is the coordination of the hydraulic prototype testing program of the Corps of Engineers to insure complete coverage of needed testing, to prevent unnecessary duplication of testing facilities and tests, to recommend instrument installations at projects where physical and hydraulic conditions will be suitable for obtaining data and to investigate hydraulic performance. Under the ES 805 program, Waterways Experiment Station personnel and equipment are made available to Districts conducting hydraulic prototype tests. Assistance also is given in planning test facilities, analyzing data and preparing reports.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0229, INVESTIGATION OF WATERSTOPS FOR CONSTRUCTION JOINTS

B.J. HOUSTON, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to determine the properties and performance of nonmetallic waterstops for use in joints in concrete structures and to prepare revised acceptance specifications and methods for testing. To correlate variations in properties with laboratory performance and performance in simulated service under a variety of exposure conditions, in order to realize the benefits of reduced costs and improved performance in the event that such will result from the substitution of appropriate nonmetallic materials for the metallic materials previously required.

The project is mainly concerned with the development and reporting of data resulting from the field exposure tests in severe environments. It is naturally concerned with new plastics that could be better than polyvinyl chloride plastic. Water retentivity properties of various shapes of waterstops have been investigated.

8. ENGINEERING WORKS

It will continue indefinitely also in connection with improvement and revision of specifications and methods of testing rubber and plastic waterstops.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0230, STABILITY OF RUBBLE-MOUND BREAKWATERS

R.Y. HUDSON, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to develop formulas and design criteria from which the action of waves on rubble-mound breakwaters can be determined with sufficient accuracy to provide economical and safe designs of full-scale structures.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0231, HARBOR DESIGN STUDIES

R.Y. HUDSON, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to determine criteria for designing harbors and harbor structures to obtain optimum wave protection for medium and large-size vessels. This will be accomplished by running tests to determine the optimum arrangement of breakwaters and navigation entrances to harbors to obtain the maximum wave reduction in the harbor, and to determine the effect of wave-front curvature on the amount of distribution of wave energy that enters a harbor through navigation openings of various dimensions and orientation with respect to the direction of wave approach. Additional tests will be run to determine effects of the so-called Mach stem phenomena on the optimum orientation of breakwater and vertical-wall piers; the relationship between the rate of wave attenuation in channels through shallow reef areas, and channel length, width, depth, and side slope; the effect of extending fill seaward along entrances of channels, through shallow reef areas, on wave pattern at the entrance of the channel and wave propagation through the channel; the relationship between harbor basin geometry and harbor response to wave energy reaching the basin via the entrance channel.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0232, WAVE FORCES ON BREAKWATERS

A.M. KAMEL, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to develop a theory and obtain experimental data on wave pressures from which the magnitude, duration, and location of wave pressures and impact forces on full-scale breakwaters of the vertical wall and composition types can be predicted.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0233, INVESTIGATION OF PLANE STRAIN

E.N. MACIVER, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to develop the apparatus and techniques for determining the strength and stress-deformation characteristics of soils in terms of principal stresses under conditions of plane strain.

A high-capacity plane strain apparatus was constructed in FY 1968 following literature search and analyses conducted in FY 1967. Comparative plane strain and triaxial compression tests will be performed on several cohesionless soils to evaluate the significance of plane strain conditions. Subsequent testing will investigate the influence of specimen proportions, apparatus features, and variations in testing techniques on results. A larger plane strain apparatus may be constructed later to permit investigations of the effect of particle size of the test materials.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0234, INVESTIGATION OF TESTING METHODS AND APPARATUS

B. MATHER, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to carry out all authorized investigation of new methods of concrete testing, new apparatus for testing, and modifications of existing test methods and apparatus in order to determine whether such methods or modifications should be standardized for use in the Corps of Engineers.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0235, HANDBOOK FOR CONCRETE AND CEMENT

B. MATHER, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to maintain by means of quarterly supplements the Handbook for Concrete and Cement containing the latest and best compilation of specifications and methods of testing freshly mixed and hardened concrete, concrete aggregates, cementitious materials, concrete curing materials, mixing and curing water, and other materials for use in connection with concrete construction of Corps of Engineers. This project provides the Corps of Engineers with the only complete, up to date, reference work on specifications applicable to cement, pozzolans, aggregates, admixtures, curing materials, waterstops, joint sealers, concrete water, etc. Through quarterly supplementation, it is kept up to date.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0236, CEMENT - AGGREGATE REACTION

K. MATHER, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to investigate the factors affecting the development of excessive expansion of portland-cement concrete resulting from the chemical reaction between aggregates and cements, in order to improve the methods of detecting cement-aggregate combinations capable of reacting to cause such excessive expansion and to improve the procedures for avoiding undesirable results of the use of such combinations by modification of the composition of the concrete.

This project has made studies on effects of alkali content of cement, cement composition, effects of alkali-silica reactions, internally and externally applied restraint effects, and carbonate rock reactions. It has also sought means to measure the effectiveness of pozzolan to inhibit alkali-silica reactions.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0237, CONCRETE AGGREGATE RESEARCH

K. MATHER, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to conduct investigational work relating to the properties, performance, specification, and testing of aggregates for portland-cement concrete, so as to improve the prescribed procedures for selecting, approving, processing, and using such materials. It also maintains, by means of annual supplements, the compilation of test data developed by all Corps of Engineers laboratories on samples from sources of concrete aggregate in the continental United States. These activities have as their ultimate purpose the reduction of costs and improvement of quality of concrete used in Corps of Engineers construction.

This project has made studies of clay in aggregates, effects of aggregate on time-dependent volume change of concrete, and quality tests of aggregates. It has also studied the effects on structures of chert gravel aggregate, cherty limestone, graywacke, quartzite, etc.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0238, SOIL SAMPLING MANUAL

A.L. MATHEWS, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

Following a survey of the techniques and equipment currently in use by the Corps of Engineers and drilling contractors to determine the types of available equipment satisfactory for obtaining undisturbed and disturbed soil samples and performing in situ soil tests, a draft of a manual was prepared containing specific instructions as to techniques and drilling and sampling equipment

8. ENGINEERING WORKS

to be used for foundation exploration on all Corps of Engineers' projects. The use of these techniques and drilling and sampling equipment will result in recovery of less disturbed soil samples, obtaining samples that might not otherwise be recovered, and reduction in exploration costs. As a result, the results of laboratory tests performed on the soil samples would be more reliable and would result in safer and more economical design. Future work will consist of revision of the manual based on review by others and subsequent publications.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0239, DEVELOPMENT OF INSTRUMENTS FOR PROTOTYPE TESTING

E.E. MCCOY, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to develop and to evaluate the performance of instruments designed to permit measurements of structural behavior of concrete structures through laboratory investigations and through experimental installations in prototype structures. This project develops procedures by which prototype behavior data can be reliably developed over long periods of time in order to provide a basis for improved structural design to effect improvements in serviceability and reduced costs of concrete structures.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0240, INVESTIGATION OF CREEP IN CONCRETE

E.E. MCCOY, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to develop standardized procedures for determining the time-dependent volume changes of concrete (especially creep and shrinkage), to develop data on the factors affecting the rate and magnitude of such changes of concrete as affected by the characteristics of materials, magnitude, time of application, duration of load and relative humidity, so as to permit more accurate interpretation of structural behavior data and more appropriate selection and use of materials to provide desirable performance.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0241, CONTINUATION OF FIELD EXPOSURE STATIONS

E.E. MCCOY, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to maintain field exposure stations at Treat Island, Cobscook Bay, Maine, and at Salt Run, St. Augustine, Florida, to continue the development of data on the resistance of concrete and concrete materials to the effects of natural weathering so as to permit the development of improved criteria for the selection of materials and concrete mixtures that will give satisfactory service regardless of the exposure to which they may be subjected.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0242, GENERAL SPILLWAY TESTS

T.E. MURPHY, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to provide general data for improvement of the design of spillway weirs and stilling basins. Discharge coefficients and pressure on spillway weirs of various heights for a full range of flow conditions to include heads in excess of that for which the weir is designed are of concern. This project will study pier and abutments contraction coefficients and discharge characteristics of crest gates. Stilling basin tests will be conducted for establishment of general rules for design of roller type energy dissipators and hydraulic jump-type stilling basins. The overall effort can be divided into under designed crest pressures and coefficients, tainter gate coefficients, pier and abutment contraction coefficients, and stilling basin design.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0243, CAVIATION

T.E. MURPHY, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to assist in development of designs for elements of hydraulic structures which will be free from cavitation damage. In accomplishing the purpose, efforts will be made to develop improved methods for prediction of prototype cavitation from model data. Also resistance of various materials to damage by cavitation will be studied. Close contact will be maintained with other installations conducting cavitation studies in order to take advantage of any new developments in technique. The overall project can be divided into resistance of material, scale effects, and shapes for specific elements of structures.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0244, LOCK FILLING AND EMPTYING SYSTEM

T.E. MURPHY, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to provide new or improved design information and procedures to assist in the design of navigation lock filling and emptying systems. Present designs are accomplished largely by empirical methods based on results of hydraulic model studies of specific structures. Comprehensive tests will be conducted on different types of filling systems to obtain data over a wide range of conditions. Analysis of tests and other available data will result in improved generalized design information. The overall effort can be divided into side-wall port systems, multiport systems, interlaced lateral and split-lateral systems, and longitudinal floor culvert systems.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0245, RIPRAP-PROTECTION FOR HYDRAULIC STRUCTURES

T.E. MURPHY, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to develop criteria for the design of riprap protection at hydraulic structures. At present no positive design rules exist for riprap protection immediately upstream from low crests, along training walls, below stilling basins, or on overflow dikes. The overall effort can be divided into specific model tests, and basic mechanics of drag and lift.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0246, RIPRAP REQUIREMENTS IN CHANNELS

T.E. MURPHY, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to develop improved criteria for the design of riprap protection for channels. Present methods have resulted in over design and thus excessive costs in some cases and under design and failures in others. Analytical studies will be made using presently available data. Flume tests will be made to provide data on shear forces, velocity distribution, and the basic mechanics of lift and drag. Large scale model tests of typical channels are planned for development of the final criteria.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0247, INVESTIGATION OF CONCRETING MATERIAL (OTHER THAN AGGREGATE AND CEMENTITIOUS MATERIALS)

L. PEPPER, U.S. Army, Waterways Experiment Sta., Vicksburg, Mississippi

The objective of this project is to carry out all authorized investigations of materials other than aggregates, cementitious materials, pozzolans and chemical admixtures, nonmetallic waterstops and gate seals, that may be proposed for use as concrete materials or in connection with concrete construction so

8. ENGINEERING WORKS

as to evaluate any benefits that may accrue from their use and to indicate the desirability of developing specifications and methods of tests.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0248, EPOXY RESINS FOR CIVIL WORKS PROJECTS L. PEPPER, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to develop information on the application that can be made of epoxy resin systems in connection with concrete construction and maintenance, and to select the most advantageous systems for the accomplishment of specific results, such as the repair of concrete surfaces that have been eroded by cavitation and the repair of cracks in existing concrete structures in order to permit the preparation of appropriate specifications and methods of testing for the acceptance of such systems for specific applications.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0249, RESEARCH ON PROPERTIES OF CEMENTITIOUS MATERIAL L. PEPPER, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to conduct investigational work relating to cementitious materials including both portland cements and other cements so as to relate their properties to the performance of concrete containing them and to develop improved specifications and methods of testing in order that cementitious material may be selected and used to give the maximum assurance of satisfactory performance.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0250, RESEARCH IN MASS CONCRETE J.M. POLATTY, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to develop information on pozzolans and chemical admixtures (including air-entraining) for use in portland-cement concrete, so as to permit the preparation of improved acceptance specifications and engineering manuals. The more effective utilization of such materials will permit the production of concrete with improved technical properties at a lower cost.

This project includes studies of pozzolans, lean mixtures with large amounts of pozzolan, temperature rise, water-reducing admixtures, lime-pozzolan reactions, air-entraining agents, calcium-chloride base solutions, low-activity pozzolans, sulfate resistance, frost resistance, effect of temperature on air-entraining admixture demand and effect of chemical admixtures on workability.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0251, PERFORMANCE OF CONSTRUCTION PLANT AND EQUIPMENT J.M. POLATTY, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to conduct investigations and to develop data on the performance of items of plant and equipment that are used or may be proposed for use in Corps of Engineers concrete construction and to develop appropriate method for testing to evaluate the performance of such items of plant and equipment in the field in order to permit appropriate modifications of criteria for approving proposed construction plant and equipment so as to realize the benefits of new developments, the use of which may result in the production of concrete of improved quality and uniformity at reduced cost.

Investigations will be made of new plant and equipment as such becomes available and comes to our attention. Project plans will be formulated for approval as appropriate. Among the types of plant and equipment that may be investigated are: concrete mixers, including truck mixers; apparatus for indicating moisture content of aggregates; equipment for splicing reinforcing bars; belt conveyors.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0252, TENSILE CRACK EXPOSURE TESTS E.C. ROSHORE, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to obtain information on the influence of variation in class of reinforcing steel, type of deformation on steel, depth of concrete coverage over steel, quality of concrete cover, and magnitude of tensile stress in steel on the performance of reinforced concrete beams subjected to severe natural weathering in order to permit appropriate revision of specifications governing the design of reinforced concrete members and the specifications for steel reinforcement when severe weathering is a characteristic of the exposure.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0253, DURABILITY AND BEHAVIOR OF PRESTRESSED CONCRETE BEAMS E.C. ROSHORE, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to develop information on the factors affecting the performance of prestressed concrete members subjected to severe natural weathering as this performance is affected by the nature of the prestressing system employed and the state of stress of the member during exposure and the quality and properties of the concrete. It will also develop information on accessories such as end anchorages and construction procedures and materials such as the composition of grout mixtures and the methods of accomplishing grouting of prestressing tendons used in posttensioned prestressed members in order to permit the employment of prestressed concrete designs so as to realize advantages that may be inherent in such design.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0254, COMPILATION OF EARTH DAM CRITERIA FOR DESIGN USE W.E. STROHM, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is the publication of design criteria for recently completed earth dams, giving sufficient information for use of designers in the field. The data on physical aspects, construction experience, and behavior of these earth dams are assembled and published.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0255, SPECIAL STUDIES FOR CIVIL WORKS SOILS PROBLEMS W.E. STROHM, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

Includes collection, correlation, and analysis of field compaction control data and procedures for earth and rockfill dams, and other special studies such as evaluation of data on performance of slope protection subject to wave action to develop improved design criteria.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0256, PROTOTYPE ANALYSES - LOCK BEHAVIOR INVESTIGATION C.C. TRAHAN, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

Field instrumentation of existing lock facilities to obtain prototype measurements of soil stresses on locks, internal stresses in concrete structure and lateral movement of the lock structure. Reports on instrumentation programs for two recently completed structures are being prepared.

8. ENGINEERING WORKS

SUPPORTED BY U.S. Dept. of Defense - Army

8.0257, FORMING, FINISHING, AND CURING CONCRETE

R.V. TYE, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to develop data on the factors affecting the quality of concrete surfaces as these are the result of materials and practices employed in forming, finishing, and curing so as to develop procedures and specifications that will prevent to the greatest possible extent the occurrence of defective surfaces.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0258, INVESTIGATIONS OF PLACEABILITY OF CONCRETE

W.O. TYNES, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to conduct investigations and to develop data relating to the factors affecting the workability and consolidation of freshly mixed concrete and to evaluate the procedures currently employed in consolidating concrete so as to develop improved methods of measuring the consistency, workability, and placeability of concrete and improved criteria for the approval of equipment to be employed in effecting consolidation.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0259, IMPROVEMENTS IN CONCRETE CONSTRUCTION PRACTICES

W.O. TYNES, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to evaluate concrete construction practices and to compare the results obtained by variations in practices either within the limits of current requirements or outside of such limits as the case might be in order to appraise the desirability of revising current specifications so as to improve the quality and uniformity of concrete construction and reduce its cost. This project includes studies on effects of random fluctuations in coarse aggregate, effects of early freezing, effects of shape of grading curves for coarse aggregates, and preplaced-aggregate concrete.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0260, IMPROVEMENTS IN MASS CONCRETE MIXTURE PROPORTIONING

W.O. TYNES, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

The objective of this project is to investigate procedures for selecting proportions for concrete mixtures containing large aggregate particles in order to determine whether concrete of improved quality and uniformity or concrete of lower cost or both can be produced by the adoption of mixture proportioning procedures differing from those currently employed. This project will include studies on air content of mass concrete, maximum size aggregate mass concrete, and water cement ratio of exterior mass concrete.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0261, INVESTIGATION OF SHOTCRETE

W.O. TYNES, U.S. Army, Waterways Experiment Sta. , Vicksburg, Mississippi

Shotcreting is not a new art; however, poor practice on many applications has resulted in difference of opinion on the merits of shotcrete as a construction material. Laboratory evaluation of shotcrete has been hampered by the difficulty of securing representative samples of in-place shotcrete. The objective of this investigation is to evaluate shotcrete as a construction material for application to Corps Projects. Tests will be conducted to determine the correct sampling techniques, pertinent physical properties, and problem areas.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0262, STRENGTH OF JOINTED ROCKS

K.S. LANE, U.S. Army, Missouri River Engr. Div. , Omaha, Nebraska

This investigation is primarily concerned with developing methods to determine the rational design strengths of rock foundations - particularly intermediate quality rocks such as the softer limestones, shales, weakly cemented breccias and weaker layers within hard rock where strength is sufficiently low that it is often a key factor in design of superimposed structures of concrete and earth.

Emphasis is placed on shear strength of open joints, naturally cemented joints, seams, cleavage planes and weaker bedding planes with limited reference testing of intact cores. Studies include effect of cyclic loading, pore pressure, and joint surface roughness, supplemented by petrofabric studies of microcracks. As one product of this research, reports are being prepared covering the various testing techniques developed which it is hoped will serve to establish guides for rock testing procedures in other Corps laboratories. Furthermore, this effort will result in the preparation of reports which will discuss the factors which affect rock shear strength and the extent to which they should be considered in design.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0263, CONTROL OF SEEPAGE FROM CNNALS AND STORAGE PONDS IN NEVADA

P.R. NIXON, U.S. Dept. of Agriculture, Reno, Nevada

Objective: To develop treatments for control of seepage from small irrigation water storage reservoirs, stock ponds, and irrigation canals using locally available materials such as clay deposits and playa lake sediments or other materials as economically feasible within the area.

Plan of Work: Continue laboratory and field evaluation of available clay deposits and playa lake sediments to determine the factors and conditions resulting in durable and effective seals in canals and reservoirs. Emphasis to be on developing a procedure for predicting sealing capability of materials and on devising systems of applying or installing the seal. Work will involve both laboratory and field plot tests.

SUPPORTED BY U.S. Dept. of Agriculture

8.0264, MECHANICS OF ICE

G.E. FRANKENSTEIN, U.S. Army, Terrestrial Sciences Center, Hanover, New Hampshire 03755

Studies will be continued on ice jams on inland rivers, and ice conditions on the St. Lawrence Seaway. Studies will also be continued on removal of ice jams by use of explosives and other means.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0265, APPLIED PHYSICS AND MECHANICS

G. FRANKSTEIN, U.S. Army, Terrestrial Sciences Center, Hanover, New Hampshire 03755

Technical Objective: Study bearing capacity of sea and lake ice and means of increasing or decreasing this capacity. Develop theories of elastic and plastic deformation and stress distribution in snow and floating ice sheets. Study movement, ablation, deformation and subsurface temperature of glacial snow and ice.

Approach: Conduct strength and load tests on fresh and salt water ice including compression, tensile, flexural and heavy loads. Develop methods of increasing ice thickness by flooding techniques. Elimination of ice by bubbling techniques will be tested. Conduct field tests relative to leveling ice for airfields. Develop theory for bearing capacity of ice sheets and snow layers. Obtain measurements of annual ice cap movement at the Tuto ramp in Greenland. Observe pressure and deformation rates of buried structures in snow at Camp Century and in the ice tunnel at Tuto. Analyze data and prepare reports.

8. ENGINEERING WORKS

Progress: Strength and load tests on fresh and salt water ice have been made and analysis and reports prepared on ice thickness required for support of military vehicles. Studies of leveling rough sea ice for airfields have resulted in the development of an ice chipper which has been successfully used at Barrow, Alaska, and the Antarctic. Theoretical work has resulted in analysis of the river crossing problem, time dependent deflection of an ice sheet, and a design criterion for snow runways. Charts have been prepared using these theoretical results, which give required ice thickness to cross ice bridges of different widths and lengths. Three pressure cells have been installed at dye 3 and a data collection program established.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0266, TECHNICAL SUPPORT, INVESTIGATIONS OF ARCTIC CONSTRUCTION

C.W. FULWIDER, U.S. Army, Terrestrial Sciences Center, Hanover, New Hampshire 03755

1. As part of a current study of dams in arctic and subarctic regions used to impound water, the following are in progress: a. Ground temperature observations made during 1953-1959 on a cross-section of an earth-fill dam at Thule, Greenland, were analyzed to determine the thermal regime in the structure under the influence of the impounded water. A report will be issued on the results in FY 69. b. of the design, construction and performance of an earth-fill dam at Livengood, Alaska, has been completed and a report will be issued in FY 1969. c. Liaison was maintained with the Division of Building Research, National Research Council on Power Generating Dams constructed in Canada.

2. Revised editions of the following Technical Manuals on Arctic and subarctic construction were prepared: TM 5-852-1 (EM 1110-345 660) 'General Provisions' TM 5-852-2 (EM 1110-345-661) 'Site Selection and Development TM 5-852-5 (EM 1110-345-664) 'Utilities' TM 5-852-7 (EM 1110-345-666) 'Surface Drainage'.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0267, STUDY OF MECHANISMS IN SOIL RELATED TO FROST HEAVE AND ITS CONTROL

J.M. SAYWARD, U.S. Army, Terrestrial Sciences Center, Hanover, New Hampshire 03755

Technical Objective: Study fundamentals and use of foam bubbles for filling voids in soil to reduce water migration and hence frost heave.

Approach: Initially seek understanding of interfacial relationships involved in soil frost action, to assess the likelihood that fixed, i.e. film-enclosed, bubbles might limit movement of water to the freezing interface. Make practical test to determine if permanent foams can be mixed or produced in soils, and, if so, will they reduce water migration and heave without harmful effect on soil packing or strength.

PROGRESS: 21 April - 1 July 1966 - Technological literature and contacts with some ten authorities in foamed plastics suggest that the use of plastic film stabilized bubbles added to soil may not be promising. In the presence of appreciable proportions of mineral fillers, ordinary closed cell foams are collapsed. Temporary foams may find application as a means of more amount of soil. Two informal progress reports have been prepared, dated 9 May and 6 June 1966. It is expected that this project will be reinstated to one active status in FY 1970.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0268, HYDRODYNAMIC CHARACTERISTICS OF FLOW CONCENTRATION GROINS

E.L. BOUODIMOS, Rutgers The State University, School of Engineering, New Brunswick, New Jersey 08903

The proposed work will evaluate hydrodynamic characteristics of a type of flood concentration groins devised to assist in artificial river aeration. The need for a structure to concentrate flow for mechanical type aerators in streams has been shown by other work in process.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch Rutgers The State University

8.0269, STRUCTURE AND MECHANICAL BEHAVIOR OF POLYMERIC MEMBRANES

J.A. SAUER, Rutgers The State University, School of Engineering, New Brunswick, New Jersey 08903

A study is to be carried out of the structure and mechanical behavior of polymeric membranes. Specific attention will be given to cellulose acetate films. The morphology and structure of such films will be studied by means of x-ray and electron microscopy. Samples to be investigated include dense films, porous films, asymmetric Loeb-type membranes, ultrathin films, and films prepared from single crystals. The mechanical behavior of the polymer films and membranes will be investigated by varied means, including sonic modulus measurements, and torsion pendulum measurements over a broad temperature range. Relaxation and melting transitions will be further investigated by means of calorimetric measurements. Attempts will be made to relate observed transitions, and the accompanying molecular motion, to the structure and morphology of the film as well as to preparation conditions and prior history. It is intended also to study the phenomenon of compaction as well as to initiate a stress analysis study of the reverse-osmosis membrane system.

SUPPORTED BY U.S. Dept. of Interior - Off. Saline Water

8.0270, EXPERIMENTAL STUDY OF MOTION OF CAVITATION BUBBLES

V.J. LUNARDINI, State University of New York, School of Engineering, Buffalo, New York 14214

An analytical study of the inception of cavitation in venturi systems has been completed. This study has uncovered a number of questions which seem to be best resolved through an experimental program. A study will be made of the motion and growth of cavitation bubbles in an internal flow device. High speed photography will be used to obtain data on nucleation, the growth history of a bubble, and the position of a bubble within the venturi. Water will be used as the test fluid. It is hoped that the experimental program will clarify the basic mechanisms sufficiently to allow a more complete theoretical study to be undertaken.

SUPPORTED BY State University of New York

8.0271, EVALUATION OF POLYVINYL CHLORIDE (PVC) AND VINYL CLAD ALUMINUM PIPE USED FOR CARRYING IRRIGATION WATER WHEN BURIED WITHIN THE FROST ZONE

H.M. OLSON, North Dakota State University, Agricultural Experiment Sta., Carrington, North Dakota 58241

Polyvinyl chloride (PVC) pipe, 8-, 10-, and 12-inch diameter, and vinyl clad aluminum pipe, 8-inch diameter, will be installed in the frost zone with 3-foot minimum cover. Approximately 900 feet of 10- and 12-inch diameter low head PVC pipe and about 660 feet each of 8-inch diameter high (head 100 psi) PVC and vinyl clad aluminum pipe will be used. Repetitive lengths of 8-inch PVC pipe will be installed with different types of pipe joints, including as a minimum solvent-cement welded joints, threaded joints, and rubber gasket joints.

Pipe installations will be evaluated for installation procedures; flow characteristics, corrosion resistance; bedding conditions; and overall performance relative to existing installations of nonreinforced concrete and asbestos-cement pipe.

Representative samples of new pipe and of bedding material will be furnished the Bureau of Reclamation laboratories for testing. Standard lengths of installed pipe will be removed in the future for examination and measurement.

SUPPORTED BY U.S. Dept. of Interior - Bu. Reclamation

H. HOLMEN, North Dakota State University, Agricultural Experiment Sta., Fargo, North Dakota 58102

8. ENGINEERING WORKS

SUPPORTED BY Ohio State Government

Objectives: 1. To determine the potential useful life of different thicknesses of nonreinforced concrete linings placed in a farm irrigation ditch and the potential useful life of a non-reinforced low pressure concrete pipe placed 12 to 30 inches below ground surface. 2. To compare the economic factors of lined and/or closed conduit distribution systems with an open unlined system.

Description: About 650 feet of concrete lined ditch and 1775 feet of low pressure concrete pipe will be installed and studied to determine durability, frost action, action of machinery traffic, installation and maintenance costs, and water losses. A camera will be used to check internal condition of pipe. Surveying instruments will be used to check movement of pipe and lining due to frost action and other sources.

SUPPORTED BY North Dakota State Government

8.0273, SHEAR EVALUATION OF WEAK ROCK FOUNDATIONS

C.K. HOFFMEYER, U.S. Army, Ordnance Res. & Dev. Labs., Cincinnati, Ohio 45227

The strengths of weak rocks such as indurated clays and shales in the Ohio River Basin are being determined in the field by in situ testing by special direct shear rigs. Comparison rock core specimens drilled with standard drilling equipment are being obtained and tested in the laboratory in direct shear blocks. The bond strength of concrete placed and cured on shales is also being tested in the field and laboratory. Different methods for preparing the rock surface preparatory to concrete placement are being investigated. The field testing is primarily accomplished at Ohio River Division navigation and flood control dam sites as they become available during early stages of construction.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0274, IMPROVEMENT OF WATER SUPPLY SOURCES AND STORAGE FACILITIES IN THE CORN BELT

R.C. REEVE, Ohio State University, Agricultural Experiment Sta., Columbus, Ohio 43210

Object: To develop design criteria for ponds and other surface and subsurface water storage facilities. To investigate methods of suppressing evaporation and seepage losses from farm ponds.

Plan of Work: Study methods of reducing water losses by compaction, dispersion and other treatments on the hydraulic conductivity of the soil. Investigate the possibility of using the soils adjacent to the reservoirs for blanket materials. Test various dispersants as possible sealing materials for soils. Also, investigations are directed toward determining the rate of evaporation from ponds in relation to climatic factors. Study the probable amounts of runoff that could be expected for use as irrigation water.

Cooperation: Missouri Agricultural Experiment Station; SCS and other agencies.

SUPPORTED BY U.S. Dept. of Agriculture

8.0275, INVESTIGATIONS OF SHORE EROSION ALONG THE OHIO SHORELINE OF LAKE ERIE

C.E. HERDENDORF, State Geol. Survey Div., Sandusky, Ohio 44870

Each year shore erosion removes approximately 3,000,000 cubic yards of bluff and beach material from the Ohio shoreline of Lake Erie. This study will provide information of the character of the shoreline, shore processes in areas of critical shore erosion and recommended methods of shore protection. Sixteen areas of critical erosion will be studied in detail. Methods of investigation will include: (1) repetitive, profiles of bluff, beach and nearshore areas, (2) current measurements, (3) repetitive aerial photographs, (4) observations of experimental shore protection structures, and (5) installation of water level gauging stations along the shoreline.

8.0276, THE HYDRAULICS AND MEASUREMENT OF CHANNEL, FLOOD PLAIN, AND OVERLAND FLOW IN THE SOUTHERN PLAINS

W.O. REE, U.S. Dept. of Agriculture, Stillwater, Oklahoma

Object: To provide an understanding of the hydraulic phenomena associated with the flow of water in channels on flood plains and overland; to develop procedures for the application of basic physical principles to the solution of problems involving overland flow and unsteady hydraulics; to determine the flow retarding properties of various channel roughnesses in natural and artificial channels and flood plains; and to develop or adapt devices for the precise measurement of flow in streams, channels and constructed works.

Plan of Work: This work is carried on at the Outdoor Hydraulic Laboratory, Stillwater, Oklahoma, through investigations on natural channels and by means of model studies.

SUPPORTED BY U.S. Dept. of Agriculture

8.0277, HYDRAULIC DESIGN OF STRUCTURES FOR WATER USE AND CONTROL IN THE SOUTHERN PLAINS

W.O. REE, U.S. Dept. of Agriculture, Stillwater, Oklahoma

Object: To develop new and improved structures for water control, conveyance, and disposal; and to determine the hydraulic criteria for their safe, efficient, and economical design.

Plan of Work: This research seeks to establish principles and develop dimensionless designs for various water control structures which can be adapted to various site situations and size requirements on individual farms and ranches and in upstream watersheds. Studies are carried on principally by means of model studies at the Outdoor Hydraulic Laboratory, Stillwater, Oklahoma, and in close coordination with related research at the St. Anthony Falls Hydraulic Laboratory, Minneapolis, Minnesota.

SUPPORTED BY U.S. Dept. of Agriculture

8.0278, STUDY OF DISCREPANCY IN FISH COUNTS BETWEEN COLUMBIA RIVER DAMS

L.C. FREDD, State Fish Commission, Clackamas, Oregon 97015

Description: Work consists of a statistical review of past counting records, fish catch, spawning escapement, hatchery return records and other pertinent observations.

Purpose: To determine the extent and possible causes of discrepancies in counts of adult salmonids between Columbia River Dams.

Results: Average percent of the adjusted Bonneville 1957 through 1965 counts that were recounted at The Dalles, McNary and Priest Rapids - Ice Harbor Dams were as follows: Spring chinook, 80%, 70%, 46%; summer chinook, 78%, 78%, 66%; fall chinook, 78%, 57%, 28%; sockeye, 97%, 100%, 106%; and steelhead trout, 97%, 83%, 46%.

A. Differences in counts of a particular species at successive dams are proportional to the abundance of that species. B. Average differences in counts usually exceed estimates of numbers of fish spawning in intermediate tributaries. C. Counting error cannot be used to logically explain observed differences in counts. Rates of re-ascent by fallbacks probably do not differ greatly by species or dam, or from year to year. D. A common factor affects the survival of spring and summer chinook between dams, its effect changes little from year to year. A common factor also controls survival of fall chinook and steelhead between McNary and Priest Rapids - Ice Harbor dams; its effects are changing -- inter-dam survival has worsened each year since 1962. E. Physical size may influence survival of chinook between Bonneville and McNary dams; most mortality may be inflicted on large chinook.

8.0279, EVALUATION OF UPSTREAM AND DOWNSTREAM ANADROMOUS FISH PASSAGE AT RIVER MILL AND FARADAY DAMS ON THE CLACKAMAS RIVER, OREGON

L. KORN, State Fish Commission, Clackamas, Oregon 97015

8. ENGINEERING WORKS

Upstream salmon and steelhead trout migrations past River Mill Dam on the Clackamas River will be evaluated by observations of any blocked fish and counts of fish passing through the ladder. Records of past movements will be examined and timing and successful passage of adults will be recorded during the study period. Movements of downstream migrating juveniles will be followed by a mark-and-recapture program to determine the portion of the population which is shunted into a side canal leading to Faraday Reservoir. Results of these investigations will be used to recommend the most efficient fish management practices or modifications to the Portland General Electric Company.

SUPPORTED BY Portland General Electric Company

8.0280, EVALUATION OF ANADROMOUS FISH PASSAGE FACILITIES AT FALL CREEK DAM, BIG FALL CREEK, OREGON

L. KORN, State Fish Commission, Clackamas, Oregon 97015

This study will test and evaluate the efficiency of fish passage facilities for anadromous fish at Fall Creek Dam. We will determine the effect of the reservoir on survival, growth, and passage of juvenile salmonids and monitor the environment for changes. Results from this study will be used to recommend operating procedures for the fish facilities, if passage is successful. If passage is unsuccessful, alternate methods of maintaining the salmon and steelhead populations will be proposed.

8.0281, DETROIT TEST CHUTE

L.R. METCALF, U.S. Army, Corps of Engineers, Portland, Oregon 97205

The test chute has been provided to measure the amount of bulking effect on the depth of flow that occurs in a full-scale, high-head, spillway chute due to entrainment of air. The effect of air entrainment on velocity of flow will also be studied. The approximately 350-foot-high spillway was partitioned during construction to form a 42-foot-wide chute. The chute walls are surmounted by a traveling carriage upon which a staff gage is mounted to measure water-surface profiles. Nine sets of electrodes spaced 50 feet apart are mounted on the chute walls. Passage of a salt cloud will be observed electronically in order to determine mean velocities. Future test objectives will include measurement of velocity distribution and variation in air entrainment concentration with depth.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0282, DETROIT TEST CONDUIT

L.R. METCALF, U.S. Army, Corps of Engineers, Portland, Oregon 97205

The test conduit has been provided as a general purpose high-head test facility for testing control valves, resistance of concrete to cavitation and or erosion, steel liner requirements downstream of regulating gates, and multiple gated regulating outlet transitions. The initial program (1964 thru approximately 1969) involves the testing of high quality concrete slabs with special surface treatments. The primary objective is to determine if any surface treatment, other than steel lining, downstream from a regulating outlet slide gate open 20 per cent will resist the cavitation and or erosional forces due to operation with 300 to 320 feet of head. A secondary aim is to provide a comparison of the relative durability of surface treatments such as steel troweled, epoxy grout, epoxy mortar and rubber coated. The test gate (17 by 30 inches) discharges into a 21-inch wide by 4-foot high by 40-foot-long flume, of which the first 10-foot-long base panel is the test section.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0283, OPEN-CHANNEL TRANSITIONS IN SUPERCRITICAL FLOW

C.H. MCCONNELL, Penn. State University, School of Engineering, University Park, Pennsylvania 16802

Investigation of supercritical flow phenomena in open-channel transitions between an upstream rectangular cross-section and a downstream trapezoidal section, in a straight channel at constant and continuous invert slopes. Three types of transitions, one warped and two composed of plane wall, are being tested. The experiments with each of the three shapes cover combinations of at least three transition lengths and three depths with Froude numbers varying up to 3.0. Design criteria will be determined based on the test results.

SUPPORTED BY Pennsylvania State Government

8.0284, DYNAMIC BEHAVIOR OF SOILS

V.A. NACCI, Univ. of Rhode Island, School of Engineering, Kingston, Rhode Island 02881

The study of the behavior of soil under moderate static loading has evolved to the point where nearly every facet of the phenomena can be controlled, tested and usefully protected into practical soil mechanics. Many structures such as high dams that are built today subject soils to very high stresses and in addition dynamic problems associated with powerful blasts, seismic forces, and vibrations have extended the need for strength and behavior, characteristics far beyond the point where static parameters may be extrapolated.

The proposed study, therefore, will attempt to develop new theories, and to predict the behavior of soil masses to high pressure, transient and cyclic loadings and impact stresses. The work will include:

1. Examination of strength and deformation characteristics under impact loading. 2. Development of a pulsating or vibrating device. 3. Investigation of liquefaction phenomena of soils under vibration and impact loads. 4. Correlations of laboratory work with field model studies.

SUPPORTED BY U.S. Dept. of Interior - O. Water Res. Rch University of Rhode Island

8.0285, INVESTIGATION OF SOIL FREEZING

G.L. RODERICK, Univ. of Rhode Island, School of Engineering, Kingston, Rhode Island 02881

Frost heaving of underlying soils can cause damage to canal and spillway linings, slope protection material of dikes and dams, and road surfaces. Such damage can lead to serious seepage losses, erosion and costly maintenance. The freezing of a soil-water system is a complex process affected by a large number of factors. The objectives of this study are to determine, for various soil types and freezing rates: the effects of initial moisture content, void ratio and saturation on the degree of ice segregation which occurs; the density required to resist heaving during freezing at near saturation; and migration of moisture and void ratio changes during freezing. Results should contribute to a more complete understanding of the soil freezing phenomena. Results will be correlated with common soil properties to establish criteria for evaluation of the frost susceptibility of soils.

8.0286, COMPUTER MODELS FOR WATER DISTRIBUTION SYSTEMS

M.L. WOLLA, Clemson University, School of Engineering, Clemson, South Carolina 29631

The project entails an analytic study of water distribution systems operating under steady-flow conditions. The objective is the formulation of a class of mathematical models and related numerical solution algorithms which would provide flexible and efficient computer techniques for predicting the characteristics of existing or proposed water distribution systems. The project consists of three stages: Phase I is concerned with the theoretical study to devise secondary models and determine their properties in as broad and general a form as possible, and to consider specializations of these models as required to solve present and future problems arising in the operation or design of water distribution systems. The initial effort will be directed toward those models which are best suited for formulation and solution with digital computers. Phase II is concerned with the investigation of

8. ENGINEERING WORKS

suitable numerical solution algorithms and their implementation on the digital computer; Phase III is concerned with a study of the feasibility of using the analog computer, either separately or in a hybrid configuration, as a means of obtaining desired solutions to the mathematical model.

8.0287, TURBINE RATING FRAME INTERFERENCE STUDY

R.A. ELDER, U.S. Tennessee Valley Auth., Knoxville, Tennessee

TVA has underway a project to determine accurate discharge ratings for turbines in the nine dams on the Tennessee River by traversing the flow at the turbine intake gate slots of each unit with frames on which are mounted Ott cosine-component current meters. This study will consist of laboratory tests to determine what effect, if any, the current meter frame has on the accuracy of the measured flows through the turbines. Some tests were conducted during 1966. Further testing will be done in 1969 and 1970.

SUPPORTED BY U.S. Tennessee Valley Auth.

8.0288, SMALL RESERVOIR SEALING

J.I. SEWELL, Univ. of Tennessee, Agricultural Experiment Sta., Knoxville, Tennessee 37916

Phase I involved the making of permeability tests of the effects of various chemicals on seepage rates of soils representative of areas where pond leakage is prevalent. In the laboratory tests, nine chemicals were tested on five soils. The variables of the tests are: soil type, horizons in soil types, type of chemical, rate of chemical, soil density, cation exchange capacity, and soil acidity. After approximately 500 permeability tests, the sodium carbonates and phosphates appear to be the most promising sealing agents.

Phase II involved the making of field tests of the most promising sealing techniques. Ponds which were constructed for one or more years and which leaked excessively were treated. Stage height data were recorded. From this, the effectiveness of the treatments were evaluated.

Nine ponds have been treated. Eight of these held well, and one holds to a depth of only six feet.

8.0290, EVALUATION OF ENGINEERING PROJECTS AND ESTUARINE DATA (ESTUARINE PROGRAM)

R.J. HOOGLAND, U.S. Dept. of Interior, Biological Laboratory, Fort Crockett - Galveston, Texas

Estuarine-dependent species of the Gulf of Mexico coast comprise several of the nation's most valuable fishery resources. If the nursery grounds in the estuaries are to be preserved, it is essential that the estuarine habitat of these species be protected during and following construction of water-development projects in upland basins, estuarine systems, and coastal marshes. The increasing number, as well as complexity, of construction projects require a detailed understanding of estuaries.

It is the purpose of this project to (1) assist the Branch of River Basin Studies (BSFW) by reviewing all proposed construction and water-development projects affecting western Gulf estuaries and, when warranted, recommend remedial measures to reduce adverse project effects; (2) where practical, recommend changes in water-development projects whereby the habitat would be enhanced for the fishery resources; (3) inventory, organize, and keep current all published and unpublished data related to western Gulf estuaries; and (4) recommend basic research needed for protecting estuarine fishery resources.

8.0291, CONTROL OF SEEPAGE FROM WATER CONVEYANCE AND STORAGE STRUCTURES IN THE INTER-MOUNTAIN AREA

P.R. NIXON, Utah State University, Agricultural Experiment Sta., Logan, Utah 84321

Objective: To develop methods, materials, and devices for control of seepage from conveyance, storage, and application structures.

Plan of Work: Continue laboratory and field evaluation of effectiveness, suitability, and durability of various materials for seepage control in canals and reservoirs and for use in water distribution devices or systems. Develop installation and maintenance techniques using existing materials and new materials as they become available.

SUPPORTED BY U.S. Dept. of Agriculture

8.0292, FACILITIES AND SYSTEMS FOR WATER HARVEST IN THE INTER-MOUNTAIN BASIN

P.R. NIXON, Utah State University, Agricultural Experiment Sta., Logan, Utah 84321

Objective: To develop methods of collecting and storing precipitation, including installation procedures, construction materials, durability, performance, and maintenance requirements.

Plan of Work: Evaluation of durability of materials by accelerated aging, exposure tests, and in actual field test installations, will continue. Other factors under study are: slope of collecting surface, storage structures, evaporation control measures, maintenance requirements and construction techniques. Materials scheduled for testing include metal, asphalt, plastic film, synthetic rubber, and soil cements.

SUPPORTED BY U.S. Dept. of Agriculture

8.0293, SHORE-LINE ENGINEERING STUDIES ON GREAT SALT LAKE

W.P. HEWITT, Univ. of Utah, State Geolog. & Min. Surv., Salt Lake City, Utah 84112

The object of this study is to determine the effect of currents, storm waves, and heavy brine on engineering structures that might be built on Great Salt Lake, or upon its shores. A contour-map of the brine-lake bed contact is to be built, currents are to be studied and reefs are to be plotted.

This project is to commence in the summer of 1965.

Status: Lakewide survey involving current measurements, water depths, water temperatures and water densities are under way. Fathometer on loan from U.S. Navy will be tested this summer. Photography of Lake, gained cooperatively in 1965 and 1966 with U.S. Geologic Survey, will be studied for reef distribution and shoreline features.

SUPPORTED BY Utah State Government

8.0294, ENGINEERING CHARACTERISTICS OF THE BOTTOM SEDIMENTS OF GREAT SALT LAKE

W.P. HEWITT, Univ. of Utah, State Geolog. & Min. Surv., Salt Lake City, Utah 84112

The object of this study is to develop data that will aid in the design of structures that might be founded on the sediments that underlie Great Salt Lake's excessively dense brine. Therefore, in order to determine the bearing capacities of Great Salt Lake sedi-

8. ENGINEERING WORKS

ments, a series of 100-foot deep holes are to be drilled into the bottom sediments of the lake. Penetration and shear vane tests will be conducted in the field; Shelby tube samples will be collected for standard laboratory testing, and constituent properties of the sediments are to be identified.

The work is to be started in the summer of 1965.

Status: work on this project postponed.

8.0296, HIGH POWERED FLOATING NUCLEAR POWER PLANT CONCEPTUAL STUDY

P.D. ARROWSMITH, U.S. Army, Nuclear Power Field Off., Fort Belvoir, Virginia

Objective: Develop a conceptual design for a high power, high reliability nuclear power floating electrical generating station (40 MWE) with simultaneous capability of furnishing one million gallons of desalted water per day.

Approach: Work is being carried out in three phases (1) preliminary investigation of suitable reactor types, desalination concepts, evaluation of plant configurations and establishment of recommended configurations for reactor and desalination concepts for further study. (2) Conceptual design of nuclear desalination, power conversion, steam to electric systems - and evaluation and selection of a floating mount - capital costs, plant layout, weighs and overall evaluation of systems will be included. (3) Final selection of system plant integration, final capital and other costs estimates, layout of a plant procurement program and preparation of a final report.

Draft report reflects cost and sizing criteria that require updating. Additional effort will be expended to produce final report using latest maritime design and current nuclear and shipyard prices. This extends scope by twenty percent and will result in August 68 completion.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0297, DEVELOP DESIGN DATA FOR LIGHT WEIGHT WATER PURIFICATION UNIT

R.J. GAINEY, U.S. Army, Engineer Research & Dev. Labs., Fort Belvoir, Virginia 22060

Technical Objective: Develop design data for a water purification unit which will be used for production of drinking water in the field to support dispersed tactical forces of the Air Mobile Division.

Approach: Perform studies to determine feasibility of vacuum diatomite filters, hydraulically operated agitators, and chemical feeders and evaluate new materials applicable to the required characteristics of the new equipment.

A prototype model was fabricated in-house, including a pressure diatomite filter, coagulation basin, storage and accessories weighing less than 1000 pounds. Engineering design tests have been completed. Procurement data package was prepared for limited production. A contract has been awarded for 45 equipment sets.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0298, RESISTANCE OF CONCRETE TO SULPHATE WATERS

G.I. OWENS, U.S. Dept. of Interior, Civil & Structural Sect., Coulee Dam, Washington

This test was established and is being continued to determine the effect of alkline waters on reinforced concrete. Test specimens were made using various admixtures, several types of cement; 4-1/2, 6, and 7-1/2 sack mixes, and one aggregate source. The information gathered is of value in connection with construction of irrigation works where sulfate contact is anticipated.

The last tests, including photographs, were taken during the Fall of 1959. The next tests will be taken in the Fall of 1965 and thereafter on a five year basis. Interim work consists of routine observations, repairing minor leaks in the ponds, and maintaining the desired salt concentration therein.

8.0299, COLLECTION OF JUVENILE SALMON IN TURBINE INTAKES

J.R. GAULEY, U.S. Dept. of Interior, Fisheries Engin. Res. Lab., North Bonneville, Washington

Description: Fish are passed through a simulated portion of a penstock and their reaction to various gateway slot configurations is measured.

Purpose: Other research has indicated mortalities as high as 11% to juvenile salmon that pass through turbines of Columbia River Dams. It has also been noted that many of these seaward migrants collect in the gateway slots at existing projects. These studies are to determine if the gateway slots can be modified and utilized as deflection and by-pass systems to prevent or reduce fish loss in turbines.

Results: These studies just initiated. Preliminary data collected have not yet been analyzed.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0300, MIGRATORY RESPONSE OF ADULT SALMONIDS TO WATER TEMPERATURE

J.R. GAULEY, U.S. Dept. of Interior, Fisheries Engin. Res. Lab., North Bonneville, Washington

Description: Fish are given choice of water of two variable temperature regimes. Reaction is measured.

Purpose: To obtain background data needed for locating and operating fish collection facilities at high storage projects where waters of different temperatures are released through turbines, regulating outlets and other facilities.

Results: Preliminary work on chinook, coho and sockeye salmon given a choice between existing river temperatures and water heated 3 degrees F, 7 degrees F, and 15 degrees above river temperature shows that a temperature increase of 3 degrees F had little effect on the response of migrating adult salmonids, but when the temperature was increased 7 degrees F above that of river flow, a number of fish rejected the heated water. River temperatures during these observations declined from 69.5 degrees to 63.8 degree F. Future research will include response to chilled as well as heated water.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0301, PASSAGE OF ADULT SALMONIDS THROUGH PIPES

J.R. GAULEY, U.S. Dept. of Interior, Fisheries Engin. Res. Lab., North Bonneville, Washington

Description: Adult salmonids are subjected to several hydraulic and light conditions in various lengths and configurations of 1-foot, 2-foot and 3-foot diameter pipes to determine fish passage potential of such transportation media.

Purpose: More efficient and less costly fish passage through difficult areas at dams than by conventional concrete channels. Modification of existing fishway exits to prevent loss of fish through adjacent spillways, temporary passage situations during project construction and the transportation of fish from point to

8. ENGINEERING WORKS

point within a dam are examples of possible application of this work.

Results: These studies now in progress. Preliminary results indicated that salmon and steelhead will pass through dark, horizontal pipes up to 270 feet in length, including several 180 degrees bends. A 2-foot diameter pipe provided best results. Experiments were conducted in an endless horizontal 2-foot diameter pipe in FY 1966. The best test conditions for chinook salmon were a dark pipe with a water velocity of 2.5 f.p.s.; 100 percent completed 800-feet and 50 percent completed 1 mile. Sockeye salmon and steelhead trout made their best performances in a lighted pipe with a velocity of 2.5 f.p.s. At these conditions, all of the sockeye reached 2,335 feet, and 76 percent completed 1 mile; 100 percent of the steelhead attained 4,383 feet, and 90 percent completed 1 mile.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0302, McNARY ARTIFICIAL SPAWNING CHANNEL STUDIES

J.S. CHAMBERS, State Dept. of Fisheries, Olympia, Washington

Description: A 2,400-foot channel, 30-feet in width with a designed flow of 60 cfs, was constructed on the basis of field criteria collected in earlier work. Adult Fall Chinook were placed in the channel annually over a nine-year period and the results measured.

Purpose: To determine if artificial spawning channels will provide a suitable replacement for natural spawning grounds inundated by dams.

Results: It has been demonstrated that fish will accept, spawn in and reproduce successfully in spawning channels when water conditions are adequate. Egg deposition has ranged between 27,000 and 2,100,000 annually with survival to seaward migrant varying from 5.2% to 36.6%. Adult returns to the channel have been small. Because high water temperatures during the incubating season are a limiting factor, production channels along the Columbia River below the mouth of the Snake River are not considered feasible. Several channels based on McNary data are being constructed by project developers on the Columbia River above the mouth of the Snake, where water temperatures are suitable.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0303, TEMPERATURE PREDICTION STUDIES RELATING TO THE DEVELOPMENT OF A POWER REACTOR SITE ON THE LOWER COLUMBIA RIVER

R.T. JASKE, Battelle Memorial Institute, Richland, Washington 99352

As a continuation of a previous program in which the dispersion characteristics adjacent to the site on river mile 72.8 were established along with installation of a temperature monitoring network, and a preliminary appraisal of the effects of the construction of Columbia Treaty dams on temperatures of the Columbia River, the following additional work was authorized: 1) Prepare a statistical probability analysis to determine the extent that time critical conditions may impose periods of shut-down (if any) of a proposed plant under the existing water management plans of control agencies and within the state water quality standards. 2) Extend this analysis to the downstream portion of the river to examine related effects involving flow transients from tides and river flow regulation for peak power requirement. 3) Technical supervision over the temperature collection network and analytical work involving analysis of recorded data.

SUPPORTED BY Portland General Electric Company

8.0304, FISH TRANSPORTATION

W.J. EBEL, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

One of the important techniques of fisheries management is the transportation of living fishes, sometimes for long distances. The solution of fish-passage problems in Columbia River Basin may require that anadromous fish be carried around dams or other obstructions, either as downstream migrant young or as

adults migrating upstream to spawn. In either case, they are subjected to various hazards which may cause serious mortality, immediate or delayed. The purpose of this investigation will be to develop safe and efficient short- and long-range methods of transporting wild anadromous fish and to improve on contemporary methods of transportation.

Current efforts are concentrated on developing a system to detect magnetically tagged adult salmon and to separate them from untagged fish in a fishway. These tags, which are placed in juvenile migrants, will provide information on the survival of transported fish and their ability to home to natal streams when they return as adults. Subsequent research will be directed to the problems of holding fish in collection facilities prior to transport, transferring fish from holding to transport facilities, and reducing mortalities during transport and release operations. Predation, disease, and physiological effects during the various phases of transportation are receiving special attention.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

8.0305, ADULT SALMON BEHAVIOR STUDIES IN RIVERS AND AT DAMS (SONIC TRACKING)

J.H. JOHNSON, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

This project seeks information which will contribute to a sound assessment of the effect of reservoirs and dams on anadromous fish runs, specifically on adult salmonids returning to Columbia River system spawning areas. Such an assessment requires an accurate knowledge of migration timing and spawning area locations before dams are constructed, and of the amount and nature of mortality resulting directly from fish passage over dams.

The project's primary research tool at present is the sonic fish tag, a miniature high frequency sound transmitter attached directly to the fish. Since tagged fish can be tracked individually from boats, their continuous movements noted in precise detail, or their progress and dispersion upstream can be measured by means of automatic recording monitors placed at intervals along the shore above a tagging site.

Studies in progress are attempting to pinpoint the causes for losses of adult salmon between Bonneville, Priest Rapids, and Ice Harbor dams using sonic tracking devices and automatic recording monitors placed at strategic intervals along the Columbia River and tributary streams.

Studies are planned on the behavior of adult salmonids in estuaries, using sonic tracking techniques to examine migration in relation to tides, freshwater inflow, salinity, and other environmental factors.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

8.0306, PROTECTION OF FINGERLING SALMON IN TURBINES

C.W. LONG, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

This project is directed toward the assessment of losses of young salmon during passage through Kaplan turbines and the development of methods to reduce these losses.

The passage of juvenile salmon at dams on the Columbia-Snake river watershed is a problem of attrition. When all low-head dams are completed, some stocks of fish may have to pass as many as 10 projects to reach the sea. Problems of passage will be further compounded in the near future when many more turbines will be installed and fish now enjoying relatively safe passage through the spillways will be forced to use the turbines as their only means of egress to downstream areas.

Equipment and techniques are being used to investigate the causes of loss of fish in prototype facilities at Ice Harbor Dam and elsewhere in the Columbia Basin. Fish protection methods fall into three general categories: (1) Operating turbines to minimize mortality, (2) Eliminating lethal agents in turbines, and (3) Bypassing fish around turbines.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

8.0307, FISH GUIDING

J.R. PUGH, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

Fish-guiding techniques examined by this project have included the use of electrical fields, louvers in combination with electricity, and large panel nets in conjunction with self-cleaning traps. Also studied was the distribution of fish in the natural environment as related to application of fish-guiding devices. Reports of these investigations are in final stages as project nears completion.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

8.0308, JUVENILE MIGRATION RATES

H.L. RAYMOND, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

This project is aimed at assessing the effects of dams and impoundments on the timing and survival of juvenile salmonids migrating to the sea. Extensive marking of fish is being done in tributary streams of the Columbia and Snake Rivers, using thermal brands. Recovery of marked fish from turbine intake gateways at dams in the Columbia and Snake Rivers and from the estuary by purse seines and beach seines is providing data on rates of movement, timing of migration, and survival of young fish in relation to the changing environment.

Information being gathered will be used to identify areas in which delays and mortalities are occurring as the result of environmental changes. These findings would then be applied to implement management practices designed to enhance survival of seaward migrating salmonids.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

8.0309, SALMON PRODUCTION IN AREAS MADE INACCESSIBLE BY DAMS

G.R. SNYDER, U.S. Dept. of Interior, Biological Laboratory, Seattle, Washington 98102

Researchers will assess available spawning and rearing areas, condition of gravels, productive capacity of lakes and reservoirs, availability of re-seeding stock with desired racial characteristics, existing predator-competitor species, and demonstrate productive potential experimentally.

Prospects for successful reestablishment of salmon runs in areas blockaded by dams are to be evaluated in the light of expanding Indian fisheries and industrial developments in the Columbia Basin.

SUPPORTED BY U.S. Dept. of Interior - Bu. Comm. Fish.

8.0310, FISHERIES-TURBINE RESEARCH COMPENDIUM COMPILATION

M.C. BELL, Univ. of Washington, Graduate School, Seattle, Washington 98122

Description: Much research has taken place in recent years in a number of countries to determine the mortality or survival levels of juvenile fish that must pass through hydroelectric turbines on their migration routes to the sea and the possible causes of any mortalities. This project will compile and analyze these various tests utilizing automatic data processing techniques and attempt to inter-relate various test data to specific turbine characteristics.

Purpose: To compile and summarize in a single volume for ready reference all fisheries-turbine test data, experience records and allied test data. To analyze in a manner that will facilitate development of prediction techniques for survivals through any turbine. To determine the need for additional expensive field tests.

Results: This project is about 40% complete. Contacts have been made with all known researchers in this field to secure test results. (Interviews have been held with turbine design experts and fisheries specialists in such work). A form for compiling test data that can be easily coded for automatic data processing methods has been designed and compilation of test data is in progress.

8.0311, GUIDING JUVENILE AND ADULT MIGRANT SALMONIDS BY NON-ELECTRICAL MEANS

P.E. FIELDS, Univ. of Washington, Graduate School, Seattle, Washington 98122

Description: This research area, investigated over a 10-year period by the University of Washington, involves dozens of individual studies conducted in the laboratory and in the field. Primary emphasis has been on the reaction of fish to lights and water velocities. Tests were designed and conducted to scientifically measure the response of fish to many light-velocity situations.

Purpose: To determine the reaction of fish to the tested stimuli and provide, if possible, criteria for the design of deflection or attraction devices to aid in the collection or protection of fish at dams.

Results: Early in the work many visual stimuli were eliminated for various reasons. Flashing lights and colored lights were no more effective than steady white lights. Multiple light arrays appeared more effectively than single lights. Field tests at McNary Dam and The Dalles Dam in recent years provided general conclusions that: a. Under some conditions, artificial light can repel fish and divert them from certain areas. Such situations require the balancing of various stimuli so that light intensity overrides velocity, turbidity, depth and temperature. b. Under other conditions, artificial light can attract fish and concentrate them in particular areas. Some degree of light adaption is necessary before attraction will occur. These studies have been completed and a final report fully discussing the many tests and the complex reaction relationships has been prepared. These studies will be considered in future fish facility design situations, but it is questionable whether the positive reaction of fish to light possesses the required simplicity for practical application.

SUPPORTED BY U.S. Dept. of Defense - Army

8.0312, FISH PASSAGE THROUGH TURBINES

F.K. CRAMER, U.S. Army, Corps of Engineers, Walla Walla, Washington

Description: Juvenile fish were passed through model and prototype Francis and Kaplan turbines at the Allis Chalmers Plant, Pennsylvania, Cushman Power station, Washington, Shasta Dam, California and Big Cliff Dam, Oregon under a variety of operating conditions. Mortality rates were measured.

Purpose: To secure design and operating guidelines for improved survival of fish that must pass through turbines and to determine if safe fish passage through turbines is possible.

Results: Survivals as high as 89.6% through Francis turbines were achieved. It was determined that desirable Francis turbine characteristics for maximum fish survival are: a. Low runner speed. b. High efficiency. c. Deep setting of centerline of runner in tailwater to minimize cavitation. d. Maximum clearance between gates and blades and between blades. Other complex relationships were also established.

Survivals as high as 95.5% were achieved in Kaplan turbines. Maximum survival occurred at highest turbine efficiency, and is related to lowest cavitation index. Work is continuing in this field to determine if Kaplan and Francis turbines can be designed and operated to minimize or eliminate juvenile fish mortalities.

Education-extramural; Education-in House; Research Facilities; Grants, Contracts, and Research Act Allotments.

9.0001, HYDROLOGY TRAINING AND METHODOLOGY

B.B. EICHERT, U.S. Army, Engineer District, Sacramento, California 95814

Activities: a. Methods systemization projects in which procedures currently in use in hydrologic engineering will be reviewed with purpose of developing step-by-step sequences, convenient formats, and other instructions necessary to increase efficiency of use, in order to reduce cost of studies and improve quality of results. New procedures will be developed for systems

matic applications. b. 'Training Courses', (16 weeks) group participation, classroom type instruction, related to various phases of hydrologic engineering. c. 'Short Conferences or Seminars', (3-5 days) following planned agendas for guidance of open discussions and lecture-type presentations related to various phases of hydrologic engineering. d. 'Individual or Small Group Training Assignments', instruction and supervision of trainees assigned to the Center for two weeks or longer. Services performed will consist of supervision and necessary advice on methods, with reliance being placed on the trainee for actual analyses and solutions. Training is systematic with emphasis placed on subject areas of special importance to each trainee. Basic data and problem situations related to the trainee's home area will be utilized insofar as practicable.

SUPPORTED BY U.S. Dept. of Defense - Army

9.0002, ECONOMICS OF WATER TRANSFER - AN APPRAISAL OF INSTITUTIONS

D. SECKLER, Colorado State University, Agricultural Experiment Sta., Fort Collins, Colorado 80521

Objectives: A. To investigate and compare various organizations and administrative procedures, which control the use of water in terms of their respective achievement and potentiality for allocative efficiency in water use among users and uses. Examine the factors that lead to flexibility, security, rigidity in water use. Also examine the role of water changes and prices in achieving allocative efficiency.

Consider: 1) Role of Northern Colorado Water Conservancy District in water use and transfer. 2) State water agencies and water organizations in Wyoming, Montana, Idaho and/or other states.

B. To investigate and estimate demand function for water in various uses and investigate complementarity and competitive relationships between uses with emphasis on implications of these relationships for transfers between uses and organizational arrangements.

9.0003, SUPPORT OF THE COMMITTEE ON WATER

E.F. COOK, Natl. Academy of Sciences, Washington, District of Columbia

Funds are requested for partial support of the National Academy's Committee on Water. The Committee has three panels concerned respectively with scientific hydrology, water management, and education. These panels will investigate water resources needs with a principal objective of making recommendations for carrying forward national programs in the fields of scientific hydrology, water management and education. Committee activities will build upon previous investigations of needs in water resources research, such as the 1963 study for the Federal Council for Science and Technology, which was restricted to Federal Agency programs. Close coordination will be maintained with other groups, such as the Universities Council on Water Resources and the Committee on Status and Needs of the American Geophysical Union's Section on Hydrology, which may be investigating specific aspects of water resources research and education.

SUPPORTED BY U.S. National Science Foundation

9.0004, SUPPLY OF AND DEMAND FOR TRAINED WATER RESOURCES PERSONNEL - A PILOT STUDY

J. FISHER, Surveys & Research Corporation, Washington, District of Columbia

The project undertakes to develop the methodology required to carry out a national survey, to be done at a later date, of the supply and utilization of and the current and future demand for trained water resources personnel. Key problems to be resolved include the identification of types of personnel working in the field of water resources, methods for collecting data as to their training, experience and utilization, capability of universities and other establishments to train the required manpower and the

9. MANPOWER, GRANTS, AND FACILITIES

identification of establishments that employ these personnel. The work will be done by means of a developmental study through interviews with selected establishments, development of a survey instrument and a pre-test of it. The final output will be a questionnaire ready for a full-scale survey, instructions and definitions for respondents and a sampling plan so that a national survey that would be Phase II could be carried out.

9.0007, WATER RESOURCES RESEARCH, MANPOWER AND TRAINING NEEDS FOR INDIANA

D. WIERSMA, Purdue University, Water Resources Research Ctr., Lafayette - West Lafayette, Indiana 47907

The project will be an attempt to study the water resources research needs of Indiana, the manpower required to adequately staff the research, planning, operating and management water resources programs in the State, and to develop training facilities, including the academic curriculum, which will fulfil these needs.

The resources of all the universities, State and Federal Agencies, and private organizations will be utilized.

9.0008, AN INVESTIGATION OF MANPOWER RESOURCES FOR WATER RESOURCES RESEARCH AND OTHER WATER-RELATED ACTIVITIES

J.E. LEWIS, Louisiana State University, Graduate School, Baton Rouge, Louisiana 70803

Can we satisfy the demand for water resources personnel during the period to 1985? Four principal intermediate objectives constitute the basic outline of the plan of work in this study:

1. identification of estimated levels of production of professional, technical, and other elements of the national labor force on a year-by-year basis to 1985; 2. identification of estimated manpower requirements in major scientific and technical programs and in industrial and occupational categories on the national level; 3. comparison of estimated manpower requirements with estimated manpower production at the pertinent educational and skill levels; 4. evaluation of the impact of the more general manpower supply and demand patterns on the availability of water resources personnel.

No attempt will be made to collect new data. The focus of the study will be on the analysis and interpretation of data currently available from the U.S. D.L., N.S.F. other government agencies and professional associations. A realistic understanding of the in-

9. MANPOWER, GRANTS, AND FACILITIES

terplay of supply and demand in the national manpower situation is a prerequisite to planning for optimal utilization of water resources personnel and funds.

9.0009, LOGISTIC SUPPORT AND MAINTENANCE OF FACILITIES

C.E. WILDE, Mount Desert Island Biol. Lab, Salisbury Cove, Maine

The Mt. Desert Island Biological Laboratory is one of very few independent marine biological research stations in the United States. It was founded in 1898 at South Harpswell, Maine, incorporated in 1914, and has functioned as a seasonal field station at Salisbury Cove, Maine. The laboratory has operated uniquely by cooperative voluntary efforts of its investigators. At the present time the yearly paid employees are in full time maintenance men and part time assistant director. The officers serve without remuneration.

Located on Frenchmen Bay, there is immediate access to organisms of the cold Atlantic waters as well as to environments of rocky shores, fresh water lakes, bogs, meadows and spruce forests. Acadia National Park is close by. The individual research programs carried out at the Laboratory represent a broad spectrum of marine biological research. The advantages of the later summer breeding seasons of certain invertebrates, the greater availability of other organisms throughout the season and special ecological aspects of the location have led to emphasis on certain kinds of research: comparative physiology of fish (especially renal and respiratory physiology); various aspects of development using marine eggs; problems of ion transport, cell division, regeneration, botanical ecology, fine structure, organ biochemistry, hemodynamics and general comparative physiology.

9.0010, THE APPLICATION OF PROGRAMMED LEARNING TECHNIQUES TO WATER CHEMISTRY

K.H. MANCY, Univ. of Michigan, School of Public Health, Ann Arbor, Michigan

A series of programmed units on selected topics in water chemistry will be developed. This involves the careful definition

of goals, precise instructional design and intensive testing and revision. The programmed material, together with carefully developed tests, will be distributed to different Federal, State and educational institutions for evaluation. Test results will be processed and analyzed and conclusions will be drawn. A comprehensive report on the feasibility of using programmed learning and the methods by which it can be applied in the field of water pollution control will be prepared.

9.0011, SUMMER RESEARCH AT THE UNIVERSITY OF OKLAHOMA BIOLOGICAL STATION

C.D. RIGGS, Univ. of Oklahoma, Graduate School, Norman, Oklahoma 73069

The University of Oklahoma Biological Station is located on the Oklahoma-Texas boundary at Lake Texoma, an artificial impoundment of approximately 93,000 acres created in 1942 by construction of a flood control and power dam on the Red and Washita Rivers. The area surrounding the Biological Station contains a variety of both aquatic and terrestrial environments for biological investigation including tall grass prairie, blackjack-oak forests, and variety of hill, plain and valley vegetation available to this laboratory.

This interesting natural environment together with the substantial physical facilities of this field station provide the basic requirements for the excellent summer research and research training programs which have developed there. Although the Biological Station is maintained for use on a year round basis, summer is its season of peak activity. During this period its staff or faculty of 11, approximately half of whom come from institutions other than the University of Oklahoma, and 70-75 pre- and postdoctoral researchers and a group of advanced undergraduate and beginning graduate students assemble for 10 weeks of intensive study. Postdoctoral participants carry out their research independently whereas predoctoral and younger students receive appropriate supervision and some didactic training.

EFFECT OF GRAZING MANAGEMENT ON RANGE LIVESTOCK NUTRITION AND ON THE RANGE RESOURCE ...Cattle, Cutting &/or Grazing Effects, Diet Or Ration -other, Management, Management and Fertility, ...2.0971

Species and Species Evaluation

AN ANALYSIS OF THE VEGETATION AND SOIL CHARACTERISTICS OF RANGE WATERSHEDS IN NEVADA ...Cover Crops, Infiltration, Mapping, Runoff, Soil-water-plant Relationships, ...2.0740

DEVELOPMENT OF A MODEL RESOURCE ANALYSIS FOR RANGE WATERSHEDS ...Mapping, Model Studies, Quality and Utilization, ...6.0460

Rotations

DEVELOPMENT OF A CHEMICAL FALLOW SYSTEM OF FARMING ...Great Plains Province, Herbicides -non-specific, Moisture Retention, Runoff, Tillage, Cropping Systems, ...4.0236

SOIL MANAGEMENT INVESTIGATIONS ON IRRIGATED LAND ...Irrigation, Management, Soil Analysis, Soil Comparison, Tillage, Cropping Systems, Water Application Methods, ...4.0114

Seed Production

Growth Management

EFFECT OF RATE OF SEEDING AND THE APPLICATION OF AGRICULTURAL CHEMICALS ON YIELD AND QUALITY OF ALFALFA SEED ...Alfalfa, Irrigation, Management, ...6.0365

Seed Production -non-specific

FERTILIZER-WATER-CULTURAL PRACTICES ...Arid and Desert, Management, Nevada, Plant Water Use-other, ...6.0342

Sugar Crops

Breeding and Genetics

VARIETAL EVALUATIONS AND IMPROVED AGRONOMIC PRACTICES FOR SUGARBEETS ...Irrigation, Management, Sugar Beets, Varietal Evaluation, ...3.0262

Management

METHODS FOR DETERMINING THE ECONOMIC PRODUCTIVITY OF IRRIGATION WATER FOR THE PRODUCTION OF SUGAR IN HAWAII ...Hawaii, Irrigation-general, Sugar Cane, Yield, ...6.0171

VARIETAL EVALUATIONS AND IMPROVED AGRONOMIC PRACTICES FOR SUGARBEETS ...Breeding and Genetics, Irrigation, Sugar Beets, Varietal Evaluation, ...3.0262

Sugar Beets

VARIETAL EVALUATIONS AND IMPROVED AGRONOMIC PRACTICES FOR SUGARBEETS ...Breeding and Genetics, Irrigation, Management, Varietal Evaluation, ...3.0262

Sugar Cane

WATER REQUIREMENTS BY SUGARCANE UNDER IRRIGATION ...Consumptive Use, Irrigation, Moisture Content -plants, Requirements for Water, ...3.0424

METHODS FOR DETERMINING THE ECONOMIC PRODUCTIVITY OF IRRIGATION WATER FOR THE PRODUCTION OF SUGAR IN HAWAII ...Hawaii, Irrigation-general, Management, Yield, ...6.0171

LAND FORMING FOR IRRIGATION AND DRAINAGE IN SUGARCANE PRODUCTION UNDER PUERTO RICAN CONDITIONS ...Drainage, Irrigation, Irrigation-general, Puerto Rico, Water Harvesting, ...3.0425

THE LOSS OF FERTILIZERS BY LEACHING FROM THE SUGARCANE SOILS OF PUERTO RICO ...Fertilizer Losses, Lysimeters, Methods of Application, Other, Puerto Rico, ...2.0938

DRAINAGE OF SUGARCANE LANDS IN THE HUMID SECTIONS OF PUERTO RICO ...Drainage, Humid, Puerto Rico, Water Table - Depth of, Water Table Fluctuation, Yield, ...2.0936

THE INFLUENCE OF WATER AND CLIMATE ON THE YIELD AND SUCROSE CONTENT OF SUGARCANE ...Applied Climatology, Irrigation-general, Microclimate-general, Puerto Rico, Yield, ...4.0211

FARM MANAGEMENT STUDY OF THE SUGARCANE FARMS SERVED BY THE LAJAS VALLEY IRRIGATION DISTRICT ...Costs, Irrigation-general, Production & Processing, Puerto Rico, Water Costs, ...3.0427

VALUE OF IRRIGATION WATER FOR THE PRODUCTION OF SUGAR CANE ...Economic Feasibility, Irrigation, Irrigation-general, Water Allocation, Water Costs, ...6.0174

Tobacco

Management

NITROGEN FERTILIZATION AND IRRIGATION OF TOBACCO ...Irrigation, Moisture Deficiency, Nitrogen, Rates Or Levels of Application, ...2.0870

IMPROVEMENT IN CIGAR TOBACCOS BY DEVELOPMENT OF MORE ADEQUATE CROPPING SYSTEMS, FERTILIZATION, CULTURAL AND CURING PRACTICES ...Irrigation-general, Space Competition, Tillage, Cropping Systems, ...3.0261

Turf

Management

TURF RESEARCH ...Irrigation, Species and Variety Evaluation, Sprinkler Irrigation, Water Costs, ...4.0065

TURFGRASS MANAGEMENT ...in Turf, New Mexico, Nitrogen, Phosphorus, Potassium, Species and Variety Evaluation, ...6.0367

THE WATER ECONOMY OF TURFGRASS ...Dew, Moisture Content, Soil Types, Soil-water-plant Relationships, Species and Variety Evaluation, ...2.0941

Species and Variety Evaluation

TURF RESEARCH ...Irrigation, Management, Sprinkler Irrigation, Water Costs, ...4.0065

TURFGRASS MANAGEMENT ...in Turf, Management, New Mexico, Nitrogen, Phosphorus, Potassium, ...6.0367

THE WATER ECONOMY OF TURFGRASS ...Dew, Management, Moisture Content, Soil Types, Soil-water-plant Relationships, ...2.0941

Weed Control

Biocontrol

BIOLOGICAL CONTROL - TAMARISK AND OTHER PHREATOPHYTES ...Antitranspirants, of Aquatic Plants, Saltcedar, Tamarisk, ...3.0335

BIOLOGIC AND ENVIRONMENTAL CONTROL OF EURASIAN MILFOIL (MYRIOPHYLLUM SPICATUM L.) IN CHESAPEAKE BAY ...Chesapeake Bay, Histology and Cytology, Range Or Territorial Distr., Water Milfoil, Waterweed... , ...6.0251

BIOLOGICAL CONTROL OF AQUATIC VEGETATION ...Lakes, of Aquatic Plants, Ponds, Tilapia, Cichlids, ...6.0196

SUBJECT INDEX

Agronomy

- PHYCOVIRUSES - THEIR NATURE, OCCURRENCE, AND APPLICATION** ...Algal Pollutant Sources, Algal Virus, Eutrophication, Isolation, Pathological Physiology, ...**5.0859**
- EUTROPHICATION - BIOLOGICAL CONTROL USING GRAZERS** ...Eutrophication, of Aquatic Plants, Survey Studies, Wisconsin, ...**5.0971**
- CONTROLLING WEEDS ON DITCHBANKS AND OTHER NON-CROP AREAS** ...Persistence in soils, Physical Control, Phytotoxicity, Soil Erosion -non-specific, ...**5.1328**
- PRINCIPLES AND PRACTICES FOR THE CONTROL OF SUBMERSED, FLOATING, AND IMMERSSED AQUATIC WEEDS** ...Canals, Environmental Effects, Evaluation, Herbicides -non-specific, of Aquatic Plants, ...**5.1329**

- COOPERATIVE BIOLOGICAL PEST CONTROL RESEARCH** ...Biological Pollutants -general, California, Canals, Evaluation, Reservoirs and Impoundments, ...**5.0087**
- INVESTIGATION AND CONTROL OF ALGAE BLOOMS AND NUISANCE GROWTHS OF WATER WEEDS** ...Eutrophication, Phosphate, Phosphite, ...**6.0110**
- EVALUATION OF HERBICIDES FOR CONTROL OF AQUATIC WEEDS** ...Application Rates, Evaluation, Floating Plants, Herbicides -non-specific, Submerged Plants, ...**5.0247**
- CHEMICAL CONTROL OF AQUATIC VEGETATION** ...Evaluation, Illinois, Lakes, Pre-emergents (plants), ...**5.0349**
- BIOLOGICAL CONTROL OF AQUATIC VEGETATION** ...Biocontrol, Lakes, Ponds, Tilapia, Cichlids, ...**6.0196**
- MANAGEMENT OF FOREST AND FARM GAME HABITAT - FISH POND MANAGEMENT** ...Farm Pond, Food Supply, Game Reserves, Habitat Studies, Site Index and Site Quality, ...**6.0245**
- INVESTIGATION OF AQUATIC WEED PROBLEMS AND MEANS OF CONTROL WITH EMPHASIS ON BRAZILIAN WATERWEED** ...Applied Ecology, Herbicides -non-specific, Screening Potential Pesticides, Water Milfoil, Waterweed..., ...**5.0938**
- STUDY OF METHODS FOR CONTROLLING AQUATIC GROWTH AT PYMATUNING RESERVOIR AND CONNEAUT LAKE, PENNSYLVANIA** ...Lakes, Pennsylvania, Plant Pollutants, Pollution Abatement, Reservoirs and Impoundments, ...**6.0470**
- RESULTS OF APPLICATIONS OF KARMEX FOR CONTROL OF PLANTS IN PONDS AND LAKES** ...Aquatic Plants (non-specific), Diuron, Evaluation, Lakes, Water Quality-general, ...**6.0568**
- NUTRITION OF WATER WEEDS** ...Mineral Nutrition, Reservoirs and Impoundments, Water Quality Control-general, ...**5.0023**

AQUATIC PLANT CONTROL - EQUIPMENT FOR MECHANICAL AND CHEMICAL DESTRUCTION ...Herbicides -non-specific, Louisiana, Pest, Disease & Weed Control, ...8.0208

AQUATIC PLANT CONTROL ...Environmental Ecology, Fish -non-specific, Herbicides -non-specific, Wildlife, ...8.0168

GROWTH SUPPRESSION AND REDUCTION IN REGROWTH POTENTIAL OF AQUATIC WEEDS ...Aerolein, Biological Pollutants -other, Maturity Or Growth Stage of , Plant Resistance, Submerged Plants, ...2.0191

AROMATIC SOLVENT AQUATIC HERBICIDES AND EMULSIFYING AGENT TESTING ...Aromatic Cpd's, Chemical Analysis, Evaluation, Herbicides -non-specific, Petroleum Cpd's -non-specific, Plant Pollutants, ...3.0107

LABORATORY STUDY OF AQUATIC ENVIRONMENTAL FACTORS AND PLANT GROWTH STAGES ON AQUATIC WEED GROWTH AND HERBICIDAL RESPONSE ...Environmental Effects, Herbicides -non-specific, Light -other, Maturity & Growth Stages, Water Temperature -other, ...3.0127

WEED CONTROL AND REVEGETATION ...New Mexico, of Trees and Shrubs, Rio Grande River, Riparian Land, ...3.0118

EFFECT OF COPPER SULFATE ON AQUATIC WEEDS ...Alkalinity, Canals, Copper, Copper Sulfate, Irrigation-general, ...3.0108

WEED CONTROL IN IRRIGATION AND DRAINAGE SYSTEMS ...Amphibious Plants, Aquatic Soils, Herbicides -non-specific, Plant Pollutants, Submerged Plants, Timing -non-specific, ...3.0094

EUTROPHICATION - EFFECT OF WEED HARVESTING ...Eutrophication, Nutrients, Physical Control, Plant Succession, ...5.0970

EUTROPHICATION - BIOLOGICAL CONTROL USING GRAZERS ...Biocontrol, Eutrophication, Survey Studies, Wisconsin, ...5.0971

EUTROPHICATION - PHYSICAL ECOLOGICAL CONTROL ...Destratification, Environment, Eutrophication, Physical Control, Primary Productivity, ...5.0972

PIGMENT ANALYSIS FOR THE DETECTION OF ENRICHMENT ...Chemical Analysis (water), Effluents-waste Water, Eutrophication, Nutrients, ...5.0906

PRINCIPLES AND PRACTICES FOR THE CONTROL OF SUBMERSED, FLOATING, AND IMMERSSED AQUATIC WEEDS ...Biocontrol, Canals, Environmental Effects, Evaluation, Herbicides -non-specific, ...5.1329

of Specific Weeds

ECESIS AND STABILIZATION OF PRICKYPEAR (OPUNTIA SPP.) ON THE RIO GRANDE PLAINS ...Angiosperms, Arid, nd Desert, Caeti, Habitat Studies, Range Or Territorial Distr. , ...6.0564

SEDIMENTATION AND WATER SALVAGE STUDIES-SOIL AND MOISTURE PROGRAM ...Channels, Phreatophytes, Seouring, Transpiration, Water Loss Control, ...8.0028

of Trees and Shrubs

UNDESIRABLE SHRUB AND TREE CONTROL ...Evaluation, Forest Watersheds, in Forests, Relations - Forage - Timber, Utah, ...3.0475

WEED CONTROL AND REVEGETATION ...New Mexico, of Aquatic Plants, Rio Grande River, Riparian Land, ...3.0118

Physical Control

SPECIES AND SUCCESSIONAL CONTROL OF UNDESIRABLE VEGETATION ...Control By Burning, Cultural Control, in Wetlands, Plant Succession, Swamps-marshes, ...6.0403

CHANGES IN WATER ENVIRONMENT RESULTING FROM AQUATIC PLANT CONTROL ...Lakes, of Aquatic Plants, Plant Pollutants, Recreation Sites, ...5.1301

EUTROPHICATION - EFFECT OF WEED HARVESTING ...Eutrophication, Nutrients, of Aquatic Plants, Plant Succession, ...5.0970

EUTROPHICATION - PHYSICAL ECOLOGICAL CONTROL ...Destratification, Environment, Eutrophication, of Aquatic Plants, Primary Productivity, ...5.0972

CONTROLLING WEEDS ON DITCHBANKS AND OTHER NON-CROP AREAS ...Biocontrol, Persistence in Soils, Phytotoxicity, Soil Erosion -non-specific, ...5.1328

Range

CONTROL OF UNDESIRABLE SHRUBS AND REVEGETATION OF SOUTHERN ARIZONA RANGES ...Arid and Desert, Arizona, Cultural Control, Integrated Cultural Control, Maturity Or Growth Stage of , ...4.0011

SEEDING ARID RANGELANDS OF ARIZONA ...Adaptation, Management and Fertility, ...4.0012

STRATTON SAGEBRUSH HYDROLOGY STUDY ...Cover Crops, Hydrology-general, Runoff, Sediment Yield, Soil Environment, ...2.0221

CHEMICAL CONTROL OF CREOSOTEBUSH AND MESQUITE ...Evaluation, Legumes -other,mesquite... , Management Effects, Phreatophytes, Watersheds-general, Zygophyllaceae, ...4.0177

CHEMICAL BRUSH CONTROL - BIOCHEMISTRY AND TOXIC HAZARD ...Aquatic Or Soil-aquatic Cycles, Environmental Effects, Herbicides -non-specific, Other, Pesticides, ...5.0944

MICROCLIMATIC FACTORS FOR FOUR PLANT COMMUNITIES ON ELK MOUNTAIN ...Artemisia, Elevational Levels, Altitude, Energy Budgets, Mapping, Wyoming, ...2.1170

HERBICIDE EVALUATION FOR PHREATOPHYTE CONTROL ...Consumptive Use, Herbicides -non-specific, Modified Water Use, Salteedar, Tamarisk, Water Loss Control, ...3.0132

Weed Control -other

PHREATOPHYTE CONTROL - LAHONTAN AND HUMBOLDT BASINS ...Phenology, Phreatophytes, Reservoirs and Impoundments, Root, Salteedar, Tamarisk, ...3.6317

FIELD EVALUATION OF SOIL-APPLIED HERBICIDE FOR TOTAL VEGETATION CONTROL ...Formulations -non-specific, Herbicides -non-specific, Soil Treatments -non-specific, ...3.0126

CONTROL OF WOODY PLANTS ...Aerial - Airplane, Herbicides -non-specific, New Mexico, Rio Grande River, ...3.0121

WEED CONTROL AND REVEGETATION ...Control and Protection, New Mexico, Plant Pollutants, Rio Grande River, ...3.0111

WEED CONTROL AND REVEGETATION ...Control and Protection, Cover Crops, Plant Pollutants, Rio Grande River, ...3.0119

Weeds -other

DISTRIBUTION, LIFE HISTORY, AND ECOLOGY OF EURASIAN WATERMILFOIL ...Chesapeake Bay, Range Or Territorial Distr. , Submerged Plants, Water Milfoil, Water weed... , ...6.0263

Weeds -phenological Studies

FIELD INVESTIGATION OF THE SUBMERSED AQUATIC ENVIRONMENT ...Aquatic Ecology, Canals, Irrigation-general, Plant Pollutants, Reservoirs and Impoundments, Submerged Plants, ...3.0125

Weeds -physiological Studies

METHODS OF CONTROLLING CLUBMOSS (SELAGINELLA DENSA RYDB) AND REDEVELOPING THE PRODUCTIVE CAPACITY OF RANGES FOLLOWING CLUBMOSS CONTROL ...Applied Ecology, Lycopsidea, Management and Fertility, ...4.0160

DETERMINATION OF FACTORS AFFECTING THE COMPETITIVE ABILITY OF WEEDS IN SEM-ARID AREAS ...Growth Rate, Roots, Semi - Arid, Vase, plant Competition -other, ...2.1016

Wildlife Habitats

Management

EFFECTS OF RESTORATION AND MANAGEMENT OF THE SAN SIMON MARSH ON ITS UTILIZATION BY MEXICAN DUCKS ...Food Supply, Mexican Duck, Spawn Or Nesting Sites, Swamps-marshes, Water Utilization -animal, ...6.0364

WATERFOWL STUDY-EVALUATION OF PHYSICAL CHANGES IN MARSH PONDS ON THE WISNER AND BILOXI DEVELOPMENT ...Land Use, Mississippi, Physical-general, Survey Studies, Swamps-marshes, Water Fowl, N.s. , ...4.0128

EFFECTS OF WATERSHED MANIPULATION ON DEER AND ELK USE ...Cover Crops, Habitat Studies, Population Dynamics, Water Yield, Watersheds-general, ...4.0003

WATERFOWL MANAGEMENT THROUGH WATER-LEVEL CONTROL ...Depth,water Level, Fluctuation, Drawdown, Management -other, Water Fowl, N.s. , Wetlands, ...4.0133

EFFECTS OF PLANTING TERRESTRIAL VEGETATION ON EXPOSED RESERVOIR BOTTOM ON AQUATIC BIOTA ...Drawdown, South Dakota, ...6.0513

MANAGEMENT OF FOREST GAME RANGES IN THE CENTRAL ROCKY MOUNTAINS, AND IMPROVEMENT OF FISH HABITAT BY MANIPULATION OF STREAMSIDE VEGETATION ...Habitat Studies, Land Use -non-specific, Soil (wildlife) Cover, Streams, Wildlife -non-specific, ...4.0074

LEAD ISOTOPIC CHEMISTRY FOR POLLUTION RESEARCH ...Analysis and Detection, Lead, Pollutants - Path of, Radioisotopes, Transport, ...5.0150

Air Temperature Instruments

THE HYDROLOGIC SIGNIFICANCE OF CHEMICALLY DERIVED MEAN BASIN TEMPERATURES ...Aldose and Ketose, Evaporation, Forecasting-prediction, Heat Measurement, Pennsylvania, ...2.0924

WMO EVAPORATION PAN DATA ...Atmosphere Radiation, Evaporation, Standards, Specifications, ...2.1113

Air-earth Interface

Boundary Layer Studies

FACTORS AFFECTING THE MOVEMENTS OF WATER AND ORGANISMS WITHIN A REGULATED MULTIPURPOSE LAKE ...Bacterial Pollutants Sources, Currents -water, Lakes, Sediments, Washington, ...2.1114

A THREE-DIMENSIONAL APPROACH TO THE EXCHANGE OF HEAT AND WATER VAPOR BETWEEN A LARGE WATER BODY AND THE ATMOSPHERE ...Diffusion, Electric Power Plants, Evaporation, Heat Exchange, ...2.0793

MICROCLIMATE ANALYSIS ...Irrigation, Irrigation-general, Microclimate-general, Texas, Transpiration, ...2.1002

A STUDY OF NATURAL EVAPORATION FROM FREE WATER SURFACES ...Evaporation, Oklahoma, Patterns, Water Loss Control, Waves, ...3.0129

BASIC INVESTIGATION OF HEAT AND MOISTURE TRANSFER ACROSS THE AIR-WATER INTERFACE ...Evaporation, Heat Exchange, Interface, Water Balance-budget, Water Loss Control, ...3.0124

Air-general

STUDY OF THE USE OF INERT GASES TO ELIMINATE ACID POLLUTION FROM ABANDONED DEEP MINES ...Acid Mine Wastes, Mine Atmosphere Conditions, Mine Hydrology, Pennsylvania, Underground Workings, ...4.0203

THE USE OF INERT GASES TO ELIMINATE POLLUTION FROM ABANDONED MINES ...Acid Mine Wastes, Ammonia, Chlorine, Mine Atmosphere Conditions, Nitrogen, ...4.0205

OXYGEN TRANSFER TO WATER DROPLETS ...Diffusion-other, Oxygen, Water, ...1.0038

Air-sea Boundary Studies

Heat and Radiation Transfer

SURFACE TEMPERATURE STUDIES USING RADIOMETRY TECHNIQUES ...Aircraft, Infrared Radiation, Microwave Radiation, Surface Environments, Temperature, ...6.0270

GREAT LAKES RESEARCH - ENERGY TRANSFER AT THE AIR-WATER INTERFACE ...Data Analysis - General, Heat-transfer-other, Lake Michigan, Mass Transfer, Towers, Wind-water Interaction, ...2.0639

Wind-water Interaction

OCEANOGRAPHIC USES OF RADAR ...Aircraft, Electronics - Applied, Radar, Surface Environments, Waves, ...6.0273

A STUDY OF PROBLEMS RELATED TO WIND-GENERATED WAVES ...Fluid-properties-other, Free Surface Waves, Laminar - Turbulent, Turbulent, ...2.0132

RESEARCH IN OCEANIC PHYSICS ...Atlantic Ocean-south, Convection, Mixing, Thermodynamics, Water Mass & Ocean Fronts, ...2.0519

DYNAMICS OF THE CIRCULATION IN THE GREAT LAKES ...Circulation General, Hydrodynamics, Lake Huron, Lake Michigan, Model Studies, ...2.0407

RESIDENCE TIMES OF WATERS BEHIND BARRIER ISLANDS ...Bays, Circulation General, Simulation Theory, Tides, ...5.0253

SUBJECT INDEX

Alaska

- EXPERIMENTAL STUDIES OF AIR AND WATER INTERFACIAL INTERACTION ...Pollutants - Path of , Turbulence-general, Waves, Wind Tunnels, ...2.0246
- VERTICAL CURRENT STRUCTURE IN THE GREAT LAKES ...Buoys, Currents -water, Forecasting-prediction, Great Lakes-general, Model Studies, ...2.0632
- GREAT LAKES RESEARCH - ENERGY TRANSFER AT THE AIR-WATER INTERFACE ...Data Analysis - General, Heat and Radiation Transfer, Heat-transfer-other, Lake Michigan, Mass Transfer, Towers, ...2.0639
- GREAT LAKES RESEARCH - LAKE WAVES ...Great Lakes-general, Waves, ...2.0641

Alabama

- HYDRAULIC INVESTIGATION OF SOIL EROSION AND SEDIMENTATION IN HIGHWAY MEDIAN AND SIDE DITCHES ...Drainage, Flow Characteristics -water, Seouring, Sedimentation, Silting, ...2.0004
- FLOOD FREQUENCY SYNTHESIS FOR SMALL STREAMS IN ALABAMA ...Drainage, Forecasting-prediction, Gaging, Peak Flow, Runoff, Small Watersheds, ...3.0172
- VERIFICATION OF HYDRAULIC DESIGN OF BRIDGES IN ALABAMA ...Bridges & Culverts, Data Acquisition-general, Drainage, Engineering Structures-general, Floods, ...8.0001
- DYNAMICS OF CHEMICAL & PHYSICAL CHARACTER OF WATER, BOTTOM MUDS & AQUATIC LIFE IN A LARGE IMPOUNDMENT ON A RIVER %PHASE II. Aquatic Soils, Chemical-general, Physical-general, Pollution - Effects of , Pollution Effects, Reservoirs and Impoundments, ...5.0008
- EVALUATION OF NEW TECHNIQUES IN ELECTRICAL RESISTIVITY SURVEYING IN THE PIEDMONT AREA, ALABAMA ...Electric Logging, Groundwater, Piedmont Province, Survey Studies, ...2.0005
- WATER POLLUTION BY DAIRY FARM WASTES AS RELATED TO METHOD OF WASTE DISPOSAL ...Animal Waste Removal-treatment, Bacterial Pollutant Sources, Chemical Oxygen Demand, Farm Wastes, Management, Sewage Lagoons, Waste Disposal-general, ...5.0011
- SOYBEAN YIELD AND QUALITY AS AFFECTED BY CLIMATIC, CULTURAL AND SOIL FACTORS ...Drought, Irrigation, Moisture Tension, Soybeans, Yield, ...3.0001
- UPPER BEAR CREEK EXPERIMENTAL PROJECT ...Cover Crops, Discharge-general, Forecasting-prediction, Small Watersheds, Technique Development, ...2.0987
- COAL STRIP MINE WATERSHED DEMONSTRATION--JACKSON COUNTY, ALABAMA ...Aquatic Ecology, Coal-general, Mining Industry, Pollution - Effects of , Water Quality-general, ...5.1124
- WRAGG SWAMP CANAL INVESTIGATION, ALABAMA ...Amount, Canals, Control Factors-general, Runoff, Urban Environments, ...4.0001
- PROJECT 2203 EFFECTS ON PHYSIOLOGY WORK UNIT 53 CHRONIC EFFECTS OF ENDRIN ON BLUEGILLS ...Bluegills, Bream, Computer Matching Code, Endrin, Residue Analysis - other, Wildlife, ...5.0022

Alaska

- INVESTIGATION OF SCOUR AT BRIDGES IN ALASKA ...Bridges & Culverts, Channel Geometry, Drainage, Erosion Control, Scouring, Suspension, ...2.0285
- A STUDY OF TECHNOLOGIES FOR REDUCING WINTER WEATHER COSTS ...Benefit-cost Analysis, Forecasting-prediction, Great Lakes-general, Meteorological Extremes, Northeast, ...2.0256
- CONTINUATION OF GLACIOLOGICAL INVESTIGATIONS ON THE CASEMENT GLACIER, ALASKA ...Floor Properties, General Synoptic Observations, Rate, Rheology - Flowage, ...2.0858
- FOREST AND BOG OF SOUTH COASTAL ALASKA - INTRA-TYPE VARIATION AND ASSOCIATED HABITAT FEATURES ...Forests, Habitat Studies, Peat, Swamps-marshes, Variation, ...2.0023
- REGIMEN OF THE MARTIN RIVER AND SIOUX GLACIERS, ALASKA ...Streams, ...2.0849
- STUDY OF RED SALMON IN THE NUSHAGAK DISTRICT ...Chemical-general, Physical-general, Salmon -coho, chinook, sockeye..., Spawn Or Nesting Sites, ...6.0622
- OBSERVATIONS ON RED SALMON IN THE KVICHAK RIVER SYSTEM ...Aquatic Ecology, Population Dynamics, Reproduction Studies (general), Salmon -coho, chinook, sockeye..., Streams, ...6.0628

- INVESTIGATION OF SPAWNING GROUND POTENTIALS AND GROWTH AND SURVIVAL OF JUVENILE SOCKEYE SALMON IN FRAZER LAKE SYSTEM ...Censusing, Lakes, Nets, Salmon -coho, chinook, sockeye..., Spawn Or Nesting Sites, Tags, ...6.0009
- MONITORING THE EFFECTS OF LAND USE ON SALMON PRODUCTION ...Construction Land Use Effects, Land Use, Logging, Transport, Equipment, Pulp, Paper , and Logging, Water Sampling, ...5.0039
- RESTORATION AND REHABILITATION OF EARTHQUAKE DAMAGED PINK AND CHUM SALMON STUDIES IN PRINCE WILLIAM SOUND ...Aquatic Ecology, Data Acquisition-general, Earthquakes, Flow Characteristics -water, Salmon -coho, chinook, sockeye..., Spawn Or Nesting Sites, Stream Rehabilitation, Tectonics-general, ...2.0026
- WATER QUALITY REQUIREMENTS IN ALASKA CAMPGROUNDS WITH PROJECTIONS OF RECREATION DEMANDS AND BENEFIT/COST ANALYSIS FOR SITE SELECTION ...Benefit-cost Analysis, Recreation Sites, Types of Resources, Water Quality-general, ...6.0007
- A GROUNDWATER QUALITY SUMMARY FOR ALASKA ...Atlases-maps, Document & Literature Info, Groundwater, Water Quality-general, ...7.0001
- DISTRIBUTION OF DISSOLVED IONS IN ALASKAN WATERS ...General Transport Effects, Glaciers, Ions and Gases, Sediments, Suspension, Water, ...2.0020
- THE EFFECTS OF EXTREME FLOODS AND PLACER MINING ON THE BASIC PRODUCTIVITY OF SUBARCTIC STREAMS ...Benthic Fauna, Bottom Sampling, Floods, Meteorological Extremes, Placer, Productivity - Food Chain, ...2.0022
- A STUDY OF THE FREEZING CYCLE IN AN ALASKAN STREAM ...General, Ice Properties-general, Sampling, Streams, ...2.0018
- A WATER QUALITY COMPUTER MODEL OF COOK INLET (PHASE ONE - THE HYDRAULIC MODEL) ...Computers-general, Estuaries, Hydraulics-general, Model Studies, Water Quality-general, ...7.0002
- ECONOMIC CONSIDERATIONS IN RESOURCES UTILIZATION CONFLICTS WITH PARTICULAR REGARD TO THE COOK INLET BASIN ...Benefit-cost Analysis, Conflicts, Economic Efficiency, Economics-general, Risk & Uncertainty, Survey Studies, Water Resources Development, ...6.0008
- ORGANIC COMPOUNDS IN ALASKA PERMAFROST GROUNDWATER ...Gas, Organic, Permafrost-frozen, Spectroscopy-general, Thin Layer, ...1.0005
- CLIMATE RELATED TO PLANT RESPONSE IN THE MATANUSKA VALLEY ...Direction, Evaporation, General Synoptic Observations, Sunshine, Transpiration and Evap, Velocity, ...2.0029
- RESPONSE OF ALASKA'S ADAPTED CROPS TO SUPPLEMENTAL WATER ...Benefit-cost Analysis, Irrigation, Irrigation-general, Soil-water-plant Relationships, Water Sources -general, ...2.0030
- OPTIMUM ESCAPEMENT STUDIES OF CHIGNIK SOCKEYE SALMON ...Aquatic Ecology, General Synoptic Observations, Lakes, Salmon -coho, chinook, sockeye..., Water Properties-general, ...6.0623
- STUDIES OF SOCKEYE SALMON, ONCORHYNCHUS NERKA, IN THE KVICHAK RIVER SYSTEM, ALASKA ...Commercial Fishing, Productivity - Food Chain, Salmon -coho, chinook, sockeye..., Watersheds-other, ...6.0627
- ARCTIC ECOSYSTEMS ...Aquatic Ecology, Energy Budgets, Freshwater Ecology, Polar, Productivity - Food Chain, ...5.0236
- FROZEN GROUND INVESTIGATIONS, BARROW, ALASKA ...Frost and Permafrost, Hydrology-general, Ice Content, Permafrost-frozen, Runoff, Small Watersheds, ...2.0748
- HYDROLOGIC STUDY OF A SMALL ALASKAN WATERSHED ...General, General Synoptic Observations, Hydrology-general, Small Watersheds, Water Sampling, ...2.0749
- GEOHYDROLOGY OF THE ANCHORAGE AREA, ALASKA ...Groundwater, Surface Water, Urban Environments, Water Quantity-general, Water Resources Development, ...2.0011
- WATER RESOURCES OF THE GREATER JUNEAU BOROUGH, ALASKA ...Observation Wells, Unconsolidated Aquifers, Urban Environments, Water Resources Development, Water Table Fluctuation, ...2.0014
- WATER RESOURCES OF THE KENAI PENINSULA BOROUGH AREA, ALASKA ...Aquifers-general, Gaging, Groundwater Basins, Runoff, Water Resources Development, ...2.0012
- TOPOGRAPHIC INFLUENCES ON PRECIPITATION ...Orographic Effects, Patterns, Runoff, Topographic Influences, ...2.0028

Alaska

SUBJECT INDEX

- BRISTOL BAY ESTUARINE ECOLOGY ...Estuaries, Fishing Gear, Life History Studies, Migration, Salmon -coho, chinook, sockeye..., Water Mass & Ocean Fronts, ...2.0016
- COASTAL AND INSHORE OCEANOGRAPHY ...Estuaries, General, Marine Biology, Other Sea Water Properties, Shoreline - Coastline, ...2.0015
- PINK SALMON INVESTIGATIONS - FRESHWATER ECOLOGY ...Aquatic Ecology, Salmon -coho, chinook, sockeye..., Spawn Or Nesting Sites, Streams, Water Properties-general, ...6.0005
- ESTUARINE STUDIES OF SOUTHEASTERN ALASKA ...Benthic Fauna, Environmental Ecology, Estuaries, Number Or Density, Vertical Distribution, ...2.0017
- TOTAL ORGANIC CARBON AS A POLLUTION CONTROL PARAMETER IN SUB-ARCTIC WATE ...Chemical Identification, Infrared, Organic Matter, Oxidation-general, Technique Development, ...5.0031
- DEVELOPMENT OF WASTE STABILIZATION LAGOONS FOR APPLICATION IN ALASKA ...Lagoon, Pilot Plant, Process Design, Sewage Lagoons, Storage-retention-facilities, ...5.0026
- EFFECTS OF LARGE SCALE FOREST FIRES ON WATER QUALITY IN THE INT. AK ...Fire Damage, Recovery, Forest Watersheds, Soil Analysis, Soils and Fertilizer, Water Quality-general, ...5.0030
- ORGANISMS RESPONSIBLE FOR TOXICITY OF ALASKAN CLAMS ...Biological Pollutants -general, Clams, Food Spoilage Detection, Microbiological, Pollutants-general, ...5.0032

Algae- Blue-green

Aphanizomenon

- AN INVESTIGATION OF APHANIZOMENON FLOS-AQUAE, A TOXIC BY-PRODUCT OF EUTROPHICATION ...Algal Metab.(non-specific &ot), Eutrophication, ...5.0717
- AUTECOLOGICAL STUDIES ON SOME DOMINANT PHYTOPLANKTON SPECIES OF LAKE CHAMPLAIN ...Algae-Diatoms, Cyanophyta (non-specific & Ot), Eutrophication, Freshwater Ecology, Vermont, ...2.1084

Cyanophyta (non-specific & Ot)

- ECOLOGY AND PHYSIOLOGY OF THERMOPHILIC BLUE-GREEN ALGAE ...Adaptation, Habitat Studies, High Temp. - 85f Or Above, Hot Springs, ...2.0898
- BLUE-GREEN ALGAE POISONING ...Algal Pollutant Sources, Algal Toxins, Arizona, Range Or Territorial Distr., Vegetable Origin, ...5.0041
- AUTECOLOGICAL STUDIES ON SOME DOMINANT PHYTOPLANKTON SPECIES OF LAKE CHAMPLAIN ...Algae-Diatoms, Aphanizomenon, Eutrophication, Freshwater Ecology, Vermont, ...2.1084
- THE AUTECOLOGY OF SOME BLUE-GREEN PLANKTON ALGAE ...Algal Culture, Eutrophication, Mixed Culture, Nutrition Studies, Phytoplankton, ...5.0955
- RELATIONS OF NUISANCE ALGAE TO FISH IN KLAMATH LAKE ...Algal Toxins, Bioassays, Fish -non-specific, Lakes, Oregon, ...5.0937
- CULTURING AND PROPAGATION OF SELECTED INVERTEBRATES AND ASSOCIATED FOOD ORGANISMS ...Algal Culture, Chlorophyceae (non-specif.&ot), Chrysophyceae (non-specif.&ot), Food Supply, Invertebrate Cultures, ...5.0591
- STRUCTURE OF THE BLUE-GREEN ALGA TOXIN ...Gas, Glucagon X Hor, Mass, Natural Occurring, Organic, ...5.0127

Oscillatoria

- THE INCORPORATION OF C14 BICARBONATE INTO PIGMENTS OF A NATURALLY OCCURRING BLUE-GREEN ALGAE COMMUNITY WITH RESPONSE TO WAVELENGTH ...Chlorophyll, Phycobilins, Physiological Ecology, Pigments, Vitamins, ...6.0432
- THE INCORPORATION OF C14-BICARBONATE INTO THE PIGMENTS OF BLUE-GREEN ALGAE POPULATION ...Carotenoid Pigments, Chlorophyll, Nutrients, Phycobilins, Pigments, ...6.0433

Algae- Brown

Phaeophyta (non-specific & Ot)

- PRIMARY PRODUCTION AND DECOMPOSITION IN ESTUARINE WATER ...Estuaries, Florida, Methane Bacteria (non-specif.), Primary Productivity, Rhodophyta (non-specific & Ot), Turnover (metabolic), ...5.0257

- PHYTOCHEMISTRY OF NARCOTIC PRINCIPLES IN CAULERPA ...Biochemical, Biochemical Analysis, Caulerpa, Cyclopropane, Medicinal Plants, ...6.0172

Algae- Diatoms

- DISTRIBUTION OF DIATOMS IN DESERT WATERS ...Branchiopoda -other, Deserts, Plant Prod. (non-specific), Playas, Respiratory System, ...2.0138
- ECOLOGICAL-PHYSIOLOGICAL INVESTIGATIONS OF LITTORAL DIATOM COMMUNITIES OF THE YAQUINA RIVER ESTUARY ...Environment, Intertidal Areas, Oregon, Physiological Ecology, ...5.0949
- VARIABILITY IN DIATOM MORPHOLOGY AND WATER POLLUTION ...Algal Culture, Bioindicators, Environment, Pollution - Effects of, Water Quality-general, ...5.0217
- AUTECOLOGICAL STUDIES ON SOME DOMINANT PHYTOPLANKTON SPECIES OF LAKE CHAMPLAIN ...Aphanizomenon, Cyanophyta (non-specific & Ot), Eutrophication, Freshwater Ecology, Vermont, ...2.1084
- DIATOM POPULATIONS CHANGES IN LAKE GEORGE ...Eutrophication, New York, Plankton Sampling, Plant Succession, Recreation Sites, ...2.0816
- FACTORS AFFECTING THE STRUCTURE OF DIATOM COMMUNITIES ...Acidity, Chemical Analysis (water), Environment, Mineral Content -water, pH -water, ...5.1008
- ECOLOGY OF DIATOMS IN HARDWATER HABITATS ...Algae, Environmental Changes, Habitat Studies, Paleocology, Pollen, ...5.0406
- DIATOM REMOVAL BY FLOCCULATION ...Algal Pollutant Sources, Flocculation, Plankton (non-specific), Sand, ...5.0353

Algae- General

- A STUDY OF THE PRIMARY PRODUCTIVITY OF NEW AND OLDER RESERVOIRS ...Climate-general, Fish -non-specific, Primary Productivity, ...2.0149
- EXCHANGE OF PHOSPHORUS SPECIES BETWEEN LIVING AND NONLIVING SYSTEMS IN FRESH WATER ENVIRONMENTS ...Bioindicators, Biological Treatment-general, Nutrients, Waste Water Treatment-general, ...5.0812
- DETERMINATION OF THE FEASIBILITY OF REMOVAL OF ALGAL NUTRIENTS IN LAKE WATERS BY ION-EXCHANGE ...Eutrophication, Ion Exchange-other, Lakes, Nutrients, Phosphate, Phosphite, ...2.0610
- EFFECTS OF ZOOPLANKTON ON PHOTOSYNTHESIS BY ALGAE IN LAKES ...Interbiotic Relat.(non-specif), Lakes, Migration, Photosynthesis, Zooplankton, ...2.1103
- DISPERSAL OF VIABLE ALGAE AND PROTOZOA BY AQUATIC INSECTS ...Aquatic Ecology, Insects -non-specific, Interbiotic Relat.(non-specif), Invertebrates, Protozoa -other, ...5.1170
- INORGANIC-ORGANIC INTERACTIONS IN NATURAL WATERS ...Chemical-general, Color, Organic-general, Physical-general, ...5.0603
- TAXONOMY AND ECOLOGY OF INSHORE MARINE MICROBIOTA ...Animal Taxonomy, Aquatic Ecology, Plant Taxonomy, Protozoa -other, Range Or Territorial Distr., ...7.0024
- BACTERIAL EFFECTS OF ALGAE ON ENTERIC ORGANISMS ...Algal Culture, Bactericides -non-specific, Intestinal Bacteria, Sanitation, Sewage, ...5.1151
- THE FRESHWATER ALGAE OF SOUTH CAROLINA - FLORISTICS AND ECOLOGY ...Freshwater Ecology, Plant Taxonomy, South Carolina, Streams, ...6.0487
- THE ALGAE AND ZOOPLANKTON OF PROTECTED AND EXPLOITED LENTIC HABITATS IN NORTHEASTERN OHIO ...Aquatic Ecology, Freshwater Ecology, Habitat Studies, Ohio, Zooplankton, ...6.0431
- ALGAE IN ILLINOIS WATERS ...Illinois, Plant Taxonomy, Water Sampling, ...6.0184
- ALGAL GROWTH POTENTIAL OF ILLINOIS WATERS ...Bioindicators, Growth (non-specific & Ot.), Growth and Differentiation, Illinois, Other, ...6.0199
- THERMAL AND BIOLOGICAL CHARACTERISTICS OF LAKES ...Evaporation, Indiana, Lakes, Stratification, Temperature, ...2.0452
- MEASUREMENT OF THE RATE OF CARBON DIOXIDE (C14) FIXATION INTO SUBCELLULAR FRACTIONS OF ALGAE ...Algal Culture, Bioindicators, Carbon, Carbon Dioxide Fixation, Growth Rate, Intracellular Localization, ...5.1090
- A STUDY OF MICROORGANISMS INDUCING TASTES AND ODORS IN WATER ...Actinomycetes -non-specific, Gas, Mass, Taste and Odor, ...5.0212

SUBJECT INDEX

Algal Physiology

Algae- Golden-brown

Chrysophyceae (non-specif.&ot)

CULTURING AND PROPAGATION OF SELECTED INVERTEBRATES AND ASSOCIATED FOOD ORGANISMS ...Algal Culture, Chlorophyceae (non-specif.&ot), Cyanophyta (non-specific & Ot), Food Supply, Invertebrate Cultures, ...5.0591

Prymnesium

STUDY OF TOXIN SYNTHESIS IN SYNCHRONIZED PRYMNESIUM ...Algal Toxins, Biosynthesis, Cell Cycle, Hemolysins - non-specific, Synchronization, ...1.0089

Algae- Grass-green

Caulerpa

PHYTOCHEMISTRY OF NARCOTIC PRINCIPLES IN CAULERPA ...Biochemical, Biochemical Analysis, Cyclopropane, Medicinal Plants, Phaeophyta (non-specific & Ot), ...6.0172

Chlorella

NUCLIDE UPTAKE BY ALGAE AND ZOOPLANKTON ...Cladocera, Environment, Ionic Effect, Organic Matter Content - water, Radioisotopes -non-specific, ...6.0048

Chlorophyceae (non-specif.&ot)

A STUDY OF INHIBITORY COMPOUNDS PRODUCED BY FRESH-WATER ALGAE ...Algal Pollutant Sources, Chemicals (incl. algacides), Eutrophication, Metabolic Inhibitors, of Aquatic Plants, ...5.0446

CULTURING AND PROPAGATION OF SELECTED INVERTEBRATES AND ASSOCIATED FOOD ORGANISMS ...Algal Culture, Chrysophyceae (non-specif.&ot), Cyanophyta (non-specific & Ot), Food Supply, Invertebrate Cultures, ...5.0591

Cladophora

CLADOPHORA AS RELATED TO POLLUTION IN WESTERN LAKE ERIE ...Algal Pollutant Sources, Bioindicators, Chemical Analysis, Lake Erie, Mapping, ...5.0883

RHEOTAXIS IN ALGAL METABOLISM AND PHOTOSYNTHESIS ...Algal Pollutant Sources, Lake Erie, Motility and Migration, Photosynthesis, Respiration, ...6.0377

Algae- Red

Rhodophyta (non-specific & Ot)

PRIMARY PRODUCTION AND DECOMPOSITION IN ESTUARINE WATER ...Estuaries, Florida, Methane Bacteria (non-specif.), Phaeophyta (non-specific & Ot), Primary Productivity, Turnover (metabolic), ...5.0257

Algal Physiology

Environment

NUCLIDE UPTAKE BY ALGAE AND ZOOPLANKTON ...Chlorella, Cladocera, Ionic Effect, Organic Matter Content - water, Radioisotopes -non-specific, ...6.0048

ECOLOGICAL-PHYSIOLOGICAL INVESTIGATIONS OF LITTORAL DIATOM COMMUNITIES OF THE YAQUINA RIVER ESTUARY ...Algae- Diatoms, Intertidal Areas, Oregon, Physiological Ecology, ...5.0949

TOLERANCE AND CYTOLOGICAL RESPONSE OF ALGAE TO MINE WATER ...Histology and Cytology, Mining Activities, pH, pH -water, Pollution - Effects of, ...5.1276

THE ECOLOGIC IMPACT OF THE INTERACTIONS AMONG MICROORGANISMS AND AQUATIC CONTAMINANTS IN LAKE ERIE ...Lake Erie, Pollution - Effects of, Primary Productivity, Sediments, Water Bacteria, ...6.0427

VARIABILITY IN DIATOM MORPHOLOGY AND WATER POLLUTION ...Algae- Diatoms, Algal Culture, Bioindicators, Pollution - Effects of, Water Quality-general, ...5.0217

COPPER TOXICITY ON ALGAE OF THE BIG BLACKFOOT RIVER ...Contamination, Pollution-water, Copper, Mining Activities, Montana, Pollution - Effects of, ...5.0701

FACTORS AFFECTING THE STRUCTURE OF DIATOM COMMUNITIES ...Acidity, Algae- Diatoms, Chemical Analysis (water), Mineral Content -water, pH -water, ...5.1008

EUTROPHICATION - PHYSICAL ECOLOGICAL CONTROL ...Destratification, Eutrophication, of Aquatic Plants, Physical Control, Primary Productivity, ...5.0972

DETERMINATION OF SELECTED ENVIRONMENTAL REQUIREMENTS OF IMPORTANT MARINE PHYTOPLANKTON SPECIES ...Axenic Culture, Growth and Differentiation, Marine Biology, Marine Plants, Phytoplankton, ...5.1094

INTEGRATED FIELD AND LABORATORY SYSTEM FOR ASSAYING THE EFFECTS OF POLLUTANTS AND TOXICANTS UPON WATER QUALITY ...Algal Culture, Axenic Culture, Phytoplankton, Pollution - Effects of, ...5.1087

Growth and Differentiation

ALGAL GROWTH AND DECOMPOSITION - EFFECTS ON WATER QUALITY ...Algal Culture, Algal Pollutant Sources, Cell Injury and Autolysis, Mineral Composition, Model Systems, Water Quality-general, ...5.0443

DETERMINATION OF CRITICAL PHOSPHATE AND NITRATE CONCENTRATIONS FOR ALGAL BLOOM CONDITIONS IN LAKE ERIE ...Algal Pollutant Sources, Eutrophication, Nitrogen, Phosphorus, ...6.0086

STUDY OF EUTROPHICATION IN LAKES MAGOG & BROME ...Algal Pollutant Sources, Canada, Eutrophication, Freshwater Ecology, Nutrition Studies, ...5.0166

ALGAL GROWTH POTENTIAL OF ILLINOIS WATERS ...Algae-General, Bioindicators, Growth (non-specific & Ot), Illinois, Other, ...6.0199

DETERMINATION OF SELECTED ENVIRONMENTAL REQUIREMENTS OF IMPORTANT MARINE PHYTOPLANKTON SPECIES ...Axenic Culture, Environment, Marine Biology, Marine Plants, Phytoplankton, ...5.1094

Metabolism

Algal Metab.(non-specific &ot)

AN INVESTIGATION OF APHANIZOMENON FLOS-AQUAE, A TOXIC BY-PRODUCT OF EUTROPHICATION ...Eutrophication, ...5.0717

MARINE TOXINS OF THE TROPICAL PACIFIC ...Animal Origin, Fish -non-specific, Other, Polynesia, Toxicology, ...5.0315

Chemicals (incl. algacides)

A STUDY OF INHIBITORY COMPOUNDS PRODUCED BY FRESH-WATER ALGAE ...Algal Pollutant Sources, Chlorophyceae (non-specif.&ot), Eutrophication, Metabolic Inhibitors, of Aquatic Plants, ...5.0446

EFFECT OF NITRILOTRIACETIC ACID (NTA) UPON THE TOXICITY OF METALS TO SELECTED SPECIES OF ESTUARINE PHYTOPLANKTON ...Acids, Carbon, Estuaries, Phytoplankton, Radioisotopes, ...5.1085

Enzymes

STUDY OF NITROGEN METABOLISM IN MARINE ALGAE ...Bioindicators, Marine Plants, Microbiological Analysis, Pollution - Effects of, Quantitative & Qualitative, ...5.1089

Mineral Composition

ECOLOGICAL PERIODICITIES OF NITROGEN AND PHOSPHORUS IN SALT MARSH FLORA AND SURROUNDING WATERS ...Swamps-marshes, ...6.0118

NUTRITIONAL ECOLOGY AND COMMUNITY STRUCTURE OF THE PHYTOPLANKTON OF GREEN BAY ...Bays, Nutrition Studies, Physiological Ecology, Phytoplankton, Wisconsin, ...5.1290

ALGAL GROWTH AND DECOMPOSITION - EFFECTS ON WATER QUALITY ...Algal Culture, Algal Pollutant Sources, Cell Injury and Autolysis, Growth and Differentiation, Model Systems, Water Quality-general, ...5.0443

Nitrogen Fixation

DYNAMICS OF THE NITROGEN CYCLE IN LAKES ...Denitrification, Lakes, Nitrogen, Respiration, ...5.0033

Nutrition Studies

A STUDY OF ALGAL POPULATIONS ASSOCIATED WITH DIFFERENT LEVELS OF WATER QUALITY IN NEW HAMPSHIRE ...Algal Pollutant Sources, Bioindicators, Eutrophication, New Hampshire, Water Quality-general, ...5.0712

NUTRITIONAL ECOLOGY AND COMMUNITY STRUCTURE OF THE PHYTOPLANKTON OF GREEN BAY ...Bays, Mineral Composition, Physiological Ecology, Phytoplankton, Wisconsin, ...5.1290

DETECTION OF LIMITING AND SURPLUS NUTRIENTS IN ALGAE ...Nitrogen, Nutrients, Nutrition, Repression, ...5.1303

Algal Physiology

THE AUTECOLOGY OF SOME BLUE-GREEN PLANKTON ALGAE ...Algal Culture, Cyanophyta (non-specific & Ot), Eutrophication, Mixed Culture, Phytoplankton, ...5.0955

COMPARATIVE STUDY OF PHYTOPLANKTON IN NEW AND RECLAIMED ACID MINE DRAINAGE PONDS ...Acidity, Mining Activities, Phytoplankton, Ponds, Waste Water Treatment-general, ...6.0437

STUDY OF EUTROPHICATION IN LAKES MAGOG & BROME ...Algal Pollutant Sources, Canada, Eutrophication, Freshwater Ecology, Growth and Differentiation, ...5.0166

pH

TOLERANCE AND CYTOLOGICAL RESPONSE OF ALGAE TO MINE WATER ...Environment, Histology and Cytology, Mining Activities, pH -water, Pollution - Effects of , ...5.1276

Respiration

RHEOTAXIS IN ALGAL METABOLISM AND PHOTOSYNTHESIS ...Algal Pollutant Sources, Cladophora, Lake Erie, Motility and Migration, Photosynthesis, ...6.0377

Pathological Physiology

PHYCOVIRUSES - THEIR NATURE, OCCURRENCE, AND APPLICATION ...Algal Pollutant Sources, Algal Virus, Biocontrol, Eutrophication, Isolation, ...5.0859

Photosynthesis

ENERGY SOURCES OF HETEROTROPHIC MICROORGANISMS IN AN AQUATIC ENVIRONMENT ...Bioenergetics, Glycolic Acid Cpd, Heterotrophic Bacteria, Phytoplankton, ...2.0622

REOXYGENATION OF IOWA STREAMS ...Aeration, Iowa, Self-purification, Streams, ...5.0417

EFFECTS OF ZOOPLANKTON ON PHOTOSYNTHESIS BY ALGAE IN LAKES ...Algae- General, Interbiotic Relat.(non-specific), Lakes, Migration, Zooplankton, ...2.1103

RHEOTAXIS IN ALGAL METABOLISM AND PHOTOSYNTHESIS ...Algal Pollutant Sources, Cladophora, Lake Erie, Motility and Migration, Respiration, ...6.0377

PRIMARY PRODUCTION IN LEWIS AND CLARK LAKE ...Phytoplankton, Primary Productivity, Reservoirs and Impoundments, South Dakota, ...6.0525

Pigments

THE INCORPORATION OF C14 BICARBONATE INTO PIGMENTS OF A NATURALLY OCCURRING BLUE-GREEN ALGAE COMMUNITY WITH RESPONSE TO WAVELENGTH ...Chlorophyll, Oscillatoria, Phycobilins, Physiological Ecology, Vitamins, ...6.0432

THE INCORPORATION OF C14-BICARBONATE INTO THE PIGMENTS OF BLUE-GREEN ALGAE POPULATION ...Carotenoid Pigments, Chlorophyll, Nutrients, Oscillatoria, Phycobilins, ...6.0433

Algebra

Systems of Equations

LABORATORY TESTING OF HYDRAULIC FORMULATIONS FOR OPEN CHANNEL FLOW ...Channel Geometry, Channel Roughness, Open Channel, Routing, Transition Sections, Velocity, ...2.0573

Alkali Metals-general

THERMODYNAMICS OF MIXING OF SALT SOLUTIONS ...Salt, Solution, ...1.0090

SOLID COORDINATION COMPOUNDS OF ALKALI METAL SALTS ...Amines, Chelation, Electronic Structure-other, Precipitation, ...3.0432

SCATTERING MEASUREMENTS ON ALKALI - WATER SYSTEMS ...Atomic & Molecular Beams, Atomic Collisions, Atomic Forces and Potentials, Multipole Interactions, ...1.0021

SCATTERING MEASUREMENTS ON ALKALI - WATER SYSTEMS ...Atomic Collisions, Molecular Collisions, Other, Water, ...1.0022

CEMENT - AGGREGATE REACTION ...Aggregates, Extenders, Fillers, Cement, Concrete, Dimensions, Expansion, Reaction-general, ...8.0236

Alkaline Earth-general

THE HEATS OF MIXING OF STRONG ELECTROLYTES ...Electrolytes, Salt, Solution, Water, ...1.0029

SUBJECT INDEX

Alternative Planning

THE ECONOMICS AND ADMINISTRATION OF WATER RESOURCES ...Administrative Structures, Colorado, Water - Alternative Uses, Water Costs, Watersheds-general, ...6.0107

ALTERNATIVE ECONOMIC RESPONSES TO THE ACID MINE DRAINAGE PROBLEM IN SOUTHEASTERN OHIO ...Acidity, Benefit-cost Analysis, Drainage, Mining Activities, Water Treatment -- General, ...5.0887

AN EXPLORATION OF COMPONENTS AFFECTING AND LIMITING POLICYMAKING OPTIONS IN LOCAL WATER AGENCIES ...Administrative Structures, Colorado, Economic Impact, Local Government, State-local Government, ...6.0104

ECONOMICS OF GROUND WATER DEVELOPMENT IN THE HIGH PLAINS OF COLORADO ...Economic Impact, Economics, Groundwater Basins, Model Studies, Water Resources Development, ...6.0108

PHYSICAL TECHNIQUES AND INSTITUTIONAL MECHANISMS FOR INTEGRATED ADJUSTMENT IN THE FLOOD PLAIN THROUGH SOIL SURVEYS ...Floodplains, Floodproofing, Land Use, Mapping, Soil Survey, ...6.0647

ALTERNATE METHODS OF MOSQUITO CONTROL TO REDUCE CHEMICAL POLLUTION OF WATERS FOR RECHARGE OF THE OGALLALA FORMATION ...Aquifers-general, Chlorinated Hydrocarbons, Insecticides -non-specific, Mosquitoes -non-specific, Playas, Pollution Abatement, ...5.1180

ECONOMIC ANALYSIS OF ALTERNATIVE WATER POLLUTION CONTROL MEASURES ...Economics-general, Model Studies, Waste Water Treatment-general, Water Quality Control-general, ...6.0231

METHODS OF ANALYSIS AND DETERMINATION OF EFFECTS OF ALTERNATIVE USES OF FORESTED LANDS ON STREAMFLOW ...Forest Watersheds, Land Use, Other, River Basins, Washington, ...4.0272

PUBLIC INVESTMENT CRITERIA FOR WATER-ORIENTED RECREATION IN THE LAKE ERIE BASIN ...Costs, Finance, Fiscal, Pollution Abatement, Projected Demand, Recreation Sites, ...6.0428

AN OPTIMAL WATER MANAGEMENT PLAN FOR THE MIAMI VALLEY ...Artificial Recharge, Augmentation-general, Conjunctive Use, Floodproofing, Optimization Technique, Systems Analysis, ...6.0467

INSTITUTIONAL DESIGN FOR WATER QUALITY MANAGEMENT - A CASE STUDY OF THE WISCONSIN RIVER BASIN ...Administrative Structures, Economics-general, Regional Areas, Water Law-general, Water Quality-general, ...5.1306

STOCHASTIC MODELS FOR WATER RESOURCES MANAGEMENT ...Application, Management, Runoff, Stochastic Models, Streams, ...6.0383

THEORETICAL AND EMPIRICAL STUDIES OF STOCHASTIC MODELS FOR THE ANALYSIS OF FLOOD CONTROL AND RELIEF POLICIES ...Floodproofing, Intergovernmental Relations, Model Studies, Other, Policy Making, ...6.0047

AN EVALUATION OF ALTERNATIVES FOR WATER RESOURCES REGULATION IN MISSOURI ...Law Enforcement, Legal Review, Missouri, State Government, ...6.0321

THE POTOMAC RIVER BASIN DEMONSTRATION PROJECT IN GEORGES CREEK ...Multiple-purpose Projects, Potomac River, River Basins, State-local Government, ...6.0261

WATER UTILIZATION AND WASTE CONTROL IN THE TEXTILE INDUSTRY ...Material Recovery Wastes, Recycle, Textile Wastes, Waste Water Pre-treatment, ...3.0377

CASE STUDY OF REMEDIAL FLOOD MANAGEMENT IN AN URBAN AREA-PHASE I ...Floodplains, Floods, Management, Planning, Urban Environments, ...6.0166

AN APPRAISAL OF FLOOD REGULATIONS IN THE STATES OF ILLINOIS, INDIANA, IOWA, MISSOURI AND OHIO ...Central, Floodplains, Floodproofing, Management, Water Rights-other, ...6.0209

A CASE STUDY OF WATER RESOURCES DEVELOPMENT - AN ANALYSIS OF A PROPOSED PROJECT ON THE MISSOURI RIVER ...Benefit-cost Analysis, Economic Impact, Land Use, Missouri River, Social Aspects, Water Resources Development, ...6.0389

WATER RIGHTS RELATED TO WATER QUALITY STORAGE ...Conflicts, Flow Augmentation, Reservoirs and Impoundments, Riparian Rights, Storage of Water, ...6.0606

DEVELOP AND DEMONSTRATE A METHOD FOR ASSESSING THE EXTENT OF POLLUTION FROM STORM WATER RUNOFF IN AN URBAN AREA ...Combined Sewer, Iowa, Nutrients, Storm Water, Urban Environments, ...5.0705

SUBJECT INDEX

Amphibious Vehicles

- INVESTIGATION FOR CONTROL OF WATER POLLUTION FROM COMBINED SEWERS IN ROANOKE, VIRGINIA ...Combined Sewer, Model Studies, Rain Fall Intensity, Runoff, Sanitary Sewage Quantity-other, Storm Water, Water Quality Control-general, ...5.1220
- THE ECONOMICS OF WATER TRANSFER - AN APPRAISAL OF INSTITUTIONS ...Administrative Structures, Economic Efficiency, Legal Review, Model Studies, Water Transfer, Welfare Economics, ...4.0169
- ECONOMICS OF WATER SUPPLY-PORTALES VALLEY, NEW MEXICO ...Available Water, Economic Impact, Projections and Estimations, Water Costs, Water Transfer, ...6.0363
- ECONOMIC ANALYSIS OF SMALL WATERSHED DEVELOPMENT IN TEXAS. ...Benefit-cost Analysis, Economic Impact, Small Watersheds, Texas, Water Resources Development, ...4.0241
- ALTERNATIVE DEVELOPMENT PATTERNS, PLANS, CONTROLS AND IMPACT ASSOCIATED WITH NEW RESERVOIRS ...Administrative Structures, Optimization, Reservoirs and Impoundments, Texas, Types of Resources, ...6.0561
- EFFICIENT SYSTEM OF WATER QUALITY MANAGEMENT FOR THE MIAMI BASIN ...Economic Efficiency, Management, Ohio, River Basins, Water Quality Control-general, ...5.1015
- ECONOMICS OF WATER QUALITY IN A REGIONAL SYSTEM ...Benefit-cost Analysis, Delaware Bay, Estuaries, Management, Water Quality-general, ...5.1011
- THE IMPACT OF THE NORTHEASTERN DROUGHT ON THE PLANNING AND PROVISION OF MUNICIPAL WATER SUPPLIES ...Administrative Structures, Economic Impact, Meteorological Extremes, Northeast, Water Supply-general, ...4.0136
- THE ECONOMICS OF PUBLIC INVESTMENT IN RESOURCES DEVELOPMENT ...Benefit-cost Analysis, Land, Price & Value, Water Resources Development, ...6.0049
- ECONOMIC GROWTH AND OPTIMUM WATER RESOURCE DEVELOPMENT ...Economics-general, Optimization, Water Allocation, Water Demand, Water Resources Development, ...6.0043
- ECONOMICS OF GROUNDWATER DEVELOPMENT IN THE HIGH PLAINS OF COLORADO ...Administrative Structures, Colorado, Economics-general, Groundwater, Water Resources Development, ...2.0207
- WATER RESOURCE DEVELOPMENT AND MANAGEMENT MODEL ...Available Water, Model Studies, State-local Government, Systems Analysis, Water Resources Development, ...6.0201
- WATER RIGHTS AND WATER LAW ...Eminent Domain, Riparian Rights, Water Allocation, Water Resources Development, Water Utilization -general, ...6.0386
- AN ECONOMIC EVALUATION OF WATER POLLUTION CONTROL, YAQUINA BAY, ORE ...Bays, Benefit-cost Analysis, Model Studies, Oregon, Systems Analysis, Water Quality Control-general, ...6.0454
- SIMULATION AS A MEANS OF STUDYING RESOURCE ALLOCATIONS ...Economics-general, Model Studies, River Basins, Simulation Theory, Water Allocation, ...6.0456
- SYSTEMS STUDY - MARYLAND PROJECT ...Hydrology-general, Management, Maryland, Planning, Water Resources Development, ...6.0603
- QUANTITATIVE WATER-BUDGET ANALYSIS OF WESTERN LONG ISLAND, NEW YORK ...Groundwater Basins, Management, New York, Water Balance-budget, Water Resources Development, ...2.0809
- WATER RESOURCES, COLUMBUS, INDIANA AREA ...Clastic Aquifers, Groundwater, Indiana, Model Studies, Water Development, ...2.0456
- TECHNOLOGY AND ECONOMICS OF CONSERVATION ...Benefit-cost Analysis, Conservation-general, Erosion-general, Land Use, Sediments, ...4.0106

Aluminum

- PROTECTIVE FILMS FORMED BY PLASMA ANODIZATION ...Anodic, Brines, Desalination, Iron, Passivation, ...3.0263
- CORROSION AND MASS TRANSFER FROM CYLINDERS OF METALS ROTATING IN SEAWATER AT HIGH TEMPERATURES AND PRESSURES ...Desalination, High, Water, ...3.0247
- DEMONSTRATION OF ALUMINUM IN SEAWATER DESALTING ...Desalination, Flash Distillation, Oxygen Containing, Scale Formation, Sulfate, Sulfite, ...3.0481

- EVALUATION OF POLYVINYL CHLORIDE (PVC) AND VINYL CLAD ALUMINUM PIPE USED FOR CARRYING IRRIGATION WATER WHEN BURIED WITHIN THE FROST ZONE ...Cladding, Irrigation-general, Joining, Bonding-general, Pipe, Tube, Polyvinyls-other, Soils, ...8.0271
- VIRUS REMOVAL BY CHEMICAL FLOCCULATION ...Coagulation, Complexing, Flocculation, Viral Pollutant Sources, Virus, ...5.0364
- REMOVAL OF PHOSPHATE FROM WATER BY ALUMINUM AND IRON ...Complexes, Iron, Mechanisms, Phosphate, Phosphite, Waste Water Treatment-general, ...5.0732
- INTERACTIONS OF SILICA WITH IRON AND ALUMINUM ...Analysis and Detection, Coagulation, Complexing, Iron, Water Treatment - General, ...5.0557
- PHOSPHORUS REMOVAL BY ADDITION OF ALUMINUM TO THE ACTIVATED SLUDGE PROCESS ...Activated, Phosphate, Phosphite, Waste Treatment-economics, ...5.0109
- PHOSPHORUS REMOVAL IN THE ACTIVATED SLUDGE PLANT ...Activated, Aeration, Phosphate, Phosphite, Precipitation, Sewage - Domestic, ...5.0788
- PARAMETRIC STUDY OF THE KINETICS OF PRECIPITATION AND NATURE OF THE PRECIPITATE OBTAINED IN PHOSPHATE REMOVAL USING IRON AND ALUMINUM SALT ...Iron, Phosphate, Phosphite, Precipitation, Solubility, Tertiary Treatment, ...5.0075
- ALUMINA COLUMNS FOR THE SELECTIVE REMOVAL OF PHOSPHORUS FROM WASTEWATERS AND THE ULTIMATE DISPOSAL OF PHOSPHORUS AS CALCIUM PHOSPHATE ...Material Recovery Wastes, Phosphate, Phosphite, Process Design, Regeneration-other, Selective-removal, ...5.1243
- SOLUBLE PHOSPHORUS REMOVAL IN THE ACTIVATED SLUDGE PROCESS ...Activated, Aeration, Chemical Treatment, Digestion, Filter-other, Phosphate, Phosphite, ...5.1037
- REMOVAL OF PHOSPHATE FROM WATER BY ALUMINUM AND IRON ...Chemical Treatment, Chemical Treatment-general, Iron, Phosphate, Phosphite, Reaction-general, ...5.0738
- CHEMISTRY OF HYDROSOLIC METALS IN NATURAL WATER ...Aeration, Demineralization, Geochemical Analysis, Iron, Manganese, Solution Chemistry, ...5.0119

Ammonia

- ENGINEERING ECONOMICS OF WATER DESALTING IN COMBINATION WITH NITROGEN FIXATION FOR AGRICULTURAL CHEMICALS MANUFACTURE ...Cost Analysis, Desalination, Fixation, Nuclear, Statistical, ...3.0347
- AMMONIA REMOVAL FROM AGRICULTURAL RUNOFF BY SELECTIVE ION EXCHANGE ...Ammonium, Ion Exchange-other, Process Design, Runoff, Waste Water Treatment-general, Zeolite, ...5.1247
- THE USE OF INERT GASES TO ELIMINATE POLLUTION FROM ABANDONED MINES ...Acid Mine Wastes, Air-general, Chlorine, Mine Atmosphere Conditions, Nitrogen, ...4.0205
- A STUDY OF THE EFFECT OF ULTRASONIC ENERGY ON WASTE WATER ...Disinfection, Organics, Ultrasonics, ...5.0104
- ULTIMATE DISPOSAL OF PHOSPHATE FROM WASTEWATER BY RECOVERY AS FERTILIZER ...Activated, Disposal, Fertilizers, Material Recovery Wastes, Nutrients, Phosphate, Phosphite, ...5.0342
- THE ELECTRO-OXIDATION OF AMMONIA IN SEWAGE TO NITROGEN ...Electrode, Electrolytic, Waste Water Treatment-general, Waste Water Treatment-other, ...5.0538
- AMMONIA STRIPPING MATHEMATICAL MODEL FOR WASTE WATER TREATMENT ...Aeration, Finance, Mathematical Analysis, Model Studies, Waste Treatment-economics, ...5.0337

Ammonium

- FISH TOXICANT STUDIES ...Control of Nuisance Species, Evaluation, Fish -non-specific, Piscicides -non-specific, Screening Potential Pesticides, ...5.1147
- AMMONIA REMOVAL FROM AGRICULTURAL RUNOFF BY SELECTIVE ION EXCHANGE ...Ammonia, Ion Exchange-other, Process Design, Runoff, Waste Water Treatment-general, Zeolite, ...5.1247

Amphibious Vehicles

- CHARACTERISTICS OF RIVER BANKS RELATED TO VEHICLE PERFORMANCE WHEN ENTERING & EXITING STREAMS ...Statistics-general, Stream Banks, Streams, Synthetic Hydrology-general, Water Vessel, ...7.0058

Amphibious Vehicles

EXPLORATORY DEVELOPMENT OF WATER PROPULSION
FOR COMBAT VEHICLES ...Marine, Other, Streams, Systems
Analysis, ...8.0215

Analysis

Differential Equations

Differential Equations General

DISPERSION DURING FLOW IN HETEROGENEOUS POROUS
MEDIA ...Dispersion -water, Model Studies, Porous Media - Flow
Through, Seepage, Statistical Models, ...5.0394

Animal Characteristics

Adaptation

GROWTH, CONDITION, AND SURVIVAL OF SHELLFISH ...En-
vironmental Physiology, Maryland, Oysters, Water Quality-
general, Water Salinity, ...6.0269

Age

YOUNG-OF-THE-YEAR FISH IN LAKE FRANCIS CASE ...Fish -
non-specific, Nets, Reservoirs and Impoundments, South Dakota,
Water Environment -other, ...6.0505

ABUNDANCE OF YOUNG-OF-THE-YEAR FISHES IN OAHE
RESERVOIR ...Aquatic Ecology, Fish -non-specific, Population
Dynamics, Reservoirs and Impoundments, South Dakota,
...6.0499

COMPOSITION OF THE SPAWNING STOCKS IN OAHE RESER-
VOIR AND LAKE SHARPE ...Fertility, Fish -non-specific, Size,
South Dakota, Spawn Or Nesting Sites, ...6.0519

EXPLORATORY SAMPLING PROGRAM FOR YOUNG-OF-THE-
YEAR FISH ...Fish -non-specific, Nets, Population Dynamics,
Reservoirs and Impoundments, ...6.0022

ACUTE TOXICITY OF PESTICIDES TO FRESHWATER INVER-
TEBRATES ...Bioassay, Chemical Measurements -water, Chemi-
cal-general, Laboratory Animals, Water Temperature-non-
specific, ...5.0662

Environmental Response

EXPERIMENTAL REARING OF SALMON AND STEELHEAD
IN BRACKISH WATER IMPOUNDMENTS ...Brackish Water,
Captive Rearing, Mortality Rates, Rainbow Trout, Steelhead
Trout, Stocking of Fish & Shellfish, ...6.0461

Fertility

COMPOSITION OF THE SPAWNING STOCKS IN OAHE RESER-
VOIR AND LAKE SHARPE ...Age, Fish -non-specific, Size,
South Dakota, Spawn Or Nesting Sites, ...6.0519

BIOCHEMISTRY OF FISH SEMEN ...Cutthroat Trout, Endrin,
Male Gametes, Mode of Action -animal, ...5.0627

Growth Rate

RELATIONSHIPS BETWEEN DRIFT DENSITY AND PRODUC-
TION, GROWTH, CROPPING EFFICIENCY AND CONSUMP-
TION IN A NATURAL BROOK TROUT POPULATION ...Lake
Trout, Brook Trout, Number Or Density, Predation, Productivity
(agricultural), Streams, ...7.0094

STREAM BIOLOGY AND ITS RELATION TO FISH PRODUC-
TION ...Food Supply, Mississippi River, Shiners, Streams, Vertical
Distribution, ...6.0223

THE EFFECT OF EVAPORATION BARRIERS ON FISH
GROWTH AND LIMNOLOGY ...Antitranspirants, Aquatic
Ecology, Environmental Ecology, Fish -non-specific, ...2.0060

SPORT FISHERY POTENTIAL IN RECLAIMED WASTEWATER
...Channel Catfish, Other, Salmon & Trout - Non-specific, Stream
Rehabilitation, Tilapia, Cichlids, ...5.0050

DISTRIBUTION AND GROWTH PATTERNS OF THE GIZZARD
SHAD (DOROSOMA CEPEDIANU) AND THREADFIN SHAD
(DOROSOMA PETENENSE) IN RESERVOIRS ...Alewife, men-
haden, shad, herring, Arkansas, Number Or Density, Reservoirs
and Impoundments, Temporal Distribution, ...6.0029

FLATHEAD CATFISH STUDY ...Aquatic Ecology, Behavior -
animal, Food Supply, Ictaluridae -other, Reproduction Studies
(general), Texas, ...6.0539

THE EVALUATION OF ENVIRONMENTAL ALTERATION BY
THERMAL LOADING AND ACID POLLUTION IN THE
COOLING RESERVOIR OF A STEAM-ELECTRIC STATION
...Acidity, Mining Activities, Reservoirs and Impoundments, Ther-
mal Pollution, Warm Water, ...5.0681

SUBJECT INDEX

TEMPERATURE REQUIREMENTS OF SALMONIDS IN RELA-
TION TO THEIR FEEDING, BIOENERGETICS, GROWTH
AND BEHAVIOR ...Behavior -animal, Energy, Rainbow Trout,
Steelhead Trout, Salmon -coho, chinook, sockeye..., Water Tem-
perature-non-specific, ...5.0942

GROWTH OF THE BROWN BULLHEAD, ICTALURUS NEBU-
LOSUS (LESUEUR), IN MINE ACID POLLUTED WATER
...Acidity, Bullheads, Contamination - Water, Mining Activities,
Ph, Acidity -water, Pollution Effects, ...5.1278

SUBLETHAL INFLUENCE OF POLLUTANTS ON FISH
METABOLISM ...Contamination - Water, Fish -non-specific,
Metabolism -animal, Pollution - Effects of , Pollution Effects,
...5.0901

WATER QUALITY REQUIREMENTS FOR AQUATIC INSECTS
...Oxygen, ...5.0699

A STUDY OF A WATER TOXICITY PROBLEM ...Bioassays,
Bioindicators, Management, Potable Water, Toxins and Poisons -
other, ...5.0197

A COMPARISON OF THE GROWTH RATE OF BLUE CATFISH
AND CHANNEL CATFISH FINGERLINGS FOR A PELLETTED
COMMERCIAL FEED ...Aquaculture & Fish-farming, Channel
Catfish, Pelleted, ...5.1179

VITAL STATISTICS OF NORTHERN PIKE IN LAKE SHARPE
...Mortality Rates, Pikes, Pickeral, Muskellunge, Population
Dynamics, Reservoirs and Impoundments, South Dakota,
...6.0502

VITAL STATISTICS OF WALLEYE IN LAKE SHARPE ...Mortali-
ty Rates, Population Dynamics, Reservoirs and Impoundments,
South Dakota, Walleyes, ...6.0503

GROWTH AND MORTALITY RATES OF YOUNG YELLOW
PERCH IN OAHE RESERVOIR ...Aquatic Ecology, Mortality
Rates, Reservoirs and Impoundments, South Dakota, Yellow
Perch, Darters, ...6.0498

MORTALITY RATES AND RECRUITMENT ...Arkansas, Fish -
non-specific, Mortality Rates, Population Dynamics, Reservoirs
and Impoundments, ...4.0014

EFFECTS OF CHRONIC EXPOSURE TO METHOXYCHLOR ON
THE GROWTH AND REPRODUCTION OF GUPPIES -
CHRONIC TOXICITY OF PESTICIDES TO FISH ...Killifish -
Cyprinodon, Maturity & Growth Stages, Methoxychlor, ...5.0650

CULTURE OF SHELLFISH IN ARTIFICIAL AND NATURAL
SALT PONDS ...Captive Rearing, Commercial Fishing, Maryland,
Oysters, Ponds, ...6.0267

Hatchability

EFFECTS OF WATER QUALITY ON HATCHING SUCCESS
...Basses -sea, white, White Perch, Captive Rearing, Louisiana,
Pollution - Effects of , Water Properties-general, ...5.0453

Longevity

ECOLOGY OF NEMATODES IN IRRIGATION WATER ...Animal
Wastes - Feed Lots, Bioindicators, Irrigation-general, Nematoda -
other, Pollution - Effects of , ...5.1232

Maturity & Growth Stages

ACUTE TOXICITY OF PESTICIDES TO FRESHWATER FISH
AND OTHER VERTEBRATES ...Insecticides -non-specific,
Mode of Action -animal, Pollution - Effects of , Pollution Effects,
Wildlife, ...5.0649

THE ROLE OF FOOD IN THE MORTALITY OF LARGEMOUTH
BASS LARVAE ...Environmental Physiology, Fasting - Starvation,
Food Supply, Largemouth Bass, Mortality Rates, ...7.0079

PREDATION ON LARGEMOUTH BASS DURING THEIR FIRST
YEAR OF LIFE ...Behavioral Ecology, Largemouth Bass, Preda-
tion, Strontium, Tags, ...7.0080

AN EVALUATION OF THE LAMPREY IN LAKE CHAMPLAIN
...Lakes, Lampreys, Predation, Spawn Or Nesting Sites, Vermont,
...6.0598

STATEWIDE FISHERIES RESEARCH ...Basses -sea, white, White
Perch, Environmental Physiology, Incubation, Low Temp. -but
Above 32f, Temperature, ...5.0818

HYBRID SUNFISH STUDIES ...Centrarchidae -other, Laboratory,
Ponds, Selection & Breeding, ...6.0195

DDT RESIDUE ACCUMULATION IN WISCONSIN FISH AND
THE EFFECT ON REPRODUCTION ...DDT , Reproduction Stu-
dies (general), Walleyes, Wildlife, Wisconsin, ...5.1292

RELATIVE ABUNDANCE OF ADULT FISH IN LAKE FRANCIS
CASE ...Number Or Density, Reservoirs and Impoundments,
South Dakota, ...6.0504

DISTRIBUTION OF YOUNG STAGES OF COASTAL FISHES
...Continental Shelf, Estuaries, Fish -non-specific, Number Or
Density, Ships and Cruises, ...6.0345

SUBJECT INDEX

Animal Characteristics

INFLUENCE OF THE PHYSICAL ENVIRONMENT ON DISTRIBUTION OF YOUNG STAGES OF COASTAL GAME FISH ...Continental Shelf, Environmental Ecology, Fish -non-specific, Physical-general, Range Or Territorial Distr. , ...6.0346

EARLY LIFE HISTORY OF WALLEYE IN LAKE FRANCIS CASE ...Aquatic Ecology, Life History Studies, Reservoirs and Impoundments, South Dakota, Walleyes, ...6.0506

VARIATIONS IN SPAWNING OF FISHES IN RELATION TO TEMPERATURE ...Biological Rhythms, Fish -non-specific, South Dakota, Temperature, Water Temperature-non-specific, ...6.0518

SEXUAL MATURATION AND SPAWNING OF NORTHERN PIKE ...Biological Rhythms, Pikes, Pickeral, Muskellunge, Reservoirs and Impoundments, South Dakota, Spawn Or Nesting Sites, ...6.0520

DEVELOPMENT OF IDENTIFICATION KEYS TO LARVAL, AND JUVENILE RESERVIOR FISHES ...Animal Taxonomy, Captive Rearing, Fish -non-specific, Photography-other, Reservoirs and Impoundments, ...6.0018

EFFECTS OF CHRONIC EXPOSURE TO METHOXYCHLOR ON THE GROWTH AND REPRODUCTION OF GUPPIES - CHRONIC TOXICITY OF PESTICIDES TO FISH ...Growth Rate, Killifish - Cyprinodon, Methoxychlor, ...5.0650

EARLY LIFE HISTORY OF COREGONIDS ...Cisco, Lake Herring, Environmental Ecology, Life History Studies, Technique Development, Water Environment -other, ...6.0295

EFFECTS OF TEMPERATURE ON MATURATION, EMBRYONIC DEVELOPMENT AND CONDITION OF FRY IN YELLOW PERCH - LAKE HERRING, SMELT AND WALLEYE ...Basic Embryology, Environmental Physiology, Temperature, Thermal Pollution, Water Temperature-non-specific, Yellow Perch, Darters, ...5.0590

Metabolic Efficiency

PHYSIOLOGICAL EFFECTS OF SUBLETHAL LEVELS OF ACID WATER ON FISH ...Acidity, Mining Activities, Ph, Acidity -water, Water Quality-general, West Virginia, ...5.1281

Mortality Rates

FISHERIES-TURBINE RESEARCH COMPENDIUM COMPILATION ...Electric Power Plants, Fish -non-specific, Migration, Turbine-other, ...8.0310

COLLECTION OF JUVENILE SALMON IN TURBINE INTAKES ...Columbia River, Control Gate, Electric Power Plants, Salmon & Trout - Non-specific, Turbine-other, ...8.0299

THE ROLE OF FOOD IN THE MORTALITY OF LARGEMOUTH BASS LARVAE ...Environmental Physiology, Fasting - Starvation, Food Supply, Largemouth Bass, Maturity & Growth Stages, ...7.0079

EFFECTS OF DISSOLVED OXYGEN CONCENTRATION ON SURVIVAL OF LARGEMOUTH BASS EMBRYOS ...Basic Embryology, Gases, Dissolved -water, Largemouth Bass, Oxygen, Water Movement, Currents, Water Temperature-non-specific, ...5.0771

MASS MORTALITY OF PACIFIC OYSTERS ALONG THE WASHINGTON COAST ...Bays, Environmental Ecology, Oysters, Pathology, Puget Sound, ...5.1230

MASS MORTALITY OF OYSTERS ALONG THE OREGON COAST ...Bays, Invertebrate Pathology, Oregon, Oysters, Pathology, ...5.0985

EVALUATION OF METHODS DESIGNED TO PREVENT WINTER-KILL ...Aeration, Chemical-general, Circulation -water, Lakes, North Dakota, ...5.0828

PREDICTING AND PREVENTING FISH KILLS ...Chemical Analysis (water), Ponds, Stratification, ...5.0012

EFFECT OF WATER QUALITY ON FIRST-YEAR MORTALITY OF LARGEMOUTH BASS ...Aquatic Ecology, Environmental Ecology, Largemouth Bass, Pollution - Effects of, Water Properties-general, ...5.0772

DISTRIBUTION OF DEMERSAL FISHES IN INSHORE WATERS ...Environmental Ecology, Fish -non-specific, Marine Biology, Nets, Vertical Distribution, ...5.1260

BIOCHEMICAL AND ECOLOGICAL RELATIONSHIPS OF PESTICIDES AND THE BIOLOGICAL CONSTITUENTS OF AQUATIC COMMUNITIES ...Applied Ecology, Bioenergetics, Cell Injury and Autolysis, Pesticides -non-specific, Sterility, ...5.0566

STUDIES IN OYSTER PATHOLOGY ...Histology and Cytology, Oysters, Pathology, ...6.0630

EXPERIMENTAL REARING OF SALMON AND STEELHEAD IN BRACKISH WATER IMPOUNDMENTS ...Brackish Water, Captive Rearing, Environmental Response, Rainbow Trout, Steelhead Trout, Stocking of Fish & Shellfish, ...6.0461

FISH PASS/ THROUGH TURBINES ...Fish -non-specific, Hydraulic, Management -other, Power Development, Stamina, ...8.0312

VITAL STATISTICS OF NORTHERN PIKE IN LAKE SHARPE ...Growth Rate, Pikes, Pickeral, Muskellunge, Population Dynamics, Reservoirs and Impoundments, South Dakota, ...6.0502

VITAL STATISTICS OF WALLEYE IN LAKE SHARPE ...Growth Rate, Population Dynamics, Reservoirs and Impoundments, South Dakota, Walleyes, ...6.0503

GROWTH AND MORTALITY RATES OF YOUNG YELLOW PERCH IN OAHRE RESERVIOR ...Aquatic Ecology, Growth Rate, Reservoirs and Impoundments, South Dakota, Yellow Perch, Darters, ...6.0498

TEMPERATURE TOLERANCE OF MARINE ANIMALS THROUGH BEHAVIORAL RESPONSES ...Behavior -animal, Environment Resistance, Thermal, Water Temperature-non-specific, ...6.0344

MORTALITY RATES AND RECRUITMENT ...Arkansas, Fish -non-specific, Growth Rate, Population Dynamics, Reservoirs and Impoundments, ...4.0014

SHELLFISH MORTALITY - CHESAPEAKE BAY ...Chesapeake Bay, Computer Matching Code, Oysters, Pathology, Protozoa, ...6.0264

PINK SALMON INVESTIGATIONS - FRESHWATER ECOLOGY ...Aquatic Ecology, Environmental Ecology, Estuaries, Physical-general, Salmon -coho, chinook, sockeye, ...4.0002

EFFECT OF SUPERSATURATION OF DISSOLVED NITROGEN ON MIGRATING SALMONIDS ...Gases, Dissolved -water, Nitrogen, Pathology, Salmon & Trout - Non-specific, ...6.0614

PROTECTION OF FINGERLING SALMON IN TURBINES ...Construction Land Use Effects, Engineering Structures-general, Migration, Salmon & Trout - Non-specific, Snake River, ...8.0306

PACIFIC OYSTER MORTALITY STUDIES ...Invertebrate Pathology, Invertebrates, Oysters, Pathology, ...6.0266

EPIZOOTICS IN EXPERIMENTAL MARINE SHELLFISH POPULATIONS ...Epizootic, Freshwater Mussels, Scallops, Oysters, Pathology, ...6.0631

Number Or Density

STUDY OF DISCREPANCY IN FISH COUNTS BETWEEN COLUMBIA RIVER DAMS ...Censusing, Columbia River, Rainbow Trout, Steelhead Trout, Salmon -coho, chinook, sockeye, ...8.0278

RELATIONSHIPS BETWEEN DRIFT DENSITY AND PRODUCTION, GROWTH, CROPPING EFFICIENCY AND CONSUMPTION IN A NATURAL BROOK TROUT POPULATION ...Growth Rate, Lake Trout, Brook Trout, Predation, Productivity (agricultural), Streams, ...7.0094

THE DISTRIBUTION OF FISH IN PENNSYLVANIA AS RELATED TO MINE ACID DRAINAGE ...Acidity, Contamination -water, Fish -non-specific, Mining Activities, Pennsylvania, ...5.1026

CHANGES IN STREAM COMMUNITIES ASSOCIATED WITH EFFLUENT - INDUCED EUTROPHICATION ...Aquatic Plants (non-specific), Eutrophication, Invertebrates -non-specific, Pennsylvania, Streams, ...5.1029

ABUNDANCE AND DISTRIBUTION OF BENTHIC MACRO-INVERTEBRATES IN A STREAM RECEIVING OILFIELD WASTEWATERS ...Benthic Fauna, Bioindicators, Contamination - Water, Industrial Wastes, Vertical Distribution, ...5.1028

DISTRIBUTION AND ABUNDANCE OF JUVENILE AMERICAN SHAD, ALOSA SAPIDISSIMA (WILSON), IN THE CONNECTICUT RIVER ABOVE HOLYOKE DAM, MASSACHUSETTS ...Alewife, menhaden, shad, herring, Connecticut River, Engineering Structures-general, Massachusetts, Migration, ...3.0271

COVER AS A LIMITING FACTOR IN TROUT PRODUCTION ...Colorado, Environmental Ecology, Salmon & Trout - Non-specific, Soil (wildlife) Cover, Streams, ...4.0070

DISTRIBUTION AND GROWTH PATTERNS OF THE GIZZARD SHAD (DOROSOMA CEPEDIANU) AND THREADFIN SHAD (DOROSOMA PETENENSE) IN RESERVOIRS ...Alewife, menhaden, shad, herring, Arkansas, Growth Rate, Reservoirs and Impoundments, Temporal Distribution, ...6.0029

FLATHEAD CATFISH INVESTIGATIONS IN THE MISSOURI RIVER ...Ictaluridae -other, Life History Studies, Missouri River, Population Dynamics, ...6.0335

A STUDY OF THE BENTHIC FAUNA OF MERLE COLLINS RESERVOIR (VIRGINIA RANCH RESERVOIR) ...California, Food Supply, Productivity - Food Chain, Reservoirs and Impoundments, ...6.0071

Animal Characteristics

SUBJECT INDEX

BOTTOM FAUNA STUDIES ...Benthic Fauna, Bottom Sampling, Depth, water Level, Fluctuation, Lakes, Water Level Fluctuation, ...4.0126

DETERMINATION OF THE MAGNITUDE AND AGE COMPOSITION OF THE HARVEST, HABITAT PREFERENCES AND FOOD HABITS ...Aquatic Ecology, Cutthroat Trout, Snake River, Wyoming, ...6.0649

LAKEBORGNE-CHANDELEUR SOUND SYSTEM ...Aquatic Ecology, Louisiana, Nets, Plankton Sampling, Tides, ...2.0543

BRETON SOUND - MOUTH OF MISSISSIPPI RIVER SYSTEM ...Aquatic Ecology, Mississippi River, Nets, Plankton Sampling, ...2.0544

ATCHAFALAYA RIVER - CALLIOU LAKE SYSTEM ...Lakes, Louisiana, Physical-general, Plankton (non-specific), Vertical Distribution, ...2.0545

VERMILION - CALCASIEU - SABINE SYSTEM ...Aquatic Ecology, Data Acquisition-general, Louisiana, Nets, Plankton Sampling, ...2.0546

TIMBALIER - TERREBONNE BAYS SYSTEM ...Aquatic Ecology, Data Acquisition-general, Louisiana, Nets, Plankton Sampling, ...2.0547

THE INSECT ORDER PLECOPTERA AS A BIOLOGICAL INDEX OF FRESH WATER QUALITY IN RHODE ISLAND ...Bioindicators, Environmental Ecology, Pollution - Effects of, Pollution Effects, Stone Flies, Plecoptera, Streams, ...5.1057

A RUN TIMING STUDY IN THE LOWER COLUMBIA RIVER BY MEANS OF A TESTFISHING PROGRAM ...Columbia River, Migration, Nets, Salmon -coho, chinook, sockeye..., Streams, ...2.0884

RELATIVE ABUNDANCE OF ADULT FISH IN LAKE FRANCIS CASE ...Maturity & Growth Stages, Reservoirs and Impoundments, South Dakota, ...6.0504

DISTRIBUTION OF YOUNG STAGES OF COASTAL FISHES ...Continental Shelf, Estuaries, Fish -non-specific, Maturity & Growth Stages, Ships and Cruises, ...6.0345

ABUNDANCE AND COMPOSITION OF ADULT FISH STOCK IN LAKE SHARPE ...Aquatic Ecology, Fish -non-specific, Population Dynamics, Reservoirs and Impoundments, South Dakota, ...6.0501

LIFE HISTORY OF CHANNEL CATFISH IN LEWIS AND CLARK LAKE ...Channel Catfish, Environmental Ecology, Life History Studies, Reservoirs and Impoundments, South Dakota, ...6.0530

DISTRIBUTION AND DENSITY OF BREEDING WATERFOWL POPULATIONS AS RELATED TO QUANTITY AND QUALITY OF WETLAND HABITAT IN NORTH DAKOTA ...Geography-physical, North Dakota, Spawn Or Nesting Sites, Water Fowl, N.s., Wetlands, ...6.0420

BENTHOS IN LEWIS AND CLARK LAKE ...Aquatic Ecology, Bloodworms, Aquatic Midges, Mayflies, Reservoirs and Impoundments, South Dakota, ...6.0514

COOPERATIVE AGREEMENT FOR BEAVER RESERVOIR CREEL CENSUS STUDY ...Censusing, Fish -non-specific, Fishing, Reservoirs and Impoundments, Weight, ...4.0015

ESTIMATES OF COMPOSITION, ABUNDANCE AND FLUCTUATION IN FISH POPULATIONS IN BULL SHOALS AND BEAVER RESERVOIRS ...Aquatic Ecology, Arkansas, Fish -non-specific, Population Dynamics, Reservoirs and Impoundments, ...4.0017

LIFE HISTORY OF CYCLOPS BICUSPIDATUS ...Aquatic Ecology, Copepods, Life History Studies, Reservoirs and Impoundments, South Dakota, ...6.0527

ESTUARINE STUDIES OF SOUTHEASTERN ALASKA ...Alaska, Benthic Fauna, Environmental Ecology, Estuaries, Vertical Distribution, ...2.0017

DISTRIBUTION, ABUNDANCE, TAXONOMY, AND BIOLOGY OF MOSQUITOES AFFECTING AGRICULTURE ...Animal Taxonomy, Insect Chemosterilants, N.s., Mosquitoes -non-specific, Radiation, Range Or Territorial Distr., ...6.0148

Productivity (agricultural)

RELATIONSHIPS BETWEEN DRIFT DENSITY AND PRODUCTION, GROWTH, CROPPING EFFICIENCY AND CONSUMPTION IN A NATURAL BROOK TROUT POPULATION ...Growth Rate, Lake Trout, Brook Trout, Number Or Density, Predation, Streams, ...7.0094

SPRING POND ECOLOGY AND MANAGEMENT ...Fishing, Habitat Studies, Management, Ponds, Salmon & Trout - Non-specific, ...3.0488

LIMESTONE DRUM PRODUCTIVITY STUDY ...Aquatic Ecology, Chemical-general, Limestone - General, Ph, Acidity -water, Population Dynamics, ...5.1273

FEASIBILITY OF TREATING AND RECYCLING USED FISH HATCHERY WATER ...Benefit-cost Analysis, Captive Rearing, Waste Water Treatment-general, Water Reuse, ...5.0753

TUSCON WASTEWATER RECLAMATION PROJECT ...Biological-general, Chemical-general, Filter-other, Fish -non-specific, Stream Rehabilitation, Water Standards, ...5.0043

FACTORS LIMITING WATERFOWL PRODUCTION ON THE SPRING-FED SALT MARSHES WEST OF THE GREAT SALT LAKE ...Mallard, Nutrition -other, Swamps-marshes, Utah, Viremia, ...5.1194

HIGH ANALYSIS FERTILIZER INVESTIGATIONS - FISHERIES ...Fertilizers -aquatic, Fish -non-specific, Reservoirs and Impoundments, Tennessee, ...6.0535

RELATIONSHIP BETWEEN MOURNING DOVE PRODUCTION AND WATER DISTRIBUTION IN THE SONORAN DESERT ...Arizona, Deserts, Dove, Habitat Studies, Water Utilization - animal, ...6.0262

Size

COMPETITION, PREDATION, AND BODY SIZE IN LAKE ZOOPLANKTON ...Aquatic Ecology, Competition, Lakes, Predation, Zooplankton, ...6.0115

FOOD INTAKE OF LARGEMOUTH BASS ...Food Supply, Lakes, Largemouth Bass, Malnutrition -other, ...6.0182

COMPOSITION OF THE SPAWNING STOCKS IN OAHE RESERVOIR AND LAKE SHARPE ...Age, Fertility, Fish -non-specific, South Dakota, Spawn Or Nesting Sites, ...6.0519

Sterility

BIOCHEMICAL AND ECOLOGICAL RELATIONSHIPS OF PESTICIDES AND THE BIOLOGICAL CONSTITUENTS OF AQUATIC COMMUNITIES ...Applied Ecology, Bioenergetics, Cell Injury and Autolysis, Mortality Rates, Pesticides -non-specific, ...5.0566

Stress

TOXIC ACTION OF WATER SOLUBLE POLLUTANTS ON FRESHWATER FISH ...Contamination - Water, Mineral Origin, Pollution Effects, Rainbow Trout, Steelhead Trout, ...5.0565

RESPONSES OF FISH TO ENVIRONMENTAL STRESSES ...Cardiovascular System, Environmental Physiology, Fish -non-specific, Kidney and Urinary System, Water Environment -other, ...5.1269

STUDY OF EXCRETORY PATTERNS IN CRAYFISHES ...Crayfish, All, Metabolism, Nitrogen, Osmoregulation, Urea, ...6.0376

INVESTIGATION OF STRESS-INDUCED MOBILIZATION OF INSECTICIDE RESIDUES - CHRONIC TOXICITY OF PESTICIDES TO FISH ...DDT, Dieldrin, Metabolism -animal, Salmon -coho, chinook, sockeye..., Wildlife, ...5.0655

PHYSIOLOGIC AND METABOLIC RESPONSE AS INDICATORS OF STRESS ...Environmental Physiology, Gases, Dissolved -water, Ions and Gases, Metabolism -animal, Oxygen, ...5.0592

THE INVESTIGATION AND ANALYSIS OF BIOCHEMICAL PROCESSES OF AQUATIC ORGANISMS UNDER STRESS ...Animal Origin, Aquatic Ecology, Fish -non-specific, Metabolism -animal, Other, ...5.0585

PHARMACOLOGY OF METAL POISONING IN ESTUARINE FISHES ...Contamination - Water, Estuaries, Killifishes - Cyprinodon, Metals Ns, ...5.1083

Weight

COOPERATIVE AGREEMENT FOR BEAVER RESERVOIR CREEL CENSUS STUDY ...Censusing, Fish -non-specific, Fishing, Number Or Density, Reservoirs and Impoundments, ...4.0015

Animal Parasitology

Ectoparasites

LAKE HURON CHEMICAL CONTROL ...Bioindicators, Chemical-general, Flow Characteristics -water, Selectivity, ...5.0578

Effect of Parasite on Host

ECOLOGICAL STUDIES OF LARVAL TREMATODES AND THEIR SNAIL-HOSTS IN THE LAKE CHAMPLAIN WATERSHED ...Aquatic Ecology, Digenea -other, Gastropods -slugs, conch, snails, Survey Studies, ...6.0396

SUBJECT INDEX

Antitranspirants

Endoparasites

Endoparasites -other

COMPARATIVE BIOCHEMICAL AND MORPHOLOGICAL CHARACTERISTICS OF MARINE FUNGI FROM SHELLFISH ...Fungal Culture, Histochemistry - Cytochem, Histology and Cytology, Marine Fungi (non-specific), Plant Taxonomy, ...6.0265

BIOLOGICAL ACTIVITIES OF MARINE FUNGI ...Host-parasite Interactions, Invertebrate Pathology, Marine Fungi (non-specific), Oysters, Pathological Physiology, Plant Developmental Biology, ...5.0289

Helminths

A PARASITOLOGICAL STUDY OF FISHES FROM THE PINE HILLS AREA ...Aquatic Ecology, Fish -non-specific, Illinois, Low Temp. -but Above 32f, Springs, ...6.0180

Protozoa

SHELLFISH MORTALITY - CHESAPEAKE BAY ...Chesapeake Bay, Computer Matching Code, Mortality Rates, Oysters, Pathology, ...6.0264

Host Specificity

UTILIZATION OF INSECT ENEMIES IN THE CONTROL OF INSECT PESTS AND WEEDS ...Biocontrol, Insects, Predation, Rearing, Weeds, ...6.0034

EFFECT OF ANTIBIOTICS ON FUNGUS PARASITES IN OYSTERS ...Antibiotics, Chemicals - Fungicides, Dermocystidium, Fungal Culture, Oysters, ...5.1171

Reservoirs

Aquatic

ECOLOGICAL STUDIES OF LARVAL TREMATODES AND THEIR SNAIL-HOSTS IN THE LAKE CHAMPLAIN WATERSHED ...Aquatic Ecology, Digenea -other, Effect of Parasite on Host, Gastropods -slugs, conch, snails, Survey Studies, ...6.0396

Animal Resistance to ...

Environment Resistance

AQUATIC ECOSYSTEM ...Acidity, Cladocera, Ph, Acidity -water, Pollution - Effects of, Productivity - Food Chain, ...6.0084

TEMPERATURE TOLERANCE OF MARINE ANIMALS THROUGH BEHAVIORAL RESPONSES ...Behavior -animal, Mortality Rates, Thermal, Water Temperature-non-specific, ...6.0344

Animal Taxonomy

SYSTEMATIC AND BIOGEOGRAPHIC STUDIES OF AQUATIC AND SEMI-AQUATIC ORGANISMS IN NORTHERN MEXICO ...Aquatic Ecology, Habitat Studies, Mexico, Plant Taxonomy, ...2.0038

CYTOTAXONOMY AND RELATED STUDIES OF HOLARCTIC MIDGES ...Arctic, Bloodworms, Aquatic Midges, Collections, Museum, Nearctic, ...5.0756

TAXONOMY AND ECOLOGY OF INSHORE MARINE MICROBIOTA ...Algae- General, Aquatic Ecology, Plant Taxonomy, Protozoa -other, Range Or Territorial Distr. , ...7.0024

TAXONOMY AND BIOLOGY OF SLUDGE WORMS ...Bioindicators, Brackish Water, Earthworms, Fresh Water, Pollution Effects, ...5.0167

INSECTS ASSOCIATED WITH AQUATIC WEED PESTS OF FOREIGN ORIGIN IN LOUISIANA ...Insects -non-specific, Louisiana, Survey Methods, Weeds, ...5.0490

ORGANISMS WHICH ATTACK THE AQUATIC PLANT, EURASIAN WATERMILFOIL IN PAKISTAN ...Insects -non-specific, Life History Studies, Other, Pakistan, Water Milfoil, Waterweed... , ...4.0202

TAXONOMY AND PHYSIOLOGY OF PROTOZOA IN CAVE STREAMS AND POOLS ...Caves, Environmental Physiology, Kentucky, Protozoa -other, Streams, ...6.0240

NEMATODES ASSOCIATED WITH SEWAGE TREATMENT AND THEIR SIGNIFICANCE ...Contamination - Water, Nematoda -other, Sewage, Streams, Waste Water Treatment-general, ...5.0251

A COMPARATIVE STUDY OF THE MACROSCOPIC BENTHIC FAUNA OF TWO CENTRAL ADIRONDACK LAKES ...Benthic Fauna, Comparative Physiology, Lakes, New York, Productivity - Food Chain, ...2.0814

OREGON FISHES - THEIR CLASSIFICATIONS, DISTRIBUTIONS AND LIFE HISTORIES ...Fresh Water, Life History Studies, Oregon, Vertical Distribution, ...6.0450

DEVELOPMENT OF IDENTIFICATION KEYS TO LARVAL, AND JUVENILE RESERVIOR FISHES ...Captive Rearing, Fish -non-specific, Maturity & Growth Stages, Photography-other, Reservoirs and Impoundments, ...6.0018

EARLY LIFE HISTORY STAGES OF OAHE AND BIG BEND RESERVOIR FISHES ...Aquatic Ecology, Life History Studies, Plankton Sampling, Reservoirs and Impoundments, South Dakota, ...6.0522

DISTRIBUTION, ABUNDANCE, TAXONOMY, AND BIOLOGY OF MOSQUITOES AFFECTING AGRICULTURE ...Insect Chemosterilants, N.s. , Mosquitoes -non-specific, Number Or Density, Radiation, Range Or Territorial Distr. , ...6.0148

Annelids

Earthworms

TAXONOMY AND BIOLOGY OF SLUDGE WORMS ...Animal Taxonomy, Bioindicators, Brackish Water, Fresh Water, Pollution Effects, ...5.0167

RESEARCH ON THE MACROBENTHOS OF THE GREAT LAKES ...Aquatic Ecology, Benthic Fauna, Food Supply, Great Lakes-general, Water Quality-general, ...6.0292

Lugworms, Marine Segmented worm

RELATIONSHIP OF TUBE-AND REEF BUILDING MARINE ANNELIDS TO COASTAL ENGINEERING AND CONSERVATION PROBLEMS IN FLORIDA ...Coastal Engineering-other, Environmental Ecology, Florida, Vertical Distribution, ...3.0187

Antarctica

LIMNOLOGY OF ROSS ISLAND, ANTARCTICA ...Benthic Organisms (non-specif), Chemical-general, Lakes, Plankton (non-specific), Publications -other, ...2.0087

GLACIOLOGY AND METEOROLOGY OF ANVERS ISLAND, ANTARCTICA ...Data Analysis - General, Geologic Maps, Intensity, Movement, Thickness - Area, ...2.0856

DEEP ICE CORE STUDIES AND ANALYSES FROM GREENLAND AND ANTARCTICA ...Core Analysis, Dust - Particulate Matter, Extraterrestrial, Greenland, Radioactive Dating-general, Velocity, ...2.0754

Antecedent Moisture

CORRELATION OF SOIL SURFACE AND RAINFALL-RUNOFF-MOISTURE RELATIONSHIPS ON AGRICULTURAL WATERSHEDS ON COASTAL PLAINS SOILS (ABBREV) ...Recharge -general, Runoff, Small Watersheds, Soil Environment, Water Yield, ...2.0002

DEVELOPMENT OF IMPROVED SNOW SURVEYING AND STREAM-FLOW FORECASTING TECHNIQUES ...Amount, Flow Characteristics -water, Forecasting-prediction, Moisture Content, Temperature, ...2.1072

HYDROLOGIC SIMULATION - DAILY STREAMFLOW ...Design Flow-flood, Floods, Forecasting-prediction, Hydrology-general, Reservoirs and Impoundments, ...6.0073

INFILTRATION AS INFLUENCED BY SOIL-VEGETATION COMPLEXES ...Infiltration, Semi - Arid, Soil-water-plant Relationships, ...2.0385

Antibiotics

ANTIBIOTIC EFFECTS OF ROOTED AQUATICS ON ZOOPLANKTON SPECIES ...Aquatic Plants (non-specific), Environmental Physiology, Physiological Ecology, ...2.0159

EFFECT OF ANTIBIOTICS ON FUNGUS PARASITES IN OYSTERS ...Chemicals - Fungicides, Dermocystidium, Fungal Culture, Host Specificity, Oysters, ...5.1171

Antitranspirants

BIOLOGICAL CONTROL - TAMARISK AND OTHER PHREATOPHYTES ...Biocontrol, of Aquatic Plants, Saltcedar, Tamarisk, ...3.0335

THE EFFECT OF EVAPORATION BARRIERS ON FISH GROWTH AND LIMNOLOGY ...Aquatic Ecology, Environmental Ecology, Fish -non-specific, Growth Rate, ...2.0060

REMOTE ELECTRO-MAGNETIC SENSORS FOR DETECTING TRANSPIRATIONAL WATER USE BY PLANTS SUBJECTED

Antitranspirants

- TO VARIOUS FOLIAR CHEMICAL TREATMENTS ...E M Radiation-general, Heat Flow, Moisture Tension, Remote Sensing, Transpiration, ...2.1069
- ENERGY SOURCES FOR EVAPOTRANSPIRATION IN THE PLAINS REGION ...Evapotranspiration, Lysimeters, Nebraska, Radiation-general, Water Loss Control, ...2.0721
- INFLUENCE OF TRANSPIRATION SUPPRESSANTS, SPRINKLER IRRIGATION & MOISTURE LEVELS ON TRANSPIRATION & EVAPOTRANSPIRATION ...Dendroclimatology, Microclimate-general, Moisture Levels, Sprinkler Irrigation, Transpiration, ...3.0464
- EVAPOTRANSPIRATION AND ITS CHEMICAL REDUCTION ...Agricultural Watersheds, Evapotranspiration, Kansas, Lysimeters, Meteorology, ...3.0244
- POTENTIAL USEFULNESS OF ANTITRANSPIRANTS FOR INCREASING WATER USE EFFICIENCY OF PLANTS ...Epidermis, Growth and Differentiation, Osmotic and Turgor Pressure, Photosynthesis, Temperature - Internal, ...3.0045
- PLANT-WATER-USE EFFICIENCY WITH GROWTH REGULATORS AND TRANSPIRATION SUPPRESSANTS ...Anti-transpirants, Fruit-set, Growth Rate, Growth Regulators, Modified Water Use, ...3.0160
- GROUND WATER RECHARGE AS AFFECTED BY SURFACE VEGETATION AND MANAGEMENT ...Conservation-general, Groundwater, Infiltration, Natural Recharge, Soil-water-plant Relationships, ...4.0061
- WATER-SOIL-PLANT RELATIONS ...Root Absorption, Soil-water-plant Relationships, Translocation, Water Movement, ...2.0059
- WATER-SOIL-PLANT RELATIONS ...Drought, Laboratory Analysis, Soil-water-plant Relationships, ...2.0088
- SOIL MOISTURE EVAPORATION AND ITS CONTROL ...Alcohols, Evaporation, Organometallic, Soil Environment, Soil Physical Properties, Tillage, Cropping Systems, Water Loss Control, ...2.0969
- WATER-SOIL-PLANT RELATIONS ...Drought, Osmotic and Turgor Pressure, Rhizosphere, Root Absorption, Soil-water-plant Relationships, ...2.1077
- EFFECT OF METABOLIC ANTITRANSPIRANTS ON INTERNAL WATER BALANCE, GROWTH AND SURVIVAL OF OUTPLANTED TREES ...Water Balance-budget, ...2.1158
- INVESTIGATION OF BLOSSOM-END ROT OF PEAR TOMATOES ...Blossom End Rot, Modified Water Use, Moisture Meters, Tomatoes, Water-borne, ...2.1044
- EVAPORATION REDUCTION INVESTIGATIONS STUDY OF THE EFFECTS OF FATTY ALCOHOLS ON THE ECOLOGY OF LAKE HEFNER ...Alcohols, Lakes, Physiological Ecology, Plankton (non-specific), Texas, ...3.0130
- SOLAR REFLECTANCE OF MONOLAYER-COVERED WATER SURFACES AS RELATED TO EVAPORATION SUPPRESSION ...Dyes and Coloring, Evaporation, Monolayers, Polymer-other, Sunshine, ...3.0110

Appalachian Highlands

Adirondack Province

- IN SITU STUDY OF FACTORS CONTROLLING NUTRIENT REGENERATIONS IN THE BOTTOM SEDIMENTS ...Aquatic Soils, Exchange Capacity, Mineral Content -water, Nutrients, Phosphorus, Ponds, ...2.0806

Appalachian Highlands-other

- HYDROLOGIC BEHAVIOR OF SELECTED WATERSHEDS IN THE NORTHERN APPALACHIAN REGION ...Clouds-precipitation, Flow Characteristics -water, Model Studies, Modification, Watersheds-general, ...2.0184
- FLOOD RUNOFF REDUCTION AND WATER YIELD IMPROVEMENT ...Cutting Operations, Forest Watersheds, Management, Runoff, Water Yield, ...5.1287

New England Province

- STUDIES OF NEAR-SURFACE SEDIMENTS IN LAKES, AND RELATIONSHIPS BETWEEN SURFACE SEDIMENT POLLEN SPECTRA AND VEGETATION ...Canada, Lakes, Paleoecology, ...2.0553
- ENHANCEMENT OF ECOLOGIC AND AESTHETIC VALUES OF WETLANDS ASSOCIATED WITH INTERSTATE HIGHWAYS ...Administrative Structures, Beautification, Interstate, Water Law-general, Wetlands, ...6.0282

SUBJECT INDEX

- ROLE OF WATER IN THE PATTERN OF REGIONAL ECONOMIC DEVELOPMENT ...Economics-general, Income, Location, Regional Areas, Water Resources Development, ...6.0502

Piedmont Province

- FEASIBILITY STUDY OF ELECTRICAL GEOPHYSICAL METHODS IN THE DETERMINATION OF SUBSURFACE HYDROGEOLOGIC ENVIRONMENTS IN SOUTH CAROLINA ...Electric Logging, Electronics - Applied, Hydrology-general, Induction, Porosity-permeability, Water Table Fluctuation, ...2.0950
- EVALUATION OF NEW TECHNIQUES IN ELECTRICAL RESISTIVITY SURVEYING IN THE PIEDMONT AREA, ALABAMA ...Alabama, Electric Logging, Groundwater, Survey Studies, ...2.0005
- DEEP SEEPAGE ON PIEDMONT WATERSHEDS ...Percolation, Physical Properties-general, Saturated Flow, Seepage, Unsaturated Flow, Water Table Fluctuation, ...2.0955
- HYDROLOGY OF PIEDMONT AGRICULTURAL WATERSHEDS ...Agricultural Watersheds, Cover Crops, General Synoptic Observations, Groundwater, Management, Soil-water-plant Relationships, Water Yield, ...2.0958
- QUANTITY, QUALITY, AND TIMING OF WATER YIELDS IN THE SOUTHERN APPALACHIANS-PIEDMONT ...Appalachia, Evapotranspiration, Forest Watersheds, Heat Budget, Water Yield, ...3.0374

Valley and Ridge Province

- HYDROLOGIC BEHAVIOR OF SELECTED WATERSHEDS IN THE NORTHERN APPALACHIAN REGION ...Clouds-precipitation, Forecasting-prediction, Mathematical Analysis, Model Studies, Runoff, Watersheds-general, ...2.0922

Applied Math Index (num Grp)

Computer Languages

Problem Oriented Languages

- A GENERALIZED COMPUTER LANGUAGE FOR HYDROLOGIC AND HYDRAULIC ANALYSIS ...Data Analysis - General, Digital Computers, Facilities, Hydraulic Engineering-other, ...8.0213

Aquaculture & Fish-farming

- FEASIBILITY OF FISH PRODUCTION IN TERTIARY WASTE TREATMENT PONDS ...Sewage Lagoons, Tertiary Treatment, Waste Water Treatment-general, ...5.0401
- LIMNOLOGY AND MANAGEMENT OF OREGON FARM PONDS AND SMALL IMPOUNDMENTS ...Farm Pond, Management, Productivity - Food Chain, Reservoirs and Impoundments, Trifluralin, Wildlife, ...6.0449
- BIONOMICS OF FISHES AND SHELLFISHES ...Bays, Economics-general, Environmental Ecology, Oregon, Productivity - Food Chain, ...2.0896
- PRODUCTION OF ADULT GAME FISHES BY ARTIFICIAL FEEDING ...Fish -non-specific, Fish Rations, Food Supply, ...6.0181
- A COMPARISON OF THE GROWTH RATE OF BLUE CATFISH AND CHANNEL CATFISH FINGERLINGS FOR A PELLETED COMMERCIAL FEED ...Channel Catfish, Growth Rate, Pelleted, ...5.1179
- GEAR RESEARCH-RICE FARM PRODUCED FISH ...Economic Efficiency, Farm Pond, Special Purpose Machines, Stocking of Fish & Shellfish, ...6.0632

Aquatic Environments

- THE DECOMPOSITION OF PETROLEUM PRODUCTS IN OUR NATURAL WATERS ...Anaerobic, Chemical, Chemical Treatment-other, Industrial Wastes, Petroleum Industry, ...5.0623
- DIFFUSION OF OXYGEN ACROSS THE MUD-WATER INTERFACE IN AQUATIC ENVIRONMENTS ...Diffusion-other, Electroanalyses-other, Ions and Gases, Oxygen, ...2.0797
- EFFECT OF EURASIAN WATERMILFOIL CONTROL PROCEDURES ON WILDLIFE AND OTHER ORGANISMS IN AQUATIC ENVIRONMENTS ...Contamination - Water, Diquat, Evaluation, Water Milfoil, Waterweed... , 2,4-d, ...5.0505

SUBJECT INDEX

Aquifers

Aquatic Soils

- IN SITU STUDY OF FACTORS CONTROLLING NUTRIENT REGENERATIONS IN THE BOTTOM SEDIMENTS ...Adirondack Province, Exchange Capacity, Mineral Content -water, Nutrients, Phosphorus, Ponds, ...2.0806
- BIOCHEMICAL EFFECTS OF MICROORGANISMS UPON THE SALT MARSH ENVIRONMENT ...Chemical, Core Analysis, Microorganisms (non-specific), Salinity, Swamps-marshes, Tide-water Areas, ...1.0026
- THE RELATIONSHIP OF SEWAGE HANDLING PRACTICE TO PESTICIDE RESIDUE LEVELS AND INVERTEBRATE ECOLOGY ...Aquatic Ecology, Insecticides -non-specific, Michigan, Pollutants - Path of, Pollution Effects, ...5.0572
- RELATIONSHIPS BETWEEN PHOSPHATE AND OTHER CHEMICALS AT THE WATERSUBSTRATE INTERFACE IN WESTERN LAKE ERIE ...Chemical, Chemical-general, Phosphate, Phosphite, Sediments, ...5.0874
- DYNAMICS OF CHEMICAL & PHYSICAL CHARACT OF WATER, BOTTOM MUDS & AQUATIC LIFE IN A LARGE IMPOUNDMENT ON A RIVER %PHASE II..Alabama, Chemical-general, Physical-general, Pollution - Effects of, Pollution Effects, Reservoirs and Impoundments, ...5.0008
- CHEMICAL AND MINERALOGICAL RELATIONSHIPS BETWEEN SUBMERGED SOILS AND RICE CULTURE ...Arkansas, Irrigation-general, Mineralogy, Rice, ...4.0021
- PHOSPHORUS IN LAKE SEDIMENTS ...Lakes, Mineral Equilibria, Phosphorus, Soil Environment, Temperature, ...5.0210
- EQUIPMENT TO AGITATE POND SOILS FOR RELEASE OF NUTRIENTS ...Limestone - General, Nutrients, Ponds, Soil Environment, Technique Development, ...5.0774
- WEED CONTROL IN IRRIGATION AND DRAINAGE SYSTEMS ...Amphibious Plants, Herbicides -non-specific, of Aquatic Plants, Plant Pollutants, Submerged Plants, Timing -non-specific, ...3.0094
- PHYSICAL AND CHEMICAL CHARACTERISTICS OF THE UPPER CHESAPEAKE BAY ...Chemical-general, Chesapeake Bay, Commercial Fishing, Environmental Effects-geologic, Physical-general, ...5.0506
- OXYGEN DEMAND OF LAKE ERIE SEDIMENT ...Deposits-other, Oxygen, Transfer Processes, ...2.0627

Aqueducts

- SURFACE AND GROUND WATER POTENTIALITIES OF THE MULLICA RIVER BASIN ...Conjunctive Use, Economic Impact, Systems Analysis, Water Quality-general, Water Transfer, ...4.0172
- MODEL STUDY OF CONTROL STRUCTURES FOR FOOTHILL FEEDER TUNNELS ...Control Gate, Urban Environments, Water Distribution Systems, Water Transfer, ...8.0217

Aquifers

Aquifers-general

- THE HYDRAULICS OF GROUND WATER TESTS ...Dispersion -water, Groundwater Movement, Model Studies, Tracers-general, ...2.0288
- DIFFUSION OF ENTRAPPED GASES IN POROUS MEDIA ...Cavitation-other, Compressibility--gas-liq, Diffusion, Groundwater, Ions and Gases, Porous Media - Flow Through, ...2.0209
- THE EVALUATION OF APPLICATION OF C-14 DATING OF GROUND WATER ...Carbon-14, Disposal Methods-other, Groundwater, Radioactivity-general, Underground Waste Disposal, ...5.0241
- THE GROUND-WATER FLOW SYSTEM IN THE DELMARVA PENINSULA ...Delaware, Flow Characteristics -water, Groundwater, Model Studies, Water Balance-budget, ...2.0254
- DEVELOPMENT OF SYSTEMS FOR GROUND WATER RECHARGE INTO THE OGALLALA FORMATION ...Artificial Recharge, Filtration, Recharge Pits - Wells, Technique Development, Turbidity, ...4.0247
- ALTERNATE METHODS OF MOSQUITO CONTROL TO REDUCE CHEMICAL POLLUTION OF WATERS FOR RECHARGE OF THE OGALLALA FORMATION ...Alternative Planning, Chlorinated Hydrocarbons, Insecticides -non-specific, Mosquitoes -non-specific, Playas, Pollution Abatement, ...5.1180
- APPLICATION OF SEISMIC SHEAR WAVE STUDIES TO THE INVESTIGATION OF AQUIFERS ...Geophysical Analysis, Lithology, Shear, Technique Development, Velocity, ...4.0137

- OPTIMUM UTILIZATION AND MANAGEMENT OF WATER IN FORMATIONS HYDROLOGICALLY-CONNECTED TO A STRETCH OF THE CONNECTICUT RIVER ...Artificial Recharge, Baseflow, Connecticut River, Massachusetts, Water Yield, ...4.0134
- GEOCHEMICAL INVESTIGATION OF THE GROUNDWATER SYSTEM IN THE LANSING, MICHIGAN, AREA ...Chemical-general, Groundwater, Ions and Gases, Michigan, Water Quality-general, ...1.0069
- NUMERICAL MODELING OF GROUND WATER FLOW ...Artificial Recharge, Groundwater Movement, Model Studies, Subsurface Flow, ...2.0506
- ECONOMIC EFFICIENCY IN THE ALLOCATION OF IRRIGATION WATER OVER TIME ...Economic Efficiency, Irrigation-general, Water - Alternative Uses, Water Allocation, Water Demand, ...6.0444
- GROUND WATER RECHARGE THROUGH PITS AND WELLS ...Artificial Recharge, Drainage, Filtration, Glass, Recharge Pits - Wells, ...2.0514
- URANIUM AND HYDROGEN RADIONUCLIDES AS NATURAL TRACERS IN THE FLORIDAN AQUIFER ...Florida, Quaternary Period, Radioisotopes, Recharge -general, Tritium, Uranium, ...2.0326
- AQUIFER PERFORMANCE TESTS UNDER TWO PHASE FLOW CONDITIONS ...Observation Wells, Subsurface Flow, Synthetic Hydrology-general, Two-phase-other, ...2.0008
- RECHARGE IN RIVER VALLEYS OF CENTRAL AND EASTERN KANSAS - EFFECT OF TUTTLE CREEK RESERVOIR ON GROUNDWATER LEVELS ...Chemical-general, Geophysical Analysis, Natural Recharge, Reservoirs and Impoundments, Water Table Fluctuation, ...2.0509
- GEOCHEMISTRY OF AQUIFERS AS AFFECTED, OR POTENTIALLY AFFECTED BY OFFTAKE OR ARTIFICIAL RECHARGE ...Artificial Recharge, Chemical-general, Discharge-general, Geochemistry-general, Louisiana, ...2.0530
- HYDROLOGIC ANALYSIS OF GROUNDWATER BASINS BY DIGITAL COMPUTER SIMULATION ...Digital Computers, Groundwater Basins, Groundwater Movement, Mathematical Analysis, Model Studies, ...4.0043
- INDUCTIVE ELECTROMAGNETIC METHODS FOR MAPPING AND EVALUATING AQUIFERS ...California, Electric Logging, Geophysical Analysis, Groundwater, Mapping, ...2.0083
- SYSTEM IDENTIFICATION AND MULTI-LEVEL OPTIMIZATION OF INTEGRATED GROUND WATER SYSTEMS ...Mathematical Analysis, Model Studies, Systems Analysis, ...6.0062
- GROUND WATER RESERVOIR RESPONSE TO EARTH TIDES ...Earth Tides, Geophysical Analysis, Porosity, Storage of Water, Water Table Fluctuation, ...2.1108
- MOVEMENT AND MIXING OF WATER INJECTED INTO AQUIFERS ...Artificial Recharge, Dispersion -water, Exchange Capacity, Flow Augmentation, Fluid Mixing, Groundwater Movement, Water Wells, ...5.0527
- ADVANCED WASTE TREATMENT FOR WATER RECLAMATION AND REUSE BY INJECTION ...Injection-wells, Recharge Pits - Wells, Secondary Treatment, Waste Water Treatment-general, Water Reuse, ...5.0778
- SMALL WATERSHED YIELDS ...Amount, Land Use, Runoff, Small Watersheds, Water Yield, ...4.0149
- DRAINAGE DESIGN FOR IRRIGATION AGRICULTURE ...Artesian Flow, Conjunctive Use, Groundwater Movement, Seepage, Water Wells, ...4.0165
- WATER YIELDS FROM SHALLOW GROUND AQUIFERS ...Irrigation-general, Permeability, Recharge -general, Water Yield, ...4.0214
- FACTORS AFFECTING WATER YIELDS FROM SMALL WATERSHEDS AND SHALLOW GROUND AQUIFERS ...Amount, Applied Climatology, Runoff, Small Watersheds, Soil Types-general, Water Yield, ...4.0207
- SEISMIC EVALUATION OF PERMEABILITY OF FRACTURE ZONES IN ROCK ...Joints-fractures, Permeability, Southwest, Structure Location, Tunnels, Water Yield, ...3.0017
- AIR INJECTION INTO AN AQUIFER ...Laboratory Analysis, Permeability, Porous Media - Flow Through, Saline Water Intrusion, ...2.0358
- RESEARCH ON GEOHYDROLOGY OF THE EASTERN SLOPE OF WEST MAUI ...Hawaii, Mountains-alpine, Patterns, Projections and Estimations, Slopes, Water Yield, ...6.0170
- DEVELOPMENT OF GROUND WATER CONTROL METHODS FOR THE HEAVY SOILS OF THE LAJAS VALLEY ...Groundwater, Hydrology-general, Piezometry, Puerto Rico, Soil Environment, ...4.0209

Aquifers

SUBJECT INDEX

EXPERIMENTAL INVESTIGATION OF HYDROLOGICAL PARAMETERS OF AQUIFERS THROUGH ELECTRICAL RESISTIVITY MEASUREMENTS ...Borehole Geophysics, Electric Logging, Hydrology-general, Other Models, Porosity-permeability, ...7.0038

RADIOCARBON AS A TRACER IN GROUND WATER PROBLEMS ...Groundwater Movement, Laminar Flow, Permeability, Radioisotopes, Recharge -general, ...2.0056

GROUNDWATER SUPPLIES ...Atlases-maps, Groundwater, Natural Recharge, Total Volume, Water Table Fluctuation, ...2.0058

SPECIFIC YIELD RESEARCH AND PERMEABILITY RESEARCH ...California, Permeability, Storage of Water, Velocity -water, Water Yield, ...7.0013

SHALLOW WELLS AND IRRIGATION PITS FOR IRRIGATION AND OTHER FARM WATER SUPPLY IN THE COASTAL PLAINS ...Coastal Plain, Irrigation-general, Pumping, Terrain Analysis, Water Wells, ...3.0194

PIT METHOD OF ARTIFICIAL GROUND-WATER RECHARGE ...Artificial Recharge, Illinois River, Induced Infiltration, Permeability, Recharge Pits - Wells, ...4.0099

GEOHYDROLOGIC SYSTEM ANALYSIS WITH AN ELECTRIC ANALOG COMPUTER ...Analog, Analog Computers, Digital Computers, Groundwater, Induced Infiltration, Network Synthesis, Systems Analysis, ...2.0417

ENVIRONMENTAL GEOLOGY OF MCHENRY COUNTY, ILLINOIS ...Illinois, Land Use, Potential of Deposit, Subsurface, Terrain Analysis, ...6.0192

PERMEABILITY OF UNCONSOLIDATED AQUIFER MATERIALS ...Data Analysis Applications, Hydrology-general, Permeability, Unconsolidated Aquifers, Valleys and Canyons, ...7.0038

AQUIFER STUDIES IN MARYLAND - SEDIMENTARY ROCKS IN THE COASTAL PLAIN ...Geologic Sections, Hydrology-general, Management, Specific Rock Unit, Subsurface, Water Allocation, ...2.0561

WATER RESOURCES OF COPIAH COUNTY ...Available Water, Chemical Analysis (water), Groundwater, Surface Water, Water Quality-general, ...4.0147

GEOLOGY AND GROUND WATER RESOURCES OF TRAILL COUNTY ...Chemical-general, Drilling and Coring, Groundwater, Permeability, Surficial Geology, ...2.0837

GEOLOGY AND GROUND WATER RESOURCES OF WELLS COUNTY ...Chemical-general, Drilling and Coring, Groundwater, Permeability, Surficial Geology, ...2.0838

GEOLOGY AND GROUND WATER RESOURCES OF GRAND FORKS COUNTY ...Chemical-general, Drilling and Coring, Groundwater, Permeability, Surficial Geology, ...2.0839

GEOLOGY AND GROUND WATER RESOURCES OF WILLIAMS COUNTY ...Chemical-general, Drilling and Coring, Groundwater, Permeability, Surficial Geology, ...2.0840

GEOLOGY AND GROUND WATER RESOURCES OF WARD COUNTY ...Geology-general, Groundwater, Hydrology-general, North Dakota, Water Quality-general, ...2.0841

GEOLOGY AND GROUND WATER RESOURCES OF BURKE COUNTY ...Chemical-general, Drilling and Coring, Groundwater, Permeability, Surficial Geology, ...2.0842

GEOLOGY AND GROUND WATER RESOURCES OF RENVILLE COUNTY ...Geology-general, Groundwater, North Dakota, Water Resources - General, Water Wells, ...2.0843

GEOLOGY AND GROUND WATER RESOURCES OF PEMBINA COUNTY ...Deposits, Geology-general, Groundwater, Mapping, Permeability, Rocks - Bedrock, ...2.0844

GEOLOGY AND GROUND WATER RESOURCES OF NELSON COUNTY ...Deposits, Geology-general, Groundwater, Mapping, Permeability, Rocks - Bedrock, ...2.0845

GEOLOGY AND GROUND WATER RESOURCES OF WALSH COUNTY ...Deposits, Geology-general, Groundwater, Mapping, Permeability, Rocks - Bedrock, ...2.0846

GEOLOGY AND GROUND WATER RESOURCES OF CAVALIER COUNTY ...Deposits, Geology-general, Groundwater, Mapping, Permeability, Rocks - Bedrock, ...2.0847

A STUDY OF LAND DISPOSAL OF SPENT SULFITE LIQUOR AT BADGER PAPER MILLS, INC., PESHTIGO, WISCONSIN ...Disposal, Limestone - General, Neutralization, Pollutants - Path of, Pulp and Paper Wastes, ...5.1295

STATISTICAL INFERENCE AND MODELS ...Dendrochronology, Distributions, Statistical Models, Stochastic Processes, Water Table Fluctuation, ...7.0108

SPECIFIC YIELD INVESTIGATION ...California, Groundwater Basins, Moisture Content, Projections and Estimations, Water Yield, ...2.0182

BOREHOLE GEOPHYSICS AS APPLIED TO GEOHYDROLOGY ...Borehole Geophysics, Geophysical Analysis, Groundwater Movement, Instrumentation-general, Technique Development, ...7.0018

MECHANICS OF GROUND-WATER FLOW ...Artificial Recharge, Earthquakes, Groundwater Basins, Groundwater Movement, Water Table Fluctuation, ...2.1093

GEOLOGIC STRUCTURE AND FRESH GROUND WATER IN GULF COASTAL PLAIN ...Flow Characteristics -water, Geologic Maps, Regional Structure, South Central, ...2.0536

GEOHYDROLOGY OF THE POTOMAC-RARITAN-MAGOTHY AQUIFER SYSTEM ...Calcite Group, Clay Minerals-general, Groundwater, Mineralogy, Solution Chemistry, ...2.0768

MISSOURI SPRINGFLOW CHARACTERISTICS ...Chemical-general, Discharge-general, Physical Features-general, Springs, Water Supply-general, ...2.0701

GRAVITY FLOW OF WATER IN SOILS AND AQUIFERS OF WESTERN KANSAS ...Gravitational Movement -water, Kansas, Natural Recharge, Soil Environment, Storage of Water, ...2.0502

MILL CREEK VALLEY ANALOG MODEL STUDY, OHIO ...Analog Computers, Artificial Recharge, Model Studies, Ohio, Recharge Pits - Wells, ...4.0195

SALT-WATER ENCROACHMENT IN THE BRUNSWICK AREA, GEORGIA ...Georgia, Observation Wells, Piezometry, Pumping, Saline Water Intrusion, ...5.0306

GEOHYDROLOGY OF SHALLOW AQUIFERS IN HENRY AND WEAKLEY COUNTIES, TENNESSE ...Groundwater, Observation Wells, Pollution Sources-general, Pumping, Tennessee, ...2.0998

WATER AVAILABILITY OF MUSCATINE ISLAND, IOWA ...Available Water, Chemical-general, Iowa, Prediction Models, Water Resources Development, ...2.0488

WATER RESOURCES OF THE BOWLING GREEN AREA, KENTUCKY ...Groundwater Movement, Industrial-general, Kentucky, Streams, Water Quality-general, ...2.0528

GROUND WATER CONDITIONS OF THE CENTRAL BOSTON AREA, MASSACHUSETTS ...Massachusetts, Observation Wells, Structure Sites, Unconsolidated Deposits, Water Table Fluctuation, ...2.0613

HYDROLOGY OF CONSOLIDATED ROCK AQUIFERS NEAR PENNINGTON, NEW JERSEY ...Circulation -water, New Jersey, Permeability, Recharge -general, Reservoirs and Impoundments, ...2.0767

BASIC HYDROLOGIC RESEARCH IN SELECTED AREAS IN SOUTH DAKOTA ...Aircraft, Geophysical Analysis, Reconnaissance, South Dakota, Water Sources -general, ...2.0976

HYDROLOGY OF A WETLAND AREA IN THE YELLOW RIVER BASIN, WISCONSIN ...Flow Characteristics -water, Water Quality-general, Wetlands, Wisconsin, ...2.1150

WATER RESOURCES OF THE KENAI PENINSULA BOROUGH AREA, ALASKA ...Alaska, Gaging, Groundwater Basins, Runoff, Water Resources Development, ...2.0012

REMOTE SENSING, GULF COASTAL AREA, CENTRAL FLORIDA ...Aircraft, Fresh Water, Saline Water Systems, Temperature, Tides, ...2.0327

TECHNIQUES FOR USE OF RADIOISOTOPES IN TRACING RESERVOIR LEAKAGE ...Faults, Foundations-general, Leakage, Radioisotopes, Reservoirs and Impoundments, ...7.0017

GROUNDWATER ANALYSIS BY DIGITAL COMPUTER APPLICATION DEVELOPMENT ...Digital Computers, Forecasting-prediction, Water Table Fluctuation, ...4.0059

FATE OF POLLUTANTS IN GROUND WATER ...Artificial Recharge, Chlorinated Hydrocarbons, Nitrate, Nitrite, Playas, Pollutants - Path of, ...5.0917

SUBSURFACE AND GROUND WATER ACCRETION, DEPLETION, MOVEMENT AND CONTRIBUTION TO STREAMFLOW ...Agricultural Watersheds, Baseflow, Groundwater Movement, Mississippi, Natural Recharge, ...2.0336

AQUIFER AND SUBSURFACE RELATIONSHIPS IN THE HYDROLOGY OF UPSTREAM AGRICULTURAL WATERSHEDS ...Baseflow, Forecasting-prediction, Groundwater Movement, Natural Recharge, Streams, Technique Development, Water Yield, ...3.0394

AQUIFER-STREAMFLOW INTERRELATIONSHIPS IN UPSTREAM AGRICULTURAL WATERSHEDS OF THE PACIFIC NORTHWEST ...Agricultural Watersheds, Flow Characteristics -water, Permeability, Recharge -general, Structure, Subsurface Flow, ...3.0201

OPTIMUM UTILIZATION OF -SURFACE AND SUBSURFACE WATER FACILITIES ...Conjunctive Use, Mathematical Analysis, Operations Research, Storage of Water, Survey Studies, ...4.0110

SUBJECT INDEX

Aquifers

ECONOMICS OF WATER MANAGEMENT ON THE TEXAS HIGH PLAINS ...Economic Impact, Groundwater, Production & Processing, Texas, Water Allocation, Water Yield, Welfare Economics, ...6.0137

Aquifers-other

WELL DRAWDOWN IN UNCONFINED AQUIFERS UNDER NON-STEADY CONDITIONS ...Drawdown, Flow Characteristics -water, Seepage, Unsteady Flow, Water Wells, ...2.0862

EFFECT OF FORMATION DIP ON THE MOVEMENT OF FRESH WATER STORED IN SALINE AQUIFERS ...Artificial Recharge, Fresh Water, Local Structure, Model Studies, Storage of Water, ...4.0122

HYDRAULICS OF WELLS ...Drawdown, Hydraulic Engineering-other, Model Studies, Unsteady Flow, Water Wells, ...7.0077

AQUIFERS AND DRAINAGE ...Brackish Water, Drainage, Groundwater Movement, Irrigation-general, Model Studies, ...2.0166

GROUND-WATER STUDIES - DEEP SANDSTONE AQUIFER IN CHICAGO REGION ...Groundwater Movement, Permeability, Pumping, Sandstones, Water Table Fluctuation, ...2.0419

GROUND-WATER GEOLOGY OF DEKALB AND BOONE COUNTIES, ILLINOIS ...Aerial, Deposits, Geophysical Analysis, Groundwater, Local Stratigraphy, Mapping, ...4.0096

ELECTRICAL EARTH RESISTIVITY SURVEYS ...Electric Logging, Electrodes, Geophysical Analysis, Groundwater, Illinois, ...7.0033

GEOLOGY OF VALLEY FILL DEPOSITS IN THE MIDDLE ILLINOIS RIVER VALLEY ...Deposits, Hydrology-general, Sedimentary History, Valley, Buried, ...7.0036

EVALUATION OF MAGOTHY AQUIFER - ANNAPOLIS AREA ...Atlases-maps, Available Water, Maryland, Model Studies, Saline Water Intrusion, ...2.0564

TRANSPORT PROCESSES IN FLUID FLOWS ...Dispersion -water, Dyes, Mathematical Analysis, Model Studies, Porous Media - Flow Through, ...2.0368

PERMEABILITY DISTRIBUTION AND SEDIMENTATIONAL FEATURES ...Big Horn, Permeability, Petrography, Sedimentary Structures-other, Water Yield, ...2.0271

GEOHYDROLOGIC ENVIRONMENTAL STUDIES ...Facies, Flow Characteristics -water, Permeability, Specific Rock Unit, Tertiary Period, ...2.0538

THERMAL CHARACTERISTICS OF AQUIFER SYSTEMS ...Carbonate Aquifers, Flow Characteristics -water, Permeability, Sub-surface Flow, Temperature, ...2.1099

HYDROGEOLOGY OF ARTESIAN SYSTEMS AND LIMESTONE TERRANES ...Artesian Flow, Carbonate Aquifers, Coastal Plain, Southeast, Water Supply-general, ...2.0287

ARTIFICIAL RECHARGE OF TREATED SEWAGE WATER AT BAY PARK, N.Y. ...Artificial Recharge, ...4.9183

HYDROLOGY OF THE SAVANNAH RIVER PLANT, SOUTH CAROLINA --BEDROCK WASTE STORAGE EXPLORATION - HYDROLOGY OF COASTAL PLAIN SEDIMENTS (ABBREV) ...Coastal Plain, Crystalline Aquifers, Hydrology-general, Seepage, Underground Waste Disposal, ...5.1108

SPRINGFIELD AREA INFILTRATION STUDY, OHIO ...Artificial Recharge, Flow Characteristics -water, Induced Infiltration, Ohio, Water Yield, ...4.0196

HYDROGEOLOGIC MAPPING OF PALEOCENE SEDIMENTS, WESTERN TENNESSEE ...Mapping, Specific Rock Unit, Surficial Geology, Tennessee, Tertiary Period, ...2.0995

WATER RESOURCES, COLUMBUS, INDIANA AREA ...Alternative Planning, Groundwater, Indiana, Model Studies, Water Development, ...2.0456

HYDROLOGY OF BURIED PENNSYLVANIAN CHANNEL SANDSTONE, KENTUCKY ...Kentucky, Observation Wells, Pennsylvanian Period, Salinity, Valley, Buried, ...2.0527

DEVELOPMENT OF WATER SUPPLIES FOR IRRIGATION IN THE SOUTH ...Available Water, Carbonate Aquifers, Irrigation Engineering, Irrigation-general, Water Resources Development, Water Sources-general, ...2.0332

Crystalline Aquifers

HYDROLOGY OF THE SAVANNAH RIVER PLANT, SOUTH CAROLINA --BEDROCK WASTE STORAGE EXPLORATION - HYDROLOGY OF COASTAL PLAIN SEDIMENTS (ABBREV) ...Clastic Aquifers, Coastal Plain, Hydrology-general, Seepage, Underground Waste Disposal, ...5.1108

Unconsolidated Aquifers

ADVANCE WARNING OF GROUND-WATER POLLUTION HAZARDS, WITH SPECIAL REFERENCE TO AQUIFERS IN GLACIAL OUTWASH ...Electrical, Electromagnetic Probing, Groundwater, Outwash Plains, Physical Parameters, ...5.1235

THE USE OF GRAVITY SHAFTS FOR GROUND WATER RECHARGE, PHASE I OF A TWO PHASE STUDY ...Deposits, Economic Efficiency, Recharge Pits - Wells, Turbidity, ...4.0189

MORPHOLOGY AND HYDROLOGY OF PLEISTOCENE DEPOSITS, DELAWARE ...Geophysical Analysis, Groundwater Movement, Morphology-general, Permeability, Quaternary Period, Water Yield, ...2.0253

GEOHYDRAULICS AT THE UNCONFORMITY BETWEEN BEDROCK AND ALLUVIAL AQUIFERS ...Flow Characteristics -water, Groundwater Basins, Rocks - Bedrock, Unconformities, Water Transfer, ...2.0229

WATER DATING TECHNIQUES AS APPLIED TO THE MISSOULA GROUND-WATER RESERVOIR, MONT. ...Carbon-14, Geochemical Analysis, Groundwater Movement, Montana, ...2.0715

Aquifers

- GROUND-WATER GEOLOGY OF OGLE COUNTY, ILLINOIS ...Aerial, Available Water, Groundwater, Joints-fractures, Observation Wells, ...7.0034
- TEMPERATURE PROSPECTING FOR SHALLOW GLACIAL AND ALLUVIAL AQUIFERS ...Deposits, Geothermal, Temperature, Temperature Profiles, ...4.0095
- PERMEABILITY OF UNCONSOLIDATED AQUIFER MATERIALS ...Aquifers-general, Data Analysis Applications, Hydrology-general, Permeability, Valleys and Canyons, ...7.0038
- MECHANICS OF AQUIFER SYSTEMS ...Storage of Water, Subsidence, ...2.0153
- WATER RESOURCES OF THE GREATER JUNEAU BOROUGH, ALASKA ...Alaska, Observation Wells, Urban Environments, Water Resources Development, Water Table Fluctuation, ...2.0014

Valley, Buried

- UTILIZATION OF THE STORAGE POTENTIAL OF RIVER VALLEY AQUIFERS (ABBREV) ...Nebraska, Recharge - general, River Basins, Storage of Water, Water Quality-general, ...4.0162
- GRAVITY INVESTIGATION OF WATER-BEARING STRATA IN SWAN VALLEY, MONTANA ...Density, Gravity Surveys, Local Structure, Montana, Porosity, ...2.0713
- INTERRELATIONSHIP OF SURFACE AND SUB-SURFACE FLOW IN THE NISHNABOTNA DRAINAGE BASIN ...Discharge-other, Drift, Groundwater Movement, Iowa, River Basins, ...2.0481
- GEOLOGY OF VALLEY FILL DEPOSITS IN THE MIDDLE ILLINOIS RIVER VALLEY ...Clastic Aquifers, Deposits, Hydrology-general, Sedimentary History, ...7.0036
- EXPLORATION AND MAPPING OF THE SALISBURY PALEOCHANNEL ...Atlases-maps, Borehole Geophysics, Channels, Geophysical Analysis, Maryland, ...2.0566
- WATER RESOURCES OF CENTRAL WISCONSIN, A WATER-POOR AREA ...Artificial Recharge, Augmentation-general, Deposits, Geophysical Analysis, Wisconsin, ...2.1146
- HYDROLOGY OF BURIED PENNSYLVANIAN CHANNEL SANDSTONE, KENTUCKY ...Clastic Aquifers, Kentucky, Observation Wells, Pennsylvanian Period, Salinity, ...2.0527

Arctic

- SATELLITE SEA ICE STUDIES ...Satellites, Sea Ice, ...6.0277
- PATHWAYS OF TRACE ELEMENTS IN ARCTIC LAKE ECOSYSTEMS ...Gel Filtration, Lakes, Organic-general, Pollutants - Path of, Trace Element Analysis, ...1.0004
- STREAM VALLEY ASYMMETRY IN AN ARCTIC ENVIRONMENT-CONDITIONS GOVERNING GEOMORPHIC PROCESSES 7360 ...Environmental Effects-geologic, Microclimate-general, Shape, Slopes, Valleys and Canyons, ...2.0255
- CYTOTAXONOMY AND RELATED STUDIES OF HOLARCTIC MIDGES ...Animal Taxonomy, Bloodworms, Aquatic Midges, Collections, Museum, Nearctic, ...5.0756
- COLD REGIONS PHYSICAL SCIENCE ...Cloud Physics, Electron, Ice Fog, Petrofabrics, ...2.0757
- SNOW AND ICE COVER INVESTIGATIONS ...Frost, Sea Ice, Snowmelt, Snowpack, Weather Forecasting, ...2.0747
- TECHNICAL SUPPORT, INVESTIGATIONS OF ARCTIC CONSTRUCTION ...Cold - Climates, Construction, Earth & Rockfill Dams, Thermal Properties-general, ...8.0266
- INVESTIGATION OF WATER SUPPLY PROBLEMS IN ARCTIC AND SUB-ARCTIC AREAS ...Groundwater, Potable Water, Storage of Water, Surface Water, Water Supply-general, ...3.0004

Argon

- HETEROGENEOUS NUCLEATION AND CONDENSATION OF VAPORS ...Liquid, Nucleation, Solution, Water, 4 Ring System, ...1.0094

Arizona

- SMALL DRAINAGE AREA STUDY ...Drainage, Floods, Gaging, Peak Flow, Small Watersheds, ...2.0289
- CONTROL OF UNDESIRABLE SHRUBS AND REVEGETATION OF SOUTHERN ARIZONA RANGES ...Arid and Desert, Cultural Control, Integrated Cultural Control, Maturity Or Growth Stage of, Range, ...4.0011

SUBJECT INDEX

- DEER FOODS ON WATERSHEDS TREATED FOR INCREASED WATER YIELD ...Deer Ns, Food Supply, Forages, N. s., Water Yield, ...4.0004
- BLUE-GREEN ALGAE POISONING ...Algal Pollutant Sources, Algal Toxins, Cyanophyta (non-specific & Ot), Range Or Territorial Distr., Vegetable Origin, ...5.0041
- FERTILIZATION OF WOODS CANYON LAKE ...Fertilizers - aquatic, Lakes, Rainbow Trout, Steelhead Trout, ...5.0040
- ECONOMIC IMPLICATIONS OF WATER POLICY IN ARIZONA ...Economic Efficiency, Economic Impact, Legal Review, Model Studies, Water Resources Development, ...6.0011
- GEOPHYSICAL INVESTIGATIONS IN ALLUVIAL BASINS IN SOUTHERN ARIZONA ...Electric Logging, Gravity Surveys, Hydrology-general, Seismic Refraction, ...2.0062
- DEVELOPMENT OF ECONOMIC WATER HARVEST SYSTEMS FOR INCREASING WATER SUPPL ...Cover Crops, Economic Efficiency, Erosion-general, Saline Soils, Water Harvesting, ...3.0012
- TRACE AND TRACER ELEMENTS IN GROUND WATER ...Agricultural Chemicals-general, Groundwater, Industrial Wastes, Trace Elements, Tracers-general, ...4.0010
- OPERATIONS RESEARCH STUDY OF WATER RESOURCES DEVELOPMENT AND MANAGEMENT IN THE TUCSON AREA ...Management, Operations Research, Optimization Technique, Research - Development, Simulation Theory, Water Resources Development, ...6.0015
- LEMON PRODUCTION IMPROVEMENT ...Citrus, Furrow Irrigation, Irrigation, Sprinkler Irrigation, Trees, ...2.0067
- SNOW HYDROLOGY ...Energy Budgets, Forest Watersheds, Mathematical Analysis, Snow, Snowmelt, ...2.0064
- MANAGEMENT OF SALINE WATER FOR CROP PRODUCTION ...Brackish Water, Management, Saline and Alkaline Soils, Use of Impaired Water, Water Quality-general, ...3.0014
- WATER IN RELATION TO ECONOMIC GROWTH IN AN ARID ENVIRONMENT ...Arid and Desert, Economic Impact, Groundwater, Model Studies, Water Costs, ...6.0013
- TREATING AN INADEQUACY OF THE UNIT HYDROGRAPH HYPOTHESIS BY STORAGE ROUTING WITH VARIABLE EMPIRICAL VALUES OF LAG AND STORAGE ...Amount, Hydrographs, Model Studies, Runoff, Storage of Water, ...2.0063
- GENETIC AND CYTOGENIC STUDIES OF HORTICULTURAL CROPS-BREEDING XEROPHYTIC CUCURBITA ...Aerial, Arid and Desert, Interspecific Genetic Relat., Squash, Pumpkin, Sterility, ...3.0010
- SOIL PHYSICAL CHANGES DUE TO MANAGEMENT PRACTICES ...Management, Management Effects, Tillage, Cropping Systems, Yield, ...2.0050
- SAFFORD VALLEY, ARIZONA GEOPHYSICAL STUDIES ...Geophysical Analysis, Groundwater, Hydrology-general, ...2.0276
- GILA RIVER PHREATOPHYTE PROJECT ...Energy Budgets, Evapotranspiration, Phreatophytes, Water Balance-budget, Water Loss Control, ...2.0042
- WATER RESOURCES APPRAISAL OF THE TUCSON BASIN, ARIZONA ...Groundwater Movement, River Basins, Storage of Water, Surface Water, Water Table Fluctuation, ...2.0043
- ELECTRICAL-ANALOG ANALYSIS OF HYDROLOGIC DATA, ARVA VALLEY, ARIZ ...Analog Computers, Groundwater, Model Studies, Pumping, Water Table Fluctuation, ...2.0044
- ARIZONA WEATHER MODIFICATION ENGINEERING RESEARCH, ATMOSPHERIC WATER RESOURCES ...Cloud Formation and Evolution, Clouds-precipitation, Nucleation Physics, Other, Storms-general, ...2.0186
- RELATIONSHIP BETWEEN MOORING DOVE PRODUCTION AND WATER DISTRIBUTION IN THE SONORAN DESERT ...Deserts, Dove, Habitat Studies, Productivity (agricultural), Water Utilization -animal, ...6.0262

Arkansas

- DISTRIBUTION AND GROWTH PATTERNS OF THE GIZZARD SHAD (DOROSOMA CEPEDIANU) AND THREADFIN SHAD (DOROSOMA PETENENSE) IN RESERVOIRS ...Alewife, menhaden, shad, herring, Growth Rate, Number Or Density, Reservoirs and Impoundments, Temporal Distribution, ...6.0029
- DEVELOPMENT OF AUTOMATED SUBIRRIGATION SYSTEM ...Automated Equipment, Design Criteria, Irrigation Engineering, Pipelines, Spray Devices, Subsurface Irrigation, ...3.0025
- WATER RESOURCES PLANNING STUDIES - ARKANSAS AND OKLAHOMA ...Daily, Oklahoma, River Basins, Water Allocation, Water Quality-general, ...6.0028

SUBJECT INDEX

Atlases-maps

THE DISTRIBUTION OF TRACE ELEMENTS IN IMPOUNDMENTS ...Electric Power Plants, Reservoirs and Impoundments, Trace Elements, Water Quality Control-general, Water Sampling, ...2.0068

A EUTROPHICATION MODEL OF THE WHITE RIVER BASIN ABOVE BEAVER RESERVOIR IN NORTHWEST ARKANSAS ...Eutrophication, Forecasting-prediction, Nutrients, Reservoirs and Impoundments, Simulation, ...5.0053

GROUNDWATER - SURFACE WATER INTEGRATION STUDY IN THE GRAND PRAIRIE REGION OF ARKANSAS ...Available Water, Conjunctive Use, Groundwater, Recharge -general, Water Demand, ...4.0020

GROUND WATER, RESOURCES AND RECHARGE - RICE ...Artificial Recharge, Groundwater, Irrigation-general, Pollution - Effects of, Water Wells, ...6.0026

ENGINEERING PHASES OF IRRIGATION IN ARKANSAS ...Irrigation, Irrigation Engineering, ...2.0069

RICE FARMS IN ARKANSAS ...Benefit-cost Analysis, Costs, Irrigation-general, Management, Rice, ...3.0026

CHEMICAL AND MINERALOGICAL RELATIONSHIPS BETWEEN SUBMERGED SOILS AND RICE CULTURE ...Aquatic Soils, Irrigation-general, Mineralogy, Rice, ...4.0021

LEGAL-ECONOMIC ASPECTS OF WATER USE IN ARKANSAS ...Administrative Structures, Economics-general, Water Law-general, Water Resources Development, Water Utilization -general, ...6.0025

MANAGEMENT ALTERNATIVES ON OZARK FOREST ...Erosion-general, Policy - Business Methods, Sediment Yield, Small Watersheds, Soils and Fertilizer, ...2.0073

WATER BALANCE AND ALKALINE EXCHANGE RELATIONSHIPS AS INFLUENCED BY WATER MANAGEMENT PRACTICES IN RICE ...Microclimate-general, Rice, Salt, Water Balance-budget, Water Depth, Water Levels, ...2.0071

POPULATION ESTIMATES FROM MIDWATER TRAWL SAMPLING ...Alewife,menhaden,shad,herring, Aquatic Ecology, Nets, Population Dynamics, Reservoirs and Impoundments, ...6.0019

MOVEMENTS OF SPORT FISHES IN BEAVER RESERVOIR ...Basses -sea,white, White Perch, Fishery Development -other, Migration, Reservoirs and Impoundments, Tags, ...6.0017

SPOTTED BASS REPRODUCTION IN BULL SHOALS ...Biological Rhythms, Centrarchidae -other, Environmental Ecology, Reproduction Studies (general), Reservoirs and Impoundments, ...6.0023

LIFE HISTORY OF LONGEAR SUNFISH ...Behavioral Ecology, Centrarchidae -other, Life History Studies, Reservoirs and Impoundments, Scuba, ...6.0016

MORTALITY RATES AND RECRUITMENT ...Fish -non-specific, Growth Rate, Mortality Rates, Population Dynamics, Reservoirs and Impoundments, ...4.0014

DESIGN AND CONSTRUCTION OF GEAR FOR MIDWATER TRAWLING ...Alewife,menhaden,shad,herring, Nets, Population Dynamics, Reservoirs and Impoundments, ...4.0016

ESTIMATES OF COMPOSITION, ABUNDANCE AND FLUCTUATION IN FISH POPULATIONS IN BULL SHOALS AND BEAVER RESERVOIRS ...Aquatic Ecology, Fish -non-specific, Number Or Density, Population Dynamics, Reservoirs and Impoundments, ...4.0017

Arkansas River

FISHES OF THE ARKANSAS RIVER BASIN, COLORADO ...Colorado, Environmental Changes, Fish -non-specific, Survey Studies, Water Environment -other, ...6.0102

WATER RESOURCES PLANNING STUDIES - OKLAHOMA AND ARKANSAS ...Data Acquisition-general, Federal Government, Planning, State-local Government, Storage of Water, ...6.0445

HYDROLOGY OF ARKANSAS RIVER VALLEY, CANON CITY TO STATE LINE ...Flow Characteristics -water, Groundwater, Hydrology-general, Irrigation-general, Management, Water Transfer, ...2.0202

Aromatic Cpds

AROMATIC SOLVENT AQUATIC HERBICIDES AND EMULSIFYING AGENT TESTING ...Chemical Analysis, Evaluation, Herbicides -non-specific, of Aquatic Plants, Petroleum Cpds. -non-specific, Plant Pollutants, ...3.0107

Astronomy

Planetary Studies

Environment

MINIMUM WATER CONCENTRATION OF ENVIRONMENTAL WATER CAPABLE OF SUPPORTING LIFE ...Extraterrestrial, Fungi -non-specific, Lichenes, Moisture, Water, ...6.0430

Atlantic Ocean-general

COORDINATION OF ESTUARINE REMOTE SENSING IN ATLANTIC COAST REGION ...Aerial, Estuaries, Satellites, ...2.0910

Atlantic Ocean-north

LOGISTIC SUPPORT AND MAINTENANCE OF FACILITIES ...Lakes, Maine, Marine Biology, Research Facilities, ...9.0009

EFFECTS OF HOT WATER MASSES ON MARINE FISHES ...Behavior -animal, Fish -non-specific, High Temp. -85f Or Above, Thermal, ...5.0721

CIRCULATION ON THE CONTINENTAL SHELF ...Circulation General, Continental Shelf, Eastern, Water Motion Recorders, ...2.0624

Atlantic Ocean-south

RESEARCH IN OCEANIC PHYSICS ...Convection, Mixing, Thermodynamics, Water Mass & Ocean Fronts, Wind-water Interaction, ...2.0619

Atlantic Plain

Coastal Plain

SHALLOW WELLS AND IRRIGATION PITS FOR IRRIGATION AND OTHER FARM WATER SUPPLY IN THE COASTAL PLAINS ...Aquifers-general, Irrigation-general, Pumping, Terrain Analysis, Water Wells, ...3.0194

INFLUENCE OF SOIL MOISTURE AND SOIL FERTILITY LEVELS ON ASPARAGUS YIELD AND QUALITY ...Asparagus, Moisture Content, Moisture Levels, Rates Or Levels of Application, ...2.0760

ATLANTIC COASTAL PLAIN - PERMEABILITY DISTRIBUTION STUDY ...Permeability, Sea Level Variations, Structural Source, Transport Direction, Wedges, ...2.0824

HYDROGEOLOGY OF ARTESIAN SYSTEMS AND LIMESTONE TERRANES ...Artesian Flow, Carbonate Aquifers, Clastic Aquifers, Southeast, Water Supply-general, ...2.0287

HYDROLOGY OF THE SAVANNAH RIVER PLANT, SOUTH CAROLINA --BEDROCK WASTE STORAGE EXPLORATION - HYDROLOGY OF COASTAL PLAIN SEDIMENTS (ABBREV) ...Clastic Aquifers, Crystalline Aquifers, Hydrology-general, Seepage, Underground Waste Disposal, ...5.1108

Continental Shelf

DISTRIBUTION OF YOUNG STAGES OF COASTAL FISHES ...Estuaries, Fish -non-specific, Maturity & Growth Stages, Number Or Density, Ships and Cruises, ...6.0345

Atlases-maps

COOPERATIVE GULF OF MEXICO INVENTORY AND STUDY - II HYDROLOGY ...Aquatic Ecology, Environmental Ecology, Estuaries, Gulf of Mexico, Water Properties-general, ...2.0670

COOPERATIVE GULF OF MEXICO INVENTORY AND STUDY - III SEDIMENTOLOGY ...Aquatic Ecology, Distribution, Environmental Ecology, Estuaries, Gulf of Mexico, ...2.0671

COOPERATIVE GULF OF MEXICO INVENTORY AND STUDY - IV BIOLOGY ...Aquatic Ecology, Environmental Ecology, Estuaries, Gulf of Mexico, Mississippi River, ...2.0672

COOPERATIVE GULF OF MEXICO INVENTORY AND STUDY (AREA DESCRIPTION) ...Estuaries, Gulf of Mexico, Industrial-general, Mississippi River, Water Properties-general, ...7.0061

GEOCHEMISTRY AND ORIGIN OF SULFO-SALINE GROUND WATER, SALINE COUNTY, MISSOURI ...Chemical-general, Geochemical Analysis, Groundwater, Permeability, Salinity, Sulfide, ...4.0152

A METHOD OF DETERMINING AND MAPPING THE HYDROLOGIC RESPONSE OF UNGAGED WATERSHEDS IN

Atlases-maps

- THE SOUTHEAST ...Hydrology-general, Land Use, Morphology-general, Small Watersheds, Southeast, ...7.0025
- WATER RESOURCES OF NORTH CAROLINA - AN INVENTORY OF INFORMATION AND DATA ...Indexes, North Carolina, Tables, Compilations, Catalogs, Water Resources - General, ...7.0085
- A GROUNDWATER QUALITY SUMMARY FOR ALASKA ...Alaska, Document & Literature Info, Groundwater, Water Quality-general, ...7.0001
- STUDY OF GEOLOGIC STRUCTURAL CONTROL ON THE FLOW AND DISCHARGE OF GEOTHERMAL WATERS ...Groundwater, Groundwater Movement, Iceland, Regional Structure, Thermal Features-other, ...2.0794
- A GEOGRAPHIC ANALYSIS OF THE HYDROLOGIC RESPONSE IN THE SOUTHEASTERN UNITED STATES ...Drainage, Land Use, Patterns, Southeast, ...2.0346
- FACTORS AFFECTING WATER YIELDS FROM SMALL WATERSHEDS AND SHALLOW GROUND AQUIFERS ...Moisture Content, Patterns, Puerto Rico, Runoff, Water Yield, ...4.0208
- TEXAS GEOLOGIC ATLAS PROJECT ...Compilation, Geologic Maps, Texas, ...7.0100
- GEOLOGY OF THE LAJITAS AND REDFORD QUADRANGLES, BREWSTER AND PRESIDIO COUNTIES, TEXAS ...Geologic Maps, Geology-general, Groundwater, Texas, ...2.1014
- GEOLOGY OF THE CAVE CREEK SCHOOL, MONUMENT HILL, AND YEAGER CREEK QUADRANGLES, GILLESPIE, BLANCO, AND HAYS COUNTIES, TEXAS ...Geologic Maps, Geology-general, Groundwater, Texas, Water Resources Development, ...7.0101
- GROUNDWATER SUPPLIES ...Aquifers-general, Groundwater, Natural Recharge, Total Volume, Water Table Fluctuation, ...2.0058
- EVALUATION OF MAGOTHY AQUIFER - ANNAPOLIS AREA ...Available Water, Clastic Aquifers, Maryland, Model Studies, Saline Water Intrusion, ...2.0564
- EXPLORATION AND MAPPING OF THE SALISBURY PALEOCHANNEL ...Borehole Geophysics, Channels, Geophysical Analysis, Maryland, Valley, Buried, ...2.0566
- FLOOD INUNDATION MAPPING, NORTHEASTERN ILLINOIS ...Data Networks, Discharge-general, Floods, Gaging, Illinois, ...4.0093

Atmosphere Composition

Chemical Composition

- STUDY OF LIGHT ISOTOPES IN LACUSTRINE ENVIRONMENTS ...Gaseous Atmosphere, Lakes, Oxygen, ...2.0242
- CHEMISTRY OF ATMOSPHERIC PRECIPITATION ...Environmental Effects-geologic, Groundwater, Precipitation-general, Streams, Water Quality-general, ...2.0279

Atmosphere Disturbance

Atmosphere Disturbance

- TIME DISTRIBUTION OF RAINFALL INTENSITIES ...Mathematical Analysis, Patterns, ...2.0920

Atmosphere Disturbance-general

- EVAPORATION MECHANISMS ...Boundary Process (moisture), Capillary Movement, Epidermis, Evaporation, Transpiration, Transpiration and Evap, ...2.1164

Fronts

- SKYWATER ...Amount, Clouds-precipitation, Montana, Storms-general, Topographic Influences, ...2.0200

Storms-general

- RAINOUT OF RADIOACTIVITY IN ILLINOIS ...Dispersion - Transporation, Fallout Products, Patterns, Washout, ...2.0445
- RAIN SCAVENGING STUDIES - DATA ANALYSIS, SYNTHESIS AND INTERPRETATION ...Clouds-precipitation, Dust - Particulate Matter, Precipitation-general, Tracers, Washout, ...7.0057
- PROBABLE MAXIMUM PRECIPITATION FOR SMALL BASIN IN THE TENNESSEE RIVER DRAINAGE SYSTEM ...Amount, Drainage, Tennessee River, Topographic Influences, Weather Forecasting, ...2.0594

SUBJECT INDEX

- MATHEMATICAL SIMULATION OF RAINFALL RUNOFF PROCESSES ...Computers-general, Hydrographs, Model Studies, Optimization, Other Computers, Runoff, ...2.1015
- CHEMICAL CHARACTERISTICS OF PRECIPITATION FALLING IN CHAMPLAIN VALLEY ...Chemical Analysis, Rain-general, Snow-general, Vermont, Water Quality-general, ...2.1086
- AN ATMOSPHERIC ENERGY BUDGET STUDY ...Great Basin, Heat Exchange, Water Balance-budget, ...2.0738
- THEORY FOR THE DESIGN OF PRECIPITATION NETWORKS FOR HYDROLOGIC ANALYSIS ...Gages, Patterns, ...7.0009
- NEUTRON ACTIVATION ANALYSIS OF IMPURITIES IN RAIN AND SNOW ...Activation Analysis, Calcium, Lake Erie, Rain-general, Snowmelt, Sulfur, ...5.0767
- COASTAL ENGINEERING STUDIES RELATED TO FLORIDAS SHORELINE AND BEACH EROSION PROBLEMS ...Beach, Bypassing, Erosion-general, General, Shoreline Structures, Waves, ...8.0160
- HYDROMETEOROLOGICAL ANALYSIS OF SEVERE RAINSTORMS ...Illinois, Meteorological Extremes, Patterns, Radar, Weather Charts-maps, ...2.0414
- CLIMATOLOGY OF HAIL ...Applied Climatology, Modification, Patterns, Radar, ...4.0097
- DENSE RAINGAGE NETWORK PROJECTS ...Climatology, Data Networks, Gages, Modification, Weather Modification-general, ...2.0424
- RAINFALL EVALUATION STUDIES ...Data Analysis Applications, Gages, General Synoptic Observations, Modification, Patterns, ...2.0416
- RELATION OF CLIMATIC AND WATERSHED CHARACTERISTICS TO STORM RUNOFF IN THE EDWARDS PLATEAU ...Amount, Runoff, Small Watersheds, Storm Water, Texas, ...2.1030
- MARINE SURFACE FORECASTING TECHNIQUES ...Forecasting-prediction, Lake Erie, Ocean Meteorological Studies, Surface Environments, Tides, ...2.0599
- HYDROLOGIC STUDIES (STORM STUDIES) ...Flood Control, Floodproofing, Hydrology-general, Patterns, Tables, Compilations, Catalogs, ...2.0549
- HYDROLOGIC STUDIES (STORM STUDIES) HAWAIIAN ISLANDS ...Hawaii, Hydrology-general, Storm Water, Weather Charts-maps, ...2.0366
- FLOODS IN NORTH LOUISIANA - RAINFALL-RUNOFF RELATIONSHIPS ...Amount, Floods, Gaging, Louisiana, Runoff, ...2.0537
- FLOOD HYDROLOGY INVESTIGATIONS ...Runoff, ...6.0090
- ATMOSPHERIC WATER RESOURCES RESEARCH IN THE STATE OF NEW MEXICO ...Clouds-general, Clouds-precipitation, New Mexico, Precipitation Instruments, Rio Grande, ...2.0175
- ARIZONA WEATHER MODIFICATION ENGINEERING RESEARCH, ATMOSPHERIC WATER RESOURCES ...Arizona, Cloud Formation and Evolution, Clouds-precipitation, Nucleation Physics, Other, ...2.0186
- SKYWATER ...Amount, Clouds-precipitation, Fronts, Montana, Topographic Influences, ...2.0200
- RELATION OF CLIMATIC AND WATERSHED FACTORS TO RUNOFF RATES AND VOLUME YIELDS ...Agricultural Watersheds, Climate, Flow Characteristics -water, Geomorphology-quantitative, Morphology-general, Water Yield, ...2.0333
- RELATION OF CLIMATIC AND WATERSHED FACTORS TO STORM RUNOFF IN CORN BELT STATES ...Agricultural Watersheds, Corn Belt, Patterns, Physical Climatology, Runoff, ...2.0867
- RELATION OF CLIMATIC AND WATERSHED FACTORS TO STORM RUNOFF IN THE SOUTHERN PLAINS ...Agricultural Watersheds, Conservation-general, Flow Characteristics -water, Runoff, ...4.0248
- STREAM FLOW REGIMES OF SEMIARID RANGELAND WATERSHEDS IN THE SOUTHWEST ...Channels, Flow Characteristics -water, Runoff, Semi - Arid, Storm Water, ...4.0009
- STREAM FLOW REGIMES ON A SEMIARID RANGELAND WATERSHED ...Agricultural Watersheds, Channels, Hydraulics-general, Hydrographs, Runoff, ...4.0178

Thunderstorms

- SHORT-DURATION CONVECTIVE RAINFALL - DEPTH-DURATION AND INTENSITY-DURATION RELATIONSHIPS AND VARIATIONS ...Amount, Convection, Gages, Patterns, ...2.0921

SUBJECT INDEX

Atomic Collisions

FIRE WEATHER FORECAST TECHNIQUES ...Fire Behavior - Identification, Fire Prevention, Regulation of Weather & Veg., Technique Development, Weather Forecasting, ...2.0587

FLOOD WAVE MOVEMENT IN NATURAL EPHEMERAL STREAM CHANNELS ...Channels, Ephemeral, Floods, Runoff, Waves, ...4.0008

Tropical Cyclones

TROPICAL STORM RAINFALL AND HURRICANE WIND FIELDS ...Forecasting, Gulf of Mexico, Pressure-density, Velocity, ...2.0595

Atmosphere Radiation

WMO EVAPORATION PAN DATA ...Air Temperature Instruments, Evaporation, Standards, Specifications, ...2.1113

EVAPORATION ...Evaporation, Forecasting-prediction, Lakes, Radiation-general, Water Yield, ...2.0603

ECOLOGICAL ENGINEERING PROJECT ...Nutrients, Synthetic Hydrology-general, Temperature, Tracers-general, Velocity - water, ...6.0159

Atmospheric Pollution

Atmoppheric Pollution-general

PREPARATION AND ANALYSIS OF CLIMATOLOGICAL DATA IMPORTANT TO AGRICULTURE AND FORESTRY ...Applied Climatology, Patterns, Precipitation -non-specific, Stochastic Processes, Western, ...4.0199

MEASUREMENT OF AIR AND WATER QUALITY ...Pollutants-general, Techniques-other, Water Quality-general, ...5.1178

INFORMATION PROCEDURES IN ENVIRONMENTAL CONTAMINATION ...Atmospheric Contamination, General Information Services, Pesticides -non-specific, ...7.0070

CONFERENCE ON SANITARY ENGINEERING EDUCATION ...Air Pollution Control, Education and Training, Management, Meetings, Water Quality-general, ...5.1152

Behavior

Dispersion - Transporation

RAINOUT OF RADIOACTIVITY IN ILLINOIS ...Fallout Products, Patterns, Storms-general, Washout, ...2.0445

PRECIPITATION SCAVENGING ...Nuclear Explosions - Fallout, Nucleation Physics, Rain-other, Snow-other, Washout, ...5.1252

Pollution Behavior-general

IRRIGATION EFFICIENCY ...Evaporation, Irrigation Engineering, Sprinkler Irrigation, Velocity, Wind Tunnels, ...3.0179

Washout

RAINOUT OF RADIOACTIVITY IN ILLINOIS ...Dispersion - Transporation, Fallout Products, Patterns, Storms-general, ...2.0445

RAIN SCAVENGING STUDIES - DATA ANALYSIS, SYNTHESIS AND INTERPRETATION ...Clouds-precipitation, Dust - Particulate Matter, Precipitation-general, Storms-general, Tracers, ...7.0057

EFFECT OF CHARGE UPON COLLISIONS IN WASHOUT ...Charge on Droplets, Charged Particles, Collision Effects, Droplet Formation, Dust - Particulate Matter, ...2.0155

SCAVENGING STUDY OF SNOW AND ICE CRYSTALS ...Charge on Droplets, Nucleation Physics, Structure, Structure-size, ...2.0406

ISOTOPES IN THE BIOSPHERE ...Erosion-general, Management, Pollutants - Path of , Radioactive Fallout, Runoff, Strontium, ...5.0670

PRECIPITATION SCAVENGING ...Dispersion - Transporation, Nuclear Explosions - Fallout, Nucleation Physics, Rain-other, Snow-other, ...5.1252

Sources

Nuclear Explosions - Fallout

PRECIPITATION SCAVENGING ...Dispersion - Transporation, Nucleation Physics, Rain-other, Snow-other, Washout, ...5.1252

Pest Control

REDUCTION OF INSECTICIDAL HAZARDS ...Atmospheric Contamination, Insecticides -non-specific, Movement, Leaching, Persistence in Soils, Pollution - Effects of , ...5.0393

INSECTICIDE RESIDUES ON ALFALFA ...Insecticides -non-specific, Persistence of Residues, Persistence in Soils, Soil Chemical Properties, ...5.1115

Pulp and Paper

CHAMPLAIN VALLEY PRECIPITATION STUDY ...Gages, Patterns, Sulfur, Valleys and Canyons, ...2.0812

Techniques

Monitoring-general

PRODUCTION AND DISPERSAL OF PATHOGENIC BACTERIAL AND VIRAL AEROSOLS BY AERATION OF CONTAMINATED WATERS ...Aeration, Aerosols, Biological Organisms, Effluents-waste Water, Mycobacterium Tubercul, Wind Tunnels, ...5.0301

Sampling-general

RAINFALL EVALUATION STUDIES ...Data Analysis - General, Gages, Modification, Patterns, Weather Modification-general, ...3.0219

Techniques-other

MEASUREMENT OF AIR AND WATER QUALITY ...Atpmopheric Pollution-general, Pollutants-general, Water Quality-general, ...5.1178

Types

Aerosols

PRODUCTION AND DISPERSAL OF PATHOGENIC BACTERIAL AND VIRAL AEROSOLS BY AERATION OF CONTAMINATED WATERS ...Aeration, Biological Organisms, Effluents-waste Water, Monitoring-general, Mycobacterium Tubercul, Wind Tunnels, ...5.0301

Biological Organisms

PRODUCTION AND DISPERSAL OF PATHOGENIC BACTERIAL AND VIRAL AEROSOLS BY AERATION OF CONTAMINATED WATERS ...Aeration, Aerosols, Effluents-waste Water, Monitoring-general, Mycobacterium Tubercul, Wind Tunnels, ...5.0301

Dust - Particulate Matter

RAIN SCAVENGING STUDIES - DATA ANALYSIS, SYNTHESIS AND INTERPRETATION ...Clouds-precipitation, Precipitation-general, Storms-general, Tracers, Washout, ...7.0057

EFFECT OF CHARGE UPON COLLISIONS IN WASHOUT ...Charge on Droplets, Charged Particles, Collision Effects, Droplet Formation, Washout, ...2.0155

DEEP ICE CORE STUDIES AND ANALYSES FROM GREENLAND AND ANTARCTICA ...Antarctica, Core Analysis, Extraterrestrial, Greenland, Radioactive Dating-general, Velocity, ...2.0754

Ice Fog

COLD REGIONS PHYSICAL SCIENCE ...Arctic, Cloud Physics, Electron, Petrofabrics, ...2.0757

Radioactivity

RADIOACTIVITY IN RAINFALL ...General Synoptic Observations, Illinois, Rain-general, ...2.0415

Atmospheric Pressure

LAKE EFFECT SNOW SITUATIONS, EASTERN LAKE ONTARIO AREA ...Data Acquisition, General Synoptic Observations, Lake Ontario, Topographic Influences, ...7.0084

IMPROVE PRECIPITATION MEASURING EQUIPMENT - HYDROLOGIC EQUIPMENT IMPROVEMENT ...Data Acquisition Systems, Gages, Instrumental Services, Technique Development, Transducers, ...7.0051

Atomic & Molecular Beams

SCATTERING MEASUREMENTS ON ALKALI - WATER SYSTEMS ...Alkali Metals-general, Atomic Collisions, Atomic Forces and Potentials, Multipole Interactions, ...1.0021

Atomic Collisions

SCATTERING MEASUREMENTS ON ALKALI - WATER SYSTEMS ...Alkali Metals-general, Atomic & Molecular Beams, Atomic Forces and Potentials, Multipole Interactions, ...1.0021

Atomic Collisions

SCATTERING MEASUREMENTS ON ALKALI - WATER SYSTEMS ...Alkali Metals-general, Molecular Collisions, Other, Water, ...1.0022

Atomic Forces and Potentials

SCATTERING MEASUREMENTS ON ALKALI - WATER SYSTEMS ...Alkali Metals-general, Atomic & Molecular Beams, Atomic Collisions, Multipole Interactions, ...1.0021

Multipole Interactions

SCATTERING MEASUREMENTS ON ALKALI - WATER SYSTEMS ...Alkali Metals-general, Atomic & Molecular Beams, Atomic Collisions, Atomic Forces and Potentials, ...1.0021

Potential Functions

THEORY OF LIQUIDS ...Approximations, Interparticle Forces, Perturbation Methods, Solution-other, Statistical, ...1.0016

Van Der Waals Forces

STATISTICAL MECHANICAL THEORIES OF FLUIDS ...Interface, Quantum Analysis, Solution, Statistical, Tension, ...1.0084

Atomic Magnetic Phenomena

Spin-orbit Interaction

THE BASIC NATURE OF LIQUIDS ...Absorption Spectra, Infrared, Interparticle Forces, Self Consistent Fields, ...1.0117

Augmentation-general

A STUDY OF THE HYDROLOGIC EFFECTS OF RAINFALL AUGMENTATION ...Amount, Clouds-precipitation, Digital Computers, Model Studies, Watersheds-general, ...3.0076

THE VALUE OF WATER IN COMPLEMENTARY INDUSTRY COMPLEXES ...Agriculture Industry, Economic Impact, Social Aspects, Utah, ...6.0576

AN OPTIMAL WATER MANAGEMENT PLAN FOR THE MIAMI VALLEY ...Alternative Planning, Artificial Recharge, Conjunctive Use, Floodproofing, Optimization Technique, Systems Analysis, ...6.0467

REVERSE OSMOSIS TO REMOVE DISSOLVED SOLIDS FROM RENOVATED WASTE WATER USED IN GROUND WATER RECHARGE ...Artificial Recharge, Effluent-standards, Reverse Osmosis, Waste Water Treatment-general, Water Reuse, ...5.0095

METHODS FOR IMPROVING ROCK PERMEABILITY ...Mineralized Rock, Permeability, Rock Fragmentation Methods, Soil and Rock Leaching, ...3.0018

RECHARGE OF GROUND WATER IN RIVER VALLEYS OF EASTERN AND CENTRAL KANSAS, AND THE HIGH PLAINS ...Artificial Recharge, Great Plains Province, Groundwater, Groundwater Mining, Natural Recharge, Water Table Fluctuation, ...4.0116

REGIONAL COMPREHENSIVE MULTI-PURPOSE WATER RESOURCES PLANNING STUDIES ...Multiple-purpose Projects, New York, Planning, Public Utilities, Water Resources Development, ...6.0370

CASCADES ATMOSPHERIC WATER RESOURCES PROGRAM ...Cascade Mountains, Clouds-precipitation, Data Analysis - General, Formation, Washington, ...2.1128

WATER RESOURCES OF CENTRAL WISCONSIN, A WATER-POOR AREA ...Artificial Recharge, Deposits, Geophysical Analysis, Valley, Buried, Wisconsin, ...2.1146

VALUE OF DESALTED WATER FOR IRRIGATION ...Benefit-cost Analysis, Desalination, Irrigation-general, Planning, Use of Impaired Water, ...3.0122

ATMOSPHERIC WATER RESOURCES PROGRAM ...Clouds-precipitation, Modification, Reservoirs and Impoundments, Technique Development, Water Quantity-general, ...2.0163

STATE OF WASHINGTON DEPARTMENT OF WATER RESOURCES CASCADE ATMOSPHERIC WATER RESOURCES PROGRAM ...Cascade - Sierra Mountains, Clouds-precipitation, Nucleation Physics, Patterns, Washington, ...2.0195

ATMOSPHERIC WATER RESOURCES RESEARCH ...California, Clouds-precipitation, Modification, Technique Development, ...2.0206

SUBJECT INDEX

Automatic Systems

AUTOMATED POTENTIOMETRIC TECHNIQUES FOR THE ON-SITE MONITORING OF ANION CONCENTRATIONS IN WATER ...Analysis and Detection, Electrode, Nitrate, Nitrite, Potentiometry, Technique Development, ...5.0676

AUTOMATIC RECORDING OF SHORT TERM B.O.D. ...Biochemical Oxygen Demand, Effluent-standards, Sewage Testing, Technique Development, ...7.0039

DETERMINATION OF THE PHOSPHATE CONTENT OF NATURAL WATERS, AT THE NUTRIENT LEVEL, BY SOLVENT EXTRACTION ...Extraction-other, Fresh Water, Nutrients, Phosphate, Phosphite, Trace Analyses-other, ...1.0015

Bacteria

Actinomycetes -non-specific

A STUDY OF THE METABOLISM OF THE AQUATIC ACTINOMYCETES ...Bacterial Pollutants, Sources, Respiration, Taste and Odor, ...5.1168

A STUDY OF MICROORGANISMS INDUCING TASTES AND ODORS IN WATER ...Algae- General, Gas, Mass, Taste and Odor, ...5.0212

Aerobic Bacteria

AEROBIC DISPOSAL OF ANIMAL WASTES WITH CONTINUOUS WATER REUSE ...Aerobic, Animal Waste Removal-treatment, Dilution-general, Sludge-other, Water Reuse, ...5.0294

Anaerobic Bacteria

EFFECTS OF WATER PROPERTIES IN THIXOTROPIC CLAY SYSTEMS ON BIOLOGICAL ACTIVITY ...Cell Cycle, Clay, Origin of Life, Thermodynamics, ...6.0217

THE BIOCHEMISTRY OF ANAEROBIC DIGESTION ...Acids, Anaerobic, Biodegradation, Other, Respiration, ...5.0762

Arthrobacter

SIGNIFICANCE OF ARTHROBACTER IN ECOLOGY OF WATER AND SOIL ...Catabolism and Degradation, Cell, env.(non-specific & Ot.), Nucleic Acids, Plant Succession, ...5.1302

Azotobacter -non-specific

AZOTOBACTER ECOLOGY ...Bioindicators, Effluents-waste Water, Streams, Symbiotic Nitrogen Fixation, ...5.0322

Bacteria (non-specific)

STUDIES ON THE INTERACTIONS OF BACTERIA AND AQUATIC NEMATODES ...Animal Pollutant Sources, Aquatic Ecology, Bacterial Pollutant Sources, Interbiotic Relat.(non-specific), Nematoda -other, ...5.0013

BIOCHEMICAL OXIDATION OF HYDROCARBONS IN NATURAL WATERS ...Chemostat, Degradation, Hydrocarbons, Organic Matter, Seasonal, ...1.0110

THE EFFECT OF WATER STRUCTURE ON BIOLOGICAL ACTIVITY ...Corn, Molecular Interaction, Water, Water Movement, ...1.0047

RECOVERY OF INDICATOR BACTERIA ON SELECTIVE MEDIA DURING DECREASE OF VIABLE COUNTS ...Bioindicators, Media, Tests of Cell Viability, Water Bacteria, ...5.0587

Clostridium Botulinum

STUDY OF WATERFOWL BOTULISM ...California, Growth (non-specific & Ot.), Identification, Pathology, Water Fowl, N.s., ...6.0070

SURVEY OF CLOSTRIDIUM BOTULINUM TYPE E ...Growth (non-specific & Ot.), Media, Microbiological Analysis, Pathology, ...5.1310

SURVEY OF CLOSTRIDIUM BOTULINUM TYPE E ...Bacterial Exotoxins, Identification, Infra Red, Mutagens, ...5.0957

BOTULINUM FOOD POISONING IN RELATION TO FISHERY PRODUCTS ...Antibiotics, Fish, N.s., Great Lakes-general, Microbiological, Repression, ...5.1305

ECOLOGY OF C. BOTULINUM IN THE COMMERCIAL FISHERIES ENVIRONMENT ...Identification, Productivity - Food Chain, Serology, ...6.0291

CLOSTRIDIUM OUTGROWTH AND TOXIN PRODUCTION DURING STORAGE OF SHELLFISH ...Bacterial Pollutant

SUBJECT INDEX

Bacteria

Sources, Microbiological, Oysters, Pacific Ocean-general, Shelf Life & Storage, ...5.1223

THERMAL DESTRUCTION OF TYPE E CLOSTRIDIUM BOTULINUM ...Cell Injury and Autolysis, Heat Resistance, Microbiological, Spore Studies, Toxicological and Allergy, ...5.0233

THE ECOLOGY OF CLOSTRIDIUM BOTULINUM IN THE TVA LAKES AREA ...Bacterial Exotoxins, Bacterial Pollutant Sources, Food, Microbiological, Range Or Territorial Distr. , Tennessee, ...2.0990

ECOLOGY OF CLOSTRIDIUM BOTULINUM TYPE E IN GREEN BAY ...Fish -non-specific, Fish, N.s. , Great Lakes-general, Microbiological, Repression, Vertical Distribution, ...2.1162

EFFECT OF TEMPERATURE AND RELATIVE HUMIDITY ON C. BOTULINUM SPORE SURVIVAL IN WHITEFISH CHUBS DURING SMOKE PROCESSING ...Ciseco, Lake Herring, Fish - other, Heat, Microbiological, Smoking, ...5.1320

SPORULATION AND GERMINATION OF CLOSTRIDIUM BOTULINUM ...Bacterial Exotoxins, Cell. env.(non-specific & Ot.), Growth (non-specific & Ot.), Media, Spore Studies, ...5.0568

THE ECOLOGY OF CLOSTRIDIUM BOTULINUM TYPE E ...Bacterial Exotoxins, Classification Or Taxonomy, Ecology, Estuaries, Serology, ...5.1070

Coliforms (non-specific)

A STUDY OF COLIFORM BACTERIA AND ESCHERICHIA COLI ON POLLUTED AND UNPOLLUTED OYSTER BOTTOMS OF MISSISSIPPI ...Identification, Mississippi River, Sewage, Vertical Distribution, Water Sampling, ...5.0619

BACTERIOLOGICAL WATER QUALITY ANALYSES OF METHODS FOR DETECTING FECAL POLLUTION ...Bacterial Pollutant Sources, Bioindicators, Microbiological Analysis, Salmonella (non-specific & Ot), Streptococcus Fecalis, ...5.1113

MICROBIOLOGICAL STUDIES IN AN OPEN AND A CLOSED WATERSHED ...Bacterial Pollutant Sources, Montana, Recreation Sites, Streptococcus Fecalis, Watersheds-general, ...5.0696

ENTERIC BACTERIA AND VIRUSES IN SEWAGE, WATER, AND SHELLFISH ...Bacterial Pollutant Sources, Oysters, Pollution Effects, Sewage, Viral Pollutant Sources, ...5.0718

INDICATOR-PATHOGEN DENSITY RELATIONSHIPS IN TRIBUTARY STREAMS ...Bacterial Pollutant Sources, Bioindicators, Microbiological Analysis, Pollutants - Path of , Streams, ...5.0562

A COMPARISON OF TOTAL COLIFORM AND FECAL COLIFORM COUNTS IN STREAM POLLUTION SURVEYS ...Bacterial Pollutant Sources, Bioindicators, Surface Water, Survey Studies, Water Standards, ...5.1296

EFFECTS OF DEVELOPMENT ON WATER QUALITY ...Eutrophication, Land Use, Nutrients, Soil Conditions, Streams, ...5.1118

FREQUENCY DISTRIBUTION OF BIOLOGICAL POLLUTANTS IN SHELLFISH AND THE MARINE ENVIRONMENT ...Biology, Enteroviruses of Humans, Gulf of Mexico, Oysters, Pollution-water, ...5.0016

E Coli

DEGRADATION OF SEWAGE AND SOIL MICROORGANISMS ...Catabolism and Degradation, Degradation, Micro-organism Enz, Sewage, Soil Bacteria, ...5.0524

Food Bacteria

SURVIVAL OF FOOD PATHOGENS IN RADIATION PASTEURIZED SEAFOOD ...Dosimetry, Fish, N.s. , Food, Microbiological, Radiation, ...5.0933

Gram-negative Bacteria

BACTERIOLOGY OF BIODEGRADABLE SURFACTANTS ...Cell Injury and Autolysis, Electron, Gram-positive Bacteria, Repression, Surfactants, ...5.0106

Gram-positive Bacteria

BACTERIOLOGY OF BIODEGRADABLE SURFACTANTS ...Cell Injury and Autolysis, Electron, Gram-negative Bacteria, Repression, Surfactants, ...5.0106

Heterotrophic Bacteria

ENERGY SOURCES OF HETEROTROPHIC MICROORGANISMS IN AN AQUATIC ENVIRONMENT ...Bioenergetics, Glycolic Acid Cpd, Photosynthesis, Phytoplankton, ...2.0622

Intestinal Bacteria

EFFECT OF POLLUTING AGENTS ON SURVIVAL OF INDICATOR ORGANISMS ...Bioindicators, Pollution-water, Salmonella (non-specific & Ot), Shigella (non-specific & Ot.), Zooplankton, ...5.1132

BACTERIAL EFFECTS OF ALGAE ON ENTERIC ORGANISMS ...Algae- General, Algal Culture, Bactericides -non-specific, Sanitation, Sewage, ...5.1151

ENTERIC BACTERIAL DEGRADATION OF STREAM DETRITUS ...Bacterial Pollutant Sources, Model Studies, Organic-general, Sanitation, Self-purification, ...5.0291

ROLE OF ENTERIC MICROORGANISMS IN DETOXIFICATION - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Bacterial Culture, Biodegradation, Fish -non-specific, Identification, Insecticides -non-specific, ...5.0641

EVALUATION OF METHODS FOR RECOVERY OF ENTEROBACTERIACEAE FROM MARINE SOURCES ...Bacterial Pollutant Sources, Crustacea -non-specific, Estuaries, Pollutants-general, ...5.1225

PURIFICATION OF HARD CLAMS FROM POLLUTED WATERS ...Animal Viruses (non-specific), Clams, Contamination - Water, Estuaries, New Jersey, ...5.0729

INCIDENCE OF PATHOGENIC ENTEROBACTERIACEAE AND ENTEROVIRUSES IN ESTUARINE AREAS ...Detection, Enteroviruses of Humans, Estuaries, Puget Sound, ...5.1226

Iron Bacteria

MICROBIOLOGICAL ASPECTS OF ACID MINE-DRAINAGE ...Acidity, Autotrophic, Indiana, Mining Industry, Sulfur Bacteria, ...5.0385

FACTORS AFFECTING MINE DRAINAGE AND THE GROUND WATER INTERACTIONS IN SELECTED AREAS OF WESTERN PENNSYLVANIA (PART I) ...Acidity, Groundwater Movement, Mine Drainage Control, Pyrite Group, Soil and Rock Leaching, ...1.0107

Marine Bacteria (non-specific)

BIOCHEMICAL EFFECTS OF MICROORGANISMS UPON THE SALT MARSH ENVIRONMENT ...Bacterial Pollutant Sources, Identification, Laboratory, Salinity, Swamps-marshes, ...1.0025

MICROBIOLOGY OF MARINE AND ESTUARINE INVERTEBRATES ...Estuaries, Microbiological Analysis, Oysters, ...2.0586

NITRIFICATION BY MARINE MICROORGANISMS ...Autotrophic, Bact. morphology (general), Bacterial Culture, Isolation From Nat. environ. , Nitrification, Nitrogen Bacteria, Range Or Territorial Distr. , ...1.0066

Methane Bacteria (non-specif.)

STUDIES ON THE METHANOGENIC BACTERIA IN SLUDGE ...Acids , Culture Collections, Digestion, Isolation From Nat. environ. , ...5.0259

PRIMARY PRODUCTION AND DECOMPOSITION IN ESTUARINE WATER ...Estuaries, Florida, Phaeophyta (non-specific & Ot), Primary Productivity, Rhodophyta (non-specific & Ot), Turnover (metabolic), ...5.0257

CONTROLLING FACTORS IN METHANE FERMENTATION ...Bacterial Culture, Cell. env.(non-specific & Ot.), Fermentation, Respiration, Saturated Hydrocarbons, ...5.0754

ACCLIMATION OF HIGH RATE ANAEROBIC DIGESTION ...Acetate, Anaerobic, Digestion, Fermentation, ...5.0366

Mycobacterium Tubercul

PRODUCTION AND DISPERSAL OF PATHOGENIC BACTERIAL AND VIRAL AEROSOLS BY AERATION OF CONTAMINATED WATERS ...Aeration, Aerosols, Biological Organisms, Effluents-waste Water, Monitoring-general, Wind Tunnels, ...5.0301

Myxobacteria

STUDIES ON AQUATIC MYXOBACTERIA ...Bacterial Pollutant Sources, Bioindicators, Degradation, Nutrition, Range Or Territorial Distr. , Streams, ...5.0952

Bacteria

SUBJECT INDEX

STUDIES ON AQUATIC MYXOBACTERIA ...Applied Ecology, Bacterial Pollutant Sources, Fresh Water, Pollution Abatement, Range Or Territorial Distr. , ...5.0954

Nitrogen Bacteria

MICROBIAL ECOLOGY OF LAKE CHAMPLAIN AS INFLUENCED BY PESTICIDES ...Biodegradation, Freshwater Ecology, Lakes, Microorganisms (non-specific), ...5.1202

CONTROL OF BIOLOGICAL GROWTHS IN RAPID SAND FILTERS AS RELATED TO IRON REMOVAL ...Disinfection, Iron, Nitrification, Repression, Sand, ...5.0377

NITRIFICATION BY MARINE MICROORGANISMS ...Autotrophic, Bact. morphology (general), Bacterial Culture, Isolation From Nat. environ. , Marine Bacteria (non-specific), Nitrification, Range Or Territorial Distr. , ...1.0066

Salmonella (non-specific & Ot)

EFFECT OF POLLUTING AGENTS ON SURVIVAL OF INDICATOR ORGANISMS ...Bioindicators , Intestinal Bacteria, Pollution-water, Shigella (non-specific & Ot.), Zooplankton, ...5.1132

BACTERIOLOGICAL WATER QUALITY ANALYSES OF METHODS FOR DETECTING FECAL POLLUTION ...Bacterial Pollutant Sources, Bioindicators, Coliforms (non-specific), Microbiological Analysis, Streptococcus Fecalis, ...5.1113

DEMONSTRATION OF THE CHANNEL AERATION PROCESS IN TREATMENT OF SEWAGE ...Aeration, Applied Ecology, Enteroviruses of Animals, Enteroviruses of Humans, Nutrients, ...5.0596

STUDY OF GROWING AREA STANDARD BY EXAMINING ENTEROPATHOGENS AND INDICATOR ...Bioindicators, Enteroviruses of Humans, Microbiological Analysis, Number, Sewage, ...5.1069

Salmonella Typhimurium

THE DEVELOPMENT OF OPERATIONAL SHELLFISH DEPURATION AND RELAYING SYSTEMS ...Bacterial Pollutant Sources, Clams, Thermal Pollution, Trace Elements, ...5.1068

Sewage Bacteria

MICROBIOLOGY OF SEWAGE LAGOONS - EFFECTS OF INDUSTRIAL WASTES ON COLIFORM AND OTHER ENTERIC ORGANISMS ...Bacteria, Biochemical Oxygen Demand, Food Processing Industry, Industrial Waste-other, Lagoon, Sewage Lagoons, ...5.0837

EFFECTS OF AUDIO VIBRATIONS ON AERATED BIOLOGICAL SYSTEMS ...Activated, Aeration, Bubble, Sonic, Waste Water Treatment-general, ...5.0673

MICROBIAL DEGRADATION OF ORGANIC POLLUTANTS OF INDUSTRIAL ORIGIN ...Chemical, Industrial Wastes, Microbial-bacterial, Organic Matter, Toxic Substances -non-specific, ...5.0514

MICROBIOLOGICAL CHARACTERIZATION OF ACTIVATED SLUDGE IN A WASTEWATER TREATMENT PLANT CHEMICALLY MODIFIED FOR PHOSPHORUS REMOVAL ...Activated, Acrobic, Cell. env.(non-specific & Ot.), Chemical Treatment, Phosphorus, ...5.1046

DETECTION AND SIGNIFICANCE OF ENZOOTIC WATER POLLUTION ...Animal Wastes - Feed Lots, Bacterial Pollutant Sources, Bioindicators, Enzootic, Protozoa -other, ...5.0700

MICROBIOLOGY OF SLUDGE - DNA ANALYSES AND N₂ REMOVAL ...Activated, Denitrification, ...5.0694

IDENTIFICATION OF LIMITING FACTORS IN THE BIOLOGICAL TREATMENT OF SEWAGE ...Activated, Biological Treatment-other, Other, Pilot Plant, ...5.0230

CHLORINATION OF WASTE WATER EFFLUENTS ...Activated, Bacteria, Chlorination, Effluent-standards, Illinois, ...5.0367

STUDY OF MICROBIOLOGICAL-BIOCHEMICAL PHOSPHATE ADSORPTION MECHANISM BY ACTIVATED SLUDGE ...Absorption-other, Activated, Mechanisms, Other, Phosphate, Phosphate, ...5.0907

Shigella (non-specific & Ot.)

EFFECT OF POLLUTING AGENTS ON SURVIVAL OF INDICATOR ORGANISMS ...Bioindicators, Intestinal Bacteria, Pollution-water, Salmonella (non-specific & Ot.), Zooplankton, ...5.1132

Soil Bacteria

DEGRADATION OF SEWAGE AND SOIL MICROORGANISMS ...Catabolism and Degradation, Degradation, E Coli, Micro-organism Enz, Sewage, ...5.0524

BIOTRANSFORMATION OF ALDRIN AND DIELDRIN BY BACTERIA - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Aldrin, Biodegradation, Cell. env.(non-specific & Ot.), Dieldrin, Other, Water Bacteria, ...5.0644

BIOTRANSFORMATION OF HEPTACHLOR BY BACTERIA - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Bacterial Pollutant Sources, Biodegradation, Heptachlor, Other, Water Bacteria, ...5.0645

Sphaerotilus

THE BIOLOGY AND CHEMISTRY OF SPHAEROTILUS ...Autotrophic, Butyric Acid, Growth (non-specific & Ot.), Nutrition, Oxidation-general, ...5.1241

ECOLOGY OF SPHAEROTILUS IN ACTIVATED SLUDGE ...Activated, Cell. env.(non-specific & Ot.), Ecology, Identification, Microbial-bacterial, ...5.0341

EFFECT OF PAPER FIBER WASTES ON FISH EGGS AND JUVENILES ...Fish -non-specific, Minnesota, Oxygen, Pollution - Effects of , Pulp, Paper , and Logging, ...5.0614

SLIME CONTROL ASSOCIATED WITH PULP MILL EFFLUENTS ...Bacterial Pollutant Sources, Industrial Wastes, Nutrition, Pulp and Paper Wastes, ...5.0977

Streptococcus Fecalis

BACTERIOLOGICAL WATER QUALITY ANALYSES OF METHODS FOR DETECTING FECAL POLLUTION ...Bacterial Pollutant Sources, Bioindicators, Coliforms (non-specific), Microbiological Analysis, Salmonella (non-specific & Ot.), ...5.1113

MICROBIOLOGICAL STUDIES IN AN OPEN AND A CLOSED WATERSHED ...Bacterial Pollutant Sources, Coliforms (non-specific), Montana, Recreation Sites, Watersheds-general, ...5.0696

ENTEROCOCCI, COLIFORM BACTERIA AND BACTERIOPHAGES IN LAKE WATER ...Bacterial Pollutant Sources, Bacteriophages (non-spec & Ot), Detection & Diagnosis, ...5.1315

Sulfur Bacteria

METABOLIC ROLE OF SULFATES AND SULFIDES PRODUCING BACTERIA IN THE POLLUTION OF WATERS ...Autotrophic, Bacterial Pollutant Sources, Budgets -other, Mine Drainage Control, Respiration, ...5.0438

WASTE WATER ODOR REDUCTION MECHANISMS IN SOIL FILTERS ...Biological, Growth (non-specific & Ot.), Pollutant-other, Soil, Taste and Odor, ...5.1258

MICROBIOLOGICAL REMOVAL OF IRON FROM MINE DRAINAGE WATERS ...Acid Mine Wastes, Iron, Microbial-bacterial, Oxidation-other, Reduction-other, ...5.0925

MICROBIOLOGICAL ASPECTS OF ACID MINE-DRAINAGE ...Acidity, Autotrophic, Indiana, Iron Bacteria, Mining Industry, ...5.0385

Vibrio N S

VIBRIO PARAHAEEMOLYTICUS IN THE ESTUARINE ENVIRONMENT ...Crustacea -non-specific, Estuaries, Isolation From Nat. environ. , Mollusks -non-specific & Other, Temporal Distribution, ...2.1115

Water Bacteria

ZOOPLANKTON NUTRITION IN LARGE RESERVOIRS ...Nutrition - Invertebrate, Population Dynamics, Productivity - Food Chain, Reservoirs and Impoundments, Zooplankton, ...2.0515

FACTORS AFFECTING ZOOPLANKTON PRODUCTION IN FOUR ARIZONA LAKES ...Environmental Ecology, Lakes, Productivity - Food Chain, Trace Element Analysis, Zooplankton, ...5.0047

SEASONAL VARIATIONS IN THE PHYTOPLANKTON - BACTERIA POPULATIONS AND THE NUTRIENT CONCENTRATION IN BEAVER RESERVOIR ...Nitrogen, Phosphorus, Phytoplankton, Reservoirs and Impoundments, Temporal Distribution, ...6.0027

ECOLOGICAL RELATIONSHIPS OF ORGANIC MATTER AND BACTERIA IN TUTTLE CREEK RESERVOIR ...Food Chains, Freshwater Ecology, Kansas, Organic Matter, Reservoirs and Impoundments, ...5.0428

ECOLOGY OF SELECTED AQUATIC BACTERIA IN THE SNAKE RIVER ...Bacterial Pollutant Sources, Pollution - Effects of , Pulp, Paper , and Logging, Sewage, Snake River, ...5.1236

BIOLOGICAL DEGRADATION OF WASTES UNDER PSYCHROPHILIC ENVIRONMENTS ...Bacterial Pollutant

SUBJECT INDEX

Bacterial Studies

- Sources, Biological, Low Temp. - But Above 32f, Mixed Culture, Polar, ...5.0036
- MICROBIAL INTERVENTION IN THE EUTROPHICATION PROCESS ...Eutrophication, Food Chains, Nutrients, Organic, Phytoplankton, ...5.0515
- THE ECOLOGY OF STREAM BIOTA IN WASTE ASSIMILATION ...Degradation, Organic Matter, Periphyton, Self-purification, Streams, ...5.0675
- THE ECOLOGIC IMPACT OF THE INTERACTIONS AMONG MICROORGANISMS AND AQUATIC CONTAMINANTS IN LAKE ERIE ...Environment, Lake Erie, Pollution - Effects of Primary Productivity, Sediments, ...6.0427
- EFFECT OF AN ACID-WATER ENVIRONMENT UPON THE SYNTHESIS OF GROWTH FACTORS BY BACTERIA ...Biosynthesis, Industrial Wastes, Ionic Effect, Mining Activities, Waste Water Treatment-general, ...5.1285
- STUDIES ON AQUATIC STALKED BACTERIA ...Bacterial Culture, Classification Or Taxonomy, Ecology, Growth (non-specific & Ot.), Stalks and Buds, ...5.1280
- RAPID IDENTIFICATION OF MICROBIAL POPULATIONS IN WATER ...Biological Pollutants -general, Fresh Water, Identification, Membrane, ...5.1167
- SEDIMENT-WATER-BACTERIA INTERACTIONS IN EUTROPHICATION ...Deposits-other, Eutrophication, Lakes, Nutrients, Oregon, ...5.0953
- BIOTRANSFORMATION OF ALDRIN AND DIELDRIN BY BACTERIA - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Aldrin, Biodegradation, Cell. env.(non-specific & Ot.), Dieldrin, Other, Soil Bacteria, ...5.0644
- BIOTRANSFORMATION OF HEPTACHLOR BY BACTERIA - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Bacterial Pollutant Sources, Biodegradation, Heptachlor, Other, Soil Bacteria, ...5.0645
- RECOVERY OF INDICATOR BACTERIA ON SELECTIVE MEDIA DURING DECREASE OF VIABLE COUNTS ...Bacteria (non-specific), Bioindicators, Media, Tests of Cell Viability, ...5.0587

Zooglia

- INVESTIGATIONS OF ZOOGLOEAL FLOCS ...Adhesion, Classification Or Taxonomy, Diffusion, Nutrients, Other, ...5.1313

Bacterial Studies

Classification Or Taxonomy

- OCCURENCE OF PROSTHECATE BACTERIA IN A GRADIENT-POLLUTED RIVER ...Bact. morphology(other Specif), Bacterial Pollutant Sources, Freshwater Ecology, Number, Streams, ...5.0571
- INVESTIGATIONS OF ZOOGLOEAL FLOCS ...Adhesion, Diffusion, Nutrients, Other, Zooglia, ...5.1313
- STUDIES ON AQUATIC STALKED BACTERIA ...Bacterial Culture, Ecology, Growth (non-specific & Ot.), Stalks and Buds, Water Bacteria, ...5.1280
- THE ECOLOGY OF CLOSTRIDIUM BOTULINUM TYPE E ...Bacterial Exotoxins, Clostridium Botulinum, Ecology, Estuaries, Serology, ...5.1070

Ecology

- STUDIES ON AQUATIC STALKED BACTERIA ...Bacterial Culture, Classification Or Taxonomy, Growth (non-specific & Ot.), Stalks and Buds, Water Bacteria, ...5.1280
- ECOLOGY OF SPHAEROTILUS IN ACTIVATED SLUDGE ...Activated, Cell. env.(non-specific & Ot.), Identification, Microbial-bacterial, Sphaerotilus, ...5.0341
- THE ECOLOGY OF CLOSTRIDIUM BOTULINUM TYPE E ...Bacterial Exotoxins, Classification Or Taxonomy, Clostridium Botulinum, Estuaries, Serology, ...5.1070

Identification

- STUDY OF WATERFOWL BOTULISM ...California, Clostridium Botulinum, Growth (non-specific & Ot.), Pathology, Water Fowl, N.s., ...6.0070
- BIOCHEMICAL EFFECTS OF MICROORGANISMS UPON THE SALT MARSH ENVIRONMENT ...Bacterial Pollutant Sources, Laboratory, Marine Bacteria (non-specific), Salinity, Swamps-marshes, ...1.0025
- A STUDY OF COLIFORM BACTERIA AND ESCHERICHIA COLI ON POLLUTED AND UNPOLLUTED OYSTER BOT-

- TOMS OF MISSISSIPPI ...Coliforms (non-specific), Mississippi River, Sewage, Vertical Distribution, Water Sampling, ...5.0619
- ACID MINE DRAINAGE MICROBIOLOGICAL STUDIES ...Acidity, Bacterial Pollutant Sources, Mining Activities, Mining Industry, Sewage, ...5.1284
- ECOLOGY OF SPHAEROTILUS IN ACTIVATED SLUDGE ...Activated, Cell. env.(non-specific & Ot.), Ecology, Microbial-bacterial, Sphaerotilus, ...5.0341
- RAPID IDENTIFICATION OF MICROBIAL POPULATIONS IN WATER ...Biological Pollutants -general, Fresh Water, Membrane, Water Bacteria, ...5.1167
- SURVEY OF CLOSTRIDIUM BOTULINUM TYPE E ...Bacterial Exotoxins, Clostridium Botulinum, Infra Red, Mutagens, ...5.0957
- WATER POLLUTION ...Bacterial Pollutant Sources, Cell. env.(non-specific & Ot.), Self-purification, Septic Tanks, Streams, ...5.0730
- ORGANIC DEBRIS ON CONNECTICUT BEACHES AND SHORES ...Catabolism and Degradation, Connecticut, Organic Matter, Physical-general, Shoreline - Coastline, ...5.0204
- ROLE OF ENTERIC MICROORGANISMS IN DETOXIFICATION - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Bacterial Culture, Biodegradation, Fish -non-specific, Insecticides -non-specific, Intestinal Bacteria, ...5.0641
- ECOLOGY OF C. BOTULINUM IN THE COMMERCIAL FISHERIES ENVIRONMENT ...Clostridium Botulinum, Productivity - Food Chain, Serology, ...6.0291

Isolation From Nat. environ.

- STUDIES ON THE METHANOGENIC BACTERIA IN SLUDGE ...Acids, Culture Collections, Digestion, Methane Bacteria (non-specif.), ...5.0259
- VIBRIO PARAHAEOLYTICUS IN THE ESTUARINE ENVIRONMENT ...Crustacea -non-specific, Estuaries, Mollusks -non-specific & Other, Temporal Distribution, Vibrio N S, ...2.1115
- NITRIFICATION BY MARINE MICROORGANISMS ...Autotrophic, Bact. morphology (general), Bacterial Culture, Marine Bacteria (non-specific), Nitrification, Nitrogen Bacteria, Range Or Territorial Distr., ...1.0066

Morphology

Bact. morphology (general)

- NITRIFICATION BY MARINE MICROORGANISMS ...Autotrophic, Bacterial Culture, Isolation From Nat. environ., Marine Bacteria (non-specific), Nitrification, Nitrogen Bacteria, Range Or Territorial Distr., ...1.0066

Bact. morphology(other Specif)

- OCCURENCE OF PROSTHECATE BACTERIA IN A GRADIENT-POLLUTED RIVER ...Bacterial Pollutant Sources, Classification Or Taxonomy, Freshwater Ecology, Number, Streams, ...5.0571

Capsule and Slime Layer

- ECONOMIC OPTIMIZATION OF SECONDARY TREATMENT AND DETERMINATION OF LOAD TO CONTROL BIOLOGICAL GROWTHS IN A STREAM ...Aeration, Lagoon, Optimization, Pulp and Paper Wastes, Storage-retention-facilities, ...5.1222

Spore Studies

- THERMAL DESTRUCTION OF TYPE E CLOSTRIDIUM BOTULINUM ...Cell Injury and Autolysis, Clostridium Botulinum, Heat Resistance, Microbiological, Toxicological and Allergy, ...5.0233
- SPORULATION AND GERMINATION OF CLOSTRIDIUM BOTULINUM ...Bacterial Exotoxins, Cell. env.(non-specific & Ot.), Clostridium Botulinum, Growth (non-specific & Ot.), Media, ...5.0568

Stalks and Buds

- STUDIES ON AQUATIC STALKED BACTERIA ...Bacterial Culture, Classification Or Taxonomy, Ecology, Growth (non-specific & Ot.), Water Bacteria, ...5.1280

Serology

- ECOLOGY OF C. BOTULINUM IN THE COMMERCIAL FISHERIES ENVIRONMENT ...Clostridium Botulinum, Identification, Productivity - Food Chain, ...6.0291
- THE ECOLOGY OF CLOSTRIDIUM BOTULINUM TYPE E ...Bacterial Exotoxins, Classification Or Taxonomy, Clostridium Botulinum, Ecology, Estuaries, ...5.1070

Bacteriophage**Bacteriophages (non-spec & Ot)**

APPLICATION OF BACTERIOPHAGES TO ELIMINATE MINE ACIDS ...Acidity, Bacterial Pollutant Sources, Isolation, Mining Industry, ...5.0995

ENTEROCOCCI, COLIFORM BACTERIA AND BACTERIOPHAGES IN LAKE WATER ...Bacterial Pollutant Sources, Detection & Diagnosis, Streptococcus Fecalis, ...5.1315

Escherichia Coli

ADSORPTION OF VIRUSES ON MINERAL SURFACES ...Adsorption, Adsorption Capacity, Control of Viruses, Mineralogy, Viral Pollutant Sources, ...5.0474

Barium

SOLUBILITIES OF THE SULFATES OF BARIUM AND STRONTIUM IN OILFIELD WATERS ...Brines, Fluid Properties, Radioisotopes, Solution Chemistry, Strontium, Thermal Properties-other, ...1.0097

Baseflow

TRACING STORM AND BASE FLOW TO VARIABLE SOURCE AREAS ON FORESTED HEADWATERS ...Floods, Forest Watersheds, Georgia, Hydraulic Structures, Runoff, Subsurface Flow, ...2.0339

EFFECTS OF GROUNDWATER SEEPAGE ON STREAM REGIMEN ...Flume Studies, Groundwater, North Dakota, Seepage, Suspension, ...2.0832

OPTIMUM UTILIZATION AND MANAGEMENT OF WATER IN FORMATIONS HYDROLOGICALLY-CONNECTED TO A STRETCH OF THE CONNECTICUT RIVER ...Aquifers-general, Artificial Recharge, Connecticut River, Massachusetts, Water Yield, ...4.0134

A STUDY OF SUBSURFACE FLOW INTO MOUNTAIN STREAMS AS RELATED TO TOPOGRAPHY AND PARTIAL SOURCE AREAS ...Georgia, Japan, Mountains-alpine, Relief, ...2.0340

FACTORS AFFECTING WATER YIELDS FROM SMALL WATERSHEDS IN GEORGIA ...Georgia, Runoff, Small Watersheds, Statistics-general, Water Yield, ...4.0083

BASE FLOW ANALYSIS OF SELECTED DRAINAGE BASINS. ...Mathematical Analysis, New Hampshire, Seasonal, Small Watersheds, ...2.0742

TRACING STORM AND BASE FLOW TO VARIABLE SOURCE AREAS ON FORESTED HEADWATERS ...Flow Characteristics -water, Forest Watersheds, Georgia, Physical Properties -other, Sediment Yield, ...2.0341

FACTORS AFFECTING MINE DRAINAGE AND THE GROUND WATER INTERACTIONS IN SELECTED AREAS OF WESTERN PENNSYLVANIA (PART 2) ...Acidity, Groundwater Movement, Mine Drainage Control, Pyrite Group, Stratified Flow, ...5.1044

LOW-FLOW ANALYSIS, WASHINGTON STREAMS ...Discharge-general, Gaging, Hydrographs, Low Flow, Washington, ...2.1134

LOW-FLOW STUDY - WISCONSIN ...Data Acquisition-general, Flow Characteristics -water, Low Flow, Wisconsin, ...2.1147

SUBSURFACE AND GROUND WATER ACCRETION, DEPLETION, MOVEMENT AND CONTRIBUTION TO STREAM-FLOW ...Agricultural Watersheds, Aquifers-general, Groundwater Movement, Mississippi, Natural Recharge, ...2.0336

AQUIFER AND SUBSURFACE RELATIONSHIPS IN THE HYDROLOGY OF UPSTREAM AGRICULTURAL WATERSHEDS ...Aquifers-general, Forecasting-prediction, Groundwater Movement, Natural Recharge, Streams, Technique Development, Water Yield, ...3.0394

Bathymetry

DEPTH CONTOURING BY COLOR SEPARATION ...Electronics -Applied, Marine Photography-television, Optical, Photogrammetry, Satellites, ...6.0276

TRANSVERSAL DRIFTS IN BOTTOM PROFILE ...Benthonic-bottom, Intertidal Areas, Ocean Waves - Currents, Waves, ...5.0254

Bayous

BAYOU LAFOURCHE SEDIMENTATION STUDY, LOUISIANA ...Channels, Louisiana, Morphology-general, Rate of Deposition, Sediment Yield, ...2.0535

Bays

MASS MORTALITY OF PACIFIC OYSTERS ALONG THE WASHINGTON COAST ...Environmental Ecology, Mortality Rates, Oysters, Pathology, Puget Sound, ...5.1230

MASS MORTALITY OF OYSTERS ALONG THE OREGON COAST ...Invertebrate Pathology, Mortality Rates, Oregon, Oysters, Pathology, ...5.0985

THE EFFECTS OF ENGINEERING PROJECTS ON THE ECOLOGY OF JONES BAY ...Aquatic Ecology, Construction, Engineering Structures-general, Texas, Water Properties-general, ...6.0543

DETERMINATION OF SAFE LEVELS OF POLLUTION IN PUERTO RICO ...Contamination - Water, Meteorological Studies-general, Pollution - Effects of, Puerto Rico, Recreation Sites, Water Properties-general, ...2.0937

RESIDENCE TIMES OF WATERS BEHIND BARRIER ISLANDS ...Circulation General, Simulation Theory, Tides, Wind-water Interaction, ...5.0253

EUTROPHICATION OF SHELTERED BAYS IN A LARGE LAKE ...Chemical-general, Currents -water, Eutrophication, Freshwater Ecology, Utah, ...5.1188

NUTRITIONAL ECOLOGY AND COMMUNITY STRUCTURE OF THE PHYTOPLANKTON OF GREEN BAY ...Mineral Composition, Nutrition Studies, Physiological Ecology, Phytoplankton, Wisconsin, ...5.1290

EFFECTS OF RIVERS ON THE METABOLISM OF TEXAS BAYS ...Nutrients, Pollutants-general, Primary Productivity, Streams, Texas, Water Quality-general, ...5.1182

EFFECTS OF WATER POLLUTION IN SAN FRANCISCO BAY ...Economic Impact, Pollution - Effects of, Recreation Sites, San Francisco Bay, Social Aspects, Water Utilization -domestic, Welfare Economies, ...5.0125

STUDIES OF THERMAL POLLUTION IN BISCAYNE BAY ...Aquatic Ecology, Florida, Pollution - Effects of, Thermal Pollution, Warm Water, ...5.0265

SPRING CREEK AUXILIARY WATER POLLUTION CONTROL PROJECT ...Combined Sewer, Effluents-waste Water, New York, Overflow, ...5.0759

BIONOMICS OF FISHES AND SHELLFISHES ...Aquaculture & Fish-farming, Economies-general, Environmental Ecology, Oregon, Productivity - Food Chain, ...2.0896

SEASONAL VARIATIONS OF SOME LIMNOLOGICAL FACTORS IN LITTLE SODUS BAY, NEW YORK ...Chemical-general, Eutrophication, Lake Ontario, New York, Productivity - Food Chain, ...3.0355

THE ANALYSIS AND GEOCHEMISTRY OF TRACE ELEMENTS IN THE HYDROSPHERE ...Activation Analysis, Chemical Analysis (water), Chemical Reactions, Gamma, Trace Element Analysis, ...1.0109

SAND TRACING AT SPECIFIC INLETS AND AREAS ON THE LOWER EAST COAST OF FLORIDA ...By-passing, Florida, Longshore Currents, Shoreline - Coastline, Tracers, ...8.0161

AN ECONOMIC EVALUATION OF WATER POLLUTION CONTROL, YAQUINA BAY, ORE ...Alternative Planning, Benefit-cost Analysis, Model Studies, Oregon, Systems Analysis, Water Quality Control-general, ...6.0454

SOCIO-ECONOMIC STUDY OF NARRAGANSETT BAY, RHODE ISLAND ...Benefit-cost Analysis, Estuaries, Land Use, Rhode Island, Social Aspects, Water Quality Control-general, ...6.0485

SEA NETTLE STUDIES IN CHESAPEAKE BAY, LIFE HISTORY AND ECOLOGY ...Aquatic Ecology, Biological Control, Chesapeake Bay, Jelly Fish, Life History Studies, ...6.0127

EFFECTS OF HEATED WATER IN A TIDAL ESTUARY ...Chesapeake Bay, Electric Power Plants, Pollution Effects, Thermal Pollution, Urban Environments, Water Properties-general, ...4.0078

QUALITY OF WATER OF THE TEXAS BAYS AND ESTUARIES ...Estuaries, Nutrients, Pollutants - Path of, Texas, Water Quality-general, ...2.1003

GEOCHEMISTRY OF SAN FRANCISCO BAY ...Clays, Distribution, Mineral Associations, San Francisco Bay, Trace Element Analysis, ...2.0121

HYDROLOGY OF UPPER OLD TAMPA BAY, FLORIDA ...Groundwater Movement, Hydrology-general, Lakes, Permeability, Water Harvesting, Water Quality-general, ...2.0331

INVENTORY OF THE GULF ESTUARY SYSTEM ...Data Acquisition-general, Estuaries, Fishing, Gulf of Mexico, Sedimentology-general, ...2.0322

SAN PABLO BAY STUDY ...Benthic Fauna, Bottom Sampling, Excavation, Spoil Banks, Water Sampling, ...6.0038

SUBJECT INDEX

Benthic Flora

PRIMARY PRODUCTIVITY IN LAKE FRANCIS CASE ...Benthic Fauna, Phytoplankton, Primary Productivity, Reservoirs and Impoundments, Standing Crops, ...6.0524

ECOLOGY OF GREAT LAKES ESTUARIES ...Currents -water, Estuaries, ...2.0626

MODEL FOR DETERMINING THE MOST UNFAVORABLE CONDITIONS FOR AREA CLASSIFICATION ...Pollutants - Path of , Pollutants-general, Rhode Island, Shellfish, N.S. , Water Standards, ...5.1067

EFFECT OF THE EFFLUENT FROM AN ATOMIC POWER PLANT ON THE ADJACENT PORTION OF BARNEGAT BAY, NEW JERSEY ...New Jersey, Pollution - Effects of , Pollution Effects, Reactor Sites & Rad Waste, Thermal Pollution, Water Temperature-non-specific, ...5.1076

Beaches

DISPERSION OF WATER AND SEDIMENTS IN THE SURF ZONE ...Pollutants - Path of , Pollution-general, Shoreline - Coastline, Size, Waves, ...5.0151

DEVELOPMENT OF CRITERIA FOR ARTIFICIAL BEACHES ...Beach, Coastal Engineering-other, Design Criteria, Shoreline Structures, Statistics-general, ...8.0155

Beef Husbandry

Management

ANIMAL, FORAGE AND WATER RESOURCES FOR BEEF PRODUCTION ...Quality and Utilization, ...5.0086

EFFECT OF GRAZING MANAGEMENT ON RANGE LIVESTOCK NUTRITION AND ON THE RANGE RESOURCE ...Cattle, Cutting &/or Grazing Effects, Diet Or Ration -other, Management and Fertility, Quality and Utilization, ...2.0971

Behavior -animal

RELATIONSHIPS BETWEEN SUB-LETHAL PESTICIDES AND REPRODUCTION AND BEHAVIOR OF FISHES ...DDT , Killifish - Cyprinodon, Pesticides -non-specific, Reproduction Studies (general), Wildlife, ...5.0292

FOOD HABITS OF LARGEMOUTH BASS LARVAE ...Aquatic Ecology, Food Supply, Largemouth Bass, Ponds, Zooplankton, ...7.0082

THE EFFECTS OF DIELDRIN ON MALLARD DUCKLING BEHAVIOR ...Dieldrin, Light Quality -non-specific, Mallard, Mode of Action -animal, Visual, ...6.0580

FLATHEAD CATFISH STUDY ...Aquatic Ecology, Food Supply, Growth Rate, Ictaluridae -other, Reproduction Studies (general), Texas, ...6.0539

TEMPERATURE REQUIREMENTS OF SALMONIDS IN RELATION TO THEIR FEEDING, BIOENERGETICS, GROWTH AND BEHAVIOR ...Energy, Growth Rate, Rainbow Trout, Steelhead Trout, Salmon -coho, chinook, sockeye..., Water Temperature-non-specific, ...5.0942

TEMPERATURE TOLERANCE OF MARINE ANIMALS THROUGH BEHAVIORAL RESPONSES ...Environment Resistance, Mortality Rates, Thermal, Water Temperature-non-specific, ...6.0344

THERMAL PREFERENCES OF MARINE FISHES AND INVERTEBRATES ...Fish -non-specific, Invertebrates -non-specific, Water Temperature-non-specific, ...5.0720

EFFECTS OF HOT WATER MASSES ON MARINE FISHES ...Atlantic Ocean-north, Fish -non-specific, High Temp. -85f Or Above, Thermal, ...5.0721

BEHAVIOR OF ESTUARINE ANIMALS ...Estuaries, Pesticides -non-specific, Pollution - Effects of , Pollution Effects, ...2.0323

FISH BEHAVIOR AND PHYSIOLOGY ...Engineering Structures-general, Environmental Physiology, Migration, Salmon & Trout - Non-specific, Thermal Pollution, ...6.0615

Beneficiation, Extraction

Beneficiation

IRON ORE FLOTATION ...Flotation, Industrial Processes-other, Mining Industry, Ores, Pollution Abatement, Recovery, Scrap and Wastes, ...5.0616

Electrolytic Processes

TREATMENT RECOVERY, AND REUSE OF COPPER WIRE MILL PICKLING WASTES ...Copper, Electrochemistry-other, Material Recovery Wastes, Metal Pickling Wastes, Regeneration-other, ...5.0722

Recovery, Scrap and Wastes

AN INVESTIGATION OF TECHNIQUES FOR THE REMOVAL OF CHROMIUM AND CYANIDES FROM ELECTROPLATING WASTES ...Chromium, Electroplated, Extraction, Flotation, Industrial Processes-other, Material Recovery Wastes, ...5.0725

ENCAPSULATION AND SOLIDIFICATION OF INTERMEDIATE LEVEL RADIOACTIVE WASTES IN THERMOPLASTICS ...Accidental, Encapsulation, Fire Research-other, Instrumentation, Plant Equip. , Polymer-other, Radioisotopes, ...5.1142

IRON ORE FLOTATION ...Beneficiation, Flotation, Industrial Processes-other, Mining Industry, Ores, Pollution Abatement, ...5.0616

Separation

LEACHING AND RECOVERY OF COPPER FROM ORES AND WASTE DUMPS ...Copper, ...3.0478

Benthic Fauna

ABUNDANCE AND DISTRIBUTION OF BENTHIC MACRO-INVERTEBRATES IN A STREAM RECEIVING OILFIELD WASTEWATERS ...Bioindicators, Contamination - Water, Industrial Wastes, Number Or Density, Vertical Distribution, ...5.1028

COLONIZATION RATES OF BENTHIC INVERTEBRATES IN AN OHIO RESERVOIR ...Intertidal Areas, Ohio, Productivity - Food Chain, Reservoirs and Impoundments, Water Level Fluctuation, ...6.0424

BOTTOM FAUNA STUDIES ...Bottom Sampling, Depth, water Level, Fluctuation, Lakes, Number Or Density, Water Level Fluctuation, ...4.0126

WATER QUALITY - BENTHIC INVERTEBRATE RELATIONSHIPS IN ESTUARIES ...Benthic-bottom, Estuaries, Maine, Pollution - Effects of , Pollution Effects, ...5.0478

THE EFFECTS OF EXTREME FLOODS AND PLACER MINING ON THE BASIC PRODUCTIVITY OF SUBARCTIC STREAMS ...Alaska, Bottom Sampling, Floods, Meteorological Extremes, Placer, Productivity - Food Chain, ...2.0022

BENTHIC INVERTEBRATES AS AN INDEX OF WATER QUALITY ...Bioindicators, Gases, Dissolved -water, Oxygen, Water Quality Control-general, ...5.0601

THE MICRODISTRIBUTION OF STREAM BENTHOS ...Aquatic Ecology, Organic-general, Productivity - Food Chain, Streams, Vertical Distribution, ...5.1020

THE BIOLOGY OF THE INFAUNA OF A TROPICAL SOFT BOTTOM AREA ...Aquatic Ecology, Estuaries, Florida, Intertidal Areas, Pollution - Effects of , ...5.0263

BOTTOM FAUNA IN THE NORTH ST. VRAIN CREEK, COLORADO ...Aquatic Ecology, Colorado, Mountains-alpine, Streams, Vertical Distribution, ...2.0158

A COMPARATIVE STUDY OF THE MACROSCOPIC BENTHIC FAUNA OF TWO CENTRAL ADIRONDACK LAKES ...Animal Taxonomy, Comparative Physiology, Lakes, New York, Productivity - Food Chain, ...2.0814

SAN PABLO BAY STUDY ...Bays, Bottom Sampling, Excavation, Spoil Banks, Water Sampling, ...6.0038

PRIMARY PRODUCTIVITY IN LAKE FRANCIS CASE ...Bays, Phytoplankton, Primary Productivity, Reservoirs and Impoundments, Standing Crops, ...6.0524

BENTHOS IN LAKE FRANCIS CASE ...Aquatic Ecology, Reservoirs and Impoundments, South Dakota, ...6.0515

RESEARCH ON THE MACROBENTHOS OF THE GREAT LAKES ...Aquatic Ecology, Earthworms, Food Supply, Great Lakes-general, Water Quality-general, ...6.0292

ESTUARINE STUDIES OF SOUTHEASTERN ALASKA ...Alaska, Environmental Ecology, Estuaries, Number Or Density, Vertical Distribution, ...2.0017

Benthic Flora

BASIC RESEARCH IN THE AQUATIC ENVIRONMENT EFFECTS OF EUTROPHICATION ON PLANKTON ALGAE AND BENTHIC PLANTS COMMUNITIES ...Eutrophication, Nutrients, ...2.0803

Benthic Flora

COMPARATIVE STUDY OF THE BENTHIC MICROBIAL BIOTA IN SOME COASTAL AREAS OF PUERTO RICO ...Benthonic-bottom, Ocean Environment, Pollution - Effects of , Puerto Rico, Standing Crops, ...6.0478

SENSITIVITY OF BENTHIC MICROFLORA TO POLLUTION GRADIENTS ...Bioindicators, Estuaries, Marine Plants, Plant Prod. (non-specific), Water Standards, ...5.1059

FACTORS INFLUENCING THE PRODUCTION OF PLANKTONIC AND BENTHIC PLANTS ...Growth Rate, Nutrition, Phytoplankton, Secretions and Products, Standing Crops, ...5.1119

Benthic Organisms (non-specific)

THE APPLICATION OF RADIOISOTOPES TO STUDIES OF AQUATIC ECOSYSTEMS ...Aquatic Ecology, Freshwater Ecology, Productivity - Food Chain, Water Properties-general, Wisconsin, ...6.0643

LIMNOLOGY OF ROSS ISLAND, ANTARCTICA ...Antarctica, Chemical-general, Lakes, Plankton (non-specific), Publications - other, ...2.0087

LIMNOLOGY OF DESOTO BEND LAKE, IOWA AND NEBRASKA ...Iowa, Lakes, Nebraska, Plankton (non-specific), Stratification, ...7.0049

A BENTHIC COMMUNITY OF THE PENOBSCOT RIVER ESTUARY ...Aquatic Ecology, Estuaries, Industrial Wastes, Maine, Productivity - Food Chain, ...5.0473

FOOD HABITS STUDY ...Aquatic Ecology, Food Supply, Lakes, Mississippi, Plankton (non-specific), ...6.0314

THE LIMNOBIOCHEMISTRY OF DEVILS LAKE, NORTH DAKOTA ...Aquatic Ecology, Biological-general, Lakes, North Dakota, Salinity, ...6.0417

Benthonic-bottom

WATER QUALITY - BENTHIC INVERTEBRATE RELATIONSHIPS IN ESTUARIES ...Benthic Fauna, Estuaries, Maine, Pollution - Effects of , Pollution Effects, ...5.0478

CONTROL OF BENTHIC DEPOSITS IN LAKES ...Deposits-other, Eutrophication, Lakes, Water Quality Control-general, ...5.0513

COMPARATIVE STUDY OF THE BENTHIC MICROBIAL BIOTA IN SOME COASTAL AREAS OF PUERTO RICO ...Benthic Flora, Ocean Environment, Pollution - Effects of , Puerto Rico, Standing Crops, ...6.0478

TRANSVERSAL DRIFTS IN BOTTOM PROFILE ...Bathymetry, Intertidal Areas, Ocean Waves - Currents, Waves, ...5.0254

BENTHIC COMMUNITIES ...Engineering Structures-general, Environmental Ecology, Estuaries, Marine Biology, Productivity - Food Chain, ...6.0156

Bering Sea

ECOLOGY & NITROGEN CYCLE IN A MARINE PLANT COMMUNITY ...Nitrogen, Physiological Ecology, Potamogeton, Rupia, Zostera, Primary Productivity, Sewage, ...5.0035

Bioassays

THE BIOASSAY OF WATER POLLUTANTS WITH CULTURED MAMMALIAN CELLS ...Bioassay, Herbicides -non-specific, Toxicity Or Residues -other, ...5.1055

ALGAL BIOASSAY TO DETERMINE THE EXTENT OF NUTRIENT REMOVAL BY AWT AT THE WASTE TREATMENT PLANT AT ELY, MINNESOTA ...Algae, Denitrification, Nutrients, Pilot Plant, Waste Water Treatment-general, ...5.1304

A STUDY OF A WATER TOXICITY PROBLEM ...Bioindicators, Growth Rate, Management, Potable Water, Toxins and Poisons - other, ...5.0197

RELATIONS OF NUISANCE ALGAE TO FISH IN KLAMATH LAKE ...Algal Toxins, Cyanophyta (non-specific & Ot), Fish - non-specific, Lakes, Oregon, ...5.0937

SCREENING AQUATIC INVERTEBRATES TO DETECT AN ORGANISM SUITABLE FOR USE IN A MONITORING PROGRAM ...Bioindicators, Cholinesterase, Fish -non-specific, Invertebrates -non-specific, Metabolism, Monitoring Systems, ...5.0639

RELATIVE SUSCEPTIBILITIES OF FISH FAMILIES TO INSECTICIDES - ACUTE TOXICITY OF PESTICIDES TO FRESHWATER FISH AND OTHER VERTEBRATES ...Bioassay, Carbamates -non-specific, Chlorinated Hydrocarbons, Organophosphorous Cpds. , Wildlife, ...5.0653

CULTURING, PROPAGATION AND CONDITION EVALUATION OF FISHES ...Blood -other, Captive Rearing, Cisco, Lake

SUBJECT INDEX

Herring, Contamination - Water, Lake Trout, Brook Trout, Yellow Perch, Darters, ...5.0586

COMPARATIVE TOXICITIES OF METALS TO ESTUARINE FISHES ...Estuaries, Industrial Wastes, Killifish - Cyprinodon, Mineral Origin, Solid Waste, ...5.1084

USE OF MARINE PLANKTONIC ORGANISMS FOR EVALUATING THE QUALITY OF MARINE AND ESTUARINE WATERS ...Estuaries, Phytoplankton, Pollution - Effects of , Pollution Effects, Zooplankton, ...5.1093

DEVELOPMENT OF A METHOD FOR CHRONIC TOXICITY BIOASSAY USING MARINE PLANKTONIC ALGAE ...Algal Culture, Marine Plants, Microbiological Analysis, Monitoring (long Term Studies), Phytoplankton, Technique Development, Toxicology, ...5.1088

COOPERATIVE STUDIES WITH FEDERAL AND STATE AGENCIES ...Crustacea -non-specific, Mollusks -non-specific & Other, Public Health Ecology, Survey Studies, Water Quality-general, ...7.0111

Biochemical Analysis

SEASONAL CHANGES IN ESTERASE ACTIVITY IN FISH AND INVERTEBRATES, INTERACTIONS BETWEEN PESTICIDES ON FISH ENZYME SYSTEMS ...Bluegills, Bream, Cholinesterase, Invertebrates -non-specific, Mode of Action - animal, Pesticides -non-specific, ...5.0638

PHYTOCHEMISTRY OF NARCOTIC PRINCIPLES IN CAULERPA ...Biochemical, Caulerpa, Cyclopropane, Medicinal Plants, Phaeophyta (non-specific & Ot), ...6.0172

Hormones

Other

THE INVESTIGATION AND ANALYSIS OF BIOCHEMICAL PROCESSES OF AQUATIC ORGANISMS UNDER STRESS ...Animal Origin, Aquatic Ecology, Fish -non-specific, Metabolism -animal, Stress, ...5.0585

Proteins and Amino Acids

Purification and Isolation

STUDIES ON THE MOLECULAR STRUCTURE OF BIOLOGICAL MEMBRANES ...Active Transport, Desalination, Membranes-other, Plasma Membrane, Structure, ...3.0388

FACTORS AFFECTING FISH PRODUCTION PONDS ...Blood Proteins -non-specific, Bluegills, Bream, Electrophoresis -other, Environmental Physiology, Protein, ...6.0221

Biological Rhythms

ECOLOGICAL SIGNIFICANCE OF ORGANIC RELEASE PRODUCTS OF MARINE AND FRESHWATER ANIMALS ...Aquatic Ecology, Metabolism, Mucus, Productivity - Food Chain, ...2.0342

SAUGER AND WALLEYE INVESTIGATIONS IN THE MISSOURI RIVER ...Missouri River, Population Dynamics, Sauger, Walleyes, ...6.0334

LIFE HISTORY OF THE GOLDEYE (Hiodon alosoides) IN GARRISON RESERVOIR, NORTH DAKOTA ...Life History Studies, Nets, North Dakota, Reservoirs and Impoundments, Spawn Or Nesting Sites, ...5.0827

VARIATIONS IN SPAWNING OF FISHES IN RELATION TO TEMPERATURE ...Fish -non-specific, Maturity & Growth Stages, South Dakota, Temperature, Water Temperature-non-specific, ...6.0518

SEXUAL MATURATION AND SPAWNING OF NORTHERN PIKE ...Maturity & Growth Stages, Pikes, Pickeral, Muskellunge, Reservoirs and Impoundments, South Dakota, Spawn Or Nesting Sites, ...6.0520

SPAWNING OF YELLOW PERCH ...Ovary, Reservoirs and Impoundments, South Dakota, Spawn Or Nesting Sites, Yellow Perch, Darters, ...6.0521

SPOTTED BASS REPRODUCTION IN BULL SHOALS ...Arkansas, Centrarchidae -other, Environmental Ecology, Reproduction Studies (general), Reservoirs and Impoundments, ...6.0023

LIFE HISTORY OF RESERVOIR FISHES, SPAWNING OF OAHE AND BIG BEND RESERVOIR FISHES ...Aquatic Ecology, Life History Studies, Reservoirs and Impoundments, South Dakota, Spawn Or Nesting Sites, ...6.0523

PHYSIOLOGY AND BEHAVIOR OF LARVAE (PHYSIOECOLOGY OF SHELLFISH PROGRAM) ...Aquatic Ecology, Environmental Ecology, Environmental Physiology, Water Properties-general, ...6.0113

SUBJECT INDEX

Birds

SURVIVAL REQUIREMENTS OF JUVENILE AND ADULT BLUE CRABS ...Crabs, All, Environmental Physiology, Laboratory, Osmoregulation, Water Properties-general, ...6.0401

Biological Techniques

ENZYMATIC TECHNIQUE FOR DETECTION OF SURPLUS PHOSPHORUS UPTAKE BY ACTIVATED SLUDGE ...Activated, Nutrients, Phosphorus, ...5.1149

Biophysics & Molec. biology

PHYSICAL, METEOROLOGICAL, AND HYDROLOGIC ASPECTS OF EVAPOTRANSPIRATION ...Evapotranspiration, Forest Watersheds, Southeast, Transpiration and Evap, Water Yield, ...2.0953

Dipole and Dielectric

EFFECTS OF POLAR ORGANIC SOLVENTS ON ENZYME ACTION ...Enzymatic, Exobiology, Kinetics -other, Temperature, Water, ...1.0063

Ionic Effect

ACTIVE AND PASSIVE ION FLUXES ACROSS INTERFACES AND MEMBRANES ...Adsorption & Interface, Diffusion, Enzymes -non-specific, Membranes-other, Transport, ...3.0348

EFFECTS OF CHEMICAL IONS ON VIRUS INACTIVATION ...Animal Viruses (non-specific), Concentration, Inactivation, Ion Exchange-other, Virus, ...5.0475

Molecular Interaction

STUDY OF FACTORS WHICH DETERMINE THE IONIC SELECTIVITY OF BIOLOGICAL AND ARTIFICIAL MEMBRANES ...Ion Selective, Natural Occurring, Other, Permeability, ...3.0371

THE EFFECT OF WATER STRUCTURE ON BIOLOGICAL ACTIVITY ...Bacteria (non-specific), Corn, Water, Water Movement, ...1.0047

Structure

STUDIES ON THE MOLECULAR STRUCTURE OF BIOLOGICAL MEMBRANES ...Active Transport, Desalination, Membranes-other, Plasma Membrane, Purif and Isol, ...3.0388

Thermodynamics

EFFECTS OF WATER PROPERTIES IN THIXOTROPIC CLAY SYSTEMS ON BIOLOGICAL ACTIVITY ...Anaerobic Bacteria, Cell Cycle, Clay, Origin of Life, ...6.0217

ION TRANSPORT IN SOME HALOPHILIC ORGANISMS ...Active Transport, Halophyte, Ions (inorganic), ...3.0232

THEORETICAL AND EXPERIMENTAL INVESTIGATIONS OF THE MECHANISM OF FLOW OF WATER AND SOLUTES IN PLANT ROOTS ...Ionic Effect, Osmotic and Turgor Pressure, Pressure & Meeh Stress, Ultrafiltration, Water Movement, ...2.0497

TRITIATED WATER STUDIES OF THE SIGNIFICANCE OF DEW AND VAPOR IN PLANT WATER ECONOMY ...Arid and Desert, Dew, Foliar Absorption, Humidity, Hydrogen, Osmotic and Turgor Pressure, ...2.0112

Birds

Anseriformes -other

STUDY OF BIOLOGICAL DESALINATION PHENOMENA AND SALT TRANSPORT MECHANISMS OF SELECTIVE AVIAN SALT GLANDS ...Active Transport, Chemical Analysis, Ion Selective, Osmoregulation, Transport, ...3.0479

A STUDY OF SUSPECTED LEAD POISONING OF SWANS AND GEESE ...Lead, Ponds, Rhode Island, ...5.1077

Black Duck

AN ECOLOGICAL STUDY OF LAKE ST. PETER, QUEBEC ...Canada, Depth, water Level, Fluctuation, Interbiotic Relat.(non-specif), Lakes, Water Level Fluctuation, ...4.0050

Chickens

FARM ANIMAL WASTE DISPOSAL ...Animal Waste Removal-treatment, Sewage Lagoons, Swine, Waste Disposal-general, ...5.0835

Ciconiiformes - Wading Birds

ECOLOGY OF SOME WADING BIRD POPULATIONS AFFECTED BY THE INVASION OF THE CATTLE EGRET INTO ALABAMA ...Aquatic Ecology, Behavioral Ecology, Mark, Tag Or Capture -other, Migration, Water Utilization -animal, ...6.0001

Dove

RELATIONSHIP BETWEEN MOURNING DOVE PRODUCTION AND WATER DISTRIBUTION IN THE SONORAN DESERT ...Arizona, Deserts, Habitat Studies, Productivity (agricultural), Water Utilization -animal, ...6.0262

Galliformes - Fowl-other

FARM ANIMAL WASTE DISPOSAL ...Animal Waste Removal-treatment, Livestock -non-specific, Sewage Lagoons, Swine, Waste Water Treatment-general, ...5.0407

Mallard

THE EFFECTS OF DIELDRIN ON MALLARD DUCKLING BEHAVIOR ...Behavior -animal, Dieldrin, Light Quality -non-specific, Mode of Action -animal, Visual, ...6.0580

WATERFOWL UTILIZATION OF SAGO PONDWEED (POTAMOGETON PECTINATUS) ON A SELECTED MARSH IN NORTHERN UTAH ...Food Supply, Potamogeton, Ruppia, Zostera, Storage, Swamps-marshes, Utah, ...6.0588

FACTORS LIMITING WATERFOWL PRODUCTION ON THE SPRING-FED SALT MARSHES WEST OF THE GREAT SALT LAKE ...Nutrition -other, Productivity (agricultural), Swamps-marshes, Utah, Viremia, ...5.1194

Mexican Duck

EFFECTS OF RESTORATION AND MANAGEMENT OF THE SAN SIMON MARSH ON ITS UTILIZATION BY MEXICAN DUCKS ...Food Supply, Management, Spawn Or Nesting Sites, Swamps-marshes, Water Utilization -animal, ...6.0364

Pintail, Anas Acuta

FOOD AND FOOD ENERGY REQUIREMENTS OF WILD DUCKLINGS ...Energy, Food Supply, Habitat Studies, Seap, Lesser, Widgeon, American, ...6.0583

Scaup, Lesser

FOOD AND FOOD ENERGY REQUIREMENTS OF WILD DUCKLINGS ...Energy, Food Supply, Habitat Studies, Pintail, Anas Acuta, Widgeon, American, ...6.0583

Water Fowl, N.s.

EFFECTS OF EARLY WATER ON WATERFOWL PRODUCTION ...Benefit-cost Analysis, Irrigation-general, Spawn Or Nesting Sites, Water Supply-general, Water Utilization -animal, ...2.9214

PHYSICAL & CHEMICAL PROPERTIES OF WATER & SOILS OF MARSHES AS THESE PROPERTIES RELATE TO THE SUCCESS OF WATERFOWL FOODS & COVER. ...Biological-general, Food Supply, Soil (wildlife) Cover, Wetlands, ...6.0371

STUDY OF WATERFOWL BOTULISM ...California, Clostridium Botulinum, Growth (non-specific & Ot.), Identification, Pathology, ...6.0070

THE EFFECTS OF DREDGING AND SILTATION ON DIVING DUCK FOODS AND FEEDING HABITS ON THE MISSISSIPPI RIVER ...Food Supply, Mississippi River, Sediments, Silting, ...5.0411

IMPORTANCE OF TYPE I WETLAND COMMUNITIES TO WATERFOWL PRODUCTION ...Censusing, Land Use, Spawn Or Nesting Sites, Water Utilization -animal, Wetlands, ...4.0218

WATERFOWL STUDY-EVALUATION OF PHYSICAL CHANGES IN MARSH PONDS ON THE WISNER AND BILOXI DEVELOPMENT ...Land Use, Management, Mississippi, Physical-general, Survey Studies, Swamps-marshes, ...4.0128

EVALUATION OF HABITAT AND REPRODUCTIVE FACTORS WHICH INFLUENCE POPULATIONS OF NESTING WATERFOWL ...Habitat Studies, Mapping, Population Dynamics, Spawn Or Nesting Sites, Water Level Fluctuation, ...4.0108

UPDATING AND REPUBLICATION OF FACTORS INFLUENCING THE RESTORATION AND DEVELOPMENT OF OGDEN BAY REFUGE ...Mans Activities, Publications -other, Swamps-marshes, Water Demand, Water Utilization -animal, ...6.0594

Birds

SUBJECT INDEX

- THE EFFECT OF LIVESTOCK UTILIZATION ON WATERFOWL HABITAT AND PRODUCTION ...Cattle, Habitat Studies, Utah, Vasc. plant & Vert. -other, Wetlands, ...6.0595
- RECREATION VALUE OF WATER FOR THE PRODUCTION OF WATERFOWL ...Benefit-cost Analysis, Recreation Sites, Utah, Wetlands, ...6.0593
- BROOD PRODUCTION AND POND PREFERENCE OF DIVING DUCKS IN THE TURTLE MOUNTAINS OF NORTH DAKOTA ...Aquatic Plants (non-specific), Chemical-general, Habitat Studies, Land Use, Water Utilization -animal, ...6.0410
- WATER TEMPERATURE AS A QUALITY FACTOR IN THE USE OF STREAMS AND RESERVOIR ...Habitat Studies, Reservoirs and Impoundments, Streams, Temperature, Thermal Pollution, ...5.0200
- WATERFOWL POPULATIONS AND RECREATIONAL USE PATTERNS IN THE PROPOSED SAYLORVILLE RESERVOIR AREA AS RELATED TO PRE-IMPOUNDMENT CONDITIONS ...Access, Frequency of Use, Iowa, Population Dynamics, Pre-impoundment Sites, User Patterns, ...6.0227
- AN EVALUATION OF SOME MARSH MANAGEMENT TECHNIQUES ...Management, Potholes, Spawn Or Nesting Sites, Swamps-marshes, Water Utilization -animal, ...4.0107
- WATER QUANTITY AND QUALITY REQUIREMENTS ON WESTERN SALINE MARSHLANDS ...Habitat Studies, Swamps-marshes, Utah, Water Allocation, Water Quality-general, ...6.0582
- ECOLOGICAL STUDIES OF MANIPULATED MARSHES AT DELTA, MANITOBA, CANADA ...Amphibious Plants, Canada, Submerged Plants, Swamps-marshes, Water Depth, Water Levels, ...4.0257
- THE EFFECTIVENESS OF WATERFOWL IN CARRYING PATHOGENIC MICRO-ORGANISMS ...Sewage, Swamps-marshes, Utah, Vertebrates, ...5.1193
- MUSQUODOBOIT - METERING BASINS NOVA SCOTIA, CANADA ...Aquatic Ecology, Canada, Mammals -other, Mapping, Water Level Fluctuation, Wetlands, ...4.0054
- AN ECOLOGICAL STUDY OF ILES-DE-LA-PAIX, LAKE ST. LOUIS, QUEBEC ...Canada, Interbiotic Relat.(non-specif), Islands, St. Lawrence River, ...4.0048
- MARSH EVALUATION AND ACQUISITION, QUEBEC ...Canada, Habitat Studies, Wetlands, ...4.0049
- WETLANDS EVALUATION AND DEVELOPMENT - MARITIMES ...Canada, Habitat Studies, Species Evaluation, Wetlands, ...6.0085
- MARSH EVALUATION AND ACQUISITION - ONTARIO ...Canada, Habitat Studies, Management, Management -other, Wetlands, ...4.0046
- LITERATURE REVIEW ON FLOODED GREEN TIMBER AREAS ...Canada, Management, Site Index and Site Quality, Survey Studies, Wetlands, ...4.0045
- WATERFOWL HABITAT INVESTIGATIONS - OTTAWA RIVER ...Canada, Floods, Habitat Studies, Water Level Fluctuation, ...4.0051
- THE MANAGEMENT OF SHALLOW-WATER IMPOUNDMENTS FOR WATERFOWL ...Food Supply, Management, Reservoirs and Impoundments, Salinity, Water Level Fluctuation, ...6.0247
- THE PHYSICAL AND CHEMICAL PROPERTIES OF WATER AND SOILS AS RELATED TO THE SUCCESSFUL GROWTH OF WATERFOWL FOOD AND COVER PLANTS ...Flooding, Food Supply, Oxygen, Phytotoxic, Soil (wildlife) Cover, Soil Conditions, ...2.0799
- AQUATIC BIOLOGY INVESTIGATIONS ...Cricetidae -other, Lake Trout, Brook Trout, Lakes, New York, Streams, ...2.0786
- EFFECTS OF REGULATED GRAZING ON WATERFOWL PRODUCTION ...Cutting &/or Grazing Effects, Productivity - Food Chain, Soil (wildlife) Cover, Swamps-marshes, ...6.0584
- HYDROLOGY OF PRAIRIE POTHOLE ...Management -other, North Dakota, Potholes, Seepage, Water Balance-budget, Water Utilization -animal, ...2.0170
- THE EFFECT OF OCEAN WATER INTRUSION INTO BACK BAY, VIRGINIA, AND CURRITUCK SOUND, NORTH CAROLINA, ON THE WATERFOWL AND FISH HABITAT ...Aquatic Ecology, Brackish Water, Fish -non-specific, Habitat Studies, Saline Water Intrusion, Water Salinity, ...2.0585
- INTENSIVE COOPERATIVE INVESTIGATIONS OF SELECTED POTHOLE ON MISSOURI COTEAU IN DICKEY, WARD AND STUTSMAN COUNTIES, NORTH DAKOTA ...Hydrology-general, Natural Recharge, Potholes, Water Level Fluctuation, Water Loss-general, ...6.0419

- WATERFOWL MANAGEMENT THROUGH WATER-LEVEL CONTROL ...Depth, water Level, Fluctuation, Drawdown, Management, Management -other, Wetlands, ...4.0133
- LIMNOLOGICAL INVESTIGATIONS OF PRAIRIE POTHOLE ...Chemical-general, Habitat Studies, North Dakota, Potholes, ...2.0850
- CHEMICAL CHARACTERIZATION OF WATERS OF PRAIRIE AND FOREST WETLANDS ...Chemical-general, Habitat Studies, Wetlands, ...1.0092
- DISTRIBUTION AND DENSITY OF BREEDING WATERFOWL POPULATIONS AS RELATED TO QUANTITY AND QUALITY OF WETLAND HABITAT IN NORTH DAKOTA ...Geography-physical, North Dakota, Number Or Density, Spawn Or Nesting Sites, Wetlands, ...6.0420

Widgeon, American

- FOOD AND FOOD ENERGY REQUIREMENTS OF WILD DUCKLINGS ...Energy, Food Supply, Habitat Studies, Pintail, Anas Acuta, Seaup, Lesser, ...6.0583

Blood Plasma and Serum

- SERUM ANALYSIS OF CUTTHROAT TROUT EXPOSED CHRONICALLY TO METHOXYCHLOR PESTICIDE EFFECTS ON FISH ENDOCRINE FUNCTIONS ...Cutthroat Trout, Endocrine -other, Methoxychlor, Mode of Action -animal, ...5.0629
- THE CONSTITUENTS AND PHYSICO-CHEMICAL PROPERTIES OF SERUM FROM GOLD-FISH EXPOSED CHRONICALLY TO MALATHION AND ENDRIN ...Endocrine -other, Endrin, Goldfish, Malathion, Mode of Action -animal, ...5.0630
- PHYSIOLOGICAL EVALUATION OF TREATED TOXIC WASTES ...Bioindicators, Contamination - Water, Pollution Effects, Pulp, Paper, and Logging, Tissues -biological, ...5.0976
- HEMATOLOGICAL CHANGES IN F. HETEROCLITUS UPON EXPOSURE TO TOXIC METALS ...Blood Cells, Cadmium, Killifish - Cyprinodon, Lead, Mineral Origin, ...5.1092

Blood-lymph-re-system

Blood -other

- CULTURING, PROPAGATION AND CONDITION EVALUATION OF FISHES ...Bioassays, Captive Rearing, Cisco, Lake Herring, Contamination - Water, Lake Trout, Brook Trout, Yellow Perch, Darters, ...5.0586

Blood Cells

- SOLUTE AND WATER TRANSPORT ACROSS BIOLOGIC MEMBRANES ...Active Transport, Carbohydrates, Ionic Effect, Kidney and Urinary System, Natural Occuring, Sodium, ...2.0706
- BLOOD OXYGEN AND CO2 CARRYING CAPACITY OF 4 FISH EXPOSED TO MALATHION AND ENDRIN - PESTICIDE EFFECTS ON FISH ENDOCRINE FUNCTIONS ...Endrin, Laboratory Animals, Malathion, Mode of Action -animal, Sevin, ...5.0632
- HEMATOLOGICAL CHANGES IN F. HETEROCLITUS UPON EXPOSURE TO TOXIC METALS ...Blood Plasma and Serum, Cadmium, Killifish - Cyprinodon, Lead, Mineral Origin, ...5.1092

Other

- STUDY OF FACTORS WHICH DETERMINE THE IONIC SELECTIVITY OF BIOLOGICAL AND ARTIFICIAL MEMBRANES ...Ion Selective, Molecular Interaction, Natural Occuring, Permeability, ...3.0371

Protein

- FACTORS AFFECTING FISH PRODUCTION PONDS ...Blood Proteins -non-specific, Bluegills, Bream, Electrophoresis -other, Environmental Physiology, Purif and Isol, ...6.0221
- CHEMICAL RESPONSES BY MARINE ORGANISMS TO STRESS ...Environmental Changes, Environmental Ecology, Environmental Physiology, Salinity, Thermal, ...5.1056

Bolsons

- GEOLOGY AND HYDROLOGY OF THE PRESIDIO BOLSON, TEXAS AND ADJACENT MEXICO ...Groundwater, Hydrology-general, Local Stratigraphy, Sedimentary Basins, Water Yield, ...2.1011

SUBJECT INDEX

Borehole Geophysics

- CONSERVATION OF FRESH-WATER RESOURCES BY DEEP-WELL DISPOSAL OF LIQUID WASTES ...Core Analysis, Lithology, Permeability, Pollution Abatement, Underground Waste Disposal, ...5.0025
- EXPERIMENTAL INVESTIGATION OF HYDROLOGICAL PARAMETERS OF AQUIFERS THROUGH ELECTRICAL RESISTIVITY MEASUREMENTS ...Aquifers-general, Electric Logging, Hydrology-general, Other Models, Porosity-permeability, ...7.0028
- EXPLORATION AND MAPPING OF THE SALISBURY PALEOCHANNEL ...Atlases-maps, Channels, Geophysical Analysis, Maryland, Valley, Buried, ...2.0566
- BOREHOLE GEOPHYSICS AS APPLIED TO GEOHYDROLOGY ...Aquifers-general, Geophysical Analysis, Groundwater Movement, Instrumentation-general, Technique Development, ...7.0018
- DESIGN OF UNDERGROUND POWERPLANTS ...Digital Computers, Electric Power Plants, Mechanics of Structures-other, Power Plant, Rock Mechanics, ...8.0031
- DRILL PERFORMANCE MONITOR ...Drilling Operation, Foundations-general, Pressure, Soil Exploration, Temperature, ...8.0097
- ENGINEERING GEOLOGIC PROPERTIES OF ROCK ...Aerial, Foundations-general, Geology - Engineering, Microstructure, Technique Development, ...8.0098
- DEVELOPMENT OF NX BOREHOLE INSTRUMENT FOR DEFORMATION MODULUS ...Deformation, Drilling and Coring, ...8.0047
- RADIOISOTOPE GROUND WATER MEASUREMENTS IN SMALL DIAMETER DRILL HOLES ...Drilling and Coring, Groundwater, Instrumentation-general, Radioisotopes, Technique Development, ...8.0066

Boron

- DEVELOPMENT OF ECONOMICAL METHODS OF BORON REMOVAL FROM IRRIGATION RETURN WATERS ...Desalination, Reverse Osmosis, Use of Impaired Water, Waste Treatment-economics, Waste Water Pre-treatment, ...5.0093
- EFFECT OF BORON IN BIOLOGICAL WASTE TREATMENT ...Activated, Aerobic, Industrial Wastes, Sewage - Domestic, Surfactants, ...5.0223
- THE PROCESSES AND CONDITIONS CONTRIBUTING TO THE ACCUMULATION OF NUTRIENTS IN DRAINAGE WATER FROM IRRIGATED AREA AND SOIL RECLAMATION ...Nitrogen, ...4.0027
- CHEMISTRY OF BORON IN CALIFORNIA SOILS ...Absorption, Fixation, Exchange, Phytotoxic, Soil Amendments, Soil and Rock Leaching, Soil Management -non-specific, Soil Morphology, Profiles, ...5.0080
- TOLERANCE OF CITRUS TO SALINITY AND BORON IN THE SOIL AND IRRIGATION WATER ...Citrus, Saline Soils, ...3.0186

Bottom Sampling

- THE FEASIBILITY OF COLD WATER FISHES FOR LAKE SHARPE, SOUTH DAKOTA ...Fish -non-specific, Low Temp. - but Above 32f, Reservoirs and Impoundments, South Dakota, Temperature, ...7.0041
- ANALYSIS OF WATER CHEMISTRY ...Aeration, Chemical Analysis (water), Destratification, Physical-general, ...4.0035
- TROUT STREAM - SURVEY OF STREAMS AND THEIR WATERSHEDS ...Biological-general, Erosion-general, Georgia, Physical-general, Population Dynamics, ...2.0361
- BOTTOM FAUNA STUDIES ...Benthic Fauna, Depth, water Level, Fluctuation, Lakes, Number Or Density, Water Level Fluctuation, ...4.0126
- CHEMICAL AND PHYSICAL ANALYSES OF WATER AND SOILS ...Chemical-general, Lakes, Physical-general, Soil Chemical Properties, Water Level Fluctuation, ...2.0548
- THE EFFECTS OF EXTREME FLOODS AND PLACER MINING ON THE BASIC PRODUCTIVITY OF SUBARCTIC STREAMS ...Alaska, Benthic Fauna, Floods, Meteorological Extremes, Placer, Productivity - Food Chain, ...2.0022
- DISTRIBUTION AND ECOLOGY OF AQUATIC INSECTS OF IDAHO ...Aquatic Ecology, Chemical-general, Idaho, Insects - non-specific, Physical-general, ...2.0393
- FARMINGTON RIVER SHAD STUDIES ...Alewife, menhaden, shad, herring, Migration, Plankton Sampling, Water Properties-general, Water Sampling, ...6.0117

Brackish Water

- RESEARCH IN SEDIMENT SAMPLING EQUIPMENT ...Bed Load, Instrumentation-general, Suspension, Turbidity, Ultrasonics, ...7.0059
- SAN PABLO BAY STUDY ...Bays, Benthic Fauna, Excavation, Spoil Banks, Water Sampling, ...6.0038
- ROUTINE SAMPLING AT SEVEN INDEX STATIONS ...Data Acquisition-general, Fish -non-specific, Lake Erie, Plankton Sampling, Water Sampling, ...6.0438

Brackish Water

- DEVELOPMENT OF THE VACUUM FREEZING VAPOR COMPRESSION PROCESS FOR USE WITH BRACKISH WATERS ...Desalination, Freezing, Mobile, North Carolina, Pilot Plants, ...3.0487
- DEVELOPMENT OF ADVANCED TRANSPORT DEPLETION PROCESSES ...Desalination, Electrodialysis, Ion Selective, Pilot Plant, ...3.0002
- HIDDEN COSTS OF USING SUBSTANDARD QUALITY WATER, AS EXPERIENCED BY WATER USERS IN WEBSTER, SOUTH DAKOTA ...Desalination, Economic Impact, Potable Water, South Dakota, Water Costs, ...6.0495
- SYNTHESIS AND EVALUATION OF NEW POLYMER MEMBRANE CANDIDATES FOR APPLICATION IN REVERSE OSMOSIS ...Brines, Desalination, Membranes-other, Organic, Reverse Osmosis, ...3.0174
- THE EFFECTS OF VELOCITY ON THE PASSIVATION OF ALLOYS IN BRACKISH WATER ...Desalination, Electrolytes, Metallic Alloys, Passivation, Velocity -water, ...3.0136
- DEVELOPMENT OF A 50,000 GALLON PER DAY NELLEN STACK ELECTRODIALYSIS MODULE ...Cost Analysis, Desalination, Electrodialysis, Membranes-other, Waste Treatment-economics, ...3.0150
- EVALUATION OF AN ELECTROCHEMICAL DESALINATION PROCESS FOR BRACKISH WATER ...Desalination, Electrochemistry-other, ...3.0396
- ELECTROLYTIC REGENERATION OF ION EXCHANGE RESINS ...Desalination, Ion Exchange-other, Pilot Plant, Regeneration-other, ...3.0327
- A COST-EFFECTIVENESS STUDY OF PRETREATMENT METHODS SUITABLE FOR INTEGRATION TO MEMBRANE DESALTING PLANTS ...Desalination, Economic Efficiency, Use of Impaired Water, Waste Treatment-economics, Waste Water Pre-treatment, ...5.0746
- STUDIES IN THE THERMOECONOMICS OF SEA AND BRACKISH WATER DEMINERALIZATION ...Demineralization, Desalination, Optimization, Sea Water-general, ...3.0319
- RESEARCH AND DEVELOPMENT OF ULTRATHIN FILM MEMBRANES FOR REVERSE OSMOSIS DESALINATION ...Cellulosics, Desalination, Dimensions, Expansion, Membranes-other, Reverse Osmosis, ...3.0298
- ION SELECTIVE ELECTROCHEMICAL SENSORS ...Brines, Detectors and Sensors, Electroanalyses-other, Electrode, Technique Development, ...5.1166
- FIELD EVALUATION OF THE SUL-BISUL ION EXCHANGE PROCESS FOR DESALTING BRACKISH WATERS ...Desalination, Ion Exchange-other, Mobile, Salinity, ...3.0214
- DEEP WELL DISPOSAL OF DESALINATION BRINE WASTES ...Artificial Recharge, Desalination, Desalination Wastes, Economics-general, Water Law-general, ...3.0296
- PROCESS AND CONFIGURATION DEVELOPMENT FOR TUBULAR REVERSE OSMOSIS UNITS ...Desalination, Other, Pilot Plant, Reverse Osmosis, ...3.0057
- BRACKISH WATER FIELD TEST EVALUATION OF MEMBRANE PROCESSES ...Desalination, Economic Efficiency, Membranes-other, Pilot Plant, ...3.0072
- DESIGN AND CONSTRUCTION OF A LOW PRESSURE HOUSEHOLD REVERSE OSMOSIS UNIT ...Cost Analysis, Desalination, Mobile, Potable Water, Reverse Osmosis, ...3.0320
- PARAMETRIC ECONOMIC AND ENGINEERING EVALUATION STUDY OF THE ELECTRODIALYSIS PROCESS ...Cost Analysis, Desalination, Electrodialysis, Other, Pilot Plant, ...3.0270
- IMPROVEMENT OF ECONOMICS OF ELECTRODIALYSIS SYSTEMS BY SELECTIVE PRETREATMENT ...Cost Analysis, Desalination, Electrodialysis, Ion Selective, Other, Waste Water Pre-treatment, ...3.0407
- BRACKISH WATER PURIFICATION BY BIOLOGICAL FUEL CELL POWERED ELECTRODIALYSIS ...Biological, Cellulose Acetate, Desalination, Electrodialysis, Water Costs, ...5.0704

Brackish Water

SUBJECT INDEX

- PHYSIOLOGICAL CHANGES IN PLANTS PRODUCED BY SALINE SOLUTIONS ...Beans (garden), Humidity, Repression, Transpiration and Evap, Water Movement, ...2.0061
- TAXONOMY AND BIOLOGY OF SLUDGE WORMS ...Animal Taxonomy, Bioindicators, Earthworms, Fresh Water, Pollution Effects, ...5.0167
- GRAND VALLEY SALINITY CONTROL DEMONSTRATION PROJECT ...Canals, Colorado River, Linings-pavings, Mineralization, Natural Recharge, ...5.0203
- AGRICULTURAL UTILIZATION OF SOILS AFFECTED BY SALINITY ...Absorption, Fixation, Exchange, Mineral Nutrition, Movement, Availability, Saline Soils, Yield, ...3.0237
- MANAGEMENT OF SALINE WATER FOR CROP PRODUCTION ...Arizona, Management, Saline and Alkaline Soils, Use of Impaired Water, Water Quality-general, ...3.0014
- EXTENT OF BRACKISH WATER IN TIDAL RIVERS ...Maryland, Saline Water Intrusion, Salinity, Tidal Streams, Tides, ...2.0562
- EXPERIMENTAL REARING OF SALMON AND STEELHEAD IN BRACKISH WATER IMPOUNDMENTS ...Captive Rearing, Environmental Response, Mortality Rates, Rainbow Trout, Steelhead Trout, Stocking of Fish & Shellfish, ...6.0461
- LIGHTWEIGHT WATER PURIFICATION UNIT ...Density, Desalination, Distillation-other, Distilling Units, Mobile, Plastic Matrix, Technique Development, Waste Water Treatment-general, ...3.0250
- RELICT COPEPODS FROM LAKE TUBORG, ELLESMERE ISLAND ...Canada, Carbon-14, Copepods, Lakes, Plankton Sampling, ...2.0257
- DISTRIBUTION OF ELEMENTS IN FLUVIAL AND BRACKISH ENVIRONMENTS ...Adsorption Capacity, Adsorption-general, Chemical Reactions, Element Ratios, Exchange Capacity, Solution, ...2.0282
- EXTENT OF BRACKISH WATER IN TIDAL RIVERS, MARYLAND ...Runoff, Tides, Water Utilization -general, ...2.0569
- SELECTION OF SITES FOR FIELD TESTING BRACKISH WATER CONVERSION UNITS ...Desalination, Other, ...3.0123
- PROGRAM FOR FIELD EVALUATION OF REVERSE OSMOSIS PILOT PLANTS ON BRACKISH WATERS ...Cost Analysis, Membranes-other, Other, Pilot Plant, Reverse Osmosis, ...3.0115
- AQUIFERS AND DRAINAGE ...Aquifers-other, Drainage, Groundwater Movement, Irrigation-general, Model Studies, ...2.0166
- VALUE OF DESALTED WATER FOR IRRIGATION ...Desalination, Electrodialysis, Irrigation-general, Saline Soils, Water Costs, ...3.0128
- THE EFFECT OF OCEAN WATER INTRUSION INTO BACK BAY, VIRGINIA, AND CURRITUCK SOUND, NORTH CAROLINA, ON THE WATERFOWL AND FISH HABITAT ...Aquatic Ecology, Fish -non-specific, Habitat Studies, Saline Water Intrusion, Water Fowl, N.s., Water Salinity, ...2.0585
- EFFECTS OF USING SALINE AND INDUSTRIAL WASTE WATERS ON YIELD AND QUALITY OF PLANTS ...Industrial Wastes, Irrigation, Irrigation-general, Saline and Alkaline Soils, Soil and Rock Leaching, Soil-water-plant Relationships, ...3.0258
- THE EFFECT OF BRACKISH WATER ON PLANTS AND SOIL IN THE SOUTH ...Irrigation, Saline and Alkaline Soils, Soil-water-plant Relationships, Southern, ...3.0192

Brines

- SOLUBILITY OF NATURAL GASES IN CONNATE WATER AND OF WATER IN NATURAL GASES ...High Pressure - 1-1000 Atm, Interstitial - Connate Water, Ions and Gases, Natural Gas, Solubility, Solution Chemistry, ...1.0080
- FUNDAMENTAL STUDIES OF DESALINATION BY FREEZING ...Desalination, Freezing, Heat Transfer, Removal-organics, ...3.0281
- STUDIES OF FUNDAMENTAL MECHANISMS IN THE DEPOSITION OF CALCIUM SULFATE SCALE ...Dilatometry, Electron, Nucleation, Phase Relationship, Scale Formation, ...3.0293
- THE EFFECTS OF NONELECTROLYTES AND SELECTED SALTS ON STRUCTURING IN WATER ...Heat Capacity-other, Solubility, Thermal Relation-other, Water, ...1.0104
- RECOVERY OF SALTS FROM SALINE WATERS VIA SOLVENT EXTRACTION ...Desalination, Distribution Coefficient, Extraction, Magnesium, Material Recovery, ...5.0162
- PROTECTIVE FILMS FORMED BY PLASMA ANODIZATION ...Aluminum, Anodic, Desalination, Iron, Passivation, ...3.0263
- SYNTHESIS AND EVALUATION OF NEW POLYMER MEMBRANE CANDIDATES FOR APPLICATION IN REVERSE OSMOSIS ...Brackish Water, Desalination, Membranes-other, Organic, Reverse Osmosis, ...3.0174

- MINERAL RECOVERY FROM CONCENTRATED BRINES ...Chloride, Desalination, Great Salt Lake, Magnesium, Potassium, Regeneration-other, ...5.1198
- DIFFUSION IN TERNARY AQUEOUS SALINE SOLUTIONS ...Diffusion, Thermodynamic Non Equilibrium, ...1.0042
- NUCLEATION AND GROWTH OF ICE CRYSTALS ...Crystal Growth, Desalination, Freezing, Hydration, Nucleation, ...3.0041
- ION SELECTIVE ELECTROCHEMICAL SENSORS ...Brackish Water, Detectors and Sensors, Electroanalyses-other, Electrode, Technique Development, ...5.1166
- WATER RESEARCH PROGRAM III CORROSION ...Composition Parameters-other, Nickel Alloys, Pitting, Titanium, ...3.0438
- REACTIONS AND TRANSPORT PHENOMENA AT SURFACES ...Analysis and Detection, Electrode, Pitting, Separation-general, Transport, ...3.0440
- DEVELOPMENT OF DIRECT CONTACT CONDENSATION MULTISTAGE FLASH (DCC-MSF) DISTILLATION PROCESS ...Condensation, Desalination, Film, Flash Distillation, Heat Transfer, Plastics - General, ...3.0040
- STUDIES ON THE HYDRATE PROCESS FOR DEMINERALIZING SEA WATER ...Crystal Growth, Demineralization, Hydration, Removal-inorganics, ...3.0366
- DESALINATION AND REDUCTION OF CONCENTRATION POLARIZATION EFFECTS IN REVERSE OSMOSIS SYSTEMS USING POROUS WALL SECTIONS ...Fluid Flow-other, Membranes-other, Other, Porosity, Reverse Osmosis, ...3.0359
- LIME MAGNESIUM CARBONATE PROCESS - SEA WATER SOFTENING PLANT ...Evaporation, High Temperature - 1000-3000, Precipitation, Removal-inorganics, Waste Water Pretreatment, ...3.0105
- EFFECT OF ELECTROCHEMICAL AND METALLURGICAL FACTORS ON CORROSION OF METALSAND ALLOYS ...Desalination, Pitting, Stainless Steels-other, ...3.0283
- EVALUATION OF HIGH PRESSURE PUMPS FOR REVERSE OSMOSIS PROCESS ...Axial Flow, Pumping, Reverse Osmosis, Sea Water-general, ...3.0410
- TEST OPERATION OF A 2,500 GPD TWO-STAGE SEA WATER REVERSE OSMOSIS PILOT PLANT ...Cost Analysis, Desalination, Membranes-other, Optimization, Pilot Plant, Reverse Osmosis, ...3.0079
- DEVELOPMENT OF NEW AND IMPROVED CELLULOSE ESTER REVERSE OSMOSIS MEMBRANES ...Desalination, Homopolymers, Membranes-other, Natural Occurring, Reverse Osmosis, ...3.0060
- THERMOPHYSICAL PROPERTIES OF SEA WATER AND AQUEOUS ELECTROLYTE SOLUTIONS CONTAINING NaCl, KCl, Na₂SO₄, AND MgSO₄ ...Boiling Point, Conductivity, Density, Tables, Compilations, Catalogs, Vapor Pressure, Viscosity, ...3.0286
- PROBABLE EFFECTS ON MARINE ENVIRONMENTS OF DISPERSING BRINE EFFLUENTS FROM LARGE DESALINATION PLANTS IN THE GULF OF CALIFORNIA ...Atomic Plants, Desalination, Gulf of California, Marine Environments-general, Pollution - Effects of, ...3.0020
- REMOVAL OF INORGANIC MATERIAL FROM SALINE WATER BY PRECIPITATION PROCESSES ...Crystal Growth, Demineralization, Nucleation, Precipitation, Removal-inorganics, ...5.0420
- A COMPREHENSIVE ANALYSIS OF THE TULAROSA BASIN SALINE WATER RESOURCES - THEIR AVAILABILITY AND POTENTIAL ECONOMIC DEVELOPMENT ...Atomic Plants, Desalination, Electric Power Plants, Impact, New Mexico, ...7.0076
- RECONDITIONING AND REUSE OF FOOD PROCESSING BRINES ...Canning Wastes, Filtration, Lagoon, Waste Treatment-economics, Water Reuse, ...5.0234
- NORTH FORK ALLUVIAL DECONTAMINATION PROJECT ...Artificial Recharge, Petroleum Industry, Seepage, Surface Water, Texas, ...5.1145
- UTILIZATION OF OIL FIELD BRINES AS A POSSIBLE FERTILIZER SOURCE ...Atomic Absorption, Emission, Geochemical Analysis, Material Recovery Wastes, X-ray, ...1.0056
- CHEMICAL QUALITY OF BRINES ASSOCIATED WITH DEEP SEDIMENTS BENEATH GREAT SALT LAKE ...Chemical Analysis (water), Great Salt Lake, Salt, Water Sampling, Water Wells, ...5.1200
- HYDROLOGY OF THE SUB-LAKE SEDIMENTS BENEATH GREAT SALT LAKE ...Artificial Recharge, Geology - Engineering, Great Salt Lake, Interstitial - Connate Water, Permeability, ...2.1082
- CHEMISTRY OF BRINE STRATIFICATION AND RELATED EVAPORATION STUDIES ...Analysis and Detection, Chemical-general, Evaporation, Ions and Gases, Water Sampling, ...1.0119

SUBJECT INDEX

Building and Land Development

- PERMIAN BASIN - ORIGIN OF SALINE WATER DISCHARGE
...Groundwater Movement, Permian Period, Saline Water Intrusion, Subsurface Flow, Texas, ...2.1004
- BINDERS OF CONCRETE RESISTANT TO SALINE WATER AT ELEVATED TEMPERATURES ...Aggregates, Extenders, Fillers, Binders, Cement, Concrete, D.t.a., X-ray, ...8.0086
- SOLUBILITIES OF SILICATES IN SALINE WATERS ...Analysis and Detection, Desalination, Scale Formation, Silicate, Solubility, ...4.0198
- CHEMISTRY OF SUBSURFACE OILFIELD BRINES ...Chemical-general, Fresh Water, Primary Recovery, ...2.0873
- ANALYTICAL METHODS - OILFIELD WATER CHEMISTRY ...Chemical Analysis (water), Fluid Properties, General, Technique Development, ...2.0874
- SOLUBILITIES OF THE SULFATES OF BARIUM AND STRONTIUM IN OILFIELD WATERS ...Barium, Fluid Properties, Radioisotopes, Solution Chemistry, Strontium, Thermal Properties-other, ...1.0097
- MINING-POLLUTION CONTROL TECHNOLOGY - OIL PRODUCTION GROUND-WATER RECLAMATION BY SELECTIVE PUMPING ...Groundwater, Mine Drainage Control, Petroleum Industry, Pumping, Saline Water Intrusion, Secondary Recovery, ...5.0913

British Isles

- RESEARCH ON DECISION MAKING AND RELATED MANAGERIAL ASPECTS OF BRITISH WATER RESOURCES PROGRAMS ...Administrative Structures, Management, Operations Research, Water Law-general, ...6.0381

Bromine

- DEVELOPMENT OF FIELD TEST FOR FREE CHLORINE ...Chlorine, Colorimetric, Membranes-other, Sterilants, Technique Development, ...5.0808
- (U) DETERMINATION OF FREE BROMINE IN WATER (US 14) ...Amines, Analysis and Detection, Chlorine, Colorimetric, ...5.0372
- DISINFECTION OF SEWAGE EFFLUENTS ...Bacteria, Chemical-general, Chlorination, Chlorine, Disinfection, Sewage, ...5.0380

Building and Land Development

Classification

Manufacturing

- PREPARE AN OPERATIONAL PLAN, CONCEPTUAL DESIGN AND PLANS AND SPECIFICATIONS FOR A SEAWATER CORROSION TEST FACILITY ...Construction-general, Desalination, Research Facilities, Test Methods, Water, ...3.0297

Public Utilities

- A STUDY OF THE ECONOMIC IMPACT OF DROUGHT ON WATER SUPPLY SYSTEMS IN THE PASSAIC RIVER BASIN, NEW JERSEY ...Economic Impact, Meteorological Extremes, New Jersey, River Basins, Water Quality-general, ...2.0761
- THE LOCAL WATER DISTRICT AS AN URBAN WATER-POLICY DETERMINING ENTITY ...California, Management, State-local Government, Urban Environments, ...6.0060
- QUANTITATIVE ANALYSIS OF WATER USE PATTERNS IN PUERTO RICO ...Consumptive Use, Projections and Estimations, Puerto Rico, Water Utilization-general, ...6.0484
- EFFECTS OF LIMNOLOGICAL FACTORS ON WATER TREATMENT ...Iowa, Other, Reservoirs, Reservoirs and Impoundments, Water Quality-general, ...5.0415
- A MATHEMATICAL MODEL FOR REGIONAL TREATMENT OF WATER POLLUTION SYSTEMS ...Estuaries, Mathematical Analysis, Public Works, Regional Areas, Sewerage Systems-other, Value Analysis, ...5.0114
- REVIEW OF ALGALCIDES ...Algaeides -non-specific, Algal Pollutant Sources, Residential, Survey Studies, Water Distribution Systems, ...5.0358
- DEMAND FOR WATER UNDER DYNAMIC CONDITIONS ...Colorado, Social Aspects, Water Costs, Water Demand, ...6.0087
- INORGANIC ADDITIONS RESULTING FROM WATER USE ...Composition, Hardness-minerals, Mineralization, Water Reuse, ...5.0350
- REGIONAL COMPREHENSIVE MULTI-PURPOSE WATER RESOURCES PLANNING STUDIES ...Augmentation-general, Multiple-purpose Projects, New York, Planning, Water Resources Development, ...6.0370

- UTILITIES IN PERMAFROST AREAS ...Codes and Standards, Cold - Climates, Permafrost-frozen, Sewage Treatment Plant, ...2.0756

- POWER TRANSMISSION STRUCTURES, NEW TYPES ...Electric Power Plants, Electrical Engineering-general, Power Transmission, Structural, Transmission Lines, ...8.0120

- EMPIRICAL PREDICTION OF SAND FILTER PERFORMANCE ...Public Works, Sand, Urban Environments, Waste Water Treatment-general, ...5.0403

Residential

- REVIEW OF ALGALCIDES ...Algaeides -non-specific, Algal Pollutant Sources, Public Utilities, Survey Studies, Water Distribution Systems, ...5.0358

Components and Equipment

Roofs

- NEW ROOFING SYSTEMS ...Domestic Structural, Elastomers Rubber, Standards, Specifications, Weathering, ...8.0078

Construction

Codes and Standards

- UTILITIES IN PERMAFROST AREAS ...Cold - Climates, Permafrost-frozen, Public Utilities, Sewage Treatment Plant, ...2.0756

Construction-general

- PREPARE AN OPERATIONAL PLAN, CONCEPTUAL DESIGN AND PLANS AND SPECIFICATIONS FOR A SEAWATER CORROSION TEST FACILITY ...Desalination, Manufacturing, Research Facilities, Test Methods, Water, ...3.0297

Construction-other

- EPOXY RESINS FOR CIVIL WORKS PROJECTS ...Concrete-other, Epoxies, Fracture Mechanics, Maintenance, Repairing, ...8.0248

Equipment

- INVESTIGATIONS OF PLACEABILITY OF CONCRETE ...Cement, Concrete, Methods, Plasticity, ...8.0258
- PERFORMANCE OF CONSTRUCTION PLANT AND EQUIPMENT ...Concrete-general, Construction, Machines, ...8.0251

Excavation

- RESEARCH TO DETERMINE THE FEASIBILITY OF NUCLEAR EXCAVATION ...Geology - Engineering, Nuclear Excavation, Nuclear Explosion, ...2.0102
- RAPID SOILS EXCAVATION ...Construction, Machines, Nuclear Excavation, Technique Development, ...8.0082
- EXPLOSIVE EXCAVATION IN THE DEVELOPMENT OF WATER RESOURCES ...Earth & Rockfill Dams, Nuclear Power, Open Channel, Reservoirs, Water Resources Development, ...8.0041
- SAN PABLO BAY STUDY ...Bays, Benthic Fauna, Bottom Sampling, Spoil Banks, Water Sampling, ...6.0038

Methods

- INVESTIGATIONS OF PLACEABILITY OF CONCRETE ...Cement, Concrete, Equipment, Plasticity, ...8.0258
- IMPROVEMENTS IN CONCRETE CONSTRUCTION PRACTICES ...Aggregates, Extenders, Fillers, Construction, Moisture, ...8.0259
- DURABILITY AND BEHAVIOR OF PRESTRESSED CONCRETE BEAMS ...Beams - Bars, Construction Materials-other, Prestressed, Weathering, ...8.0253

Design

Codes and Standards

- UTILITIES IN PERMAFROST AREAS ...Cold - Climates, Permafrost-frozen, Public Utilities, Sewage Treatment Plant, ...2.0756

- ULTIMATE STRENGTH DESIGN ...Electric Power Plants, Power Development, Reinforced, Structural, ...8.0030

Structural

- INVESTIGATION OF THE USE OF LOW-COST PLASTIC FILMS FOR SOLAR STILL CONSTRUCTION ...Costs, Distilling Units, Film, Glass, Plastics - General, Weathering, ...3.0391
- ULTIMATE STRENGTH DESIGN ...Codes and Standards, Electric Power Plants, Power Development, Reinforced, ...8.0030

Building and Land Development

SUBJECT INDEX

POWER TRANSMISSION STRUCTURES, NEW TYPES ...Electric Power Plants, Electrical Engineering-general, Power Transmission, Public Utilities, Transmission Lines, ...8.0120

Land Use

Planning

URBAN AND METROPOLITAN STUDIES ...Aerial, Geography-physical, Remote Sensing-general, Urban, Urban Environments, ...6.0139

Redevelopment of Land

INTERRELATIONS BETWEEN RIVER BASIN DEVELOPMENTS AND DEVELOPMENT OF METROPOLITAN AREAS ...Planning, River Basins, Urban Research, Water Resources Development, ...6.0165

Value

INFLUENCE ON LAND VALUES OF IMPROVED UTILIZATION THROUGH FLOOD PROTECTION ...Economic Impact, Flood-proofing, Land Use, Rural Areas, Urban Environments, ...6.0129

Zoning

FLOODS IN PUNALUU-HAUULA AREA, OAHU, HAWAII ...Floodproofing, Floods, Hawaii, Peak Flow, ...4.0086

Landscape

ANALYSIS OF DRAINAGE BASINS AND LANDSCAPES ...River Basins, Watersheds-general, ...2.0633

Maintenance

DISTRIBUTION OF LIQUIDS IN POLAR CAMPS ...Flow, Permafrost-frozen, Pipes, Polar, Sewage, ...5.0134

EPOXY RESINS FOR CIVIL WORKS PROJECTS ...Concrete-other, Construction-other, Epoxies, Fracture Mechanics, Repairing, ...8.0248

Public Works

A MATHEMATICAL MODEL FOR REGIONAL TREATMENT OF WATER POLLUTION SYSTEMS ...Estuaries, Mathematical Analysis, Public Utilities, Regional Areas, Sewerage Systems-other, Value Analysis, ...5.0114

EMPIRICAL PREDICTION OF SAND FILTER PERFORMANCE ...Public Utilities, Sand, Urban Environments, Waste Water Treatment-general, ...5.0403

ORGANIC MATTER AND ITS ROLE IN WATER QUALITY ...Management, Organic Matter, Reservoirs and Impoundments, Urban Environments, Waste Water Treatment-general, ...5.0122

EXTRACTION OF ALGAE BY FLOCCULATIVE TECHNIQUES ...Additives, Algal Pollutant Sources, Extraction, Flocculation, ...5.0398

Buoys

BIOLOGY AND CHEMISTRY OF MARINE PLANKTON POPULATIONS ...Chlorophyll, Food Chains, Nutrients, Phytoplankton, Vertical Distribution, Zooplankton, ...6.0289

VERTICAL CURRENT STRUCTURE IN THE GREAT LAKES ...Currents -water, Forecasting-prediction, Great Lakes-general, Model Studies, Wind-water Interaction, ...2.0632

Cadmium

HEMATOLOGICAL CHANGES IN *F. HETEROCLOTUS* UPON EXPOSURE TO TOXIC METALS ...Blood Cells, Blood Plasma and Serum, Killifish - Cyprinodon, Lead, Mineral Origin, ...5.1092

Calcium

NEW SELECTIVE MEMBRANES ...Desalination, Ion Selective, Natural Occurring, Reverse Osmosis, ...5.0763

SEPARATION OF MAGNESIUM FROM CALCIUM IN THEIR SALINE SOLUTIONS ...Chelation, Desalination, Ion Exchange-other, Magnesium, Separation-general, ...5.0687

ION HYDRATION AND ION INTERACTION ...Assoc & Dissoc, Attenuation, Hydration, Magnesium, Salt, Ultrasonic, Ultrasonics, ...1.0059

PREDICTING THE EFFECT OF WATER QUALITY AND GYPSUM ON THE CHEMICAL AND PHYSICAL PROPERTIES OF SALINE AND ALKALI SOILS ...Forecasting-prediction, Hydrated Acid and Norm, Model Studies, Pollution - Effects of, Soil Chemical Properties, ...3.0013

NEUTRON ACTIVATION ANALYSIS OF IMPURITIES IN RAIN AND SNOW ...Activation Analysis, Lake Erie, Rain-general, Snowmelt, Storms-general, Sulfur, ...5.0767

PHYSIOLOGY OF MINERAL ACCUMULATION IN PLANTS ...Adhesion, Corn, Drought, Mineral Nutrition, Nutrition, ...2.0107

California

STUDIES OF PHOTOSYNTHETIC HALOPHILES FROM OWENS LAKE ...Exobiology, Halophytic, Ionic Effect, Playas, Temperature, ...6.0057

RADIOISOTOPIC TRACER STUDY TO INVESTIGATE THE MECHANICS OF LITTORAL TRANSPORT AROUND POINT CONCEPTION, CALIFORNIA ...Distribution, Intertidal Areas, Radioisotopes, Sediment Transport-other, Tracers, ...1.0031

AMERICAN RIVER HYDROBIOLOGIC POTENTIAL STUDY ...Bioindicators, Lower Plants, Phytoplankton, Primary Productivity, Water Quality-general, ...5.0143

STUDY OF WATERFOWL BOTULISM ...Clostridium Botulinum, Growth (non-specific & Ot.), Identification, Pathology, Water Fowl, N.s., ...6.0070

A STUDY OF THE BENTHIC FAUNA OF MERLE COLLINS RESERVOIR (VIRGINIA RANCH RESERVOIR) ...Food Supply, Number Or Density, Productivity - Food Chain, Reservoirs and Impoundments, ...6.0071

THE LOCAL WATER DISTRICT AS AN URBAN WATER-POLICY DETERMINING ENTITY ...Management, Public Utilities, State-local Government, Urban Environments, ...6.0060

ON-FARM IRRIGATION WATER SUPPLIES AND COSTS IN RELATION TO CROPPING SYSTEMS AND PRODUCTION ADJUSTMENTS IN THE SACRAMENTO VALLEY ...Economic Efficiency, Irrigation-general, Water - Alternative Uses, Water Costs, Water Quantity-general, ...6.0051

THE DEVELOPMENT OF WATER RESOURCES IN CALIFORNIA IN RELATIONSHIP TO PLANS AND PROGRAMS FOR WESTERN REGIONAL WATER DEVELOPMENT ...Planning, Regional Areas, Social Aspects, Water Resources Development, Water Transfer, ...6.0063

ECONOMIC EVALUATION OF WATER - A DYNAMIC INTER-REGIONAL INPUT-OUTPUT PROGRAMMING MODEL OF CALIFORNIA AND THE WESTERN STATES WATER ECONOMY ...Available Water, Economics-general, Other Models, ...6.0044

THE ACCEPTABILITY OF MINERAL TASTE IN DOMESTIC WATER ...Mineralization, Potable Water, Taste, Water Utilization -domestic, ...5.0068

ESTIMATION OF RECREATIONAL BENEFITS AT SOME EXISTING WATER DEVELOPMENT SITES IN CALIFORNIA ...Projected Demand, Recreation Sites, Recreation Types -non-specific, Welfare Economics, ...6.0081

A SYSTEM APPROACH FOR INTEGRATING GROUNDWATER AND SURFACE-WATER USE ...Conjunctive Use, Groundwater, Systems Analysis, Water Quality Control-general, Water Utilization -general, ...6.0037

PACIFIC OCEAN INFLUENCE UPON CALIFORNIA RAINFALL ...Forecasting, Pacific Ocean-general, Patterns, Rain-other, Temperature, ...2.0104

SYSTEMATIC ANALYSIS OF MANAGEMENT EFFECTIVENESS OF THE WATER QUALITY CONTROL BOARD SYSTEM OF CALIFORNIA ...Management, Model Studies, Operations Research, State-local Government, Water Quality Control-general, ...6.0035

INDUCTIVE ELECTROMAGNETIC METHODS FOR MAPPING AND EVALUATING AQUIFERS ...Aquifers-general, Electric Logging, Geophysical Analysis, Groundwater, Mapping, ...2.0083

PUBLIC ATTITUDES TOWARD REUSE OF RECLAIMED WATER ...Attitudes & Attitude Change, Water Reuse, ...6.0042

MARINE WASTE DISPOSAL AND SEA URCHIN ECOLOGY ...Pollution Effects, Productivity - Food Chain, Sea Urchins & Other Echinoderm, Sewage, ...5.0130

EUTROPHICATION OF SURFACE WATERS - LAKE TAHOE ...Effluents-waste Water, Eutrophication, Lakes, Runoff, ...5.0088

WATER-QUALITY REGIMEN OF TAHOE-TRUCKEE SYSTEM ...Digital Computers, Lakes, Model Studies, Nevada, Water Quality-general, ...5.0706

TREATMENT OF COMBINED SEWER OVERFLOWS BY THE DISSOLVED AIR FLOTATION PROCESS ...Chlorination, Combined Sewer, Flotation, Overflow, ...5.0153

CHARACTERIZATION OF THE ACTIVATED SLUDGE PROCESS AT THE HYPERION TREATMENT PLANT ...Activated, Mathematical Analysis, Model Studies, Waste Water Treatment-general, Water Purification Plants, ...5.0107

SUBJECT INDEX

Canada

MOISTURE CONTROL AND ITS RELATION TO CULTURAL PRACTICES FOR CITRUS, TREE, AND VINE CROPS ...Irrigation, Moisture Tension, Soil-water-plant Relationships, Trees, Vines, ...2.0139

CLIMATIC PATTERNS AND THEIR EFFECT ON CALIFORNIA AGRICULTURE ...Agriculture, Applied Climatology, Data Analysis - General, Phenology, Production & Processing, Temperature, Weather, ...2.0095

SOIL MOISTURE DRYING CURVES-MANAGEMENT RELATIONS ...Management, Moisture Content, Sequoia, Soil Environment, ...6.0036

DISPERSAL OF CONCENTRATED OR UNDILUTED INSECTICIDES FOR IMPROVED MOSQUITO CONTROL ...Animal Appl. -other, Insecticides -non-specific, Larvicides, Mosquitoes -non-specific, ...5.0493

METHODOLOGIES FOR PREDICTING CLIMATIC SUITABILITY OF NEW AREAS FOR IRRIGATED AGRICULTURE ...Alpine, Applied Climatology, Arid and Desert, Cold - Climates, Forecasting-prediction, Irrigation-general, ...2.0096

DRAINAGE DESIGN IN RELATION TO SOIL SALINITY ...Drainage, Drainage Engineering, Movement, Availability, Saline and Alkaline Soils, Soil and Rock Leaching, ...3.0046

IRRIGATION STUDIES WITH VEGETABLES ...Aerial, Irrigation-general, Root, Saline Soils, Soil-water-plant Relationships, Water Quality-general, ...2.0137

MOISTURE CONTENT OF VARIOUSLY TREATED CHAPARRAL SOILS IN RELATION TO SEEDLING ESTABLISHMENT OF ADAPTED PERENNIAL GRASSES ...Adaptation, Cover Crops, Grasses -non-specific, Moisture Tension, Soil-water-plant Relationships, ...2.0142

EFFECTS OF ON-FARM IRRIGATION WATER SUPPLIES AND COSTS ON CROPPING SYSTEMS AND PRODUCTION ADJUSTMENTS ...Agriculture, Irrigation-general, Production & Processing, Water Costs, Water Demand, ...6.0052

COOPERATIVE WATERSHED MANAGEMENT ON BRUSHLANDS OF CALIFORNIA ...Amount, Management, Management and Fertility, Runoff, Sediment Yield, ...4.0036

GROUND WATER RESEARCH ...Agriculture Industry, Artificial Recharge, Dispersion -water, Groundwater, Groundwater Movement, ...2.0135

COOPERATIVE WATERSHED MANAGEMENT IN SNOWLANDS AND LOWER CONIFER ZONES OF CALIFORNIA ...Coniferous Forests, Forest Watersheds, Management, Moisture Tension, Snowmelt, ...4.0022

FLOODS FROM SMALL DRAINAGE AREAS ...Floods, Gaging, Hydrographs, Small Watersheds, ...4.0039

RELATIONSHIP BETWEEN IRRIGATION WATER COMPOSITION AND SOIL PROPERTIES ...Clovers -red,alsike,ladino... , Irrigation-general, Movement, Availability, Saline and Alkaline Soils, Salinity, ...3.0034

BORON CHARACTERISTICS AND RECLAMATION NEEDS OF SOILS IN WESTERN KERN COUNTY ...Boron, ...3.0087

COOPERATIVE BIOLOGICAL PEST CONTROL RESEARCH ...Biological Pollutants -general, Canals, Evaluation, of Aquatic Plants, Reservoirs and Impoundments, ...5.0087

SPECIFIC YIELD RESEARCH AND PERMEABILITY RESEARCH ...Aquifers-general, Permeability, Storage of Water, Velocity -water, Water Yield, ...7.0013

NUTRIENT REMOVAL FROM AGRICULTURAL WASTE WATERS ...Denitrification, Eutrophication, Nutrients, Pilot Plants, San Francisco Bay, Waste Water Treatment-general, ...4.0032

A SALT BALANCE INVESTIGATION ON THE SANTA ANA RIVER BASIN ABOVE PRADO DA ...Forecasting-prediction, Groundwater Basins, Salinity, Systems Analysis, Water Quality Control-general, ...5.0098

GENESIS AND MORPHOLOGY OF PYGMY FOREST-BLACKLOCK SOIL ECOSYSTEM ...Douglas Fir, Sequoia, Soil Ecology, Water Table Fluctuation, Wave-built Terrace, ...6.0041

ADHESIVE PROTECTION FOR CONCRETE ...Cavitation, Cement, Concrete, Coatings-general, Epoxies, Erosion, ...8.0015

MINERAL-WATER INTERACTION IN SALTLINE ENVIRONMENTS ...Analysis and Detection, Evaporation, Interfacial, Solution, Solution Chemistry, ...2.1095

LAND SUBSIDENCE STUDIES IN THE SAN JOAQUIN VALLEY ...San Joaquin, Subsidence, ...2.0152

SPECIFIC YIELD INVESTIGATION ...Aquifers-general, Groundwater Basins, Moisture Content, Projections and Estimations, Water Yield, ...2.0182

VERIFICATION OF MASS-TRANSFER AND PAN EVAPORATION RELATIONSHIPS FOR LARGE LAKES AND RESERVOIRS (SALTON SEA, CALIFORNIA) ...Conductivity, Evaporation, Forecasting-prediction, Lakes, Vapor Pressure, ...2.0129

DETERMINATION OF CHANNEL CAPACITY OF THE MERCED RIVER, CALIFORNIA ...Channels, Cross-section, Discharge-general, Hydrographic, Peak Flow, ...2.0116

CHANNEL CAPACITY IN STONY CREEK NEAR ORLAND, CALIFORNIA ...Channels, Design Flow-flood, Peak Flow, Reservoirs and Impoundments, Water Transfer, ...2.0122

SAN GORGONIO PASS GROUND-WATER STUDIES, CALIFORNIA ...Artificial Recharge, Groundwater Basins, Groundwater Movement, Storage of Water, Water Table Fluctuation, ...4.0037

FLOOD FLOWS AND SEDIMENT YIELD OF COLMA CREEK BASIN, CALIFORNIA ...Construction, Floods, Projections and Estimations, Sediment Yield, Urban Environments, Water Yield, ...4.0038

ATMOSPHERIC WATER RESOURCES RESEARCH ...Augmentation-general, Clouds-precipitation, Modification, Technique Development, ...2.0206

EARTHQUAKE THEORY AS APPLIED TO DAMS AND APPURTENANT STRUCTURES ...Arch Dams, Dynamic-other, Earthquakes, Engineering Structures-general, ...8.0096

PRECIPITATION PATTERNS ON UPSTREAM WATERSHEDS IN CENTRAL AND SOUTHERN CALIFORNIA ...Climatology, Patterns, Runoff, Sediment Yield, Watersheds-general, ...2.0103

WATER USE UNDER DRYLAND CONDITIONS IN COASTAL VALLEYS OF CALIFORNIA ...Applied Climatology, Modified Water Use, Moisture Content, Precipitation-general, Soil Environment, ...3.0092

MANAGEMENT PRACTICES FOR SALINE AND SODIC SOILS IN IMPERIAL VALLEY ...Management, Plant Residues, Humus, Compost, Tillage, Cropping Systems, ...3.0037

CONSUMER ATTITUDES TOWARD MINERAL TASTE IN DOMESTIC WATER ...Attitudes & Attitude Change, Hardness-minerals, Potable Water, Taste and Odor, Water Standards, ...6.0039

Canada

STUDIES OF NEAR-SURFACE SEDIMENTS IN LAKES, AND RELATIONSHIPS BETWEEN SURFACE SEDIMENT POLLEN SPECTRA AND VEGETATION ...Lakes, New England Province, Paleocology, ...2.0555

ECOLOGICAL STUDIES OF MANIPULATED MARSHES AT DELTA, MANITOBA, CANADA ...Amphibious Plants, Submerged Plants, Swamps-marshes, Water Depth, Water Levels, Water Fowl, N.s. , ...4.0257

INTER-BASIN DIVERSION OF WATER - A TEXAS CASE STUDY ...Economic Impact, Fiscal, Price & Value, Southern, Water Transfer, ...4.0244

AN ECOLOGICAL STUDY OF LAKE ST. PETER, QUEBEC ...Black Duck, Depth,water Level, Fluctuation, Interbiotic Relat.(non-specif), Lakes, Water Level Fluctuation, ...4.0050

REHABILITATION, SCOTSBURN MARSH, NOVA SCOTIA, CANADA ...Engineering Structures-general, Habitat Studies, Swamps-marshes, Water Level Fluctuation, ...4.0053

MUSQUODOBOIT - METERING BASINS NOVA SCOTIA, CANADA ...Aquatic Ecology, Mammals -other, Mapping, Water Fowl, N.s. , Water Level Fluctuation, Wetlands, ...4.0054

STUDY OF THE DISTRIBUTION OF FOUR ASSOCIATIONS OF AQUATIC PLANTS IN THE VICINITY OF MONTREAL ...Amphibious Plants, Depth, Freshwater Ecology, Range Or Territorial Distr. , St. Lawrence River, ...4.0047

AN ECOLOGICAL STUDY OF ILES-DE-LA-PAIX, LAKE ST. LOUIS, QUEBEC ...Interbiotic Relat.(non-specif), Islands, St. Lawrence River, Water Fowl, N.s. , ...4.0048

MARSH EVALUATION AND ACQUISITION, QUEBEC ...Habitat Studies, Wetlands, ...4.0049

WETLANDS EVALUATION AND DEVELOPMENT - MARITIMES ...Habitat Studies, Species Evaluation, Wetlands, ...6.0085

MARSH EVALUATION AND ACQUISITION - ONTARIO ...Habitat Studies, Management -other, Water Fowl, N.s. , Wetlands, ...4.0046

LITERATURE REVIEW ON FLOODED GREEN TIMBER AREAS ...Management, Site Index and Site Quality, Survey Studies, Water Fowl, N.s. , Wetlands, ...4.0045

WATERFOWL HABITAT INVESTIGATIONS - OTTAWA RIVER ...Floods, Habitat Studies, Water Fowl, N.s. , Water Level Fluctuation, ...4.0051

AERATED LAGOONS & ANAEROBIC REACTORS - A FIELD & LAB STUDY OF THEIR EFFICIENCIES & DESIGN PRINCIPLES IN SEWAGE TREATMENT ...Aerobic, Anaerobic, Process Design, Sewage Lagoons, ...5.0165

- STUDY OF EUTROPHICATION IN LAKES MAGOG & BROME
...Algal Pollutant Sources, Eutrophication, Freshwater Ecology,
Growth and Differentiation, Nutrition Studies, ...5.0166
- AERATED SEWAGE LAGOON INVESTIGATION - BOISSEVAIN
...Aeration, Economic Efficiency, Sewage Lagoons, Technique
Development, ...5.0170
- EVALUATION OF AERATED LAGOONS AS A SEWAGE
TREATMENT FACILITY IN THE PRAIRIE PROVINCES ...Ac-
tivated, Aeration, Economic Efficiency, Sewage Lagoons, Waste
Treatment-economics, ...5.0173
- RELICT COPEPODS FROM LAKE TUBORG, ELLESMERE
ISLAND ...Brackish Water, Carbon-14, Copepods, Lakes, Plank-
ton Sampling, ...2.0257

Canals

- OPERATION RIVERPORTS ...Harbors, Mississippi River, Missouri
River, Streams, Water Transportation, ...6.0183
- METHODS FOR CONTROLLING ALLIGATORWEED AND
OTHER WEEDS IN CANALS, WATERWAYS, AND AD-
JACENT WATERS IN THE SOUTHEASTERN U. S. ...Evalua-
tion, Herbicides -non-specific, Integrated Biological Control, of
Aquatic Plants, Southeast, ...8.0210
- FEEDBACK CONTROL OF CANAL CHECK GATES ...Channel
Regulation-other, Control Gate, Economic Efficiency, Water De-
mand, ...4.0023
- INVESTIGATION OF SEEPAGE REDUCTION BY NATURAL
PROCESSES IN IRRIGATION CANALS ...Irrigation-general,
Linings-pavings, Seepage, Soil Environment, Tensiometer,
...3.0207
- THE FLOW OF WATER IN FLUMES AND CANALS ...Channel
Geometry, Flume, Open Channel, Open Channel Flow, Turbulent,
...8.0222
- GRAND VALLEY SALINITY CONTROL DEMONSTRATION
PROJECT ...Brackish Water, Colorado River, Linings-pavings,
Mineralization, Natural Recharge, ...5.0203
- EFFECT OF EXTERNAL AIR PRESSURE ON LIQUID FLOW
THROUGH A POROUS MEDIUM ...Model Studies, Permeabili-
ty, Physical Properties -other, Pressure-density, Seepage, ...2.0392
- OPEN CHANNEL TRANSITIONS ...Energy Losses-other, Flow
Characteristics -water, Open Channel, Surface Phenomena,
Transition Sections, ...8.0004
- THE NANGARHAR CANAL PROJECT OF EASTERN
AFGHANISTAN ...Afghanistan, Electric Power Plants, Hydrology-
general, Irrigation-general, Water Resources Development,
...4.0179
- COOPERATIVE BIOLOGICAL PEST CONTROL RESEARCH
...Biological Pollutants -general, California, Evaluation, of Aquatic
Plants, Reservoirs and Impoundments, ...5.0087
- FLOW MEASUREMENT OF IRRIGATION WATER ...Flow
Characteristics -water, Fluids, Flume, Irrigation, Measurement,
...3.0144
- AQUATIC TRANSPORT OF NUCLEAR DEBRIS ...Chemical
Reactions, Exchange Capacity, Ion Exchange-other, Pollutants -
Path of, Radioactive Fallout, ...1.0012
- WRAGG SWAMP CANAL INVESTIGATION, ALABAMA
...Alabama, Amount, Control Factors-general, Runoff, Urban En-
vironments, ...4.0001
- FIELD INVESTIGATION OF THE SUBMERSED AQUATIC EN-
VIRONMENT ...Aquatic Ecology, Irrigation-general, Plant Pollu-
tants, Reservoirs and Impoundments, Submerged Plants, Weeds -
phenological Studies, ...3.0125
- DEVELOPMENT OF STANDARD DESIGNS FOR CANAL
STRUCTURES ...Construction, Design Criteria, Energy Losses-
general, Model Studies, Open Channel, ...8.0064
- PROTECTION OF ERODIBLE CHANNELS AND SURFACES
WITH GRAVEL OR RIPRAP ...Channels, Energy Loss -water,
Engineering Structures-general, Flow Characteristics -water,
Groundwater, Linings-pavings, Scouring, Seepage, ...8.0040
- STUDIES OF EQUATIONS FOR SEEPAGE LOSS FROM
CANALS ...Lining, Loss, Open Channel, Permeability, Soil Test -
Insitu, ...8.0129
- STUDIES OF CANAL HYDRAULICS ...Channel Roughness, En-
ergy Losses-other, Hydraulics-general, Open Channel, Transition
Sections, ...8.0130
- EFFECT OF COPPER SULFATE ON AQUATIC WEEDS ...Al-
kalinity, Copper, Copper Sulfate, Irrigation-general, of Aquatic
Plants, ...3.0108
- AUTOMATION OF CANAL SYSTEMS ...Channel Regulation-
other, Control Gate, Controls, Open Channel, Other Control
Systems, ...8.0138

- INVESTIGATION OF EROSION AND TRACTIVE FORCES ON
CANALS--OPEN AND CLOSED CONDUIT RESEARCH PRO-
GRAM ...Erosion-general, Lining, Linings-pavings, Soil Environ-
ment, Traction, ...8.0035
- HARD SURFACE LININGS--LOWER COST CANAL LINING
PROGRAM ...Bituminous, Cement, Concrete, Gel, Linings-
pavings, Sealant Materials, ...8.0050
- EVALUATION OF CANAL SEALANTS -OPEN AND CLOSED
CONDUIT RESEARCH PROGRAM ...Dam, Canal, Flume Stu-
dies, Sealant Materials, Seepage, Soil Environment, ...8.0085
- INVESTIGATION OF GROOVE AND CRACK SEALING
MATERIALS ...Bituminous, Cement, Concrete, Elastomers
Rubber, Linings-pavings, Polyethylene, Sealant Materials.
...8.0076
- PRINCIPLES AND PRACTICES FOR THE CONTROL OF SUB-
MERSED, FLOATING, AND IMMERSED AQUATIC WEEDS
...Biocontrol, Environmental Effects, Evaluation, Herbicides -non-
specific, of Aquatic Plants, ...5.1329
- PERSISTENCE AND FATE OF HERBICIDES IN WATER AND
AQUATIC SOILS AND THE EFFECTS OF HERBICIDES IN IR-
RIGATION WATER ON CROP PLANTS ...Herbicides -non-
specific, Irrigation, Persistence of Residues, Persistence in Soils,
Pollutants - Path of, ...5.1330
- CONTROL OF SEEPAGE FROM CANALS AND STORAGE
PONDS IN NEVADA ...Bentonite, Linings-pavings, Seepage,
Water Loss Control, ...8.0263

Capillary Movement

- EVAPORATION MECHANISMS ...Atmosphere Disturbance-
general, Boundary Process (moisture), Epidermis, Evaporation,
Transpiration, Transpiration and Evap, ...2.1164
- EVALUATION OF SUBIRRIGATION FOR CROP PRODUCTION
...Irrigation, Irrigation Engineering, ...2.1036

Carbon

- STABLE CARBON AND OXYGEN ISOTOPE RATIO VARIA-
TIONS IN THE FLOW TO CARBON AND OXYGEN
THROUGH NORMAL AND POLLUTED AQUATIC SYSTEMS
...Analysis and Detection, Element Ratios, Organic-general, Ox-
ygen, Pollutants - Path of, Sewerage Systems-other, ...5.1183
- THE ELECTROSORB PROCESS FOR DESALTING WATER
...Adsorption-other, Desalination, Electrochemistry-other, Elec-
trode, ...3.0102
- THE THERMOSORB PROCESS FOR DESALTING WATER ...Ad-
sorption-other, Cost Analysis, Desalination, Ion Exchange-other,
Thermal Treatment, ...3.0103
- THE ELECTROSORB PROCESS FOR DESALTING WATER
...Adsorption-other, Desalination, Electrochemistry-other, Elec-
trode, ...3.0104
- TOXAPHENE FILTRATION PUBLICATION ...Filtration, Publica-
tions -other, Removal of Residues, Toxaphene, ...5.1146
- REFRACTORY ADSORPTION ON CH⁺MCOKE ...Activated Car-
bon, Adsorption-other, Phy and Chem Properties, Refractory,
...5.1135
- A STUDY OF THE REMOVAL OF CARBONACEOUS,
NITROGENOUS AND PHOSPHORUS MATERIALS FROM
CONCENTRATED PROCESS WASTE STREAMS ...Digestion,
Nitrogen, Phosphorus, Process Design, Streams, ...5.0060
- STRUCTURE OF CARBON-OXYGEN COMPLEXES ...Adsorp-
tion-other, Complexes, Infrared. Oxygen, Surface-other, ...1.0082
- USE OF TOTAL CARBON ANALYZER TO DEFINE
MICROBIOLOGICAL PROCESSES ...Microbial-bacterial, Quan-
titative Chemistry, ...5.1116
- SOURCE DISTRIBUTION AND FATE OF C14 LABELED AND
CHLORINATION HYDROCARBON INSECTICIDE RESIDUES
IN FISH ...Biodegradation, Food Chains, Animal And/or Man,
Persistence of Residues, Wildlife, ...5.0281
- EFFECT OF NITRILOTRIACETIC ACID (NTA) UPON THE
TOXICITY OF METALS TO SELECTED SPECIES OF
ESTUARINE PHYTOPLANKTON ...Acids, Chemicals (incl. al-
gacides), Estuaries, Phytoplankton, Radioisotopes, ...5.1085

Carbonate, Bicarbonate

- SPECTROPHOTOMETRIC AND FLUOROMETRIC DETER-
MINATION OF SELECTED ANION WATER CONTAMI-
NANTS ...Chemical Identification, Fluorometry, Iodide,
Phosphate, Phosphite, Spectroscopy-general, Thiocyanate,
...5.0672

SUBJECT INDEX

Cellular Physiology

Cardiovascular System

PESPONES OF FISH TO ENVIRONMENTAL STRESSES ...Environmental Physiology, Fish -non-specific, Kidney and Urinary System, Stress, Water Environment -other, ...5.1269

Carotenoid Pigments

THE INCORPORATION OF C14-BICARBONATE INTO THE PIGMENTS OF BLUE-GREEN ALGAE POPULATION ...Chlorophyll, Nutrients, Oscillatoria, Phycobilins, Pigments, ...6.0433

Casting of Materials

DEVELOPMENT OF REVERSE OSMOSIS MEMBRANES ...Acids, Cellulose Acetate, Desalination, Nitrogen, Technique Development, ...3.0050

14-01-0001-1760 -- IN-SITU FORMATION OF REGENERATIVE CELLULOSE ACETATE MEMBRANES ON POROUS SUPPORTS ...Cellulose Acetate, Ceramics - General, Reverse Osmosis, Saline Conversion, Solutionizing, ...3.0069

CORROSION AND TUBERCULATION IN DISTRIBUTION SYSTEMS ...Coatings-general, Corrosion Prevention-other, Iron, Water, ...5.0373

FORMING, FINISHING, AND CURING CONCRETE ...Cement, Concrete, Setting, Curing, Surface, Surface Cleaning, Finishing, ...8.0257

Cells and Batteries

Fuel Cells

Biological

BRACKISH WATER PURIFICATION BY BIOLOGICAL FUEL CELL POWERED ELECTRODIALYSIS ...Brackish Water, Cellulose Acetate, Desalination, Electrodialysis, Water Costs, ...5.0704

Fuel Cell-other

METHOD FOR QUANTITATIVE ANALYSIS OF PHENOLS IN FUEL CELL PRODUCT WATER ...Alcohols, Quinones, Steam Distillation, Ultraviolet, Water, ...1.0041

Cellular Physiology

Action- & Bioelectrical Pot.

TEMPERATURE EFFECTS ON BIOLOGICALLY INTERESTING MEMBRANE SYSTEMS ...Membranes-other, Model Membranes, Oils -fats, Permeability, Temperature, ...3.0182

COMPARATIVE STUDIES OF DINOFLAGELLATE TOXINS ...Algal Culture, Algal Toxins, Dinophyceae (non-specific &ot), Toxicology, ...5.0716

Activity and Specialization

Motility and Migration

RHEOTAXIS IN ALGAL METABOLISM AND PHOTOSYNTHESIS ...Algal Pollutant Sources, Cladophora, Lake Erie, Photosynthesis, Respiration, ...6.0377

Secretions and Products

DISSOLVED ORGANIC MATTER AND PHOTOSYNTHESIS IN LAKES ...Autotrophic, Lakes, Nutrition, Submerged Plants, ...5.0574

FACTORS INFLUENCING THE PRODUCTION OF PLANKTONIC AND BENTHIC PLANTS ...Benthic Flora, Growth Rate, Nutrition, Phytoplankton, Standing Crops, ...5.1119

Cell Injury and Autolysis

ALGAL GROWTH AND DECOMPOSITION - EFFECTS ON WATER QUALITY ...Algal Culture, Algal Pollutant Sources, Growth and Differentiation, Mineral Composition, Model Systems, Water Quality-general, ...5.0443

ALGAE DEGRADATION IN WATERWAYS ...Algal Culture, Algal Pollutant Sources, Mixed Culture, Water Properties-general, ...5.0126

BACTERIOLOGY OF BIODEGRADABLE SURFACTANTS ...Electron, Gram-negative Bacteria, Gram-positive Bacteria, Repression, Surfactants, ...5.0106

BIOCHEMICAL AND ECOLOGICAL RELATIONSHIPS OF PESTICIDES AND THE BIOLOGICAL CONSTITUENTS OF

AQUATIC COMMUNITIES ...Applied Ecology, Bioenergetics, Mortality Rates, Pesticides -non-specific, Sterility, ...5.0566

EFFECTS OF PESTICIDES ON PROTEIN, CARBOHYDRATE, AND NUCLEIC ACID METABOLISM. INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Biosynthesis, Microorganisms (non-specific), Mode of Action - animal, Mode of Action -plant, Pesticides -non-specific, Respiration, ...5.0643

THERMAL DESTRUCTION OF TYPE E CLOSTRIDIUM BOTULINUM ...Clostridium Botulinum, Heat Resistance, Microbiological, Spore Studies, Toxicological and Allergy, ...5.0233

BIOLOGICAL ALGICIDES ...Algicides -non-specific, Algal Virus, Endogenous Cpd -plants, Mixed Culture, ...5.0226

Environment

Cell. env.(non-specific & Ot.)

THE KINETICS OF MICROBIOLOGICAL MODIFICATION OF ORGANIC SUBSTANCES OCCURRING IN NATURAL WATERS ...Active Transport, Biological-general, Microorganisms (non-specific), Organic-general, ...1.0006

MICROBIAL RELEASE OF SOLUBLE PHOSPHATE IN AN ACTIVATED SLUDGE ENVIRONMENT ...Microorganisms (non-specific), Oxygen, Phosphate, Phosphite, ...5.1213

MICROBIOLOGICAL CHARACTERIZATION OF ACTIVATED SLUDGE IN A WASTEWATER TREATMENT PLANT CHEMICALLY MODIFIED FOR PHOSPHORUS REMOVAL ...Activated, Aerobic, Chemical Treatment, Phosphorus, Sewage Bacteria, ...5.1046

ECOLOGY OF SPHAEROTILUS IN ACTIVATED SLUDGE ...Activated, Ecology, Identification, Microbial-bacterial, Sphaerotilus, ...5.0341

CONTROLLING FACTORS IN METHANE FERMENTATION ...Bacterial Culture, Fermentation, Methane Bacteria (non-specific), Respiration, Saturated Hydrocarbons, ...5.0754

SIGNIFICANCE OF ARTHROBACTER IN ECOLOGY OF WATER AND SOIL ...Arthrobacter, Catabolism and Degradation, Nucleic Acids, Plant Succession, ...5.1302

WATER POLLUTION ...Bacterial Pollutant Sources, Identification, Self-purification, Septic Tanks, Streams, ...5.0730

BIOTRANSFORMATION OF ALDRIN AND DIELDRIN BY BACTERIA - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Aldrin, Biodegradation, Dieldrin, Other, Soil Bacteria, Water Bacteria, ...5.0644

SPORULATION AND GERMINATION OF CLOSTRIDIUM BOTULINUM ...Bacterial Exotoxins, Clostridium Botulinum, Growth (non-specific & Ot.), Media, Spore Studies, ...5.0568

Gases

THE NATURE AND MAGNITUDE OF THE RESISTANCE TO FLOW OF WATER IN ROOTS ...Exudates, Osmotic and Turgor Pressure, Roots, Temperature, Transpiration and Evap, Water Movement, ...2.0245

INFLUENCE OF PLANT AND ENVIRONMENTAL FACTORS ON PHOTOSYNTHESIS, STOMATAL APERTURE AND TRANSPIRATION ...Diffusion, Epidermis, Osmotic and Turgor Pressure, Photosynthesis, Transpiration and Evap, ...2.0501

Ionic Effect

STUDIES OF PHOTOSYNTHETIC HALOPHILES FROM OWENS LAKE ...California, Exobiology, Halophytic, Playas, Temperature, ...6.0057

NUCLIDE UPTAKE BY ALGAE AND ZOOPLANKTON ...Chlorella, Cladocera, Environment, Organic Matter Content - water, Radioisotopes -non-specific, ...6.0048

SOLUTE AND WATER TRANSPORT ACROSS BIOLOGIC MEMBRANES ...Active Transport, Blood Cells, Carbohydrates, Kidney and Urinary System, Natural Occuring, Sodium, ...2.0706

EFFECT OF AN ACID-WATER ENVIRONMENT UPON THE SYNTHESIS OF GROWTH FACTORS BY BACTERIA ...Biosynthesis, Industrial Wastes, Mining Activities, Waste Water Treatment-general, Water Bacteria, ...5.1285

THEORETICAL AND EXPERIMENTAL INVESTIGATIONS OF THE MECHANISM OF FLOW OF WATER AND SOLUTES IN PLANT ROOTS ...Osmotic and Turgor Pressure, Pressure & Mech Stress, Thermodynamics, Ultrafiltration, Water Movement, ...2.0497

PHYSIOLOGICAL ADAPTATION OF PLANTS TO MOISTURE AND OSMOTIC STRESSES WITH RESPECT TO SALT ACCUMULATION ...Bioenergetics, Drought, Mineral Nutrition, Osmotic and Turgor Pressure, Respiration, ...3.0229

Cellular Physiology

SUBJECT INDEX

Moisture

- MINIMUM WATER CONCENTRATION OF ENVIRONMENTAL WATER CAPABLE OF SUPPORTING LIFE ...Environment, Extraterrestrial, Fungi -non-specific, Lichenes, Water, ...6.0430
- THE INFLUENCE OF INADEQUATE WATER SUPPLY ON METABOLISM IN BIOLOGICAL SYSTEMS WITH EMPHASIS ON PROTEIN SYNTHESIS AND NUCLEIC ACID METABOLISM ...Drought, ...3.0180

Temperature

- STUDIES OF PHOTOSYNTHETIC HALOPHILES FROM OWENS LAKE ...California, Exobiology, Halophytic, Ionic Effect, Playas, ...6.0057
- HYDROSTATIC PRESSURE-TEMPERATURE, AS ENVIRONMENTAL PARAMETERS, ON GROWTH, BIOCHEMISTRY AND PHYSIOLOGY OF MICROORGANISMS ...Growth (non-specific & Ot.), Marine Biology (non-specific), Microorganisms (non-specific), Pressure & Mech Stress, ...6.0459
- EFFECTS OF POLAR ORGANIC SOLVENTS ON ENZYME ACTION ...Dipole and Dielectric, Enzymatic, Exobiology, Kinetics -other, Water, ...1.0063
- THE NATURE AND MAGNITUDE OF THE RESISTANCE TO FLOW OF WATER IN ROOTS ...Exudates, Gases, Osmotic and Turgor Pressure, Roots, Transpiration and Evap, Water Movement, ...2.0245
- TEMPERATURE EFFECTS ON BIOLOGICALLY INTERESTING MEMBRANE SYSTEMS ...Action- & Bioelectrical Pot., Membranes-other, Model Membranes, Oils -fats, Permeability, ...3.0182

Growth and Differentiation

Cell Cycle

- EFFECTS OF WATER PROPERTIES IN THIXOTROPIC CLAY SYSTEMS ON BIOLOGICAL ACTIVITY ...Anaerobic Bacteria, Clay, Origin of Life, Thermodynamics, ...6.0217
- STUDY OF TOXIN SYNTHESIS IN SYNCHRONIZED PRYMNESIIUM ...Algal Toxins, Biosynthesis, Hemolysins -non-specific, Prymnesium, Synchronization, ...1.0089

Growth (non-specific & Ot.)

- HYDROSTATIC PRESSURE-TEMPERATURE, AS ENVIRONMENTAL PARAMETERS, ON GROWTH, BIOCHEMISTRY AND PHYSIOLOGY OF MICROORGANISMS ...Marine Biology (non-specific), Microorganisms (non-specific), Pressure & Mech Stress, Temperature, ...6.0459
- STUDY OF WATERFOWL BOTULISM ...California, Clostridium Botulinum, Identification, Pathology, Water Fowl, N.s., ...6.0070
- WASTE WATER ODOR REDUCTION MECHANISMS IN SOIL FILTERS ...Biological, Pollutant-other, Soil, Sulfur Bacteria, Taste and Odor, ...5.1258
- STUDIES ON AQUATIC STALKED BACTERIA ...Bacterial Culture, Classification Or Taxonomy, Ecology, Stalks and Buds, Water Bacteria, ...5.1280
- THE BIOLOGY AND CHEMISTRY OF SPHAEROTILUS ...Autotrophic, Butyric Acid, Nutrition, Oxidation-general, Sphaerotilus, ...5.1241
- SURVEY OF CLOSTRIDIUM BOTULINUM TYPE E ...Clostridium Botulinum, Media, Microbiological Analysis, Pathology, ...5.1313
- ALGAL GROWTH POTENTIAL OF ILLINOIS WATERS ...Algae-General, Bioindicators, Growth and Differentiation, Illinois, Other, ...6.0199
- SPORULATION AND GERMINATION OF CLOSTRIDIUM BOTULINUM ...Bacterial Exotoxins, Cell. env.(non-specific & Ot.), Clostridium Botulinum, Media, Spore Studies, ...5.0568

Growth Rate

- A STUDY OF PHYTOPLANKTON DYNAMICS IN LAKE FAYETTEVILLE AS A MEANS OF ASSESSING WATER QUALITY ...Algal Culture, Bioindicators, Eutrophication, Phytoplankton, Primary Productivity, ...6.0031
- KINETICS OF BIOLOGICAL FILTERS ...Microbial-bacterial, Microorganisms (non-specific), Organic Wastes, Pollutant-other, Trickling, ...5.1103
- FACTORS INFLUENCING THE PRODUCTION OF PLANKTONIC AND BENTHIC PLANTS ...Benthic Flora, Nutrition, Phytoplankton, Secretions and Products, Standing Crops, ...5.1119
- MEASUREMENT OF THE RATE OF CARBON DIOXIDE (C14) FIXATION INTO SUBCELLULAR FRACTIONS OF ALGAE ...Algae-General, Algal Culture, Bioindicators, Carbon, Carbon Dioxide Fixation, Intracellular Localization, ...5.1090

Repression

- PHYSIOLOGICAL CHANGES IN PLANTS PRODUCED BY SALINE SOLUTIONS ...Beans (garden), Brackish Water, Humidity, Transpiration and Evap, Water Movement, ...2.0061
- DETECTION OF LIMITING AND SURPLUS NUTRIENTS IN ALGAE ...Nitrogen, Nutrients, Nutrition, Nutrition Studies, ...5.1303
- BACTERIOLOGY OF BIODEGRADABLE SURFACTANTS ...Cell Injury and Autolysis, Electron, Gram-negative Bacteria, Gram-positive Bacteria, Surfactants, ...5.0106
- BOTULINUM FOOD POISONING IN RELATION TO FISHERY PRODUCTS ...Antibiotics, Clostridium Botulinum, Fish, N.s., Great Lakes-general, Microbiological, ...5.1305
- CONTROL OF BIOLOGICAL GROWTHS IN RAPID SAND FILTERS AS RELATED TO IRON REMOVAL ...Disinfection, Iron, Nitrification, Nitrogen Bacteria, Sand, ...5.0377
- ECOLOGY OF CLOSTRIDIUM BOTULINUM TYPE E IN GREEN BAY ...Clostridium Botulinum, Fish -non-specific, Fish, N.s., Great Lakes-general, Microbiological, Vertical Distribution, ...2.1162

Synchronization

- STUDY OF TOXIN SYNTHESIS IN SYNCHRONIZED PRYMNESIIUM ...Algal Toxins, Biosynthesis, Cell Cycle, Hemolysins -non-specific, Prymnesium, ...1.0089

Intracellular Localization

- MEASUREMENT OF THE RATE OF CARBON DIOXIDE (C14) FIXATION INTO SUBCELLULAR FRACTIONS OF ALGAE ...Algae-General, Algal Culture, Bioindicators, Carbon, Carbon Dioxide Fixation, Growth Rate, ...5.1090

Membrane Permeability & Exch.

Active Transport

- SOLUTE AND WATER TRANSPORT ACROSS BIOLOGIC MEMBRANES ...Blood Cells, Carbohydrates, Ionic Effect, Kidney and Urinary System, Natural Occuring, Sodium, ...2.0706
- TRANSFER OF SALT AND WATER ACROSS MEMBRANES OF PLANT MITOCHONDRIA ...Bioenergetics, Desalination, Mitochondrial Membranes, Salt, Water Movement, ...3.0218
- ION TRANSPORT IN SOME HALOPHILIC ORGANISMS ...Halophytic, Ions (inorganic), Thermodynamics, ...3.0232
- STUDIES ON THE MOLECULAR STRUCTURE OF BIOLOGICAL MEMBRANES ...Desalination, Membranes-other, Plasma Membrane, Purif and Isol, Structure, ...3.0388
- STUDY OF BIOLOGICAL DESALINATION PHENOMENA AND SALT TRANSPORT MECHANISMS OF SELECTIVE AVIAN SALT GLANDS ...Anseriformes -other, Chemical Analysis, Ion Selective, Osmoregulation, Transport, ...3.0479
- THE KINETICS OF MICROBIOLOGICAL MODIFICATION OF ORGANIC SUBSTANCES OCCURRING IN NATURAL WATERS ...Biological-general, Cell. env.(non-specific & Ot.), Microorganisms (non-specific), Organic-general, ...1.0006

Diffusion

- ACTIVE AND PASSIVE ION FLUXES ACROSS INTERFACES AND MEMBRANES ...Adsorption & Interface, Enzymes -non-specific, Ionic Effect, Membranes-other, Transport, ...3.0348
- INVESTIGATIONS OF ZOOGLOEAL FLOCS ...Adhesion, Classification Or Taxonomy, Nutrients, Other, Zooglia, ...5.1313
- INFLUENCE OF PLANT AND ENVIRONMENTAL FACTORS ON PHOTOSYNTHESIS, STOMATAL APERTURE AND TRANSPIRATION ...Epidermis, Gases, Osmotic and Turgor Pressure, Photosynthesis, Transpiration and Evap, ...2.0501

Other

- STUDY OF MICROBIOLOGICAL-BIOCHEMICAL PHOSPHATE SORPTION MECHANISM BY ACTIVATED SLUDGE ...Absorption-other, Activated, Mechanisms, Phosphate, Phosphite, Sewage Bacteria, ...5.0907

Permeability

- STUDIES OF NATURALLY OCCURRING ACIDIC LIPIDS - IONIC, SURFACE AND MEMBRANE PROPERTIES ...Cephalin, Lecithin, Model Membranes, Sphingomyelin, Surface Properties -other, ...3.0354
- STUDY OF FACTORS WHICH DETERMINE THE IONIC SELECTIVITY OF BIOLOGICAL AND ARTIFICIAL MEMBRANES ...Ion Selective, Molecular Interaction, Natural Occuring, Other, ...3.0371

SUBJECT INDEX

Cellular Physiology

Water Movement

- THE NATURE AND MAGNITUDE OF THE RESISTANCE TO FLOW OF WATER IN ROOTS ...Exudates, Gases, Osmotic and Turgor Pressure, Roots, Temperature, Transpiration and Evap, ...2.0245
- TRANSFER OF SALT AND WATER ACROSS MEMBRANES OF PLANT MITOCHONDRIA ...Active Transport, Bioenergetics, Desalination, Mitochondrial Membranes, Salt, ...3.0218
- PHYSIOLOGICAL CHANGES IN PLANTS PRODUCED BY SALINE SOLUTIONS ...Beans (garden), Brackish Water, Humidity, Repression, Transpiration and Evap, ...2.0061
- WATER-SOIL-PLANT RELATIONS ...Antitranspirants, Root Absorption, Soil-water-plant Relationships, Translocation, ...2.0059
- THE EFFECT OF WATER STRUCTURE ON BIOLOGICAL ACTIVITY ...Bacteria (non-specific), Corn, Molecular Interaction, Water, ...1.0047
- THEORETICAL AND EXPERIMENTAL INVESTIGATIONS OF THE MECHANISM OF FLOW OF WATER AND SOLUTES IN PLANT ROOTS ...Ionic Effect, Osmotic and Turgor Pressure, Pressure & Mech Stress, Thermodynamics, Ultrafiltration, ...2.0497

Metabolism (intracellular)

Amino Acids

- UPTAKE OF ORGANIC COMPOUNDS BY MARINE INVERTEBRATES ...Amino Acids -non-specific, Chemoreceptors, Invertebrates -non-specific, Marine Biology, Metabolism, Nutrition - Invertebrate, Pulse-labelling, ...6.0058

Autotrophic

- DISSOLVED ORGANIC MATTER AND PHOTOSYNTHESIS IN LAKES ...Lakes, Nutrition, Secretions and Products, Submerged Plants, ...5.0574
- METABOLIC ROLE OF SULFATES AND SULFIDES PRODUCING BACTERIA IN THE POLLUTION OF WATERS ...Bacterial Pollutant Sources, Budgets -other, Mine Drainage Control, Respiration, Sulfur Bacteria, ...5.0438
- THE BIOLOGY AND CHEMISTRY OF SPHAEROTILUS ...Butyric Acid, Growth (non-specific & Ot.), Nutrition, Oxidation-general, Sphaerotilus, ...5.1241
- MICROBIOLOGICAL ASPECTS OF ACID MINE-DRAINAGE ...Acidity, Indiana, Iron Bacteria, Mining Industry, Sulfur Bacteria, ...5.0385
- THE EFFECTS OF LIGHT WAVE LENGTHS ON THE RATES OF PHOTOSYNTHESIS AND ITS REALTION TO OXYGEN LEVELS IN PONDS ...Optical Properties, Oxygen Content - water, Ponds, Respiration, Water - Light Qual. & Quant. , ...6.0033
- NITRIFICATION BY MARINE MICROORGANISMS ...Bact. morphology (general), Bacterial Culture, Isolation From Nat. environ. , Marine Bacteria (non-specific), Nitrification, Nitrogen Bacteria, Range Or Territorial Distr. , ...1.0066

Bioenergetics

- ENERGY SOURCES OF HETEROTROPHIC MICROORGANISMS IN AN AQUATIC ENVIRONMENT ...Glycolic Acid Cpds, Heterotrophic Bacteria, Photosynthesis, Phytoplankton, ...2.0622
- TRANSFER OF SALT AND WATER ACROSS MEMBRANES OF PLANT MITOCHONDRIA ...Active Transport, Desalination, Mitochondrial Membranes, Salt, Water Movement, ...3.0218
- BIOCHEMICAL AND ECOLOGICAL RELATIONSHIPS OF PESTICIDES AND THE BIOLOGICAL CONSTITUENTS OF AQUATIC COMMUNITIES ...Applied Ecology, Cell Injury and Autolysis, Mortality Rates, Pesticides -non-specific, Sterility, ...5.0566
- PHYSIOLOGICAL ADAPTATION OF PLANTS TO MOISTURE AND OSMOTIC STRESSES WITH RESPECT TO SALT ACCUMULATION ...Drought, Ionic Effect, Mineral Nutrition, Osmotic and Turgor Pressure, Respiration, ...3.0229

Biosynthesis

- THE INFLUENCE OF INADEQUATE WATER SUPPLY ON METABOLISM IN BIOLOGICAL SYSTEMS WITH EMPHASIS ON PROTEIN SYNTHESIS AND NUCLEIC ACID METABOLISM ...Drought, ...3.0180
- EFFECT OF AN ACID-WATER ENVIRONMENT UPON THE SYNTHESIS OF GROWTH FACTORS BY BACTERIA ...Industrial Wastes, Ionic Effect, Mining Activities, Waste Water Treatment-general, Water Bacteria, ...5.1285
- EFFECTS OF PESTICIDES ON PROTEIN, CARBOHYDRATE, AND NUCLEIC ACID METABOLISM. INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Cell Inju-

ry and Autolysis, Microorganisms (non-specific), Mode of Action -animal, Mode of Action -plant, Pesticides -non-specific, Respiration, ...5.0643

- STUDY OF TOXIN SYNTHESIS IN SYNCHRONIZED PRYMNESIIUM ...Algal Toxins, Cell Cycle, Hemolysins -non-specific, Prymnesium, Synchronization, ...1.0089

Carbohydrates

- SOLUTE AND WATER TRANSPORT ACROSS BIOLOGIC MEMBRANES ...Active Transport, Blood Cells, Ionic Effect, Kidney and Urinary System, Natural Occuring, Sodium, ...2.0706

Carbon Dioxide Fixation

- MEASUREMENT OF THE RATE OF CARBON DIOXIDE (C14) FIXATION INTO SUBCELLULAR FRACTIONS OF ALGAE ...Algae- General, Algal Culture, Bioindicators, Carbon, Growth Rate, Intracellular Localization, ...5.1090

Catabolism and Degradation

- SIGNIFICANCE OF ARTHROBACTER IN ECOLOGY OF WATER AND SOIL ...Arthrobacter, Cell. env.(non-specific & Ot.), Nucleic Acids, Plant Succession, ...5.1302
- DEGRADATION OF SEWAGE AND SOIL MICROORGANISMS ...Degradation, E Coli, Micro-organism, Enz, Sewage, Soil Bacteria, ...5.0524
- THE PHYSIOLOGICAL BASIS OF THE TOLERANCE OF HORTICULTURAL CROPS TO COLD, DROUGHT, AND WATER ...Cold Resistance and Hardiness, Drought, ...2.0500
- ORGANIC DEBRIS ON CONNECTICUT BEACHES AND SHORES ...Connecticut, Identification, Organic Matter, Physical-general, Shoreline - Coastline, ...5.0204

Ions (inorganic)

- ION TRANSPORT IN SOME HALOPHILIC ORGANISMS ...Active Transport, Halophytic, Thermodynamics, ...3.0232

Nitrogen Fixation

- DYNAMICS OF THE NITROGEN CYCLE IN LAKES ...Denitrification, Lakes, Nitrogen, Respiration, ...5.0033

Nucleic Acids

- THE INFLUENCE OF INADEQUATE WATER SUPPLY ON METABOLISM IN BIOLOGICAL SYSTEMS WITH EMPHASIS ON PROTEIN SYNTHESIS AND NUCLEIC ACID METABOLISM ...Drought, ...3.0180
- SIGNIFICANCE OF ARTHROBACTER IN ECOLOGY OF WATER AND SOIL ...Arthrobacter, Catabolism and Degradation, Cell. env.(non-specific & Ot.), Plant Succession, ...5.1302

Nutrition

- DISSOLVED ORGANIC MATTER AND PHOTOSYNTHESIS IN LAKES ...Autotrophic, Lakes, Secretions and Products, Submerged Plants, ...5.0574
- PHOSPHATE UPTAKE, STORAGE, AND RELEASE BY MICROORGANISMS IN WASTEWATER TREATMENT ...Chemostat, Microorganisms (non-specific), Phosphate, Phosphite, Storage, Waste Water Treatment-general, ...5.1282
- STUDIES ON PHOSPHORUS TRANSFORMATIONS IN EUTROPHIC LAKES ...Bacterial Culture, Bacterial Pollutant Sources, Budgets -other, Connecticut, Eutrophication, Phosphorus, ...5.0216
- STUDIES ON AQUATIC MYXOBACTERIA ...Bacterial Pollutant Sources, Bioindicators, Degradation, Myxobacteria, Range Or Territorial Distr. , Streams, ...5.0952
- DETECTION OF LIMITING AND SURPLUS NUTRIENTS IN ALGAE ...Nitrogen, Nutrients, Nutrition Studies, Repression, ...5.1303
- THE BIOLOGY AND CHEMISTRY OF SPHAEROTILUS ...Autotrophic, Butyric Acid, Growth (non-specific & Ot.), Oxidation-general, Sphaerotilus, ...5.1241
- OXYGEN CONSUMPTION IN CONTINUOUS BIOLOGICAL CULTURE ...Activated, Aeration, Bacteria, Flocculation, ...5.0424
- PHYSIOLOGY OF MINERAL ACCUMULATION IN PLANTS ...Adhesion, Calcium, Corn, Drought, Mineral Nutrition, ...2.0107
- FACTORS INFLUENCING THE PRODUCTION OF PLANKTONIC AND BENTHIC PLANTS ...Benthic Flora, Growth Rate, Phytoplankton, Secretions and Products, Standing Crops, ...5.1119
- SLIME CONTROL ASSOCIATED WITH PULP MILL EFFLUENTS ...Bacterial Pollutant Sources, Industrial Wastes, Pulp and Paper Wastes, Sphaerotilus, ...5.0977

Other

- INVESTIGATIONS OF ZOOGLOEAL FLOCS ...Adhesion, Classification Or Taxonomy, Diffusion, Nutrients, Zooglia, ...5.1313
- THE BIOCHEMISTRY OF ANAEROBIC DIGESTION ...Acids, Anaerobic, Anaerobic Bacteria, Biodegradation, Respiration, ...5.0762
- IDENTIFICATION OF LIMITING FACTORS IN THE BIOLOGICAL TREATMENT OF SEWAGE ...Activated, Biological Treatment-other, Pilot Plant, Sewage Bacteria, ...5.0230
- BIOTRANSFORMATION OF ALDRIN AND DIELDRIN BY BACTERIA - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Aldrin, Biodegradation, Cell. env.(non-specific & Ot.), Dieldrin, Soil Bacteria, Water Bacteria, ...5.0644
- BIOTRANSFORMATION OF HEPTACHLOR BY BACTERIA - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Bacterial Pollutant Sources, Biodegradation, Heptachlor, Soil Bacteria, Water Bacteria, ...5.0645

Proteins

- THE INFLUENCE OF INADEQUATE WATER SUPPLY ON METABOLISM IN BIOLOGICAL SYSTEMS WITH EMPHASIS ON PROTEIN SYNTHESIS AND NUCLEIC ACID METABOLISM ...Drought, ...3.0180

Respiration

- METABOLIC ROLE OF SULFATES AND SULFIDES PRODUCING BACTERIA IN THE POLLUTION OF WATERS ...Autotrophic, Bacterial Pollutant Sources, Budgets -other, Mine Drainage Control, Sulfur Bacteria, ...5.0438
- DYNAMICS OF THE NITROGEN CYCLE IN LAKES ...Denitrification, Lakes, Nitrogen, Nitrogen Fixation, ...5.0033
- THE BIOCHEMISTRY OF ANAEROBIC DIGESTION ...Acids, Anaerobic, Anaerobic Bacteria, Biodegradation, Other, ...5.0762
- A STUDY OF THE METABOLISM OF THE AQUATIC ACTINOMYCETES ...Actinomycetes -non-specific, Bacterial Pollutant Sources, Taste and Odor, ...5.1168
- CONTROLLING FACTORS IN METHANE FERMENTATION ...Bacterial Culture, Cell. env.(non-specific & Ot.), Fermentation, Methane Bacteria (non-specif.), Saturated Hydrocarbons, ...5.0754
- PHYSIOLOGICAL ADAPTATION OF PLANTS TO MOISTURE AND OSMOTIC STRESSES WITH RESPECT TO SALT ACCUMULATION ...Bioenergetics, Drought, Ionic Effect, Mineral Nutrition, Osmotic and Turgor Pressure, ...3.0229
- EFFECTS OF POSSIBLE POLLUTANTS ON ENERGY PRODUCTION BY BLUEGILL LIVER MITOCHONDRIA ...Bluegills, Bream, Metallic Ions, Mineral, Mineral Origin, ...5.0348
- THE EFFECTS OF LIGHT WAVE LENGTHS ON THE RATES OF PHOTOSYNTHESIS AND ITS REACTION TO OXYGEN LEVELS IN PONDS ...Autotrophic, Optical Properties, Oxygen Content -water, Ponds, Water - Light Qual. & Quant., ...6.0033
- EFFECTS OF PESTICIDES ON PROTEIN, CARBOHYDRATE, AND NUCLEIC ACID METABOLISM. INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Biosynthesis, Cell Injury and Autolysis, Microorganisms (non-specific), Mode of Action -animal, Mode of Action -plant, Pesticides -non-specific, ...5.0643
- PHYSIOLOGICAL STUDIES OF ALFALFA AS RELATED TO COLD AND HEAT TOLERANCE, DROUGHT RESISTANCE, AND FORAGE QUALITY AND YIELD ...Alfalfa, Blood Albumin, Cold Resistance and Hardiness, Drought, ...2.0572

Turnover (metabolic)

- PRIMARY PRODUCTION AND DECOMPOSITION IN ESTUARINE WATER ...Estuaries, Florida, Methane Bacteria (non-specif.), Phaeophyta (non-specific & Ot), Primary Productivity, Rhodophyta (non-specific & Ot), ...5.0257

Model Systems

- ALGAL GROWTH AND DECOMPOSITION - EFFECTS ON WATER QUALITY ...Algal Culture, Algal Pollutant Sources, Cell Injury and Autolysis, Growth and Differentiation, Mineral Composition, Water Quality-general, ...5.0443

Surface Properties**Adhesion**

- INVESTIGATIONS OF ZOOGLOEAL FLOCS ...Classification Or Taxonomy, Diffusion, Nutrients, Other, Zooglia, ...5.1313
- PHYSIOLOGY OF MINERAL ACCUMULATION IN PLANTS ...Calcium, Corn, Drought, Mineral Nutrition, Nutrition, ...2.0107

Adsorption & Interface

- THE LOSS OF ORGANIC AND INORGANIC MATERIALS FROM ABOVE-GROUND PLANT PARTS, WITH REFERENCE TO DECONTAMINATION OF PARTS UTILIZED FOR FOOD ...Atomic Bomb, Leaching-aerial, Radioactive, Fallout, Root Adsorption, ...5.0776
- ACTIVE AND PASSIVE ION FLUXES ACROSS INTERFACES AND MEMBRANES ...Diffusion, Enzymes -non-specific, Ionic Effect, Membranes-other, Transport, ...3.0348

Surface Properties -other

- STUDIES OF NATURALLY OCCURRING ACIDIC LIPIDS - IONIC, SURFACE AND MEMBRANE PROPERTIES ...Cephalin, Lecithin, Model Membranes, Permeability, Sphingomyelin, ...3.0354
- FOLIAR PENETRATION OF CHEMICALS WHICH INCREASE DROUGHT AND SALT TOLERANCE ...Drought Resistance, Foliar Absorption, Growth Retardation of Plants, Modified Water Use, Saline Soils, ...3.0049

Tests of Cell Viability

- RECOVERY OF INDICATOR BACTERIA ON SELECTIVE MEDIA DURING DECREASE OF VIABLE COUNTS ...Bacteria (non-specific), Bioindicators, Media, Water Bacteria, ...5.0587

Ceramic Construction Materials**Bituminous**

- CHANGES IN PHYSICAL CHARACTERISTICS OF ASPHALT MATERIAL ...Aging, Asphalt - Tar Sands, Cement, Concrete, Linings-pavings, Test Methods, ...8.0105
- ASPHALT BINDING OF COBBLES FOR RIPRAP ...Aggregates, Extenders, Fillers, Binders, Conglomerates, Embankments, Erosion-general, Slopes, ...8.0106
- STABILIZATION OF SLOPES ...Clay, Cuts, Embankments, Slopes, Soil Stabilization, ...8.0069
- FIELD PERFORMANCE OF ASPHALTIC CONCRETE ...Asphalt, Cement, Concrete, Highway Structures, Hydraulic Structures, Time, ...8.0070
- SCREENING TESTS ON NEW ASPHALTIC, PLASTIC, AND RUBBER PRODUCTS ...Elastomers Rubber, Standards, Specifications, Test Methods, ...8.0079
- HARD SURFACE LININGS-LOWER COST CANAL LINING PROGRAM ...Canals, Cement, Concrete, Gel, Linings-pavings, Sealant Materials, ...8.0050
- MEMBRANE LININGS-OPEN AND CLOSED CONDUIT RESEARCH PROGRAM ...Elastomers Rubber, Lining, Open Channel, Polyethylene, Polyvinyl Chloride, ...8.0051
- INVESTIGATION OF GROOVE AND CRACK SEALING MATERIALS ...Canals, Cement, Concrete, Elastomers Rubber, Linings-pavings, Polyethylene, Sealant Materials, ...8.0076

Cement, Concrete

- INFLUENCES OF SALINE WATER ON CONCRETE ...Composition Parameters-other, Construction Materials-other, Desalination, Saline Water Systems, Salinity, ...3.0221
- CORROSION PROTECTION BY INHIBITOR CROSS-LINKING AND SURFACE COATING GRAFTING ...Crosslinked, Inhibitors, Metallic Alloys, Metals, Radiation Induced, ...3.0404
- POLYMERIC COATINGS FOR PROTECTION ON CONCRETE EXPOSED TO AQUEOUS SALINE ENVIRONMENTS ...Adhesion, Depolymerization, Organic-general, Plastics - General, Salinity, Water, ...3.0405
- ADHESIVE PROTECTION FOR CONCRETE ...California, Cavitation, Coatings-general, Epoxies, Erosion, ...8.0015
- INVESTIGATIONS OF PLACEABILITY OF CONCRETE ...Equipment, Methods, Plasticity, ...8.0258
- FORMING, FINISHING, AND CURING CONCRETE ...Casting of Materials, Setting, Curing, Surface, Surface Cleaning, Finishing, ...8.0257
- INVESTIGATION OF TESTING METHODS AND APPARATUS ...Atomic Absorption, Infrared, Instrumentation, Plant Equip., Standards, Specifications, Test Methods, Ultrasonic and Sonic, ...8.0234
- INVESTIGATION OF CONCRETING MATERIAL (OTHER THAN AGGREGATE AND CEMENTITIOUS MATERIALS) ...Construction Materials-other, Standards, Specifications, Test Methods, ...8.0247

SUBJECT INDEX

Ceramics

CEMENT - AGGREGATE REACTION ...Aggregates, Extenders, Fillers, Alkali Metals-general, Dimensions, Expansion, Reaction-general, ...**8.0236**

RESEARCH IN MASS CONCRETE ...Aggregates, Extenders, Fillers, Standards, Specifications, ...**8.0250**

INVESTIGATION OF CREEP IN CONCRETE ...Creep, Dimensions, Expansion, Water, ...**8.0240**

TENSILE CRACK EXPOSURE TESTS ...Beams - Bars, Crack Initiation, Propagation, Reinforcing Steel, Standards, Specifications, Weathering, ...**8.0252**

INVESTIGATION OF WATERSTOPS FOR CONSTRUCTION JOINTS ...Elastomers Rubber, Joints, Plastics - General, Sealing, Water, ...**8.0229**

CONCRETE AGGREGATE RESEARCH ...Aggregates, Extenders, Fillers, Chert, Non-foliated Rocks, Sandstones, Standards, Specifications, Test Methods, ...**8.0237**

CONTINUATION OF FIELD EXPOSURE STATIONS ...Florida, Maine, Research Facilities, Water, Weathering, ...**8.0241**

HANDBOOK FOR CONCRETE AND CEMENT ...Aggregates, Extenders, Fillers, Curing Agents, Handbooks, Sealant Materials, Water, ...**8.0235**

RESEARCH ON PROPERTIES OF CEMENTITIOUS MATERIAL ...Mechanical Properties-general, Physical Properties-general, Standards, Specifications, Test Methods, ...**8.0249**

IMPROVEMENTS IN MASS CONCRETE MIXTURE PROPORTIONING ...Aggregates, Extenders, Fillers, Composition Parameters-other, Costs, Homogeneity, Quality Control-materials, ...**8.0260**

SHEAR EVALUATION OF WEAK ROCK FOUNDATIONS ...Foundations, Joining, Bonding-general, Ohio River, Shear Strength, Soil Test - Insitu, ...**8.0273**

INVESTIGATION OF SHOTCRETE ...Mechanical Properties-general, Physical Properties-general, Test Methods, ...**8.0261**

MODEL STUDIES OF MASS CONCRETE STRUCTURES ...Dimension-three, Mass, Model Studies, Stress Recorders, Technique Development, ...**8.0227**

CONCRETE TEST VESSEL ...Concrete-other, Desalination, Pressure Vessel Materials, Tanks, Water, ...**8.0113**

BINDERS OF CONCRETE RESISTANT TO SALINE WATER AT ELEVATED TEMPERATURES ...Aggregates, Extenders, Fillers, Binders, Brines, D.t.a., X-ray, ...**8.0086**

EVALUATION OF CONCRETE AND RELATED MATERIALS FOR USE IN DESALINATION PLANTS ...Coatings-general, Corrosion General, Ferrous Alloys - Other, Saline Conversion, Sealant Materials, ...**8.0062**

INVESTIGATIONS OF ALGAE INHIBITING MATERIALS ...Coatings-other, Fouling, Inhibitors, Liquids Or Sprays, Organic Wastes, Water Distribution Systems, ...**3.0106**

CONCRETE CURING COMPOUND INVESTIGATIONS ...Curing Agents, Dam, Canal, Organic-general, Weathering, ...**8.0075**

CHANGES IN PHYSICAL CHARACTERISTICS OF ASPHALT MATERIAL ...Aging, Asphalt - Tar Sands, Bituminous, Linings-pavings, Test Methods, ...**8.0105**

ULTRASONIC TESTING OF ROCK AND CONCRETE ...Attenuation, Consolidated Material, Structure Location, Ultrasonic and Sonic, Ultrasonics, ...**8.0116**

EFFECT OF PROPERTIES OF FRESH CONCRETE ON FORM PRESSURES ...Aggregates, Extenders, Fillers, Composition Parameters-other, Pressure, Temperature General, ...**8.0107**

FACTORS INFLUENCING THE RESISTANCE OF CONCRETE TO SULFATE ATTACK ...Aggregates, Extenders, Fillers, Chemicals, Composition Parameters-other, Sulfate, Sulfite, ...**8.0044**

ANALYSIS OF LENGTH CHANGE OF CONCRETE ...Aggregates, Extenders, Fillers, Crack Initiation, Propagation, Drying, Failure Analysis, Reliability, Shrinking, ...**8.0103**

COMPRESSIVE CREEP TESTS OF CONCRETE ...Aggregates, Extenders, Fillers, Compression, Creep, Engineering Structures-general, ...**8.0068**

EVALUATION AND DEVELOPMENT OF SPECIFICATIONS AND TEST METHODS FOR CEMENT AND POZZOLAN ...Composition Parameters-other, Compression, Quality Control-materials, Standards, Specifications, Test Methods, ...**8.0101**

FACTORS INFLUENCING THE DURABILITY OF CONCRETE ...Chemicals, Durability, Deterioration, Organic-general, Pipe, Tube, Sulfate, Sulfite, ...**8.0043**

EFFECT OF AGGREGATE PROPERTIES AND CEMENT CONTENT ON THE TENSILE STRENGTH OF CONCRETE ...Aggregates, Extenders, Fillers, Composition Parameters-other, Tensile, Test Methods, ...**8.0110**

RESISTANCE OF CONCRETE TO SULPHATE WATERS ...Alkalinity, Chemicals, Dam, Canal, Irrigation, Sulfate, Sulfite, ...**8.0298**

EFFECT OF THE MAGNITUDE OF COMPRESSIVE STRENGTH OF CONCRETE AT VARIOUS AGES ON THE STANDARD DEVIATION AND COEFFICIENT OF VARIATION ...Compression, Engineering Structures-general, Quality Control-materials, ...**8.0111**

DEVELOPMENT AND EVALUATION OF TEST PROCEDURES FOR DETERMINING REACTIVE EXPANSION, AIR AND WATER PERMEABILITY, AND BONDING EFFICIENCY ...Adhesives, Bonding - Other, Porosity, Permeability, Repairing, Test Methods, ...**8.0112**

THE DEVELOPMENT OF CONCRETE-POLYMER MATERIALS ...Ceramic Matrix, Durability, Deterioration, In-situ, Plastics - General, Radiation Induced, Strength, Cohesion, ...**8.0045**

CORROSION OF METALS IN CONCRETE ...Chloride, Low Alloy Steels, Stress, Strain, Water, ...**8.0023**

EVALUATION OF CONCRETE PROPERTIES OF CORES FROM OLD STRUCTURES ...Dams-other, Engineering Structures-general, Mechanical Properties-general, Time, ...**8.0063**

FIELD PERFORMANCE OF ASPHALTIC CONCRETE ...Asphalt, Bituminous, Highway Structures, Hydraulic Structures, Time, ...**8.0070**

PETROGRAPHIC INVESTIGATIONS ...Aggregates, Extenders, Fillers, Construction Materials-other, Petrography, Structure-materials-general, ...**8.0119**

EFFECT OF RETARDING ADMIXTURES ON PROPERTIES OF CONCRETE ...Additives, Aggregates, Extenders, Fillers, Durability, Deterioration, Engineering Structures-general, ...**8.0046**

REVIATION OF CONCRETE AND MASONRY ...Concrete-other, Mechanical Vibrations-other, Physical Properties-general, Standards, Specifications, Vibration, ...**8.0108**

INVESTIGATION IN THE DEVELOPMENT AND IMPROVEMENT OF SPECIAL CEMENTS ...Durability, Deterioration, Elasticity - General, Engineering Structures-general, Setting, Curing, Strength, Cohesion, ...**8.0048**

PERFORMANCE OF WATER-REDUCING SET-CONTROLLING ADMIXTURES IN CONCRETE, MORTAR AND CEMENT PASTE ...Chemical Materials-other, Composition Parameters-other, Engineering Structures-general, Setting, Curing, ...**8.0049**

HARD SURFACE LININGS--LOWER COST CANAL LINING PROGRAM ...Bituminous, Canals, Gel, Linings-pavings, Sealant Materials, ...**8.0050**

REGION 2 - WEED CONTROL ...Engineering Structures-general, Setting, Curing, Water, ...**8.0115**

INVESTIGATION OF GROOVE AND CRACK SEALING MATERIALS ...Bituminous, Canals, Elastomers Rubber, Linings-pavings, Polyethylene, Sealant Materials, ...**8.0076**

Construction Materials-other

INFLUENCES OF SALINE WATER ON CONCRETE ...Cement, Concrete, Composition Parameters-other, Desalination, Saline Water Systems, Salinity, ...**3.0221**

INVESTIGATION OF CONCRETING MATERIAL (OTHER THAN AGGREGATE AND CEMENTITIOUS MATERIALS) ...Cement, Concrete, Standards, Specifications, Test Methods, ...**8.0247**

DURABILITY AND BEHAVIOR OF PRESTRESSED CONCRETE BEAMS ...Beams - Bars, Methods, Pre-stressed, Weathering, ...**8.0253**

PETROGRAPHIC INVESTIGATIONS ...Aggregates, Extenders, Fillers, Cement, Concrete, Petrography, Structure-materials-general, ...**8.0119**

Ceramics

Ceramics - General

14-01-0001-1760 -- IN-SITU FORMATION OF REGENERATIVE CELLULOSE ACETATE MEMBRANES ON POROUS SUPPORTS ...Casting of Materials, Cellulose Acetate, Reverse Osmosis, Saline Conversion, Solutionizing, ...**3.0069**

Glass

INVESTIGATION OF THE USE OF LOW-COST PLASTIC FILMS FOR SOLAR STILL CONSTRUCTION ...Costs, Distilling Units, Film, Plastics - General, Structural, Weathering, ...**3.0391**

RESEARCH ON POROUS GLASS MEMBRANES FOR REVERSE OSMOSIS ...Desalination, Fiber, Filament, Whisker, Membranes-

Ceramics

- other, Porosity, Permeability, Reverse Osmosis, Waste Water Treatment-other, ...3.0068
- GROUND WATER RECHARGE THROUGH PITS AND WELLS ...Aquifers-general, Artificial Recharge, Drainage, Filtration, Recharge Pits - Wells, ...2.0514
- TREATMENT OF MUNICIPAL SECONDARY EFFLUENT BY REVERSE OSMOSIS ...Carbon, Fiber, Filament, Whisker, Membranes-other, Pollutant-fouling, Reverse Osmosis, Waste Water Pre-treatment, ...5.0131
- GLASS FIBER REINFORCED PLASTIC MORTAR PIPE FOR PRESSURE IRRIGATION DISTRIBUTION SYSTEM ...Fiber, Filament, Whisker, Irrigation Engineering, Pipe, Tube, Pipelines, Plastic Matrix, ...8.0027

Cesium

- EFFECTS OF LIMNOLOGICAL FACTORS ON UPTAKE OF CS137 BY FISH ...Metabolism -animal, ...1.0068
- THE EFFECTS OF LIMNOLOGICAL FACTORS ON THE UPTAKE OF CS137 BY FISH ...Atomic Absorption, Emission, Lakes, Michigan, Radioactive Fallout, ...2.0653
- IMPROVED DETECTION TECHNIQUES TO DETERMINE RADIONUCLIDES IN FRESH AND SEA WATER ...Fresh Water, Ion Exchange-other, Radioactivity-general, Sea Water-general, ...5.1100
- BIOLOGICAL (ENRICHMENT) CHAINS OF RADIONUCLIDES IN FINNISH LAKES ...Eutrophication, Finland, Nutrients, Radioactive Fallout, Radioisotopes ...2.0309

Channels

- PERFORMANCE OF CIRCULAR CULVERTS ON STEEP GRADES ...Culvert, Drainage, Engineering Structures-general, Erosion Control, Flow Characteristics -water, ...8.0289
- STABLE ALLUVIAL CHANNELS ...Alluvial Deposits, Boundary Layer-general, Control Factors-general, Cross-section, Flow Characteristics -water, ...2.0225
- HYDRODYNAMIC FORCES ON NON-COHESIVE BED PARTICLES INCLUDING SEEPAGE ...Drag, Seepage, ...2.1079
- FLOW OF A ROTATING FLUID OVER IRREGULAR SURFACE TOPOGRAPHIES ...Flow Characteristics -water, Rotating Fluids, Roughness, ...2.0249
- MCMRY ARTIFICIAL SPAWNING CHANNEL STUDIES ...Columbia River, Construction Land Use Effects, Salmon -coho, chinook, sockeye., Spawn Or Nesting Sites, Temperature, ...8.0302
- SURFACE WATER MANAGEMENT ...Forest Watersheds, Hydrographs, Mountains-alpine, Seepage, Soil-water-plant Relationships, ...4.0060
- THE EFFECT OF A PERMEABLE BED ON SEDIMENT MOTION ...Permeability, Sediment Transport-general, Seepage, Slopes, ...2.0353
- THE HYDRAULICS OF SPATIALLY VARIED STEADY FLOW IN AN IRRIGATION DISTRIBUTION CHANNEL WITH FURROW OUTLETS ...Engineering Structures-general, Flow Characteristics -water, Furrow Irrigation, Orifice, Weir, ...3.0398
- CHANGES IN NATURAL CHANNELS RESULTING FROM CONTROL DEVICES IN THE UPPER REACHES OF THE BASINS ...Control Factors-general, Open Channel, Reservoirs, Sedimentation, Structure Sites, ...2.0685
- AN ECOLOGICAL AND RECREATIONAL USE SURVEY OF A SMALL MISSISSIPPI RIVER JUST BEFORE CHANNELIZATION ...Frequency of Use, Mississippi, Recreation Sites, Streams, ...6.0315
- EFFECTS OF RIVER CURVATURE ON RESISTANCE TO FLOW ...Flow Characteristics -water, Flume Studies, Roughness, Unsteady Flow, Velocity -water, ...8.0198
- FREE SURFACE FLOW AND WAVE PROPAGATION THROUGH CHANNEL-FLOOD PLAIN GEOMETRIES ...Conduit Flow-other, Floodplains, Flow Characteristics -water, Free Surface Waves, Model Studies, ...8.0196
- THE CHARACTERIZATION OF OVERLAND FLOW ON VERY ROUGH SURFACES ...Channel Roughness, Data Analysis Applications, Flow Characteristics -water, Model Studies, Surface Flow, ...8.0192
- HYDRAULICS LABORATORY ...Flow of Dispersed Solids, Open Channel, Sedimentation, Streams, Suspension, Turbulent, ...8.0146
- EXPLORATION AND MAPPING OF THE SALISBURY PALEOCHANNEL ...Atlases-maps, Borehole Geophysics, Geophysical Analysis, Maryland, Valley, Buried, ...2.0566

SUBJECT INDEX

- HARBOR DESIGN STUDIES ...Harbors, Navigation, Waves, ...8.0231
- COMMITTEE ON CHANNEL STABILIZATION ...Alluvial Deposits, Bedding Planes, Design Criteria, Open Channel, Stabilization-other, Streams, Temperature, ...2.0686
- SHOALING PROCESSES ...Sand Bars, Scouring, Sediment Transport-other, Tidewater Areas, Turbulent Flow, ...2.0690
- LONG TERM CHANNEL CHANGES ...Cross-section, Gaging, Morphology-general, Soil Erosion -non-specific, ...2.0284
- UNSTEADY FLOW AND SALINE INTRUSION IN ESTUARIES ...Estuaries, Model Studies, Open Channel Flow, Saline Water Intrusion, Unsteady Flow, ...2.1091
- FLOW AND SEDIMENT TRANSPORT, RIO GRANDE CONVEYANCE CHANNEL ...Flume Studies, Morphology-general, Rio Grande River, Sediment Transport-other, Streams, ...2.0771
- EVALUATION OF VARIABLES IN ALLUVIAL CHANNEL FLOW ...Bed Load, Flow Characteristics -water, Model Studies, Morphology-general, Velocity -water, ...2.0237
- GRAIN SIZE DISTRIBUTION AND BEDLOAD TRANSPORT ...Bed Load, Discharge-general, Flume Studies, Grain Size, Hydraulics-general, ...2.1101
- DETERMINATION OF CHANNEL CAPACITY OF THE MERCED RIVER, CALIFORNIA ...California, Cross-section, Discharge-general, Hydrographic, Peak Flow, ...2.0116
- BAYOU LAFOURCHE SEDIMENTATION STUDY, LOUISIANA ...Bayous, Louisiana, Morphology-general, Rate of Deposition, Sediment Yield, ...2.0535
- CHANNEL MEANDER STUDIES ...Discharge-general, Grain Size, Indiana, Meanders, Suspension, ...2.0453
- CHANNEL CAPACITY IN STONY CREEK NEAR ORLAND, CALIFORNIA ...California, Design Flow-flood, Peak Flow, Reservoirs and Impoundments, Water Transfer, ...2.0122
- FLOOD INUNDATION STUDY, WISCONSIN ...Design Flow-flood, Floodproofing, Floods, Mapping, Wisconsin, ...4.0278
- PROTECTION OF ERODIBLE CHANNELS AND SURFACES WITH GRAVEL OR RIPRAP ...Canals, Energy Loss -water, Engineering Structures-general, Flow Characteristics -water, Groundwater, Linings-pavings, Scouring, Seepage, ...8.0040
- CHANNELIZATION STUDIES ...Channel Geometry, Control and Protection, New Mexico, Sedimentation, Silting, ...8.0053
- SEDIMENTATION AND WATER SALVAGE STUDIES-SOIL AND MOISTURE PROGRAM ...of Specific Weeds, Phreatophytes, Scouring, Transpiration, Water Loss Control, ...8.0028
- FACTORS AFFECTING STABILITY OF ARTIFICIAL AND NATURAL CHANNELS ...Cohesive Soil-general, Hydraulic Gradient, Open Channel, Soil Stability Analysis, Vane, ...8.0034
- SEDIMENT PROCEDURES DEVELOPMENT AND RESERVOIR SEDIMENTATION ...Engineering Structures-general, Reservoirs and Impoundments, Sediment Transport-other, Sediment Yield, Sedimentology-general, ...6.0089
- SOIL STABILIZATION AND RUNOFF REGULATION IN CONIFER WATERSHEDS ...Erosion-general, Forest Watersheds, Internal Water Movement, Land Use, Runoff, Stabilization-other, ...5.0967
- DEVELOPMENT AND EVALUATION OF MEANS AND MEASURES FOR CHANNEL STABILIZATION ...Channel Geometry, Design Criteria, Flow Characteristics -water, Mechanics, General, Scouring, Sediment Transport-general, ...5.1022
- MECHANICS OF SEDIMENT ENTRAINMENT, TRANSPORTATION AND DEPOSITION IN CHANNELS OF THE SOUTHERN BRANCH AND AT THE USDA SEDIMENTATION LABORATORY ...Flume Studies, Sediment Transport-general, Sedimentation, Velocity -water, Waves, ...2.0677
- STREAM CHANNEL STABILIZATION SEDIMENT CONTROL WORKS IN CHANNELS ...Erosion Control, Lining, Open Channel, Scouring, Sedimentation, ...5.0930
- STORM RUNOFF AND FLOOD FLOWS IN RELATION TO CLIMATIC AND WATERSHED CHARACTERISTICS ...Hydrographs, Water Yield, Watersheds-general, ...4.0206
- WATER ACCUMULATION, FLOOD-WAVE MOVEMENT AND WATER YIELD FROM COMPLEX WATERSHEDS OF THE PACIFIC NORTHWEST ...Floods, Forecasting-prediction, Hydrographs, Idaho, Peak Flow, Storage of Water, Water Yield, Watersheds-general, ...3.0202
- THE HYDRAULICS AND MEASUREMENT OF CHANNEL, FLOOD PLAIN, AND OVERLAND FLOW IN THE SOUTHERN PLAINS ...Channel Roughness, Floodplains, Measurement, Open Channel, Unsteady, ...8.0276

SUBJECT INDEX

Chemical & Physical Properties

FACTORS INFLUENCING THE STABILITY AND REGIME OF CHANNELS IN AGRICULTURAL WATERSHEDS ...Agricultural Watersheds, Climate, General Deposition, Land Use, Morphology-general, ...4.0072

MORPHOLOGY AND STABILITY OF STREAM CHANNELS IN SOUTHWESTERN SEMIARID RANGELAND WATERSHEDS ...Channel Filling, Cross-section, Gullies - Arroyos, Sediment Yield, Stream Banks, ...5.0757

MORPHOLOGY AND STABILITY OF STREAM CHANNELS IN SOUTHERN CALIFORNIA ...Channel Filling, Cross-section, Gullies - Arroyos, Sediment Yield, Stream Banks, ...5.0103

FLOOD WAVE MOVEMENT IN NATURAL EPHEMERAL STREAM CHANNELS ...Ephemeral, Floods, Runoff, Thunderstorms, Waves, ...4.0008

STREAM FLOW REGIMES OF SEMIARID RANGELAND WATERSHEDS IN THE SOUTHWEST ...Flow Characteristics - water, Runoff, Semi - Arid, Storm Water, Storms-general, ...4.0009

STREAM FLOW REGIMES ON A SEMIARID RANGELAND WATERSHED ...Agricultural Watersheds, Hydraulics-general, Hydrographs, Runoff, Storms-general, ...4.0178

Charged Particles

EFFECT OF CHARGE UPON COLLISIONS IN WASHOUT ...Charge on Droplets, Collision Effects, Droplet Formation, Dust - Particulate Matter, Washout, ...2.0155

Chemical & Physical Properties

Colligative

Concentration

VOLUME CHANGES ON MIXING SOLUTIONS OF ELECTROLYTES ...Binary Mixtures, Dilatometry, Electrolytes, Mixing, ...1.0086

THERMODYNAMICS OF MIXING OF SALT SOLUTIONS ...Alkali Metals-general, Salt, Solution, ...1.0090

DIFFUSION PHENOMENA IN ICE - RECRYSTALLIZATION PHENOMENA IN ICE ...Crystal Growth, Desalination, Diffusion-other, Electrolytes, Rate of Reaction, ...3.0361

EFFECT OF PH AND IONIC STRENGTH ON THE CRYSTALLIZATION AND MORPHOLOGY OF POLYMER MEMBRANES AND FIBERS ...Desalination, Membranes-other, Morphology-other, Natural Occurring, Reverse Osmosis, ...3.0188

TRANSPORT PROPERTIES OF AQUEOUS ELECTROLYTE SOLUTIONS - AN APPROACH FROM THE HIGH CONCENTRATION LIMIT ...Desalination, Entropy, Glassy, Transport, Viscosity, ...1.0049

REMOVAL OF TRACE METALS FROM WATER BY ION FLOTATION ...Domestic, Flotation, Foam, Industrial Waste-other, Trace Elements, ...5.0878

EFFECTS OF CHEMICAL IONS ON VIRUS INACTIVATION ...Animal Viruses (non-specific), Inactivation, Ion Exchange-other, Ionic Effect, Virus, ...5.0475

TREATMENT OF ALKALINE WASTES FROM POTATO PROCESSING ...Activated, Canning Wastes, Food Processing Industry, Plant Waste Removal, Treatment, Streams & Rivers, Waste Water Treatment-general, ...5.0465

RECOVERY & REUSE OF LIME AS A COAGULANT IN TERTIARY TREAT & NITROGEN REMOVAL FROM TERTIARY TREATED EFFLUENT ...Coagulation, Denitrification, Disposal, Material Recovery Wastes, Tertiary Treatment, ...5.0160

UPTAKE AND RELEASE OF SOLUBLE ORTHOPHOSPHATE BY ACTIVATED SLUDGE ...Activated, Aeration, Effluents-waste Water, Phosphate, Phosphite, ...5.0365

MECHANISMS AND RATES OF HEAVY METAL SORPTION AND DESORPTION ...Adsorption-desorption, Mechanisms, Other, Oxidation Reduction, Rate of Reaction, ...2.0181

QUANTITATIVE DETECTION OF SMALL AMOUNTS OF VIRUSES IN LARGE VOLUMES OF WATER ...Analysis and Detection, Detectors and Sensors, Filtration, Membranes-other, Virus, ...5.0842

SINGLE STAGE LIME TREATMENT WASTEWATER ...Demineralization, Electrodialysis, Filter-other, Precipitation, Sedimentation, ...5.0897

HIGH RESOLUTION NUCLEAR MAGNETIC RESONANCE SPECTRA OF ORGANIC PESTICIDES ...Carbamates -non-specific, Chlorinated Hydrocarbons, Decomposition-general, Isotopic, Nuclear Magnetic Resonance, Organophosphorous Cpd., Temperature-other, ...5.0283

Osmotic Pressure

ION - ION AND ION - MOLECULE INTERACTIONS IN AQUEOUS SALT SOLUTIONS ...Activity, Conductivity, Ionic, Polarization, Solution, ...1.0020

DEVELOPMENT OF METHODS FOR MEASURING PARTIAL VAPOR PRESSURE OF SOIL WATER ...Krypton, Moisture Tension, Soil Environment, Soil-water-plant Relationships, Technique Development, Vapor Pressure, ...2.0495

Vapor Pressure

DISPOSAL OF BRINE BY SOLAR EVAPORATION ...Desalination, Evaporation, Heat Transfer, Mass Transfer, Solar Still, ...3.0333

MAXIMUM RATE OF VAPORIZATION AND CONDENSATION OF WATER WITH DISSOLVED SALTS AND SURFACE CONTAMINATION ...Condensation, Electrolytes, Evaporation, Gas/gas, Rate of Reaction, ...3.0413

INVESTIGATION OF ANOMALOUS WATER ...Condensation, Density, Phy and Chem Properties, Vapor, Viscosity, Water, ...3.0288

THERMOPHYSICAL PROPERTIES OF SEA WATER AND AQUEOUS ELECTROLYTE SOLUTIONS CONTAINING NaCl, KCl, Na₂SO₄, AND MgSO₄ ...Boiling Point, Brines, Conductivity, Density, Tables, Compilations, Catalogs, Viscosity, ...3.0286

ISOTOPE EFFECT ON THE THERMODYNAMIC ACTIVITY OF WATER ...Activity, Chemical-general, Deuterium, Solution, Water, ...1.0112

DEVELOPMENT OF METHODS FOR MEASURING PARTIAL VAPOR PRESSURE OF SOIL WATER ...Krypton, Moisture Tension, Osmotic Pressure, Soil Environment, Soil-water-plant Relationships, Technique Development, ...2.0495

VERIFICATION OF MASS-TRANSFER AND PAN EVAPORATION RELATIONSHIPS FOR LARGE LAKES AND RESERVOIRS (SALTON SEA, CALIFORNIA) ...California, Conductivity, Evaporation, Forecasting-prediction, Lakes, ...2.0129

RELATIONSHIP OF PESTICIDE PROPERTIES TO ADSORPTION ...Adsorption-other, Electrophoresis, Polarization, ...5.0825

Crystal

Inorganic

STUDY OF SNOW CRYSTAL TYPES IN GREAT LAKES SNOWSTORMS ...Activation Analysis, Great Lakes-general, Iodine, Storm Water, Structure, ...2.0784

Liquid

HETEROGENEOUS NUCLEATION AND CONDENSATION OF VAPORS ...Argon, Nucleation, Solution, Water, 4 Ring System, ...1.0094

Density

INVESTIGATION OF ANOMALOUS WATER ...Condensation, Phy and Chem Properties, Vapor, Vapor Pressure, Viscosity, Water, ...3.0288

THERMOPHYSICAL PROPERTIES OF SEA WATER AND AQUEOUS ELECTROLYTE SOLUTIONS CONTAINING NaCl, KCl, Na₂SO₄, AND MgSO₄ ...Boiling Point, Brines, Conductivity, Tables, Compilations, Catalogs, Vapor Pressure, Viscosity, ...3.0286

Diffusion

Diffusion-other

TRANSPORT PROPERTIES OF CONCENTRATED SALT SOLUTIONS ...Bond Type-general, Conductivity, Desalination, Kinetic-general, ...1.0087

DIFFUSION PHENOMENA IN ICE - RECRYSTALLIZATION PHENOMENA IN ICE ...Concentration, Crystal Growth, Desalination, Electrolytes, Rate of Reaction, ...3.0361

THE INVESTIGATION OF TRANSPORT PROCESSES IN AQUEOUS ELECTROLYTE SOLUTIONS ...Conductivity, Electrolytes, Ionic, Solution, Water, ...1.0093

TRANSPORT PHENOMENA IN FUSED ORGANIC SALTS ...Desalination, Reverse Osmosis, Salt, Thermal Properties-other, Viscosity, ...3.0075

ION DISCRIMINATION BY HYDROPHOBIC MEMBRANES ...Equilibrium-other, Hydrophobic, Membranes-other, Solution, ...3.0234

DIFFUSION OF OXYGEN AND HYDROGEN SULFIDE IN WATER AS EFFECTED BY DISSOLVED SURFACTANTS ...Oxygen, Sulfide, Surfactants, ...1.0002

Chemical & Physical Properties

SUBJECT INDEX

OXYGENATION OF AQUEOUS BODIES USING LIQUID OXYGEN ...Aeration, Oxygen, Solution, Waste Treatment-economics, ...5.0685

DIFFERENTIAL ION MOBILITY AT COLLOIDAL SURFACES ...Colloidal Phenomena, Hydrophobic, Membranes-other, Radiochemical Techniques, Transport, ...2.0053

DIFFUSION OF OXYGEN ACROSS THE MUD-WATER INTERFACE IN AQUATIC ENVIRONMENTS ...Aquatic Environments, Electroanalyses-other, Ions and Gases, Oxygen, ...2.0797

OXYGEN TRANSFER TO WATER DROPLETS ...Air-general, Oxygen, Water, ...1.0038

Gas/gas

MAXIMUM RATE OF VAPORIZATION AND CONDENSATION OF WATER WITH DISSOLVED SALTS AND SURFACE CONTAMINATION ...Condensation, Electrolytes, Evaporation, Rate of Reaction, Vapor Pressure, ...3.0413

Gas/liquid

DIFFUSIVITY OF OXYGEN AND SULFIDE SPECIES IN AQUEOUS SOLUTIONS ...Chemical Treatment, Oxygen, Solution, Sulfide, Surfactants, ...1.0003

EFFECT OF SURFACE FILMS ON GASES DISSOLVED IN WATER ...Evaporation, Ions and Gases, Solubility, Water Loss Control, ...5.0056

Liquid/liquid

DIFFUSION AND FLOW IN INTERPHASE TRANSPORT ...Convection, Desalination, Membranes-other, Surfactants, ...5.0378

Electrical

Conductivity

AN INVESTIGATION OF ION MOBILITY IN AQUEOUS SOLUTIONS ...Solution, State Variables - Pvt, Transport, Variable Temperature, Variational Pressure, ...1.0064

STUDIES OF THE PHYSICAL CHEMISTRY OF ELECTROLYTE SOLUTIONS ...Desalination, Electrolytes, Mathematical Analysis, Model Studies, Nuclear Magnetic, ...1.0085

TRANSPORT PROPERTIES OF CONCENTRATED SALT SOLUTIONS ...Bond Type-general, Desalination, Diffusion-other, Kinetic-general, ...1.0087

THE INVESTIGATION OF TRANSPORT PROCESSES IN AQUEOUS ELECTROLYTE SOLUTIONS ...Diffusion-other, Electrolytes, Ionic, Solution, Water, ...1.0093

ION - ION AND ION - MOLECULE INTERACTIONS IN AQUEOUS SALT SOLUTIONS ...Activity, Ionic, Osmotic Pressure, Polarization, Solution, ...1.0020

Electrical Properties-other

ELECTRIC AND STRUCTURAL PROPERTIES OF ION SELECTIVE MEMBRANES ...Electrolytes, Glassy, Membranes-other, Permeability, Transport, ...5.0135

Electrochemical

Dielectric Properties

DIELECTRIC PROPERTIES OF HYDROGEN-BONDED LIQUIDS ...Alcohols, Desalination, Hydrogen, Isomerism, Thermal Relation-other, ...1.0078

SPECTROSCOPIC AND DIELECTRIC STUDIES OF NEW HYDROGEN BONDED SPECIES ...Gaseous, Hydrogen, Infrared, Far, Phase Relationship, Water, ...1.0061

TRANSPORT AND DIELECTRIC PROPERTIES OF SALINE SOLUTIONS ...Analysis and Detection, Compressibility-gas-liq, Extreme High Pressure - K Bar, Transference, Water, ...1.0103

Electrochemical-other

ELLIPSOMETRIC STUDIES OF PASSIVATION, WITH SPECIAL REFERENCE TO THE ESSENTIAL ANIONIC CONSTITUENTS OF SALINE WATER ...Desalination, Halide, Passivation, Saline Conversion, Water, ...3.0412

THE EFFECT OF ORGANIC INHIBITORS ON THE DISSOLUTION KINETICS OF IRON ...Corrosion General, Electrode, Inhibitors, Iron, Kinetics-other, ...3.0065

Electrolytes

STUDIES BEARING ON THE RELATION OF STRUCTURE TO PROPERTIES IN LIQUID SOLUTIONS ...Activity, Solution, Water, ...1.0105

STUDIES OF CONCENTRATED AQUEOUS ELECTROLYTES AND OF MOLTEN ELECTROLYTES BY INFRARED SPECTROSCOPY ...Infrared, Raman, Solid State, Solution, Variable Temperature, ...1.0118

VOLUME CHANGES ON MIXING SOLUTIONS OF ELECTROLYTES ...Binary Mixtures, Concentration, Dilatometry, Mixing, ...1.0086

STUDIES OF THE PHYSICAL CHEMISTRY OF ELECTROLYTE SOLUTIONS ...Conductivity, Desalination, Mathematical Analysis, Model Studies, Nuclear Magnetic, ...1.0085

DIFFUSION PHENOMENA IN ICE - RECRYSTALLIZATION PHENOMENA IN ICE ...Concentration, Crystal Growth, Desalination, Diffusion-other, Rate of Reaction, ...3.0361

ELECTRIC AND STRUCTURAL PROPERTIES OF ION SELECTIVE MEMBRANES ...Electrical Properties-other, Glassy, Membranes-other, Permeability, Transport, ...5.0135

ION-SOLVENT AND ION-ION INTERACTIONS IN AQUEOUS ELECTROLYTES ...Activity, Assoc & Dissoc, Relaxation, Temperature Jump Method, Ultrasonic, ...1.0095

THE INVESTIGATION OF TRANSPORT PROCESSES IN AQUEOUS ELECTROLYTE SOLUTIONS ...Conductivity, Diffusion-other, Ionic, Solution, Water, ...1.0093

THE EFFECTS OF VELOCITY ON THE PASSIVATION OF ALLOYS IN BRACKISH WATER ...Brackish Water, Desalination, Metallic Alloys, Passivation, Velocity -water, ...3.0136

STUDY OF A SPECIFIC INFLUENCE OF IONIC SPECIES ON STRUCTURING IN WATER ...Configuration, Entropy, Half Cell, Ion Exchange-other, Membranes-other, ...1.0010

THE HEATS OF MIXING OF STRONG ELECTROLYTES ...Alkaline Earth-general, Salt, Solution, Water, ...1.0029

MAXIMUM RATE OF VAPORIZATION AND CONDENSATION OF WATER WITH DISSOLVED SALTS AND SURFACE CONTAMINATION ...Condensation, Evaporation, Gas/gas, Rate of Reaction, Vapor Pressure, ...3.0413

FREEZING POTENTIAL STUDY ...Desalination, Freezing, Polarization, Relaxation, Solution, ...3.0183

ANALYSIS OF SOLUTIONS FOR SURFACE-ACTIVE CONSTITUENTS ...Absorption-other, Detectors and Sensors, Electrochemical-other, Electrode, Surfactants, ...5.0439

NMR AND X-RAY STUDIES OF STRUCTURE IN AQUEOUS ELECTROLYTE SOLUTIONS ...Adsorption-other, Nuclear Magnetic, Nuclear Magnetic Resonance, Reaction-general, Solution, X-ray, ...1.0073

ELECTROANALYTICAL CHEMISTRY - STUDIES OF ADSORPTION AND REDOX PROCESSES AT ELECTRODES ...Amperometry, Analysis and Detection, Oxidation Reduction, Polarography, Surfactants, ...5.0440

Polarization

SOLUTE PROPERTIES OF WATER ...Hydration, Hydrogen, Solution, Water, ...1.0098

CONTROL OF CONCENTRATION POLARIZATION IN REVERSE OSMOSIS DESALINATION OF WATER ...Desalination, Flow Characteristics -water, Fluid Flow-other, Membranes-other, Reverse Osmosis, ...3.0287

STUDY OF MASS TRANSFER THROUGH MEMBRANES ...Desalination, Electrodialysis, Lasers, Membranes-other, Reverse Osmosis, ...3.0035

STUDY OF THE HYDRODYNAMIC ASPECTS OF DESALINATION BY REVERSE OSMOSIS ...Membranes-other, Other, Reverse Osmosis, ...3.0267

DEVELOPMENT OF A LOW-COST IRON-BASE ALLOY TO RESIST CORROSION IN HOT SEA-WATER ...Alloy & Systems, Desalination, Orientation, Saline Conversion, Water, ...3.0418

CONCEPTUAL DESIGN STUDY FOR ELECTRODIALYSIS ...Cost Analysis, Electrodialysis, Gasket Materials, Membranes-other, Saline Conversion, ...3.0285

Polyelectrolytes

CHARACTERIZATION AND REMOVAL OF REFRACTORY COLOR COLLOIDS FROM HAWAIIAN SURFACE WATERS ...Coagulation, Colloidal Phenomena, Color, Hawaii, Potable Water, Zeta Potential, ...5.0310

FLOCCULATION OF COLLOIDS WITH POLYELECTROLYTES IN AQUEOUS SALT SOLUTIONS ...Adsorption-general, Coagulation, Colloidal Phenomena, Flocculation, Salinity, ...5.1065

METHODS TO REDUCE WATER POLLUTION CAUSED BY STORM WATER SEWER LOADING BY USING FLUID FLOW FRICTION REDUCERS ...Flow, Friction, Molecular Weight-other, Storm Sewer Quantity-other, Storm Water, ...5.1185

EFFICIENCY AND ECONOMY OF POLYMERIC SEWAGE CLARIFICATION ...Industrial Processes-general, Sewage - Domestic, Waste Treatment-economics, ...5.0610

THE USE OF ORGANIC POLYELECTROLYTES FOR OPERATIONAL IMPROVEMENT OF WASTE TREATMENT PROCESSES ...Activated, Coagulation, Waste Treatment-economics, ...5.0868

SUBJECT INDEX

Chemical & Physical Properties

FULL SCALE RAW WASTE WATER FLOCCULATION ...Flocculation, Pollutant Removal-general, Sedimentation, Sewage Treatment Plant, ...5.0244

IMPROVEMENTS TO THE BOROUGH OF NEW PROVIDENCE SEWAGE PUMPING STATION AND TREATMENT FACILITIES ...Chlorination, Pilot Plant, Plastics - General, Pumping Stations, Sedimentation, Trickling, ...6.0353

REVERSE OSMOSIS TREATMENT OF WASTEWATERS ...Industrial Wastes, Membranes-other, Organic Wastes, Process Design, Reverse Osmosis, ...5.0516

ROCK CREEK PARK CLARIFICATION PROJECT ...Chlorination, Coagulation, District of Columbia, Sediments, Streams, ...4.0044

A PROGRAM FOR DEMONSTRATING COMBINED SEWER OVERFLOW CONTROL TECHNIQUE FOR WATER QUALITY IMPROVEMENTS AND BEACH PROTECTION ...Chlorination, Combined Sewer, Disinfection, Lake Erie, Potable Water, Shoreline - Coastline, ...5.0867

APPLICATION OF HYPERFILTRATION WITH DYNAMICALLY-FORMED MEMBRANES TO TREATMENT OF MUNICIPAL SEWAGE EFFLUENTS ...Filtration, Membranes-other, Secondary Treatment, Sludge-general, Tertiary Treatment, ...5.1143

INVESTIGATION OF AMPHIPATHIC WATER-SOLUBLE POLYMERS AS FLOCCULANTS AND FLOTATION AIDS IN DOMESTIC WASTEWATER TREATMENT ...Domestic Wastes-general, Flocculation, Flotation, Sewage - Domestic, Waste Water Treatment-general, ...5.0222

REMOVAL OF SUSPENDED MATTER AND TURBIDITY FROM WATER BY FLOCCULATION WITH POLYELECTROLYTE COAGULANTS AND COAGULATION ACIDS ...Electrophoresis, Flocculation, Sediments, Waste Water Treatment-general, ...4.0109

POWDERED CARBON TREATMENT OF WASTEWATER ...Activated, Chemical, Fluidized Bed, Microwave, Waste Treatment-economics, ...5.0857

Transference

TRANSPORT AND DIELECTRIC PROPERTIES OF SALINE SOLUTIONS ...Analysis and Detection, Compressibility-gas-liq, Dielectric Properties, Extreme High Pressure - K Bar, Water, ...1.0103

Equilibrium

Binary Mixtures

VOLUME CHANGES ON MIXING SOLUTIONS OF ELECTROLYTES ...Concentration, Dilatometry, Electrolytes, Mixing, ...1.0086

Equilibrium-other

THE USE OF AMALGAM ELECTRODES TO MEASURE ACTIVITY COEFFICIENTS OF METAL SALTS IN MULTICOMPONENT SALT SOLUTIONS ...Activity Coefficient, Electrode, Saline Water Systems, ...1.0065

ION DISCRIMINATION BY HYDROPHOBIC MEMBRANES ...Diffusion-other, Hydrophobic, Membranes-other, Solution, ...3.0234

SORPTION AND DESORPTION OF CHLORINATED HYDROCARBON PESTICIDES IN AQUATIC SEDIMENT MINERALS ...Absorption, Fixation, Exchange, Adsorption Capacity, Adsorption-desorption, Model Studies, Pesticides, ...5.0690

CALCULATION OF CHEMICAL DOSAGES IN LIME-SODA SOFTENING ...Hardness-minerals, Lime Treatment, ...5.0376

GEOCHEMICAL CONTROLS OF WATER QUALITY ...Chemical Analysis (water), Electroanalyses-other, Properties of Minerals, Reaction-general, Solution Chemistry, ...2.0115

Phase Relationship

MULTICOMPONENT FIXED-BED ION EXCHANGE IN THE TREATMENT OF SALINE WATER ...Desalination, Ion Exchange-other, Reaction-general, Regeneration-other, ...3.0082

STUDIES OF FUNDAMENTAL MECHANISMS IN THE DEPOSITION OF CALCIUM SULFATE SCALE ...Brines, Dilatometry, Electron, Nucleation, Scale Formation, ...3.0293

THE MEASUREMENT OF EVAPORATION AND CONDENSATION COEFFICIENTS OF WATER UNDER EQUILIBRIUM CONDITIONS ...Desalination, Equilibrium - Chemical, Tritium, Vaporization, ...3.0403

BEHAVIOR OF LIQUID SURFACES DURING EVAPORATION AND CONDENSATION ...Evaporation, Rate of Reaction, ...1.0083

SPECTROSCOPIC AND DIELECTRIC STUDIES OF NEW HYDROGEN BONDED SPECIES ...Dielectric Properties, Gaseous, Hydrogen, Infrared, Far, Water, ...1.0061

MASS TRANSFER AND CHEMICAL REACTION IN TWO PHASE FLOW ...Close Channel, Mass Transfer, Mathematical Analysis, Model Studies, Waste Water Treatment-general, ...5.0225

Gel

STRUCTURE AND MORPHOLOGY OF INORGANIC MEMBRANES ...Complexes, Electron, Membranes-other, Transport, ...3.0463

PREPARATION AND PROPERTIES OF GRAFTED AND VECTORED MEMBRANES FOR USE IN DESALINATION ...Copolymerization, Desalination, Graft - Polymerization, Membranes-other, Porosity, ...3.0378

Phy and Chem Properties

EFFECT OF AMINES, ALCOHOLS AND PHENOLS ON THE PHYSICO-CHEMICAL PROPERTIES OF WATER ...Hydrogen, Infrared, Liquid Solutions, X-ray, ...1.0106

INVESTIGATION OF ANOMALOUS WATER ...Condensation, Density, Vapor, Vapor Pressure, Viscosity, Water, ...3.0288

REFRACTORY ADSORPTION ON CHEMCOKE ...Activated Carbon, Adsorption-other, Carbon, Refractory, ...5.1135

Rheological

Rheological-general

ROTATIONAL STABILITY OF DILUTE POLYMER SOLUTIONS ...Fluid Flow-other, Mass Transfer, Organic, Polymer Type-other, Solution, Transport, ...1.0027

ROTATIONAL STABILITY IN DILUTE POLYMER SOLUTIONS ...Polymer Type-other, Solution, States of Flow, Waste Water Treatment-other, ...1.0028

Viscosity

THERMODYNAMICS AND TRANSPORT PROPERTIES OF MULTICOMPONENT INTERFACES ...Distillation-other, Extraction, Interface, Other, Surfactants, ...3.0483

TRANSPORT PROPERTIES OF AQUEOUS ELECTROLYTE SOLUTIONS - AN APPROACH FROM THE HIGH CONCENTRATION LIMIT ...Concentration, Desalination, Entropy, Glassy, Transport, ...1.0049

VISCOSITY STUDIES OF AQUEOUS SOLUTIONS ...Activation Energy, Alcohols, Desalination, Mixed Solvents, Water, ...1.0033

INVESTIGATION OF ANOMALOUS WATER ...Condensation, Density, Phy and Chem Properties, Vapor, Vapor Pressure, Water, ...3.0288

TRANSPORT PHENOMENA IN FUSED ORGANIC SALTS ...Desalination, Diffusion-other, Reverse Osmosis, Salt, Thermal Properties-other, ...3.0075

THERMOPHYSICAL PROPERTIES OF SEA WATER AND AQUEOUS ELECTROLYTE SOLUTIONS CONTAINING NaCl, KCl, Na₂SO₄, AND MgSO₄ ...Boiling Point, Brines, Conductivity, Density, Tables, Compilations, Catalogs, Vapor Pressure, ...3.0286

PRESSURE AND TEMPERATURE DEPENDENCE OF VOLUME VISCOSITY AND MICROSCOPIC STRUCTURE IN WATER AND SALINE SOLUTIONS ...Analysis and Detec on, Inorganic, Ultrasonic, Water, ...3.0161

INTERFACIAL STRUCTURE AND TRANSPORT IN WATER ...Alcohols, Evaporation, Flow Characteristics -water, Surface-other, Water Loss Control, ...3.0152

INVESTIGATIONS INTO TECHNIQUES FOR IMPROVING THE AMOUNT AND EFFICIENCY OF OXYGEN INCORPORATION INTO RAPID-RATE BIOLOGICAL WASTE TREATMENT SYS ...Activated, Biological Treatment-other, Oxygen, Plants-systems-other, Waste Treatment-economics, ...5.0169

Solution

Solubility

SOLUBILITY OF NATURAL GASES IN CONNATE WATER AND OF WATER IN NATURAL GASES ...Brines, High Pressure - 1-1000 Atm, Interstitial - Connate Water, Ions and Gases, Natural Gas, Solution Chemistry, ...1.0080

THE EFFECTS OF NONELECTROLYTES AND SELECTED SALTS ON STRUCTURING IN WATER ...Brines, Heat Capacity-other, Thermal Relation-other, Water, ...1.0104

THE EFFECT OF SURFACTANTS ON THE AQUEOUS SOLUBILITY OF OXYGEN AND HYDROGEN SULFIDE ...Micelle, Oxygen, Sulfide, Surfactants, Wettability, ...1.0001

THE STRUCTURE AND PROPERTIES OF WATER SOLUTIONS ...Aqueous, Inorganic, Thermodynamic Relation, Water, ...1.0039

Chemical & Physical Properties

SUBJECT INDEX

A LABORATORY STUDY OF THE SOLUBLE METALS IN ROCKS, SAPROLITE, AND SOIL FROM THE BROAD QUADRANGLE, GEORGIA ...Atomic Absorption, Laboratory Analysis, Lateritic, Solution Chemistry, Trace Element Analysis, ...1.0037

EFFECTS OF SURFACTANTS ON FIBROUS BED COALESCING ...Emulsion, Interface, Packed Bed, Surfactants, Water Treatment -- General, ...5.0340

EXPERIMENTAL CLOSED WATER SYSTEM TO ELIMINATE WASTE WATER DISCHARGE FROM JOHNS MANVILLE PLANT 03, DEFIANCE, OHIO ...Alcohols, Industrial Processes-other, Screening, Waste Water Treatment-general, ...5.0724

EFFECT OF SURFACE FILMS ON GASES DISSOLVED IN WATER ...Evaporation, Gas/Liquid, Ions and Gases, Water Loss Control, ...5.0056

PARAMETRIC STUDY OF THE KINETICS OF PRECIPITATION AND NATURE OF THE PRECIPITATE OBTAINED IN PHOSPHATE REMOVAL USING IRON AND ALUMINUM SALT ...Aluminum, Iron, Phosphate, Phosphite, Precipitation, Tertiary Treatment, ...5.0075

SOLUBILITIES OF SILICATES IN SALINE WATERS ...Analysis and Detection, Brines, Desalination, Scale Formation, Silicate, ...4.0198

SOLUBILITIES OF SILICATES IN SALINE WATERS ...Petroleum Chemistry, Silicate, ...1.0096

Solution-other

THEORY OF LIQUIDS ...Approximations, Interparticle Forces, Perturbation Methods, Potential Functions, Statistical, ...1.0016

Surface

Area

ADSORPTION OF ORGANIC COMPOUNDS ONTO SOLIDS FROM AQUEOUS SOLUTIONS ...Adsorption-general, Organic Matter, Organics-general, Solution, Surface Energy, Surface-other, ...1.0122

EFFECT OF SURFACE GROUPS ON ADSORPTION OF POLLUTANTS ...Activated Carbon, Adsorption, Material Recovery Wastes, Organics, ...5.0987

Bubble

THE KINETICS OF COMPRESSIBILITY EFFECTS IN TWO PHASE SINGLE COMPONENT FLOW ...Kinetic-general, Rate Determination, Spectroscopy-other, Two-phase-other, ...3.0292

EFFECTS OF AUDIO VIBRATIONS ON AERATED BIOLOGICAL SYSTEMS ...Activated, Aeration, Sewage Bacteria, Sonic, Waste Water Treatment-general, ...5.0673

Micelle

THE EFFECT OF SURFACTANTS ON THE AQUEOUS SOLUBILITY OF OXYGEN AND HYDROGEN SULFIDE ...Oxygen, Solubility, Sulfide, Surfactants, Wettability, ...1.0001

EFFECT OF SURFACTANT MICELLES ON METAL ION REMOVAL BY FLOTATION FROM METALLURGICAL WASTEWATER ...Copper, Foam, Metal Pickling Wastes, Surfactants, Ultrasonics, Zinc, ...5.0691

Monolayers

SOLAR REFLECTANCE OF MONOLAYER-COVERED WATER SURFACES AS RELATED TO EVAPORATION SUPPRESSION ...Evaporation, Evaporation Control, Organics-general, Refractometry, Water Loss Control, ...2.1110

INCREASING WATER SUPPLIES BY SUPPRESSION OF RESERVOIR EVAPORATION ...Evaporation, Membranes-other, Organic, Reservoirs and Impoundments, Water Loss Control, ...3.0397

THE SURFACE SHEAR VISCOSITY OF MONOMOLECULAR FILMS ...Viscosity, ...5.0791

EVAPORATION RETARDATION, PONDS OR SMALL LAKES ...Evaporation, Farm Pond, Lakes, Water Loss Control, ...4.0100

SOLAR REFLECTANCE OF MONOLAYER-COVERED WATER SURFACES AS RELATED TO EVAPORATION SUPPRESSION ...Antitranspirants, Dyes and Coloring, Evaporation, Polymer-other, Sunshine, ...3.0110

Permeability

THE RELATIONSHIP BETWEEN ADSORPTION AND PERMEABILITY ...Adsorption-other, Benzene Rings, Cellulose Acetate, Organometallic, Silica Gel, ...2.0698

ELECTRIC AND STRUCTURAL PROPERTIES OF ION SELECTIVE MEMBRANES ...Electrical Properties-other, Electrolytes, Glassy, Membranes-other, Transport, ...5.0135

PREPARATION OF SMALL TUBES AND THE DETERMINATION OF THEIR PROPERTIES FOR REVERSE OSMOSIS ...Dimensions, Expansion, Mechanical Properties-general, Pipe, Tube, Reverse Osmosis, Stretch Forming, Cryoform, ...3.0387

TEMPERATURE EFFECTS ON BIOLOGICALLY INTERESTING MEMBRANE SYSTEMS ...Action- & Bioelectrical Pot., Membranes-other, Model Membranes, Oils -fats, Temperature, ...3.0182

WATER RESEARCH PROGRAM - SECTION IV. SEPARATIONS PROCESS ...Additives, Chemical Effect-other, Interface, Membranes-other, Other, Porosity, Reverse Osmosis, Separation-general, ...3.0441

MECHANICAL PROPERTIES OF ULTRA-THIN LIPID MEMBRANE ...Creep, Elasticity - General, Fracture - General, Laminates, Natural Occuring, ...3.0342

Porosity

RESEARCH ON LIFE SUPPORT POROUS MEMBRANES FOR REVERSE OSMOSIS ...Membranes-other, Potable Water, Recycle, Reverse Osmosis, Water Reuse, ...3.0169

STUDIES ON THE FREEZING PROCESS FOR DESALTING SALINE WATERS ...Cost Analysis, Freezing, Other, Thermodynamic Relation, Washing, ...3.0365

DEMINERALIZATION BY FORCED-FLOW ELECTRO-DESALINATION ...Demineralization, Desalination, Electrodialysis, Fluid Flow-other, Ion Selective, Screening, ...3.0003

SYNTHESIS OF MODIFIED LOEB MEMBRANES BY GRAFTING ...Desalination, Graft - Polymerization, Membranes-other, Monomer Synthesis, Natural Occuring, ...3.0340

PREPARATION AND PROPERTIES OF GRAFTED AND VECTORED MEMBRANES FOR USE IN DESALINATION ...Copolymerization, Desalination, Gel, Graft - Polymerization, Membranes-other, ...3.0378

WATER RESEARCH PROGRAM - SECTION IV. SEPARATIONS PROCESS ...Additives, Chemical Effect-other, Interface, Membranes-other, Other, Permeability, Reverse Osmosis, Separation-general, ...3.0441

DESALINATION AND REDUCTION OF CONCENTRATION POLARIZATION EFFECTS IN REVERSE OSMOSIS SYSTEMS USING POROUS WALL SECTIONS ...Brines, Fluid Flow-other, Membranes-other, Other, Reverse Osmosis, ...3.0359

RESEARCH ON IMPROVED REVERSE OSMOSIS MEMBRANES ...Cellulosics, Crosslinked, Membranes-other, Polyvinyl Pyrrolidone, Reverse Osmosis, Saline Conversion, ...3.0096

THE STRUCTURE OF THE ACTIVE LAYER OF THE ASYMMETRIC CELLULOSE ACETATE MEMBRANE - THE SALT AND WATER PERMEABILITY OF A BIOLOGICAL MEMBRANE ...Cellulose Acetate, Natural Occuring, Other, Rate Determination, ...3.0353

SORPTION BEHAVIOR OF ORGANIC PYROPOLYMERS IN AQUEOUS SOLUTION ...Adsorption-absorption-other, Organic, Organics, ...5.0232

ACCESSIBILITY OF PORES IN POROUS MEDIA ...Porous Media - Flow Through, ...8.0017

Surface Energy

SOLIDIFICATION AND SEPARATION OF ICE FROM SALINE WATER ...Convection, Desalination, Freezing, Magnetic Field, ...3.0277

ADSORPTION OF ORGANIC COMPOUNDS ONTO SOLIDS FROM AQUEOUS SOLUTIONS ...Adsorption-general, Area, Organic Matter, Organics-general, Solution, Surface-energy, ...1.0122

Surface-other

BEHAVIOR OF LIQUID SURFACES DURING EVAPORATION AND CONDENSATION ...Evaporation, Rate of Reaction, ...1.0083

AN EXPERIMENTAL INVESTIGATION OF CELLULOSE ACETATE MEMBRANE REGENERATION ...Cellulose Acetate, Fluid Flow-other, Other, Regeneration-other, ...3.0324

INTERFACIAL STRUCTURE AND TRANSPORT IN WATER ...Alcohols, Evaporation, Flow Characteristics -water, Viscosity, Water Loss Control, ...3.0152

ADSORPTION OF ORGANIC COMPOUNDS ONTO SOLIDS FROM AQUEOUS SOLUTIONS ...Adsorption-general, Area, Organic Matter, Organics-general, Solution, Surface Energy, ...1.0122

STRUCTURE OF CARBON-OXYGEN COMPLEXES ...Adsorption-other, Carbon, Complexes, Infrared, Oxygen, ...1.0082

SUBJECT INDEX

Chemical Analysis

Surfactants

- FOAM SEPARATION FOR FIELD WATER TREATMENT ...Aeration, Foam, Military Aspects, Potable Water, Sterilants, ...5.0444
- EVALUATION OF INORGANIC MEMBRANES FOR ELECTRODIALYSIS OF BRACKISH WATERS ...Desalination, Electrodes, Ion Exchange-other, Membranes-other, Stability, ...3.0209
- DIFFUSION AND FLOW IN INTERPHASE TRANSPORT ...Convection, Desalination, Liquid/liquid, Membranes-other, ...5.0378
- THE EFFECT OF SURFACTANTS ON THE AQUEOUS SOLUBILITY OF OXYGEN AND HYDROGEN SULFIDE ...Micelle, Oxygen, Solubility, Sulfide, Wettability, ...1.0001
- DIFFUSION OF OXYGEN AND HYDROGEN SULFIDE IN WATER AS EFFECTED BY DISSOLVED SURFACTANTS ...Diffusion-other, Oxygen, Sulfide, ...1.0002
- THE ORGANIC CONCENTRATION GRADIENT IN AN AERATION COLUMN ...Aeration, Bubbles, Foam, Organic Matter, Waste Water Treatment-general, ...5.0734
- EFFECT OF SURFACTANT MICELLES ON METAL ION REMOVAL BY FLOTATION FROM METALLURGICAL WASTEWATER ...Copper, Foam, Metal Pickling Wastes, Micelle, Ultrasonics, Zinc, ...5.0691
- KINETIC STUDIES OF THE OXIDATIVE DEGRADATION OF DETERGENT, AND RELATED CHEMICAL SPECIES IN AQUEOUS SOLUTION ...Biodegradation, Biological, Chemical Degradation, Kinetic-general, Physical Degradation, Waste Water Treatment-general, ...5.0495
- DIFFUSIVITY OF OXYGEN AND SULFIDE SPECIES IN AQUEOUS SOLUTIONS ...Chemical Treatment, Gas/liquid, Oxygen, Solution, Sulfide, ...1.0003
- THE APPLICATION OF LASER IONIZATION MASS SPECTROMETRY TO THE IDENTIFICATION OF ORGANIC SALTS IN POLLUTED WATER ...Applications of Lasers-masers, Organic Matter, Physical Parameters, Spectroscopy, Sulfonates (rso3na), ...1.0108
- FOAM SEPARATION FLOTATION OF COLLOID ORGANIC SYSTEMS ...Chromium, Colloidal Phenomena, Flotation, Foam, Iron, Process Design, Pulp and Paper Wastes, Sulfate, Sulfite, ...5.0445
- STUDIES IN FOAM SEPARATION AND RELATED TECHNIQUES ...Extraction, Foam, Industrial Waste-other, Separation-other, ...5.0520
- REMOVAL OF METAL IONS BY FLOTATION WITH SURFACTANTS ...Cost Analysis, Demineralization, Flotation, Ions and Gases, Other, Temperature, ...5.0692
- WASTE TREATMENT ...Activated, Biological, Solid Waste, Waste Treatment-economics, Waste Water Treatment-general, ...5.0731
- ELECTROANALYTICAL CHEMISTRY - STUDIES OF ADSORPTION AND REDOX PROCESSES AT ELECTRODES ...Amperometry, Analysis and Detection, Electrolytes, Oxidation Reduction, Polarography, ...5.0440
- (U) BIODEGRADABILITY OF DETERGENT COMPOUNDS ...Activated, Biodegradation, Biological, Gas, Laundry Wastes, Sulfonates (rso3na), ...5.0534
- INVESTIGATION OF SOAP-DETERGENT COMBINATIONS BASED ON INEDIBLE ANIMAL FA ...Acids, Biodegradation, Hydrolysis, Organic, Stability, ...5.0991
- BIODEGRADABLE DETERGENTS FROM ANIMAL FATS ...Biodegradation, Esters, Septic Tanks, Sulfonates (rso3na), ...5.0992

Tension

- STATISTICAL MECHANICAL THEORIES OF FLUIDS ...Interface, Quantum Analysis, Solution, Statistical, Van Der Waals Forces, ...1.0084
- RESEARCH ON HIGH-EFFICIENCY COMBINED EVAPORATIVE AND CONDENSATIVE HEAT TRANSFER SYSTEM ...Condensation, Fluoro Plastics, Heat Transfer, Heat Transfer Coefficients, Other, Titanium, ...3.0266
- IMPINGEMENT OF A FLUID ON A FLUID SURFACE ...Impinging Jets, Interface, Surface Phenomena, ...1.0127
- INTERFACIAL WATER STRUCTURE AND PROPERTIES ...Hydration, Inorganic, Interface, Thermal Properties-other, Water, ...1.0044

Wettability

- THE EFFECT OF SURFACTANTS ON THE AQUEOUS SOLUBILITY OF OXYGEN AND HYDROGEN SULFIDE ...Micelle, Oxygen, Solubility, Sulfide, Surfactants, ...1.0001

Transport

- AN INVESTIGATION OF ION MOBILITY IN AQUEOUS SOLUTIONS ...Conductivity, Solution, State Variables - Pvt, Variable Temperature, Variational Pressure, ...1.0064
- ACTIVE AND PASSIVE ION FLUXES ACROSS INTERFACES AND MEMBRANES ...Adsorption & Interface, Diffusion, Enzymes -non-specific, Ionic Effect, Membranes-other, ...3.0348
- ELECTRIC AND STRUCTURAL PROPERTIES OF ION SELECTIVE MEMBRANES ...Electrical Properties-other, Electrolytes, Glassy, Membranes-other, Permeability, ...5.0135
- WATER TRANSPORT ACROSS MEMBRANES BY ELECTROOSMOSIS ...Desalination, Electric Field, Electroosmosis, Membranes-other, ...5.1012
- TRANSPORT PROPERTIES OF AQUEOUS ELECTROLYTE SOLUTIONS - AN APPROACH FROM THE HIGH CONCENTRATION LIMIT ...Concentration, Desalination, Entropy, Glassy, Viscosity, ...1.0049
- STRUCTURE AND MORPHOLOGY OF INORGANIC MEMBRANES ...Complexes, Electron, Gel, Membranes-other, ...3.0463
- STUDY OF BIOLOGICAL DESALINATION PHENOMENA AND SALT TRANSPORT MECHANISMS OF SELECTIVE AVIAN SALT GLANDS ...Active Transport, Anseriformes -other, Chemical Analysis, Ion Selective, Osmoregulation, ...3.0479
- REACTIONS AND TRANSPORT PHENOMENA AT SURFACES ...Analysis and Detection, Brines, Electrode, Pitting, Separation-general, ...3.0440
- WATER RESEARCH PROGRAM - SECTION I, PROPERTIES OF SOLUTIONS ...Colloidal Phenomena, Distribution Coefficient, Membranes-other, Potentiometry, Salts, Vapor, ...1.0115
- TRANSPORT PROCESSES OF PARTICLES IN DILUTE SUSPENSIONS IN TURBULENT WATER FLOW ...Colloidal Phenomena, Flow Characteristics -water, Hydraulics-general, Sedimentation, Turbulent Flow, ...5.0370
- DIFFERENTIAL ION MOBILITY AT COLLOIDAL SURFACES ...Colloidal Phenomena, Diffusion-other, Hydrophobic, Membranes-other, Radiochemical Techniques, ...2.0053
- VELOCITIES OF RADIONUCLIDES AT ARNAR GOSA SITE ...Groundwater, Nevada, Pollutants - Path of, Radioactivity-underground Test, ...2.0174
- LEAD ISOTOPIC CHEMISTRY FOR POLLUTION RESEARCH ...Analysis and Detection, Lead, Other, Pollutants - Path of, Radioisotopes, ...5.0150

Chemical Analysis

- A MASS TRANSFER STUDY OF CURRENT REQUIREMENTS FOR CATHODIC PROTECTION ...Cathodic Protection, Cavitation, Desalination, Fluid Flow-other, Heat Transfer, Oxygen, ...3.0033
- DETERMINATION OF OXYGEN IN SEA WATER ...Electroanalyses-other, Gases, Oxygen, Salt, ...1.0009
- STUDY OF BIOLOGICAL DESALINATION PHENOMENA AND SALT TRANSPORT MECHANISMS OF SELECTIVE AVIAN SALT GLANDS ...Active Transport, Anseriformes -other, Ion Selective, Osmoregulation, Transport, ...3.0479
- CHEMICAL CHARACTERISTICS OF PRECIPITATION FALLING IN CHAMPLAIN VALLEY ...Rain-general, Snow-general, Storms-general, Vermont, Water Quality-general, ...2.1086
- CHEMICAL CHARACTERISTICS OF ORGANIC COLOR IN WATER ...Coagulation, Depolymerization, Dyes and Coloring, Hydrolysis, Other, ...5.1259
- ROLE OF SOLIDS IN COMBINED SEWAGE POLLUTION ...Combined Sewer, Disinfection, Screening, Solid Waste, ...5.0091
- ANALYTICAL INSTRUMENTATION FOR DETERMINING LOW LEVELS OF TOTAL ORGANIC CARBON IN WATER ...Analyzing, Organic-general, Total Organic Carbon, ...5.0094
- MODIFICATIONS TO PUMPING STATION AT SHAGOWA LAKE, FIELD SITE, ELY, MINNESOTA ...Demineralization, Equipment Purchase Operation, Minnesota, Pumping, ...5.0932
- CHARACTERIZATION OF ORGANIC CONTAMINANTS IN PAPER MILL WASTE EFFLUENTS ...Chemical Identification, Chemical Treatment, Distillation-other, Extraction, Organic, Pulp and Paper Wastes, ...5.0284

Chemical Analysis (water)

SUBJECT INDEX

Chemical Analysis (water)

- CLASSIFICATION OF DEEP SUBSURFACE WATERS BY CHEMICAL COMPOSITION AND GEOLOGY ...Geochemical Analysis, Groundwater, High Pressure Research, Interstitial - Conate Water, Salinity, ...2.0883
- SILVEX PERSISTENCE IN WATER AND HYDROSOIL ...Alcohols, Clay, Esters, Sand, ...8.0162
- DEVELOPMENT OF A CALIBRATION MODULE FOR TRACE OXYGEN ANALYZERS ...Analyzing, Calibration Devices, Inorganic, Oxygen, Technique Development, ...3.0055
- ANALYSIS OF WATER CHEMISTRY ...Aeration, Bottom Sampling, Destratification, Physical-general, ...4.0035
- WATERSHED EVALUATION ...Population Dynamics, Stream Rehabilitation, Streams, Temperature, Watershed-general, ...4.0226
- PESTICIDE RESIDUE STUDY IN SPORT FISH WATERS ...Filtration, Monitoring Systems, Pesticides -non-specific, Pollution - Effects of, ...5.1231
- PREDICTING AND PREVENTING FISH KILLS ...Mortality Rates, Ponds, Stratification, ...5.0012
- STRUCTURAL CHEMISTRY OF YELLOW ORGANIC MATTER IN FRESH WATER ...Hydrogenolyses, Organic, Organic Content, Organic Matter, Organic-general, ...5.1054
- SPECTROPHOTOMETRIC AND FLUOROMETRIC DETERMINATION OF SELECTED ANION WATER CONTAMINANTS ...Chemical Identification, Fluoride, Fluorometry, Nitrate, Nitrite, Spectroscopy-general, ...5.0671
- ANALYSIS OF TRACE ELEMENTS IN WATER ...Activation Analysis, Inorganic, Other, Spectroscopy-other, ...5.1062
- STATISTICAL TREATMENT OF HYDROGEOLOGIC DATA - PART II, WATER QUALITY ASPECTS ...Time Series Analysis, ...2.0735
- EVALUATION BY TEST DRILLING OF GEOPHYSICAL PROSPECTING FOR GROUND WATER IN THE PIEDMONT AREA, ALABAMA ...Drilling and Coring, Geophysical Analysis, Groundwater, Pumping, Water Development, ...2.0006
- DEVICE FOR FIELD DETERMINATION OF HEAVY METALS IN NATURAL WATERS ...Electrode, Heavy Elements, Ions and Gases, Metals, Polarography, ...7.0032
- DISSOLVED OXYGEN DETERMINATION IN NATURAL AND WASTE WATERS ...Ions and Gases, Oxygen, Potentiometry, Technique Development, Voltammetry, ...5.0553
- FACTORS AFFECTING THE STRUCTURE OF DIATOM COMMUNITIES ...Acidity, Algae- Diatoms, Environment, Mineral Content -water, pH -water, ...5.1008
- TO EVALUATE THE UTILITY OF EXISTING AUTOMATIC CHEMICAL ANALYSIS EQUIPMENT FOR WATER QUALITY SURVEILLANCE UNDER COMPUTER CONTROL ...Atomic Absorption, Automatic Data Acquisition, Computers-general, Information Retrieval Methods, Information Storage and File, System Development, Water Properties-general, ...7.0078
- WASTE DISPOSAL IN RURAL AREAS ...Aerobic, Animal Waste Removal-treatment, Effluents-waste Water, Farm Wastes, Rural Areas, Septic Tanks, ...5.0219
- THE QUALITY OF ARIZONA WATERS WITH PARTICULAR REFERENCE TO FLUORIDES ...Fluoride, Water Quality-general, ...5.0049
- A FIVE YEAR LIMNOLOGICAL STUDY OF A NEWLY CREATED ACID MINE WATER IMPOUNDMENT ...Acidity, Alkalinity, Chemical-general, Mining Activities, Physical-general, ...5.0895
- THE ANALYSIS AND GEOCHEMISTRY OF TRACE ELEMENTS IN THE HYDROSPHERE ...Activation Analysis, Bays, Chemical Reactions, Gamma, Trace Element Analysis, ...1.0109
- DEVELOPMENT OF ANALYTICAL METHODS FOR PESTICIDE CONTAMINANTS IN DOMESTIC, IRRIGATION, LAKE, AND POND WATERS ...Chemical Analysis, Chemical Treatment-general, Irrigation-general, Lakes, Pesticides -non-specific, Ponds, ...5.0139
- INTERRELATIONSHIP OF FACTORS AFFECTING QUALITY OF IMPOUNDED WATERS ...Biological-general, Chemical-general, Lakes, Physical-general, Water Quality-general, ...2.0413
- HYDROGEOLOGY OF SOLID WASTE DISPOSAL SITES ...Groundwater Movement, Hydrology-general, Illinois, Sanitary Landfills, ...5.0347
- TRACE ELEMENT CHEMISTRY OF STREAMS OF THE LOWER KANSAS RIVER BASIN ...Analysis and Detection, Atomic Absorption, Trace Analyses-other, Trace Element Analysis, ...1.0055

- WATER RESOURCES OF COPIAH COUNTY ...Aquifers-general, Available Water, Groundwater, Surface Water, Water Quality-general, ...4.0147
- SUBSURFACE WATER POLLUTION FROM SANITARY LANDFILLS IN CARBONATE ROCK TERRAIN ...Disposal, Dolomite, Groundwater, Sanitary Landfills, Soil and Rock Leaching, ...5.1030
- CHEMICAL QUALITY OF BRINES ASSOCIATED WITH DEEP SEDIMENTS BENEATH GREAT SALT LAKE ...Brines, Great Salt Lake, Salt, Water Sampling, Water Wells, ...5.1200
- ANALYTICAL METHODS - WATER CHEMISTRY ...Analysis and Detection, Chromatography-general, Emission, Other, Photometric Techniques, ...2.0196
- GEOCHEMICAL CONTROLS OF WATER QUALITY ...Electroanalyses-other, Equilibrium-other, Properties of Minerals, Reaction-general, Solution Chemistry, ...2.0115
- TECHNIQUES AND INSTRUMENTATION ...Mobile, Physical Parameters, Technique Development, Temperature, Water Sampling, ...5.0187
- EUTROPHICATION RESEARCH AMERICAN FALLS RESERVOIR STUDY ...Eutrophication, Idaho, Nutrients, Reservoirs and Impoundments, Water Quality Control-general, ...5.0317
- WATER CONTROL - CONTROL TECHNIQUES FIELD TESTING AND EVALUATION ...Acidity, Coal-general, Mine Drainage Control, Mining Activities, Pollution Abatement, ...5.1018
- REUSE OF WASTE IRRIGATION WATER TO RECOVER ADDITIONAL PETROLEUM BY WATERFLOODING ...D.t.a., Irrigation-other, Petroleum Industry, Secondary Recovery, Spectroscopy-general, Water Reuse, ...5.0154
- ANALYTICAL METHODS - OILFIELD WATER CHEMISTRY ...Brines, Fluid Properties, General, Technique Development, ...2.0874
- GENERAL HYDROGRAPHIC FEATURES OF OAHÉ RESERVOIR AND LAKE SHARPE ...Phytoplankton, South Dakota, Temperature, Turbidity, Zooplankton, ...6.0516
- FIELD TECHNIQUES FOR CHEMICAL ANALYSIS OF WETLAND CRITERIA ...Chromatography-other, Colorimetric, Translocation Grants, Wetlands, ...1.0091
- CHEMICAL CHARACTERISTICS OF THE GREAT LAKES ...Great Lakes-general, Nutrients, Productivity - Food Chain, Water Quality-general, ...5.0542
- DEVELOPMENT OF AUTOMATED ANALYSES FOR THE SUPPORT OF ADVANCED WASTE TREATMENT RESEARCH PROJECTS ...Automatic Data Acquisition, Instrumentation-general, Waste Water Treatment-general, ...5.0863
- EUTROPHICATION - EFFECT OF FLOW AUGMENTATION ...Chemical-general, Eutrophication, Flow Augmentation, Physical-general, Pollution Abatement, ...5.0969
- PIGMENT ANALYSIS FOR THE DETECTION OF ENRICHMENT ...Effluents-waste Water, Eutrophication, Nutrients, of Aquatic Plants, ...5.0906
- TRACE AMOUNT SUBSTANCES IN ENVIRONMENTAL HEALTH ...Other, Pollutants-general, Trace Elements, ...5.0677

Chemical Analysis - Soils

- MODE OF OCCURRENCE OF MINOR ELEMENTS IN SEDIMENTS AND SOILS ...Groundwater, Heavy Mineral Analysis, Mineralogy, Trace Element Analysis, Weathering Products, ...1.0054
- SALINITY TOLERANCES OF CERTAIN TROPICAL SOILS AND RELATIONSHIPS BETWEEN SODIUM ION ACTIVITIES AND SOIL PHYSICAL PROPERTIES ...Irrigation-general, Saline Properties, Semi - Arid, Sodium, Soil Chemical Properties, Tropic, ...3.0200
- MAXIMUM PRODUCTION OF CROPS UNDER IRRIGATION IN WESTERN NEBRASKA ...Irrigation, Moisture Content, Nebraska, Subsurface Irrigation, Yield, ...2.0727

Chemical Processing

Drying

- ANALYSIS OF LENGTH CHANGE OF CONCRETE ...Aggregates, Extenders, Fillers, Cement, Concrete, Crack Initiation, Propagation, Failure Analysis, Reliability, Shrinking, ...8.0103

Sealing

- INVESTIGATION OF WATERSTOPS FOR CONSTRUCTION JOINTS ...Cement, Concrete, Elastomers Rubber, Joints, Plastics - General, Water, ...8.0229

SUBJECT INDEX

Chemical Reactions

Setting, Curing

- FORMING, FINISHING, AND CURING CONCRETE ...Casting of Materials, Cement, Concrete, Surface, Surface Cleaning, Finishing, ...8.0257
- INVESTIGATION IN THE DEVELOPMENT AND IMPROVEMENT OF SPECIAL CEMENTS ...Cement, Concrete, Durability, Deterioration, Elasticity - General, Engineering Structures-general, Strength, Cohesion, ...8.0048
- PERFORMANCE OF WATER-REDUCING SET-CONTROLLING ADMIXTURES IN CONCRETE, MORTAR AND CEMENT PASTE ...Cement, Concrete, Chemical Materials-other, Composition Parameters-other, Engineering Structures-general, ...8.0049
- REGION 2 - WEED CONTROL ...Cement, Concrete, Engineering Structures-general, Water, ...8.0115

Chemical Reactions

Condensation

- ENHANCEMENT OF WATER QUALITY USING FOREST DERIVED COAGULATING SYSTEMS ...Alcohols, Aldehydes, Coagulation, Heterocyclics-other, Industrial Processes-other, Pulp, Paper, and Logging, ...5.1255
- NEW-TYPE GLYCOL MONO ALKYL ETHERS FOR THE CONTROL OF WATER EVAPORATION, TO EXTEND THE USE OF COTTONSEED OIL ...Acids, Agronomic, Evaporation, Water Loss Control, ...2.0451

Decomposition

Biodegradation

- A STUDY OF PRESSURE DIALYSIS AND COUPLING PHENOMENA IN SYNTHETIC AND NATURAL MEMBRANES ...Desalination, Membranes-other, Mosaic, Reverse Osmosis, Water Properties-general, ...3.0273
- ENZYMES FOR ANALYSIS AND PURIFICATION OF SALINE WATER SYSTEMS ...Alcohols, Bioindicators, Degradation, Fluorometry, Heavy Elements, Pesticides, ...5.0456
- INTERMEDIATE PRODUCTS IN THE BACTERIAL DECOMPOSITION OF HEXADECANOL AND OCTADECANOL ...Alcohols, Gas, ...5.1158
- THE BIOCHEMISTRY OF ANAEROBIC DIGESTION ...Acids, Anaerobic, Anaerobic Bacteria, Other, Respiration, ...5.0762
- (U) BIODEGRADABILITY OF DETERGENT COMPOUNDS ...Activated, Biological, Gas, Laundry Wastes, Sulfonates (rso3na), Surfactants, ...5.0534
- INVESTIGATION OF SOAP-DETERGENT COMBINATIONS BASED ON INEDIBLE ANIMAL FA ...Acids, Hydrolysis, Organic, Stability, Surfactants, ...5.0921
- BIODEGRADABLE DETERGENTS FROM ANIMAL FATS ...Esters, Septic Tanks, Sulfonates (rso3na), Surfactants, ...5.0992

Decomposition-general

- QUALITY IMPROVEMENT OF SWIMMING POOL WATERS - KINETICS AND MECHANISMS OF THE CHLORINATION-DEGRADATION OF UREA AND URIC ACID ...Chlorination, Potable, Sterilants, Titrimetry-other, Ultraviolet, ...5.0832
- DILUTE SOLUTION REACTIONS OF NITRATE ION AS APPLIED TO WATER RECLAMATION ...Denitrification, Nitrate, Nitrite, Reduction-general, Survey Studies, ...5.0073
- BEHAVIOR OF POLLUTANTS IN WATER ...Aquatic Or Soil-aquatic Cycles, Infiltration, Movement, Leaching, Persistence in Soils, Pesticides -non-specific, Pollutants - Path of, ...5.0190
- HIGH RESOLUTION NUCLEAR MAGNETIC RESONANCE SPECTRA OF ORGANIC PESTICIDES ...Carbamates -non-specific, Chlorinated Hydrocarbons, Concentration, Isotopic, Nuclear Magnetic Resonance, Organophosphorous Cpd., Temperature-other, ...5.0283

Decomposition-other

- FATE AND PERSISTENCE OF PESTICIDES AND PHYSIOLOGICALLY ACTIVE DEGRADATION PRODUCTS ...Chemical Identification, Degradation -other, Infrared, Persistence of Residues, ...5.1032
- PHYSICAL-CHEMICAL PHENOMENA ASSOCIATED WITH ORGANO-COLLOIDAL SURFACE INTERACTIONS ...Absorption, Fixation, Exchange, Bond Type-general, Colloidal Phenomena, Isotherm, X-ray, ...5.0277

Depolymerization

- POLYMERIC COATINGS FOR PROTECTION ON CONCRETE EXPOSED TO AQUEOUS SALINE ENVIRONMENTS ...Adhesion, Cement, Concrete, Organic-general, Plastics - General, Salinity, Water, ...3.0405

- CHEMICAL CHARACTERISTICS OF ORGANIC COLOR IN WATER ...Chemical Analysis, Coagulation, Dyes and Coloring, Hydrolysis, Other, ...5.1259

- RENOVATION OF MUNICIPAL WASTEWATER BY REVERSE OSMOSIS SYSTEMS ...Membranes-other, Model Studies, Process Design, Reverse Osmosis, Urban Environments, ...5.0092

Electrochemical

Electrochemical-other

- ANALYSIS OF SOLUTIONS FOR SURFACE-ACTIVE CONSTITUENTS ...Absorption-other, Detectors and Sensors, Electrode, Electrolytes, Surfactants, ...5.0439

Electrode

- KINETICS OF ADSORPTION VIA DOUBLE LAYER CAPACITY MEASUREMENTS ...Aqueous, Interface, Methodology, Non-electrical Measurements, ...1.0100
- METALLIC CORROSION IN HALIDE ENVIRONMENTS ...Cathodic Protection, Desalination, Halogens-general, Water, ...3.0369
- THE USE OF AMALGAM ELECTRODES TO MEASURE ACTIVITY COEFFICIENTS OF METAL SALTS IN MULTICOMPONENT SALT SOLUTIONS ...Activity Coefficient, Equilibrium-other, Saline Water Systems, ...1.0065
- THE EFFECT OF ORGANIC INHIBITORS ON THE DISSOLUTION KINETICS OF IRON ...Corrosion General, Electrochemical-other, Inhibitors, Iron, Kinetics-other, ...3.0065
- ELECTROCHEMICAL DEMINERALIZATION OF BRACKISH WATER ...Demineralization, Desalination, Electrochemistry-other, Ion Exchange-other, Regeneration-other, ...3.0039
- ION SELECTIVE ELECTROCHEMICAL SENSORS ...Brackish Water, Brines, Detectors and Sensors, Electroanalyses-other, Technique Development, ...5.1166
- PRECISION ANALYSIS WITH ION-SELECTIVE ELECTRODES ...Analysis and Detection, ...5.0765
- RESEARCH ON NEW ION-ADSORPTION ELECTRODES FOR DEMINERALIZATION OF SALINE WATER ...Desalination, Electrochemistry-other, Graft - Polymerization, Organic, Oxidation Reduction, Removal-inorganics, ...3.0363
- REACTIONS AND TRANSPORT PHENOMENA AT SURFACES ...Analysis and Detection, Brines, Pitting, Separation-general, Transport, ...3.0440
- THE ELECTROSORB PROCESS FOR DESALTING WATER ...Adsorption-other, Carbon, Desalination, Electrochemistry-other, ...3.0102
- THE ELECTROSORB PROCESS FOR DESALTING WATER ...Adsorption-other, Carbon, Desalination, Electrochemistry-other, ...3.0104
- AUTOMATED POTENTIOMETRIC TECHNIQUES FOR THE ON-SITE MONITORING OF ANION CONCENTRATIONS IN WATER ...Analysis and Detection, Automatic Systems, Nitrate, Nitrite, Potentiometry, Technique Development, ...5.0676
- ANALYSIS OF SOLUTIONS FOR SURFACE-ACTIVE CONSTITUENTS ...Absorption-other, Detectors and Sensors, Electrochemical-other, Electrolytes, Surfactants, ...5.0439
- DEVICE FOR FIELD DETERMINATION OF HEAVY METALS IN NATURAL WATERS ...Chemical Analysis (water), Heavy Elements, Ions and Gases, Metals, Polarography, ...7.0032
- AN ELECTROCHEMICAL METHOD FOR REMOVAL OF PHOSPHATES FROM WASTEWATERS ...Electrochemistry-other, Phosphate, Phosphite, Waste Treatment-economics, ...5.0523
- ELECTROOSMOTIC PUMPING FOR DEWATERING SEWAGE SLUDGE ...Drying-dewatering, Electroosmosis, Sludge-general, Treatment-other, ...5.0072
- THE ELECTRO-OXIDATION OF AMMONIA IN SEWAGE TO NITROGEN ...Ammonia, Electrolytic, Waste Water Treatment-general, Waste Water Treatment-other, ...5.0538

Electrodeposition

- PHYSICAL CHEMISTRY OF RADIOELEMENTS - RADIOMETRIC METHODS OF ANALYSIS ...Activation Analysis, Extraction-other, Organic, Precipitation, Radioactivity-general, ...7.0020

Half Cell

- STUDY OF A SPECIFIC INFLUENCE OF IONIC SPECIES ON STRUCTURING IN WATER ...Configuration, Electrolytes, Entropy, Ion Exchange-other, Membranes-other, ...1.0010

Chemical Reactions

Polarization

STUDIES OF MEMBRANE PHENOMENA - PREPARATION OF NEW ELECTRODIALYSIS MEMBRANES ...Electrodialysis, Ion Selective, Olefins, Organic, ...**3.0350**

Exchange

Exchange-other

THE EFFECT OF CLAY MINERALS ON THE CHEMICAL COMPOSITION OF FRESH AND SALINE WATERS ...Adsorption-other, Chemical-general, Clay Minerals-general, Core Analysis, Groundwater, Interstitial - Connate Water, ...**2.0360**

Isotopic

HIGH RESOLUTION NUCLEAR MAGNETIC RESONANCE SPECTRA OF ORGANIC PESTICIDES ...Carbamates -non-specific, Chlorinated Hydrocarbons, Concentration, Decomposition-general, Nuclear Magnetic Resonance, Organophosphorous Cpd., Temperature-other, ...**5.0283**

Halogenation

Chlorination

QUALITY IMPROVEMENT OF SWIMMING POOL WATERS - KINETICS AND MECHANISMS OF THE CHLORINATION-DEGRADATION OF UREA AND URIC ACID ...Decomposition-general, Potable, Sterilants, Titrimetry-other, Ultraviolet, ...**5.0832**

COMPOSITION OF RESIDUES FROM PULP BLEACHING TREATMENTS ...Extraction, Natural Occurring, Pulp and Paper Wastes, Quinones, ...**5.0760**

Hydrolysis and Esterification

Hydrolysis

CHEMICAL CHARACTERISTICS OF ORGANIC COLOR IN WATER ...Chemical Analysis, Coagulation, Depolymerization, Dyes and Coloring, Other, ...**5.1259**

HYDROLYSIS OF SLUDGE USING LOW PRESSURE STEAM WITH SO₂ AS A HYDROLYTIC ADJUNCT AND TO STUDY THE UTILIZATION OF THE RESULTING HYDROLYSATE ...Chemical Treatment, Digestion, Feeds Or Feed Additives, Fertilizers, Material Recovery Wastes, Waste Treatment-economics, ...**5.0782**

PREDICTING SOLUTE MOVEMENT AND DISTRIBUTION IN SOILS ...Infiltration, Salinity, Soil and Rock Leaching, Soil Environment, Subsurface Flow, ...**2.1043**

INVESTIGATION OF SOAP-DETERGENT COMBINATIONS BASED ON INEDIBLE ANIMAL FA ...Acids, Biodegradation, Organic, Stability, Surfactants, ...**5.0991**

METAL ION INTERACTIONS WITH WATER ...Bond Energy, Forces, Inorganic, Metal Ion, Natural Occurring, Organic, Polynuclear Complex, Vibration, ...**1.0077**

Interfacial

MINERAL-WATER INTERACTION IN SALINE ENVIRONMENTS ...Analysis and Detection, California, Evaporation, Solution, Solution Chemistry, ...**2.1095**

Ionic

THE INVESTIGATION OF TRANSPORT PROCESSES IN AQUEOUS ELECTROLYTE SOLUTIONS ...Conductivity, Diffusion-other, Electrolytes, Solution, Water, ...**1.0093**

IONIC SOLVATION ...Assoc & Dissoc, Covalent, Nuclear Magnetic Resonance, Raman, Solvation-other, ...**1.0101**

A STUDY OF THE INTERACTIONS PRESENT IN AQUEOUS SALT SOLUTIONS BY NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY ...Conservation-general, Nuclear Magnetic, Solution, Transition Metal-general, Water Resources Development, ...**1.0074**

Metallation

Chelation

SOLID COORDINATION COMPOUNDS OF ALKALI METAL SALTS ...Alkali Metals-general, Amines, Electronic Structure-other, Precipitation, ...**3.0432**

SEPARATION OF MAGNESIUM FROM CALCIUM IN THEIR SALINE SOLUTIONS ...Calcium, Desalination, Ion Exchange-other, Magnesium, Separation-general, ...**5.0687**

SUBJECT INDEX

Complexing

INVESTIGATIONS OF AQUEOUS SALT SOLUTIONS BY RAMAN SPECTROSCOPY ...Complexes, Raman, Solution, Solvent-other, Thermal Relation-other, ...**1.0079**

FOAM FRACTIONATION ...Extraction, Flotation, Foam, Material Recovery, Removal--inorganics, ...**3.0389**

VIRUS REMOVAL BY CHEMICAL FLOCCULATION ...Aluminum, Coagulation, Flocculation, Viral Pollutant Sources, Virus, ...**5.0364**

TREATMENT OF DYEING BATH WASTE STREAMS BY FOAMING AND FLOTATION TECHNIQUE ...Color, Dye Wastes, Flotation, Foam, Industrial Wastes, ...**5.1212**

INTERACTIONS OF SILICA WITH IRON AND ALUMINUM ...Aluminum, Analysis and Detection, Coagulation, Iron, Water Treatment -- General, ...**5.0557**

Neutralization

CRUSHED LIMESTONE BARRIERS FOR NEUTRALIZATION OF ACID STREAM ...Acid Mine Wastes, Limestone - General, ...**5.1036**

TREATMENT OF BEAN HOUSE WASTES FROM A VEGETABLE TANNERY ...Aerobic, Anaerobic, Lime Treatment, Tannery Wastes, Waste Water Treatment-general, ...**5.0864**

COMPLETE TREATMENT OF TANNERY INDUSTRIAL WASTE FOR CHROME TANNING, ALUM TANNING AND VEGETABLE TANNING ...Aerobic, Anaerobic, Process Design, Tannery Wastes, Waste Water Pre-treatment, ...**5.0436**

CONSTRUCTION OF MINE WATER TREATMENT PLANT AT HOLLYWOOD, PENNSYLVANIA ...Acid Mine Wastes, Disposal, Filtration, Microbial-bacterial, Waste Treatment-economics, ...**5.0994**

IN-SITU PRECIPITATION OF SLUDGE RESULTING FROM REACTION OF MINE WATER WITH LOW COST ADDITIVES TO PREVENT MINE DRAINAGE POLLUTION ...Acid Mine Wastes, Drainage, Mining Activities, Precipitation, Treatment-other, ...**5.1000**

A STUDY OF LAND DISPOSAL OF SPENT SULFITE LIQUOR AT BADGER PAPER MILLS, INC., PESHTIGO, WISCONSIN ...Aquifers-general, Disposal, Limestone - General, Pollutants - Path of, Pulp and Paper Wastes, ...**5.1295**

Nitration

PROCESS DEVELOPMENT FOR REMOVAL OF NUTRIENT MATERIALS FROM WASTEWATERS ...Activated, Anaerobic, Denitrification, Loading, Nutrients, Pollutant-other, ...**5.0841**

Oxidation

Catalytic

METAL ION-CATALYZED OXIDATION OF PHENOLS AND AROMATIC AMINES ...Alcohols, Metal Ion, Organic Wastes, Radioisotopes, ...**5.1159**

APPLICABILITY OF ARDOX CATALYSTS TO THE OXIDATION OF MUNICIPAL SEWAGE EFFLUENTS AND OF WASTES PRODUCED DURING MANNED SPACE FLIGHT ...Catalyst-other, Effluent-standards, Manned Satellite, Municipal-waste-other, Sewage, ...**5.0745**

INTERACTION OF ORGANIC MOLECULES IN WATER ...Assoc & Dissoc, Drug Chemistry, Enzymatic, Organic-general, ...**1.0058**

Electrolytic

CATALYTIC OXIDATION OF ORGANIC COMPOUNDS IN WASTE WATERS ...Chemical Treatment-general, Electrochemistry-other, Heterogeneous Catalysis, Organics, ...**5.0332**

IMPROVEMENT OF TREATMENT OF FOOD INDUSTRY WASTE ...Chemical Treatment, Dairy Wastes, ...**5.0777**

THE ELECTRO-OXIDATION OF AMMONIA IN SEWAGE TO NITROGEN ...Ammonia, Electrode, Waste Water Treatment-general, Waste Water Treatment-other, ...**5.0538**

Oxidants

PHOTOLYSIS MECHANISMS FOR POLLUTION ABATEMENT ...Chemical Treatment, Organics, Photolysis, Pollution Abatement, Sunshine, ...**5.0335**

HETEROGENEOUS OXIDATION OF POLLUTANTS IN WATER ...Chemical Treatment-other, Element, Heterogeneous Catalysis, Organic Matter, Regeneration-other, ...**5.0789**

Oxidation-general

THE BIOLOGY AND CHEMISTRY OF SPHAEROTILUS ...Autotrophic, Butyric Acid, Growth (non-specific & Ot.), Nutrition, Sphaerotilus, ...**5.1241**

SUBJECT INDEX

Chemical Reactions

OPTIMAL DESIGN OF WASTE TREATMENT SYSTEMS ...Activated, Biological Treatment-other, Electrodialysis, Optimization, Process Design, ...8.0202

OXYGENATION KINETICS OF REDUCED SULFUR SPECIES ...Order, Other, Oxygen, ...5.0496

STUDY OF THE SULFIDE-TO-SULFATE REACTION MECHANISM ...Adsorption-other, Biological Cycles, Properties and Structure, Pyrite Group, Solution Chemistry, Sulfate, Sulfite, Sulfide, ...5.0880

AN INVESTIGATION OF LIGHT-CATALYZED CHLORINE FOR TREATMENT OF WASTE WATER ...Chlorine, Light-catalyzed, Organics, Waste Treatment-economics, Waste Water Treatment-general, ...5.0686

TOTAL ORGANIC CARBON AS A POLLUTION CONTROL PARAMETER IN SUB-ARCTIC WATE ...Alaska, Chemical Identification, Infrared, Organic Matter, Technique Development, ...5.0031

Oxidation-other

APPLICABILITY OF ARDOX CATALYST TO OXIDATION IN SPACE WASTE MANAGEMENT ...Activated, Manned Satellite, Microbial-bacterial, Other, Waste-disposal-recovery, ...5.0240

THE EFFECTIVENESS OF CONTACT FILTER FOR THE REMOVAL OF IRON FROM GROUND WATER ...Filtration, Flocculation, Groundwater, Sand, ...2.0021

THE CHEMISTRY OF MAGANESE IN NATURAL WATERS ...Analysis and Detection, Chemical-general, Manganese, Water Chemistry, Water Treatment -- General, ...5.0129

MICROBIOLOGICAL REMOVAL OF IRON FROM MINE DRAINAGE WATERS ...Acid Mine Wastes, Iron, Microbial-bacterial, Reduction-other, Sulfur Bacteria, ...5.0925

OPERATIONAL DEMONSTRATION OF OXIDATION DITCH METHOD OF WASTE TREATMENT ...Chemical Treatment, Lagoon, Process Design, ...5.0839

Ozonization

MICROTRAINING PILOT TESTS OF STORM WATER OVERFLOWS FROM COMBINED STORM AND SANITARY SEWER SYSTEMS ...Chlorination, Combined Sewer, Pilot Plants, Screening, ...5.1003

DISINFECTION OF RENOVATED WASTEWATER ...Chlorination, Disinfection, Effluent-standards, Waste Treatment-economics, ...5.0846

Wet Oxidation

AIR OXIDATION OF ORGANIC COMPOUNDS IN AQUEOUS SYSTEMS ...Chemical Treatment, Kinetics-other, Mass Transfer, Organic Wastes, Solution, ...5.0215

AIR OXIDATION OF ORGANIC COMPOUNDS IN AQUEOUS SYSTEMS ...Aeration, Chemical Treatment, Continuous, Mass Transfer, Organics, ...1.0023

Oxidation Reduction

RESEARCH CN NEW ION-ADSORPTION ELECTRODES FOR DEMINERALIZATION OF SALINE WATER ...Desalination, Electrochemistry-other, Electrode, Graft - Polymerization, Organic, Removal-inorganics, ...3.0363

ELECTROANALYTICAL CHEMISTRY - STUDIES OF ADSORPTION AND REDOX PROCESSES AT ELECTRODES ...Amperometry, Analysis and Detection, Electrolytes, Polarography, Surfactants, ...5.0440

MECHANISMS AND RATES OF HEAVY METAL SORPTION AND DESORPTION ...Adsorption-desorption, Concentration, Mechanisms, Other, Rate of Reaction, ...2.0181

Photochemical

Light-catalyzed

AN INVESTIGATION OF LIGHT-CATALYZED CHLORINE FOR TREATMENT OF WASTE WATER ...Chlorine, Organics, Oxidation-general, Waste Treatment-economics, Waste Water Treatment-general, ...5.0686

Photolysis

PHOTOLYSIS MECHANISMS FOR POLLUTION ABATEMENT ...Chemical Treatment, Organics, Oxidants, Pollution Abatement, Sunshine, ...5.0335

HETEROGENEOUS NUCLEATION OF ICE ...Growth and Preparation, Nucleation Physics, Radiation-general, Temperature, ...2.0785

Polymerization

Copolymerization

PREPARATION AND PROPERTIES OF GRAFTED AND VECTORED MEMBRANES FOR USE IN DESALINATION ...Desalination, Gel, Graft - Polymerization, Membranes-other, Porosity, ...3.0378

Crosslinking

INFLUENCE OF STRONGLY BOUND COUNTER-IONS ON PERMSELECTIVE MEMBRANES ...Electrochemistry-other, Ion Selective, Van Der Waals, ...3.0227

A STUDY OF MEMBRANES FOR DESALINATION BY REVERSE OSMOSIS ...Desalination, Membranes-other, Natural Occurring, Reverse Osmosis, ...3.0030

Graft - Polymerization

SYNTHESIS OF MODIFIED LOEB MEMBRANES BY GRAFTING ...Desalination, Membranes-other, Monomer Synthesis, Natural Occurring, Porosity, ...3.0340

PREPARATION AND PROPERTIES OF GRAFTED AND VECTORED MEMBRANES FOR USE IN DESALINATION ...Copolymerization, Desalination, Gel, Membranes-other, Porosity, ...3.0378

RESEARCH ON NEW ION-ADSORPTION ELECTRODES FOR DEMINERALIZATION OF SALINE WATER ...Desalination, Electrochemistry-other, Electrode, Organic, Oxidation Reduction, Removal-inorganics, ...3.0363

In-situ

THE DEVELOPMENT OF CONCRETE-POLYMER MATERIALS ...Cement, Concrete, Ceramic Matrix, Durability, Deterioration, Plastics - General, Radiation Induced, Strength, Cohesion, ...8.0045

Polymerization-general

DEVELOPMENT OF ULTRATHIN SKIN MEMBRANES - HEMA POLYMERS ...Desalination, Esters, Films, Membranes-other, Reverse Osmosis, ...3.0278

Radiation Induced

CORROSION PROTECTION BY INHIBITOR CROSS-LINKING AND SURFACE COATING GRAFTING ...Cement, Concrete, Crosslinked, Inhibitors, Metallic Alloys, Metals, ...3.0404

THE DEVELOPMENT OF CONCRETE-POLYMER MATERIALS ...Cement, Concrete, Ceramic Matrix, Durability, Deterioration, In-situ, Plastics - General, Strength, Cohesion, ...8.0045

Telemerization

ENERGETICS AND STRUCTURE OF THE HYDROGEN BOND ...Alcohols, Hydrogen, Infrared, Polarization, Solution, ...1.0036

Precipitation

SOLID COORDINATION COMPOUNDS OF ALKALI METAL SALTS ...Alkali Metals-general, Amines, Chelation, Electronic Structure-other, ...3.0432

Reaction-general

MULTICOMPONENT FIXED-BED ION EXCHANGE IN THE TREATMENT OF SALINE WATER ...Desalination, Ion Exchange-other, Phase Relationship, Regeneration-other, ...3.0082

NMR AND X-RAY STUDIES OF STRUCTURE IN AQUEOUS ELECTROLYTE SOLUTIONS ...Adsorption-other, Electrolytes, Nuclear Magnetic, Nuclear Magnetic Resonance, Solution, X-ray, ...1.0073

REMOVAL OF PHOSPHATE FROM WATER BY ALUMINUM AND IRON ...Aluminum, Chemical Treatment, Chemical Treatment-general, Iron, Phosphate, Phosphite, ...5.0738

CEMENT - AGGREGATE REACTION ...Aggregates, Extenders, Fillers, Alkali Metals-general, Cement, Concrete, Dimensions, Expansion, ...8.0236

GEOCHEMICAL CONTROLS OF WATER QUALITY ...Chemical Analysis (water), Electroanalyses-other, Equilibrium-other, Properties of Minerals, Solution Chemistry, ...2.0115

METHODS OF ANALYSIS FOR INSECT-CONTROL CHEMICALS ...Chemical Analysis, Colorimetric, Extraction-other, Gas, Spectroscopy-other, ...5.0491

Chemical Reactions

Rearrangements

Ketonic

THE ROLE OF WATER IN ORGANIC REACTIONS ...Deuterium, Inorganic, Solvolyses, Structure - Activity, Transition State, Water, ...1.0062

Reduction

Electrolytic

DEVELOPMENT OF A COULOMETRIC METHOD FOR THE MEASUREMENT OF DISSOLVED OXYGEN IN SEA WATER ...Analysis and Detection, Coulometry, Gases, Oxygen, Technique Development, ...2.0914

Hydrogenolyses

STRUCTURAL CHEMISTRY OF YELLOW ORGANIC MATTER IN FRESH WATER ...Chemical Analysis (water), Organic, Organic Content, Organic Matter, Organic-general, ...5.1054

Reduction-general

DILUTE SOLUTION REACTIONS OF NITRATE ION AS APPLIED TO WATER RECLAMATION ...Decomposition-general, Denitrification, Nitrate, Nitrite, Survey Studies, ...5.0073

Reduction-other

CHEMICAL REMOVAL OF NITRATE FROM POTABLE WATER SUPPLIES ...Ion Exchange-other, Nitrate, Nitrite, Potable, Potable Water, ...5.0423

MICROBIOLOGICAL REMOVAL OF IRON FROM MINE DRAINAGE WATERS ...Acid Mine Wastes, Iron, Microbial-bacterial, Oxidation-other, Sulfur Bacteria, ...5.0925

NITRATE DETERMINATION USING CHROMIUM (II) COMPLEXES ...Chromium, Complexes, Electroanalyses-other, Nitrate, Nitrite, Other, ...1.0121

Solvation

Hydration

SOLUTE PROPERTIES OF WATER ...Hydrogen, Polarization, Solution, Water, ...1.0098

NUCLEATION AND GROWTH OF ICE CRYSTALS ...Brines, Crystal Growth, Desalination, Freezing, Nucleation, ...3.0041

STUDIES ON THE HYDRATE PROCESS FOR DEMINERALIZING SEA WATER ...Brines, Crystal Growth, Demineralization, Removal-inorganics, ...3.0366

ION HYDRATION AND ION INTERACTION ...Assoc & Dissoc, Attenuation, Calcium, Magnesium, Salt, Ultrasonic, Ultrasonics, ...1.0059

INTERFACIAL WATER STRUCTURE AND PROPERTIES ...Inorganic, Interface, Tension, Thermal Properties-other, Water, ...1.0044

Solvation-other

IONIC SOLVATION ...Assoc & Dissoc, Covalent, Ionic, Nuclear Magnetic Resonance, Raman, ...1.0101

Solvolyses

THE ROLE OF WATER IN ORGANIC REACTIONS ...Deuterium, Inorganic, Ketonic, Structure - Activity, Transition State, Water, ...1.0062

Synthesis

Fixation

ENGINEERING ECONOMICS OF WATER DESALTING IN COMBINATION WITH NITROGEN FIXATION FOR AGRICULTURAL CHEMICALS MANUFACTURE ...Ammonia, Cost Analysis, Desalination, Nuclear, Statistical, ...3.0347

CHEMISTRY OF NITROGEN IN NATURAL WATERS ...Analysis and Detection, Denitrification, Lakes, Nitrogen, Radioisotopes, ...5.0250

Organic

DEVELOPMENT OF DESALINATION MEMBRANES ...Copolymers, Desalination, Membranes-other, ...3.0406

STRUCTURAL CHEMISTRY OF YELLOW ORGANIC MATTER IN FRESH WATER ...Chemical Analysis (water), Hydrogenolyses, Organic Content, Organic Matter, Organic-general, ...5.1054

BASIC SALINOGEN ION EXCHANGE RESINS FOR SELECTIVE NITRATE REMOVAL FROM POTABLE AND EFFLUENT WATER ...Effluents-waste Water, Ion Exchange-other, Nitrate, Nitrite, Potable Water, Selective-removal, ...5.0537

SUBJECT INDEX

LIGNIN SULFONATES IN PULP MILL EFFLUENTS ...Column, Natural Occurring, Pulp and Paper Wastes, Sulfonates (rso3na), Ultraviolet, ...5.0959

INVESTIGATION OF SOAP-DETERGENT COMBINATIONS BASED ON INEDIBLE ANIMAL FA ...Acids, Biodegradation, Hydrolysis, Stability, Surfactants, ...5.0991

STRUCTURE OF THE BLUE-GREEN ALGA TOXIN ...Cyanophyta (non-specific & Ot), Gas, Glucagon X Hor, Mass, Natural Occurring, ...5.0127

Transfer

Oxygen

A MASS TRANSFER STUDY OF CURRENT REQUIREMENTS FOR CATHODIC PROTECTION ...Cathodic Protection, Cavitation, Chemical Analysis, Desalination, Fluid Flow-other, Heat Transfer, ...3.0033

OXYGEN TRANSFER TO WATER DROPLETS ...Air-general, Diffusion-other, Water, ...1.0038

INVESTIGATIONS INTO TECHNIQUES FOR IMPROVING THE AMOUNT AND EFFICIENCY OF OXYGEN INCORPORATION INTO RAPID-RATE BIOLOGICAL WASTE TREATMENT SYS ...Activated, Biological Treatment-other, Plants-systems-other, Viscosity, Waste Treatment-economics, ...5.0169

Chemistry - Atomic & Molecular

Atomic & Molecular Beam

INTERMOLECULAR FORCES AND THE LIQUID STATE ...Bond Energy, Forces, Desalination, Hydrogen, Inorganic, Liquid, ...1.0051

MOLECULAR BEAM INVESTIGATION OF THE WATER MOLECULE ...Bond Energy, Forces, Cross Sections, Diffraction-other, Water, ...3.0223

Bond Theories

Electrostatic

ION-SOLVENT INTERACTION ...Assoc & Dissoc, Hydrogen, Mixed Solvents, Salt, Steric Effects, ...1.0018

Bond Type

Bond Type-general

TRANSPORT PROPERTIES OF CONCENTRATED SALT SOLUTIONS ...Conductivity, Desalination, Diffusion-other, Kinetic-general, ...1.0087

PHYSICAL-CHEMICAL PHENOMENA ASSOCIATED WITH ORGANIC-COLLOIDAL SURFACE INTERACTIONS ...Absorption, Fixation, Exchange, Colloidal Phenomena, Decomposition-other, Isotherm, X-ray, ...5.0277

Bond Type-other

INVESTIGATION OF DESALINATION BY FREEZING ...Desalination, Free Energy, Freezing, Impurity, Interface, ...3.0417

Covalent

IONIC SOLVATION ...Assoc & Dissoc, Ionic, Nuclear Magnetic Resonance, Raman, Solvation-other, ...1.0101

Hydrogen

SOLUTE PROPERTIES OF WATER ...Hydration, Polarization, Solution, Water, ...1.0098

DIELECTRIC PROPERTIES OF HYDROGEN-BONDED LIQUIDS ...Alcohols, Desalination, Dielectric Properties, Isomerism, Thermal Relation-other, ...1.0078

STRUCTURE IN SOLVENTS AND CONCENTRATED SOLUTIONS ...Infrared, Ion Exchange-other, Nuclear Magnetic, Salt, Water, ...1.0035

INTERMOLECULAR FORCES AND THE LIQUID STATE ...Atomic & Molecular Beam, Bond Energy, Forces, Desalination, Inorganic, Liquid, ...1.0051

SPECTROSCOPIC AND DIELECTRIC STUDIES OF NEW HYDROGEN BONDED SPECIES ...Dielectric Properties, Gaseous, Infrared, Far, Phase Relationship, Water, ...1.0061

EFFECT OF AMINES, ALCOHOLS AND PHENOLS ON THE PHYSICO-CHEMICAL PROPERTIES OF WATER ...Infrared, Liquid Solutions, Phy and Chem Properties, X-ray, ...1.0106

ENERGETICS AND STRUCTURE OF THE HYDROGEN BOND ...Alcohols, Infrared, Polarization, Solution, Telemerization, ...1.0036

SUBJECT INDEX

Chemistry - Atomic & Molecular

ION-SOLVENT INTERACTION ...Assoc & Dissoc, Electrostatic, Mixed Solvents, Salt, Steric Effects, ...1.0018
NMR AND IR STUDIES OF HYDROGEN BONDING IN N-ALKYLPHOSPHORAMIDATES ...Infrared, Nuclear Magnetic Resonance, Phosphorous, Salt, Steric Effects, ...5.0279

Ionic

ION - ION AND ION - MOLECULE INTERACTIONS IN AQUEOUS SALT SOLUTIONS ...Activity, Conductivity, Osmotic Pressure, Polarization, Solution, ...1.0020

Van Der Waals

INFLUENCE OF STRONGLY BOUND COUNTER-IONS ON PERMESELECTIVE MEMBRANES ...Crosslinking, Electrochemistry-other, Ion Selective, ...3.0227

Bonding

Assoc & Dissoc

ION-SOLVENT AND ION-ION INTERACTIONS IN AQUEOUS ELECTROLYTES ...Activity, Electrolytes, Relaxation, Temperature Jump Method, Ultrasonic, ...1.0095

ION-SOLVENT INTERACTION ...Electrostatic, Hydrogen, Mixed Solvents, Salt, Steric Effects, ...1.0018

IONIC SOLVATION ...Covalent, Ionic, Nuclear Magnetic Resonance, Raman, Solvation-other, ...1.0101

ION HYDRATION AND ION INTERACTION ...Attenuation, Calcium, Hydration, Magnesium, Salt, Ultrasonic, Ultrasonics, ...1.0059

INTERACTION OF ORGANIC MOLECULES IN WATER ...Catalytic, Drug Chemistry, Enzymatic, Organic-general, ...1.0058

Bond Energy, Forces

INTERMOLECULAR FORCES AND THE LIQUID STATE ...Atomic & Molecular Beam, Desalination, Hydrogen, Inorganic, Liquid, ...1.0051

MOLECULAR BEAM INVESTIGATION OF THE WATER MOLECULE ...Atomic & Molecular Beam, Cross Sections, Diffraction-other, Water, ...3.0223

METAL ION INTERACTIONS WITH WATER ...Hydrolysis, Inorganic, Metal Ion, Natural Occurring, Organic, Polynuclear Complex, Vibration, ...1.0077

Chem Structure Determination

Chem Str Determination

THE DETERMINATION OF THE STRUCTURES OF ORGANIC CONTAMINANTS IN WATER ...Analyzing, Chemical Identification, Chromatography-other, Distillation-other, Spectroscopy-other, ...5.0278

Inorganic

INTERMOLECULAR FORCES AND THE LIQUID STATE ...Atomic & Molecular Beam, Bond Energy, Forces, Desalination, Hydrogen, Liquid, ...1.0051

A STUDY OF HYPERSONIC WAVES IN WATER AND IN AQUEOUS SOLUTIONS ...Dissociation, Hypersonic Waves, Relaxation, Ultrasonic, Ultrasonics, Water, ...1.0030

A NUCLEAR MAGNETIC RELAXATION INVESTIGATION OF WATER-MEMBRANE INTERACTIONS ...Interface, Isotope-other, Membranes-other, Nuclear Magnetic Resonance, Relaxation, ...3.0349

PRESSURE AND TEMPERATURE DEPENDENCE OF VOLUME VISCOSITY AND MICROSCOPIC STRUCTURE IN WATER AND SALINE SOLUTIONS ...Analysis and Detection, Ultrasonic, Viscosity, Water, ...3.0161

THE STRUCTURE AND PROPERTIES OF WATER SOLUTIONS ...Aqueous, Solubility, Thermodynamic Relation, Water, ...1.0039

INTERFACIAL WATER STRUCTURE AND PROPERTIES ...Hydration, Interface, Tension, Thermal Properties-other, Water, ...1.0044

THERMODYNAMICS OF WATER AND WATER SOLUTIONS ...Entropy, Solution, Water, ...1.0043

THE ROLE OF WATER IN ORGANIC REACTIONS ...Deuterium, Ketonic, Solvolyses, Structure - Activity, Transition State, Water, ...1.0062

METAL ION INTERACTIONS WITH WATER ...Bond Energy, Forces, Hydrolysis, Metal Ion, Natural Occurring, Organic, Polynuclear Complex, Vibration, ...1.0077

Organic

CHARACTERIZATION OF ORGANIC CONTAMINANTS IN PAPER MILL WASTE EFFLUENTS ...Chemical Analysis, Chemi-

cal Identification, Chemical Treatment, Distillation-other, Extraction, Pulp and Paper Wastes, ...5.0284

METAL ION INTERACTIONS WITH WATER ...Bond Energy, Forces, Hydrolysis, Inorganic, Metal Ion, Natural Occurring, Polynuclear Complex, Vibration, ...1.0077

Cross Sections

MOLECULAR BEAM INVESTIGATION OF THE WATER MOLECULE ...Atomic & Molecular Beam, Bond Energy, Forces, Diffraction-other, Water, ...3.0223

Diffraction

Diffraction-other

MOLECULAR BEAM INVESTIGATION OF THE WATER MOLECULE ...Atomic & Molecular Beam, Bond Energy, Forces, Cross Sections, Water, ...3.0223

X-ray

EFFECT OF AMINES, ALCOHOLS AND PHENOLS ON THE PHYSICO-CHEMICAL PROPERTIES OF WATER ...Hydrogen, Infrared, Liquid Solutions, Phy and Chem Properties, ...1.0106

Electronic Phenomena

Polarization

ENERGETICS AND STRUCTURE OF THE HYDROGEN BOND ...Alcohols, Hydrogen, Infrared, Solution, Telemerization, ...1.0036

FREEZING POTENTIAL STUDY ...Desalination, Electrolytes, Freezing, Relaxation, Solution, ...3.0183

ION - ION AND ION - MOLECULE INTERACTIONS IN AQUEOUS SALT SOLUTIONS ...Activity, Conductivity, Ionic, Osmotic Pressure, Solution, ...1.0020

COMPARATIVE EVALUATION OF REVERSE OSMOSIS PILOT PLANTS OF DIFFERENT DESIGN CONFIGURATIONS ...Cost Analysis, Desalination, Interface, Membranes-other, Reverse Osmosis, ...3.0117

RELATIONSHIP OF PESTICIDE PROPERTIES TO ADSORPTION ...Adsorption-other, Electrophoresis, Vapor Pressure, ...5.0825

Electronic Structure

Electronic Structure-other

SOLID COORDINATION COMPOUNDS OF ALKALI METAL SALTS ...Alkali Metals-general, Amines, Chelation, Precipitation, ...3.0432

Excitation Energies

Activation Energy

VISCOSITY STUDIES OF AQUEOUS SOLUTIONS ...Alcohols, Desalination, Mixed Solvents, Viscosity, Water, ...1.0033

Relaxation

FREEZING POTENTIAL STUDY ...Desalination, Electrolytes, Freezing, Polarization, Solution, ...3.0183

Resonance Spectroscopy

Nuclear Magnetic Resonance

IONIC SOLVATION ...Assoc & Dissoc, Covalent, Ionic, Raman, Solvation-other, ...1.0101

A NUCLEAR MAGNETIC RELAXATION INVESTIGATION OF WATER-MEMBRANE INTERACTIONS ...Inorganic, Interface, Isotope-other, Membranes-other, Relaxation, ...3.0349

NMR AND IR STUDIES OF HYDROGEN BONDING IN N-ALKYLPHOSPHORAMIDATES ...Hydrogen, Infrared, Phosphorous, Salt, Steric Effects, ...5.0279

HIGH RESOLUTION NUCLEAR MAGNETIC RESONANCE SPECTRA OF ORGANIC PESTICIDES ...Carbamates -non-specific, Chlorinated Hydrocarbons, Concentration, Decomposition-general, Isotopic, Organophosphorous Cpd., Temperature-other, ...5.0283

Scattering

Other

SCATTERING MEASUREMENTS ON ALKALI - WATER SYSTEMS ...Alkali Metals-general, Atomic Collisions, Molecular Collisions, Water, ...1.0022

Chemistry - Atomic & Molecular

SUBJECT INDEX

Raman

THE RELATION BETWEEN THE STRUCTURE AND PROPERTIES OF LIQUID WATER ...Infrared, Far, Ultraviolet, Water, ...1.0102

Spectroscopy

Infrared

EFFECT OF AMINES, ALCOHOLS AND PHENOLS ON THE PHYSICO-CHEMICAL PROPERTIES OF WATER ...Hydrogen, Liquid Solutions, Phy and Chem Properties, X-ray, ...1.0106

ENERGETICS AND STRUCTURE OF THE HYDROGEN BOND ...Alcohols, Hydrogen, Polarization, Solution, Telemerization, ...1.0036

NMR AND IR STUDIES OF HYDROGEN BONDING IN N-ALKYLPHOSPHORAMIDATES ...Hydrogen, Nuclear Magnetic Resonance, Phosphorous, Salt, Steric Effects, ...5.0279

Infrared, Far

THE RELATION BETWEEN THE STRUCTURE AND PROPERTIES OF LIQUID WATER ...Raman, Ultraviolet, Water, ...1.0102

SPECTROSCOPIC AND DIELECTRIC STUDIES OF NEW HYDROGEN BONDED SPECIES ...Dielectric Properties, Gaseous, Hydrogen, Phase Relationship, Water, ...1.0061

Infrared, Near

DIFFUSION OF OXYGEN AND HYDROGEN SULFIDE IN WATER AS EFFECTED BY DISSOLVED SURFACTANTS ...Diffusion-other, Oxygen, Sulfide, Surfactants, ...1.0002

Ultraviolet

THE RELATION BETWEEN THE STRUCTURE AND PROPERTIES OF LIQUID WATER ...Infrared, Far, Raman, Water, ...1.0102

ULTRAVIOLET ABSORPTION AND ITS POSSIBLE RELATION TO EUTROPHICATION IN LARGE NEW HAMPSHIRE LAKES ...Eutrophication, Filtration, Lakes, New Hampshire, Technique Development, ...5.0714

Stereochemistry

Configuration

STUDY OF A SPECIFIC INFLUENCE OF IONIC SPECIES ON STRUCTURING IN WATER ...Electrolytes, Entropy, Half Cell, Ion Exchange-other, Membranes-other, ...1.0010

Inversion

AN EVALUATION OF THE SUGAR-INVERSION METHOD OF MEASURING MEAN TEMPERATURE IN A CLIMATOLOGICAL NETWORK ...Aldose and Ketose, Microclimate-general, Physical Climatology, Temperature, ...2.0925

Isomerism

DIELECTRIC PROPERTIES OF HYDROGEN-BONDED LIQUIDS ...Alcohols, Desalination, Dielectric Properties, Hydrogen, Thermal Relation-other, ...1.0078

Steric Effects

ION-SOLVENT INTERACTION ...Assoc & Dissoc, Electrostatic, Hydrogen, Mixed Solvents, Salt, ...1.0018

NMR AND IR STUDIES OF HYDROGEN BONDING IN N-ALKYLPHOSPHORAMIDATES ...Hydrogen, Infrared, Nuclear Magnetic Resonance, Phosphorous, Salt, ...5.0279

Stimulated Emission

Lasers

STUDY OF MASS TRANSFER THROUGH MEMBRANES ...Desalination, Electrodialysis, Membranes-other, Polarization, Reverse Osmosis, ...3.0035

Vibration

METAL ION INTERACTIONS WITH WATER ...Bond Energy, Forces, Hydrolysis, Inorganic, Metal Ion, Natural Occurring, Organic, Polynuclear Complex, ...1.0077

Chemistry - Coordination

Complexes

INVESTIGATIONS OF AQUEOUS SALT SOLUTIONS BY RAMAN SPECTROSCOPY ...Complexing, Raman, Solution, Solvent-other, Thermal Relation-other, ...1.0079

STRUCTURE AND MORPHOLOGY OF INORGANIC MEMBRANES ...Electron, Gel, Membranes-other, Transport, ...3.0463

REMOVAL OF PHOSPHATE FROM WATER BY ALUMINUM AND IRON ...Aluminum, Iron, Mechanisms, Phosphate, Phosphate, Waste Water Treatment-general, ...5.0732

LIGAND EXCHANGE REAGENTS ...Colorimetric, Compound, Dyes and Coloring, Ion Exchange-other, Spectroscopy-other, ...5.0431

STRUCTURE OF CARBON-OXYGEN COMPLEXES ...Adsorption-other, Carbon, Infrared, Oxygen, Surface-other, ...1.0082

NITRATE DETERMINATION USING CHROMIUM (II) COMPLEXES ...Chromium, Electroanalyses-other, Nitrate, Nitrite, Other, Reduction-other, ...1.0121

Complexing Agents

Chelating Agents

RECOVERY OF METAL SALTS FROM CONCENTRATED BRINES BY CHELATION CONTRACT NO. 14-01-0001-1692 ...Cost Analysis, Ion Exchange-other, Material Recovery, Potable, Regeneration-other, ...5.0142

EFFECTS OF CRUDE OILS AND THEIR EMULSIONS TO MARINE ORGANISMS ...Emulsion, Oil, Petroleum Chemistry, Poisons-other, Removal-organics, ...5.1082

Polynuclear Complex

METAL ION INTERACTIONS WITH WATER ...Bond Energy, Forces, Hydrolysis, Inorganic, Metal Ion, Natural Occurring, Organic, Vibration, ...1.0077

Chemistry - Effects

Additives

STUDIES ON APPLICATION OF RADIOISOTOPE TECHNIQUES IN STREAM POLLUTION PROBLEMS IN THE PULP AND PAPER INDUSTRY ...Iridium, Pollutants - Path of, Radioisotopes, ...5.1233

STRUCTURE OF SEMIPERMEABLE POLYMER FILMS AND ITS EFFECT ON SALT REJECTION ...Desalination, Filtration, Membranes-other, Molecular Weight Distribution, Morphology-other, ...3.0414

WATER RESEARCH PROGRAM - SECTION IV. SEPARATIONS PROCESS ...Chemical Effect-other, Interface, Membranes-other, Other, Permeability, Porosity, Reverse Osmosis, Separation-general, ...3.0441

IMPROVEMENTS IN DESALINATION BY THE FLASH EVAPORATION PROCESS ...Desalination, Evaporation, Fluidized Bed, Ion Exchange-other, Scale Formation, ...3.0408

CONSTANT TOTAL PRESSURE EVAPORATION WITH HEAT REUSE BY A BUILT-IN ENGINE ...Boiling Point, Condensation, Desalination, Heat Recovery, Saturated Hydrocarbons, ...3.0135

EFFECT OF DRAG REDUCING ADDITIVES IN WATER TRANSPORTATION ...Close Channel, Drag, Fluid Flow-other, Laminar - Turbulent, Polymer Type-other, ...1.0111

SMALL DESALINATION UNIT TO TEST SCALE REDUCTION ADDITIVES ...Desalination, Distillation-other, Economic Efficiency, Scale Formation, ...3.0429

UNSTEADY FLOW OF DILUTE AQUEOUS HIGH POLYMER SOLUTIONS IN PIPES ...Fluid Flow-other, Mathematics Matching Code, Pipes, Size, Unsteady, ...8.0164

STORM WATER DEMONSTRATION PROJECT - CITY OF SOMERSWORTH, NEW HAMPSHIRE ...Chlorination, Combined Sewer, Polymer Type-other, Storm Water, ...5.0710

MICROBIOLOGICAL TREATMENT OF POTATO WASTES ...Agricultural Microbiology, Canning Wastes, Industrial Wastes, Material Recovery Wastes, Microbial-bacterial, Plant Waste Removal, Treatment, Trace Analyses-other, ...5.0978

EXTRACTION OF ALGAE BY FLOCCULATIVE TECHNIQUES ...Algal Pollutant Sources, Extraction, Flocculation, Public Works, ...5.0398

Chemical Effect-other

WATER RESEARCH PROGRAM - SECTION IV. SEPARATIONS PROCESS ...Additives, Interface, Membranes-other, Other, Permeability, Porosity, Reverse Osmosis, Separation-general, ...3.0441

EFFECT OF METAL POISONING ON VARIOUS ENZYMES IN FISH ...Atpase, Inhibitors, Killifish - Cyprinodon, Metals Ns, Mineral Origin, ...5.1091

SUBJECT INDEX

Chemistry - Instrumentation

Electric Field

WATER TRANSPORT ACROSS MEMBRANES BY ELECTRO-OSMOSIS ...Desalination, Electroosmosis, Membranes-other, Transport, ...5.1012

APPLICATIONS OF POWDERED MAGNETIC IRON OXIDE FOR THE REMOVAL OF PATHOGENIC MICROORGANISMS ...Adsorption-absorption-other, Electrochemistry-other, Magnetic, Spinel Group, Virus, ...5.0400

Environmental Conditions

Oxidizing Atmosphere

IMPROVEMENT OF THE CORROSION RESISTANCE OF ALUMINUM BRASS FOR USE IN SEA WATER CONVERSION PLANTS ...Copper, Desalination, Films, High, Water, ...3.0213

Impurity

INVESTIGATION OF DESALINATION BY FREEZING ...Bond Type-other, Desalination, Free Energy, Freezing, Interface, ...3.0417

Isotope

Deuterium

ISOTOPE EFFECT ON THE THERMODYNAMIC ACTIVITY OF WATER ...Activity, Chemical-general, Solution, Vapor Pressure, Water, ...1.0112

THE ROLE OF WATER IN ORGANIC REACTIONS ...Inorganic, Ketonic, Solvolyses, Structure - Activity, Transition State, Water, ...1.0062

Isotope-other

A NUCLEAR MAGNETIC RELAXATION INVESTIGATION OF WATER-MEMBRANE INTERACTIONS ...Inorganic, Interface, Membranes-other, Nuclear Magnetic Resonance, Relaxation, ...3.0349

Magnetic Field

SOLIDIFICATION AND SEPARATION OF ICE FROM SALINE WATER ...Convection, Desalination, Freezing, Surface Energy, ...3.0277

Pressure

High

RESEARCH ON PIEZODIALYSIS ...Desalination, Dialysis, Mosaic, ...3.0291

DEVELOPMENT OF THE VACUUM FREEZING VAPOR COMPRESSION PROCESS ...Desalination, Evaporation, Freezing, Pilot Plant, Potable Water, ...1.0128

PROPOSAL TO DEVELOP A HIGH-PRESSURE-FOAM WASTE WATER TREATMENT PROCESS ...Flocculation, Foam, Organics, Waste Water Treatment-general, ...5.0100

HYDROSTATIC HIGH PRESSURE EFFECTS ...Activity, Enthalpy, Entropy, Water, ...1.0126

Pressure-other

SELF-ADJUSTING AND SELF-CLEANING FILTER FEASIBILITY STUDY ...Chlorination, Combined Sewer, Filament Winding, Filter-other, Pollutant-other, ...5.0227

Radiation

Other

GAMMA RADIATION OF TEXTILE WASTE WATER TO REDUCE POLLUTION ...Cobalt, Gamma, Industrial Wastes, Textile Wastes, Waste Water Treatment-general, ...5.0006

Solvent

Aqueous

KINETICS OF ADSORPTION VIA DOUBLE LAYER CAPACITY MEASUREMENTS ...Electrode, Interface, Methodology, Non-electrical Measurements, ...1.0100

THE STRUCTURE AND PROPERTIES OF WATER SOLUTIONS ...Inorganic, Solubility, Thermodynamic Relation, Water, ...1.0039

Hydrophobic

ION DISCRIMINATION BY HYDROPHOBIC MEMBRANES ...Diffusion-other, Equilibrium-other, Membranes-other, Solution, ...3.0234

DIFFERENTIAL ION MOBILITY AT COLLOIDAL SURFACES ...Colloidal Phenomena, Diffusion-other, Membranes-other, Radiochemical Techniques, Transport, ...2.0053

Mixed Solvents

ION-SOLVENT INTERACTION ...Assoc & Dissoc, Electrostatic, Hydrogen, Salt, Steric Effects, ...1.0018

VISCOSITY STUDIES OF AQUEOUS SOLUTIONS ...Activation Energy, Alcohols, Desalination, Viscosity, Water, ...1.0033

Solvent-other

INVESTIGATIONS OF AQUEOUS SALT SOLUTIONS BY RAMAN SPECTROSCOPY ...Complexes, Complexing, Raman, Solution, Thermal Relation-other, ...1.0079

THE MECHANISM FOR FORMATION OF A SKINNED TYPE MEMBRANE ...Desalination, Evaporation, Interface, Light Scattering, Membranes-other, ...3.0265

Structural Effects

Structural Effect-other

INORGANIC ION EXCHANGERS AND THE NUCLEATION OF SCALE FORMING MATERIALS ...Calorimetry, Desalination, Equilibrium - Chemical, Ion Exchange-other, Zirconium, ...3.0341

THE MOLECULAR NATURE OF ORGANIC WASTE REMOVAL PATTERNS ...Activated, Analysis and Detection, Gas, Organics, Rate of Reaction, ...5.1155

Structure - Activity

THE ROLE OF WATER IN ORGANIC REACTIONS ...Deuterium, Inorganic, Ketonic, Solvolyses, Transition State, Water, ...1.0062

Temperature

High

PROGRAM FOR ELECTRODIALYSIS RESEARCH AND DEVELOPMENT ...Electrodialysis, Membranes-other, Other, ...3.0116

Low

COMPLETE MIX ACTIVATED SLUDGE UNIT PROCESS ADAPTION TO LOW TEMP ...Activated, Loading, Pilot Plant, Separation-other, Solid Waste, ...5.0028

Temperature-other

AN INVESTIGATION OF THE EFFECT OF CONTROLLED RELEASES ON THE PHYSICAL, CHEMICAL AND BACTERIOLOGICAL CHARACTERISTICS OF FORT LOUDOUN RESERVOIR ...Nitrogen, Phosphate, Phosphite, Stratified Flow, Suspension, Tennessee, ...5.1128

HIGH RESOLUTION NUCLEAR MAGNETIC RESONANCE SPECTRA OF ORGANIC PESTICIDES ...Carbamates -non-specific, Chlorinated Hydrocarbons, Concentration, Decomposition-general, Isotopic, Nuclear Magnetic Resonance, Organophosphorous Cpds., ...5.0283

Chemistry - Instrumentation

Application Or Purpose

Analyzing

INSTALLATION OF INSTRUMENTATION FOR CLAIR ENGLE PLANT ...Computers-general, Desalination, Flash Distillation, Gaging, ...3.0457

DEVELOPMENT OF A CALIBRATION MODULE FOR TRACE OXYGEN ANALYZERS ...Calibration Devices, Chemical Analysis (water), Inorganic, Oxygen, Technique Development, ...3.0055

DEVELOPMENT OF INSTRUMENTAL TECHNIQUES FOR THE ANALYSIS OF TRACE ORGANIC CONSTITUENTS IN WATER ...Chromatography-other, Infrared, Odor, Organic, Organic Wastes, ...5.0211

A CONTINUOUS MULTIPARAMETER WATER QUALITY MONITOR ...Instrumental Services, Mobile, Recording Systems, Transducers, Water Quality-general, ...7.0006

ANALYTICAL INSTRUMENTATION FOR DETERMINING LOW LEVELS OF TOTAL ORGANIC CARBON IN WATER ...Chemical Analysis, Organic-general, Total Organic Carbon, ...5.0094

THE DETERMINATION OF THE STRUCTURES OF ORGANIC CONTAMINANTS IN WATER ...Chem Str Determ-other, Chemical Identification, Chromatography-other, Distillation-other, Spectroscopy-other, ...5.0278

Property Measurement

THERMAL PROPERTIES OF SALT SOLUTIONS ...Conductivity, Salts, Solution, ...1.0057

Mobile

DEVELOPMENT OF THE VACUUM FREEZING VAPOR COMPRESSION PROCESS FOR USE WITH BRACKISH WATERS ...Brackish Water, Desalination, Freezing, North Carolina, Pilot Plants, ...3.0487

TRAINING, TECHNICAL SUPERVISION, AND ASSISTANCE REGARDING THE OPERATION OF A SKID-MOUNTED MSF UNIT ...Aeration, Distillation-other, Foam, Other, Pilot Plant, ...3.0491

FIELD EVALUATION OF THE SULFONIC ION EXCHANGE PROCESS FOR DESALTING BRACKISH WATERS ...Brackish Water, Desalination, Ion Exchange-other, Salinity, ...3.0214

DESIGN, CONSTRUCTION AND OPERATION OF A SKID-MOUNTED ION EXCHANGE PILOT PLANT ...Cost Analysis, Desalination, Economics-general, Ion Exchange-other, Pilot Plants, ...3.0329

OPERATION OF A 50,000 GPD PORTABLE PILOT PLANT ...Membranes-other, Pilot Plant, Reverse Osmosis, Scale Formation, Zeolite, ...3.0029

DESIGN AND CONSTRUCTION OF A LOW PRESSURE HOUSEHOLD REVERSE OSMOSIS UNIT ...Brackish Water, Cost Analysis, Desalination, Potable Water, Reverse Osmosis, ...3.0320

BIOLOGICAL NITROGEN FIXATION IN LAKES ...Acetylene, Ethylene, Gas, Lakes, Nitrogen, Nitrogen Fixation, ...5.1299

A CONTINUOUS MULTIPARAMETER WATER QUALITY MONITOR ...Analyzing, Instrumental Services, Recording Systems, Transducers, Water Quality-general, ...7.0006

DEVELOP DESIGN DATA FOR LIGHT WEIGHT WATER PURIFICATION UNIT ...Filtration, Potable, Potable Water, Technique Development, Waste Water Treatment-other, ...8.0297

LIGHTWEIGHT WATER PURIFICATION UNIT ...Brackish Water, Density, Desalination, Distillation-other, Distilling Units, Plastic Matrix, Technique Development, Waste Water Treatment-general, ...3.0250

REVERSE OSMOSIS WATER PURIFICATION ...Cellulose Acetate, Military Aspects, Other, Potable Water, Reverse Osmosis, ...3.0251

ION EXCHANGE UNIT, 3000 GPH ...Demineralization, Ion Exchange-other, Other, Potable Water, Radioactivity-general, ...5.1215

TECHNIQUES AND INSTRUMENTATION ...Chemical Analysis (water), Physical Parameters, Technique Development, Temperature, Water Sampling, ...5.0187

Type

FLUOROMETRIC QUALITATION AND QUANTITATION OF LIGNIN SULFONATES IN WATER ...Fluorometry, Natural Occurring, Pulp and Paper, Pulp and Paper Wastes, Sulfate, Sulfite, Sulfonates (rsosna), ...5.0286

Automatic

ASSEMBLY AND EVALUATION OF AN IMPROVED PPB OXYGEN ANALYZER FOR SEA WATER ...Calibration Devices, Gases, Inorganic, Oxygen, Technique Development, ...3.0453

PROCESS CONTROL MODEL FOR OXYGEN REGENERATION OF POLLUTED RIVERS ...Aeration, Chemical Oxygen Demand, Detectors and Sensors, Model Studies, Oxygen, Streams, ...5.0727

Calibration Devices

DEVELOPMENT OF A CALIBRATION MODULE FOR TRACE OXYGEN ANALYZERS ...Analyzing, Chemical Analysis (water), Inorganic, Oxygen, Technique Development, ...3.0055

ASSEMBLY AND EVALUATION OF AN IMPROVED PPB OXYGEN ANALYZER FOR SEA WATER ...Automatic, Gases, Inorganic, Oxygen, Technique Development, ...3.0453

Detectors and Sensors

ION SELECTIVE ELECTROCHEMICAL SENSORS ...Brackish Water, Brines, Electroanalyses-other, Electrode, Technique Development, ...5.1166

PROCESS CONTROL MODEL FOR OXYGEN REGENERATION OF POLLUTED RIVERS ...Aeration, Automatic, Chemical Oxygen Demand, Model Studies, Oxygen, Streams, ...5.0727

DETECTION AND IDENTIFICATION OF MOLECULAR WATER POLLUTANTS BY LASER RAMAN SPECTROSCOPY

...Chemical Analysis, Industrial Wastes, Lasers and Masers, Pesticides -non-specific, Physical Parameters, Raman, Surfactants, ...5.0441

ANALYSIS OF SOLUTIONS FOR SURFACE-ACTIVE CONSTITUENTS ...Absorption-other, Electrochemical-other, Electrode, Electrolytes, Surfactants, ...5.0439

TURBULENCE IN LIQUIDS ...Quartz, Turbulence, Turbulent, ...8.0187

QUANTITATIVE DETECTION OF SMALL AMOUNTS OF VIRUSES IN LARGE VOLUMES OF WATER ...Analysis and Detection, Concentration, Filtration, Membranes-other, Virus, ...5.0842

Testing Devices

FISHER AND PORTER INSTALLATION METHODS ...Evaporation, Gages, Technique Development, ...7.0049

Ultrasonics

A STUDY OF HYPERSONIC WAVES IN WATER AND IN AQUEOUS SOLUTIONS ...Dissociation, Hypersonic Waves, Inorganic, Relaxation, Ultrasonic, Water, ...1.0030

ION HYDRATION AND ION INTERACTION ...Assoc & Dissoc, Attenuation, Calcium, Hydration, Magnesium, Salt, Ultrasonic, ...1.0059

EFFECT OF SURFACTANT MICELLES ON METAL ION REMOVAL BY FLOTATION FROM METALLURGICAL WASTEWATER ...Copper, Foam, Metal Pickling Wastes, Micelle, Surfactants, Zinc, ...5.0691

FABRICATION AND EVALUATION OF AN ULTRASONIC FILTRATION SYSTEM FOR TREATING COMBINED SEWER OVERFLOWS ...Biochemical Oxygen Demand, Combined Sewer, Filter-other, Overflow, Waste Treatment-economics, ...5.0105

A STUDY OF THE EFFECT OF ULTRASONIC ENERGY ON WASTE WATER ...Ammonia, Disinfection, Organics, ...5.0104

Chemistry - Mechanisms**Kinetics****Kinetic-general**

TRANSPORT PROPERTIES OF CONCENTRATED SALT SOLUTIONS ...Bond Type-general, Conductivity, Desalination, Diffusion-other, ...1.0087

THE KINETICS OF COMPRESSIBILITY EFFECTS IN TWO PHASE SINGLE COMPONENT FLOW ...Bubble, Rate Determination, Spectroscopy-other, Two-phase-other, ...3.0292

KINETIC STUDIES OF THE OXIDATIVE DEGRADATION OF DETERGENT, AND RELATED CHEMICAL SPECIES IN AQUEOUS SOLUTION ...Biodegradation, Biological, Chemical Degradation, Physical Degradation, Surfactants, Waste Water Treatment-general, ...5.0495

PREPARATION OF MONODISPERSE EMULSIONS ...Distribution, Emulsion, Nucleation, Precipitation, ...5.0064

Kinetics-other

THE EFFECT OF ORGANIC INHIBITORS ON THE DISSOLUTION KINETICS OF IRON ...Corrosion General, Electrochemical-other, Electrode, Inhibitors, Iron, ...3.0065

AIR OXIDATION OF ORGANIC COMPOUNDS IN AQUEOUS SYSTEMS ...Chemical Treatment, Mass Transfer, Organic Wastes, Solution, Wet Oxidation, ...5.0215

KINETICS AND MECHANISM IN ACTIVATED SLUDGE PROCESSES ...Activated, Process Design, ...5.0927

A STUDY OF THE KINETICS OF THE ACTIVATED SLUDGE PROCESS ...Activated, Aeration, Flow Regulations, Pump, Storage-retention-facilities, ...5.0862

Order

OXYGENATION KINETICS OF REDUCED SULFUR SPECIES ...Other, Oxidation-general, Oxygen, ...5.0496

Rate of Reaction

BEHAVIOR OF LIQUID SURFACES DURING EVAPORATION AND CONDENSATION ...Evaporation, ...1.0083

DIFFUSION PHENOMENA IN ICE - RECRYSTALLIZATION PHENOMENA IN ICE ...Concentration, Crystal Growth, Desalination, Diffusion-other, Electrolytes, ...3.0361

MAXIMUM RATE OF VAPORIZATION AND CONDENSATION OF WATER WITH DISSOLVED SALTS AND SURFACE CONTAMINATION ...Condensation, Electrolytes, Evaporation, Gas/gas, Vapor Pressure, ...3.0413

SUBJECT INDEX

Chemistry - Mechanisms

ENGINEERING FEASIBILITY STUDY OF THE HORIZONTAL TUBE MULTIPLE EFFECT DISTILLATION PROCESS ...Desalination, Distilling Units, Economic Efficiency, Heat Transfer, North Carolina, ...3.0352

REMOVAL OF COLLOIDAL MATTER FROM WASTE WATER ...Microbial-bacterial, Organic Wastes, Pollutant-other, Sediments, Waste Water Treatment-general, ...5.0599

THE MOLECULAR NATURE OF ORGANIC WASTE REMOVAL PATTERNS ...Activated, Analysis and Detection, Gas, Organics, Structural Effect-other, ...5.1155

MECHANISMS AND RATES OF HEAVY METAL SORPTION AND DESORPTION ...Adsorption-desorption, Concentration, Mechanisms, Other, Oxidation Reduction, ...2.0181

Relaxation

ION-SOLVENT AND ION-ION INTERACTIONS IN AQUEOUS ELECTROLYTES ...Activity, Assoc & Dissoc, Electrolytes, Temperature Jump Method, Ultrasonic, ...1.0095

A STUDY OF HYPERSONIC WAVES IN WATER AND IN AQUEOUS SOLUTIONS ...Dissociation, Hypersonic Waves, Inorganic, Ultrasonic, Ultrasonics, Water, ...1.0030

A NUCLEAR MAGNETIC RELAXATION INVESTIGATION OF WATER-MEMBRANE INTERACTIONS ...Inorganic, Interface, Isotope-other, Membranes-other, Nuclear Magnetic Resonance, ...3.0349

Mechanism Determination

Mechanisms

REMOVAL OF PHOSPHATE FROM WATER BY ALUMINUM AND IRON ...Aluminum, Complexes, Iron, Phosphate, Phosphite, Waste Water Treatment-general, ...5.0732

BEHAVIOR OF TRACE ELEMENTS IN WATER RECLAMATION TREATMENT PROCESSES ...Chemical Treatment-general, Pollutant-other, Radioisotopes, Trace Elements, ...5.0177

THE ECOLOGY OF THE MICROBIAL POPULATION OF ACTIVATED SLUDGE ...Activated, Degradation, Industrial Processes-other, Plant Succession, Toxic Substances -non-specific, ...5.0168

MECHANISMS AND RATES OF HEAVY METAL SORPTION AND DESORPTION ...Adsorption-desorption, Concentration, Other, Oxidation Reduction, Rate of Reaction, ...2.0181

PHOSPHATE REMOVAL BY ACTIVATED SLUDGE PROCESS APPLICATION - PLANT SCALE DEMONSTRATION ...Activated, Location, Phosphate, Phosphite, Pollutant-other, Sewage Treatment Plant, ...5.0912

STUDY OF MICROBIOLOGICAL-BIOCHEMICAL PHOSPHATE SORPTION MECHANISM BY ACTIVATED SLUDGE ...Absorption-other, Activated, Other, Phosphate, Phosphite, Sewage Bacteria, ...5.0907

Transition State

THE ROLE OF WATER IN ORGANIC REACTIONS ...Deuterium, Inorganic, Ketonic, Solvolyses, Structure - Activity, Water, ...1.0062

Reaction Media

Gaseous

SPECTROSCOPIC AND DIELECTRIC STUDIES OF NEW HYDROGEN BONDED SPECIES ...Dielectric Properties, Hydrogen, Infrared, Far, Phase Relationship, Water, ...1.0061

ENGINEERING SERVICES - 50-150 MM GALLON PER DAY MULTISTAGE, MULTIFLASH DESALINATION PROCESS ...Desalination, Distilling Units, Flash Distillation, Fluid Flow-other, Removal-inorganics, ...3.0064

HIGH-PRESSURE VAPOR EXTRACTION OF SOLUBLE ORGANIC SOLUTES FROM AQUEOUS INDUSTRIAL WASTE STREAMS ...Extraction, Flow of Gas in Liquid, High Pressure - 1-1000 Atm, Industrial Processes-other, Two-phase-other, ...5.0070

Liquid

INTERMOLECULAR FORCES AND THE LIQUID STATE ...Atomic & Molecular Beam, Bond Energy, Forces, Desalination, Hydrogen, Inorganic, ...1.0051

Solid State

STUDIES OF CONCENTRATED AQUEOUS ELECTROLYTES AND OF MOLTEN ELECTROLYTES BY INFRARED SPECTROSCOPY ...Electrolytes, Infrared, Raman, Solution, Variable Temperature, ...1.0118

STUDY OF METHODS TO RETARD COMPACTION OF CELLULOSE ACETATE MEMBRANES IN REVERSE OSMOSIS DESALINATION ...Cellulose Acetate, Desalination, Membranes-other, Natural Occurring, Reverse Osmosis, ...3.0149

Solution

INVESTIGATIONS OF AQUEOUS SALT SOLUTIONS BY RAMAN SPECTROSCOPY ...Complexes, Complexing, Raman, Solvent-other, Thermal Relation-other, ...1.0079

SOLUTE PROPERTIES OF WATER ...Hydration, Hydrogen, Polarization, Water, ...1.0098

AN INVESTIGATION OF ION MOBILITY IN AQUEOUS SOLUTIONS ...Conductivity, State Variables - Pvt, Transport, Variable Temperature, Variational Pressure, ...1.0064

STUDIES BEARING ON THE RELATION OF STRUCTURE TO PROPERTIES IN LIQUID SOLUTIONS ...Activity, Electrolytes, Water, ...1.0105

STUDIES OF CONCENTRATED AQUEOUS ELECTROLYTES AND OF MOLTEN ELECTROLYTES BY INFRARED SPECTROSCOPY ...Electrolytes, Infrared, Raman, Solid State, Variable Temperature, ...1.0118

THERMODYNAMICS OF MIXING OF SALT SOLUTIONS ...Alkali Metals-general, Salt, ...1.0090

STATISTICAL MECHANICAL THEORIES OF FLUIDS ...Interface, Quantum Analysis, Statistical, Tension, Van Der Waals Forces, ...1.0084

ENERGETICS AND STRUCTURE OF THE HYDROGEN BOND ...Alcohols, Hydrogen, Infrared, Polarization, Telemerization, ...1.0036

THE INVESTIGATION OF TRANSPORT PROCESSES IN AQUEOUS ELECTROLYTE SOLUTIONS ...Conductivity, Diffusion-other, Electrolytes, Ionic, Water, ...1.0093

HETEROGENEOUS NUCLEATION AND CONDENSATION OF VAPORS ...Argon, Liquid, Nucleation, Water, 4 Ring System, ...1.0094

THERMAL PROPERTIES OF SALT SOLUTIONS ...Conductivity, Property Measurement, Salts, ...1.0057

FREEZING POTENTIAL STUDY ...Desalination, Electrolytes, Freezing, Polarization, Relaxation, ...3.0183

DISSOLVED GASES AND WATER CLUSTERING IN AQUEOUS SOLUTION ...Chlorine, Dioxide, Ions and Gases, Salt, Thermal Properties-other, Water, ...1.0052

ION DISCRIMINATION BY HYDROPHOBIC MEMBRANES ...Diffusion-other, Equilibrium-other, Hydrophobic, Membranes-other, ...3.0234

ION - ION AND ION - MOLECULE INTERACTIONS IN AQUEOUS SALT SOLUTIONS ...Activity, Conductivity, Ionic, Osmotic Pressure, Polarization, ...1.0020

A STUDY OF THE INTERACTIONS PRESENT IN AQUEOUS SALT SOLUTIONS BY NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY ...Conservation-general, Ionic, Nuclear Magnetic, Transition Metal-general, Water Resources Development, ...1.0074

ROTATIONAL STABILITY OF DILUTE POLYMER SOLUTIONS ...Fluid Flow-other, Mass Transfer, Organic, Polymer Type-other, Transport, ...1.0027

AIR OXIDATION OF ORGANIC COMPOUNDS IN AQUEOUS SYSTEMS ...Chemical Treatment, Kinetics-other, Mass Transfer, Organic Wastes, Wet Oxidation, ...5.0215

DIFFUSIVITY OF OXYGEN AND SULFIDE SPECIES IN AQUEOUS SOLUTIONS ...Chemical Treatment, Gas/liquid, Oxygen, Sulfide, Surfactants, ...1.0003

ROTATIONAL STABILITY IN DILUTE POLYMER SOLUTIONS ...Polymer Type-other, Rheological-general, States of Flow, Waste Water Treatment-other, ...1.0028

ADSORPTION OF ORGANIC COMPOUNDS ONTO SOLIDS FROM AQUEOUS SOLUTIONS ...Adsorption-general, Area, Organic Matter, Organics-general, Surface Energy, Surface-other, ...1.0122

ISOTOPE EFFECT ON THE THERMODYNAMIC ACTIVITY OF WATER ...Activity, Chemical-general, Deuterium, Vapor Pressure, Water, ...1.0112

NMR AND X-RAY STUDIES OF STRUCTURE IN AQUEOUS ELECTROLYTE SOLUTIONS ...Adsorption-other, Electrolytes, Nuclear Magnetic, Nuclear Magnetic Resonance, Reaction-general, X-ray, ...1.0073

ATOMIZATION AND DROP SIZE OF NON-NEWTONIAN FLUID ...Atomization, Distribution, Non - Newtonian, Nozzles, Spray Devices, ...5.0796

STUDIES OF LOW MOLECULAR WEIGHT LIGNIN SULFONATES ...Column, Molecular Weight Distribution, Natural Occurring, Sulfonates (rso3na), ...5.1262

OXYGENATION OF AQUEOUS BODIES USING LIQUID OXYGEN ...Aeration, Diffusion-other, Oxygen, Waste Treatment-economics, ...5.0685

THERMODYNAMICS OF WATER AND WATER SOLUTIONS ...Entropy, Water, ...1.0043

Vapor

WATER RESEARCH PROGRAM - SECTION I, PROPERTIES OF SOLUTIONS ...Colloidal Phenomena, Distribution Coefficient, Membranes-other, Potentiometry, Salts, Transport, ...1.0115

INVESTIGATION OF ANOMALOUS WATER ...Condensation, Density, Phy and Chem Properties, Vapor Pressure, Viscosity, Water, ...3.0288

EFFECT OF THE WARM CLOUD BASE UPON CLOUDSEEDING FROM THE GROUND ...Clouds-precipitation, Iodine, Nucleation, Nucleation Physics, Silver, ...2.0156

Chemistry - Organic Compounds

Aliphatics

Acids

DEVELOPMENT OF REVERSE OSMOSIS MEMBRANES ...Casting of Materials, Cellulose Acetate, Desalination, Nitrogen, Technique Development, ...3.0050

THE BIOCHEMISTRY OF ANAEROBIC DIGESTION ...Anaerobic, Anaerobic Bacteria, Biodegradation, Other, Respiration, ...5.0762

STUDIES ON THE METHANOGENIC BACTERIA IN SLUDGE ...Culture Collections, Digestion, Isolation From Nat. environ., Methane Bacteria (non-specif.), ...5.0259

NEW-TYPE GLYCOL MONO ALKYL ETHERS FOR THE CONTROL OF WATER EVAPORATION, TO EXTEND THE USE OF COTTONSEED OIL ...Agronomic, Condensation, Evaporation, Water Loss Control, ...2.0451

EFFECT OF NITRILOTRIACETIC ACID (NTA) UPON THE TOXICITY OF METALS TO SELECTED SPECIES OF ESTUARINE PHYTOPLANKTON ...Carbon, Chemicals (incl. algicides), Estuaries, Phytoplankton, Radioisotopes, ...5.1085

INVESTIGATION OF SOAP-DETERGENT COMBINATIONS BASED ON INEDIBLE ANIMAL FA ...Biodegradation, Hydrolysis, Organic, Stability, Surfactants, ...5.0991

Alcohols

SILVEX PERSISTENCE IN WATER AND HYDROSOIL ...Chemical Analysis (water), Clay, Esters, Sand, ...8.0162

DIELECTRIC PROPERTIES OF HYDROGEN-BONDED LIQUIDS ...Desalination, Dielectric Properties, Hydrogen, Isomerism, Thermal Relation-other, ...1.0078

ENERGETICS AND STRUCTURE OF THE HYDROGEN BOND ...Hydrogen, Infrared, Polarization, Solution, Telemerization, ...1.0036

VISCOSITY STUDIES OF AQUEOUS SOLUTIONS ...Activation Energy, Desalination, Mixed Solvents, Viscosity, Water, ...1.0033

INTERFACIAL STRUCTURE AND TRANSPORT IN WATER ...Evaporation, Flow Characteristics -water, Surface-other, Viscosity, Water Loss Control, ...3.0152

INTERMEDIATE PRODUCTS IN THE BACTERIAL DECOMPOSITION OF HEXADECANOL AND OCTADECANOL ...Biodegradation, Gas, ...5.1158

SOIL MOISTURE EVAPORATION AND ITS CONTROL ...Antitranspirants, Evaporation, Organometallic, Soil Environment, Soil Physical Properties, Tillage, Cropping Systems, Water Loss Control, ...2.0969

EVAPORATION REDUCTION INVESTIGATIONS STUDY OF THE EFFECTS OF FATTY ALCOHOLS ON THE ECOLOGY OF LAKE HEFNER ...Antitranspirants, Lakes, Physiological Ecology, Plankton (non-specific), Texas, ...3.0130

Aldehydes

AEROBIC SECONDARY TREATMENT OF PLYWOOD GLUE WASTES ...Activated, Aeration, Aerobic, Lagoon, Process Design, Secondary Treatment, ...5.0984

Aldose and Ketose

THE HYDROLOGIC SIGNIFICANCE OF CHEMICALLY DERIVED MEAN BASIN TEMPERATURES ...Air Temperature Instruments, Evaporation, Forecasting-prediction, Heat Measurement, Pennsylvania, ...2.0924

AN EVALUATION OF THE SUGAR-INVERSION METHOD OF MEASURING MEAN TEMPERATURE IN A CLIMATOLOGICAL NETWORK ...Inversion, Microclimate-general, Physical Climatology, Temperature, ...2.0925

Amines

(U) DETERMINATION OF FREE BROMINE IN WATER (US 14) ...Analysis and Detection, Bromine, Chlorine, Colorimetric, ...5.0372

Esters

SILVEX PERSISTENCE IN WATER AND HYDROSOIL ...Alcohols, Chemical Analysis (water), Clay, Sand, ...8.0162

DEVELOPMENT OF ULTRATHIN SKIN MEMBRANES - HEMA POLYMERS ...Desalination, Films, Membranes-other, Polymerization-general, Reverse Osmosis, ...3.0278

BIODEGRADABLE DETERGENTS FROM ANIMAL FATS ...Biodegradation, Septic Tanks, Sulfonates (rso3na), Surfactants, ...5.0992

Olefins

STUDIES OF MEMBRANE PHENOMENA - PREPARATION OF NEW ELECTRODIALYSIS MEMBRANES ...Electrodialysis, Ion Selective, Organic, Polarization, ...3.0350

Phosphorous

NMR AND IR STUDIES OF HYDROGEN BONDING IN N-ALKYLPHOSPHORAMIDATES ...Hydrogen, Infrared, Nuclear Magnetic Resonance, Salt, Steric Effects, ...5.0279

Salt

THERMODYNAMICS OF MIXING OF SALT SOLUTIONS ...Alkali Metals-general, Solution, ...1.0090

THE HEATS OF MIXING OF STRONG ELECTROLYTES ...Alkaline Earth-general, Electrolytes, Solution, Water, ...1.0029

DISSOLVED GASES AND WATER CLUSTERING IN AQUEOUS SOLUTION ...Chlorine, Dioxide, Ions and Gases, Solution, Thermal Properties-other, Water, ...1.0052

ION HYDRATION AND ION INTERACTION ...Assoc & Dissoc, Attenuation, Calcium, Hydration, Magnesium, Ultrasonic, Ultrasonics, ...1.0059

TRANSPORT PHENOMENA IN FUSED ORGANIC SALTS ...Desalination, Diffusion-other, Reverse Osmosis, Thermal Properties-other, Viscosity, ...3.0075

Saturated Hydrocarbons

DISSOLVED ORGANIC PHOSPHORUS IN NATURAL WATERS ...Analysis and Detection, Organic-general, Precipitation, Radiochemical Techniques, Removal--inorganics, ...1.0088

CONSTANT TOTAL PRESSURE EVAPORATION WITH HEART REUSE BY A BULIT-IN ENGINE ...Additives, Boiling Point, Condensation, Desalination, Heat Recovery, ...3.0135

ORGANIC DECOMPOSITION AT POISED O-R POTENTIAL LEVELS ...Anaerobic, Digestion, Electrodialysis, Membranes-other, ...5.0550

MICROBIAL INTERACTIONS IN WASTE TREATMENT SYSTEMS ...Anaerobic, Digestion, Filter-other, Ion Selective, Microbial-bacterial, ...5.0395

CONTROLLING FACTORS IN METHANE FERMENTATION ...Bacterial Culture, Cell. env.(non-specific & Ot.), Fermentation, Methane Bacteria (non-specif.), Respiration, ...5.0754

MICROBIOLOGY OF ANAEROBIC SLUDGE ...Anaerobic, Biological, Digestion, Fermentation, Microbial-bacterial, ...5.0809

Condensed Alicyclics

4 Ring System

HETEROGENEOUS NUCLEATION AND CONDENSATION OF VAPORS ...Argon, Liquid, Nucleation, Solution, Water, ...1.0094

Condensed Aromatics

Nitroso Compounds

REAGENTS FOR DETERMINATIONS OF TRACE IMPURITIES IN WATER ...Analysis and Detection, Cobalt, Inorganic, Nitrate, Nitrite, Spectroscopy-general, ...5.0330

Quinones

COMPOSITION OF RESIDUES FROM PULP BLEACHING TREATMENTS ...Chlorination, Extraction, Natural Occurring, Pulp and Paper Wastes, ...5.0760

METHOD FOR QUANTITATIVE ANALYSIS OF PHENOLS IN FUEL CELL PRODUCT WATER ...Alcohols, Fuel Cell-other, Steam Distillation, Ultraviolet, Water, ...1.0041

Dyes and Coloring

- BIOLOGICAL TREATMENT OF SPENT VEGETABLE TANNINS ...Biological, Chemical Treatment, Industrial Wastes, Tannery Wastes, Waste Water Treatment-general, ...5.1283
- CHEMICAL CHARACTERISTICS OF ORGANIC COLOR IN WATER ...Chemical Analysis, Coagulation, Depolymerization, Hydrolysis, Other, ...5.1259
- LIGAND EXCHANGE REAGENTS ...Colorimetric, Complexes, Compound, Ion Exchange-other, Spectroscopy-other, ...5.0431
- WATER MEASUREMENT ...Discharge-general, Fluids, Measurement, Technique Development, Water Quantity-general, ...8.0128
- SOLAR REFLECTANCE OF MONOLAYER-COVERED WATER SURFACES AS RELATED TO EVAPORATION SUPPRESSION ...Antitranspirants, Evaporation, Monolayers, Polymer-other, Sunshine, ...3.0110

Heterocyclics (1 Hetero)

Nitrogen

- DEVELOPMENT OF REVERSE OSMOSIS MEMBRANES ...Acids, Casting of Materials, Cellulose Acetate, Desalination, Technique Development, ...3.0050
- DESIGN AND CONSTRUCTION OF A REVERSE OSMOSIS PILOT PLANT FOR THE DESALINATION OF SEA WATER ...Desalination, Membranes-other, Pilot Plant, Reverse Osmosis, Sea Water-general, ...3.0051

Heterocyclics (2 Hetero)

Heterocyclics-other

- ENHANCEMENT OF WATER QUALITY USING FOREST DERIVED COAGULATING SYSTEMS ...Alcohols, Aldehydes, Coagulation, Condensation, Industrial Processes-other, Pulp, Paper, and Logging, ...5.1255

Noncondensed Aromatics

Alcohols

- ENZYMES FOR ANALYSIS AND PURIFICATION OF SALINE WATER SYSTEMS ...Biodegradation, Bioindicators, Degradation, Fluorometry, Heavy Elements, Pesticides, ...5.0456
- ENHANCEMENT OF WATER QUALITY USING FOREST DERIVED COAGULATING SYSTEMS ...Aldehydes, Coagulation, Condensation, Heterocyclics-other, Industrial Processes-other, Pulp, Paper, and Logging, ...5.1255
- METAL ION-CATALYZED OXIDATION OF PHENOLS AND AROMATIC AMINES ...Catalytic, Metal Ion, Organic Wastes, Radioisotopes, ...5.1159
- EXPERIMENTAL CLOSED WATER SYSTEM TO ELIMINATE WASTE WATER DISCHARGE FROM JOHNS MANVILLE PLANT 03, DEFIANCE, OHIO ...Industrial Processes-other, Screening, Solubility, Waste Water Treatment-general, ...5.0724
- DEMONSTRATION OF A FACILITY FOR THE BIOLOGICAL TREATMENT OF COMPLEX CHLOROPHENOLIC WASTE ...Aerobic, Organics, Pesticides, Pond, Removal of Residues, ...5.0055
- METHOD FOR QUANTITATIVE ANALYSIS OF PHENOLS IN FUEL CELL PRODUCT WATER ...Fuel Cell-other, Quinones, Steam Distillation, Ultraviolet, Water, ...1.0041
- SORPTION ISOTHERMS OF PHENOL ON ION EXCHANGE RESINS ...Industrial Processes-other, Industrial Wastes, Ion Exchange-other, Isotherm, ...2.0402

Aldehydes

- ENHANCEMENT OF WATER QUALITY USING FOREST DERIVED COAGULATING SYSTEMS ...Alcohols, Coagulation, Condensation, Heterocyclics-other, Industrial Processes-other, Pulp, Paper, and Logging, ...5.1255

Amines

- SOLID COORDINATION COMPOUNDS OF ALKALI METAL SALTS ...Alkali Metals-general, Chelation, Electronic Structure-other, Precipitation, ...3.0432

Benzene Rings

- THE RELATIONSHIP BETWEEN ADSORPTION AND PERMEABILITY ...Adsorption-other, Cellulose Acetate, Organometallic, Permeability, Silica Gel, ...2.0698

Noncondensed Aromatics-other

- THE ANALYSIS OF AROMATIC CONSTITUENTS IN WATER USING FLUORESCENCE AND PHOSPHORESCENCE ...Analy-

sis and Detection, Chromatography-other, Extraction-other, Spectroscopy-other, Taste and Odor, ...5.0711

Salt

- NMR AND IR STUDIES OF HYDROGEN BONDING IN N-ALKYLPHOSPHORAMIDATES ...Hydrogen, Infrared, Nuclear Magnetic Resonance, Phosphorous, Steric Effects, ...5.0279

Organics-general

- SOLAR REFLECTANCE OF MONOLAYER-COVERED WATER SURFACES AS RELATED TO EVAPORATION SUPPRESSION ...Evaporation, Evaporation Control, Monolayers, Refractometry, Water Loss Control, ...2.1110
- ADSORPTION OF ORGANIC COMPOUNDS ONTO SOLIDS FROM AQUEOUS SOLUTIONS ...Adsorption-general, Area, Organic Matter, Solution, Surface Energy, Surface-other, ...1.0122
- IDENTIFICATION OF NATURAL AND SYNTHETIC ORGANIC COMPOUNDS IN RAW AND TREATED MUNICIPAL WASTES ...Chromatography-other, Filtration, Purification-general, Separation-general, Tertiary Treatment, ...5.0847

Pesticides

- ENZYMES FOR ANALYSIS AND PURIFICATION OF SALINE WATER SYSTEMS ...Alcohols, Biodegradation, Bioindicators, Degradation, Fluorometry, Heavy Elements, ...5.0456
- SORPTION AND DESORPTION OF CHLORINATED HYDROCARBON PESTICIDES IN AQUATIC SEDIMENT MINERALS ...Absorption, Fixation, Exchange, Adsorption Capacity, Adsorption-desorption, Equilibrium-other, Model Studies, ...5.0690
- DEMONSTRATION OF A FACILITY FOR THE BIOLOGICAL TREATMENT OF COMPLEX CHLOROPHENOLIC WASTE ...Aerobic, Alcohols, Organics, Pond, Removal of Residues, ...5.0055
- ORGANIC SUBSTANCES IN WATER ...Extraction, Gas, Infrared, Organic Wastes, Vacuum Distillation, ...5.0120
- INTERACTIONS OF PESTICIDES AND SEDIMENTED OILS ...Chemical Treatment-other, Chlorinated Hydrocarbons, Other, Pollutants - Path of, ...5.0551

Poisons-other

- EFFECTS OF CRUDE OILS AND THEIR EMULSIONS TO MARINE ORGANISMS ...Chelating Agents, Emulsion, Oil, Petroleum Chemistry, Removal-organics, ...5.1082

Chemistry - Polymer

Basic Structure

Copolymers

- NEW SYNTHETIC MEMBRANES FOR REVERSE OSMOSIS DESALINATION ...Desalination, Membranes-other, Reverse Osmosis, Technique Development, ...3.0468
- RESEARCH AND DEVELOPMENT OF NEW POLYMER SYSTEMS FOR REVERSE OSMOSIS MEMBRANES ...Desalination, Membranes-other, Organic, Reverse Osmosis, ...3.0031
- IMPROVED ION EXCHANGE POLYMERS AND MEMBRANES FOR ELECTRODIALYSIS OF SALINE WATER ...Electrodialysis, Ion Exchange-other, Membranes-other, Other, ...3.0395
- DEVELOPMENT OF DESALINATION MEMBRANES ...Desalination, Membranes-other, Organic, ...3.0406
- STUDIES OF MEMBRANE PHENOMENA - PREPARATION OF NEW ELECTRODIALYSIS MEMBRANES ...Desalination, Electrodialysis, Membranes-other, Organic, ...3.0351

Homopolymers

- DEVELOPMENT OF NEW AND IMPROVED CELLULOSE ESTER REVERSE OSMOSIS MEMBRANES ...Brines, Desalination, Membranes-other, Natural Occurring, Reverse Osmosis, ...3.0060

Terpolymers

- MEMBRANE MATERIALS FOR WASTE WATER RECLAMATION BY REVERSE OSMOSIS ...Cellulose Acetate, Demineralization, Reverse Osmosis, Waste Water Treatment-other, ...5.0149

Molecular Weight**Molecular Weight Distribution**

STRUCTURE OF SEMIPERMEABLE POLYMER FILMS AND ITS EFFECT ON SALT REJECTION ...Additives, Desalination, Filtration, Membranes-other, Morphology-other, ...3.0414

STUDIES OF LOW MOLECULAR WEIGHT LIGNIN SULFONATES ...Column, Natural Occurring, Solution, Sulfonates (rso₃na), ...5.1262

Molecular Weight-other

METHODS TO REDUCE WATER POLLUTION CAUSED BY STORM WATER SEWER LOADING BY USING FLUID FLOW FRICTION REDUCERS ...Flow, Friction, Polyelectrolytes, Storm Sewer Quantity-other, Storm Water, ...5.1185

Size

UNSTEADY FLOW OF DILUTE AQUEOUS HIGH POLYMER SOLUTIONS IN PIPES ...Additives, Fluid Flow-other, Mathematics Matching Code, Pipes, Unsteady, ...8.0164

Monomer Synthesis

SYNTHESIS OF MODIFIED LOEB MEMBRANES BY GRAFTING ...Desalination, Graft - Polymerization, Membranes-other, Natural Occurring, Porosity, ...3.0340

Morphology**Glassy**

ELECTRIC AND STRUCTURAL PROPERTIES OF ION SELECTIVE MEMBRANES ...Electrical Properties-other, Electrolytes, Membranes-other, Permeability, Transport, ...5.0135

TRANSPORT PROPERTIES OF AQUEOUS ELECTROLYTE SOLUTIONS - AN APPROACH FROM THE HIGH CONCENTRATION LIMIT ...Concentration, Desalination, Entropy, Transport, Viscosity, ...1.0049

Morphology-other

EFFECT OF PH AND IONIC STRENGTH ON THE CRYSTALLIZATION AND MORPHOLOGY OF POLYMER MEMBRANES AND FIBERS ...Concentration, Desalination, Membranes-other, Natural Occurring, Reverse Osmosis, ...3.0188

THE PREPARATION OF REVERSE OSMOSIS MEMBRANES BY THE SURFACE MODIFICATION OF CELLULOSE AND RELATED MATERIALS ...Desalination, Membranes-other, Natural Occurring, Reverse Osmosis, ...3.0211

STRUCTURE OF SEMIPERMEABLE POLYMER FILMS AND ITS EFFECT ON SALT REJECTION ...Additives, Desalination, Filtration, Membranes-other, Molecular Weight Distribution, ...3.0414

PREPARATION OF REVERSE OSMOSIS MEMBRANES BY SURFACE MODIFICATION OF CELLULOSE AND RELATED MATERIALS ...Cellulosics, Desalination, Film, Membranes-other, Reverse Osmosis, ...3.0212

DEVELOPMENT OF HOLLOW FILAMENT TECHNOLOGY FOR REVERSE OSMOSIS DESALINATION SYSTEMS ...Desalination, Membranes-other, Reverse Osmosis, Technique Development, ...3.0165

STRUCTURE AND MECHANICAL BEHAVIOR OF POLYMERIC MEMBRANES ...Cellulose Acetate, Cellulosics, Mechanical Properties-general, Reverse Osmosis, Structure-materials-general, ...8.0269

Polymer Types**Natural Occurring**

WHITE WATER CLARIFICATION AND REUSE ...Electrokinetic-other, Flocculation, Pulp and Paper Wastes, Waste Treatment-economics, Water Reuse, ...5.0334

MEMBRANES FOR REVERSE OSMOSIS DESALINATION BY DIRECT CASTING ON POROUS SUPPORTS ...Cellulosics, Cost Analysis, Film, Reverse Osmosis, Saline Conversion, ...3.0307

STUDY OF METHODS TO RETARD COMPACTION OF CELLULOSE ACETATE MEMBRANES IN REVERSE OSMOSIS DESALINATION ...Cellulose Acetate, Desalination, Membranes-other, Reverse Osmosis, Solid State, ...3.0149

PREPARATION AND CHARACTERIZATION OF MEMBRANES FOR REVERSE OSMOSIS ...Desalination, Membranes-other, Reverse Osmosis, ...3.0364

MULTICOMPONENT MEMBRANE FOR REVERSE OSMOSIS ...Membranes-other, Other, Reverse Osmosis, ...3.0386

EFFECT OF PH AND IONIC STRENGTH ON THE CRYSTALLIZATION AND MORPHOLOGY OF POLYMER MEM-

BRANES AND FIBERS ...Concentration, Desalination, Membranes-other, Morphology-other, Reverse Osmosis, ...3.0188

SYNTHESIS OF MODIFIED LOEB MEMBRANES BY GRAFTING ...Desalination, Graft - Polymerization, Membranes-other, Monomer Synthesis, Porosity, ...3.0340

STUDY OF FACTORS WHICH DETERMINE THE IONIC SELECTIVITY OF BIOLOGICAL AND ARTIFICIAL MEMBRANES ...Ion Selective, Molecular Interaction, Other, Permeability, ...3.0371

THE PREPARATION OF REVERSE OSMOSIS MEMBRANES BY THE SURFACE MODIFICATION OF CELLULOSE AND RELATED MATERIALS ...Desalination, Membranes-other, Morphology-other, Reverse Osmosis, ...3.0211

NEW SELECTIVE MEMBRANES ...Calcium, Desalination, Ion Selective, Reverse Osmosis, ...5.0763

A STUDY OF MEMBRANES FOR DESALINATION BY REVERSE OSMOSIS ...Crosslinking, Desalination, Membranes-other, Reverse Osmosis, ...3.0030

DEVELOPMENT OF WATER PURIFICATION SYSTEMS BASED ON REVERSE OSMOSIS ...Desalination, Membranes-other, Plastic Matrix, Reinforcing Materials, Reverse Osmosis, ...3.0147

DEVELOPMENT OF NEAR NEUTRAL MEMBRANES FOR USE IN TRANSPORT DEPLETION SYSTEM ...Desalination, Electrodialysis, Ion Selective, ...3.0321

CHARACTERIZATION OF CELLULOSE ACETATE MEMBRANES AND ULTRATHIN FILMS FOR REVERSE OSMOSIS ...Desalination, Electrical Properties, Film, Membranes, Membranes-other, Reverse Osmosis, ...3.0362

THE PREPARATION OF ULTRA-THIN REVERSE OSMOSIS MEMBRANES BY ELECTROSTATIC DEPOSITION ...Desalination, Electrostatic, Membranes-other, Reverse Osmosis, ...3.0162

THE INFLUENCE OF HYDROXYL RATIO ON THE PERFORMANCE OF REVERSE OSMOSIS DESALINATION MEMBRANES ...Desalination, Membranes-other, Reverse Osmosis, ...3.0330

MODIFICATION OF PROTEIN FILMS FOR USE IN DESALINATION ...Desalination, Dialysis, Membranes-other, Polyvinyls-other, Reverse Osmosis, ...3.0269

HYDROFORMING REVERSE OSMOSIS MEMBRANES AND A DESALTING MODULE BASED ON THE HYDROFORMING PROCESS ...Desalination, Membranes-other, Regeneration-other, Reverse Osmosis, ...3.0268

EVALUATION OF DESALINATION PROPERTIES OF CELLULOSE ACETATE MEMBRANES IN FLAT, TUBULAR AND SPIRAL WOUND CONFIGURATIONS ...Desalination, Film, Membranes-other, Saline Conversion, Stress, Strain, ...3.0052

DEVELOPMENT OF NEW AND IMPROVED CELLULOSE ESTER REVERSE OSMOSIS MEMBRANES ...Brines, Desalination, Homopolymers, Membranes-other, Reverse Osmosis, ...3.0060

STUDIES OF LOW MOLECULAR WEIGHT LIGNIN SULFONATES ...Column, Molecular Weight Distribution, Solution, Sulfonates (rso₃na), ...5.1262

COMPOSITION OF RESIDUES FROM PULP BLEACHING TREATMENTS ...Chlorination, Extraction, Pulp and Paper Wastes, Quinones, ...5.0760

LIGNIN SULFONATES IN PULP MILL EFFLUENTS ...Column, Organic, Pulp and Paper Wastes, Sulfonates (rso₃na), Ultraviolet, ...5.0959

FLUOROMETRIC QUALITATION AND QUANTITATION OF LIGNIN SULFONATES IN WATER ...Fluorometry, Pulp and Paper, Pulp and Paper Wastes, Sulfate, Sulfite, Sulfonates (rso₃na), Type, ...5.0286

METAL ION INTERACTIONS WITH WATER ...Bond Energy, Forces, Hydrolysis, Inorganic, Metal Ion, Organic, Polynuclear Complex, Vibration, ...1.0077

STRUCTURE OF THE BLUE-GREEN ALGA TOXIN ...Cyanophyta (non-specific & Ot), Gas, Glucagon X Hor, Mass, Organic, ...5.0127

Organic

SYNTHESIS AND EVALUATION OF NEW POLYMER MEMBRANE CANDIDATES FOR APPLICATION IN REVERSE OSMOSIS ...Brackish Water, Brines, Desalination, Membranes-other, Reverse Osmosis, ...3.0174

RESEARCH AND DEVELOPMENT OF NEW POLYMER SYSTEMS FOR REVERSE OSMOSIS MEMBRANES ...Copolymers, Desalination, Membranes-other, Reverse Osmosis, ...3.0031

RESEARCH ON NEW ION-ADSORPTION ELECTRODES FOR DEMINERALIZATION OF SALINE WATER ...Desalination,

SUBJECT INDEX

Chemistry - Surface & Colloid

Electrochemistry-other, Electrode, Graft - Polymerization, Oxidation Reduction, Removal--inorganics, ...3.0363

STUDIES OF MEMBRANE PHENOMENA - PREPARATION OF NEW ELECTRODIALYSIS MEMBRANES ...Electrodialysis, Ion Selective, Olefins, Polarization, ...3.0350

DEVELOPMENT OF DESALINATION MEMBRANES ...Copolymers, Desalination, Membranes-other, ...3.0406

STUDIES OF MEMBRANE PHENOMENA - PREPARATION OF NEW ELECTRODIALYSIS MEMBRANES ...Copolymers, Desalination, Electrodialysis, Membranes-other, ...3.0351

WATER QUALITY CONTROL WITH SYNTHETIC POLYMERIC FLOCCULANTS ...Activated, Bacteria, Bacterial Pollutant Sources, Flocculation, Water Quality Control-general, ...5.0221

ROTATIONAL STABILITY OF DILUTE POLYMER SOLUTIONS ...Fluid Flow-other, Mass Transfer, Polymer Type-other, Solution, Transport, ...1.0027

INCREASING WATER SUPPLIES BY SUPPRESSION OF RESERVOIR EVAPORATION ...Evaporation, Membranes-other, Monolayers, Reservoirs and Impoundments, Water Loss Control, ...3.0397

SORPTION BEHAVIOR OF ORGANIC PYROPOLYMERS IN AQUEOUS SOLUTION ...Adsorption-absorption-other, Organics, Porosity, ...5.0232

WASTE TREATMENT FACILITIES FOR POLY VINYL CHLORIDE MANUFACTURING PLANT ...Activated, Activated Carbon, Chemical Manufacturing Wastes, Effluent-standards, Pond, ...5.0866

SUSPENDED AND COLLOIDAL SOLIDS REMOVAL--FLOCCULATION BY ORGANIC POLYMERS ...Biological Treatment-other, Chemical Treatment, Colloidal Phenomena, Filter-other, Separation-general, ...5.0851

Organometallic

THE RELATIONSHIP BETWEEN ADSORPTION AND PERMEABILITY ...Adsorption-other, Benzene Rings, Cellulose Acetate, Permeability, Silica Gel, ...2.0698

SOIL MOISTURE EVAPORATION AND ITS CONTROL ...Alcohols, Antitranspirants, Evaporation, Soil Environment, Soil Physical Properties, Tillage, Cropping Systems, Water Loss Control, ...2.0969

Polymer Type-other

EFFECT OF DRAG REDUCING ADDITIVES IN WATER TRANSPORTATION ...Additives, Close Channel, Drag, Fluid Flow-other, Laminar - Turbulent, ...1.0111

ROTATIONAL STABILITY OF DILUTE POLYMER SOLUTIONS ...Fluid Flow-other, Mass Transfer, Organic, Solution, Transport, ...1.0027

ROTATIONAL STABILITY IN DILUTE POLYMER SOLUTIONS ...Rheological-general, Solution, States of Flow, Waste Water Treatment-other, ...1.0028

DEMONSTRATION AND EVALUATION OF POLYMERIC ADDITIVES IN THE TREATMENT OF STORM SEWER OVERFLOW ...Combined Sewer, Pilot Plant, ...5.0579

STORM WATER DEMONSTRATION PROJECT - CITY OF SOMERSWORTH, NEW HAMPSHIRE ...Additives, Chlorination, Combined Sewer, Storm Water, ...5.0710

Polymer-other

DETERMINATION OF THE SURFACE AND COLLOIDAL CONDITIONS WHICH CAN LEAD TO HIGH SALT REJECTION REVERSE OSMOSIS POLYMER MEMBRANES ...Colloidal Phenomena, Desalination, Ion Selective, Reverse Osmosis, ...3.0071

ENCAPSULATION AND SOLIDIFICATION OF INTERMEDIATE LEVEL RADIOACTIVE WASTES IN THERMOPLASTICS ...Accidental, Encapsulation, Fire Research-other, Instrumentation, Plant Equip., Radioisotopes, Recovery, Scrap and Wastes, ...5.1142

SOLAR REFLECTANCE OF MONOLAYER-COVERED WATER SURFACES AS RELATED TO EVAPORATION SUPPRESSION ...Antitranspirants, Dyes and Coloring, Evaporation, Monolayers, Sunshine, ...3.0110

Structural Types

Crosslinked

GEL SEPARATION PROCESSES FOR SALINE SOLUTIONS ...Desalination, Gel Filtration, Ion Exchange-other, Other, ...3.0066

CORROSION PROTECTION BY INHIBITOR CROSS-LINKING AND SURFACE COATING GRAFTING ...Cement, Concrete, Inhibitors, Metallic Alloys, Metals, Radiation Induced, ...3.0404

RESEARCH ON IMPROVED REVERSE OSMOSIS MEMBRANES ...Cellulosics, Membranes-other, Polyvinyl Pyrrolidone, Porosity, Reverse Osmosis, Saline Conversion, ...3.0096

Chemistry - Specialized Fields

Drug Chemistry

INTERACTION OF ORGANIC MOLECULES IN WATER ...Assoc & Dissoc, Catalytic, Enzymatic, Organic-general, ...1.0058

Water Chemistry

THE CHEMISTRY OF MAGANESE IN NATURAL WATERS ...Analysis and Detection, Chemical-general, Manganese, Oxidation-other, Water Treatment -- General, ...5.0129

THE APPLICATION OF PROGRAMMED LEARNING TECHNIQUES TO WATER CHEMISTRY ...Chemical-general, Education and Training, Water Quality Control-general, ...5.0010

Chemistry - Surface & Colloid

Absorption

Absorption-other

ANALYSIS OF SOLUTIONS FOR SURFACE-ACTIVE CONSTITUENTS ...Detectors and Sensors, Electrochemical-other, Electrode, Electrolytes, Surfactants, ...5.0439

THE EFFECT OF DETERGENTS ON THE OXYGENATION OF WATER ...Activated, Isotherm, Oxygen, Surfactants, ...5.1207

PRODUCTION OF HIGHLY PALATABLE WATER FROM AIR FOR HOUSEHOLD, LIVESTOCK, AND INDUSTRIAL USE ...Cost Analysis, Potable Water, Process Development-other, Solar Still, Water Development, ...3.0242

STUDY OF MICROBIOLOGICAL-BIOCHEMICAL PHOSPHATE SORPTION MECHANISM BY ACTIVATED SLUDGE ...Activated, Mechanisms, Other, Phosphate, Phosphite, Sewage Bacteria, ...5.0907

Metals

CORROSION PROTECTION BY INHIBITOR CROSS-LINKING AND SURFACE COATING GRAFTING ...Cement, Concrete, Crosslinked, Inhibitors, Metallic Alloys, Radiation Induced, ...3.0404

Adsorption

Adsorption-general

ADSORPTION OF ORGANIC COMPOUNDS ONTO SOLIDS FROM AQUEOUS SOLUTIONS ...Area, Organic Matter, Organics-general, Solution, Surface Energy, Surface-other, ...1.0122

FLOCCULATION OF COLLOIDS WITH POLYELECTROLYTES IN AQUEOUS SALT SOLUTIONS ...Coagulation, Colloidal Phenomena, Flocculation, Polyelectrolytes, Salinity, ...5.1065

DISTRIBUTION OF ELEMENTS IN FLUVIAL AND BRACKISH ENVIRONMENTS ...Adsorption Capacity, Brackish Water, Chemical Reactions, Element Ratios, Exchange Capacity, Solution, ...2.0282

Adsorption-other

THE RELATIONSHIP BETWEEN ADSORPTION AND PERMEABILITY ...Benzene Rings, Cellulose Acetate, Organometallic, Permeability, Silica Gel, ...2.0698

ELECTROSORPTION AND DESORPTION PROCESS FOR DEMINERALIZATION ...Demineralization, Desalination, Electrochemistry-other, Industrial Operation-other, Membranes-other, ...5.0014

A STUDY OF PRESCALING DEPOSITION ...Copper, Desalination, Radioisotopes, Saline Conversion, Scaling, Encrusting, ...1.0011

CONSTRUCTION AND OPERATION OF 7-GPM PILOT PLANT FOR SILICA REMOVAL ...Evaporation, Hardness, Pilot Plant, Pollutant-other, Silicon, ...3.0323

THE ELECTROSORB PROCESS FOR DESALTING WATER ...Carbon, Desalination, Electrochemistry-other, Electrode, ...3.0102

THE THERMOSORB PROCESS FOR DESALTING WATER ...Carbon, Cost Analysis, Desalination, Ion Exchange-other, Thermal Treatment, ...3.0103

THE ELECTROSORB PROCESS FOR DESALTING WATER ...Carbon, Desalination, Electrochemistry-other, Electrode, ...3.0104

- ADSORPTION OF IONS IN TRACE CONCENTRATIONS ON SOIL AND SILT PARTICLES ...Adsorption: Capacity, Radioisotopes, Size, Soil Environment, Transfer Processes, ...2.0349
- THE IMPACT OF LEAD-ZINC MINING ON THE QUALITY AND ECOLOGY OF SURFACE WATERS IN SOUTHEAST MISSOURI ...Atomic Absorption, Lead, Missouri, Trace Elements, Zinc, ...5.0689
- THE EFFECT OF CLAY MINERALS ON THE CHEMICAL COMPOSITION OF FRESH AND SALINE WATERS ...Chemical-general, Clay Minerals-general, Core Analysis, Exchange-other, Groundwater, Interstitial - Connate Water, ...2.0360
- DEVELOPMENT OF PULSATING ADSORPTION FILTER FOR TERTIARY TREATMENT OF WASTE WATERS ...Ash-coal, Biological, Pilot Plant, Sand, Tertiary Treatment, ...5.0408
- NMR AND X-RAY STUDIES OF STRUCTURE IN AQUEOUS ELECTROLYTE SOLUTIONS ...Electrolytes, Nuclear Magnetic, Nuclear Magnetic Resonance, Reaction-general, Solution, X-ray, ...1.0073
- ADSORPTION FROM AQUEOUS SOLUTION ...Adsorption, Adsorption-absorption-other, Organic Matter, Organics, ...5.0558
- REFRACTORY ADSORPTION ON CHEMCOKE ...Activated Carbon, Carbon, Phys and Chem Properties, Refractory, ...5.1135
- STUDY OF THE SULFIDE-TO-SULFATE REACTION MECHANISM ...Biological Cycles, Oxidation-general, Properties and Structure, Pyrite Group, Solution Chemistry, Sulfate, Sulfite, Sulfide, ...5.0880
- STRUCTURE OF CARBON-OXYGEN COMPLEXES ...Carbon, Complexes, Infrared, Oxygen, Surface-other, ...1.0082
- PHYSICS AND CHEMISTRY OF SOIL WATER AND INTERFACIAL PHENOMENA ...Boundary Process (moisture), Frost and Permafrost, Moisture Retention, Permafrost-frozen, Thermal Properties-general, ...1.0076
- CHARACTERIZATION OF ORGANIC CONTAMINANTS IN TEXTILE WASTE EFFLUENTS ...Chromatography-other, Extraction-other, Organic Wastes, Spectroscopy-other, Textile Wastes, ...5.0280
- RELATIONSHIP OF PESTICIDE PROPERTIES TO ADSORPTION ...Electrophoresis, Polarization, Vapor Pressure, ...5.0825
- PARTICULATE-ORGANIC EFFECT - SENSORY QUALITY OF WATER ...Coagulation, Colloidal Phenomena, Organic Matter, Potable Water, Taste and Odor, Waste Water Treatment-other, ...5.1013
- SORPTION KINETICS IN FLOW THROUGH GRANULAR PARTICLES ...Groundwater, Ion Exchange-other, Porous Media - Flow Through, Rate Determination, Tertiary Treatment, Water Quality Control-general, ...5.1191
- Isotherm**
- REMOVAL OF TRACE ORGANICS FROM WATER BY ADSORPTION ON COAL ...Activated Carbon, Adsorption, Coal-general, Organic, Waste Water Treatment-general, ...5.1209
- THE EFFECT OF DETERGENTS ON THE OXYGENATION OF WATER ...Absorption-other, Activated, Oxygen, Surfactants, ...5.1207
- SORPTION ISOTHEMS OF PHENOL ON ION EXCHANGE RESINS ...Alcohols, Industrial Processes-other, Industrial Wastes, Ion Exchange-other, ...2.0402
- PHYSICO-CHEMICAL PHENOMENA ASSOCIATED WITH ORGANIC-COLLOIDAL SURFACE INTERACTIONS ...Absorption, Fixation, Exchange, Bond Type-general, Colloidal Phenomena, Decomposition-other, X-ray, ...5.0277
- Metals**
- A STUDY OF THE EFFECTS OF SURFACE POTENTIAL ON SCALE FORMATION ...Crystal Growth, Desalination, Electrochemistry-other, Nucleation, Scale Formation, ...3.0080
- Silica Gel**
- THE RELATIONSHIP BETWEEN ADSORPTION AND PERMEABILITY ...Adsorption-other, Benzene Rings, Cellulose Acetate, Organometallic, Permeability, ...2.0698
- Zeolite**
- OPERATION OF A 50,000 GPD PORTABLE PILOT PLANT ...Membranes-other, Mobile, Pilot Plant, Reverse Osmosis, Scale Formation, ...3.0029
- AMMONIA REMOVAL FROM AGRICULTURAL RUNOFF BY SELECTIVE ION EXCHANGE ...Ammonia, Ammonium, Ion Exchange-other, Process Design, Runoff, Waste Water Treatment-general, ...5.1247

Adsorption-desorption

- SORPTION AND DESORPTION OF CHLORINATED HYDROCARBON PESTICIDES IN AQUATIC SEDIMENT MINERALS ...Absorption, Fixation, Exchange, Adsorption Capacity, Equilibrium-other, Model Studies, Pesticides, ...5.0690
- MECHANISMS AND RATES OF HEAVY METAL SORPTION AND DESORPTION ...Concentration, Mechanisms, Other, Oxidation Reduction, Rate of Reaction, ...2.0181
- RURAL RUNOFF CONTROL ...Nutrients, Pesticides -non-specific, Runoff, Rural Areas, Thermal Properties-other, ...5.0282

Catalysts**Catalyst-other**

- APPLICABILITY OF ARDOX CATALYSTS TO THE OXIDATION OF MUNICIPAL SEWAGE EFFLUENTS AND OF WASTES PRODUCED DURING MANNED SPACE FLIGHT ...Catalytic, Effluent-standards, Manned Satellite, Municipal-waste-other, Sewage, ...5.0745

Enzymatic

- EFFECTS OF POLAR ORGANIC SOLVENTS ON ENZYME ACTION ...Dipole and Dielectric, Exobiology, Kinetics -other, Temperature, Water, ...1.0063
- INTERACTION OF ORGANIC MOLECULES IN WATER ...Assoc & Dissoc, Catalytic, Drug Chemistry, Organic-general, ...1.0058

Colloidal Phenomena

- DETERMINATION OF THE SURFACE AND COLLOIDAL CONDITIONS WHICH CAN LEAD TO HIGH SALT REJECTION REVERSE OSMOSIS POLYMER MEMBRANES ...Desalination, Ion Selective, Polymer-other, Reverse Osmosis, ...3.0071
- MICROFLOTATION AND FLOCCULATION OF NATURAL COLLOIDAL SYSTEMS ...Adsorption, Electrochemistry-other, Flocculation, Flotation, Microbial-bacterial, ...5.0790
- WATER RESEARCH PROGRAM - SECTION I, PROPERTIES OF SOLUTIONS ...Distribution Coefficient, Membranes-other, Potentiometry, Salts, Transport, Vapor, ...1.0115
- CHARACTERIZATION AND REMOVAL OF REFRACTORY COLOR COLLOIDS FROM HAWAIIAN SURFACE WATERS ...Coagulation, Color, Hawaii, Polyelectrolytes, Potable Water, Zeta Potential, ...5.0310
- TRANSPORT PROCESSES OF PARTICLES IN DILUTE SUSPENSIONS IN TURBULENT WATER FLOW ...Flow Characteristics -water, Hydraulics-general, Sedimentation, Transport, Turbulent Flow, ...5.0370
- ELECTROPHORETIC CLARIFICATION OF WATER ...Bacterial Pollutant Sources, Desalination, Other, Pesticides -non-specific, Tertiary Treatment, Waste Water Treatment-general, ...5.1157
- FLOCCULATION OF COLLOIDS WITH POLYELECTROLYTES IN AQUEOUS SALT SOLUTIONS ...Adsorption-general, Coagulation, Flocculation, Polyelectrolytes, Salinity, ...5.1065
- THE REMOVAL OF IMPURITIES IN TRICKLING FILTER EFFLUENTS ...Coagulation, Other, Secondary Treatment, Tertiary Treatment, Trickling, ...5.1106
- FOAM SEPARATION FLOTATION OF COLLOID ORGANIC SYSTEMS ...Chromium, Flotation, Foam, Iron, Process Design, Pulp and Paper Wastes, Sulfate, Sulfite, Surfactants, ...5.0445
- DIFFERENTIAL ION MOBILITY AT COLLOIDAL SURFACES ...Diffusion-other, Hydrophobic, Membranes-other, Radiochemical Techniques, Transport, ...2.0053
- FLOW OF COLLOIDAL SUSPENSIONS IN POROUS MEDIA ...Model Studies, Porous Media - Flow Through, Radioisotopes, Suspension, ...2.0871
- PHYSICO-CHEMICAL PHENOMENA ASSOCIATED WITH ORGANIC-COLLOIDAL SURFACE INTERACTIONS ...Absorption, Fixation, Exchange, Bond Type-general, Decomposition-other, Isotherm, X-ray, ...5.0277
- SUSPENDED AND COLLOIDAL SOLIDS REMOVAL--FLOCCULATION BY ORGANIC POLYMERS ...Biological Treatment-other, Chemical Treatment, Filter-other, Organic, Separation-general, ...5.0851
- SUSPENDED AND COLLOIDAL SOLIDS REMOVAL--SOLIDS SEPARATION BY CHEMICAL TREATMENT AND FILTRATION ...Coagulation, Emulsion, Filter-other, Membranes-other, Separation-general, ...5.0854
- PARTICULATE-ORGANIC EFFECT - SENSORY QUALITY OF WATER ...Adsorption-other, Coagulation, Organic Matter, Potable Water, Taste and Odor, Waste Water Treatment-other, ...5.1013

SUBJECT INDEX

Chemistry - Surface & Colloid

Electrokinetics

Electrokinetic-other

WHITE WATER CLARIFICATION AND REUSE ...Flocculation, Natural Occurring, Pulp and Paper Wastes, Waste Treatment-economics, Water Reuse, ...5.0334

Electroosmosis

WATER TRANSPORT ACROSS MEMBRANES BY ELECTRO-OSMOSIS ...Desalination, Electric Field, Membranes-other, Transport, ...5.1012

ELECTRICAL EFFECTS ON WATER INFILTRATION INTO SOILS ...Electrical Properties, Infiltration, Soil Environment, Streaming Potential, Unsaturated Flow, Zeta Potential, ...2.0467

ELECTROSMOTIC PUMPING FOR DEWATERING SEWAGE SLUDGE ...Drying-dewatering, Electrode, Sludge-general, Treatment-other, ...5.0072

FARM ANIMAL WASTE DISPOSAL ...Aeration, Animal Waste Removal-treatment, Drying-dewatering, Farm Wastes, ...5.0564

Electrophoresis

REMOVAL OF SUSPENDED MATTER AND TURBIDITY FROM WATER BY FLOCCULATION WITH POLYELECTROLYTE COAGULANTS AND COAGULATION ACIDS ...Flocculation, Polyelectrolytes, Sediments, Waste Water Treatment-general, ...4.0109

RELATIONSHIP OF PESTICIDE PROPERTIES TO ADSORPTION ...Adsorption-other, Polarization, Vapor Pressure, ...5.0825

Streaming Potential

THE TRANSPORT OF SALTS AND WATER ACROSS A CATION EXCHANGER UNDER A GRADIENT OF HYDROSTATIC PRESSURE ...Cation, Desalination, Membranes-other, Thermodynamic Non Equilibrium, ...3.0467

ELECTRICAL EFFECTS ON WATER INFILTRATION INTO SOILS ...Electrical Properties, Electroosmosis, Infiltration, Soil Environment, Unsaturated Flow, Zeta Potential, ...2.0467

TREATMENT OF WATER FROM SMALL RESERVOIRS FOR DOMESTIC CONSUMPTION ...Coagulation, Filter-other, Water Utilization -domestic, ...5.0397

Zeta Potential

ELECTRICAL EFFECTS ON WATER INFILTRATION INTO SOILS ...Electrical Properties, Electroosmosis, Infiltration, Soil Environment, Streaming Potential, Unsaturated Flow, ...2.0467

CHARACTERIZATION AND REMOVAL OF REFRACTORY COLOR COLLOIDS FROM HAWAIIAN SURFACE WATERS ...Coagulation, Colloidal Phenomena, Color, Hawaii, Polyelectrolytes, Potable Water, ...5.0310

A MATHEMATICAL MODEL FOR THE FINAL CLARIFIER OF AN ACTIVATED SLUDGE PROCESS ...Activated, Computers-general, Effluents-waste Water, Forecasting-prediction, Thickening, ...5.1322

Emulsion

EFFECTS OF SURFACTANTS ON FIBROUS BED COALESCING ...Interface, Packed Bed, Solubility, Surfactants, Water Treatment -- General, ...5.0340

PREPARATION OF MONODISPERSE EMULSIONS ...Distribution, Kinetic-general, Nucleation, Precipitation, ...5.0064

THE SURFACE SHEAR VISCOSITY OF MONOMOLECULAR FILMS ...Viscosity, ...5.0791

TREATMENT OF WASTE WATER - WASTE OIL MIXTURE ...Coagulation, Disposal, Flocculation, Flotation, Process Design, ...5.0898

FILTRATION OF AQUEOUS EFFLUENTS CARRYING EMULSIFIED OILS ...Coagulation, Effluents-waste Water, Filter-other, Oil - Technological Testing, ...1.0008

SUSPENDED AND COLLOIDAL SOLIDS REMOVAL-SOLIDS SEPARATION BY CHEMICAL TREATMENT AND FILTRATION ...Coagulation, Colloidal Phenomena, Filter-other, Membranes-other, Separation-general, ...5.0854

EFFECTS OF CRUDE OILS AND THEIR EMULSIONS TO MARINE ORGANISMS ...Chelating Agents, Oil, Petroleum Chemistry, Poisons-other, Removal-organics, ...5.1082

Films

DEVELOPMENT OF PERMANENT SYSTEMS FOR DROPWISE CONDENSATION ...Condensation, Distillation-other, Heat Transfer, Pilot Plant, Vapor, ...3.0411

AN INTERFEROMETRIC INVESTIGATION OF TRANSPORT PHENOMENA IN PARTIAL PRESSURE DISTILLATION

...Demineralization, Distilling Units, Evaporation, Heat Transfer, Interface, ...3.0489

DEVELOPMENT OF ULTRATHIN SKIN MEMBRANES - HEMA POLYMERS ...Desalination, Esters, Membranes-other, Polymerization-general, Reverse Osmosis, ...3.0278

IMPROVEMENT OF THE CORROSION RESISTANCE OF ALUMINUM BRASS FOR USE IN SEA WATER CONVERSION PLANTS ...Copper, Desalination, High, Oxidizing Atmosphere, Water, ...3.0213

Heterogeneous Catalysis

CATALYTIC OXIDATION OF ORGANIC COMPOUNDS IN WASTE WATERS ...Chemical Treatment-general, Electrochemistry-other, Electrolytic, Organics, ...5.0332

HETEROGENEOUS OXIDATION OF POLLUTANTS IN WATER ...Chemical Treatment-other, Element, Organic Matter, Oxidants, Regeneration-other, ...5.0789

Homogeneous Catalysis

Metal Ion

METAL ION-CATALYZED OXIDATION OF PHENOLS AND AROMATIC AMINES ...Alcohols, Catalytic, Organic Wastes, Radioisotopes, ...5.1159

METAL ION INTERACTIONS WITH WATER ...Bond Energy, Forces, Hydrolysis, Inorganic, Natural Occurring, Organic, Polynuclear Complex, Vibration, ...1.0077

Interface

KINETICS OF ADSORPTION VIA DOUBLE LAYER CAPACITY MEASUREMENTS ...Aqueous, Electrode, Methodology, Non-electrical Measurements, ...1.0100

STATISTICAL MECHANICAL THEORIES OF FLUIDS ...Quantum Analysis, Solution, Statistical, Tension, Van Der Waals Forces, ...1.0084

AN INTERFEROMETRIC INVESTIGATION OF TRANSPORT PHENOMENA IN PARTIAL PRESSURE DISTILLATION ...Demineralization, Distilling Units, Evaporation, Films, Heat Transfer, ...3.0489

THERMODYNAMICS AND TRANSPORT PROPERTIES OF MULTICOMPONENT INTERFACES ...Distillation-other, Extraction, Other, Surfactants, Viscosity, ...3.0483

INVESTIGATION OF DESALINATION BY FREEZING ...Bond Type-other, Desalination, Free Energy, Freezing, Impurity, ...3.0417

THE MECHANISM FOR FORMATION OF A SKINNED TYPE MEMBRANE ...Desalination, Evaporation, Light Scattering, Membranes-other, Solvent-other, ...3.0265

WATER RESEARCH PROGRAM - SECTION IV. SEPARATIONS PROCESS ...Additives, Chemical Effect-other, Membranes-other, Other, Permeability, Porosity, Reverse Osmosis, Separation-general, ...3.0441

A NUCLEAR MAGNETIC RELAXATION INVESTIGATION OF WATER-MEMBRANE INTERACTIONS ...Inorganic, Isotope-other, Membranes-other, Nuclear Magnetic Resonance, Relaxation, ...3.0349

EFFECTS OF SURFACTANTS ON FIBROUS BED COALESCING ...Emulsion, Packed Bed, Solubility, Surfactants, Water Treatment -- General, ...5.0340

IMPINGEMENT OF A FLUID ON A FLUID SURFACE ...Impinging Jets, Surface Phenomena, Tension, ...1.0127

INTERFACIAL WATER STRUCTURE AND PROPERTIES ...Hydration, Inorganic, Tension, Thermal Properties-other, Water, ...1.0044

COMPARATIVE EVALUATION OF REVERSE OSMOSIS PILOT PLANTS OF DIFFERENT DESIGN CONFIGURATIONS ...Cost Analysis, Desalination, Membranes-other, Polarization, Reverse Osmosis, ...3.0117

BASIC INVESTIGATION OF HEAT AND MOISTURE TRANSFER ACROSS THE AIR-WATER INTERFACE ...Boundary Layer Studies, Evaporation, Heat Exchange, Water Balance-budget, Water Loss Control, ...3.0124

Membranes

Cellulose Acetate

THE RELATIONSHIP BETWEEN ADSORPTION AND PERMEABILITY ...Adsorption-other, Benzene Rings, Organometallic, Permeability, Silica Gel, ...2.0698

WATER TRANSPORT THROUGH HYPERFILTRATION MEMBRANES ...Desalination, Radioisotopes, Rate Determination, Reverse Osmosis, ...3.0239

STUDY OF METHODS TO RETARD COMPACTION OF CELLULOSE ACETATE MEMBRANES IN REVERSE OSMOSIS DESALINATION ...Desalination, Membranes-other, Natural Occurring, Reverse Osmosis, Solid State, ...3.0149

DEVELOPMENT OF REVERSE OSMOSIS MEMBRANES ...Acids, Casting of Materials, Desalination, Nitrogen, Technique Development, ...3.0050

DEVELOPMENT OF IMPROVED CELLULOSE ACETATE MEMBRANES FOR REVERSE OSMOSIS ...Desalination, Fiber, Filament, Whisker, Reverse Osmosis, ...3.0264

DEVELOPMENT OF STORAGE TECHNIQUES FOR REVERSE OSMOSIS MEMBRANES ...Microorganisms (non-specific), Other, Reverse Osmosis, Storage, ...3.0058

AN EXPERIMENTAL INVESTIGATION OF CELLULOSE ACETATE MEMBRANE REGENERATION ...Fluid Flow-other, Other, Regeneration-other, Surface-other, ...3.0324

MODIFIED ION-EXCHANGE MEMBRANES FOR WATER PURIFICATION BY REVERSE OSMOSIS ...Desalination, High Pressure - 1-1000 Atm, Ion Exchange-other, Reverse Osmosis, ...3.0289

THE STRUCTURE OF THE ACTIVE LAYER OF THE ASYMMETRIC CELLULOSE ACETATE MEMBRANE - THE SALT AND WATER PERMEABILITY OF A BIOLOGICAL MEMBRANE ...Natural Occurring, Other, Porosity, Rate Determination, ...3.0353

14-01-0001-1760 -- IN-SITU FORMATION OF REGENERATIVE CELLULOSE ACETATE MEMBRANES ON POROUS SUPPORTS ...Casting of Materials, Ceramics - General, Reverse Osmosis, Saline Conversion, Solutionizing, ...3.0069

STRUCTURE AND MECHANICAL BEHAVIOR OF POLYMERIC MEMBRANES ...Cellulosics, Mechanical Properties-general, Morphology-other, Reverse Osmosis, Structure-materials-general, ...8.0269

BRACKISH WATER PURIFICATION BY BIOLOGICAL FUEL CELL POWERED ELECTRODIALYSIS ...Biological, Brackish Water, Desalination, Electrodialysis, Water Costs, ...5.0704

MEMBRANE MATERIALS FOR WASTE WATER RECLAMATION BY REVERSE OSMOSIS ...Demineralization, Reverse Osmosis, Terpolymers, Waste Water Treatment-other, ...5.0149

REVERSE OSMOSIS WATER PURIFICATION ...Military Aspects, Mobile, Other, Potable Water, Reverse Osmosis, ...3.0251

Ion Selective

INFLUENCE OF STRONGLY BOUND COUNTER-IONS ON PERMSELECTIVE MEMBRANES ...Crosslinking, Electrochemistry-other, Van Der Waals, ...3.0227

DEVELOPMENT OF ADVANCED TRANSPORT DEPLETION PROCESSES ...Brackish Water, Desalination, Electrodialysis, Pilot Plant, ...3.0002

DEMINERALIZATION BY FORCED-FLOW ELECTRODESALINATION ...Demineralization, Desalination, Electrodialysis, Fluid Flow-other, Porosity, Screening, ...3.0003

STUDY OF FACTORS WHICH DETERMINE THE IONIC SELECTIVITY OF BIOLOGICAL AND ARTIFICIAL MEMBRANES ...Molecular Interaction, Natural Occurring, Other, Permeability, ...3.0371

NEW SELECTIVE MEMBRANES ...Calcium, Desalination, Natural Occurring, Reverse Osmosis, ...5.0763

DETERMINATION OF THE SURFACE AND COLLOIDAL CONDITIONS WHICH CAN LEAD TO HIGH SALT REJECTION REVERSE OSMOSIS POLYMER MEMBRANES ...Colloidal Phenomena, Desalination, Polymer-other, Reverse Osmosis, ...3.0071

THE DESIGN, CONSTRUCTION AND TESTING OF A 10,000 GPD TRANSPORT DEPLETION DESALINATION PILOT PLANT ...Cost Analysis, Desalination, Other, Pilot Plant, ...3.0148

DEVELOPMENT OF NEAR NEUTRAL MEMBRANES FOR USE IN TRANSPORT DEPLETION SYSTEM ...Desalination, Electrodialysis, Natural Occurring, ...3.0321

THE ELECTROHYDRODYNAMICS OF ELECTRODIALYSIS SYSTEMS ...Desalination, Electrodialysis, Fluid Dynamics, ...3.0280

STUDY OF BIOLOGICAL DESALINATION PHENOMENA AND SALT TRANSPORT MECHANISMS OF SELECTIVE AVIAN SALT GLANDS ...Active Transport, Anseriformes -other, Chemical Analysis, Osmoregulation, Transport, ...3.0479

STUDIES OF MEMBRANE PHENOMENA - PREPARATION OF NEW ELECTRODIALYSIS MEMBRANES ...Electrodialysis, Olefins, Organic, Polarization, ...3.0350

STUDY OF REJECTION OF VARIOUS SOLUTES BY REVERSE OSMOSIS MEMBRANES ...Cellulosics, Removal--inorganics,

Removal--organics, Reverse Osmosis, Saline Conversion, ...3.0097

IMPROVEMENT OF ECONOMICS OF ELECTRODIALYSIS SYSTEMS BY SELECTIVE PRETREATMENT ...Brackish Water, Cost Analysis, Desalination, Electrodialysis, Other, Waste Water Pre-treatment, ...3.0407

MICROBIAL INTERACTIONS IN WASTE TREATMENT SYSTEMS ...Anaerobic, Digestion, Filter-other, Microbial-bacterial, Saturated Hydrocarbons, ...5.0395

SELECTIVE NITRATE AND PHOSPHATE REMOVAL ...Denitrification, Ion Exchange-other, Nitrate, Nitrite, Phosphate, Phosphite, Selective-removal, Waste Treatment-economics, ...5.0532

Membranes-other

RESEARCH ON LIFE SUPPORT POROUS MEMBRANES FOR REVERSE OSMOSIS ...Porosity, Potable Water, Recycle, Reverse Osmosis, Water Reuse, ...3.0169

DEVELOPMENT OF FIELD TEST FOR FREE CHLORINE ...Bromine, Chlorine, Colorimetric, Sterilants, Technique Development, ...5.0808

ACTIVE AND PASSIVE ION FLUXES ACROSS INTERFACES AND MEMBRANES ...Adsorption & Interface, Diffusion, Enzymes -non-specific, Ionic Effect, Transport, ...3.0348

THE TRANSPORT OF SALTS AND WATER ACROSS A CATION EXCHANGER UNDER A GRADIENT OF HYDROSTATIC PRESSURE ...Cation, Desalination, Streaming Potential, Thermodynamic Non Equilibrium, ...3.0467

NEW SYNTHETIC MEMBRANES FOR REVERSE OSMOSIS DESALINATION ...Copolymers, Desalination, Reverse Osmosis, Technique Development, ...3.0468

CONTROL OF CONCENTRATION POLARIZATION IN REVERSE OSMOSIS DESALINATION OF WATER ...Desalination, Flow Characteristics -water, Fluid Flow-other, Polarization, Reverse Osmosis, ...3.0287

A STUDY OF PRESSURE DIALYSIS AND COUPLING PHENOMENA IN SYNTHETIC AND NATURAL MEMBRANES ...Biodegradation, Desalination, Mosaic, Reverse Osmosis, Water Properties-general, ...3.0273

ELECTROSORPTION AND DESORPTION PROCESS FOR DEMINERALIZATION ...Adsorption-other, Demineralization, Desalination, Electrochemistry-other, Industrial Operation-other, ...5.0014

ELECTRIC AND STRUCTURAL PROPERTIES OF ION SELECTIVE MEMBRANES ...Electrical Properties-other, Electrolytes, Glassy, Permeability, Transport, ...5.0135

WATER TRANSPORT ACROSS MEMBRANES BY ELECTROSMOSIS ...Desalination, Electric Field, Electroosmosis, Transport, ...5.1012

STUDY OF METHODS TO RETARD COMPACTION OF CELLULOSE ACETATE MEMBRANES IN REVERSE OSMOSIS DESALINATION ...Cellulose Acetate, Desalination, Natural Occurring, Reverse Osmosis, Solid State, ...3.0149

PREPARATION AND CHARACTERIZATION OF MEMBRANES FOR REVERSE OSMOSIS ...Desalination, Natural Occurring, Reverse Osmosis, ...3.0364

MULTICOMPONENT MEMBRANE FOR REVERSE OSMOSIS ...Natural Occurring, Other, Reverse Osmosis, ...3.0386

SYNTHESIS AND EVALUATION OF NEW POLYMER MEMBRANE CANDIDATES FOR APPLICATION IN REVERSE OSMOSIS ...Brackish Water, Brines, Desalination, Organic, Reverse Osmosis, ...3.0174

STUDY OF ORIENTED CELLULOSE MEMBRANES FOR REVERSE OSMOSIS AND THE RELATIONSHIP BETWEEN MORPHOLOGY AND SALT REJECTION ...Desalination, Film, Orientation, Reverse Osmosis, Structure-materials-general, ...3.0248

EFFECT OF PH AND IONIC STRENGTH ON THE CRYSTALLIZATION AND MORPHOLOGY OF POLYMER MEMBRANES AND FIBERS ...Concentration, Desalination, Morphology-other, Natural Occurring, Reverse Osmosis, ...3.0188

STUDY OF MASS TRANSFER THROUGH MEMBRANES ...Desalination, Electrodialysis, Lasers, Polarization, Reverse Osmosis, ...3.0035

STUDIES ON THE MOLECULAR STRUCTURE OF BIOLOGICAL MEMBRANES ...Active Transport, Desalination, Plasma Membrane, Purif and Isol, Structure, ...3.0388

SYNTHESIS OF MODIFIED LOEB MEMBRANES BY GRAFTING ...Desalination, Graft - Polymerization, Monomer Synthesis, Natural Occurring, Porosity, ...3.0340

SUBJECT INDEX

Chemistry - Surface & Colloid

- STUDY OF THE HYDRODYNAMIC ASPECTS OF DESALINATION BY REVERSE OSMOSIS ...Other, Polarization, Reverse Osmosis, ...3.0267
- THE PREPARATION OF REVERSE OSMOSIS MEMBRANES BY THE SURFACE MODIFICATION OF CELLULOSE AND RELATED MATERIALS ...Desalination, Morphology-other, Natural Occurring, Reverse Osmosis, ...3.0211
- STRUCTURE AND MORPHOLOGY OF INORGANIC MEMBRANES ...Complexes, Electron, Gel, Transport, ...3.0463
- DEVELOPMENT OF ULTRATHIN SKIN MEMBRANES - HEMA POLYMERS ...Desalination, Esters, Films, Polymerization-general, Reverse Osmosis, ...3.0278
- REVERSE OSMOSIS TUBULAR MODULE OPTIMIZATION ...Desalination, Digital Computers, Pilot Plant, Reverse Osmosis, ...3.0070
- PREPARATION AND PROPERTIES OF GRAFTED AND VECTORED MEMBRANES FOR USE IN DESALINATION ...Copolymerization, Desalination, Gel, Graft - Polymerization, Porosity, ...3.0378
- A STUDY OF MEMBRANES FOR DESALINATION BY REVERSE OSMOSIS ...Crosslinking, Desalination, Natural Occurring, Reverse Osmosis, ...3.0030
- STUDY OF A SPECIFIC INFLUENCE OF IONIC SPECIES ON STRUCTURING IN WATER ...Configuration, Electrolytes, Entropy, Half Cell, Ion Exchange-other, ...1.0010
- DESIGN AND CONSTRUCTION OF A REVERSE OSMOSIS PILOT PLANT FOR THE DESALINATION OF SEA WATER ...Desalination, Nitrogen, Pilot Plant, Reverse Osmosis, Sea Water-general, ...3.0051
- RESEARCH AND DEVELOPMENT OF NEW POLYMER SYSTEMS FOR REVERSE OSMOSIS MEMBRANES ...Copolymers, Desalination, Organic, Reverse Osmosis, ...3.0031
- DESIGN, CONSTRUCT AND EVALUATE A 1,000 GALLON PER DAY REVERSE OSMOSIS UNIT OF RECTANGULAR CONFIGURATION ...Cost Analysis, Desalination, Other, Reverse Osmosis, ...3.0028
- DEVELOPMENT OF A 50,000 GALLON PER DAY NELLEN STACK ELECTRODIALYSIS MODULE ...Brackish Water, Cost Analysis, Desalination, Electrodialysis, Waste Treatment-economics, ...3.0150
- DEVELOPMENT OF WATER PURIFICATION SYSTEMS BASED ON REVERSE OSMOSIS ...Desalination, Natural Occurring, Plastic Matrix, Reinforcing Materials, Reverse Osmosis, ...3.0147
- HYDRODYNAMIC STUDIES FOR ELECTRODIALYSIS ...Electrodialysis, Pilot Plant, ...5.0121
- REVERSE OSMOSIS MEMBRANES CONTAINING GRAPHITIC OXIDE ...Desalination, Graphite, Pilot Plant, Reverse Osmosis, ...3.0416
- REVERSE OSMOSIS PERMEATORS - DESIGN STUDY ...Cost Analysis, Other, Pilot Plant, Reverse Osmosis, ...3.0367
- EVALUATION OF INORGANIC MEMBRANES FOR ELECTRODIALYSIS OF BRACKISH WATERS ...Desalination, Electrodialysis, Ion Exchange-other, Stability, Surfactants, ...3.0209
- TEMPERATURE EFFECTS ON BIOLOGICALLY INTERESTING MEMBRANE SYSTEMS ...Action- & Bioelectrical Pot., Model Membranes, Oils -fats, Permeability, Temperature, ...3.0182
- STRUCTURE OF SEMIPERMEABLE POLYMER FILMS AND ITS EFFECT ON SALT REJECTION ...Additives, Desalination, Filtration, Molecular Weight Distribution, Morphology-other, ...3.0414
- DIFFUSION AND FLOW IN INTERPHASE TRANSPORT ...Convection, Desalination, Liquid/liquid, Surfactants, ...5.0378
- CHARACTERIZATION OF CELLULOSE ACETATE MEMBRANES AND ULTRATHIN FILMS FOR REVERSE OSMOSIS ...Desalination, Electrical Properties, Film, Membranes, Natural Occurring, Reverse Osmosis, ...3.0362
- THE MECHANISM FOR FORMATION OF A SKINNED TYPE MEMBRANE ...Desalination, Evaporation, Interface, Light Scattering, Solvent-other, ...3.0265
- RESEARCH AND DEVELOPMENT OF ULTRATHIN FILM MEMBRANES FOR REVERSE OSMOSIS DESALINATION ...Brackish Water, Celluloses, Desalination, Dimensions, Expansion, Reverse Osmosis, ...3.0298
- THE PREPARATION OF ULTRA-THIN REVERSE OSMOSIS MEMBRANES BY ELECTROSTATIC DEPOSITION ...Desalination, Electrostatic, Natural Occurring, Reverse Osmosis, ...3.0162
- WATER RESEARCH PROGRAM - SECTION I, PROPERTIES OF SOLUTIONS ...Colloidal Phenomena, Distribution Coefficient, Potentiometry, Salts, Transport, Vapor, ...1.0115
- WATER RESEARCH PROGRAM - SECTION IV, SEPARATIONS PROCESS ...Additives, Chemical Effect-other, Interface, Other, Permeability, Porosity, Reverse Osmosis, Separation-general, ...3.0441
- THE INFLUENCE OF HYDROXYL RATIO ON THE PERFORMANCE OF REVERSE OSMOSIS DESALINATION MEMBRANES ...Desalination, Natural Occurring, Reverse Osmosis, ...3.0330
- MODIFICATION OF PROTEIN FILMS FOR USE IN DESALINATION ...Desalination, Dialysis, Natural Occurring, Polyvinyls-other, Reverse Osmosis, ...3.0269
- DESALINATION AND REDUCTION OF CONCENTRATION POLARIZATION EFFECTS IN REVERSE OSMOSIS SYSTEMS USING POROUS WALL SECTIONS ...Brines, Fluid Flow-other, Other, Porosity, Reverse Osmosis, ...3.0359
- A NUCLEAR MAGNETIC RELAXATION INVESTIGATION OF WATER-MEMBRANE INTERACTIONS ...Inorganic, Interface, Isotope-other, Nuclear Magnetic Resonance, Relaxation, ...3.0349
- PREPARATION OF REVERSE OSMOSIS MEMBRANES BY SURFACE MODIFICATION OF CELLULOSE AND RELATED MATERIALS ...Celluloses, Desalination, Film, Morphology-other, Reverse Osmosis, ...3.0212
- CONCEPTUAL DESIGN STUDY FOR ELECTRODIALYSIS ...Cost Analysis, Desalination, Electrodialysis, Marketing, Water, ...3.0210
- HYDROFORMING REVERSE OSMOSIS MEMBRANES AND A DESALTING MODULE BASED ON THE HYDROFORMING PROCESS ...Desalination, Natural Occurring, Regeneration-other, Reverse Osmosis, ...3.0268
- REVERSE OSMOSIS PILOT PLANT INVESTIGATIONS ...Cost Analysis, Desalination, Other, Pilot Plant, Reverse Osmosis, ...3.0056
- PRELIMINARY EVALUATION OF HIGH RETENTION MEMBRANES ...Desalination, Other, Reverse Osmosis, Sea Water-general, ...3.0059
- REVERSE OSMOSIS MEMBRANE REGENERATION ...Cost Analysis, Regeneration-other, Reverse Osmosis, ...3.0054
- DEVELOPMENT OF A THIN-LIQUID FILM MEMBRANE DEVICE FOR EFFICIENT DESALINATION BY REVERSE OSMOSIS ...Cost Analysis, Desalination, Process Development-other, Reverse Osmosis, ...3.0155
- CONCEPTUAL DESIGN STUDY ON REVERSE OSMOSIS MEMBRANE ASSEMBLY MODULAR UNIT ...Desalination, Pilot Plant, Process Development-other, Reverse Osmosis, ...3.0215
- TEST OPERATION OF A TUBULAR 4,300 GPD REVERSE OSMOSIS UNIT ON SEA WATER ...Desalination, Process Development-other, Reverse Osmosis, Sea Water-general, ...3.0098
- BRACKISH WATER FIELD TEST EVALUATION OF MEMBRANE PROCESSES ...Brackish Water, Desalination, Economic Efficiency, Pilot Plant, ...3.0072
- PARAMETRIC ECONOMIC AND ENGINEERING EVALUATION STUDY OF THE REVERSE OSMOSIS PROCESS ...Cost Analysis, Marketing, Pilot Plant, Reverse Osmosis, ...3.0164
- TEST OPERATION OF A 2,500 GPD TWO-STAGE SEA WATER REVERSE OSMOSIS PILOT PLANT ...Brines, Cost Analysis, Desalination, Optimization, Pilot Plant, Reverse Osmosis, ...3.0079
- EVALUATION OF DESALINATION PROPERTIES OF CELLULOSE ACETATE MEMBRANES IN FLAT, TUBULAR AND SPIRAL WOUND CONFIGURATIONS ...Desalination, Film, Natural Occurring, Saline Conversion, Stress, Strain, ...3.0052
- CONCEPTUAL DESIGN STUDY - REVERSE OSMOSIS MEMBRANE ASSEMBLY MODULAR UNIT ...Cost Analysis, Fluid Flow-other, Other, Reverse Osmosis, ...3.0345
- RESEARCH ON IMPROVED REVERSE OSMOSIS MEMBRANES ...Celluloses, Crosslinked, Polyvinyl Pyrrolidone, Porosity, Reverse Osmosis, Saline Conversion, ...3.0096
- DEVELOPMENT OF NEW AND IMPROVED CELLULOSE ESTER REVERSE OSMOSIS MEMBRANES ...Brines, Desalination, Homopolymers, Natural Occurring, Reverse Osmosis, ...3.0060
- DEVELOPMENT OF A WATER DESALINATION SYSTEM BASED ON HOLLOW FINE FIBER MEMBRANES ...Celluloses, Desalination, Fiber, Filament, Whisker, Pilot Plant, Reverse Osmosis, ...3.0274
- OPERATION OF A 50,000 GPD PORTABLE PILOT PLANT ...Mobile, Pilot Plant, Reverse Osmosis, Scale Formation, Zeolite, ...3.0029
- CONSTRUCTION AND DEVELOPMENT OF SPIRAL DESIGN ELECTRODIALYSIS MODULE ...Desalination, Electrodialysis, Pilot Plants, ...3.0154

DEVELOPMENT OF HOLLOW FILAMENT TECHNOLOGY FOR REVERSE OSMOSIS DESALINATION SYSTEMS ...Desalination, Morphology-other, Reverse Osmosis, Technique Development, ...3.0165

PARAMETRIC ECONOMIC AND ENGINEERING STUDY OF THE REVERSE OSMOSIS PROCESS ...Cost Analysis, Desalination, Other, Rate Determination, Reverse Osmosis, Water Costs, ...3.0573

CONCEPTUAL DESIGN STUDY ON ELECTRODIALYSIS MEMBRANE ASSEMBLY MODULAR UNIT DESIGN ...Cost Analysis, Desalination, Electrodialysis, Pilot Plant, Potable, ...3.0228

CONCEPTUAL DESIGN STUDY FOR ELECTRODIALYSIS ...Cost Analysis, Electrodialysis, Gasket Materials, Polarization, Saline Conversion, ...3.0285

IMPROVED ION EXCHANGE POLYMERS AND MEMBRANES FOR ELECTRODIALYSIS OF SALINE WATER ...Copolymers, Electrodialysis, Ion Exchange-other, Other, ...3.0395

RESEARCH ON POROUS GLASS MEMBRANES FOR REVERSE OSMOSIS ...Desalination, Fiber, Filament, Whisker, Glass Porosity, Permeability, Reverse Osmosis, Waste Water Treatment-other, ...3.0068

ION DISCRIMINATION BY HYDROPHOBIC MEMBRANES ...Diffusion-other, Equilibrium-other, Hydrophobic, Solution, ...3.0234

DEVELOPMENT OF DESALINATION MEMBRANES ...Copolymers, Desalination, Organic, ...3.0406

STUDIES OF MEMBRANE PHENOMENA - PREPARATION OF NEW ELECTRODIALYSIS MEMBRANES ...Copolymers, Desalination, Electrodialysis, Organic, ...3.0351

INCREASING WATER SUPPLIES BY SUPPRESSION OF RESERVOIR EVAPORATION ...Evaporation, Monolayers, Organic, Reservoirs and Impoundments, Water Loss Control, ...3.0397

ORGANIC DECOMPOSITION AT POISED O-R POTENTIAL LEVELS ...Anaerobic, Digestion, Electrodialysis, Saturated Hydrocarbons, ...5.0550

TREATMENT OF MUNICIPAL SECONDARY EFFLUENT BY REVERSE OSMOSIS ...Carbon, Fiber, Filament, Whisker, Glass, Pollutant-fouling, Reverse Osmosis, Waste Water Pre-treatment, ...5.0131

REVERSE OSMOSIS TREATMENT OF WASTEWATERS ...Industrial Wastes, Organic Wastes, Polyelectrolytes, Process Design, Reverse Osmosis, ...5.0516

RENOVATION OF MUNICIPAL WASTEWATER BY REVERSE OSMOSIS SYSTEMS ...Depolymerization, Model Studies, Process Design, Reverse Osmosis, Urban Environments, ...5.0092

APPLICATION OF HYPERFILTRATION WITH DYNAMICALLY-FORMED MEMBRANES TO TREATMENT OF MUNICIPAL SEWAGE EFFLUENTS ...Filtration, Polyelectrolytes, Secondary Treatment, Sludge-general, Tertiary Treatment, ...5.1143

DIFFERENTIAL ION MOBILITY AT COLLOIDAL SURFACES ...Colloidal Phenomena, Diffusion-other, Hydrophobic, Radiochemical Techniques, Transport, ...2.0053

WATER TREATMENT BY REVERSE OSMOSIS METHOD ...Fresh Water, Pilot Plants, Reverse Osmosis, Waste Water Treatment-general, ...5.0164

PROGRAM FOR FIELD EVALUATION OF REVERSE OSMOSIS PILOT PLANTS ON BRACKISH WATERS ...Brackish Water, Cost Analysis, Other, Pilot Plant, Reverse Osmosis, ...3.0115

PROGRAM FOR ELECTRODIALYSIS RESEARCH AND DEVELOPMENT ...Electrodialysis, High, Other, ...3.0116

COMPARATIVE EVALUATION OF REVERSE OSMOSIS PILOT PLANTS OF DIFFERENT DESIGN CONFIGURATIONS ...Cost Analysis, Desalination, Interface, Polarization, Reverse Osmosis, ...3.0117

CONTROL OF MINERAL CONSTITUENTS IN WASTE WATER BY ELECTRODIALYSIS ...Activated Carbon, Electrodialysis, Organics, Solid Waste, Waste Treatment-economics, ...5.0845

QUANTITATIVE DETECTION OF SMALL AMOUNTS OF VIRUSES IN LARGE VOLUMES OF WATER ...Analysis and Detection, Concentration, Detectors and Sensors, Filtration, Virus, ...5.0842

SUSPENDED AND COLLOIDAL SOLIDS REMOVAL--SOLIDS SEPARATION BY CHEMICAL TREATMENT AND FILTRATION ...Coagulation, Colloidal Phenomena, Emulsion, Filter-other, Separation-general, ...5.0854

Mosaic

RESEARCH ON PIEZODIALYSIS ...Desalination, Dialysis, High, ...3.0291

A STUDY OF PRESSURE DIALYSIS AND COUPLING PHENOMENA IN SYNTHETIC AND NATURAL MEM-

BRANES ...Biodegradation, Desalination, Membranes-other, Reverse Osmosis, Water Properties-general, ...3.0273

MOSAIC MEMBRANES FOR DESALINATION ...Desalination, Electrodialysis, Reverse Osmosis, ...3.0373

Natural Occuring

SOLUTE AND WATER TRANSPORT ACROSS BIOLOGIC MEMBRANES ...Active Transport, Blood Cells, Carbohydrates, Ionic Effect, Kidney and Urinary System, Sodium, ...2.0706

THE STRUCTURE OF THE ACTIVE LAYER OF THE ASYMMETRIC CELLULOSE ACETATE MEMBRANE - THE SALT AND WATER PERMEABILITY OF A BIOLOGICAL MEMBRANE ...Cellulose Acetate, Other, Porosity, Rate Determination, ...3.0353

MECHANICAL PROPERTIES OF ULTRA-THIN LIPID MEMBRANE ...Creep, Elasticity - General, Fracture - General, Laminates, Permeability, ...3.0342

Surface-other

FLOW FIELD IN A PACKED BED ...Fluid Flow-other, Mass Transfer, Packed Bed, Porous Media - Flow Through, ...1.0045

Suspension

AN INVESTIGATION OF THE EFFECT OF CONTROLLED RELEASES ON THE PHYSICAL, CHEMICAL AND BACTERIOLOGICAL CHARACTERISTICS OF FORT LOUDOUN RESERVOIR ...Nitrogen, Phosphate, Phosphite, Stratified Flow, Temperature-other, Tennessee, ...5.1128

Chemistry-organic Sulfur Cpds

Sulfonic Acid and Derivatives

Sulfonates (rsO₃Na)

THE APPLICATION OF LASER IONIZATION MASS SPECTROMETRY TO THE IDENTIFICATION OF ORGANIC SALTS IN POLLUTED WATER ...Applications of Lasers-masers, Organic Matter, Physical Parameters, Spectroscopy, Surfactants, ...1.0108

STUDIES OF LOW MOLECULAR WEIGHT LIGNIN SULFONATES ...Column, Molecular Weight Distribution, Natural Occurring, Solution, ...5.1262

LIGNIN SULFONATES IN PULP MILL EFFLUENTS ...Column, Natural Occurring, Organic, Pulp and Paper Wastes, Ultraviolet, ...5.0959

(U) BIODEGRADABILITY OF DETERGENT COMPOUNDS ...Activated, Biodegradation, Biological, Gas, Laundry Wastes, Surfactants, ...5.0534

FLUOROMETRIC QUALITATION AND QUANTITATION OF LIGNIN SULFONATES IN WATER ...Fluorometry, Natural Occurring, Pulp and Paper, Pulp and Paper Wastes, Sulfate, Sulfite, Type, ...5.0286

BIODEGRADABLE DETERGENTS FROM ANIMAL FATS ...Biodegradation, Esters, Septic Tanks, Surfactants, ...5.0992

Chemostat

PHOSPHATE UPTAKE, STORAGE, AND RELEASE BY MICROORGANISMS IN WASTEWATER TREATMENT ...Microorganisms (non-specific), Nutrition, Phosphate, Phosphite, Storage, Waste Water Treatment-general, ...5.1282

BIOCHEMICAL OXIDATION OF HYDROCARBONS IN NATURAL WATERS ...Bacteria (non-specific), Degradation, Hydrocarbons, Organic Matter, Seasonal, ...1.0110

Chesapeake Bay

THE BIOLOGY AND CHEMISTRY OF TRACE ELEMENTS IN MARINE AND ESTUARINE WATERS ...Estuaries, Phytoplankton, Productivity - Food Chain, Trace Element Analysis, Zooplankton, ...2.0556

A RECONNAISSANCE STUDY OF THE CHEAPEAKE BAY ...Erosion-general, Floods, Sedimentology-general, Shoreline - Coastline, Survey Studies, Thermal Pollution, ...6.0254

BIOLOGIC AND ENVIRONMENTAL CONTROL OF EURASIAN MILFOIL (MYRIOPHYLLUM SPICATUM L.) IN CHESAPEAKE BAY ...Bioccontrol, Histology and Cytology, Range Or Territorial Distr., Water Milfoil, Waterweed..., ...6.0251

SUSPENDED SEDIMENTS IN THE UPPER CHESEPECKE BAY - EVALUATION OF METHODS FOR SIZE ANALYSIS OF SUSPENDED MATERIALS ...Laboratory, Sampling, Size, Size Frequency Distribution, Turbidity, ...2.0557

SUBJECT INDEX

Chromatography

FIELD MEASUREMENTS OF THE TEMPORAL AND SPATIAL VARIATIONS IN CONCENTRATION AND PARTICLE SIZE DISTRIBUTION OF SUSPENDED MATERIALS IN THE UPPER ...Distribution, Maryland, Mineralogy, Size, Turbidity, ...2.0558

COMPARISON OF OPTICAL PROPERTIES WITH DIRECT MEASUREMENTS OF CONCENTRATION AND SIZE DISTRIBUTION OF SUSPENDED MATERIALS ...Fluorometry, Light Scattering, Optical Properties, Size, Turbidity, ...2.0559

ENHANCEMENT OF RECREATIONAL USES OF ESTUARINE WATERS THROUGH STUDY OF POTENTIAL CONTROL METHODS FOR STINGING SEA NETTLES ...Biological Control, Estuaries, Jelly Fish, Recreation Sites, Water Quality-general, ...6.0256

SEA NETTLE STUDIES IN CHESAPEAKE BAY, LIFE HISTORY AND ECOLOGY ...Aquatic Ecology, Bays, Biological Control, Jelly Fish, Life History Studies, ...6.0127

EFFECTS OF HEATED WATER IN A TIDAL ESTUARY ...Bays, Electric Power Plants, Pollution Effects, Thermal Pollution, Urban Environments, Water Properties-general, ...4.0078

DISTRIBUTION, LIFE HISTORY, AND ECOLOGY OF EURASIAN WATERMILFOIL ...Range Or Territorial Distr. , Submerged Plants, Water Milfoil, Waterweed... , Weeds -other, ...6.0263

PHYSICAL AND CHEMICAL CHARACTERISTICS OF THE UPPER CHESAPEAKE BAY ...Aquatic Soils, Chemical-general, Commercial Fishing, Environmental Effects-geologic, Physical-general, ...5.0506

POTENTIAL OYSTER SETTING CAPACITY - LOCAL AREAS ...Commercial Fishing, Other, Oysters, Spawn Or Nesting Sites, Streams, ...5.0507

ECOLOGY AND DISTRIBUTION OF OYSTERS AND CLAMS ...Clams, Commercial Fishing, Food Supply, Food Webs, Oysters, ...6.0268

SHELLFISH MORTALITY - CHESAPEAKE BAY ...Computer Matching Code, Mortality Rates, Oysters, Pathology, Protozoa, ...6.0264

Chloride

MINERAL RECOVERY FROM CONCENTRATED BRINES ...Brines, Desalination, Great Salt Lake, Magnesium, Potassium, Regeneration-other, ...5.1198

THE EFFECT OF SALTS APPLIED TO HIGHWAYS ON THE INFILTRATION AND PERCOLATION OF WATER THROUGH THE SOILS BANDING HIGHWAYS ...Infiltration, Pollutants - Path of , Snow and Ice Removal, Sodium, Soil Chemical Properties, ...5.0471

DIGESTION OF SLUDGES WITH SODIUM CHLORIDE AND SULFATE ...Digestion, Disposal, Disposal Wastes, Sodium, Sulfate, Sulfite, ...5.0299

CORROSION OF METALS IN CONCRETE ...Cement, Concrete, Low Alloy Steels, Stress, Strain, Water, ...8.0023

Chlorine

DEVELOPMENT OF FIELD TEST FOR FREE CHLORINE ...Bromine, Colorimetric, Membranes-other, Sterilants, Technique Development, ...5.0808

(U) DETERMINATION OF FREE BROMINE IN WATER (US 14) ...Amines, Analysis and Detection, Bromine, Colorimetric, ...5.0372

EFFECTS OF CHEMICAL IMPURITIES IN WATER DISINFECTION BY HALOGENS ...Chemical and Spices, Chlorination, Disinfectants, Taste and Odor, Water for Cooking Or Drinking, ...5.0512

DISINFECTION OF SMALL QUANTITIES OF DRINKING WATER ...Chemical Treatment-general, Iodine, Military Aspects, Potable Water, Sterilants, ...5.0374

DISSOLVED GASES AND WATER CLUSTERING IN AQUEOUS SOLUTION ...Dioxide, Ions and Gases, Salt, Solution, Thermal Properties-other, Water, ...1.0052

DISINFECTION OF SEWAGE EFFLUENTS ...Bacteria, Bromine, Chemical-general, Chlorination, Disinfection, Sewage, ...5.0380

AN INVESTIGATION OF LIGHT-CATALYZED CHLORINE FOR TREATMENT OF WASTE WATER ...Light-catalyzed, Organics, Oxidation-general, Waste Treatment-economics, Waste Water Treatment-general, ...5.0686

THE USE OF INERT GASES TO ELIMINATE POLLUTION FROM ABANDONED MINES ...Acid Mine Wastes, Air-general, Ammonia, Mine Atmosphere Conditions, Nitrogen, ...4.0205

SALT DISTRIBUTION ALONG LAKE BOTTOM AND WITHIN DEEP SEDIMENTS BENEATH GREAT SALT LAKE ...Great Salt Lake, Quaternary Period, Salt, Sodium, ...5.1201

Chlorites, hypochlorites

CHLORINATION AND HYPOCHLORINATION OF POLLUTED STORM WATER PUMPAGE ...Bacteria, Chlorination, Disinfection, Storm Sewer Quantity-other, Water Purification Plants, ...5.0458

Chlorophyll

BIOLOGY AND CHEMISTRY OF MARINE PLANKTON POPULATIONS ...Buoys, Food Chains, Nutrients, Phytoplankton, Vertical Distribution, Zooplankton, ...6.0289

THE INCORPORATION OF C14 BICARBONATE INTO PIGMENTS OF A NATURALLY OCCURRING BLUE-GREEN ALGAE COMMUNITY WITH RESPONSE TO WAVELENGTH ...Oscillatoria, Phycobilins, Physiological Ecology, Pigments, Vitamins, ...6.0432

THE INCORPORATION OF C14-BICARBONATE INTO THE PIGMENTS OF BLUE-GREEN ALGAE POPULATION ...Carotenoid Pigments, Nutrients, Oscillatoria, Phycobilins, Pigments, ...6.0433

Chromatography

Chromatography-general

ANALYTICAL METHODS - WATER CHEMISTRY ...Analysis and Detection, Chemical Analysis (water), Emission, Other, Photometric Techniques, ...2.0196

Chromatography-other

THE ANALYSIS OF AROMATIC CONSTITUENTS IN WATER USING FLUORESCENCE AND PHOSPHORESCENCE ...Analysis and Detection, Extraction-other, Noncondensed Aromatics-other, Spectroscopy-other, Taste and Odor, ...5.0711

THE ACTIVATION-CHROMATOGRAPHIC ELEMENTAL AND STRUCTURAL ANALYSIS OF FRESH WATER SOURCES ...Activation Analysis, Analysis and Detection, Fresh Water, Gamma, Inorganic, Organic, ...5.0252

DEVELOPMENT OF INSTRUMENTAL TECHNIQUES FOR THE ANALYSIS OF TRACE ORGANIC CONSTITUENTS IN WATER ...Analyzing, Infrared, Odor, Organic, Organic Wastes, ...5.0211

DETERMINATION OF DEGRADED DYES AND AUXILIARY CHEMICALS IN EFFLUENTS FROM TEXTILE DYEING PROCESSES ...Dye Wastes, Lagoon, Spectroscopy-other, Textile Wastes, Waste Water Treatment-general, ...5.0297

FIELD TECHNIQUES FOR CHEMICAL ANALYSIS OF WETLAND CRITERIA ...Chemical Analysis (water), Colorimetric, Translation Grants, Wetlands, ...1.0091

THE DETERMINATION OF THE STRUCTURES OF ORGANIC CONTAMINANTS IN WATER ...Analyzing, Chem Str Determination, Chemical Identification, Distillation-other, Spectroscopy-other, ...5.0278

IDENTIFICATION OF NATURAL AND SYNTHETIC ORGANIC COMPOUNDS IN RAW AND TREATED MUNICIPAL WASTES ...Filtration, Organics-general, Purification-general, Separation-general, Tertiary Treatment, ...5.0847

CHARACTERIZATION OF ORGANIC CONTAMINANTS IN TEXTILE WASTE EFFLUENTS ...Adsorption-other, Extraction-other, Organic Wastes, Spectroscopy-other, Textile Wastes, ...5.0280

Column

STUDIES OF LOW MOLECULAR WEIGHT LIGNIN SULFONATES ...Molecular Weight Distribution, Natural Occurring, Solution, Sulfonates (rso3na), ...5.1262

LIGNIN SULFONATES IN PULP MILL EFFLUENTS ...Natural Occurring, Organic, Pulp and Paper Wastes, Sulfonates (rso3na), Ultraviolet, ...5.0959

Gas

BIOLOGICAL AND CHEMICAL OXIDATION OF SELECTED ORGANIC PESTICIDES ...Biological, Chemical Degradation, Chlorinated Hydrocarbons, Chlorination, Degradation, Pesticides, ...5.0010

Chromatography

- DEVELOPMENT OF ANALYTICAL METHODS FOR PESTICIDE CONTAMINANTS IN DOMESTIC, IRRIGATION AND POND WATERS ...Chlorinated Hydrocarbons, Emission, Irrigation-general, Pollutants-general, Ponds, ...5.0137
- INTERMEDIATE PRODUCTS IN THE BACTERIAL DECOMPOSITION OF HEXADECANOL AND OCTADECANOL ...Alcohols, Biodegradation, ...5.1158
- BIOLOGICAL NITROGEN FIXATION IN LAKES ...Acetylene, Ethylene, Lakes, Mobile, Nitrogen, Nitrogen Fixation, ...5.1299
- NATURALLY OCCURRING TASTES AND ODORS IN WATER SUPPLIES ...Freezing, Mass, Nuclear Magnetic, Studies, Organoleptic, Taste and Odor, ...5.1169
- ORGANIC COMPOUNDS IN ALASKA PERMAFROST GROUNDWATER ...Alaska, Organic, Permafrost-frozen, Spectroscopy-general, Thin Layer, ...1.0005
- THE MOLECULAR NATURE OF ORGANIC WASTE REMOVAL PATTERNS ...Activated, Analysis and Detection, Organics, Rate of Reaction, Structural Effect-other, ...5.1155
- ORGANICS CAUSING TASTE OR ODOR IN THE MISSOURI RIVER ...Infrared, Library, Missouri River, Organic Matter, Taste and Odor, ...5.0683
- (U) BIODEGRADABILITY OF DETERGENT COMPOUNDS ...Activated, Biodegradation, Biological, Laundry Wastes, Sulfonates (rs03na), Surfactants, ...5.0534
- ORGANIC SUBSTANCES IN WATER ...Extraction, Infrared, Organic Wastes, Pesticides, Vacuum Distillation, ...5.0120
- PESTICIDE MONITORING PROGRAM ...Bioindicators, Estuaries, Monitoring Systems, Oysters, ...5.0268
- METHODS OF ANALYSIS FOR INSECT-CONTROL CHEMICALS ...Chemical Analysis, Colorimetric, Extraction-other, Reaction-general, Spectroscopy-other, ...5.0491
- A STUDY OF MICROORGANISMS INDUCING TASTES AND ODORS IN WATER ...Actinomyces -non-specific, Algae-General, Mass, Taste and Odor, ...5.0212
- STRUCTURE OF THE BLUE-GREEN ALGA TOXIN ...Cyanophyta (non-specific & Ot), Glucagon X Hor, Mass, Natural Occurring, Organic, ...5.0127

Thin Layer

- ORGANIC COMPOUNDS IN ALASKA PERMAFROST GROUNDWATER ...Alaska, Gas, Organic, Permafrost-frozen, Spectroscopy-general, ...1.0005

Chromium

- FOAM SEPARATION FLOTATION OF COLLOID ORGANIC SYSTEMS ...Colloidal Phenomena, Flotation, Foam, Iron, Process Design, Pulp and Paper Wastes, Sulfate, Sulfite, Surfactants, ...5.0445
- AN INVESTIGATION OF TECHNIQUES FOR THE REMOVAL OF CHROMIUM AND CYANIDES FROM ELECTROPLATING WASTES ...Electroplated, Extraction, Flotation, Industrial Processes-other, Material Recovery Wastes, Recovery, Scrap and Wastes, ...5.0725
- NITRATE DETERMINATION USING CHROMIUM (II) COMPLEXES ...Complexes, Electroanalyses-other, Nitrate, Nitrite, Other, Reduction-other, ...1.0121
- DEPURATION OF CHEMICAL POLLUTANTS IN SHELLFISH ...Contamination - Water, Metabolism, Oysters, Pesticides -non-specific, Shellfish Depuration, ...5.0020

Circulation -water

- WINTER TEMPERATURE STRUCTURE OF THE GREAT LAKES ...Lake Michigan, Sea Ice, Temperature, Thermodynamics, ...2.0631
- EVALUATION OF METHODS DESIGNED TO PREVENT WINTER-KILL ...Aeration, Chemical-general, Lakes, Mortality Rates, North Dakota, ...5.0828
- THE ROLE OF LANGMUIR CIRCULATIONS IN MIXING OF LAKE GEORGE ...Evaporation, Heat Flow, Lakes, Mixing, New York, ...2.0779
- FLUSHING PATTERN OF CERTAIN TIDAL STREAMS IN DELAWARE ...Aquatic Ecology, Delaware, Discharge-general, Industrial-general, Tidal Streams, ...2.0250
- INVESTIGATION OF THE CIRCULATION OF LAKE SUPERIOR ...Model Studies, Stratified Flow, Temperature, Velocity -water, ...2.1161
- HORIZONTAL DISPERSION IN SHALLOW ESTUARIES OF IRREGULAR SHAPE ...Dispersion -water, Estuaries, Gulf of Mexico, Model Studies, Water Quality-general, ...2.1013

SUBJECT INDEX

- EXPERIMENTAL REVERSAL OF THE LAKE EUTROPHICATION PROCESS ...Biological-general, Eutrophication, Nutrients, Temperature, Wisconsin, ...5.1308
- FLUSHING OF SMALL SHALLOW LAKES ...Discharge-other, Lakes, Mixing, Pollution Abatement, Self-purification, ...5.1242
- HYDROLOGY OF CONSOLIDATED ROCK AQUIFERS NEAR PENNINGTON, NEW JERSEY ...Aquifers-general, New Jersey, Permeability, Recharge -general, Reservoirs and Impoundments, ...2.0767

Classifications

- AN INTEGRATED SYSTEM OF STREAM CLASSIFICATION ...Morphology-general, Rock Type, Roughness, Streams, Structurally Controlled Feature, ...2.0465

Cleansing Agents

- INFLUENCE OF WATER QUALITY IN MAINTAINING WHITENESS WHEN LAUNDERING WHITE FABRICS ...Color, Cotton, Hardness-minerals, Laundering, Pollution - Effects of, Strength, Cohesion, ...3.0382

Climatic Regions

Alpine

- LIMNOLOGICAL STUDIES OF LENTIC WATERS IN IDAHO ...Idaho, Lakes, Phytoplankton, Primary Productivity, Productivity - Food Chain, Reservoirs and Impoundments, ...2.0398
- METHODOLOGIES FOR PREDICTING CLIMATIC SUITABILITY OF NEW AREAS FOR IRRIGATED AGRICULTURE ...Applied Climatology, Arid and Desert, California, Cold - Climates, Forecasting-prediction, Irrigation-general, ...2.0096
- WATER YIELD IMPROVEMENT, AND SNOW AND AVALANCHE PREDICTION AND PREVENTION, IN THE ALPINE REGIONS OF THE CENTRAL ROCKY MOUNTAINS ...Colorado, Snowslide-avalanche, Water Loss Control, Water Yield, ...3.0146

Arid and Desert

- EVALUATION OF FIVE METHODS FOR SAMPLING DESERT AND WETLAND VEGETATION ...Colorado, Deserts, Plant Ecology (non-specific), Utah, Wetlands, ...3.0471
- CONTROL OF UNDESIRABLE SHRUBS AND REVEGETATION OF SOUTHERN ARIZONA RANGES ...Arizona, Cultural Control, Integrated Cultural Control, Maturity Or Growth Stage of, Range, ...4.0011
- ARID LAND ECOLOGY AND ENVIRONMENT STUDIES IV. WATER QUANTITY MANAGEMENT ...Big Horn, Deserts, Deserts, Arid Lands, Moisture Content, Wyoming, ...4.0281
- SOIL TEMPERATURE AS A CRITERION FOR ALLOCATING WATER SUPPLY FOR CROP USE ...Moisture Content, Soil Environment, Soil Moisture -non-specific, Temperature, Water Allocation, ...2.0111
- THE WATER RELATIONS OF DESERT PLANTS ...Osmotic and Turgor Pressure, Phenology, Plant Water Use-other, Seasonal, Xeric, ...2.0737
- PATTERNS OF POLICY MAKING IN WATER RESOURCES DEVELOPMENT ...Policy Making, Social Aspects, ...6.0356
- MODEL STUDY TO PREDICT SALT DISTRIBUTION AND CONCENTRATION OF WATER IN SOIL PROFILES ...Irrigation-general, Model Studies, Moisture Content, Saline Properties, Soil Chemical Properties, ...5.0750
- AN ECONOMIC STUDY OF THE DEMAND FOR OUTDOOR RECREATION ...Methods, Projected Demand, Recreation Sites, Reservoirs and Impoundments, Standards, ...6.0014
- FERTILIZER-WATER-CULTURAL PRACTICES ...Management, Nevada, Plant Water Use-other, Seed Production -non-specific, ...6.0342
- RUNOFF INDUCEMENT IN ARID LANDS ...Infiltration, Linings-pavings, Runoff, Stabilization-general, Storage of Water, Synthetic Hydrology-general, ...3.0238
- BIOLOGY AND CONSUMPTIVE WATER USE OF PERENNIAL RANGE PLANTS UNDER DESERT CONDITIONS ...Consumptive Use, Flood Irrigation, Management and Fertility, Perennial, Phenology, Soil-water-plant Relationships, ...3.0231
- WATER IN RELATION TO ECONOMIC GROWTH IN AN ARID ENVIRONMENT ...Arizona, Economic Impact, Groundwater, Model Studies, Water Costs, ...6.0013
- GENETIC AND CYTOGENIC STUDIES OF HORTICULTURAL CROPS-BREEDING XEROPHYTIC CUCURBITA ...Aerial,

SUBJECT INDEX

Climatic Regions

Arizona, Interspecific Genetic Relat. , Squash, Pumpkin, Sterility, ...3.6010

METHODOLOGIES FOR PREDICTING CLIMATIC SUITABILITY OF NEW AREAS FOR IRRIGATED AGRICULTURE ...Alpine, Applied Climatology, California, Cold - Climates, Forecasting-prediction, Irrigation-general, ...2.0096

TRITIATED WATER STUDIES OF THE SIGNIFICANCE OF DEW AND VAPOR IN PLANT WATER ECONOMY ...Dew, Foliar Absorption, Humidity, Hydrogen, Osmotic and Turgor Pressure, Thermodynamics, ...2.0112

A UNIFIED APPROACH TO WATER, FOOD AND POWER IN A COASTAL DESERT COMMUNITY ...Desalination, Deserts, Diesel, Distilling Units, Electric Power Plants, Greenhouse, Use of Impaired Water, ...3.6015

ECESIS AND STABILIZATION OF PRICKYPEAR (OPUNTIA SPP.) ON THE RIO GRANDE PLAINS ...Angiosperms, Cacti, Habitat Studies, of Specific Weeds, Range Or Territorial Distr. , ...6.0564

VEGETATION CHANGES IN SOUTHWESTERN NORTH AMERICA ...Climate, Deserts, Arid Lands, Other Water Conditions, Soil-water-plant Relationships, Southwest, ...2.0045

LARGE IMPOUNDMENTS ...Eutrophication, Nevada, Reservoirs and Impoundments, Water Properties-general, Water Quality-general, ...5.0184

BREEDING AND EVALUATION OF IMPROVED VARIETIES OF PERENNIAL COOL-SEASON GRASSES ADAPTED TO SEMIARID AND ARID REGIONS ...Breeding, Breeding and Genetics, Disease & Anomalies, Semi - Arid, ...2.0574

IRRIGATION SYSTEMS FOR EFFICIENT WATER USE IN THE GREAT BASIN ...Evapotranspiration, Great Basin, Lysimeters, Sprinkler Irrigation, Water Balance-budget, ...3.0314

THE SIMULATION OF HYDROLOGIC EVENTS IN ARID REGIONS ...Analog Computers, Hydrology-general, Management, Model Studies, Surface Water, ...2.1075

Climate-general

A STUDY OF THE PRIMARY PRODUCTIVITY OF NEW AND OLDER RESERVOIRS ...Algae- General, Fish -non-specific, Primary Productivity, ...2.0149

CLIMATE OF THE NORTHEAST - ANALYSES & RELATIONSHIP TO PLANT RESPONSE (NE-35 ...Aerial, Beans (garden), Delaware, Envir. responses (non-specific, General Synoptic Observations, ...2.0251

WATER REQUIREMENTS OF CROPS ...Irrigation, Irrigation-general, Management, Moisture Content, Requirements for Water, Soil-water-plant Relationships, ...2.0654

AGROCLIMATIC PARAMETERS ...Agricultural Studies -general, Applied Climatology, Nebraska, Phenology, Seasonal, ...2.0724

APPLICATION OF CLIMATOLOGY TO NEW JERSEY AGRICULTURE ...Agricultural Studies -general, Northeast, Phenology, ...2.0762

WEATHER INFORMATION FOR AGRICULTURE ...Data Analysis - General, Evapotranspiration, General Synoptic Observations, Soil Physical Properties, ...4.0190

STUDIES OF THE SOIL-MOISTURE-PLANT REGIME FOR THE CONDITIONS OF WESTERN OKLAHOMA ...Analog Computers, Consumptive Use, Evapotranspiration, Oklahoma, Soil-water-plant Relationships, ...2.0880

MOISTURE USE CHARACTERISTICS OF CERTAIN CROP PLANTS ...Moisture Levels, Plant Water Use-other, Soil Fertility, Varietal Evaluation, Yield, ...2.0991

DEVELOPING COMPUTER PROGRAMS FOR SOLUTION OF HYDROLOGIC PROBLEMS RELATED TO SMALL WATERSHEDS ...Forecasting-prediction, Hydrographs, Physiography-general, Small Watersheds, Water Yield, ...7.0102

THE EFFECT OF BOLL MOISTURE STRESS ON DEVELOPMENT AND LINT QUALITY OF COTTON ...Cotton, Floral, Growth, Israel, Soil Environment, ...3.0236

ECOLOGICAL EFFECTS OF WEATHER MODIFICATION ...Management, Modification, Water Properties-general, Weather Modification-general, ...2.0168

RELATION OF CLIMATIC AND WATERSHED PHYSIOGRAPHIC AND CULTURAL FACTORS TO WATER YIELD ...Agricultural Watersheds, Groundwater, Land Use, Shape, Water Yield, ...3.0393

MOISTURE CONSERVATION PRINCIPLES AND PRACTICES IN THE PACIFIC NORTHWEST ...Air - Water - Plant Relations, Evapotranspiration, Management Effects, Modified Water Use, Soil-water-plant Relationships, ...4.0267

CLIMATOLOGICAL FACTORS AFFECTING WATER USE IN AGRICULTURE ...Consumptive Use, Irrigation-general, Projections and Estimations, Requirements for Water, Water Demand, ...6.0599

Cold - Climates

HYDROLOGIC CHARACTERIZATION OF SMALL WATERSHEDS ...Mathematical Analysis, Model Studies, Peak Flow, Runoff, Small Watersheds, ...4.0143

METHODOLOGIES FOR PREDICTING CLIMATIC SUITABILITY OF NEW AREAS FOR IRRIGATED AGRICULTURE ...Alpine, Applied Climatology, Arid and Desert, California, Forecasting-prediction, Irrigation-general, ...2.0096

TECHNICAL SUPPORT, INVESTIGATIONS OF ARCTIC CONSTRUCTION ...Arctic, Construction, Earth & Rockfill Dams, Thermal Properties-general, ...8.0266

UTILITIES IN PERMAFROST AREAS ...Codes and Standards, Permafrost-frozen, Public Utilities, Sewage Treatment Plant, ...2.0756

Humid

THE DEMAND AND PRICE STRUCTURES FOR WATER IN A HUMID AREA ...Consumptive Use, Georgia, Price & Value, Water Costs, Water Demand, ...6.0161

DRAINAGE OF SUGARCANE LANDS IN THE HUMID SECTIONS OF PUERTO RICO ...Drainage, Puerto Rico, Sugar Cane, Water Table - Depth of , Water Table Fluctuation, Yield, ...2.0936

COATING TECHNOLOGY ...Coatings-general, Paint - General, Sealant Materials, Standards, Specifications, Surface Cleaning, Finishing, ...8.0131

Microclimate-general

STREAM VALLEY ASYMMETRY IN AN ARCTIC ENVIRONMENT-CONDITIONS GOVERNING GEOMORPHIC PROCESSES 7360 ...Arctic, Environmental Effects-geologic, Shape, Slopes, Valleys and Canyons, ...2.0255

INFLUENCE OF TRANSPIRATION SUPPRESSANTS, SPRINKLER IRRIGATION & MOISTURE LEVELS ON TRANSPIRATION & EVAPOTRANSPIRATION ...Antitranspirants, Dendroclimatology, Moisture Levels, Sprinkler Irrigation, Transpiration, ...3.0464

WATER BALANCE AND ALKALINE EXCHANGE RELATIONSHIPS AS INFLUENCED BY WATER MANAGEMENT PRACTICES IN RICE ...Arkansas, Rice, Salt, Water Balance-budget, Water Depth, Water Levels, ...2.0071

AN EVALUATION OF THE SUGAR-INVERSION METHOD OF MEASURING MEAN TEMPERATURE IN A CLIMATOLOGICAL NETWORK ...Aldose and Ketose, Inversion, Physical Climatology, Temperature, ...2.0925

PREDICTIONS OF WATER REQUIREMENTS OF CROPS FROM MICROCLIMATIC PARAMETERS ...Air - Water - Plant Relations, Energy Budgets, Evapotranspiration, Miniature Or Microenvironment, Requirements for Water, ...4.0029

THE INFLUENCE OF WATER AND CLIMATE ON THE YIELD AND SUCROSE CONTENT OF SUGARCANE ...Applied Climatology, Irrigation-general, Puerto Rico, Sugar Cane, Yield, ...4.0211

EFFECT OF THE CLIMATE AND MICROCLIMATE ON AGRICULTURE IN SOUTH DAKOTA ...Applied Climatology, Automatic Stations, Digital Computers, South Dakota, Statistics-general, ...2.0973

MICROCLIMATE ANALYSIS ...Boundary Layer Studies, Irrigation, Irrigation-general, Texas, Transpiration, ...2.1002

HIGH ALTITUDE EVAPOTRANSPIRATION FROM NATIVE MEADOWS ...Energy Budgets, Evapotranspiration, Harvest and Storage, Lysimeters, Nuclear Moisture Meters, ...3.0493

Polar

BIOLOGICAL DEGRADATION OF WASTES UNDER PSYCHROPHILIC ENVIRONMENTS ...Bacterial Pollutant Sources, Biological, Low Temp. - But Above 32f, Mixed Culture, Water Bacteria, ...5.0036

DISTRIBUTION OF LIQUIDS IN POLAR CAMPS ...Flow, Maintenance, Permafrost-frozen, Pipes, Sewage, ...5.0134

MINIMUM WATER SANITARY SYSTEM ...Equipment, Flushing Devices, Incineration, Waste Treatment-economies, ...3.0078

ARCTIC ECOSYSTEMS ...Alaska, Aquatic Ecology, Energy Budgets, Freshwater Ecology, Productivity - Food Chain, ...5.0236

Climatic Regions

STUDY OF ASSIMILATIVE CAPACITY OF ARCTIC AND SUB-ARCTIC STREAMS ...Environmental Effects-geologic, Pollution - Effects of , Self-purification, Streams, ...5.0029

Semi - Arid

MICROMETEOROLOGICAL INVESTIGATIONS OF THE ENERGY BUDGET - EFFECT OF SUMMER WINDS ...Evapotranspiration, Heat Budget, Heat Flow, Micrometeorology, Wind-general, ...2.0516

OPTIMIZING SALVAGEABLE WATER RESOURCES IN A SEMI-ARID INLAND BASIN ...Natural Recharge, Optimization, Runoff, Water - Alternative Uses, Water Quality-general, Water Reuse, .. 3.0019

A COMPREHENSIVE WATER RESOURCES ANALYSIS OF A TYPICAL OVERDRAWN BASIN IN AN IRRIGATED SEMIARID AREA - PECOS RIVER BASIN, NEW MEXICO ...New Mexico, River Basins, Systems Analysis, ...6.0362

DETERMINATION OF FACTORS AFFECTING THE COMPETITIVE ABILITY OF WEEDS IN SEM-ARID AREAS ...Growth Rate, Roots, Vasc. plant Competition -other, Weeds -physiological Studies, ...2.1016

SALINITY TOLERANCES OF CERTAIN TROPICAL SOILS AND RELATIONSHIPS BETWEEN SODIUM ION ACTIVITIES AND SOIL PHYSICAL PROPERTIES ...Chemical Analysis - Soils, Irrigation-general, Saline Properties, Sodium, Soil Chemical Properties, Tropic, ...3.0200

AN ESTIMATION OF THE THERMAL POTENTIAL FOR GROWING IRRIGATED CROPS ON OREGON'S DRYLAND ...Applied Climatology, Phenology, ...6.0453

BREEDING AND EVALUATION OF IMPROVED VARIETIES OF PERENNIAL COOL-SEASON GRASSES ADAPTED TO SEMIARID AND ARID REGIONS ...Arid and Desert, Breeding, Breeding and Genetics, Disease & Anomalies, ...2.0574

EVAPOTRANSPIRATION UNDER NATURAL CONDITIONS ...Evaporation, Moisture Budgets, Moisture Tension, Ponds, ...2.0384

INFILTRATION AS INFLUENCED BY SOIL-VEGETATION COMPLEXES ...Infiltration, Soil-water-plant Relationships, ...2.0385

STREAM FLOW REGIMES OF SEMIARID RANGELAND WATERSHEDS IN THE SOUTHWEST ...Channels, Flow Characteristics -water, Runoff, Storm Water, Storms-general, ...4.0009

Sub - Humid

ECONOMIC ASPECTS OF SUPPLEMENTAL IRRIGATION IN MISSOURI ...Corn, Economics-general, Irrigation-general, Moisture -non-specific, Temperature -non-specific, ...6.0320

A PHYSICAL AND ECONOMIC ANALYSIS OF ALTERNATIVE IRRIGATION METHODS IN A SUB-HUMID CLIMATE ...Agriculture, Irrigation-general, North Dakota, Production & Processing, ...6.0415

WATER MOVEMENT CONTROL AND CULTURAL PRACTICES IN COTTON PRODUCTION ...Conservation & Management Eng, Cotton, Management, Soil Tillage Methods -other, Tillage, Cropping Systems, Water Yield, ...2.0003

A PHYSICAL AND ECONOMIC ANALYSIS OF ALTERNATIVE IRRIGATION METHODS IN A SUB-HUMID CLIMATE ...Applied Climatology, Evapotranspiration, Irrigation-general, Model Studies, Water Balance-budget, ...3.0384

THE INVESTIGATION OF SOIL PROBLEMS IN RELATION TO IRRIGATION DEVELOPMENT IN SUBHUMID AREAS ...Irrigation, Soil-water-plant Relationships, ...2.0967

Sub - Polar

RADIOACTIVE FOOD-CHAINS IN THE SUBARCTIC ENVIRONMENT ...Productivity - Food Chain, Radioactive Fallout, Radioactive Isotopes, Radiologic Health, Toxicological and Allergy, ...2.0308

EVALUATION OF AN OXIDATION-DITCH WASTEWATER TREATMENT PLANT IN SUBARCTIC ALASKA ...Chemical Oxygen Demand, Dilution-other, Model Studies, Waste Treatment-economics, ...5.0038

SUBARC AERAT LAG INVES BIKIN REQUIR SEASON & DIURN EFF ON NUT BAL ...Aeration, Effluent-standards, Lagoon, Process Design, Waste Treatment-economics, ...5.0027

Sub - Tropic

ANTI-POLLUTION AND SEWAGE DISPOSAL FOR FLORIDA COMMUNITIES ...Lagoon, Organics, Pollution Abatement, Sand, Sewage - Domestic, ...5.0255

SUBJECT INDEX

Temperate

FACTORS AFFECTING PRIMARY AND SECONDARY PRODUCTION IN TEMPERATE LAKES ...Lakes, Minnesota, Productivity - Food Chain, Regression Analysis, Zooplankton, ...2.0157

Tropic

(U) INSTABILITY PATTERNS IN THE TROPICS .. Radar, Weather Forecasting, ...2.0320

SALINITY TOLERANCES OF CERTAIN TROPICAL SOILS AND RELATIONSHIPS BETWEEN SODIUM ION ACTIVITIES AND SOIL PHYSICAL PROPERTIES ...Chemical Analysis - Soils, Irrigation-general, Saline Properties, Semi - Arid, Sodium, Soil Chemical Properties, ...3.0200

PILOT EVAPOTRANSPIRATION STUDY WITH LYSIMETERS OF WATER USE BY SUGAR CANE, PINEAPPLE AND TROPICAL TRUCK CROPS ...Evapotranspiration, Lysimeters, Pineapple, Sugarcane, Yield, ...2.0372

(U) STABILIZATION POND OPERATION IN TROPICAL AREAS (P) ...Algae, Bacteria, Biochemical Oxygen Demand, Loading, Pond, ...5.0174

Climatology

Applied Climatology

CLIMATIC PATTERNS AND THEIR EFFECT ON CALIFORNIA AGRICULTURE ...Agriculture, California, Data Analysis - General, Phenology, Production & Processing, Temperature, Weather, ...2.0095

EVALUATION OF CLIMATIC PATTERNS AFFECTING IDAHO AGRICULTURE ...Agricultural Watersheds, Data Analysis - General, Evaporation, Forecasting, Idaho, Meteorological Averages, Patterns, ...2.0396

WEATHER INFORMATION FOR AGRICULTURE ...General Synoptic Observations, Iowa, Moisture Content, Oats, Soil Environment, ...2.0484

CRITERIA FOR EVALUATION AND FUNCTIONAL DESIGN OF IRRIGATION SYSTEMS ...Drought, Irrigation, Irrigation-general, Moisture Levels, Moisture Tension, ...2.0524

AGROCLIMATIC PARAMETERS ...Agricultural Studies -general, Climate-general, Nebraska, Phenology, Seasonal, ...2.0724

CLIMATE AND PHENOLOGICAL PATTERNS FOR AGRICULTURE IN THE WESTERN REGION ...Meteorological Averages, Other Water Conditions, Patterns, Phenology, Tables, Compilations, Catalogs, ...3.0332

PREPARATION AND ANALYSIS OF CLIMATOLOGICAL DATA IMPORTANT TO AGRICULTURE AND FORESTRY ...Atmospheric Pollution-general, Patterns, Precipitation -non-specific, Stochastic Processes, Western, ...4.0199

SOIL, PLANT, AND METEOROLOGICAL FACTORS IN DRAINAGE EVALUATION AND DESIGN ...Drainage, Drainage Engineering, Soil Environment, Soil-water-plant Relationships, ...4.0213

AGRICULTURAL CLIMATOLOGY OF WEST VIRGINIA ...Climate, Northeast, Other Water Conditions, Phenology, ...2.1142

FACTORS AFFECTING WATER YIELDS FROM SMALL WATERSHEDS AND SHALLOW GROUND AQUIFERS ...Amount, Aquifers-general, Runoff, Small Watersheds, Soil Types-general, Water Yield, ...4.0207

METHODOLOGIES FOR PREDICTING CLIMATIC SUITABILITY OF NEW AREAS FOR IRRIGATED AGRICULTURE ...Alpine, Arid and Desert, California, Cold - Climates, Forecasting-prediction, Irrigation-general, ...2.0096

ECONOMICS OF CLIMATE ...Economic Impact, Kansas, Risk & Uncertainty, Weather, Yield, ...2.0511

PILOT STUDY OF THE PROBABILITY OF OCCURRENCE OF CLIMATOLOGICAL PHENOMENA IN THE ATLANTA AREA ...Georgia, Model Studies, Weather Forecasting, ...2.0351

CLIMATOLOGY OF HAIL ...Modification, Patterns, Radar, Storms-general, ...4.0097

TOPOGRAPHIC EFFECTS ON PRECIPITATION ...Illinois, Precipitation Instruments, Topographic Influences, ...2.0412

SOIL AND CLIMATE FACTORS AFFECTING THE EFFICIENT USE OF WATER BY CROPS ...Air - Water - Plant Relations, Evaporation, Iowa, Moisture Content, Moisture Levels, Soil-water-plant Relationships, ...2.0485

A PHYSICAL AND ECONOMIC ANALYSIS OF ALTERNATIVE IRRIGATION METHODS IN A SUB-HUMID CLIMATE ...Evapotranspiration, Irrigation-general, Model Studies, Sub - Humid, Water Balance-budget, ...3.0384

SUBJECT INDEX

Clouds

- AN ESTIMATION OF THE THERMAL POTENTIAL FOR GROWING IRRIGATED CROPS ON OREGON'S DRYLAND ...Phenology, Semi - Arid, ...6.0453
- THE INFLUENCE OF WATER AND CLIMATE ON THE YIELD AND SUCROSE CONTENT OF SUGARCANE ...Irrigation-general, Microclimate-general, Puerto Rico, Sugar Cane, Yield, ...4.0211
- EFFECT OF THE CLIMATE AND MICROCLIMATE ON AGRICULTURE IN SOUTH DAKOTA ...Automatic Stations, Digital Computers, Microclimate-general, South Dakota, Statistics-general, ...2.0973
- GROUNDWATER RECHARGE ...Forecasting-prediction, Groundwater, Natural Recharge, Observation Wells, Water Table Fluctuation, ...3.0430
- THE DEVELOPMENT OF SYNOPTIC CLIMATOLOGY AND STATISTICAL FORECASTING METHODS AND OROGRAPHIC PRECIPITATION ...Patterns, ...2.0205
- FEASIBILITY OF USING ATMOSPHERIC WATER RESOURCES IN THE NORTHEASTERN UNITED STATES ...Benefit-cost Analysis, Clouds-precipitation, Connecticut River, River Basins, Water Resources Development, ...2.0161
- WATER USE UNDER DRYLAND CONDITIONS IN COASTAL VALLEYS OF CALIFORNIA ...California, Modified Water Use, Moisture Content, Precipitation-general, Soil Environment, ...3.0092

Climatology

- BEHAVIOR OF WATER IN AN SOUTHWEST IMPOUNDMENT - LAKE THUNDERBIRD ...Chemical-general, Land Use, Physical-general, Reservoirs and Impoundments, Water Quality-general, ...5.0918
- CLIMATE AND PHENOLOGICAL PATTERNS FOR AGRICULTURE IN THE WESTERN REGION ...Nevada, Patterns, ...2.0730
- DENSE RAINFALL NETWORK PROJECTS ...Data Networks, Gages, Modification, Storms-general, Weather Modification-general, ...2.0424
- DRAINAGE CORRELATION RESEARCH PROJECT ...Drainage, Floods, Peak Flow, Precipitation-general, Small Watersheds, ...2.0710
- DROUGHT FREQUENCY, INTENSITY & DURATION - ITS CORRELATION TO STREAMFLOW AND ITS IMPACT UPON SYNTHETIC HYDROLOGY ...Flow Characteristics -water, Meteorological Extremes, Patterns, Synthetic Hydrology-general, Water Loss-general, ...2.0763
- MOUNTAIN RESEARCH ...General, Mountains-alpine, ...2.0753
- PRECIPITATION PATTERNS ON RANGELAND WATERSHEDS IN THE SOUTHWEST ...Forecasting, Patterns, Runoff, Sediment Yield, Southwest, ...2.0040
- PRECIPITATION PATTERNS ON UPSTREAM WATERSHEDS IN CENTRAL AND SOUTHERN CALIFORNIA ...California, Patterns, Runoff, Sediment Yield, Watersheds-general, ...2.0103

Climatology-general

- RESEARCH INTO RECENT CLIMATIC CHANGES ...Computation Techniques, Correlation, Physical Climatology, ...2.0321

Dendroclimatology

- INFLUENCE OF TRANSPIRATION SUPPRESSANTS, SPRINKLER IRRIGATION & MOISTURE LEVELS ON TRANSPIRATION & EVAPOTRANSPIRATION ...Antitranspirants, Microclimate-general, Moisture Levels, Sprinkler Irrigation, Transpiration, ...3.0464
- THE ROLE OF VEGETATION AND SOIL IN WATERSHED YIELD ...Cover Crops, Soil Properties - General, Soil-water-plant Relationships, Water Balance-budget, Water Yield, Watersheds-general, ...4.0256

Physical Climatology

- RESEARCH INTO RECENT CLIMATIC CHANGES ...Climatology-general, Computation Techniques, Correlation, ...2.0321
- WATER TRANSFER FROM SOIL TO THE ATMOSPHERE AS RELATED TO CLIMATE AND SOIL PROPERTIES ...Evaporation, Humidity, Moisture Content, Radiation-general, Water Balance-budget, Water Transfer, ...2.1046
- CLIMATE OF THE NORTHEAST - ANALYSIS AND RELATIONSHIP TO PLANT RESPONSE ...Ash Trees, Flowering, New York, Phenology, ...2.0791
- COMPUTER SIMULATION AND EVALUATION OF CLIMATOLOGICAL MODELS ...Computers-general, Model Studies, Patterns, Statistics-general, ...7.0044

- AN EVALUATION OF THE SUGAR-INVERSION METHOD OF MEASURING MEAN TEMPERATURE IN A CLIMATOLOGICAL NETWORK ...Aldose and Ketose, Inversion, Microclimate-general, Temperature, ...2.0925
- CLIMATOLOGICAL MEASUREMENTS RELATED TO AGRICULTURE ...Amount, Fog-haze-mist, Land Use, Sunshine, Temperature, Water Utilization-general, ...2.0741
- MISCELLANEOUS FIELD RESEARCH IN CLIMATOLOGY ...Amount, Precipitation-general, Water Resources Development, Water Yield, Weather Modification-general, ...2.0606
- RELATION OF CLIMATIC AND WATERSHED FACTORS TO STORM RUNOFF IN CORN BELT STATES ...Agricultural Watersheds, Corn Belt, Patterns, Runoff, Storms-general, ...2.0867

Clouds

Classification

Cumulus

- RESEARCH ON CHARACTERISTICS OF CONVECTIVE CLOUDS IN TEXAS ...Aircraft, Cloud Physics, Data Analysis - General, Model Studies, Texas, ...2.1023
- CONVECTIVE CLOUD SYSTEMS, NORTHERN GREAT PLAINS, ATMOSPHERIC WATER RESOURCES ...Cloud Structure, Clouds-precipitation, Convection, Great Plains Province, Model Studies, ...2.0193

Other

- ARIZONA WEATHER MODIFICATION ENGINEERING RESEARCH, ATMOSPHERIC WATER RESOURCES ...Arizona, Cloud Formation and Evolution, Clouds-precipitation, Nucleation Physics, Storms-general, ...2.0186
- INVESTIGATION OF THE FEASIBILITY OF WARM-CLOUD MANAGEMENT ...Cloud Temperature, Clouds-precipitation, Model Studies, Modification, ...2.0165

Cloud Cover

- SUBSYNOPTIC WEATHER SPECIFICATION ...Data Analysis Applications, Dew, Micrometeorology, Model Studies, Temperature, Weather Forecasting, ...2.0592
- NUMERICAL PREDICTION OF CLOUDINESS AND PRECIPITATION ...Applications, Forecasting, Prediction Models, ...2.0266
- CLOUD AND PRECIPITATION FORECAST MODEL ...Condensation-general, Forecasting, Latent Heats, Model Studies, Weather Forecasting, ...2.0267

Cloud Formation and Evolution

- NUMERICAL SIMULATION OF THE MACROPHYSICAL AND MICROPHYSICAL PROCESSES OF MOIST CONVECTION ...Clouds-precipitation, Convection, Formation, Model Studies, Thermodynamics, ...2.0239
- ARIZONA WEATHER MODIFICATION ENGINEERING RESEARCH, ATMOSPHERIC WATER RESOURCES ...Arizona, Clouds-precipitation, Nucleation Physics, Other, Storms-general, ...2.0186
- THE DEVELOPMENT OF SYNOPTIC CLIMATOLOGY AND STATISTICAL FORECASTING METHODS AND OROGRAPHIC PRECIPITATION ...Patterns, ...2.0205
- ATMOSPHERIC WATER RESOURCES RESEARCH UNIVERSITY OF WYOMING ...Cloud Physics, Nucleation Physics, Orographic Effects, Snowpack, Wyoming, ...2.0162

Cloud Physics

- NORTH SIERRA OROGRAPHIC, CONVECTIVE CLOUD STUDY - ATMOSPHERIC WATER RESOURCES PROGRAM ...Data Display Systems, Hydrology-general, Modification, Orographic Effects, Precipitation Instruments, ...2.0731
- RESEARCH ON THE METEOROGENEITY OF CLOUD STRUCTURE ...Cloud Structure, Convection, Energy-general, In-cloud, ...2.1017
- RESEARCH ON CHARACTERISTICS OF CONVECTIVE CLOUDS IN TEXAS ...Aircraft, Cumulus, Data Analysis - General, Model Studies, Texas, ...2.1023
- USE OF RADAR FOR HYDROLOGICAL STUDIES ...Evaporation, Groundwater Movement, Patterns, Radar, Structure-size, ...2.0776
- COLD REGIONS PHYSICAL SCIENCE ...Arctic, Electron, Ice Fog, Petrofabrics, ...2.0757
- ATMOSPHERIC WATER RESOURCES RESEARCH UNIVERSITY OF WYOMING ...Cloud Formation and Evolution, Nucleation Physics, Orographic Effects, Snowpack, Wyoming, ...2.0162

Clouds

PRODUCTION AND DETECTION OF ARTIFICIAL ICE NUCLEI
...Formation, Model Studies, Modification, Nucleation Physics,
Precipitation Instruments, ...2.0173

Cloud Structure

ROCKY MOUNTAIN OROGRAPHIC CLOUD PRECIPITATION
AND MODIFICATION ...Clouds-precipitation, Colorado, Forma-
tion, Patterns, Topographic Influences, ...3.0140

RESEARCH ON THE METEOROGNEITY OF CLOUD STRUC-
TURE ...Cloud Physics, Convection, Energy-general, In-cloud,
...2.1017

CONVECTIVE CLOUD SYSTEMS, NORTHERN GREAT
PLAINS, ATMOSPHERIC WATER RESOURCES ...Clouds-
precipitation, Convection, Cumulus, Great Plains Province, Model
Studies, ...2.9193

Cloud Temperature

INVESTIGATION OF THE FEASIBILITY OF WARM-CLOUD
MANAGEMENT ...Clouds-precipitation, Model Studies, Modifi-
cation, Other, ...2.0165

Clouds-general

NATIONWIDE PRECIPITATION - NMC FORECAST
TECHNIQUES ...Computers-general, Forecasting, Forecasting-
prediction, General Synoptic Observations, Regression Analysis,
...2.0589

ATMOSPHERIC WATER RESOURCES RESEARCH IN THE
STATE OF NEW MEXICO ...Clouds-precipitation, New Mexico,
Precipitation Instruments, Rio Grande, Storms-general, ...2.0175

Coal

SEWAGE TREATMENT, PILOT PLANT EVALUATION ...Ash-
coal, Coal-general, Industrial Wastes, Pilot Plant, Waste Treat-
ment-economics, ...5.0870

Washing

STUDIES ON THE FREEZING PROCESS FOR DESALTING
SALINE WATERS ...Cost Analysis, Freezing, Other, Porosity,
Thermodynamic Relation, ...3.0365

SALINE WATER BY FREEZING - A PROGRAM OF IN-
VESTIGATION ...Desalination, Evaporation, Freezing, Microse-
py-other, Nucleation, ...3.0343

COUNTERWASHERS FOR FREEZE-DISTILLATION
DESALINATION ...Cost Analysis, Fluid Flow-other, Freezing,
Packed Bed, Screening, ...3.0279

Coatings

Chemical Conversion

Anodic

PROTECTIVE FILMS FORMED BY PLASMA ANODIZATION
...Aluminum, Brines, Desalination, Iron, Passivation, ...3.0263

Cladding

EVALUATION OF POLYVINYL CHLORIDE (PVC) AND
VINYL CLAD ALUMINUM PIPE USED FOR CARRYING IR-
RIGATION WATER WHEN BURIED WITHIN THE FROST
ZONE ...Aluminum, Irrigation-general, Joining, Bonding-general,
Pipe, Tube, Polyvinyls-other, Soils, ...8.0271

Coatings-general

CORROSION AND TUBERCULATION IN DISTRIBUTION
SYSTEMS ...Casting of Materials, Corrosion Prevention-other,
Iron, Water, ...5.0373

ADHESIVE PROTECTION FOR CONCRETE ...California, Cavity-
tion, Cement, Concrete, Epoxies, Erosion, ...8.0015

CORROSION MITIGATION -CATHODIC PROTECTION OF
WATER-IMMERSED STEEL STRUCTURES ...Cathodic Protec-
tion, Engineering Studies-general, Hydraulic Structures, Low
Alloy Steels, ...8.0172

EVALUATION OF CONCRETE AND RELATED MATERIALS
FOR USE IN DESALINATION PLANTS ...Cement, Concrete,
Corrosion General, Ferrous Alloys - Other, Saline Conversion,
Sealant Materials, ...8.0062

COATING TECHNOLOGY ...Humid, Paint - General, Sealant
Materials, Standards, Specifications, Surface Cleaning, Finishing,
...8.0131

SUBJECT INDEX

NEW DEVELOPMENTS IN CATHODIC PROTECTION AND
CORROSION STUDIES ...Cathodic Protection, Dam, Canal,
Platinum, Titanium, ...8.0024

Coatings-other

INVESTIGATIONS OF ALGAE INHIBITING MATERIALS ...Ce-
ment, Concrete, Fouling, Inhibitors, Liquids Or Sprays, Organic
Wastes, Water Distribution Systems, ...3.0106

Dip, Immersion

Galvanized

STUDIES OF CORROSION SPECIMENS ...Pipe, Tube, Test
Methods, Water, Water Quality-general, ...8.0177

Electroplated

AN INVESTIGATION OF TECHNIQUES FOR THE REMOVAL
OF CHROMIUM AND CYANIDES FROM ELECTROPLATING
WASTES ...Chromium, Extraction, Flotation, Industrial
Processes-other, Material Recovery Wastes, Recovery, Scrap and
Wastes, ...5.0725

Electrostatic

THE PREPARATION OF ULTRA-THIN REVERSE OSMOSIS
MEMBRANES BY ELECTROSTATIC DEPOSITION ...Desalina-
tion, Membranes-other, Natural Occurring, Reverse Osmosis,
...3.0162

Paint and Organic

Organic-general

DEVELOPMENT OF PARYLENE COATING FOR DROPWISE
CONDENSATION OF WATER ON HEAT EXCHANGERS
...Condensation, Copper, Desalination, Heat Exchangers, Plastics-
other, ...3.0322

POLYMERIC COATINGS FOR PROTECTION ON CONCRETE
EXPOSED TO AQUEOUS SALINE ENVIRONMENTS ...Adhe-
sion, Cement, Concrete, Depolymerization, Plastics - General,
Salinity, Water, ...3.0405

CONCRETE CURING COMPOUND INVESTIGATIONS ...Ce-
ment, Concrete, Curing Agents, Dam, Canal, Weathering,
...8.0075

FACTORS INFLUENCING THE DURABILITY OF CONCRETE
...Cement, Concrete, Chemicals, Durability, Deterioration, Pipe,
Tube, Sulfate, Sulfite, ...8.0043

PROTECTIVE LININGS FOR WATER PASSAGE SURFACES OF
FERROUS METALWORK ...Erosion, Linings-pavings, Pipe,
Tube, Water, ...8.0087

Paint - General

PAINT TESTS ...Epoxies, Polyvinyls-other, Primers, Urethanes,
...8.0173

COATING TECHNOLOGY ...Coatings-general, Humid, Sealant
Materials, Standards, Specifications, Surface Cleaning, Finishing,
...8.0131

Primers

PAINT TESTS ...Epoxies, Paint - General, Polyvinyls-other,
Urethanes, ...8.0173

Solutionizing

14-01-0001-1760 -- IN-SITU FORMATION OF REGENERATIVE
CELLULOSE ACETATE MEMBRANES ON POROUS SUP-
PORTS ...Casting of Materials, Cellulose Acetate, Ceramics -
General, Reverse Osmosis, Saline Conversion, ...3.0069

Cobalt

REAGENTS FOR DETERMINATIONS OF TRACE IMPURITIES
IN WATER ...Analysis and Detection, Inorganic, Nitrate, Nitrite,
Nitroso Compounds, Spectroscopy-general, ...5.0330

GAMMA RADIATION OF TEXTILE WASTE WATER TO
REDUCE POLLUTION ...Gamma, Industrial Wastes, Other, Tex-
tile Wastes, Waste Water Treatment-general, ...5.0006

Collections

THE AQUATIC PLANT RESOURCES OF WESTERN MONTANA
...Aquatic Plants (non-specific), Montana, Plant Taxonomy, Publi-
cations -other, ...2.0717

CYTOTAXONOMY AND RELATED STUDIES OF HOLARCTIC
MIDGES ...Animal Taxonomy, Arctic, Bloodworms, Aquatic
Midges, Museum, Nearctic, ...5.0756

SUBJECT INDEX

Columbia River

SEARCH FOR AND IMPORTATION OF FOREIGN INSECT ENEMIES OF WEEDS ...Biocontrol, Insects -non-specific, Vasc. plant & Arthropods Comp, Weeds, ...2.0076

Colorado

ROCKY MOUNTAIN OROGRAPHIC CLOUD PRECIPITATION AND MODIFICATION ...Cloud Structure, Clouds-precipitation, Formation, Patterns, Topographic Influences, ...3.0140

INFLUENCE OF ACCUMULATED SEDIMENTS UPON WATER VELOCITY OF MICROHABITATS OCCUPIED BY TROUTS ...Habitat Studies, Rio Grande River, Salmon & Trout - Non-specific, Sediments, Velocity -water, ...4.0068

FISHES OF THE ARKANSAS RIVER BASIN, COLORADO ...Arkansas River, Environmental Changes, Fish -non-specific, Survey Studies, Water Environment -other, ...6.0102

WATER VELOCITY AND SPATIAL CO-ACTIONS OF HATCHERY TROUT AND WILD BROWN TROUT ...Behavioral Ecology, Brown Trout, Flume Studies, Rainbow Trout, Steelhead Trout, Velocity -water, ...5.0198

FISHES OF THE SOUTH PLATTE RIVER BASIN, COLORADO ...Animal Distr. (non-specific), Environmental Changes, Environmental Ecology, Fish -non-specific, Pollution - Effects of, River Basins, ...5.0194

COVER AS A LIMITING FACTOR IN TROUT PRODUCTION ...Environmental Ecology, Number Or Density, Salmon & Trout - Non-specific, Soil (wildlife) Cover, Streams, ...4.0070

EVALUATION OF FIVE METHODS FOR SAMPLING DESERT AND WETLAND VEGETATION ...Arid and Desert, Deserts, Plant Ecology (non-specific), Utah, Wetlands, ...3.0471

SMALL IMPOUNDMENT STOCKING ...Bullheads, Centrarchidae -other, Control of Nuisance Species, Lakes, Stocking of Fish & Shellfish, ...5.0201

COLORADO COMPREHENSIVE PLAN FOR OUTDOOR RECREATION ...Economic Impact, Mapping, Other, Planning, Recreation Sites, ...6.0324

SOUTH PLATTE RIVER DEVELOPMENT PLAN ...Fishing, Picnicking, Recreation Activities, Recreation Sites, Riding, ...2.0160

THE ECONOMICS AND ADMINISTRATION OF WATER RESOURCES ...Administrative Structures, Alternative Planning, Water - Alternative Uses, Water Costs, Watersheds-general, ...6.0107

AN EXPLORATION OF COMPONENTS AFFECTING AND LIMITING POLICYMAKING OPTIONS IN LOCAL WATER AGENCIES ...Administrative Structures, Alternative Planning, Economic Impact, Local Government, State-local Government, ...6.0104

DRYLAND SOIL MANAGEMENT ...Evapotranspiration, Management Effects, Modified Water Use, Soil-water-plant Relationships, Tillage, Cropping Systems, Wind Erosion, ...2.0208

ECOLOGY OF COLORADO MOLLUSKS ...Mollusks -non-specific & Other, Pollution - Effects of, Pollution -non-specific, Pollution Effects, Range Or Territorial Distr., ...5.0178

BOTTOM FAUNA IN THE NORTH ST. VRAIN CREEK, COLORADO ...Aquatic Ecology, Benthic Fauna, Mountains-alpine, Streams, Vertical Distribution, ...2.0158

LEVELS OF SECONDARY PRODUCTIVITY IN COLORADO MOUNTAIN STREAMS ...Mountains-alpine, Productivity - Food Chain, Secondary Productivity, Streams, ...5.0179

CHEMICAL ECOLOGY OF DIAPYCNID COPEPODS OF COLORADO ...Aquatic Ecology, Chemical Measurements -water, Copepods, Environmental Ecology, Fresh Water, ...6.0088

DEMAND FOR WATER UNDER DYNAMIC CONDITIONS ...Public Utilities, Social Aspects, Water Costs, Water Demand, ...6.0087

SEALING OF CANALS AND RESERVOIRS WITH COLORADO CLAYS ...Clay, Irrigation Engineering, Open Channel, Particle Size, Permeability, Reservoirs, Waterproof, ...8.0144

GROUND WATER RESOURCES ...Groundwater, Management, Model Studies, Technique Development, Water Resources Development, ...4.0067

ECONOMICS OF GROUNDWATER DEVELOPMENT IN THE HIGH PLAINS OF COLORADO ...Administrative Structures, Alternative Planning, Economics-general, Groundwater, Water Resources Development, ...2.0207

WATER SALVAGE STUDY ...Modified Water Use, Phreatophytes, Transpiration, Water Loss Control, ...6.0096

CORRELATION OF JOINT DENSITY AND ROCK LOADS--INSTALLATION OF TUNNEL SET LOAD CELLS IN DIVIDE TUNNEL, COLORADO ...Engineering Structures-general, Geology - Engineering, Joints-fractures, Tunnels, ...8.0134

PARK RANGE ATMOSPHERIC WATER RESOURCES PROGRAM ...Clouds-precipitation, Nucleation Physics, Orographic Effects, Patterns, Technique Development, ...2.0164

SKYWATER--PARK RANGE FOREST HYDROLOGY ...Forest Watersheds, Model Studies, Mountains-alpine, Topographic Influences, Weather Modification-general, ...2.0172

SKYWATER ...Data Acquisition-general, Gaging, Streams, ...2.0190

PROJECT SKYWATER - COLORADO - STEAMBOAT SPRING ...Automatic Stations, Gages, Instrumental Services, Other Telemetry, Snow-general, ...2.0204

ECONOMIC ANALYSIS OF RESOURCE AREAS ...Economic Impact, Recreation Sites, Reservoirs and Impoundments, Social Aspects, ...6.0097

WATER YIELD IMPROVEMENT, AND SNOW AND AVALANCHE PREDICTION AND PREVENTION, IN THE ALPINE REGIONS OF THE CENTRAL ROCKY MOUNTAINS ...Alpine, Snowslide-avalanche, Water Loss Control, Water Yield, ...3.0146

Colorado River

ATMOSPHERIC WATER ...Cirques, Evaporation, Snowmelt, Snow-pack, Water Loss Control, ...2.0223

ATMOSPHERIC WATER BALANCE AND THE FORECAST OF ANNUAL RUNOFF FROM THE UPPER COLORADO RIVER BASIN ...Evaporation, Forecasting-prediction, Runoff, Water Balance-budget, ...2.0222

APPLICATION OF OPERATIONS RESEARCH TECHNIQUES FOR ALLOCATION OF COLORADO RIVER WATERS IN UTAH ...Operations Research, Optimization, Utah, Water Allocation, ...6.0575

ELECTRONIC ANALOG SIMULATION OF THE SALINITY FLOW SYSTEM WITHIN THE UPPER COLORADO RIVER BASIN ...Analog Computers, Management, Salinity, ...7.0105

GRAND VALLEY SALINITY CONTROL DEMONSTRATION PROJECT ...Brackish Water, Canals, Linings-pavings, Mineralization, Natural Recharge, ...5.0203

HISTORY OF THE DEVELOPMENT OF THE WATER RESOURCES OF THE COLORADO RIVER-PHASE ONE, THE COLORADO RIVER COMPACT ...History, Water Resources Development, ...6.0066

CALIFORNIA-ARIZONA ECONOMIC INTERDEPENDENCE AND THE COLORADO RIVER CONFLICT WITH PARTICULAR REFERENCE TO AGRICULTURE ...Agriculture Industry, Economic Impact, Income, Input - Output Analysis, Water Allocation, ...6.0050

HYDROLOGY OF LOWER COLORADO RIVER BASIN ...Groundwater, Groundwater Movement, Total Volume, Water Loss-general, Water Quality-general, ...2.0066

FIELD TESTS OF POWER TRANSMISSION EQUIPMENT ...Field Testing, Power Transmission, Relay Circuits, Switching, Transmission Lines, ...8.0036

Columbia River

ECOLOGICAL STUDIES OF RADIOACTIVITY IN THE COLUMBIA RIVER ESTUARY AND ADJACENT PACIFIC OCEAN ...Contamination - Water, Organ Sampling Devices, Pacific Ocean-north, Pollutants - Path of, Radioactivity, ...6.0452

COLUMBIA RIVER STUDIES ...Contamination - Water, Invertebrates, Oysters, Pollution Effects, Radioactivity-general, Reproductive System, ...5.1268

MOVEMENT OF RADIONUCLIDES IN THE COLUMBIA RIVER ESTUARY ...Estuaries, Mathematical Analysis, Pollutants - Path of, Radioactivity-general, Water Sampling, ...5.0986

COLUMBIA RIVER SEDIMENT STUDIES ...Geochemical Analysis, Radioactivity-general, Radiochemical Techniques, Sediments, Self-purification, ...5.1249

STUDY OF DISCREPANCY IN FISH COUNTS BETWEEN COLUMBIA RIVER DAMS ...Censusing, Number Or Density, Rainbow Trout, Steelhead Trout, Salmon -coho, chinook, sockeye..., ...8.0278

MENARY ARTIFICIAL SPAWNING CHANNEL STUDIES ...Channels, Construction Land Use Effects, Salmon -coho, chinook, sockeye..., Spawn Or Nesting Sites, Temperature, ...8.0302

COLLECTION OF JUVENILE SALMON IN TURBINE INTAKES ...Control Gate, Electric Power Plants, Mortality Rates, Salmon & Trout - Non-specific, Turbine-other, ...8.0299

PROBLEMS AND OPPORTUNITIES OF WATER RESOURCE UTILIZATION IN THE UPPER COLUMBIA AND MISSOURI

Columbia River

SUBJECT INDEX

RIVER BASINS ...Economics-general, Missouri River, Water - Alternative Uses, Water Resources Development, Water Utilization -domestic, ...6.0328

A COMPARATIVE ANALYSIS OF AMERICAN AND CANADIAN GOVERNMENTAL DEVELOPMENT OF REGIONAL WATER POLICY IN THE COLUMBIA RIVER BASIN ...Administrative Structures, Intergovernmental Relations, International, Water Resources Development, ...6.0632

FORMULATION OF A GENERAL MATHEMATICAL MODEL FOR THE PREDICTION OF THERMAL ENERGY CHANGES IN IMPOUNDMENTS ...Forecasting-prediction, Mathematical Analysis, Model Studies, Reservoirs and Impoundments, Thermal Pollution, ...5.0163

TEMPERATURE PREDICTION STUDIES RELATING TO THE DEVELOPMENT OF A POWER REACTOR SITE ON THE LOWER COLUMBIA RIVER ...Atomic Plants, Construction Sites, Data Networks, Dispersion -water, Thermal Pollution, ...8.0303

A RUN TIMING STUDY IN THE LOWER COLUMBIA RIVER BY MEANS OF A TESTFISHING PROGRAM ...Migration, Nets, Number Or Density, Salmon -coho, chinook, sockeye..., Streams, ...2.0884

COLUMBIA RIVER CHINOOK SALMON ...Construction Land Use Effects, Habitat Studies, Population Dynamics, Salmon - coho, chinook, sockeye..., Spawn Or Nesting Sites, ...2.1129

PLANKTON-PERIPHYTON STUDIES IN THE COLUMBIA RIVER ...Food Webs, Periphyton, Phytoplankton, Radioactivity-general, Radioecology, ...2.1127

TRANSLOCATION OF RADIONUCLIDES BY FISH ...Fish -non-specific, Migration, Phosphorus, Radioactivity-general, Zinc, ...2.1130

COLUMBIA RIVER ECOLOGY ...Chromium, Phosphorus, Pollutants - Path of, Radioisotopes, Zinc, ...6.0613

EFFECT OF REACTOR EFFLUENT ON QUALITY OF COLUMBIA RIVER WATER ...Atomic Plants, Digital Computers, Filtration, Pollution - Effects of, Radioactivity-general, ...5.1246

MECHANISMS OF ENVIRONMENTAL EXPOSURE ...Radioactive Isotopes, Radioactivity-general, Radiologic Health, Regulation and Selection, Toxicological and Allergy, ...5.1244

MOVEMENT OF RADIONUCLIDES IN THE LOWER COLUMBIA RIVER ...Absorbed Load, Adsorption Capacity, Pollutants - Path of, Radioactivity-general, ...2.0902

THE MOVEMENT OF RADIONUCLIDES IN THE COLUMBIA RIVER ESTUARY ...Absorbed Load, Estuaries, Pollutants - Path of, Radioactivity-general, ...2.0903

JUVENILE MIGRATION RATES ...Migration, Other, Salmon & Trout - Non-specific, Snake River, Water Environment -other, ...8.0308

SALMON PRODUCTION IN AREAS MADE INACCESSIBLE BY DAMS ...Aquatic Ecology, Engineering Structures-general, Environmental Ecology, Salmon & Trout - Non-specific, Spawn Or Nesting Sites, ...8.0309

ADULT SALMON BEHAVIOR STUDIES IN RIVERS AND AT DAMS (SONIC TRACKING) ...Aquatic Ecology, Behavioral Ecology, Migration, Salmon & Trout - Non-specific, Tags, ...8.0305

PREDICTION OF ENVIRONMENT ...Biological-general, Environmental Ecology, Low Temp. -but Above 32f, Physical-general, Reservoirs and Impoundments, Salmon & Trout - Non-specific, Snake River, Temperature, Thermal Pollution, ...6.0617

EFFECTS OF INDUSTRIAL EXPANSION ON THE AQUATIC ENVIRONMENT OF ESTUARINE AREAS ...Estuaries, Salmon & Trout - Non-specific, ...2.1131

Column Leaching & Diffusing

MOVEMENT AND ADSORPTION OF PESTICIDES IN STERILIZED SOIL COLUMNS ...Absorption Rates, Absorption, Fixation, Exchange, Internal Water Movement, Movement, Leaching, Pesticides -non-specific, Soil Tests, ...5.0256

Committee-support

SUPPORT OF THE COMMITTEE ON WATER ...Hydrology-general, Management, Teaching and Research, ...9.0003

PARTIAL SUPPORT OF THE U. S. NATIONAL COMMITTEE FOR THE INTERNATIONAL HYDROLOGICAL DECADE ...Hydrology-general, ...9.0005

TIDAL FLOWS IN RIVERS AND HARBORS ...Harbors, Hydraulics-general, Streams, Tides, ...2.0688

GENERAL TECHNICAL ASSISTANCE ...Crustacea -non-specific, Mollusks -non-specific & Other, Shellfish Depuration, Water Quality-general, ...5.1075

Commodity Development Research

Microbiological Uses

Agricultural Microbiology

TREATMENT OF AQUEOUS AGRICULTURAL WASTES FOR CLEAN WATER AND FOR MICROBIAL PROTEIN PRODUCTION ...Aeration, Animal Waste Removal-treatment, Fermentation, Microorganism Proteins, Plant Waste Removal, Treatment, ...5.0410

MICROBIOLOGICAL TREATMENT OF POTATO WASTES ...Additives, Canning Wastes, Industrial Wastes, Material Recovery Wastes, Microbial-bacterial, Plant Waste Removal, Treatment, Trace Analyses-other, ...5.0978

New Ag Uses of Industrial Prod

Feeds Or Feed Additives

HYDROLYSIS OF SLUDGE USING LOW PRESSURE STEAM WITH SO₂ AS A HYDROLYTIC ADJUNCT AND TO STUDY THE UTILIZATION OF THE RESULTING HYDROLYSATE ...Chemical Treatment, Digestion, Fertilizers, Hydrolysis, Material Recovery Wastes, Waste Treatment-economics, ...5.0782

Fertilizers

HYDROLYSIS OF SLUDGE USING LOW PRESSURE STEAM WITH SO₂ AS A HYDROLYTIC ADJUNCT AND TO STUDY THE UTILIZATION OF THE RESULTING HYDROLYSATE ...Chemical Treatment, Digestion, Feeds Or Feed Additives, Hydrolysis, Material Recovery Wastes, Waste Treatment-economics, ...5.0782

ULTIMATE DISPOSAL OF PHOSPHATE FROM WASTEWATER BY RECOVERY AS FERTILIZER ...Activated, Ammonia, Disposal, Material Recovery Wastes, Nutrients, Phosphate, Phosphate, ...5.0342

New Uses of Ag Products

Agronomic

NEW-TYPE GLYCOL MONO ALKYL ETHERS FOR THE CONTROL OF WATER EVAPORATION, TO EXTEND THE USE OF COTTONSEED OIL ...Acids, Condensation, Evaporation, Water Loss Control, ...2.0451

Vegetables

PILOT PLANT DEVELOPMENT OF THE ION-EXCHANGE PROCESS FOR RECOVERY OF AMINO COMPOUNDS FROM POTATO STARCH FACTORY EFFLUENTS ...Agricultural Chemicals-other, Air Pollution -other, Amino Acids -non-specific, Food Processing Industry, Plant Waste Removal, Treatment, ...5.0990

Communication

Mass Communication

MEASUREMENT OF COMMUNITY OPINION RELATING TO PUBLIC WATER SUPPLIES ...Attitudes & Attitude Change, Citizen's Participation, Social Aspects, Water Quality-general, Water Supply-general, Water Utilization -domestic, ...6.0167

Communication Systems

Radio

AUTOMATIC VHF RADIO HYDROLOGIC DATA REPORTING SYSTEM ...Automatic Data Acquisition, Data Transmission Systems, General Synoptic Observations, Hydrology-general, Very High Frequency, ...7.0096

Communication Theory

Man Machine Systems

Other Man-machine

A SYNTHETIC COMPUTER LANGUAGE FOR SANITARY ENGINEERING ...Computation Techniques, Solid Waste-general, ...5.1014

SUBJECT INDEX

Computers

Composite Materials

Laminates

- MECHANICAL PROPERTIES OF ULTRA-THIN LIPID MEMBRANE ...Creep, Elasticity - General, Fracture - General, Natural Occuring, Permeability, ...3.0342
- FREE DROP WATER CONTAINER ...Airborne-operation, Equipment, Logistics, Pipe, Tube, Urethanes, ...8.0209

Reinforced Systems

Ceramic Matrix

- PLASTIC PIPE AND TUBING ...Corrosion General, Engineering Structures-general, Pipe, Tube, Plastic Matrix, Plastics - General, ...8.0132
- THE DEVELOPMENT OF CONCRETE-POLYMER MATERIALS ...Cement, Concrete, Durability, Deterioration, In-situ, Plastics - General, Radiation Induced, Strength, Cohesion, ...8.0045

Filament Winding

- SELF-ADJUSTING AND SELF-CLEANING FILTER FEASIBILITY STUDY ...Chlorination, Combined Sewer, Filter-other, Pollutant-other, Pressure-other, ...5.0227

Plastic Matrix

- DEVELOPMENT OF WATER PURIFICATION SYSTEMS BASED ON REVERSE OSMOSIS ...Desalination, Membranes-other, Natural Occuring, Reinforcing Materials, Reverse Osmosis, ...3.0147
- LIGHTWEIGHT WATER PURIFICATION UNIT ...Brackish Water, Density, Desalination, Distillation-other, Distilling Units, Mobile, Technique Development, Waste Water Treatment-general, ...3.0250
- PLASTIC PIPE AND TUBING ...Ceramic Matrix, Corrosion General, Engineering Structures-general, Pipe, Tube, Plastics - General, ...8.0132
- GLASS FIBER REINFORCED PLASTIC MORTAR PIPE FOR PRESSURE IRRIGATION DISTRIBUTION SYSTEM ...Fiber, Filament, Whisker, Glass, Irrigation Engineering, Pipe, Tube, Pipelines, ...8.0027

Reinforcing Materials

- DEVELOPMENT OF WATER PURIFICATION SYSTEMS BASED ON REVERSE OSMOSIS ...Desalination, Membranes-other, Natural Occuring, Plastic Matrix, Reverse Osmosis, ...3.0147

Computer Electronics

Analog

- GEOHYDROLOGIC SYSTEM ANALYSIS WITH AN ELECTRIC ANALOG COMPUTER ...Analog Computers, Aquifers-general, Digital Computers, Groundwater, Induced Infiltration, Network Synthesis, Systems Analysis, ...2.0417

Data Acquisition Systems

- RADAR DATA ACQUISITION OVER OCEANOGRAPHIC TEST SITES ...Electronics - Applied, Icebergs, Optical, Radar, Surface Environments, Waves, ...6.0274
- EVALUATION OF HYDROLOGIC INSTRUMENTATION ON MAYNARD CREEK WATERSHED ...Data Processing Services, Evaluation Other, Montana, ...7.0073
- IMPROVE COMPONENTS OF THE DATA ACQUISITION SYSTEM - SATELLITE COMMUNICATIONS EQUIPMENT ...Automatic Data Aquisition, Instrumental Services, Rain-general, Satellites & Deep Space Probe, Streams, ...7.0050
- IMPROVE PRECIPITATION MEASURING EQUIPMENT - HYDROLOGIC EQUIPMENT IMPROVEMENT ...Atmospheric Pressure, Gages, Instrumental Services, Technique Development, Transducers, ...7.0051

Data Transmission Systems

- TELEMETERING OF HYDROLOGIC DATA FROM REMOTE AREAS ...Automatic Data Aquisition, Mountains-alpine, Other Telemetry, Remote Areas, Technique Development, ...7.0026
- AUTOMATIC VHF RADIO HYDROLOGIC DATA REPORTING SYSTEM ...Automatic Data Aquisition, General Synoptic Observations, Hydrology-general, Radio, Very High Frequency, ...7.0096

Digital Computers

- DIGITAL INSTRUMENTATION AND TELEMETRY FOR WATER RESOURCES RESEARCH ...Automatic Data Aquisition, Electronics - Applied, ...7.0072
- DIGITAL SYSTEMS FOR ON-SITE DATA COLLECTION FOR WATER QUALITY ANALYSIS ...Automatic Data Aquisition, Data Networks, Technique Development, Water Quality-general, ...7.0005
- HIGH-VOLTAGE D-C TRANSMISSION INVESTIGATIONS ...Ac-dc, Dc-ac, Electrical Engineering-general, Power Regulator, Power Transmission, Silicon-controlled-rectifiers, ...8.0054

Recording Systems

- A CONTINUOUS MULTIPARAMETER WATER QUALITY MONITOR ...Analyzing, Instrumental Services, Mobile, Transducers, Water Quality-general, ...7.0006
- INSTRUMENTATION FOR RESEARCH ...Doppler, Fluid Dynamics, Instrumental Services, Turbulence, Velocity, ...7.0109

Computer Methods -general

Computer Methods -other

- LIVESTOCK WASTE MANAGEMENT AND SANITATION ...Aerobic, Animal Waste Removal-treatment, General Sanitation Methods, Manure, ...5.0360

Computers

Analog Computers

- APPLICATION OF MAGNETOHYDRODYNAMICS TO MEASUREMENT OF LIQUID VELOCITY AND TURBULENCE ...Analog Computers Math, Technique Development, Turbulent, Turbulent Flow, Velocity, Velocity -water, ...2.1166
- SIMULATION OF WATER RESOURCE REGIMES ...Estuaries, Groundwater, Model Studies, Surface Water, ...7.0047
- SEDIMENTATION AND IN-PLACE FILTRATION DURING FLOW THROUGH EARTH FRACTURES ...Filtration, Joints-fractures, Mathematical Analysis, Model Studies, Sedimentology-general, ...4.0018
- APPLICATION OF AN ELECTRONIC ANALOG COMPUTER TO THE SIMULATION OF THE TOTAL HYDROLOGIC-ECONOMIC FLOW SYSTEM ...Economics-general, Hydrology-general, Model Studies, River Basins, ...6.0585
- TIDAL EFFECTS ON GROUND WATER HYDRAULICS IN HAWAII ...Groundwater, Hawaii, Hydraulics-general, Model Studies, Tides, ...2.0378
- THE DEVELOPMENT OF A SIMULATION MODEL FOR THE BEAR RIVER BASIN ...Development of Models, Model Studies, Planning, River Basins, Utah, ...6.0586
- EFFECTS OF FOREST COVER MANIPULATION ON WATER YIELD AS STUDIED BY AN ELECTRIC ANALOG ...Development of Models, Forest Watersheds, Soils and Fertilizer, Washington, Water Yield, ...3.0484
- COMPUTER SIMULATION OF URBAN HYDROLOGIC SYSTEMS ...Hydrographs, Runoff, Texas, Urban Environments, Watersheds-other, ...4.0258
- COMPUTER SIMULATION OF AQUIFERS OF COASTAL PLAIN OF NORTH CAROLINA ...Carbonate Aquifers, Development of Models, Digital Computers, Model Studies, North Carolina, ...2.0822
- ANALOG MODELING TO DETERMINE FRESH WATER AVAILABILITY ON THE OUTER BANKS OF NORTH CAROLINA ...Groundwater, Groundwater Movement, Model Studies, North Carolina, Water Yield, ...3.0375
- ELECTRONIC ANALOG SIMULATION OF THE SALINITY FLOW SYSTEM WITHIN THE UPPER COLORADO RIVER BASIN ...Colorado River, Management, Salinity, ...7.0105
- STUDIES OF THE SOIL-MOISTURE-PLANT REGIME FOR THE CONDITIONS OF WESTERN OKLAHOMA ...Climate-general, Consumptive Use, Evapotranspiration, Oklahoma, Soil-water-plant Relationships, ...2.0880
- HYDRAULICS OF FLOOD MOVEMENTS ...Floods, Mathematical Analysis, Open Channel Flow, Partial, Routing, Unsteady Flow, ...2.0348
- HYDROLOGIC ANALYSIS BY ANALOG COMPUTERS ...Groundwater, Hydrographs, Hydrology-general, Reservoirs and Impoundments, Routing, Surface Water, ...2.0429

Computers

SUBJECT INDEX

- SACRAMENTO-SAN JOAQUIN DELTA ANALOG MODEL STUDIES ...Deltas, Electronics - Applied, Instrumental Services, Model Studies, Sacramento River, ...7.0008
- GEOHYDROLOGIC SYSTEM ANALYSIS WITH AN ELECTRIC ANALOG COMPUTER ...Analog, Aquifers-general, Digital Computers, Groundwater, Induced Infiltration, Network Synthesis, Systems Analysis, ...2.0417
- APPLICATION OF OPTIMIZATION TECHNIQUES TO PROBLEMS TO AGRICULTURE ...Animal Waste Removal-treatment, Digital Computers, Model Studies, Optimization, Solid Waste, Waste Water Treatment-general, ...5.0427
- ELECTRONIC ANALOG MODEL STUDIES OF RIVER BASINS ...Groundwater, Management, Model Studies, Precipitation-general, River Basins, Runoff, Water Cycle, Water Resources Development, ...2.1059
- A STUDY OF THE INTEGRATION OF THE WATER RESOURCES OF THE BEAR, WEBER, AND JORDAN RIVERS IN NORTHERN UTAH ...Analog Computers Math, Model Studies, Planning, Utah, Water Transfer, ...6.0587
- DENVER MULTIPHASE FLOW ...Infiltration, Instrumental Services, Internal Water Movement, Transducers, Unsaturated Flow, ...2.0192
- ELECTRICAL ANALOG MODELS OF HYDROLOGIC SYSTEMS ...Flow Characteristics -water, Groundwater, Groundwater Movement, Model Studies, Surface Water, ...2.0037
- MILL CREEK VALLEY ANALOG MODEL STUDY, OHIO ...Aquifers-general, Artificial Recharge, Model Studies, Ohio, Recharge Pits - Wells, ...4.0195
- ELECTRICAL-ANALOG ANALYSIS OF HYDROLOGIC DATA, ARVA VALLEY, ARIZ ...Arizona, Groundwater, Model Studies, Pumping, Water Table Fluctuation, ...2.0044
- HYDROGEOLOGY OF GLACIAL OUTWASH NEAR SIOUX FALLS, SOUTH DAKOTA ...Available Water, Outwash Plains, Prediction Models, Projections and Estimations, South Dakota, ...2.0975
- IRRIGABLE LAND SUITABILITY STUDY ...Irrigation-general, Percolation, Saline and Alkaline Soils, Water Quality-general, ...6.0092
- INSTRUMENTATION, DATA ACQUISITION, AND COMPUTER TECHNIQUES ...Automatic Data Acquisition, Data Analysis Applications, Digital Computers, Hydraulics-general, ...7.0019
- HIGH-VOLTAGE A-C TRANSMISSION ...Development of Models, Digital Computers, Electrical Engineering-general, Power Transmission, Switching, ...8.0056
- APPLICATIONS OF ANALOG COMPUTER SIMULATION TECHNIQUES FOR RUNOFF PREDICTIONS WITHIN THE REYNOLDS CREEK WATERSHED ...Forecasting-prediction, Idaho, Model Studies, Runoff, Simulation Theory, ...7.0106
- THE SIMULATION OF HYDROLOGIC EVENTS IN ARID REGIONS ...Arid and Desert, Hydrology-general, Management, Model Studies, Surface Water, ...2.1075
- DRAINAGE SYSTEMS FOR THE IMPERIAL VALLEY ...Digital Computers, Drainage, Groundwater Movement, ...4.0026

Analog Computers Math

- APPLICATION OF MAGNETOHYDRODYNAMICS TO MEASUREMENT OF LIQUID VELOCITY AND TURBULENCE ...Analog Computers, Technique Development, Turbulent, Turbulent Flow, Velocity, Velocity -water, ...2.1166
- A STUDY OF THE INTEGRATION OF THE WATER RESOURCES OF THE BEAR, WEBER, AND JORDAN RIVERS IN NORTHERN UTAH ...Analog Computers, Model Studies, Planning, Utah, Water Transfer, ...6.0587

Computers-general

- COMPUTER SIMULATION OF ESTUARINE DISPERSION ...Dispersion -water, Estuaries, Model Studies, Seasonal, Tides, ...5.0935
- INSTALLATION OF INSTRUMENTATION FOR CLAIR ENGLE PLANT ...Analyzing, Desalination, Flash Distillation, Gaging, ...3.0457
- A METHOD FOR SYSTEM EVALUATION AND COST-EFFECTIVENESS OF LARGE MULTISTAGE FLASH DESALTING PLANTS ...Cost Analysis, Desalination, Flash Distillation, Research - Development, Systems Analysis, ...3.0166
- AN ANALYSIS OF PHOSPHORUS AND NITROGEN COMPOUNDS IN TIDAL MARSHLAND DRAINAGE - LABORATORY PROCEDURES ...Colorimetric, Conductrometry, Management, Nitrogen, Phosphate, Phosphite, Swamps-marshes, ...1.0024

- EVAPORATION FROM SOIL SURFACES AS AFFECTED BY SALT, STRUCTURE AND TEXTURE ...Boundary Process (moisture), Development of Models, Evaporation, Saline Properties, Soil Morphology, Profiles, Water Movement-general, ...2.0216
- MATHEMATICAL SIMULATION OF RAINFALL RUNOFF PROCESSES ...Hydrographs, Model Studies, Optimization, Other Computers, Runoff, Storms-general, ...2.1015
- A CONTINUATION OF THE STUDY TO DETERMINE THE COSTS OF WATER IN INDUSTRIAL USES ...Benefit-cost Analysis, Industrial-general, Model Studies, Water Costs, Water Demand, ...6.0468
- UTILIZATION OF PHYSICAL AND MATHEMATICAL MODELS IN ESTUARINE WATER RESOURCES RESEARCH AND MANAGEMENT ...Estuaries, Management, Model Studies, Shoreline - Coastline, Tides, ...6.0607
- PROGRAMMED SELECTION OF OPTIMUM USES OF A SMALL WATER RESOURCE SUBJECTED TO COMPLEX SIMULTANEOUS DEMAND STRESSES ...Model Studies, Optimization, Water - Alternative Uses, Water Demand, Water Supply-general, ...6.0281
- COMPUTER SIMULATION OF AQUIFERS OF COASTAL PLAIN OF NORTH CAROLINA ...Carbonate Aquifers, Mining Industry, North Carolina, Saline Water Intrusion, Water Table Fluctuation, ...2.0821
- MEASUREMENT AND ANALYSIS OF NATURAL-TYPE SURFACES AFFECTING FLUID FLOW ...Channel Roughness, Fluid Flow-other, Frictional, Hydraulic Gradient, ...2.0247
- STOCHASTIC ANALYSIS OF HYDROLOGIC SYSTEMS ...Mathematical Analysis, Model Studies, River Basins, Stochastic Models, Systems Analysis, ...6.0203
- ANOMALOUS FLOOD RESPONSE IN REGIONS OF SIMILAR GEOMORPHIC CHARACTERISTICS ...Floods, Flow Characteristics -water, Morphology-general, Pennsylvania, ...2.0927
- NUMERICAL SIMULATION OF GROUNDWATER FLOW SYSTEMS ...Groundwater Movement, Management, Research - Development, Simulation Theory, ...2.0918
- A WATER QUALITY COMPUTER MODEL OF COOK INLET (PHASE ONE - THE HYDRAULIC MODEL) ...Alaska, Estuaries, Hydraulics-general, Model Studies, Water Quality-general, ...7.0002
- ECONOMIC EVALUATION OF WATER QUALITY ...Benefit-cost Analysis, Management, Model Studies, Systems Analysis, Waste Water Treatment-general, ...6.0046
- TO EVALUATE THE UTILITY OF EXISTING AUTOMATIC CHEMICAL ANALYSIS EQUIPMENT FOR WATER QUALITY SURVEILLANCE UNDER COMPUTER CONTROL ...Atomic Absorption, Automatic Data Acquisition, Chemical Analysis (water), Information Retrieval Methods, Information Storage and File, System Development, Water Properties-general, ...7.0078
- COMPLEMENTARY - COMPETITIVE ASPECTS OF WATER STORAGE ...Benefit-cost Analysis, Model Studies, Reservoirs and Impoundments, Storage of Water, Water - Alternative Uses, ...5.0144
- MATHEMATICAL AND COMPUTER SERVICES FOR THE ANALYSIS OF DATA AND DESIGN OF EXPERIMENTS FOR CERTAIN FWPCA PROGRAMS ...Data Analysis - General, Facilities, Instrumental Services, Oregon, ...5.0934
- DEVELOPMENT OF MATHEMATICAL MODEL OF SEWAGE SLUDGE FLUIDIZED BED INCINERATORS ...Disposal, Fluidized Bed, Mathematical Analysis, Model Studies, ...5.0344
- A MATHEMATICAL MODEL FOR THE FINAL CLARIFIER OF AN ACTIVATED SLUDGE PROCESS ...Activated, Effluents-waste Water, Forecasting-prediction, Thickening, Zeta Potential, ...5.1322
- MODEL STUDIES FOR DEVELOPMENT AND CALIBRATION OF STREAMFLOW CONTROL DEVICES IN THE SOUTHERN BRANCH ...Channel Regulation-general, Discharge-general, Gaging, Models, Synthetic Hydrology-general, ...3.0189
- ECONOMIC EVALUATION OF IRRIGATION IN NORTH DAKOTA ...Economics-general, Irrigation-general, North Dakota, Optimization, ...3.0379
- SOIL CHARACTERISTICS AFFECTING SUBSURFACE DRAINAGE ...Model Studies-general, Permeability, Void Ratio and Porosity, ...4.0194
- DATA REDUCTION METHODS FOR STREAMFLOW FROM SMALL, WILDLAND WATERSHEDS ...Data Analysis - General, Discharge-general, Gaging, Integration, Quadrature, Small Watersheds, Utah, ...2.1068
- COMPUTER SIMULATION AND EVALUATION OF CLIMATOLOGICAL MODELS ...Model Studies, Patterns, Statistics-general, ...7.0044

SUBJECT INDEX

Computers

ANALYSIS AND SYNTHESIS OF HYDROLOGIC SYSTEMS
...Flow Characteristics -water, Hydrology-general, Open Channel Flow, Patterns, Technique Development, ...2.0615

NUMERICAL MODELING OF GENERAL CIRCULATION OF EARTHS ATMOSPHERE ...Air Motion-general, Heat Exchange, Humidity, Latent Heats, Weather Modification-general, ...7.0014

AUTOMATION OF GROUND-WATER RECORDS ...Automatic Data Aquisition, Groundwater, Information Retrieval Methods, Other Storage, ...7.0046

PROBABILITIES OF SEQUENCES OF DRY DAYS IN TEXAS
...Forecasting, Irrigation-general, Planning, Tables, Compilations, Catalogs, Water Supply-general, ...3.0442

OPTIMIZATION IN THE USE OF VARIABLE QUALITY DESALTED WATER AND AN ARTIFICIAL UNDERGROUND RESERVOIR TO SUPPLY PEAK MUNICIPAL WATER DEMANDS ...Conjunctive Use, Desalination, Optimization, Other Computers, Urban Environments, Use of Impaired Water, ...3.0470

WEATHER RADAR - PRECIPITATION RELATIONSHIP ...Automatic Stations, Forecasting, Patterns, Radar, ...2.0876

NATIONWIDE PRECIPITATION - NMC FORECAST TECHNIQUES ...Clouds-general, Forecasting, Forecasting-prediction, General Synoptic Observations, Regression Analysis, ...2.0589

NUMERICAL PRECIPITATION MODEL ...Forecasting, Model Studies, Simulation Theory, Western, ...2.0588

DEVELOPMENT OF HYDROLOGIC ANALYSIS TECHNIQUES
...Data Analysis - General, Hydrology-general, Land Use, Model Studies, Technique Development, ...2.0988

COMPUTER-ORIENTED MATHEMATICAL MODEL FOR CONTINUOUS STREAMFLOW PREDICTION ...Amount, Development of Models, Discharge-general, Prediction Models, ...2.0985

HYDROLOGY TRAINING AND METHODOLOGY ...Education and Training, Hydraulic Engineering-other, Hydrology-general, Meetings, ...9.0001

RESERVOIR SYSTEM ANALYSIS FOR LOW-FLOW REGULATION ...Low Flow, Management, Optimization, Reservoirs and Impoundments, Systems Analysis, ...2.0151

PLAN FORMULATION AND EVALUATION STUDIES - RECREATION DESIGN CRITERIA AND DEMAND ...Costs, Frequency of Use, Planning, Projected Demand, Survey, ...6.0078

ARTIFICIAL FLOODS ...Dam, Dams-other, Floods, Flow Characteristics -water, ...6.0076

REMOTE SENSING, EVERGLADES AREA, FLORIDA ...Florida, Remote Areas, Swamps-marshes, Visible Light, Water Properties-general, ...2.0329

STRUCTURAL RESPONSE, DYNAMIC LOADS ...Dynamic-other, Earthquakes, Electric Power Plants, Industrial Structures, Other Computers, Rock Mechanics, ...8.0032

EXPERIMENTAL DESIGN & STATISTICAL EVALUATION OF WEATHER MODIFICATION EXPERIMENTS ...Data Analysis - General, Data Analysis Applications, Statistics-general, Technique Development, Weather Modification-general, ...2.0198

EFFECTS OF CRACKING IN ARCH DAMS ...Analysis Structural, Arch Dams, Engineering Structures-general, Fracture Mechanics, Tensile, ...8.0092

SMALL IMPOUNDMENTS ...Destratification, Flow Augmentation, Reservoirs and Impoundments, Water Quality-general, ...5.0189

PREDICTING NITRATE CONTENT OF AGRICULTURAL DRAIN WATER ...Agricultural Watersheds, Drainage, Model Studies-general, Moisture Content, Nitrate, Nitrite, Nitrogen, ...5.0181

DISTRIBUTION AND ABUNDANCE OF ZOOPLANKTON IN LAKE ERIE ...Aquatic Ecology, Environmental Ecology, Inter-biotic Relat.(non-specif), Lake Erie, Other Computers, Population Dynamics, ...6.0294

SOIL WATER MOVEMENT IN RELATION TO THE CONSERVATION OF WATER SUPPLIES ...Conservation-general, Evaporation, Groundwater Movement, Infiltration, Internal Water Movement, Water Loss Control, ...2.0033

METHODS FOR WATER QUALITY IMPROVEMENT AND ITS STORAGE UNDERGROUND ...Denitrification, Groundwater Basins, Management, Natural Recharge, Percolation, Underground Waste Disposal, Waste Water Treatment-general, ...4.0005

SOIL HEAT TRANSFER - PERMAFROST AND FROST PENETRATION ...Heat Flow, Math. model, Permafrost-frozen, Thermal Properties-other, ...2.0024

Digital Computers

URBAN HYDROLOGIC STUDIES ...Drainage, Forecasting-prediction, Louisiana, Peak Flow, Urban Environments, ...2.0551

SIMULATION MODELING OF THERMAL EFFECTS ON SELECTED RIVER SYSTEMS ...Atomic Plants, Forecasting-prediction, Model Studies, Self-purification, Thermal Pollution, ...4.0270

A STUDY OF THE HYDROLOGIC EFFECTS OF RAINFALL AUGMENTATION ...Amount, Augmentation-general, Clouds-precipitation, Model Studies, Watersheds-general, ...3.0076

REVERSE OSMOSIS TUBULAR MODULE OPTIMIZATION
...Desalination, Membranes-other, Pilot Plant, Reverse Osmosis, ...3.0070

SIMULATION OF MULTISTAGE FLASH TEST MODULI (9-STAGE SAN DIEGO PLANT) ...Desalination, Development of Models, Flash Distillation, Hybrid Computers, Ordinary, ...3.0328

ANALYSIS OF DESALTING PLANTS AS A SOURCE OF SUPPLEMENTAL SAFE YIELD ...Desalination, Optimization Technique, Other, Process Development-other, ...3.0469

GENERAL STUDIES RELATED TO CODING GROUND-WATER APPROPRIATIONS & BASIC DATA FOR INFORMATION, STORAGE & PROCESSING SYSTEMS ...Data & Statistics Info Storage, Data and Statistics Centers, General Design, Water Law-general, ...7.0074

DIGITAL INSTRUMENTATION AND TELEMETRY FOR WATER RESOURCES RESEARCH ...Automatic Data Aquisition, Electronics - Applied, ...7.0072

MATHEMATICAL SIMULATION OF HYDROLOGIC EVENTS ON UNGAGED WATERSHEDS ...Hydrographs, Runoff, Sensitivity Problems, Testing of Models, Watersheds-general, ...2.0461

DIGITAL SYSTEMS FOR ON-SITE DATA COLLECTION FOR WATER QUALITY ANALYSIS ...Automatic Data Aquisition, Data Networks, Technique Development, Water Quality-general, ...7.0005

PRECIPITATION INTENSITY-FREQUENCY RELATIONSHIPS FOR WEST VIRGINIA ...Amount, Patterns, West Virginia, ...2.1141

SIMULATION OF THE HYDROLOGIC CYCLE ON SMALL AGRICULTURAL WATERSHEDS BY DIGITAL TECHNIQUES ...Agricultural Watersheds, Algorithms, Other Models, Virginia, Water Cycle, ...2.1109

DEVELOPMENT OF COMPUTER MODELS & METHODOLOGY FOR FORECASTING & EVALUATING MUNICIPAL & INDUSTRIAL WATER REQUIREMENTS ...Maryland, Model Studies, Projections and Estimations, Urban Environments, Water Demand, ...6.0252

COMPUTER SIMULATION OF THE HYDROLOGIC SYSTEM OF A MOUNTAIN WATERSHED ...Groundwater, Hydrology-general, Model Studies, Mountains-alpine, Surface Water, Watersheds-other, ...2.0707

THE DETERMINATION OF ZONES OF INTENSE CONTRIBUTION TO STREAM FLOW AS RELATED TO THE CONCEPT OF PARTIAL AREA CONTRIBUTIONS ...Development of Models, Model Studies, Runoff, Synthetic Hydrology-general, Watersheds-general, ...2.0580

SIMULATION MODEL FOR EVALUATION OF INTERCEPTION FROM FOREST TREES ...Environment, Forests, Interception, Model Studies, Snow-general, ...2.0390

PARTIAL AREA CONTRIBUTION TO STREAM FLOW ...Flow Characteristics -water, Model Studies, Runoff, Water Yield, Watersheds-general, ...2.0581

DEVELOPMENT OF A REFINED PREDICTIVE SYSTEM FOR USE IN FORECASTING MUNICIPAL WATER NEEDS ...Forecasting-prediction, Testing of Models, Urban Environments, Water Utilization -domestic, ...6.0253

DEVELOP A COMPUTERIZED METHODOLOGY FOR EVALUATION OF MUNICIPAL WATER CONSERVATION RESEARCH PROGRAMS ...Conservation-general, Cost Analysis, Development of Models, Urban Environments, ...3.0253

A GENERALIZED COMPUTER LANGUAGE FOR HYDROLOGIC AND HYDRAULIC ANALYSIS ...Data Analysis - General, Facilities, Hydraulic Engineering-other, Problem Oriented Languages, ...8.0213

STOCHASTIC BASIS FOR COMPREHENSIVE RIVER BASIN PLANNING ...Development of Models, Monte Carlo Methods, New York, Planning, Stochastic Processes, Systems Analysis, ...6.0374

HYDROLOGIC ANALYSIS OF GROUNDWATER BASINS BY DIGITAL COMPUTER SIMULATION ...Aquifers-general, Groundwater Basins, Groundwater Movement, Mathematical Analysis, Model Studies, ...4.0043

Computers

SUBJECT INDEX

- COMPUTER SIMULATION OF AQUIFERS OF COASTAL PLAIN OF NORTH CAROLINA ...Analog Computers, Carbonate Aquifers, Development of Models, Model Studies, North Carolina, ...2.0822
- WATER-QUALITY REGIMEN OF TAHOE-TRUCKEE SYSTEM ...California, Lakes, Model Studies, Nevada, Water Quality-general, ...5.0706
- OPTIMAL DESIGN OF SEWER AND DRAINAGE SYSTEMS ...Open Channel, Process Design, Sewerage Systems-other, Unsteady, ...5.0530
- HYDRAULICS OF SURFACE IRRIGATION ...Differential Equations, Irrigation, Steady, Surface Irrigation -general, Unsteady, ...2.0098
- STATISTICAL ANALYSIS OF FLOOD PEAKS OF GEORGIA RIVERS ...Data Analysis Applications, Discharge-general, Floods, Georgia, Peak Flow, ...2.0357
- TURBULENT FLOW THROUGH POROUS MEDIA ...Digital Computers, Finite Differences, Porous Media - Flow Through, Prediction Models, Turbulent, Turbulent Flow, ...2.0354
- SYSTEM ANALYSIS OF RAINFALL-RUNOFF RELATIONSHIP ...Amount, Digital Computers, Ordinary, Runoff, Systems Analysis, ...2.0427
- INVESTIGATION OF THE 'TURBULENT' TRANSPORT MECHANISMS FOR HEAT AND MOMENTUM TRANSFER IN PIPE FLOW ...Heat-transfer-other, Statistics-general, Turbulent, Velocity, ...5.0371
- PLANNING ALGORITHMS FOR REGIONAL WATER RESOURCE SYSTEMS ...Algorithms, Economic Efficiency, Planning, Systems Analysis, Water Resources Development, ...7.0012
- GEOHYDROLOGIC SYSTEM ANALYSIS WITH AN ELECTRIC ANALOG COMPUTER ...Analog, Analog Computers, Aquifers-general, Groundwater, Induced Infiltration, Network Synthesis, Systems Analysis, ...2.0417
- APPLICATION OF OPTIMIZATION TECHNIQUES TO PROBLEMS TO AGRICULTURE ...Analog Computers, Animal Waste Removal-treatment, Model Studies, Optimization, Solid Waste, Waste Water Treatment-general, ...5.0427
- EFFECT OF THE CLIMATE AND MICROCLIMATE ON AGRICULTURE IN SOUTH DAKOTA ...Applied Climatology, Automatic Stations, Microclimate-general, South Dakota, Statistics-general, ...2.0973
- EFFECT OF REACTOR EFFLUENT ON QUALITY OF COLUMBIA RIVER WATER ...Atomic Plants, Columbia River, Filtration, Pollution - Effects of, Radioactivity-general, ...5.1246
- INSTRUMENTATION, DATA ACQUISITION, AND COMPUTER TECHNIQUES ...Analog Computers, Automatic Data Acquisition, Data Analysis Applications, Hydraulics-general, ...7.0019
- DESIGN OF UNDERGROUND POWERPLANTS ...Borehole Geophysics, Electric Power Plants, Mechanics of Structures-other, Power Plant, Rock Mechanics, ...8.0031
- HIGH-VOLTAGE A-C TRANSMISSION ...Analog Computers, Development of Models, Electrical Engineering-general, Power Transmission, Switching, ...8.0056
- SLAB ANALYSIS ...Beams - Bars, Engineering Structures-general, ...8.0117
- GROUNDWATER ANALYSIS BY DIGITAL COMPUTER APPLICATION DEVELOPMENT ...Aquifers-general, Forecasting-prediction, Water Table Fluctuation, ...4.0059
- ENGINEERING ANALYSIS OF WASTE TREATMENT ...Activated Carbon, Development of Models, Electrodialysis, Optimization, Sewerage Systems-other, ...5.0861
- COMPUTERIZED DESIGN AND SYSTEMS ANALYSIS OF WASTEWATER TREATMENT PLANTS ...Application, Development of Models, Forecasting-prediction, Systems Analysis, Waste Water Treatment-general, ...6.0421
- DRAINAGE SYSTEMS FOR THE IMPERIAL VALLEY ...Analog Computers, Drainage, Groundwater Movement, ...4.0026

Digital Computers

- TURBULENT FLOW THROUGH POROUS MEDIA ...Digital Computers, Finite Differences, Porous Media - Flow Through, Prediction Models, Turbulent, Turbulent Flow, ...2.0354
- SYSTEM ANALYSIS OF RAINFALL-RUNOFF RELATIONSHIP ...Amount, Digital Computers, Ordinary, Runoff, Systems Analysis, ...2.0427

Hybrid Computers

- SIMULATION OF MULTISTAGE FLASH TEST MODULI (9-STAGE SAN DIEGO PLANT) ...Desalination, Development of Models, Digital Computers, Flash Distillation, Ordinary, ...3.0328

- EFFICIENCY OF DATA COLLECTION SYSTEMS IN HYDROLOGY AND WATER RESOURCES FOR PREDICTION AND CONTROL ...Control and Protection, Economic Efficiency, Hydrology-general, Systems Analysis, ...7.0004
- DYNAMIC SYSTEM MODELING AND SIMULATION OF A RIVER BASIN ...Dynamic, Michigan, Model Studies, River Basins, Stochastic Models, ...6.0301
- HYBRID COMPUTER SIMULATION OF GROUND-WATER BASINS ...Development of Models, Groundwater, Groundwater Basins, Model Studies, Water Quality Control-general, ...2.0106
- DEVELOPMENT AND CALIBRATION OF A PITOT SPHERE ...Gaging, Hybrid Computers, Mass, ...8.0193

Hybrid Computers

- DEVELOPMENT AND CALIBRATION OF A PITOT SPHERE ...Gaging, Hybrid Computers, Mass, ...8.0193

Other Computers

- MATHEMATICAL SIMULATION OF RAINFALL RUNOFF PROCESSES ...Computers-general, Hydrographs, Model Studies, Optimization, Runoff, Storms-general, ...2.1015
- OPTIMIZATION IN THE USE OF VARIABLE QUALITY DESALTED WATER AND AN ARTIFICIAL UNDERGROUND RESERVOIR TO SUPPLY PEAK MUNICIPAL WATER DEMANDS ...Computers-general, Conjunctive Use, Desalination, Optimization, Urban Environments, Use of Impaired Water, ...3.0470
- STRUCTURAL ANALYSIS ...Analysis Structural, Beams - Bars, Concrete-other, Finite Differences, Frame, Arch, truss, ...8.0020
- STRUCTURAL RESPONSE, DYNAMIC LOADS ...Computers-general, Dynamic-other, Earthquakes, Electric Power Plants, Industrial Structures, Rock Mechanics, ...8.0032

Other Computers

- DISTRIBUTION AND ABUNDANCE OF ZOOPLANKTON IN LAKE ERIE ...Aquatic Ecology, Computers-general, Environmental Ecology, Interbiotic Relat.(non-specif), Lake Erie, Population Dynamics, ...6.0294

Conifers

Conifers -non-specific

- A STUDY OF SNOW INTERCEPTED BY CONIFEROUS TREE CROWNS AND ITS DISPOSITION UNDER THE CLIMATIC CONDITIONS OF CENTRAL NEW YORK ...Coniferous Forests, Interception, New York, Snow, Snow-other, ...2.0787

Douglas Fir

- EFFECTS OF LOGGING ON SALMON POPULATIONS IN COASTAL STREAMS ...Forest Debris, Forest Watersheds, Logging, Transport, Equipment, Population Dynamics, Salmon - coho, chinook, sockeye., ...5.0947
- GENESIS AND MORPHOLOGY OF PYGMY FOREST-BLACKLOCK SOIL ECOSYSTEM ...California, Sequoia, Soil Ecology, Water Table Fluctuation, Wave-built Terrace, ...6.0041
- TESTS OF DOUGLAS-FIR PLANTING STOCK FOR SURVIVAL UNDER DROUGHT STRESS ...Drought, Longevity, Mycorrhiza, Physiology, Plant Chemistry, Site Index and Site Quality, ...2.0894

Juniperus

- EFFECTS OF PINYON-JUNIPER CONVERSION ON WATERSHED VALUES IN UTAH ...Cover Crops, Forest Watersheds, Moisture Budgets, Pines, Water Balance-budget, ...2.1067

Pines

- FOREST TREE NUTRITION AND FOREST FERTILIZATION ...Irrigation-general, Physiology, Plant Chemistry, Potassium, Soil Fertility, Soils and Fertilizer, ...2.0815
- EFFECTS OF PINYON-JUNIPER CONVERSION ON WATERSHED VALUES IN UTAH ...Cover Crops, Forest Watersheds, Juniperus, Moisture Budgets, Water Balance-budget, ...2.1067
- TRANSPIRATION RATES OF CONIFERS ...Air Temperature - non-specific, Solar Light -non-specific, Spruces, ...2.0712
- FOREST SITE AMELIORATION IN THE COASTAL FLAT-WOODS OF MISSISSIPPI - ECONOMIC AND BIOLOGICAL

SUBJECT INDEX

Connecticut River

- CONSIDERATIONS ...Mississippi, Moisture Tension, Site Index and Site Quality, Water Table - Depth of, Water Table Fluctuation, ...2.0682
- CONSERVING SOIL MOISTURE BENEATH RED PINE BY MEANS OF A FOLIAR SPRAY OF A STOMATA - CLOSING CHEMICAL ...Liquids Or Sprays, Moisture Content, PMA, Soil Environment, Soils and Fertilizer, Transpiration, ...3.0151
- WATER CONTROL FOR FOREST PRODUCTION ...Available Water, Cultural Control, Palms, Timber Stand Improvement, Water Loss Control, ...3.0175
- GROWTH AND DEVELOPMENT OF NATIVE HARDWOODS AND PINE ...Available Water, Growth, Soil Environment, Soil Types, Soils and Fertilizer, ...2.0430
- EFFECTS OF SOIL MOISTURE STRESS ...Drought, Moisture Deficiency, Moisture Tension, Physiology, Plant Chemistry, Soil Environment, ...2.0431
- EFFECT OF MOISTURE STRESS ON RATES OF PHOTOSYNTHESIS ...Drought, Growth Rate, Photosynthesis, Respiration, ...2.0956
- THE MANAGEMENT OF PONDEROSA PINE - NEW METHODS OF THINNING DENSE STAGNATING SECOND GROWTH STANDS ...Fire Use for Silviculture, Soil Environment, Soils and Fertilizer, Timber Stand Improvement, ...2.0065
- INTERRELATION OF MOISTURE REGIME & NUTRIENT LEVELS OF SELECTED MISSISSIPPI SOILS & THEIR RELATION TO THE SITE INDEX OF LOBLOLLY PINE ...Forest Watersheds, Mississippi, Moisture Tension, Site Index and Site Quality, Soils and Fertilizer, ...2.0683
- SILVICULTURE OF COASTAL PLAIN TIMBER TYPES ...Environment, Forest Watersheds, Taxodioidae, Timber Stand Improvement, Wetlands, ...4.0212

Sequoia

- SOIL MOISTURE DRYING CURVES-MANAGEMENT RELATIONS ...California, Management, Moisture Content, Soil Environment, ...6.0036
- GENESIS AND MORPHOLOGY OF PYGMY FOREST-BLACKLOCK SOIL ECOSYSTEM ...California, Douglas Fir, Soil Ecology, Water Table Fluctuation, Wave-built Terrace, ...6.0041

Spruces

- TRANSPIRATION RATES OF CONIFERS ...Air Temperature - non-specific, Pines, Solar Light -non-specific, ...2.0712

Taxodioidae

- SILVICULTURE OF COASTAL PLAIN TIMBER TYPES ...Environment, Forest Watersheds, Pines, Timber Stand Improvement, Wetlands, ...4.0212

Conjunctive Use

- WATER RESOURCE OPERATIONS STUDY ...Operations Research, Planning, Water Cycle, Weather Modification-general, Wyoming, ...6.0652
- OPTIMIZATION OF WELLS AND RECHARGE FACILITIES IN CONJUNCTIVE USE OF GROUNDWATER RESERVOIRS ...Groundwater Basins, Optimization, Pumping, Recharge -general, Water Wells, ...6.0054
- AN OPTIMAL WATER MANAGEMENT PLAN FOR THE MIAMI VALLEY ...Alternative Planning, Artificial Recharge, Augmentation-general, Floodproofing, Optimization Technique, Systems Analysis, ...6.0467
- A SYSTEM APPROACH FOR INTEGRATING GROUNDWATER AND SURFACE-WATER USE ...California, Groundwater, Systems Analysis, Water Quality Control-general, Water Utilization -general, ...6.0037
- SURFACE AND GROUND WATER POTENTIALITIES OF THE MULLICA RIVER BASIN ...Aqueducts, Economic Impact, Systems Analysis, Water Quality-general, Water Transfer, ...4.0172
- A COMPENDIUM OF WATER LAW AND ECONOMICS IN NEW HAMPSHIRE ...Economic Impact, New Hampshire, Water Law-general, Water Quality-general, Water Rights-general, Water Utilization -domestic, ...6.0283
- A COMPARATIVE STUDY OF THE USE TAX AS A MEANS OF ALLOCATION OF WATER RESOURCES IN A CONJUNCTIVE USE SYSTEM ...Benefit-cost Analysis, Fiscal, Groundwater, Water Allocation, Welfare Economics, ...6.0056
- GROUNDWATER - SURFACE WATER INTEGRATION STUDY IN THE GRAND PRAIRIE REGION OF ARKANSAS ...Arkansas, Available Water, Groundwater, Recharge -general, Water Demand, ...4.0020

- SYSTEMS SIMULATION FOR MANAGEMENT OF A TOTAL WATER RESOURCE ...Management, Optimization, Planning, River Basins, Water Transfer, ...4.0230

- DRAINAGE DESIGN FOR IRRIGATION AGRICULTURE ...Aquifers-general, Artesian Flow, Groundwater Movement, Seepage, Water Wells, ...4.0165

- ECONOMIC ANALYSIS OF ALTERNATIVE WATER USE TECHNIQUES IN PRODUCTION OF COTTON, GRAIN SORGHUM & RELATED CROPS - SOUTHERN HIGH PLAINS OF TEXAS ...Conservation-general, Economic Efficiency, Irrigation-general, Water - Alternative Uses, Water Costs, ...6.0571

- OPTIMIZATION IN THE USE OF VARIABLE QUALITY DESALTED WATER AND AN ARTIFICIAL UNDERGROUND RESERVOIR TO SUPPLY PEAK MUNICIPAL WATER DEMANDS ...Computers-general, Desalination, Optimization, Other Computers, Urban Environments, Use of Impaired Water, ...3.0470

- OPTIMUM UTILIZATION OF SURFACE AND SUBSURFACE WATER FACILITIES ...Aquifers-general, Mathematical Analysis, Operations Research, Storage of Water, Survey Studies ...4.0110

Connecticut

- RATE AND DIRECTION OF GROUND WATER CIRCULATION IN CLOSE SPACED BEDROCK AND GRAVEL WELLS UNDER THE INFLUENCE OF NON-SYNCHRONOUS PUMPING TIME ...Groundwater Movement, Land Use, Pumping, Subsurface Flow, ...2.0244

- REVERSE FILTER EROSION PROTECTION ...Control and Protection, Engineering Structures-general, Erosion-general, Filters, Lining, ...8.0147

- INTEGRATION OF CONNECTICUT WATER RIGHTS LAWS AND POLLUTION CONTROL LAWS ...Legal Review, State Government, Water Allocation, Water Quality Control-general, Water Rights-general, ...6.0116

- STUDIES ON PHOSPHORUS TRANSFORMATIONS IN EUTROPHIC LAKES ...Bacterial Culture, Bacterial Pollutant Sources, Budgets -other, Eutrophication, Nutrition, Phosphorus, ...5.0216

- ORGANIC DEBRIS ON CONNECTICUT BEACHES AND SHORES ...Catabolism and Degradation, Identification, Organic Matter, Physical-general, Shoreline - Coastline, ...5.0204

- REGIONAL UTILITIES STUDY-WATER SUPPLY, SEWERAGE, DRAINAGE AND REFUSE DISPOSAL ...Municipal-waste-other, Operations Research, Planning, Sewage, Water Supply-general, ...5.0207

- DISPOSAL OF LIQUID WASTES ...Disposal Wastes, Plants - Systems-general, ...5.0206

- ECOLOGICAL FACTORS AFFECTING REPRODUCTION OF SHELLFISH (PHYSIOECOLOGY OF SHELLFISH PROGRAM) ...Environmental Ecology, Oysters, Reproductive System, Spawn Or Nesting Sites, Water Properties-general, ...6.0114

Connecticut River

- DISTRIBUTION AND ABUNDANCE OF JUVENILE AMERICAN SHAD, ALOSA SAPIDISSIMA (WILSON), IN THE CONNECTICUT RIVER ABOVE HOLYOKE DAM, MASSACHUSETTS ...Alewife,menhaden,shad,herring, Engineering Structures-general, Massachusetts, Migration, Number Or Density, ...3.0271

- FOOD HABITS OF LARVAL AND JUVENILE SHAD IN THE CONNECTICUT RIVER ...Alewife,menhaden,shad,herring, Aquatic Ecology, Food Supply, Massachusetts, Recreation Sites, ...3.0272

- STUDY OF THE RIVER PHASE OF THE LIFE HISTORIES OF ALOSA PSEUDOHARENGUS AND AESTIVALIS ...Alewife,menhaden,shad,herring, Aquatic Ecology, Environmental Ecology, Life History Studies, Spawn Or Nesting Sites, ...6.0111

- POTENTIAL FISHERY FOR RIVER HERRINGS IN CONNECTICUT RIVER ...Alewife,menhaden,shad,herring, Environmental Ecology, Life History Studies, Nets, Spawn Or Nesting Sites, ...4.0075

- OPTIMUM UTILIZATION AND MANAGEMENT OF WATER IN FORMATIONS HYDROLOGICALLY-CONNECTED TO A STRETCH OF THE CONNECTICUT RIVER ...Aquifers-general, Artificial Recharge, Baseflow, Massachusetts, Water Yield, ...4.0134

- THE USE OF AERIAL PHOTOGRAPHS TO EVALUATE THE RECREATIONAL RESOURCES OF A RIVER ...Land Use, Methods, Photogrammetry, Recreation Sites, Streams, ...6.0285

- FEASIBILITY OF USING ATMOSPHERIC WATER RESOURCES IN THE NORTHEASTERN UNITED STATES ...Applied Cli-

Connecticut River

- matology, Benefit-cost Analysis, Clouds-precipitation, River Basins, Water Resources Development, ...2.0161
- THE CONNECTICUT RIVER STUDY ...Projected Demand, Recreation Areas and Parks, Recreation Sites, Recreation Types - non-specific, Types of Resources, ...3.0168

Conservation

- ECONOMICS OF SOIL CONSERVATION PRACTICES WITHIN WATERSHEDS ...Agricultural Watersheds, Economics-general, Kansas, Tillage, Cropping Systems, ...3.0243

Conservation-general

- SAN LUIS WATERSHED STUDY ...Management, New Mexico, Sediment Yield, Small Watersheds, Water Yield, ...2.0234
- MOUNTAIN MEADOW RESTORATION ...Agricultural Land Use Effects, Conservation, Management and Fertility, Mountains-alpine, Other Water Conditions, ...4.0166
- HYDROLOGY OF SUBURBAN AREAS ...Amount, Land, New Jersey, Runoff, Suburban Areas, ...4.0173
- A STUDY OF THE INTERACTIONS PRESENT IN AQUEOUS SALT SOLUTIONS BY NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY ...Ionic, Nuclear Magnetic, Solution, Transition Metal-general, Water Resources Development, ...1.0074
- WATER RESOURCES IN SOURDOUGH AND MIDDLE CREEK WATERSHEDS - A COMPARATIVE STUDY OF QUALITY AND HYDROLOGY ...Hydrology-general, Land Use, Montana, Water Quality Control-general, Watersheds-general, ...5.0695
- LEGAL RESEARCH, WRITING AND DRAFTING TOWARD IMPROVING MONTANA WATER LAWS ...Legislation, Montana, State Government, Water Utilization -general, ...6.0333
- DEVELOP A COMPUTERIZED METHODOLOGY FOR EVALUATION OF MUNICIPAL WATER CONSERVATION RESEARCH PROGRAMS ...Cost Analysis, Development of Models, Digital Computers, Urban Environments, ...3.0253

Construction Materials

Dam, Canal

- CONCRETE CURING COMPOUND INVESTIGATIONS ...Cement, Concrete, Curing Agents, Organic-general, Weathering, ...8.0075
- DESIGN IMPROVEMENTS--GATES AND VALVES ...Channel Regulation-other, Control Gate, Galvanic, Seals, Valves, ...8.0088

SUBJECT INDEX

Copper

RESISTANCE OF CONCRETE TO SULPHATE WATERS ...Alkalinity, Cement, Concrete, Chemicals, Irrigation, Sulfate, Sulfite, ...8.0298

NEW DEVELOPMENTS IN CATHODIC PROTECTION AND CORROSION STUDIES ...Cathodic Protection, Coatings-general, Platinum, Titanium, ...8.0024

EVALUATION OF CANAL SEALANTS -OPEN AND CLOSED CONDUCT RESEARCH PROGRAM ...Canals, Flume Studies, Sealant Materials, Seepage, Soil Environment, ...8.0085

Domestic Structural

NEW ROOFING SYSTEMS ...Elastomers Rubber, Roofs, Standards, Specifications, Weathering, ...8.0078

Construction Sites

VERIFICATION OF HYDRAULIC COMPUTATION METHODS FOR BRIDGE SITES ...Bridges & Culverts, Discharge-general, Location, ...8.0207

A STUDY OF THE DISPOSAL OF THE EFFLUENT FROM A LARGE DESALINATION PLANT ...Copper, Desalination, Desalination Wastes, Effluents-waste Water, Handbooks, ...3.0295

SOCIAL CHANGE IN A WATER RESOURCE DEVELOPMENT AREA - SOCIAL ASPECTS OF THE CONSTRUCTION PHASE OF LIBBY DAM ...Attitudes & Attitude Change, Recreation Sites, Reservoirs and Impoundments, Social Aspects, Social Change, User Patterns, ...6.0329

TEMPERATURE PREDICTION STUDIES RELATING TO THE DEVELOPMENT OF A POWER REACTOR SITE ON THE LOWER COLUMBIA RIVER ...Atomic Plants, Columbia River, Data Networks, Dispersion -water, Thermal Pollution, ...8.0203

EVALUATION OF ENGINEERING PROJECTS AND ESTUARINE DATA (ESTUARINE PROGRAM) ...Commercial Fishing, Conservation & Management Eng, Estuaries, Gulf of Mexico, Habitat Studies, Land Use -non-specific, ...8.0290

Consultants, Advisory Services

AIDS FOR WASTEWATER SYSTEM PERSONNEL SAFETY AND ADVANCEMENT ...Personnel, Safety, Waste Water Treatment-general, ...9.0006

Continental Shelf

ESTUARIES AND SHORE STUDIES AND WATER SURFACE INVESTIGATIONS ...Effluents-waste Water, Evaporation, Infrared Radiation, Shoreline - Coastline, Thermal Pollution, Visible Light, ...6.0143

DISTRIBUTION OF LIFE WITH DEPTH ...Marine Photography-television, North Carolina, Photography-other, Vertical Distribution, ...5.0272

MARINE HYDROLOGY AND GEOCHEMISTRY, ATLANTIC CONTINENTAL SHELF AND SLOPE ...Chemistry, Distribution, Mixing, Ocean Environment, Saline Water Intrusion, ...2.0623

INFLUENCE OF THE PHYSICAL ENVIRONMENT ON DISTRIBUTION OF YOUNG STAGES OF COASTAL GAME FISH ...Environmental Ecology, Fish -non-specific, Maturity & Growth Stages, Physical-general, Range Or Territorial Distr., ...6.0346

CIRCULATION ON THE CONTINENTAL SHELF ...Atlantic Ocean-north, Circulation General, Eastern, Water Motion Recorders, ...2.0624

Control and Protection

REVERSE FILTER EROSION PROTECTION ...Connecticut, Engineering Structures-general, Erosion-general, Filters, Lining, ...8.0147

LEGAL ASPECTS OF WATER USE AND CONTROL IN SOUTH CAROLINA ...Legislation, South Carolina, Survey Studies, Water Law-general, Water Utilization -general, ...6.0492

THE MANAGEMENT AND CONTROL OF WATER IN PUERTO RICO ...Data Analysis - General, Management, Puerto Rico, Types of Resources, Water Quality-general, Water Supply-general, ...6.0480

EFFICIENCY OF DATA COLLECTION SYSTEMS IN HYDROLOGY AND WATER RESOURCES FOR PREDICTION AND CONTROL ...Economic Efficiency, Hybrid Computers, Hydrology-general, Systems Analysis, ...7.0004

ANTHROPOLOGICAL ANALYSIS OF SOCIAL AND CULTURAL BENEFITS AND COSTS FROM STREAM-CONTROL MEASURES ...Demography, Kentucky, River Basins, Social Aspects, ...6.0239

DIVERTING MISSISSIPPI RIVER WATER TO TEXAS - A PRELIMINARY EVALUATION OF PLANS ...Mississippi River, Streams, ...Water Transfer, ...8.0205

OPERATIONS RESEARCH IN WATER QUALITY MANAGEMENT ...Channel Regulation-other, Engineering Structures-general, Management, Operations Research, Water Quality Control-general, ...5.0526

DEVELOPMENT OF MULTIPLE-USE PRODUCTION/OUTPUT INFORMATION FOR OWNERS OF SMALL WOODLANDS IN THE CENTRAL HARDWOOD REGION ...Erosion-general, Forest Watersheds, General Information Services, Input - Output Analysis, Multiple-purpose Projects, ...7.0027

ILLINOIS AND ITS INTERSTATE COMPACTS ...Administrative Structures, Illinois, Interstate, Legal Review, Urban Environments, ...6.0185

AN HISTORICAL APPRAISAL OF THE TENNESSEE VALLEY AUTHORITY'S FLOOD CONTROL PROJECT AND PROGRAM ...Administrative Structures, Benefit-cost Analysis, Survey Studies, Tennessee River, ...4.0227

CITY OF JACKSON, WATER RESOURCES STUDY, MISSISSIPPI ...Floods, Groundwater, Mississippi, Urban Environments, Water Supply-general, ...4.0148

CHANNELIZATION STUDIES ...Channel Geometry, Channels, New Mexico, Sedimentation, Silting, ...8.0053

WEED CONTROL AND REVEGETATION ...New Mexico, Plant Pollutants, Rio Grande River, Weed Control -other, ...3.0111

WEED CONTROL AND REVEGETATION ...Cover Crops, Plant Pollutants, Rio Grande River, Weed Control -other, ...3.0119

GENERAL WATER QUALITY INVESTIGATIONS ...Meetings, Pollutants-general, State-local Government, Technique Development, Water Quality-general, ...5.0186

Control Systems

Guidance

FISH GUIDING ...Animal Distr. (non-specific), Fish -non-specific, Instrumental Services, Management -other, Water Environment -other, ...8.0307

Other Control Systems

ELECTRICAL MACHINERY TEMPERATURE CONTROL ...Electric Power Plants, Motors and Appliances, Power Regulator, Temperature, ...8.0125

AUTOMATION OF CANAL SYSTEMS ...Canals, Channel Regulation-other, Control Gate, Controls, Open Channel, ...8.0138

Control Theory

Dynamic Control System

WATER DISPATCHING OPERATIONS BY ELECTRONIC COMPUTER ...Daily, Design Flow-flood, Electric Power Plants, Inflow, Power Generation, Reservoirs and Impoundments, ...2.0984

Sensitivity Problems

MATHEMATICAL SIMULATION OF HYDROLOGIC EVENTS ON UNGAGED WATERSHEDS ...Digital Computers, Hydrographs, Runoff, Testing of Models, Watersheds-general, ...2.0461

Copper

A STUDY OF THE DISPOSAL OF THE EFFLUENT FROM A LARGE DESALINATION PLANT ...Construction Sites, Desalination, Desalination Wastes, Effluents-waste Water, Handbooks, ...3.0295

EFFECT OF SURFACTANT MICELLES ON METAL ION REMOVAL BY FLOTATION FROM METALLURGICAL WASTEWATER ...Foam, Metal Pickling Wastes, Micelle, Surfactants, Ultrasonics, Zinc, ...5.0691

COPPER TOXICITY ON ALGAE OF THE BIG BLACKFOOT RIVER ...Contamination, Pollution-water, Environment, Mining Activities, Montana, Pollution - Effects of, ...5.0701

TREATMENT RECOVERY, AND REUSE OF COPPER WIRE MILL PICKLING WASTES ...Electrochemistry-other, Electrolytic Processes, Material Recovery Wastes, Metal Pickling Wastes, Regeneration-other, ...5.0722

EFFECT OF COPPER SULFATE ON AQUATIC WEEDS ...Alkalinity, Canals, Copper Sulfate, Irrigation-general, of Aquatic Plants, ...3.0108

Core Analysis

SUBJECT INDEX

Core Analysis

- BIOCHEMICAL EFFECTS OF MICROORGANISMS UPON THE SALT MARSH ENVIRONMENT ...Aquatic Soils, Chemical, Microorganisms (non-specific), Salinity, Swamps-marshes, Tide-water Areas, ...1.0026
- RELATION OF PHOSPHORUS IN LAKE BOTTOM DEPOSITS AND POLLUTIONAL HISTORY OF MINNESOTA LAKES ...Chemical, Lakes, Minnesota, Phosphorus, ...5.0602
- CONSERVATION OF FRESH-WATER RESOURCES BY DEEPWELL DISPOSAL OF LIQUID WASTES ...Borehole Geophysics, Lithology, Permeability, Pollution Abatement, Underground Waste Disposal, ...5.0025
- THE EFFECT OF CLAY MINERALS ON THE CHEMICAL COMPOSITION OF FRESH AND SALINE WATERS ...Adsorption-other, Chemical-general, Clay Minerals-general, Exchange-other, Groundwater, Interstitial - Connate Water, ...2.0360
- ENGINEERING GEOLOGY ...Dams-general, Foundations-general, Geology - Engineering, Highway Sites, Reservoirs, ...8.0174
- ENVIRONMENTAL RADIATION STUDIES ...Protactinium, Rate of Deposition, Thorium, Uranium, ...1.0113
- DEEP ICE CORE STUDIES AND ANALYSES FROM GREENLAND AND ANTARCTICA ...Antarctica, Dust - Particulate Matter, Extraterrestrial, Greenland, Radioactive Dating-general, Velocity, ...2.0754

Corrosion, Deterioration

Agents

Biological

- THE ELECTROCHEMICAL BEHAVIOR OF METALS AND ALLOYS IN SEA WATER AND THE EFFECT OF BIOLOGICAL SLIMES ON THEIR RATES OF CORROSION ...Bacteria, Desalination, High, Metallic Alloys, Water, ...3.0181
- STORAGE AND CONVEYANCE OF IRRIGATION WATER ...Irrigation-general, Leakage, Linings-pavings, Porosity, Permeability, Stability, Weathering, ...2.1071
- CORROSION AND ENCRUSTATION MECHANISMS IN WATER SUPPLIES ...Chemicals, Corrosion Prevention-other, Mineralization, Sealing, Encrusting, ...2.0274
- MICROBIOLOGICAL INVESTIGATIONS ...Biological Pollutants - general, Marine Fouling, Microorganisms (non-specific), Water Supply-general, ...3.0133

Chemicals

- EFFECT OF ELECTROCHEMICAL AND METALLURGICAL FACTORS ON CORROSION OF METALS AND ALLOYS ...Austenitic, Galvanic, Passivation, Pitting, Water, ...3.0282
- CORROSION AND ENCRUSTATION MECHANISMS IN WATER SUPPLIES ...Biological, Corrosion Prevention-other, Mineralization, Sealing, Encrusting, ...2.0274
- FACTORS INFLUENCING THE RESISTANCE OF CONCRETE TO SULFATE ATTACK ...Aggregates, Extenders, Fillers, Cement, Concrete, Composition Parameters-other, Sulfate, Sulfite, ...8.0044
- FACTORS INFLUENCING THE DURABILITY OF CONCRETE ...Cement, Concrete, Durability, Deterioration, Organic-general, Pipe, Tube, Sulfate, Sulfite, ...8.0043
- RESISTANCE OF CONCRETE TO SULPHATE WATERS ...Alkalinity, Cement, Concrete, Dam, Canal, Irrigation, Sulfate, Sulfite, ...8.0298

Soils

- EVALUATION OF POLYVINYL CHLORIDE (PVC) AND VINYL CLAD ALUMINUM PIPE USED FOR CARRYING IRRIGATION WATER WHEN BURIED WITHIN THE FROST ZONE ...Aluminum, Cladding, Irrigation-general, Joining, Bonding-general, Pipe, Tube, Polyvinyls-other, ...8.0271
- CORROSION OF UNDERGROUND STEEL PILING ...Corrosion Prevention-other, Deep, Low Alloy Steels, Soil Chemical Properties, Soil Electrical Properties, ...8.0223
- POURBAIX DIAGRAM FOR CORROSION EVALUATION ...Soil Chemical Properties, Test Methods, Water, ...8.0022

Water

- EFFECT OF ELECTROCHEMICAL AND METALLURGICAL FACTORS ON CORROSION OF METALS AND ALLOYS ...Austenitic, Chemicals, Galvanic, Passivation, Pitting, ...3.0282
- METALLIC CORROSION IN HALIDE ENVIRONMENTS ...Cathodic Protection, Desalination, Electrode, Halogens-general, ...3.0369

SEA WATER CORROSION TEST PROGRAM ...Desalination, Inhibitors, Scale Formation, Sea Water-general, ...3.0455

CORROSION RESEARCH ...Cathodic Protection, Desalination, Iron, ...3.0167

CORROSION AND MASS TRANSFER FROM CYLINDERS OF METALS ROTATING IN SEAWATER AT HIGH TEMPERATURES AND PRESSURES ...Aluminum, Desalination, High, ...3.0247

ELLIPSOMETRIC STUDIES OF PASSIVATION, WITH SPECIAL REFERENCE TO THE ESSENTIAL ANIONIC CONSTITUENTS OF SALINE WATER ...Desalination, Electrochemical-other, Halide, Passivation, Saline Conversion, ...3.0412

A STUDY OF THE STRESS-CORROSION SUSCEPTIBILITY OF CUPRO-NICKEL AND TITANIUM UNDER DESALINATION CONDITIONS ...Copper, Desalination, Stress Corrosion, Temperature General, Titanium, ...3.0137

SEAWATER CORROSION CONTROL BY ENVIRONMENT MODIFICATION ...Environment General, Inhibitors, Low Alloy Steels, Other, Saline Conversion, ...3.0454

DEVELOPMENT OF A LOW-COST IRON-BASE ALLOY TO RESIST CORROSION IN HOT SEA-WATER ...Alloy & Systems, Desalination, Orientation, Polarization, Saline Conversion, ...3.0418

THE ELECTROCHEMICAL BEHAVIOR OF METALS AND ALLOYS IN SEA WATER AND THE EFFECT OF BIOLOGICAL SLIMES ON THEIR RATES OF CORROSION ...Bacteria, Biological, Desalination, High, Metallic Alloys, ...3.0181

DEVELOPMENT OF LOW-COST, CORROSION-RESISTANT ALLOYS AND ON ELECTRO-CHEMICAL TECHNIQUES FOR THEIR PROTECTION IN DESALINATION SYSTEMS ...Copper, Corrosion Prevention-other, Desalination, Saline Conversion, Zinc, ...3.0290

POLYMERIC COATINGS FOR PROTECTION ON CONCRETE EXPOSED TO AQUEOUS SALINE ENVIRONMENTS ...Adhesion, Cement, Concrete, Depolymerization, Organic-general, Plastics - General, Salinity, ...3.0405

PREPARE AN OPERATIONAL PLAN, CONCEPTUAL DESIGN AND PLANS AND SPECIFICATIONS FOR A SEAWATER CORROSION TEST FACILITY ...Construction-general, Desalination, Manufacturing, Research Facilities, Test Methods, ...3.0297

IMPROVEMENT OF THE CORROSION RESISTANCE OF ALUMINUM BRASS FOR USE IN SEA WATER CONVERSION PLANTS ...Copper, Desalination, Films, High, Oxidizing Atmosphere, ...3.0213

APPLICATION OF IRON-ALUMINUM BASE ALLOYS TO SALINE WATER CONVERSION ...Alloy & Systems, Cost Analysis, Desalination, Pipe, Tube, Stainless Steels-other, ...3.0099

CORROSION AND TUBERCULATION IN DISTRIBUTION SYSTEMS ...Casting of Materials, Coatings-general, Corrosion Prevention-other, Iron, ...5.0373

COOLING TOWER TREATMENT ...Corrosion Prevention-other, Other, Scale Formation, Sealing, Encrusting, Water Purification Plants, ...8.0175

EVALUATION OF CORROSION RATE TESTERS ...Corrosion General, Low Temperature -, Medium Temperature - 300-1000k, Test Methods, ...8.0176

STUDIES OF CORROSION SPECIMENS ...Galvanized, Pipe, Tube, Test Methods, Water Quality-general, ...8.0177

INVESTIGATION OF CREEP IN CONCRETE ...Cement, Concrete, Creep, Dimensions, Expansion, ...8.0240

INVESTIGATION OF WATERSTOPS FOR CONSTRUCTION JOINTS ...Cement, Concrete, Elastomers Rubber, Joints, Plastics - General, Sealing, ...8.0229

CONTINUATION OF FIELD EXPOSURE STATIONS ...Cement, Concrete, Florida, Maine, Research Facilities, Weathering, ...8.0241

CORROSION MITIGATION ...Corrosion Prevention-other, Deep, Low Alloy Steels, Marine Fouling, Pre-stressed, ...8.0157

CONCRETE TEST VESSEL ...Cement, Concrete, Concrete-other, Desalination, Pressure Vessel Materials, Tanks, ...8.0113

PROTECTIVE LININGS FOR WATER PASSAGE SURFACES OF FERROUS METALWORK ...Erosion, Linings-pavings, Organic-general, Pipe, Tube, ...8.0087

POURBAIX DIAGRAM FOR CORROSION EVALUATION ...Soil Chemical Properties, Soils, Test Methods, ...8.0022

CORROSION OF METALS IN CONCRETE ...Cement, Concrete, Chloride, Low Alloy Steels, Stress, Strain, ...8.0023

Weathering

INVESTIGATION OF THE USE OF LOW-COST PLASTIC FILMS FOR SOLAR STILL CONSTRUCTION ...Costs, Distilling Units, Film, Glass, Plastics - General, Structural, ...3.0391

SUBJECT INDEX

Corrosion, Deterioration

STORAGE AND CONVEYANCE OF IRRIGATION WATER
...Biological, Irrigation-general, Leakage, Linings-pavings, Porosity, Permeability, Stability, ...2.1071

TENSILE CRACK EXPOSURE TESTS ...Beams - Bars, Cement, Concrete, Crack Initiation, Propagation, Reinforcing Steel, Standards, Specifications, ...8.0252

DURABILITY AND BEHAVIOR OF PRESTRESSED CONCRETE BEAMS ...Beams - Bars, Construction Materials-other, Methods, Pre-stressed, ...8.0253

CONTINUATION OF FIELD EXPOSURE STATIONS ...Cement, Concrete, Florida, Maine, Research Facilities, Water, ...8.0241

CONCRETE CURING COMPOUND INVESTIGATIONS ...Cement, Concrete, Curing Agents, Dam, Canal, Organic-general, ...8.0075

NEW ROOFING SYSTEMS ...Domestic Structural, Elastomers Rubber, Roofs, Standards, Specifications, ...8.0078

Corrosion General

THE EFFECT OF ORGANIC INHIBITORS ON THE DISSOLUTION KINETICS OF IRON ...Electrochemical-other, Electrode, Inhibitors, Iron, Kinetics-other, ...3.0065

INVESTIGATION OF CORROSION FUNDAMENTALS AS RELATED TO ALLOYING ...Additives, Alloy & Systems, Aluminum, Copper, ...3.0415

EVALUATION OF CORROSION RATE TESTERS ...Low Temperature -, Medium Temperature - 300-1000k, Test Methods, Water, ...8.0176

EVALUATION OF CONCRETE AND RELATED MATERIALS FOR USE IN DESALINATION PLANTS ...Cement, Concrete, Coatings-general, Ferrous Alloys - Other, Saline Conversion, Sealant Materials, ...8.0062

PLASTIC PIPE AND TUBING ...Ceramic Matrix, Engineering Structures-general, Pipe, Tube, Plastic Matrix, Plastics - General, ...8.0132

Durability, Deterioration

FACTORS INFLUENCING THE DURABILITY OF CONCRETE ...Cement, Concrete, Chemicals, Organic-general, Pipe, Tube, Sulfate, Sulfite, ...8.0043

THE DEVELOPMENT OF CONCRETE-POLYMER MATERIALS ...Cement, Concrete, Ceramic Matrix, In-situ, Plastics - General, Radiation Induced, Strength, Cohesion, ...8.0045

EFFECT OF RETARDING ADMIXTURES ON PROPERTIES OF CONCRETE ...Additives, Aggregates, Extenders, Fillers, Cement, Concrete, Engineering Structures-general, ...8.0046

INVESTIGATION IN THE DEVELOPMENT AND IMPROVEMENT OF SPECIAL CEMENTS ...Cement, Concrete, Elasticity - General, Engineering Structures-general, Setting, Curing, Strength, Cohesion, ...8.0048

FACILITIES AND SYSTEMS FOR WATER HARVEST IN THE INTER-MOUNTAIN BASIN ...Film, Mountains-alpine, Storage of Water, Water Harvesting, Water Loss Control, ...8.0292

Effects and Mechanisms

Aging

CHANGES IN PHYSICAL CHARACTERISTICS OF ASPHALT MATERIAL ...Asphalt - Tar Sands, Bituminous, Cement, Concrete, Linings-pavings, Test Methods, ...8.0105

Cavitation

A MASS TRANSFER STUDY OF CURRENT REQUIREMENTS FOR CATHODIC PROTECTION ...Cathodic Protection, Chemical Analysis, Desalination, Fluid Flow-other, Heat Transfer, Oxygen, ...3.0033

ADHESIVE PROTECTION FOR CONCRETE ...California, Cement, Concrete, Coatings-general, Epoxies, Erosion, ...8.0015

ALLOY SELECTION FOR CAVITATION RESISTANCE ...Cavitation-other, Metallic Alloys, Test Methods, Turbine-other, ...8.0025

Fouling

INVESTIGATIONS OF ALGAE INHIBITING MATERIALS ...Cement, Concrete, Coatings-other, Inhibitors, Liquids Or Sprays, Organic Wastes, Water Distribution Systems, ...3.0106

Galvanic

EFFECT OF ELECTROCHEMICAL AND METALLURGICAL FACTORS ON CORROSION OF METALS AND ALLOYS ...Austenitic, Chemicals, Passivation, Pitting, Water, ...3.0282

DESIGN IMPROVEMENTS--GATES AND VALVES ...Channel Regulation-other, Control Gate, Dam, Canal, Seals, Valves, ...8.0088

Oxidation

INSULATING MINERAL OILS AND SYNTHETIC LIQUIDS AND LUBRICATING OILS ...Electrical Materials, Liquid Lubricants, Lubricants and Fluids - Other, Standards, Specifications, Test Methods, ...8.0059

Pitting

EFFECT OF ELECTROCHEMICAL AND METALLURGICAL FACTORS ON CORROSION OF METALS AND ALLOYS ...Austenitic, Chemicals, Galvanic, Passivation, Water, ...3.0282

WATER RESEARCH PROGRAM III CORROSION ...Brines, Composition Parameters-other, Nickel Alloys, Titanium, ...3.0438

REACTIONS AND TRANSPORT PHENOMENA AT SURFACES ...Analysis and Detection, Brines, Electrode, Separation-general, Transport, ...3.0440

EFFECT OF ELECTROCHEMICAL AND METALLURGICAL FACTORS ON CORROSION OF METALS AND ALLOYS ...Brines, Desalination, Stainless Steels-other, ...3.0283

Scaling, Encrusting

SCALE CONTROL WITH GRAPHITE HEAT-TRANSFER TUBES OF CONTROLLED PERMEABILITY TO STEAM ...Desalination, Distillation-other, Distilling Units, Heat Exchangers, Heat Transfer, ...3.0390

A STUDY OF PRESCALING DEPOSITION ...Copper, Desalination, Radioisotopes, Saline Conversion, ...1.0011

COOLING TOWER TREATMENT ...Corrosion Prevention-other, Other, Scale Formation, Water, Water Purification Plants, ...8.0175

CORROSION AND ENCRUSTATION MECHANISMS IN WATER SUPPLIES ...Biological, Chemicals, Corrosion Prevention-other, Mineralization, ...2.0274

Stress Corrosion

A STUDY OF THE STRESS-CORROSION SUSCEPTIBILITY OF CUPRO-NICKEL AND TITANIUM UNDER DESALINATION CONDITIONS ...Copper, Desalination, Temperature General, Titanium, Water, ...3.0137

THE ROLE OF BRITTLE SURFACE FILMS IN STRESS-CORROSION CRACKING ...Crack Initiation, Propagation, Desalination, Iron, Magnesium, ...3.0255

THE ROLE OF BRITTLE SURFACE FILMS IN STRESS-CORROSION CRACKING ...Alloys and Systems, Austenitic, Brittleness, Copper, Film, Titanium, ...3.0254

Prevention

Cathodic Protection

METALLIC CORROSION IN HALIDE ENVIRONMENTS ...Desalination, Electrode, Halogens-general, Water, ...3.0369

A MASS TRANSFER STUDY OF CURRENT REQUIREMENTS FOR CATHODIC PROTECTION ...Cavitation, Chemical Analysis, Desalination, Fluid Flow-other, Heat Transfer, Oxygen, ...3.0033

CORROSION RESEARCH ...Desalination, Iron, Water, ...3.0167

CORROSION MITIGATION -CATHODIC PROTECTION OF WATER-IMMERSED STEEL STRUCTURES ...Coatings-general, Engineering Studies-general, Hydraulic Structures, Low Alloy Steels, ...8.0172

NEW DEVELOPMENTS IN CATHODIC PROTECTION AND CORROSION STUDIES ...Coatings-general, Dam, Canal, Platinum, Titanium, ...8.0024

Corrosion Prevention-other

DEVELOPMENT OF LOW-COST, CORROSION-RESISTANT ALLOYS AND ON ELECTRO-CHEMICAL TECHNIQUES FOR THEIR PROTECTION IN DESALINATION SYSTEMS ...Copper, Desalination, Saline Conversion, Water, Zinc, ...3.0290

CORROSION AND TUBERCULATION IN DISTRIBUTION SYSTEMS ...Casting of Materials, Coatings-general, Iron, Water, ...5.0373

COOLING TOWER TREATMENT ...Other, Scale Formation, Scaling, Encrusting, Water, Water Purification Plants, ...8.0175

CORROSION OF UNDERGROUND STEEL PILING ...Deep, Low Alloy Steels, Soil Chemical Properties, Soil Electrical Properties, Soils, ...8.0223

CORROSION MITIGATION ...Deep, Low Alloy Steels, Marine Fouling, Pre-stressed, Water, ...8.0157

CORROSION AND ENCRUSTATION MECHANISMS IN WATER SUPPLIES ...Biological, Chemicals, Mineralization, Scaling, Encrusting, ...2.0274

Corrosion, Deterioration

SUBJECT INDEX

Inhibitors

- SEA WATER CORROSION TEST PROGRAM ...Desalination, Scale Formation, Sea Water-general, Water, ...3.0455
- SEAWATER CORROSION CONTROL BY ENVIRONMENT MODIFICATION ...Environment General, Low Alloy Steels, Other, Saline Conversion, Water, ...3.0454
- THE EFFECT OF ORGANIC INHIBITORS ON THE DISSOLUTION KINETICS OF IRON ...Corrosion General, Electrochemical-other, Electrode, Iron, Kinetics-other, ...3.0065
- CORROSION PROTECTION BY INHIBITOR CROSS-LINKING AND SURFACE COATING GRAFTING ...Cement, Concrete, Crosslinked, Metallic Alloys, Metals, Radiation Induced, ...3.0404
- INVESTIGATIONS OF ALGAE INHIBITING MATERIALS ...Cement, Concrete, Coatings-other, Fouling, Liquids Or Sprays, Organic Wastes, Water Distribution Systems, ...3.0106

Passivation

- EFFECT OF ELECTROCHEMICAL AND METALLURGICAL FACTORS ON CORROSION OF METALS AND ALLOYS ...Austenitic, Chemicals, Galvanic, Pitting, Water, ...3.0282
- PROTECTIVE FILMS FORMED BY PLASMA ANODIZATION ...Aluminum, Anodic, Brines, Desalination, Iron, ...3.0263
- ELLIPSOIDAL STUDIES OF PASSIVATION, WITH SPECIAL REFERENCE TO THE ESSENTIAL ANIONIC CONSTITUENTS OF SALINE WATER ...Desalination, Electrochemical-other, Halide, Saline Conversion, Water, ...3.0412
- THE EFFECTS OF VELOCITY ON THE PASSIVATION OF ALLOYS IN BRACKISH WATER ...Brackish Water, Desalination, Electrolytes, Metallic Alloys, Velocity -water, ...3.0136

Crustacea

Branchiopoda -other

- DISTRIBUTION OF DIATOMS IN DESERT WATERS ...Algae-Diatoms, Deserts, Plant Prod. (non-specific), Playas, Respiratory System, ...2.0138

Copepods

- IMPOUNDMENT EFFECTS ON WATER QUALITY AS REFLECTED IN PARASITISM OF RESERVOIR BASSES ...Pathology, Pre-impoundment Sites, Reservoirs and Impoundments, Water Level Fluctuation, Water Quality-general, ...6.0024
- ANNUAL PHYTOPLANKTON PRODUCTION IN PUGET SOUND WATERS ...Invertebrate Cultures, Phytoplankton, Puget Sound, Standing Crops, Tides, ...5.1256
- CHEMICAL ECOLOGY OF DIPTOMID COPEPODS OF COLORADO ...Aquatic Ecology, Chemical Measurements -water, Colorado, Environmental Ecology, Fresh Water, ...6.0088
- RELICT COPEPODS FROM LAKE TUBORG, ELLESMERE ISLAND ...Brackish Water, Canada, Carbon-14, Lakes, Plankton Sampling, ...2.0257
- LIFE HISTORY OF CYCLOPS BICUSPIDATUS ...Aquatic Ecology, Life History Studies, Number Or Density, Reservoirs and Impoundments, South Dakota, ...6.0527
- DEVELOPMENT OF CULTURE METHODS FOR ECOLOGICALLY IMPORTANT MARINE ZOOPLANKTON SPECIES ...Aquatic Ecology, Environmental Physiology, Invertebrate Cultures, Zooplankton, ...5.1096
- DETERMINATION OF SELECTED ENVIRONMENTAL REQUIREMENTS OF IMPORTANT SPECIES OF MARINE ZOOPLANKTON ...Oxygen, Water Salinity, Water Temperature-non-specific, Zooplankton, ...5.1097

Crabs, All

- SURVIVAL REQUIREMENTS OF JUVENILE AND ADULT BLUE CRABS ...Biological Rhythms, Environmental Physiology, Laboratory, Osmoregulation, Water Properties-general, ...6.0401
- EFFECT OF ENVIRONMENTAL CHANGES ON BLUE CRAB ABUNDANCE ...Environmental Changes, Life History Studies, Migration, North Carolina, Population Dynamics, ...6.0400
- REARING AND SENSITIVITY STUDIES OF VARIOUS LIFE STAGES OF MARINE MACROINVERTEBRATES ...Bioindicators, Shrimps - Common, Whole Body Culture & Rearing, ...5.1079

Crayfish, All

- STUDY OF EXCRETORY PATTERNS IN CRAYFISHES ...Metabolism, Nitrogen, Osmoregulation, Stress, Urea, ...6.0376

Crustacea -non-specific

- THERMAL EFFECTS ON MARINE AND ESTUARINE SHELLFISH ...Aquatic Ecology, Environmental Physiology, Mollusks -non-specific & Other, Pollution - Effects of , Water Temperature-non-specific, ...5.1251
- MARINE BIOLOGICAL ASSESSMENT OF POLLUTIONAL FATE ...Contamination - Water, Fish -non-specific, Nets, Pollution - Effects of , ...5.0975
- VIBRIO PARAHAEMOLYTICUS IN THE ESTUARINE ENVIRONMENT ...Estuaries, Isolation From Nat. environ. , Mollusks -non-specific & Other, Temporal Distribution, Vibrio N S, ...2.1115
- BIOLOGICAL METHODS RESEARCH ...Chemical Identification, Enteroviruses of Humans, Isolation, Sewage, Viral Pollutant Sources, ...5.0017
- EVALUATION OF METHODS FOR RECOVERY OF ENTEROBACTERIACEAE FROM MARINE SOURCES ...Bacterial Pollutant Sources, Estuaries, Intestinal Bacteria, Pollutants-general, ...5.1225
- INVESTIGATIONS ON CIGUATERA-LIKE BIOTOXINS IN SHELLFISH ...Algal Culture, Algal Toxins, Bulk Culture -other, Gymnodinium, Mollusks -non-specific & Other, ...5.0018
- COOPERATIVE STUDIES WITH FEDERAL AND STATE AGENCIES ...Bioassays, Mollusks -non-specific & Other, Public Health Ecology, Survey Studies, Water Quality-general, ...7.0111
- GENERAL TECHNICAL ASSISTANCE ...Committee-support, Mollusks -non-specific & Other, Shellfish Depuration, Water Quality-general, ...5.1075

Diplostraca

Cladocera

- NUCLIDE UPTAKE BY ALGAE AND ZOOPLANKTON ...Chlorella, Environment, Ionic Effect, Organic Matter Content -water, Radioisotopes -non-specific, ...6.0048
- DIVERSITY AND ECOLOGICAL NICHE IN MULTI-SPECIES ASSOCIATIONS OF CHYORID CLADOCERA (CRUSTACEA) ...Environmental Ecology, Habitat Studies, Interbiotic Relat.(non-specif), Lakes, Microfossils, ...2.0911
- AQUATIC ECOSYSTEM ...Acidity, Environment Resistance, Ph, Acidity -water, Pollution - Effects of , Productivity - Food Chain, ...6.0084

Isopods

- FEEDING PATTERNS OF THE FRESHWATER ISOPOD LIRCEUS BRACHYURUS ...Aquatic Ecology, Behavioral Ecology, Food Supply, Nutrition - Invertebrate, Pennsylvania, Streams, ...7.0093

Shrimps - Brine Or Fairy

- INFLUENCE OF SALINITY AND TEMPERATURE ON TOXICITY OF SOME PESTICIDES TO BRINE SHRIMP ...Environmental Effects, Salinity, Temperature, ...5.0663

Shrimps - Common

- EXPERIMENTAL SEEDING (SHRIMP AQUACULTURE PROGRAM) ...Captive Rearing, Florida, Population Dynamics, Spawn Or Nesting Sites, Stocking of Fish & Shellfish, ...6.0565
- REARING AND SENSITIVITY STUDIES OF VARIOUS LIFE STAGES OF MARINE MACROINVERTEBRATES ...Bioindicators, Crabs, All, Whole Body Culture & Rearing, ...5.1079

Shrimps - Seed Or Mussel

- EFFECTS OF THE CHLORINATED HYDROCARBONS, ALDRIN AND DIELDRIN, ON FRESHWATER SEED SHRIMP (OSTRACODA) ...Aldrin, Contamination - Water, Dieldrin, Fresh Water, Laboratory Animals, Pollution - Effects of , ...5.1117

Crystallization

Crystal Growth

- A STUDY OF THE NUCLEATION AND GROWTH CHARACTERISTICS OF SLURRIES OF ICE CRYSTALS ...Desalination, Fluid Dynamics, Freezing, Nucleation, Shear-flow, ...3.0356
- DIFFUSION PHENOMENA IN ICE - RECRYSTALLIZATION PHENOMENA IN ICE ...Concentration, Desalination, Diffusion-other, Electrolytes, Rate of Reaction, ...3.0361
- A STUDY OF THE EFFECTS OF SURFACE POTENTIAL ON SCALE FORMATION ...Desalination, Electrochemistry-other, Metals, Nucleation, Scale Formation, ...3.0080

SUBJECT INDEX

Culture (methods & Techniques)

- NUCLEATION AND GROWTH OF ICE CRYSTALS ...Brines, Desalination, Freezing, Hydration, Nucleation, ...3.0041
- STUDIES ON THE HYDRATE PROCESS FOR DEMINERALIZING SEA WATER ...Brines, Demineralization, Hydration, Removal--inorganics, ...3.0366
- REMOVAL OF INORGANIC MATERIAL FROM SALINE WATER BY PRECIPITATION PROCESSES ...Brines, Demineralization, Nucleation, Precipitation, Removal--inorganics, ...5.0420

Crystallization-other

- TREATMENT AND DISPOSAL OF CONDENSATE WASTES FROM HIGH LEVEL WASTE SOLIDIFICATION PROCESSES ...Disposal Wastes, Fractionation, Material Recovery Wastes, Nuclear, Precipitation, ...5.1250
- DESALINATION BY HIGH PRESSURE SOLIDIFICATION OF WATER TO ICE ...Desalination, High Pressure - 1-1000 Atm, Other, ...3.0360

Nucleation

- ICE FORMATION BY CONTACT NUCLEATION ...Formation, Growth and Preparation, Model Studies, Nucleation Physics, Temperature, ...3.0339
- STUDIES OF FUNDAMENTAL MECHANISMS IN THE DEPOSITION OF CALCIUM SULFATE SCALE ...Brines, Dilatometry, Electron, Phase Relationship, Scale Formation, ...3.0293
- A STUDY OF THE NUCLEATION AND GROWTH CHARACTERISTICS OF SLURRIES OF ICE CRYSTALS ...Crystal Growth, Desalination, Fluid Dynamics, Freezing, Shear-flow, ...3.0356
- SALINE WATER BY FREEZING - A PROGRAM OF INVESTIGATION ...Desalination, Evaporation, Freezing, Microscopy-other, Washing, ...3.0343
- HETEROGENEOUS NUCLEATION AND CONDENSATION OF VAPORS ...Argon, Liquid, Solution, Water, 4 Ring System, ...1.0094
- A STUDY OF THE EFFECTS OF SURFACE POTENTIAL ON SCALE FORMATION ...Crystal Growth, Desalination, Electrochemistry-other, Metals, Scale Formation, ...3.0080
- NUCLEATION AND GROWTH OF ICE CRYSTALS ...Brines, Crystal Growth, Desalination, Freezing, Hydration, ...3.0041
- REMOVAL OF INORGANIC MATERIAL FROM SALINE WATER BY PRECIPITATION PROCESSES ...Brines, Crystal Growth, Demineralization, Precipitation, Removal--inorganics, ...5.0420
- PREPARATION OF MONODISPERSE EMULSIONS ...Distribution, Emulsion, Kinetic-general, Precipitation, ...5.0064
- SEEDING OF BRACKISH WATER ...Desalination Wastes, Evaporation, Material Recovery Wastes, Scale Formation, ...5.1216
- EFFECT OF THE WARM CLOUD BASE UPON CLOUDSEEDING FROM THE GROUND ...Clouds-precipitation, Iodine, Nucleation Physics, Silver, Vapor, ...2.0156

Culture (methods & Techniques)

Algal Culture

- VARIABILITY IN DIATOM MORPHOLOGY AND WATER POLLUTION ...Algae- Diatoms, Bioindicators, Environment, Pollution - Effects of, Water Quality-general, ...5.0217
- ALGAL GROWTH AND DECOMPOSITION - EFFECTS ON WATER QUALITY ...Algal Pollutant Sources, Cell Injury and Autolysis, Growth and Differentiation, Mineral Composition, Model Systems, Water Quality-general, ...5.0443
- A STUDY OF PHYTOPLANKTON DY, AMICS IN LAKE FAYETTEVILLE AS A MEANS OF ASSESSING WATER QUALITY ...Bioindicators, Eutrophication, Growth Rate, Phytoplankton, Primary Productivity, ...6.0031
- THE AUTECOLOGY OF SOME BLUE-GREEN PLANKTON ALGAE ...Cyanophyta (non-specific & Ot), Eutrophication, Mixed Culture, Nutrition Studies, Phytoplankton, ...5.0955
- ALGAE DEGRADATION IN WATERWAYS ...Algal Pollutant Sources, Cell Injury and Autolysis, Mixed Culture, Water Properties-general, ...5.0126
- BACTERIAL EFFECTS OF ALGAE ON ENTERIC ORGANISMS ...Algae- General, Bactericides -non-specific, Intestinal Bacteria, Sanitation, Sewage, ...5.1151
- COLLECTION AND ESTABLISHMENT IN CULTURE OF SPECIES AND STRAINS OF MARINE PHYTOPLANKTON ORGANISMS ...Culture Collections, Marine Plants, Phytoplankton, Pollution-general, ...5.1063

- USE OF PURE STRAINS OF ALGAE AND MIXED ALGAE-PROTOZOA, AND ALGAE-BACTERIA CULTURES IN SEWAGE TREATMENT ...Algae, Microbial-bacterial, Pilot Plant, Waste Water Treatment-general, ...5.0382

- CULTURING AND PROPAGATION OF SELECTED INVERTEBRATES AND ASSOCIATED FOOD ORGANISMS ...Chlorophyceae (non-specif.&ot), Chrysophyceae (non-specif.&ot), Cyanophyta (non-specific & Ot), Food Supply, Invertebrate Cultures, ...5.0591

- INTEGRATED FIELD AND LABORATORY SYSTEM FOR AS-SAYING THE EFFECTS OF POLLUTANTS AND TOXICANTS UPON WATER QUALITY ...Axenic Culture, Environment, Phytoplankton, Pollution - Effects of, ...5.1087

- DEVELOPMENT OF A METHOD FOR CHRONIC TOXICITY BIOASSAY USING MARINE PLANKTONIC ALGAE ...Bioassays, Marine Plants, Microbiological Analysis, Monitoring (long Term Studies), Phytoplankton, Technique Development, Toxicology, ...5.1088

- MEASUREMENT OF THE RATE OF CARBON DIOXIDE (C14) FIXATION INTO SUBCELLULAR FRACTIONS OF ALGAE ...Algae- General, Bioindicators, Carbon, Carbon Dioxide Fixation, Growth Rate, Intracellular Localization, ...5.1090

- LABORATORY STUDIES OF TOXIC DINOFLAGELLATES ...Algal Toxins, Gonyaulax, Gulf of Mexico, Gymnodinium, Vegetable Origin, ...5.1161

- COMPARATIVE STUDIES OF DINOFLAGELLATE TOXINS ...Action- & Bioelectrical Pot., Algal Toxins, Dinophyceae (non-specific &ot), Toxicology, ...5.0716

- INVESTIGATIONS ON CIGUATERA-LIKE BIOTOXINS IN SHELLFISH ...Algal Toxins, Bulk Culture -other, Crustacea -non-specific, Gymnodinium, Mollusks -non-specific & Other, ...5.0018

Axenic Culture

- INFLUENCE OF PROTOZOAN ACTIVITY ON HALOGENATED HYDROCARBON RESIDUES - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Metabolism, Mode of Action -animal, Petroleum Cpd.s. -non-specific, Protozoa -other, ...5.0642

- DETERMINATION OF SELECTED ENVIRONMENTAL REQUIREMENTS OF IMPORTANT MARINE PHYTOPLANKTON SPECIES ...Environment, Growth and Differentiation, Marine Biology, Marine Plants, Phytoplankton, ...5.1094

- INTEGRATED FIELD AND LABORATORY SYSTEM FOR AS-SAYING THE EFFECTS OF POLLUTANTS AND TOXICANTS UPON WATER QUALITY ...Algal Culture, Environment, Phytoplankton, Pollution - Effects of, ...5.1087

Bacterial Culture

- STUDIES ON PHOSPHORUS TRANSFORMATIONS IN EUTROPHIC LAKES ...Bacterial Pollutant Sources, Budgets -other, Connecticut, Eutrophication, Nutrition, Phosphorus, ...5.0216

- STUDIES ON AQUATIC STALKED BACTERIA ...Classification Or Taxonomy, Ecology, Growth (non-specific & Ot.), Stalks and Buds, Water Bacteria, ...5.1280

- CONTROLLING FACTORS IN METHANE FERMENTATION ...Cell. env.(non-specific & Ot.), Fermentation, Methane Bacteria (non-specif.), Respiration, Saturated Hydrocarbons, ...5.0754

- ROLE OF ENTERIC MICROORGANISMS IN DETOXIFICATION - INTERACTION BETWEEN MICROORGANISMS AND PESTICIDES ...Biodegradation, Fish -non-specific, Identification, Insecticides -non-specific, Intestinal Bacteria, ...5.0641

- NITRIFICATION BY MARINE MICROORGANISMS ...Autotrophic, Bact. morphology (general), Isolation From Nat. environ., Marine Bacteria (non-specific), Nitrification, Nitrogen Bacteria, Range Or Territorial Distr., ...1.0066

Bulk Culture -other

- INVESTIGATIONS ON CIGUATERA-LIKE BIOTOXINS IN SHELLFISH ...Algal Culture, Algal Toxins, Crustacea -non-specific, Gymnodinium, Mollusks -non-specific & Other, ...5.0018

Cell Cloning

- EFFECT OF INDUST WASTES OF MEMPHIS & SHELBY COUNTY ON PRIMARY PLANKTONIC PRODUCERS ...Drainage, Industrial Wastes, Plankton (non-specific), Primary Productivity, Tennessee, ...5.1134

- PLAQUING AND FLUORESCENT ANTIBODY METHODS FOR DETECTION AND IDENTIFICATION OF ENTEROVIRUSES ...Assay, Detection & Diagnosis, Enteroviruses of Animals, Pollutants-general, Waste Water Treatment-other, ...5.0046

Fungal Culture

COMPARATIVE BIOCHEMICAL AND MORPHOLOGICAL CHARACTERISTICS OF MARINE FUNGI FROM SHELLFISH ...Endoparasites -other, Histochemistry - Cytochem, Histology and Cytology, Marine Fungi (non-specific), Plant Taxonomy, ...6.0265

EFFECT OF ANTIBIOTICS ON FUNGUS PARASITES IN OYSTERS ...Antibiotics, Chemicals - Fungicides, Dermocystidium, Host Specificity, Oysters, ...5.1171

Invertebrate Cultures

ANNUAL PHYTOPLANKTON PRODUCTION IN PUGET SOUND WATERS ...Copepods, Phytoplankton, Puget Sound, Standing Crops, Tides, ...5.1256

ACUTE TOXICITY OF PESTICIDES TO FRESHWATER INVERTEBRATES - DEVELOPMENT OF A LABORATORY STREAM FOR REARING AND TESTING AQUATIC INVERTEBRATES ...Captive Rearing, Invertebrates -non-specific, Laboratory, Laboratory Animals, Pesticides -non-specific, ...6.0319

CULTURING AND PROPAGATION OF SELECTED INVERTEBRATES AND ASSOCIATED FOOD ORGANISMS ...Algal Culture, Chlorophyceae (non-specific & Ot), Chrysophyceae (non-specific & Ot), Cyanophyta (non-specific & Ot), Food Supply, ...5.0591

DEVELOPMENT OF CULTURE METHODS FOR ECOLOGICALLY IMPORTANT MARINE ZOOPLANKTON SPECIES ...Aquatic Ecology, Copepods, Environmental Physiology, Zooplankton, ...5.1096

Mixed Culture

BIOLOGICAL DEGRADATION OF WASTES UNDER PSYCHROPHILIC ENVIRONMENTS ...Bacterial Pollutant Sources, Biological, Low Temp. - But Above 32f, Polar, Water Bacteria, ...5.0036

OXYGEN TRANSFER IN CONCENTRATED MICROBIAL SYSTEMS ...Degradation, Microbial-bacterial, Model Studies, Oxygen, Physico - Chem - Metab, ...5.0801

THE AUTECOLOGY OF SOME BLUE-GREEN PLANKTON ALGAE ...Algal Culture, Cyanophyta (non-specific & Ot), Eutrophication, Nutrition Studies, Phytoplankton, ...5.0955

ALGAE DEGRADATION IN WATERWAYS ...Algal Culture, Algal Pollutant Sources, Cell Injury and Autolysis, Water Properties-general, ...5.0126

BIOLOGICAL ALGICIDES ...Algicides -non-specific, Algal Virus, Cell Injury and Autolysis, Endogenous Cpds -plants, ...5.0226

Culture Collections

STUDIES ON THE METHANOGENIC BACTERIA IN SLUDGE ...Acids, Digestion, Isolation From Nat. environ., Methane Bacteria (non-specific), ...5.0259

COLLECTION AND ESTABLISHMENT IN CULTURE OF SPECIES AND STRAINS OF MARINE PHYTOPLANKTON ORGANISMS ...Algal Culture, Marine Plants, Phytoplankton, Pollution-general, ...5.1063

Cumberland River

SIMULATED OPEN CHANNEL HYDRAULICS ...Mathematical Analysis, Model Studies, Numerical Analysis-other, Open Channel Flow, Tennessee, ...2.0983

Currents -water

THE RELATIONSHIP BETWEEN TURBIDITY CURRENTS AND FISH MOVEMENTS IN GARRISON RESERVOIR ...Nets, North Dakota, Reservoirs and Impoundments, Turbidity, Turbidity & Suspended Matter, ...5.0829

FACTORS AFFECTING THE MOVEMENTS OF WATER AND ORGANISMS WITHIN A REGULATED MULTIPURPOSE LAKE ...Bacterial Pollutant Sources, Boundary Layer Studies, Lakes, Sediments, Washington, ...2.1114

EUTROPHICATION OF SHELTERED BAYS IN A LARGE LAKE ...Bays, Chemical-general, Eutrophication, Freshwater Ecology, Utah, ...5.1188

A THREE DIMENSIONAL STUDY OF PARAMETERS RELATED TO THE CURRENT DISTRIBUTION IN LAKE ROOSEVELT ...Model Studies, Reservoirs and Impoundments, Stratification, Temperature, Water Quality-general, ...5.1245

A LIMNOLOGICAL STUDY OF LAKE PONTCHARTRAIN, LOUISIANA, IN THE SUMMER OF 1968 ...Chemical-general, Lakes, Louisiana, Physical-general, Water Sampling, ...5.0457

MIXING AND DISPERSION OF CONTAMINANTS IN RESERVOIRS ...Dispersion -water, Mixing, Reservoirs and Impoundments, Tracers-general, Velocity -water, ...5.1153

VERTICAL CURRENT STRUCTURE IN THE GREAT LAKES ...Buoys, Forecasting-prediction, Great Lakes-general, Model Studies, Wind-water Interaction, ...2.0632

FEASIBILITY OF RATING CURRENT METERS IN A VELOCITY FIELD ...Gaging, Mass, Model Studies, Velocity -water, ...7.0107

SALINITY INTRUSION AND RELATED PHENOMENA ...General Deposition, Mixing, Open Channel Flow, Saline Water Intrusion, Sediment Transport-general, ...2.0687

GREAT LAKES RESEARCH - CHARACTERISTICS OF LAKE WATER ...Chemical-general, Great Lakes-general, Ocean Meteorological Studies, Physical-general, Water Quality-general, ...2.0648

GREAT LAKES RESEARCH - HARBOR CURRENTS ...Great Lakes-general, Harbors, Model Studies, Pressure-density, Water Level Fluctuation, Wind-general, ...2.0642

LIMNOLOGICAL FEATURES LAKE SHARPE IN RELATION TO COLD-WATER FISHES ...Fish -non-specific, Low Temp. -but Above 32f, Reservoirs and Impoundments, South Dakota, Temperature, ...6.0517

PHYSICAL LIMNOLOGY OF THE GREAT LAKES ...Environmental Ecology, Fish -non-specific, Temperature, ...5.0541

ECOLOGY OF GREAT LAKES ESTUARIES ...Bays, Estuaries, ...2.0626

Cyclopropane

PHYTOCHEMISTRY OF NARCOTIC PRINCIPLES IN CAULERPA ...Biochemical, Biochemical Analysis, Caulerpa, Medicinal Plants, Phaeophyta (non-specific & Ot), ...6.0172

Dairy Husbandry

Management

WATER POLLUTION BY DAIRY FARM WASTES AS RELATED TO METHOD OF WASTE DISPOSAL ...Alabama, Animal Waste Removal-treatment, Bacterial Pollutant Sources, Chemical Oxygen Demand, Farm Wastes, Sewage Lagoons, Waste Disposal-general, ...5.0011

FEED AND WASTE HANDLING IN THE DAIRY OPERATION ...Animal Waste Removal-treatment, Animal Wastes - Feed Lots, Pennsylvania, Sprinkler Irrigation, ...5.1023

Dam Sites

EXTREME RAINFALL FOR THE MEKONG RIVER BASIN ...Floods, Management, Meteorological Extremes, Southeast Asia, Water Loss Control, ...2.0596

Data Acquisition

LAKE EFFECT SNOW SITUATIONS, EASTERN LAKE ONTARIO AREA ...Atmospheric Pressure, General Synoptic Observations, Lake Ontario, Topographic Influences, ...7.0084

OCEANOGRAPHIC DATA COLLECTION - MIDDLE PUGET SOUND ...Oysters, Puget Sound, Salinity, Temperature, Trace Elements, ...7.0112

Automatic Data Acquisition

GREAT LAKES RESEARCH - MONITORING OF WATER CHARACTERISTICS ...Forecasting-prediction, Geophysical Analysis, Great Lakes-general, Temperature, ...2.0647

TELEMETERING OF HYDROLOGIC DATA FROM REMOTE AREAS ...Data Transmission Systems, Mountains-alpine, Other Telemetry, Remote Areas, Technique Development, ...7.0026

A STUDY OF THE OPEN WATER DISTRIBUTION AND ABUNDANCE OF NET-PLANKTON AS AN INDEX OF EUTROPHICATION IN LAKE SUPERIOR ...Bioindicators, Lake Superior, Plankton Sampling, Water Quality-general, Zooplankton, ...5.0600

DIGITAL INSTRUMENTATION AND TELEMETERY FOR WATER RESOURCES RESEARCH ...Digital Computers, Electronics - Applied, ...7.0072

HYDROLOGIC ANALYSIS OF THE NORTH FORK OF ELK CREEK ...Discharge-general, Montana, Observation Wells, Water Table Fluctuation, ...2.0714

SUBJECT INDEX

Data Acquisition

DIGITAL SYSTEMS FOR ON-SITE DATA COLLECTION FOR WATER QUALITY ANALYSIS ...Data Networks, Digital Computers, Technique Development, Water Quality-general, ...7.0005

THERMAL AND INDUSTRIAL POLLUTION - DELAWARE RIVER ...Delaware River, Electric Power Plants, Industrial Wastes, Physical Parameters, Pulp, Paper, and Logging, Thermal Pollution, ...5.0989

TO EVALUATE THE UTILITY OF EXISTING AUTOMATIC CHEMICAL ANALYSIS EQUIPMENT FOR WATER QUALITY SURVEILLANCE UNDER COMPUTER CONTROL ...Atomic Absorption, Chemical Analysis (water), Computers-general, Information Retrieval Methods, Information Storage and File, System Development, Water Properties-general, ...7.0078

WATER QUALITY TELEMTRY ...Benefit-cost Analysis, Instrumental Services, Other Telemetry, Water Quality-general, ...5.1197

SYSTEM MONITORING AND REMOTE CONTROL ...Effluents-waste Water, Gages, Instrumental Services, Other Telemetry, Physical Parameters, ...5.0559

AUTOMATION OF GROUND-WATER RECORDS ...Computers-general, Groundwater, Information Retrieval Methods, Other Storage, ...7.0046

SEDIMENTATION METER ...Gaging, Rate of Deposition, ...7.0104

IMPROVE COMPONENTS OF THE DATA ACQUISITION SYSTEM - SATELLITE COMMUNICATIONS EQUIPMENT ...Data Acquisition Systems, Instrumental Services, Rain-general, Satellites & Deep Space Probes, Streams, ...7.0050

DEVELOP PROTOTYPE PRECIPITATION OCCURRENCE SENSOR - DEVELOP AMOS III-70 (AUTOMATIC WEATHER STATION) ...Automatic Stations, Precipitation Instruments, Precipitation-other, Technique Development, ...7.0053

TEST AND EVALUATION OF TELEMETERING STORAGE PRECIPITATION GAGE ...Amount, Automatic Stations, Gages, Technique Development, ...7.0048

IMPROVE PRECIPITATION MEASURING EQUIPMENT - D-III PRECIPITATION EQUIPMENT ...Amount, Automatic Stations, Gages, Technique Development, ...2.0591

AUTOMATIC VHF RADIO HYDROLOGIC DATA REPORTING SYSTEM ...Data Transmission Systems, General Synoptic Observations, Hydrology-general, Radio, Very High Frequency, ...7.0096

GREAT LAKES RESEARCH - MONITORING OF WATER CHARACTERISTICS ...Forecasting-prediction, Geophysical Analysis, Great Lakes-general, Instrumentation-general, Temperature, ...2.0649

INSTRUMENTATION, DATA ACQUISITION, AND COMPUTER TECHNIQUES ...Analog Computers, Data Analysis Applications, Digital Computers, Hydraulics-general, ...7.0019

DEVELOPMENT OF AUTOMATED ANALYSES FOR THE SUPPORT OF ADVANCED WASTE TREATMENT RESEARCH PROJECTS ...Chemical Analysis (water), Instrumentation-general, Waste Water Treatment-general, ...5.0863

DESIGN CRITERIA FOR LIVESTOCK FARMSTEAD WATER SYSTEMS ...Design Criteria, Storage of Water, Water Demand, Water Transfer, Water Utilization -animal, ...6.0257

Data Acquisition-general

THERMAL POLLUTION AND ITS IMPLICATIONS FOR THE COAL INDUSTRY-A SURVEY OF THE STATE OF KNOWLEDGE ...Electric Power Plants, Pollution - Effects of, Survey Studies, Thermal Pollution, ...5.0208

RUNOFF STUDIES ON SMALL DRAINAGE AREAS ...Discharge-general, Drainage, Peak Flow, Small Watersheds, West Virginia, ...2.0290

HYDROLOGY RESEARCH PROJECT ...Data Analysis - General, Drainage, Hydrology-general, Small Watersheds, Structural, ...2.0281

COLLECTION OF HYDROLOGIC DATA OF SMALL DRAINAGE AREAS ...Drainage, Maryland, Runoff, Small Watersheds, Storm Water, ...2.0560

VERIFICATION OF HYDRAULIC DESIGN OF BRIDGES IN ALABAMA ...Alabama, Bridges & Culverts, Drainage, Engineering Structures-general, Floods, ...8.0001

HYDROLOGIC STUDIES ...Floods, Small Watersheds, Virginia, ...2.0299

COMPILATION OF WATER QUALITY DATA ...Aquatic Ecology, Basses -sea,white, White Perch, Data Analysis - General, Lakes, Water Quality-general, ...5.0459

RESTORATION AND REHABILITATION OF EARTHQUAKE DAMAGED PINK AND CHUM SALMON STUDIES IN PRINCE WILLIAM SOUND ...Alaska, Aquatic Ecology, Earthquakes, Flow Characteristics -water, Salmon -coho,chinook,sockeye..., Spawn Or Nesting Sites, Stream Rehabilitation, Tectonics-general, ...2.0026

VERMILION - CALCASIEU - SABINE SYSTEM ...Aquatic Ecology, Louisiana, Nets, Number Or Density, Plankton Sampling, ...2.0546

TIMBALIER - TERREBONNE BAYS SYSTEM ...Aquatic Ecology, Louisiana, Nets, Number Or Density, Plankton Sampling, ...2.0547

WATER RESOURCES PLANNING STUDIES - OKLAHOMA AND ARKANSAS ...Arkansas River, Federal Government, Planning, State-local Government, Storage of Water, ...6.0445

METHODOLOGY FOR INTEGRATING WATER QUALITY MANAGEMENT WITH THE MANAGEMENT OF THE TOTAL WATER RESOURCES IN MINNESOTA ...Management, Minnesota, Technique Development, Water Quality Control-general, ...5.0605

A CLASSIFICATION OF THE LAKES OF THE STATE OF OREGON ...Lakes, Oregon, Survey Studies, Water Properties-general, ...2.0891

SYSTEMATIC STUDY AND DEVELOPMENT OF LONG-RANGE PROGRAMS OF URBAN WATER RESOURCES RESEARCH ...Economics-general, Projections and Estimations, Social Aspects, Systems Analysis, Urban Environments, Water Law-general, ...6.0392

EVALUATION OF GROUNDWATER RESOURCES, LIVERMORE VALLEY, CALIFORNIA ...Groundwater Basins, Management, Model Studies, Subsurface Flow, Water Yield, ...4.0025

APPLICATION OF AERIAL PHOTOGRAPHS FOR THE INVESTIGATION OF THE DISCHARGE PROPERTIES OF DRAINAGE BASINS ...Aerial, Discharge-general, Photogrammetry, River Basins, Water Yield, ...2.0792

RESEARCH ON DATA AND ANALYTICAL SYSTEMS FOR PREPARING NATIONAL WATER ASSESSMENTS ...Data & Statistics Info Storage, Model Studies, Statistics-general, Water Quality-general, Water Quantity-general, ...6.0397

DATA COLLECTION ECONOMICS FOR WATER POLLUTION STUDIES ...Economic Efficiency, Operations Research, Water Quality Control-general, ...7.0055

EUTROPHICATION OF NATURAL WATERS ...Eutrophication, Forecasting-prediction, Lakes, Plant Succession, Water Quality Control-general, ...5.1314

A PILOT-SCALE STUDY OF ACID MINE DRAINAGE ...Acidity, Mining Industry, Pollution Abatement, Systems Analysis, ...5.0881

WATER POLLUTION STUDY OF THE WABASH RIVER ...Indiana, Low Flow, Model Studies, Oxygen, Water Quality-general, ...5.0390

ENVIRONMENTAL GEOLOGY STUDY OF DALLAS-FT. WORTH METROPOLITAN REGION ...Geology - Engineering, Groundwater, Shallow, Texas, Urban Environments, ...7.0098

AERIAL MEASUREMENT OF HYDROLOGIC PHENOMENA ...Aerial, Geophysical Analysis, Humidity Instruments, Hydrology-general, Infrared Radiation, ...7.0003

LOW-FLOW STUDY - WISCONSIN ...Baseflow, Flow Characteristics -water, Low Flow, Wisconsin, ...2.1147

TIDAL DISCHARGE RESEARCH, NEW JERSEY ...Discharge-general, Other Data Analysis, Sediments, Tides, Water Quality-general, ...2.0769

USE OF WATER ON FEDERAL IRRIGATION PROJECTS ...Irrigation-general, Moisture Content, Rio Grande River, Water Table Fluctuation, ...6.0538

SKYWATER ...Colorado, Gaging, Streams, ...2.0190

EFFECT OF RECLAMATION PROJECTS UPON THE QUALITY OF WATER OF THE MISSOURI RIVER ABOVE SIOUX CITY, IOWA ...Missouri River, River Basins, Water Quality-general, ...5.0191

INVENTORY OF THE GULF ESTUARY SYSTEM ...Bays, Estuaries, Fishing, Gulf of Mexico, Sedimentology-general, ...2.0322

ROUTINE SAMPLING AT SEVEN INDEX STATIONS ...Bottom Sampling, Fish -non-specific, Lake Erie, Plankton Sampling, Water Sampling, ...6.0438

Data Acquisition-other

HYDROLOGICAL DATA ACQUISITION THROUGH REMOTE RECONNAISSANCE SYSTEMS ...Aerial, Hydrology-general, Infrared Radiation, Mapping, Moisture Content, Reflectance, ...7.0075

Data Acquisition

SUBJECT INDEX

Data Networks

- UTAH ATMOSPHERIC WATER RESOURCES (THE WASATCH WEATHER MODIFICATION PROJECT) ...Automatic Stations, Clouds-precipitation, Gages, Patterns, Utah, ...2.1074
- DIGITAL SYSTEMS FOR ON-SITE DATA COLLECTION FOR WATER QUALITY ANALYSIS ...Automatic Data Acquisition, Digital Computers, Technique Development, Water Quality-general, ...7.0005
- CLIMATIC PATTERNS IN WASHINGTON STATE ...Climate, Data Analysis Applications, Evaporation, Forecasting, Patterns, ...2.1122
- TEMPERATURE PREDICTION STUDIES RELATING TO THE DEVELOPMENT OF A POWER REACTOR SITE ON THE LOWER COLUMBIA RIVER ...Atomic Plants, Columbia River, Construction Sites, Dispersion -water, Thermal Pollution, ...8.0303
- HYDROLOGIC MEASUREMENT SYSTEMS ...Amount, Error Analysis, Gages, Hydrology-general, Instrumentation-general, Rain-general, Technique Development, Urban Environments, ...7.0056
- SOUTHERN ILLINOIS REGIONAL ECONOMIC DATA SYSTEM ...Economics-general, Illinois, Impact, Industrial-general, Regional Areas, ...7.0030
- GROUND WATER TABLE FLUCTUATIONS ...Observation Wells, Other Data Analysis, Water Table Fluctuation, ...4.0062
- DENSE RAINGAGE NETWORK PROJECTS ...Climatography, Gages, Modification, Storms-general, Weather Modification-general, ...2.0424
- HYDROLOGIC RELATIONS IN HAWAII ...Amount, Floodproofing, Hawaii, Hydrology-general, Runoff, ...2.0365
- VALUE OF STREAMFLOW DATA ...Benefit-cost Analysis, Gaging, Open Channel Flow, Unsteady Flow, Water Resources Development, ...6.0077
- FLOOD INUNDATION MAPPING, NORTHEASTERN ILLINOIS ...Atlases-maps, Discharge-general, Floods, Gaging, Illinois, ...4.0093

Data Analysis - General

- HYDROLOGY RESEARCH PROJECT ...Data Acquisition-general, Drainage, Hydrology-general, Small Watersheds, Structural, ...2.0281
- SMALL STREAMS INVESTIGATIONS IN OREGON ...Discharge-general, Floods, Gaging, Hydrographs, Peak Flow, ...2.0293
- DOUBTFUL HYDROGRAPHIC DATA ...Aircraft, Hydrology-general, Satellites, Technique Development, ...6.0278
- DOCTORAL DISSERTATION RESEARCH IN GEOGRAPHY ...General Synoptic Observations, Geography-physical, Humidity, Ohio River, Water Balance-budget, ...3.0392
- RAINFALL EVALUATION STUDIES ...Gages, Modification, Patterns, Sampling-general, Weather Modification-general, ...3.0219
- GLACIOLOGY AND METEOROLOGY OF ANVERS ISLAND, ANTARCTICA ...Antarctica, Geologic Maps, Intensity, Movement, Thickness - Area, ...2.0856
- PESTICIDE RESIDUE DATA PROCESSING ...Chemical Analysis, Document & Literature Info, Information Retrieval Methods, Persistence of Residues, Pesticides -non-specific, ...5.0147
- CHEMICAL TREATMENT OF NEBISH LAKE ...Aquatic Ecology, Chemical Treatment-general, Control of Nuisance Species, Lakes, Stocking of Fish & Shellfish, ...5.1293
- COMPILATION OF WATER QUALITY DATA ...Aquatic Ecology, Basses -sea,white, White Perch, Data Acquisition-general, Lakes, Water Quality-general, ...5.0459
- AN EVALUATION OF RECENT APPROACHES FOR THE DESIGN OF BIOLOGICAL WASTES TREATMENT ...Biological Treatment-general, Pilot Plant, Process Design, Waste Water Treatment-general, ...5.0928
- THE MANAGEMENT AND CONTROL OF WATER IN PUERTO RICO ...Control and Protection, Management, Puerto Rico, Types of Resources, Water Quality-general, Water Supply-general, ...6.0480
- WATERSHED ANALYSIS RELATING TO EUTROPHICATION OF LAKE MICHIGAN ...Economics-general, Eutrophication, Great Lakes-general, Michigan, Social Aspects, ...6.0302
- BIOLOGICAL PRODUCTIVITY OF THE COEUR D'ALENE RIVER AS RELATED TO WATER QUALITY ...Idaho, Primary Productivity, Productivity - Food Chain, Streams, Water Quality-general, ...5.0326
- ASSEMBLY AND ANALYSIS OF HYDROLOGIC AND GEOMORPHOLOGIC DATA FOR SMALL WATERSHEDS IN INDIANA ...Geomorphology-general, Hydrographs, Indiana, Small Watersheds, Streams, ...2.0459

- A GENERALIZED COMPUTER LANGUAGE FOR HYDROLOGIC AND HYDRAULIC ANALYSIS ...Digital Computers, Facilities, Hydraulic Engineering-other, Problem Oriented Languages, ...8.0213
- COMPUTER ANALYSIS OF WATERSHED CHARACTERISTICS AFFECTING FLOOD HYDROLOGY ...Economic Efficiency, Floods, Research - Development, Small Watersheds, Water Loss Control, ...2.0523
- PRECIPITATION AND RUNOFF DISTRIBUTIONS - ANALYSIS AND COMPARISONS ...Discharge-general, Forecasting-prediction, Other Probability, Patterns, Runoff, ...2.0739
- DELAWARE ESTUARY AND BAY WATER QUALITY SAMPLING AND MATHEMATICAL MODELING PROJECT ...Delaware Bay, Mathematical Analysis, Model Studies, Pollution Abatement, Technique Development, ...5.0749
- MATHEMATICAL AND COMPUTER SERVICES FOR THE ANALYSIS OF DATA AND DESIGN OF EXPERIMENTS FOR CERTAIN FWPCA PROGRAMS ...Computers-general, Facilities, Instrumental Services, Oregon, ...5.0934
- CLIMATIC PATTERNS AND THEIR EFFECT ON CALIFORNIA AGRICULTURE ...Agriculture, Applied Climatology, California, Phenology, Production & Processing, Temperature, Weather, ...2.0095
- EVALUATION OF CLIMATIC PATTERNS AFFECTING IDAHO AGRICULTURE ...Agricultural Watersheds, Applied Climatology, Evaporation, Forecasting, Idaho, Meteorological Averages, Patterns, ...2.0396
- RAINFALL OVER MISSOURI ...Gages, Geography-physical, Modification, Patterns, Topographic Influences, ...2.0694
- WEATHER INFORMATION FOR AGRICULTURE ...Climate-general, Evapotranspiration, General Synoptic Observations, Soil Physical Properties, ...4.0190
- DATA REDUCTION METHODS FOR STREAMFLOW FROM SMALL, WILDLAND WATERSHEDS ...Computers-general, Discharge-general, Gaging, Integration, Quadrature, Small Watersheds, Utah, ...2.1068
- RESEARCH ON CHARACTERISTICS OF CONVECTIVE CLOUDS IN TEXAS ...Aircraft, Cloud Physics, Cumulus, Model Studies, Texas, ...2.1023
- REGIONAL CORRELATIONS IN HYDROLOGIC VARIABLES ...Annual, Correlation, Evaporation, Patterns, Runoff, ...7.0097
- PILOT-STUDY OF SMALL WATERSHED HYDROLOGY ...Floods, Instrumentation-general, Mathematical Analysis, Rain-general, Runoff, Small Watersheds, ...2.0379
- LAND FORMING FOR DRAINAGE AND FURROW IRRIGATION ...Drainage, Furrow Irrigation, Irrigation, Irrigation Engineering, Pumping, ...5.1131
- CASCADES ATMOSPHERIC WATER RESOURCES PROGRAM ...Augmentation-general, Cascade Mountains, Clouds-precipitation, Formation, Washington, ...2.1128
- STATE WATER PLANNING FOR WYOMING ...Planning, State-local Government, Water Supply-general, Wyoming, ...6.0653
- DEVELOPMENT OF HYDROLOGIC ANALYSIS TECHNIQUES ...Computers-general, Hydrology-general, Land Use, Model Studies, Technique Development, ...2.0988
- GREAT LAKES RESEARCH - ENERGY TRANSFER AT THE AIR-WATER INTERFACE ...Heat and Radiation Transfer, Heat-transfer-other, Lake Michigan, Mass Transfer, Towers, Wind-water Interaction, ...2.0639
- STUDY OF TUNNEL LININGS AND REINFORCEMENT ...Channel Type-other, Lining, Linings-pavings, Reinforced, ...8.0104
- EXPERIMENTAL DESIGN & STATISTICAL EVALUATION OF WEATHER MODIFICATION EXPERIMENTS ...Computers-general, Data Analysis Applications, Statistics-general, Technique Development, Weather Modification-general, ...2.0198
- EVALUATION OF ESTUARINE DATA ...Current Research Projects Info, Estuaries, Gulf of Mexico, ...2.1047

Data Reduction and Analysis

Data Analysis Applications

- STATISTICAL, METEOROLOGICAL AND DEPTH-AREA ANALYSIS OF RAINFALL ...Forecasting, Hydrology-general, Middle-east-general, Patterns, ...2.0492
- STATISTICAL ANALYSES OF THE VARIATIONS OF PRECIPITATION-TEMPERATURE AND EVAPORATION IN TEXAS ...Evaporation, Patterns, Temperature, Texas, ...2.1027
- CLIMATIC PATTERNS IN WASHINGTON STATE ...Climate, Data Networks, Evaporation, Forecasting, Patterns, ...2.1122

SUBJECT INDEX

Deposits - Non-metallic

THE CHARACTERIZATION OF OVERLAND FLOW ON VERY ROUGH SURFACES ...Channel Roughness, Channels, Flow Characteristics uwater, Model Studies, Surface Flow, ...8.0192

STATISTICAL ANALYSIS OF FLOOD PEAKS OF GEORGIA RIVERS ...Digital Computers, Discharge-general, Floods, Georgia, Peak Flow, ...2.0357

STATISTICAL ANALYSIS OF WATER CONSUMPTION ...Consumptive Use, Illinois, Urban Environments, Water Sources - general, Water Utilization -general, ...7.0037

PERMEABILITY OF UNCONSOLIDATED AQUIFER MATERIALS ...Aquifers-general, Hydrology-general, Permeability, Unconsolidated Aquifers, Valleys and Canyons, ...7.0038

RAINFALL EVALUATION STUDIES ...Gages, General Synoptic Observations, Modification, Patterns, Storms-general, ...2.0416

SUBSYNOPTIC WEATHER SPECIFICATION ...Cloud Cover, Dew, Micrometeorology, Model Studies, Temperature, Weather Forecasting, ...2.0592

INSTRUMENTATION, DATA ACQUISITION, AND COMPUTER TECHNIQUES ...Analog Computers, Automatic Data Acquisition, Digital Computers, Hydraulics-general, ...7.0019

EXPERIMENTAL DESIGN & STATISTICAL EVALUATION OF WEATHER MODIFICATION EXPERIMENTS ...Computers-general, Data Analysis - General, Statistics-general, Technique Development, Weather Modification-general, ...2.0198

Other Data Analysis

OPERATIONAL HYDROMETEOROLOGICAL DATA MANAGEMENT SYSTEM ...Data Processing Services, Economics-business-management, Information Retrieval Methods, Management-general, Southern, Streams, System Development, ...7.0011

SEQUENTIAL USE WITHIN A HYDROLOGIC COMPLEX ...Hydrology-general, Management, Model Studies, Systems Analysis, Water Quality-general, ...5.1189

GROUND WATER TABLE FLUCTUATIONS ...Data Networks, Observation Wells, Water Table Fluctuation, ...4.0062

TIDAL DISCHARGE RESEARCH, NEW JERSEY ...Data Acquisition-general, Discharge-general, Sediments, Tides, Water Quality-general, ...2.0769

System Development

OPERATIONAL HYDROMETEOROLOGICAL DATA MANAGEMENT SYSTEM ...Data Processing Services, Economics-business-management, Information Retrieval Methods, Management-general, Other Data Analysis, Southern, Streams, ...7.0011

TO EVALUATE THE UTILITY OF EXISTING AUTOMATIC CHEMICAL ANALYSIS EQUIPMENT FOR WATER QUALITY SURVEILLANCE UNDER COMPUTER CONTROL ...Atomic Absorption, Automatic Data Acquisition, Chemical Analysis (water), Computers-general, Information Retrieval Methods, Information Storage and File, Water Properties-general, ...7.0078

WAVE RECORDING AND ANALYSIS ...Lasers-masers, Pressure, Radar, Sonar, Statistics-general, Water Motion Recorders, Waves, ...2.0262

Decision Making

THE DECISION SEQUENCE IN WATER RESOURCE PLANNING ...Decision Theory, Operations Research, Planning, ...6.0069

AN EXPLORATION OF THE INFLUENCE OF ATTITUDES FOR DECISION-MAKING IN WATER MANAGEMENT ...Attitudes & Attitude Change, Floods, Management, ...6.0187

Defects

Surface

FORMING, FINISHING, AND CURING CONCRETE ...Casting of Materials, Cement, Concrete, Setting, Curing, Surface Cleaning, Finishing, ...8.0257

Delaware

FLUSHING PATTERN OF CERTAIN TIDAL STREAMS IN DELAWARE ...Aquatic Ecology, Circulation -water, Discharge-general, Industrial-general, Tidal Streams, ...2.0250

THE GROUND-WATER FLOW SYSTEM IN THE DELMARVA PENINSULA ...Aquifers-general, Flow Characteristics -water, Groundwater, Model Studies, Water Balance-budget, ...2.0254

CLIMATE OF THE NORTHEAST - ANALYSES & RELATIONSHIP TO PLANT RESPONSE (NE-35 ...Aerial, Beans (garden),

Climate-general, Envir. responses (non-specific, General Synoptic Observations, ...2.0251

ECOLOGICAL STUDIES OF WILDLIFE MANAGEMENT PRACTICES ...Depth,water Level, Fluctuation, Habitat Studies, Management, Swamps-marshes, Wildlife -non-specific, ...6.0119

REMOTE SENSING OF DELAWARE ESTUARY ...Aircraft, Estuaries, Pollutants-general, ...2.0909

Delaware Bay

DELAWARE ESTUARY AND BAY WATER QUALITY SAMPLING AND MATHEMATICAL MODELING PROJECT ...Data Analysis - General, Mathematical Analysis, Model Studies, Pollution Abatement, Technique Development, ...5.0749

ECONOMICS OF WATER QUALITY IN A REGIONAL SYSTEM ...Alternative Planning, Benefit-cost Analysis, Estuaries, Management, Water Quality-general, ...5.1011

Delaware River

THE ECONOMICS OF WATER SUPPLY AND QUALITY ...Benefit-cost Analysis, Flow Augmentation, Model Studies, Pollution Abatement, Urban Environments, Water Allocation, ...6.0286

ECONOMICS OF WATER QUALITY FOR A REGIONAL SYSTEM ...Economic Efficiency, Estuaries, Finance, Regional Areas, Water Demand, Water Quality-general, ...6.0465

THERMAL AND INDUSTRIAL POLLUTION - DELAWARE RIVER ...Automatic Data Acquisition, Electric Power Plants, Industrial Wastes, Physical Parameters, Pulp, Paper, and Logging, Thermal Pollution, ...5.0989

INTERSTATE REGIONAL PLANNING FOR WATER SUPPLY AND WASTE DISPOSAL ...Disposal-general, Interstate, Planning, Water Distribution Systems, Water Quality Control-general, Water Supply-general, ...5.0748

OXYGEN REGENERATION OF POLLUTED RIVERS ...Aeration, Economic Efficiency, Instrumentation-general, Oxygen, Pollution Abatement, Streams, ...5.0740

DELAWARE ESTUARY SEDIMENTATION STUDY ...Rate of Deposition, Sand Bars, Sediment Transport-general, Sediment Yield, Turbulent Flow, ...2.0908

Deltas

ENGINEERING PHASES OF SURFACE DRAINAGE ...Drainage, Drainage Engineering, Drainage Systems, ...4.0019

LAKE ERIE ENVIRONMENTAL STUDIES PROGRAM ...Biological, Biological-general, Chemical, Chemical-general, Eutrophication, Lake Erie, Meteorological Studies-general, Monitoring (long Term Studies), Physical-general, Sedimentology-general, ...2.0783

SACRAMENTO-SAN JOAQUIN DELTA ANALOG MODEL STUDIES ...Analog Computers, Electronics - Applied, Instrumental Services, Model Studies, Sacramento River, ...7.0008

Deposits - Non-metallic

Aggregates - Crushed Rock

POROSITY AND PERMEABILITY OF VIRGINIA AGGREGATES ...Nitrogen, Permeability, Porosity, Virginia, ...2.1111

EVALUATION OF ROCK RIPRAP AND DEVELOPMENT OF SUBSTITUTES ...Engineering Structures-general, Erosion Control, Petrography, Slopes, Soil Cement, Wave Action, ...8.0081

Asphalt - Tar Sands

CHANGES IN PHYSICAL CHARACTERISTICS OF ASPHALT MATERIAL ...Aging, Bituminous, Cement, Concrete, Linings-pavings, Test Methods, ...8.0105

Brines - Saline Waters

SUBSURFACES BRINES CONTAINING VALUABLE AND STRATEGIC MINERALS ...Chemical-general, Geochemistry-general, Hardness-minerals, Potential of Deposit, ...7.0091

Coal

Bituminous

CHEMICAL CHARACTERISTICS OF WATERS IN FLOODED BITUMINOUS-COAL MINESHAFTS ...Acidity, Geochemical Analysis, Mine Drainage Control, Mine Hydrology, Pyrite Group, ...5.1279

Deposits - Non-metallic

SUBJECT INDEX

Coal-general

- COMBINED DESALINATION AND POWER-GENERATION BASED ON COAL ENERGY ...Cost Analysis, Desalination, Flash Distillation, Material Recovery, Reverse Osmosis, ...3.0325
- SEWAGE TREATMENT, PILOT PLANT EVALUATION ...Ash-coal, Coal, Industrial Wastes, Pilot Plant, Waste Treatment-economics, ...5.0870
- REMOVAL OF TRACE ORGANICS FROM WATER BY ADSORPTION ON COAL ...Activated Carbon, Adsorption, Isotherm, Organic, Waste Water Treatment-general, ...5.1209
- HYDROLOGY AND WATER QUALITY OF SURFACE MINING FOR COAL IN PIKE COUNTY, INDIANA ...Hydrology-general, Indiana, Strip Mines, Water Quality-general, ...5.0384
- PHYSICAL AND CHEMICAL CHANGES IN WEATHERING COAL SPOILS-EFFECT ON WATER SUPPLY AND PLANT GROWTH ...Growth Rate, Regeneration & Seed Production, Runoff, Soil and Rock Leaching, Spoil Banks, Spoil Banks, Strip Mine Soils, ...5.0903
- ESTIMATING ACID MINE DRAINAGE POTENTIAL FROM COAL BEDS BY USE OF THE SOXHLET EXTRACTOR ...Acid Mine Wastes, Acidity, Extraction, Iron, Sulfate, Sulfite, ...5.0993
- TREATMENT OF COAL MINE WATERS TO MEET CURRENT COMMONWEALTH WATER DISCHARGE REQUIREMENTS ...Lagoon, Mining Activities, Pennsylvania, Waste Treatment-economics, Waste Water Treatment-general, ...5.1038
- COAL STRIP MINE WATERSHED STUDY ...Aquatic Ecology, Mining Activities, Pollution - Effects of, Soil Management -non-specific, Stream Rehabilitation, Strip Mines, ...2.0980
- COAL STRIP MINE WATERSHED DEMONSTRATION-- JACKSON COUNTY, ALABAMA ...Alabama, Aquatic Ecology, Mining Industry, Pollution - Effects of, Water Quality-general, ...5.1124
- HYDROLOGIC INFLUENCES OF STRIP MINING, BEAVER CREEK, KENTUCKY ...Appalachia, Hydrology-general, Mining Activities, Pollution - Effects of, Strip Mines, ...5.0890
- WATER CONTROL - CONTROL TECHNIQUES FIELD TESTING AND EVALUATION ...Acidity, Chemical Analysis (water), Mine Drainage Control, Mining Activities, Pollution Abatement, ...5.1018
- USE OF COAL AS ADSORBENT FOR TREATING WASTE WATER ...Adsorption-absorption-other, Anaerobic, Domestic, Material Recovery Wastes, Secondary Treatment, ...5.1017
- REDUCTION IN DAMAGES TO FORESTS BY IMPROVING MINING AND REHABILITATION PROCEDURES ...Conservation & Management Eng, Forest Watersheds, Mining Industry, Site Index and Site Quality, Soils and Fertilizer, ...4.0120

Oil Shale

- POLLUTANTS IN PRODUCT AND PROCESS WATERS FROM OIL-SHALE RETORTING OPERATIONS AND METHODS FOR THEIR REMOVAL ...Material Recovery Wastes, Mining Industry, Pollutants-general, Technique Development, Waste Water Treatment-general, ...5.1324

Water - Hot Water

- GEOTHERMAL RESOURCES OF IDAHO ...Chemical-general, Hot Springs, Idaho, Survey Studies, Temperature, ...3.0206

Deserts

- PRECIPITATION, STREAMFLOW AND SEDIMENT CONVEYANCE IN A SMALL ARID WATERSHED ...Climate, Flash Floods, Flow Characteristics -water, Patterns, Sediment Transport-other, ...2.0496
- DISTRIBUTION OF DIATOMS IN DESERT WATERS ...Algae-Diatoms, Branchiopoda -other, Plant Prod. (non-specific), Playas, Respiratory System, ...2.0138
- EVALUATION OF FIVE METHODS FOR SAMPLING DESERT AND WETLAND VEGETATION ...Arid and Desert, Colorado, Plant Ecology (non-specific), Utah, Wetlands, ...3.0471
- ARID LAND ECOLOGY AND ENVIRONMENT STUDIES IV. WATER QUANTITY MANAGEMENT ...Arid and Desert, Big Horn, Deserts, Arid Lands, Moisture Content, Wyoming, ...4.0281
- A UNIFIED APPROACH TO WATER, FOOD AND POWER IN A COASTAL DESERT COMMUNITY ...Arid and Desert, Desalination, Diesel, Distilling Units, Electric Power Plants, Greenhouse, Use of Impaired Water, ...3.0015
- COOPERATIVE EVAPOTRANSPIRATION RESEARCH ...Climate, Evapotranspiration, Heat Exchange, Radiation-general, ...2.0136

- RELATIONSHIP BETWEEN MOURNING DOVE PRODUCTION AND WATER DISTRIBUTION IN THE SONORAN DESERT ...Arizona, Dove, Habitat Studies, Productivity (agricultural), Water Utilization -animal, ...6.0262

Design Instrumentation

Design Instrumentation-other

- DEVELOPMENT OF HYDROLOGIC EQUIPMENT ...Hydraulic Engineering-other, Hydrology-general, Instrumental Services, Instrumentation-general, Other Telemetry, ...7.0064

Dimension

Dimension-three

- NUMERICAL ANALYSIS OF TIME-DEPENDENT FREE SURFACE FLOWS ...Capillarity, Finite Differences, Open Channel, Partial, Unsteady, ...2.0441
- MODEL STUDIES OF MASS CONCRETE STRUCTURES ...Cement, Concrete, Mass, Model Studies, Stress Recorders, Technique Development, ...8.0227

Dimension-two

- GROUND WATER DISPERSION DURING PUMPING AND RECHARGE OPERATIONS ...Approximations, Artificial Recharge, Dispersion -water, Finite Differences, Groundwater, Porous Media - Flow Through, Steady, ...5.0529

Math. model

- SOIL HEAT TRANSFER - PERMAFROST AND FROST PENETRATION ...Computers-general, Heat Flow, Permafrost-frozen, Thermal Properties-other, ...2.0024

Measuring Devices

Fluids

- RADIOISOTOPE WATER FLOW MEASUREMENT IN HIGH-HEAD TURBINES AND PUMPS ...Open Channel Flow, Pump-other, Radioisotopes, Technique Development, Turbine-other, ...4.0057
- FLOW MEASUREMENT OF IRRIGATION WATER ...Canals, Flow Characteristics -water, Flume, Irrigation, Measurement, ...3.0144
- HYDRAULIC INVESTIGATION OF TAINTER GATES AS FLOW MEASURING DEVICES ...Control Gate, Fluid Dynamics, Measurement, ...8.0167
- WATER MEASUREMENT ...Discharge-general, Dyes and Coloring, Measurement, Technique Development, Water Quantity-general, ...8.0128
- RADIOISOTOPE WATER FLOW MEASUREMENT IN HIGH-HEAD TURBINES AND PUMPS ...Open Channel Flow, Radioisotopes, Water, ...8.0065

Mass

- DEVELOPMENT AND CALIBRATION OF A PITOT SPHERE ...Gaging, Hybrid Computers, Hybrid Computers, ...8.0193
- FEASIBILITY OF RATING CURRENT METERS IN A VELOCITY FIELD ...Currents -water, Gaging, Model Studies, Velocity -water, ...7.0107

Moisture

- DEVELOPMENT OF AUTOMATED SUBIRRIGATION SYSTEM ...Automated Equipment, Irrigation Engineering, Pipes, Plastics -General, Subsurface Irrigation, Water Distribution Systems, ...3.0024
- PERFORMANCE OF CONSTRUCTION PLANT AND EQUIPMENT ...Concrete-general, Construction, Equipment, Machines, ...8.0251

Pressure

- UNSTEADY FLOW PARAMETERS IN HYDRAULIC DESIGN ...Conduit, Incompressible, Reservoirs, Transition Sections, Unsteady, ...8.0200
- PORE-PRESSURE MEASURING REFINEMENTS IN SOILS FOR SHEAR AND CONSOLIDATION ...Capillarity, Cohesive Soil-general, Pore Water, Technique Development, Triaxial, ...8.0080
- DRILL PERFORMANCE MONITOR ...Borehole Geophysics, Drilling Operation, Foundations-general, Soil Exploration, Temperature, ...8.0097

SUBJECT INDEX

Dicots

Stress Recorders

- MODEL STUDIES OF MASS CONCRETE STRUCTURES ...Cement, Concrete, Dimension-three, Mass, Model Studies, Technique Development, ...8.0227
DETERMINATION OF IN SITU STRESSES BY STRAIN-RELIEF METHOD ...Dams-other, Reinforced, ...8.0021

Temperature

- SIMULTANEOUS RADIATION, CONVECTION AND CONDUCTION IN A TRANSPIRATION PROCESS ...Mixed Modes, Porous Media - Flow Through, Transpiration, ...2.1154
DRILL PERFORMANCE MONITOR ...Borehole Geophysics, Drilling Operation, Foundations-general, Pressure, Soil Exploration, ...8.0097
ELECTRICAL MACHINERY TEMPERATURE CONTROL ...Electric Power Plants, Motors and Appliances, Other Control Systems, Power Regulator, ...8.0125

Turbulence

- TURBULENCE IN LIQUIDS ...Detectors and Sensors, Quartz, Turbulent, ...8.0187
INSTRUMENTATION FOR RESEARCH ...Doppler, Fluid Dynamics, Instrumental Services, Recording Systems, Velocity, ...7.0109

Velocity

- INVESTIGATION OF THE TURBULENT TRANSPORT MECHANISMS FOR HEAT AND MOMENTUM TRANSFER IN PIPE FLOW ...Digital Computers, Heat-transfer-other, Statistics-general, Turbulent, ...5.0371
INSTRUMENTATION FOR RESEARCH ...Doppler, Fluid Dynamics, Instrumental Services, Recording Systems, Turbulence, ...7.0109

Requirement

- SANITATION, WASTE DISPOSAL AND PEST AND VECTOR CONTROL ...Nuclear Explosion, Pollution - Effects of, Radioactive Fallout, Radiologic Warfare, Sewage, Urban Environments, ...5.0059

Simulators

- DEVELOPMENT OF HYDRAULIC DESIGN CRITERIA ...Conduit, Design Criteria, Models, Spillways, Water Control Works-other, ...8.0226
HYDRAULIC PROTOTYPE TESTS ...Channel Regulation-other, Conduit, Models, Spillways, ...8.0228

Specifications

- DURABILITY OF CONCRETE DRAIN TILE AND IRRIGATION PIPE ...Drainage, Pipes, Plain, Strength, Techniques, ...8.0221

Testing

Techniques

- COMPARISON OF EVAPORATION INSTRUMENTS ...Evaporation, Instrumentation-general, Tanks, ...2.0450
DURABILITY OF CONCRETE DRAIN TILE AND IRRIGATION PIPE ...Drainage, Pipes, Plain, Specifications, Strength, ...8.0221

Developmental Biology

Vertebrates

Basic Embryology

- THE EFFECT OF DIELDRIN ON SURVIVAL AND DEVELOPMENT OF FISH EGGS ...Aldrin, Dieldrin, Mode of Action - animal, Ohio, Pollution - Effects of, ...5.0885
EFFECT OF INCUBATION TEMPERATURE ON SURVIVAL OF LARGEMOUTH BASS EMBRYOS ...Environmental Physiology, Incubation, Largemouth Bass, Temperature, Warm Water, ...6.0387
EFFECTS OF DISSOLVED OXYGEN CONCENTRATION ON SURVIVAL OF LARGEMOUTH BASS EMBRYOS ...Gases, Dissolved -water, Largemouth Bass, Mortality Rates, Oxygen, Water Movement, Currents, Water Temperature-non-specific, ...5.0771
EFFECTS OF TEMPERATURE AND SILT ON NORTHERN PIKE DEVELOPMENTS IN THE LABORATORY ...Laboratory, Pikes, Pickeral, Muskellunge, South Dakota, Turbidity & Suspended Matter, Water Temperature-non-specific, ...6.0507
EFFECTS OF TEMPERATURE AND SILT ON YELLOW PERCH DEVELOPMENT IN THE LABORATORY ...Laboratory, South

- Dakota, Turbidity & Suspended Matter, Water Temperature-non-specific, Yellow Perch, Darters, ...6.0508

- EFFECTS OF TEMPERATURE AND SILT ON WHITE BASS DEVELOPMENT IN THE LABORATORY ...Basses -sea,white, White Perch, Laboratory, Turbidity, Turbidity & Suspended Matter, Water Temperature-non-specific, ...6.0509

- ENVIRONMENTAL FACTORS AND YOUNG WHITE BASS SURVIVAL IN RESERVOIRS ...Basses -sea,white, White Perch, Captive Rearing, Environmental Physiology, Reservoirs and Impoundments, ...6.0512

- EFFECTS OF TEMPERATURE ON MATURATION, EMBRYONIC DEVELOPMENT AND CONDITION OF FRY IN YELLOW PERCH - LAKE HERRING, SMELT AND WALLEYE ...Environmental Physiology, Maturity & Growth Stages, Temperature, Thermal Pollution, Water Temperature-non-specific, Yellow Perch, Darters, ...5.0590

Dewatering

- SHALES AS FILTERS IN NATURAL WATERS ...Chemical-general, Filtration, Fine-grained Clastics, Groundwater, Interstitial - Connate Water, ...2.0079

- EFFECTS OF DEWATERING ON A TROUT POPULATION ...Montana, Population Dynamics, Recreation Sites, Salmon & Trout - Non-specific, Streams, ...6.0330

- DEWATERING AND DRYING OF SLUDGE ON POROUS MEDIA ...Drying-dewatering, Sand, Sludge-other, ...5.1140

- ULTIMATE DISPOSAL OF SLUDGES BY SURFACE SPREADING ...Animal Wastes - Feed Lots, Disposal, Transport, Waste Disposal -underground, ...5.0850

Dicots

Amaranthaceae -alligatorweed..

- EXPANDED AQUATIC PLANT CONTROL PROJECT ...of Aquatic Plants, Submerged Plants, Translocation, 2,4-d, ...6.0248

Apples

- EFFECT OF WATER APPLICATIONS TO SOD AND MULCH UPON QUALITY ATTRIBUTES OF APPLE FRUITS ...Irrigation, Mulches -other, Quality -non-specific, Sprinkler Irrigation, Storage Changes, Trees, ...2.0853

- SOIL MOISTURE AND FRUIT GROWTH IN RELATION TO WEATHER CHECKING OF MCINTOSH APPLES ...Growth Rate, Moisture Content, Moisture Levels, Weather Checking, ...2.0789

Apricot

- IRRIGATION STUDIES WITH APRICOTS AT WOLFskill EXPERIMENTAL ORCHARDS ...Growth Rate, Irrigation, Irrigation-general, Trees, Yield, ...2.0099

Artemisia

- MICROCLIMATIC FACTORS FOR FOUR PLANT COMMUNITIES ON ELK MOUNTAIN ...Elevational Levels, Altitude, Energy Budgets, Mapping, Range, Wyoming, ...2.1170

- IMPROVEMENT OF WATER YIELDS AND SOIL STABILIZATION IN RIVER BASINS ...Cover Crops, Erosion-general, Forest Watersheds, Management, Soil-water-plant Relationships, Water Yield, ...3.0495

Ash Trees

- CLIMATE OF THE NORTHEAST - ANALYSIS AND RELATIONSHIP TO PLANT RESPONSE ...Flowering, New York, Phenology, Physical Climatology, ...2.0791

- ACCUMULATION OF CLIMATOLOGICAL DATA ...Flowering, Ohio, Soil Depth, Soil Temp. -non-specific, ...7.0090

Blueberries, Cranberries

- THE PERSISTENCE, ACCUMULATION AND FATE OF PESTICIDES IN CRANBERRY SOILS AND RESERVOIRS ...Chlorinated Hydrocarbons, Organophosphorous Cpds., Persistence in Soils, Reservoirs and Impoundments, Swamps-marshes, ...5.0533

Brassica -the Cabbage Group

- IMPROVEMENT OF HIGH ALTITUDE (7600) VEGETABLE CROPS ...Elevational Levels, Altitude, Irrigation, Irrigation-general, Lettuce, Quality -non-specific, ...4.0055

Dicots

BROCCOLI CULTURAL INVESTIGATIONS IN WESTERN WASHINGTON ...Aerial, Irrigation, Irrigation-general, Space Competition, Washington, ...2.1126

Cacti

ECESIS AND STABILIZATION OF PRICKYPEAR (OPUNTIA SPP.) ON THE RIO GRANDE PLAINS ...Angiosperms, Arid and Desert, Habitat Studies, of Specific Weeds, Range Or Territorial Distr. , ...6.0564

Cantalope, Muskmelon, Honeydew

FACTORS AFFECTING THE QUALITY OF ARIZONA MELONS ...Irrigation , Mineral Nutrition, Moisture Levels, Nitrogen, Vines, ...2.0031

Citrus

IRRIGATION EFFICIENCY ...Evaporation, Florida, Sprinkler Irrigation, Trees, Water Loss Control, ...3.0177

REMOVAL OF ORGANICS AND NUTRIENTS FROM CITRUS PROCESSING PLANT WASTES ...Activated, Aeration, Food Processing Industry, Organics, Pond, Waste Water Treatment-general, ...5.0266

SPRINKLER IRRIGATION OF CITRUS UNDER SOUTHWESTERN CONDITIONS ...Flood Irrigation, Irrigation, Southwest, Sprinkler Irrigation, Trees, ...2.0052

RESPONSE OF CITRUS TREES TO SOIL MOISTURE ...Internal Water Movement, Moisture Levels, Rhizosphere, ...2.0039

LEMON PRODUCTION IMPROVEMENT ...Arizona, Furrow Irrigation, Irrigation, Sprinkler Irrigation, Trees, ...2.0067

SOILS AND NUTRIENT CULTURE EXPERIMENTS TO DETERMINE THE EFFECTS OF VARIABLE SALINITY CONDITIONS ON CITRUS BEHAVIOR ...Irrigation, Saline and Alkaline Soils, Saline Soils, Salinity, Trees, ...3.0086

LEACHING REQUIREMENT AND SALINITY STUDIES WITH BEARING ORANGE TREES ...Flood Irrigation, Leaching-other, Soil and Rock Leaching, Trees, Water Salinity, ...4.0041

EVAPOTRANSPIRATION AND SOIL MOISTURE DETERMINATION AS GUIDES TO CITRUS IRRIGATION ...Evapotranspiration, Irrigation, Moisture Content, Moisture Levels, ...2.0315

RELATIONSHIP BETWEEN EXCESSIVE SOIL MOISTURE AND CITRUS ROOT DAMAGE ...Drainage, Drainage Engineering, Excessive Moisture, Other Environmental Conditions, Piezometry, ...2.0316

WATER RELATIONS WITH CITRUS ON THE FLATWOODS AND MARSHES OF THE EAST COAST ...Drainage, Saline Soils, Sprinkler Irrigation, Swamps-marshes, Water Table Fluctuation, ...2.0310

ENVIRONMENT CONTROL FOR ORCHARDS AND FIELDS ...Freezing & Below, High Temp. - 85f Or Above, Sprinkler Irrigation, Strawberry, Trees, ...8.0204

CITRUS FERTILIZER TEST ON SEVERAL PRINCIPAL CITRUS SOIL TYPES IN THE LOWER RIO GRANDE VALLEY OF TEXAS ...Concentration Within Fertilize, Irrigation, Irrigation-general, Rates Or Levels of Application, Soil Types, ...2.1034

EFFECTS OF CULTURAL PRACTICES, SOIL MOISTURE LEVELS, AND FERTILITY LEVELS ON CITRUS TREE REACTION, AND ON SOIL PROPERTIES ...Consumptive Use, Moisture Levels, Requirements for Water, Soil Chemical Properties, Trees, ...2.1033

TOLERANCE OF CITRUS TO LOW TEMPERATURES ...Cold, Low Temp. - But Above 32f, Plants, Trees, ...3.0184

TOLERANCE OF CITRUS TO SALINITY AND BORON IN THE SOIL AND IRRIGATION WATER ...Boron, Saline Soils, ...3.0186

SURFACE AND SUBSURFACE IRRIGATION SYSTEMS FOR COASTAL CALIFORNIA ...Agricultural Watersheds, Saline and Alkaline Soils, Salinity, Subsurface Irrigation, Surface Irrigation - general, ...3.0091

IRRIGATION AND OTHER PRODUCTION RELATIONS IN FLORIDA CITRUS ENTERPRISES ...Benefit-cost Analysis, Florida, Input - Output Analysis, Irrigation-general, Water Costs, Water Demand, ...6.0135

Cotton

SPRINKLER IRRIGATION OF COTTON WITH HIGH SALT-CONTENT WATER ...Salinity, Sprinkler Irrigation, ...3.0011

IRRIGATION OF COTTON AND CORN. ...Corn, Irrigation, Irrigation-general, Rates Or Levels of Application, Yield, ...2.0960

SUBJECT INDEX

Lauraceae - Sassafras...

SOIL-MOISTURE-PLANT RELATIONS OF AVOCADO TREES ...Irrigation-general, Moisture Content, Soil-water-plant Relationships, Temperature, Trees, ...2.0148

Legumes

Alfalfa

SPRING IRRIGATION OF ALFALFA ...Irrigation, Rhizosphere, Temperature, ...3.0313

DROUGHT INJURY AND RESISTANCE IN PLANTS ...Drought, Moisture Deficiency, ...2.0834

NORTHERN IDAHO ALFALFA PROBLEM ...Idaho, Internal Water Movement, Other Environmental Conditions, Soil Conditions, Soil-water-plant Relationships, ...2.0397

EFFECT OF RATE OF SEEDING AND THE APPLICATION OF AGRICULTURAL CHEMICALS ON YIELD AND QUALITY OF ALFALFA SEED ...Growth Management, Irrigation, Management, ...6.0365

IRRIGATED GRASS INVESTIGATIONS ON THE BELLE FOURCHE PROJECT ...Grasses -non-specific, Harvest and Storage, Irrigation-general, South Dakota, ...2.0977

PHYSIOLOGICAL STUDIES OF ALFALFA AS RELATED TO COLD AND HEAT TOLERANCE, DROUGHT RESISTANCE, AND FORAGE QUALITY AND YIELD ...Blood Albumin, Cold Resistance and Hardiness, Drought, Respiration, ...2.0572

Beans (garden)

PHYSIOLOGICAL CHANGES IN PLANTS PRODUCED BY SALINE SOLUTIONS ...Brackish Water, Humidity, Repression, Transpiration and Evap, Water Movement, ...2.0061

CLIMATE OF THE NORTHEAST - ANALYSES & RELATIONSHIP TO PLANT RESPONSE (NE-35 ...Aerial, Climate-general, Delaware, Envir. responses (non-specific, General Synoptic Observations, ...2.0251

SPRING AND SUMMER HORTICULTURAL CROPS ...Aerial, Fruit, Nuts & Berries -other, Potatoes, Sprinkler Irrigation, Strawberry, ...2.0338

Clovers -red, alsike, ladino...

RELATIONSHIP BETWEEN IRRIGATION WATER COMPOSITION AND SOIL PROPERTIES ...California , Irrigation-general, Movement, Availability, Saline and Alkaline Soils, Salinity, ...3.0034

Legumes -other..mesquite...

CHEMICAL CONTROL OF CREOSOTE BUSH AND MESQUITE ...Evaluation, Management Effects, Phreatophytes, Range, Watersheds-general, Zygophyllaceae, ...4.0177

IRRIGATED PASTURE AND MEADOW ESTABLISHMENT AND MANAGEMENT ...Flood Irrigation, Grasses -non-specific, Irrigation, Legume-grass Mixtures, Montana, North Dakota, Oregon, ...3.0472

TIMBER AND WATERSHED RESOURCES DEVELOPMENT RESEARCH IN HAWAII ...Erosion-general, Evapotranspiration, Rain, Soils and Fertilizer, Streams, ...2.0367

Peanut

THE RESPONSE OF PEANUTS TO SUPPLEMENTAL IRRIGATION ...Excessive Moisture, Irrigation, Moisture Content, Yield, ...2.0364

Soybean

EFFECT OF WATER AVAILABILITY ON PHOTOSYNTHESIS OF PLANTS ...Available Water, Corn, Drought, Irrigation-general, Moisture Content -plants, Photosynthesis, ...2.0426

FIELD INVESTIGATIONS OF SUBSURFACE AND SURFACE DRAINAGE ...Corn, Drainage, ...4.0103

INJURY AND RESISTANCE IN PLANTS ...Corn, Drought, Moisture Deficiency, Translocation, ...2.0487

EFFECT OF SOIL MOISTURE AND POTASSIUM FERTILIZATION ON THE TRANSPIRATION RATE OF SOYBEANS (GLYCINE MAX) ...Growth Rate, Moisture Levels, Potassium, Transpiration, Transpiration and Evap, ...2.0404

Lettuce

IMPROVEMENT OF HIGH ALTITUDE (7600) VEGETABLE CROPS ...Brassica -the Cabbage Group, Elevational Levels, Altitude, Irrigation, Irrigation-general, Quality -non-specific, ...4.0055

SUBJECT INDEX

Dicots

THE EVALUATION, BREEDING AND IMPROVEMENT OF LETTUCE VARIETIES FOR TEXAS ...Aerial, Irrigation, Space Competition, Texas, ...6.0550

Macadamia

MACADAMIA CULTURE ...Fruit-set, Hawaii, Irrigation, Trees, ...2.0377

Malpighiaceae

STUDIES WITH BARBADOS OR WEST INDIAN CHERRY (MALPIGHIA PUNICFOLIA, L.) ...Puerto Rico, Shrubs, Vitamins, Yield, ...6.0482

Myrtaceae

GUAVA VARIETIES. SELECTION & PROPAGATION OF GUAVA VARIETIES & INVESTIG. OF COMMERCIAL & INDUSTR. POSSIBILITIES OF THE FRUIT (ABBREV) ...Irrigation, Puerto Rico, Selection & Breeding, Trees, Varietal Evaluation, ...5.1047

Oaks

MANIPULATION OF TREMBLING ASPEN AND GAMBEL OAK FOR INCREASED WATER YIELD ...Cutting Operations, Nuclear Moisture Meters, Poplars, Aspens, Cottonwoods, Snowmelt, Water Loss Control, Water Yield, ...4.0259

SOIL MOISTURE DISTRIBUTION PATTERNS UNDER MIXED OAK FOREST ...Canopy & Overstory, Interception, Moisture Content, Rhode Island, Soil Environment, ...2.0940

Peaches

MOISTURE REQUIREMENTS OF DECIDUOUS ORCHARDS ...Cracking, Moisture Tension, Other Environmental Conditions, Plums, Trees, ...4.0030

PEACH NITROGEN, PRUNING AND IRRIGATION STUDY ...Irrigation-general, Moisture Content, Nitrogen, Trees, ...4.0185

IRRIGATION PRACTICES WITH RANGER PEACHES ...Fruit, Irrigation-general, Size, Yield, ...2.1053

Pears

NUTRITIONAL AND SOIL MOISTURE REQUIREMENTS OF PEAR ORCHARDS OF SOUTHERN OREGON ...Oregon, Quality -non-specific, Requirements for Water, Trees, Yield, ...2.0899

Pecans, Hickory Nuts

FACTORS AFFECTING PRODUCTION OF PECANS IN ARIZONA ...Irrigation, Irrigation-general, Mineral Nutrition, Moisture Content, Saline Properties, Saline Soils, ...2.0046

Plums

MOISTURE REQUIREMENTS OF DECIDUOUS ORCHARDS ...Cracking, Moisture Tension, Other Environmental Conditions, Peaches, Trees, ...4.0030

PRUNE ORCHARD MANAGEMENT ...Internal Necrosis, Nitrogen, Rates Or Levels of Application, Trees, ...6.0611

Polygonaceae

INVASION OF THE AQUATIC HABITAT BY AMPHIBIOUS SPECIES OF POLYGONUM ...Amphibious Plants, Clones, Habitat Studies, of Aquatic Plants, Plant Taxonomy, ...2.1105

Poplars, Aspens, Cottonwoods

MANIPULATION OF TREMBLING ASPEN AND GAMBEL OAK FOR INCREASED WATER YIELD ...Cutting Operations, Nuclear Moisture Meters, Oaks, Snowmelt, Water Loss Control, Water Yield, ...4.0259

Potatoes

INFLUENCES OF MIST IRRIGATION ON MOISTURE STRESS, GROWTH, YIELD, AND QUALITY OF POTATOES AND OTHER VEGETABLE CROPS ...Drought, Irrigation, Mist Irrigation, Moisture Tension, ...2.0668

SPRING AND SUMMER HORTICULTURAL CROPS ...Aerial, Beans (garden), Fruit, Nuts & Berries -other, Sprinkler Irrigation, Strawberry, ...2.0338

EFFECTS OF COARSE SKELETON ON PHYSICAL PROPERTIES OF SOIL ...Maine, Physical Properties-general, Runoff, Soil Compaction Or Density, ...2.0553

THE EFFECT OF VARIOUS COMMERCIAL FERTILIZER PLACEMENTS AND IRRIGATION PRACTICES ON THE YIELD AND QUALITY OF RUSSET BURBANK POTATOES ...Band Width, Irrigation, Irrigation-general, Soil Temp. -non-specific, Yield, ...2.0228

A STUDY OF TECHNIQUES FOR INCREASING EFFICIENCY OF IRRIGATION WATER APPLIED TO POTATOES ...Irrigation, Moisture Tension, Water Application Methods, ...2.0798

WHEN TO IRRIGATE ...Irrigation, Moisture Levels, Root, ...2.1123

Safflower

IMPROVED CULTURAL PRACTICES FOR PRODUCING SAFFLOWER UNDER IRRIGATED AND NON-IRRIGATED CONDITIONS ...Application Rates, Evaluation, Irrigation, ...3.0256

Saltcedar, Tamarisk

PHREATOPHYTE CONTROL - LAHONTAN AND HUMBOLDT BASINS ...Phenology, Phreatophytes, Reservoirs and Impoundments, Root, Weed Control -other, ...3.0317

BIOLOGICAL CONTROL - TAMARISK AND OTHER PHREATOPHYTES ...Antitranspirants, Biocontrol, of Aquatic Plants, ...3.0335

PHREATOPHYTE EVAPORATION RESEARCH ...Energy Budgets, Evapotranspiration, Groundwater, Phreatophytes, ...2.1052

GREENHOUSE AND OUTDOOR NURSERY CULTURE OF SALT CEDAR PLANTS TO BE USED IN PHREATOPHYTE CONTROL PROGRAM ...Agricultural Chemicals-general, Greenhouse, Shrubs & Vines, Mainly Fibrous, Trees, ...3.0131

HERBICIDE EVALUATION FOR PHREATOPHYTE CONTROL ...Consumptive Use, Herbicides -non-specific, Modified Water Use, Range, Water Loss Control, ...3.0132

CONSUMPTIVE USE OF WATER BY SALT CEDARS ...Consumptive Use, Lysimeters, New Mexico, Other Water Conditions, Water Table - Depth of, ...3.0113

Squash, Pumpkin

GENETIC AND CYTOGENIC STUDIES OF HORTICULTURAL CROPS-BREEDING XEROPHYTIC CUCURBITA ...Aerial, Arid and Desert, Arizona, Interspecific Genetic Relat., Sterility, ...3.0010

Strawberry

SPRING AND SUMMER HORTICULTURAL CROPS ...Aerial, Beans (garden), Fruit, Nuts & Berries -other, Potatoes, Sprinkler Irrigation, ...2.0338

ENVIRONMENT CONTROL FOR ORCHARDS AND FIELDS ...Citrus, Freezing & Below, High Temp. - 85f Or Above, Sprinkler Irrigation, Trees, ...8.0204

Sweetpotatoes

EFFECTS OF VARIOUS PRE-HARVEST AND POST-HARVEST TREATMENTS ON SWEET POTATOES ...Herbicides -non-specific, Irrigation, Root, Screening Potential Pesticides, ...6.0560

Tobacco

A COMPARATIVE STUDY OF SODIUM TRANSLOCATION IN PLANTS ...Ion Transport and Elect. pot., Sodium, Translocation, ...2.0110

IRRIGATION AND FERTILITY PRACTICES FOR FLUE CURED-TOBACCO ...Excessive Moisture, Irrigation, Nitrogen, ...2.0363

Tomatoes

IRRIGATION STUDIES WITH TOMATOES ...Irrigation, Moisture Levels, Yield, ...2.0804

INVESTIGATION OF BLOSSOM-END ROT OF PEAR TOMATOES ...Antitranspirants, Blossom End Rot, Modified Water Use, Moisture Meters, Water-borne, ...2.1044

Umbelliferae

CULTURAL PRACTICES OF VEGETABLE CROPS ...Irrigation, Onion, Garlic, Shallot, Leeks, Quality -non-specific, Yield, ...2.1049

Dicots

SUBJECT INDEX

Walnuts -black & English

SOIL-PLANT-ATMOSP. RE COMPONENTS IN IRRIGATION STUDIES OF BLACK WALNUT TREES IN SOUTHERN ILLINOIS ...Air - Water - Plant Relations, Irrigation-general, Moisture Tension, Soil-water-plant Relationships, Transpiration, ...2.0401

SOIL AND WATER REQUIREMENTS FOR BLACK WALNUT AND OTHER HARDWOODS ...Requirements for Water, Site Index and Site Quality, Soil Structure, Soil Structure -other, Soils and Fertilizer, ...4.6089

Water Milfoil, Waterweed...

BIOLOGIC AND ENVIRONMENTAL CONTROL OF EURASIAN MILFOIL (MYRIOPHYLLUM SPICATUM L.) IN CHESAPEAKE BAY ...Biocontrol, Chesapeake Bay, Histology and Cytology, Range Or Territorial Distr. , ...6.0251

THE ECOLOGY OF SELECTED SUBMERSED AQUATIC WEEDS ...Elodea, Waterweed, Thalassia, Mineral Nutrition, of Aquatic Plants, Potamogeton, Rupia, Zostera., Submerged Plants, ...2.0764

ORGANISMS WHICH ATTACK THE AQUATIC PLANT, EURASIAN WATERMILFOIL IN PAKISTAN ...Animal Taxonomy, Insects -non-specific, Life History Studies, Other, Pakistan, ...4.0202

INVESTIGATION OF AQUATIC WEED PROBLEMS AND MEANS OF CONTROL WITH EMPHASIS ON BRAZILIAN WATERWEED ...Applied Ecology, Herbicides -non-specific, of Aquatic Plants, Screening Potential Pesticides, ...5.0928

EFFECT OF EURASIAN WATERMILFOIL CONTROL PROCEDURES ON WILDLIFE AND OTHER ORGANISMS IN AQUATIC ENVIRONMENTS ...Aquatic Environments, Contamination - Water, Diquat, Evaluation, 2,4-d, ...5.0505

DISTRIBUTION, LIFE HISTORY, AND ECOLOGY OF EURASIAN WATERMILFOIL ...Chesapeake Bay, Range Or Territorial Distr. , Submerged Plants, Weeds -other, ...6.0263

Zygophyllaceae

CHEMICAL CONTROL OF CREOSOTE BUSH AND MESQUITE ...Evaluation, Legumes -other, mesquite., Management Effects, Phreatophytes, Range, Watersheds-general, ...4.0177

Diffraction

Electron

STRUCTURE AND MORPHOLOGY OF INORGANIC MEMBRANES ...Complexes, Gel, Membranes-other, Transport, ...3.0463

X-ray

NMR AND X-RAY STUDIES OF STRUCTURE IN AQUEOUS ELECTROLYTE SOLUTIONS ...Adsorption-other, Electrolytes, Nuclear Magnetic, Nuclear Magnetic Resonance, Reaction-general, Solution, ...1.0073

UTILIZATION OF OIL FIELD BRINES AS A POSSIBLE FERTILIZER SOURCE ...Atomic Absorption, Brines, Emission, Geochemical Analysis, Material Recovery Wastes, ...1.0056

BINDERS OF CONCRETE RESISTANT TO SALINE WATER AT ELEVATED TEMPERATURES ...Aggregates, Extenders, Fillers, Binders, Brines, Cement, Concrete, D.t.a. , ...8.0086

PHYSICAL-CHEMICAL PHENOMENA ASSOCIATED WITH ORGANO-COLLOIDAL SURFACE INTERACTIONS ...Absorption, Fixation, Exchange, Bond Type-general, Colloidal Phenomena, Decomposition-other, Isotherm, ...5.0277

Digestive System

Intestine

SOCIO-ECONOMIC FACTORS RELATED TO THE INCIDENCE OF A WATER-BORNE DISEASE ...Economic Impact, Pollution-water, Puerto Rico, Social Aspects, Social Environment of The City, ...5.1048

Dinophyceae (non-specific &ot)

COMPARATIVE STUDIES OF DINOFLAGELLATE TOXINS ...Action- & Bioelectrical Pot. , Algal Culture, Algal Toxins, Toxicology, ...5.0716

Dioxide

DISSOLVED GASES AND WATER CLUSTERING IN AQUEOUS SOLUTION ...Chlorine, Ions and Gases, Salt, Solution, Thermal Properties-other, Water, ...1.0052

Discharge

Annual

A STUDY OF SERIAL CORRELATION IN ANNUAL STREAM RUNOFF ...Correlation, Runoff, Stochastic Models, Streams, ...2.1132

REGIONAL CORRELATIONS IN HYDROLOGIC VARIABLES ...Correlation, Data Analysis - General, Evaporation, Patterns, Runoff, ...7.0097

HYDROLOGIC SIMULATION - MONTHLY AND ANNUAL STREAMFLOW ...Correlation, Forecasting-prediction, Regression Analysis, Research - Development, Simulation, Water Supply-general, ...6.0074

LOW FLOW CHARACTERISTICS OF TENNESSEE STREAMS ...Gaging, Low Flow, Tennessee, Variation in Time, ...2.0997

Daily

WATER RESOURCES PLANNING STUDIES - ARKANSAS AND OKLAHOMA ...Arkansas, Oklahoma, River Basins, Water Allocation, Water Quality-general, ...6.0028

WATER DISPATCHING OPERATIONS BY ELECTRONIC COMPUTER ...Design Flow-flood, Dynamic Control System, Electric Power Plants, Inflow, Power Generation, Reservoirs and Impoundments, ...2.0984

Discharge-general

HYDROLOGICAL STUDY ...Drainage, Gaging, Peak Flow, Rhode Island, Small Watersheds, ...2.0943

VERIFICATION OF HYDRAULIC COMPUTATION METHODS FOR BRIDGE SITES ...Bridges & Culverts, Construction Sites, Location, ...8.0207

DRAINAGE AREA FLOW RESEARCH ...Drainage, Montana, Small Watersheds, ...2.0270

RUNOFF STUDIES ON SMALL DRAINAGE AREAS ...Data Acquisition-general, Drainage, Peak Flow, Small Watersheds, West Virginia, ...2.0290

FLOOD FREQUENCY FOR SMALL DRAINAGE AREAS ...Drainage, Floods, Mississippi, Small Watersheds, ...2.0291

SMALL STREAMS INVESTIGATIONS IN OREGON ...Data Analysis - General, Floods, Gaging, Hydrographs, Peak Flow, ...2.0293

DETERMINATION OF THE DISTRIBUTION OF RADIONUCLIDES DISCHARGED TO THE GROUND AT THE NRTS, IDAHO ...Artesian Flow, Observation Wells, Pollutants - Path of , Radioactivity-general, Radioisotopes, ...5.0318

HYDROLOGIC INVESTIGATION OF WATERSHEDS IN OHIO ...Hydrology-general, Ohio, Simulation, Small Watersheds, ...2.0861

FLUSHING PATTERN OF CERTAIN TIDAL STREAMS IN DELAWARE ...Aquatic Ecology, Circulation -water, Delaware, Industrial-general, Tidal Streams, ...2.0250

GENERALIZED ANALYSIS OF SMALL WATERSHED RESPONSES ...Forecasting-prediction, Hydrology general, Inflow, Small Watersheds, ...2.0084

HYDROLOGIC ANALYSIS OF THE NORTH FORK OF ELK CREEK ...Automatic Data Acquisition, Montana, Observation Wells, Water Table Fluctuation, ...2.0714

PILOT STUDY OF SMALL WATERSHED FLOOD HYDROLOGY IN HAWAII, PHASE II ...Design Criteria, Drainage Systems, Floods, Hawaii, Urban Environments, ...2.0381

APPLICATION OF AERIAL PHOTOGRAPHS FOR THE INVESTIGATION OF THE DISCHARGE PROPERTIES OF DRAINAGE BASINS ...Aerial, Data Acquisition-general, Photogrammetry, River Basins, Water Yield, ...2.0792

GEOCHEMISTRY OF AQUIFERS AS AFFECTED, OR POTENTIALLY AFFECTED BY OFFTAKE OR ARTIFICIAL RECHARGE ...Aquifers-general, Artificial Recharge, Chemical-general, Geochemistry-general, Louisiana, ...2.0530

PRECIPITATION AND RUNOFF DISTRIBUTIONS - ANALYSIS AND COMPARISONS ...Data Analysis - General, Forecasting-prediction, Other Probability, Patterns, Runoff, ...2.0739

ECONOMIC EVALUATION OF CHANGES IN LAND USE OF A MUNICIPAL WATERSHED AS A GUIDE TO DECISION-MAK-

SUBJECT INDEX

Dispersion -water

- ING ...Land Use, North Carolina, Reservoirs and Impoundments, Urban Environments, Water Costs, ...6.0408
- U. S. S. R. LITERATURE ON WATER SUPPLY AND POLLUTION CONTROL ...Russia, Sewage, Sewerage Systems-general, Survey Studies, Waste Disposal-general, ...5.0228
- STUDIES ON EFFECTS OF WATERSHED PRACTICES ON STREAMS ...Chemical-general, Forest Watersheds, Organic Matter, Periphyton, Physical-general, Primary Productivity, ...5.0948
- MODEL STUDIES FOR DEVELOPMENT AND CALIBRATION OF STREAMFLOW CONTROL DEVICES IN THE SOUTHERN BRANCH ...Channel Regulation-general, Computers-general, Gaging, Models, Synthetic Hydrology-general, ...3.0189
- NON-STEADY 2 AND 3-DIMENSIONAL FLOW OF FLUID INTO POROUS MATERIAL ...Unsteady Flow, ...2.0394
- DATA REDUCTION METHODS FOR STREAMFLOW FROM SMALL, WILDLAND WATERSHEDS ...Computers-general, Data Analysis - General, Gaging, Integration, Quadrature, Small Watersheds, Utah, ...2.1068
- MODEL STUDY OF SEWER DROPSHAFT ...Conduit, Design-other, Flow Regulations, Runoff, Two-phase-other, ...8.0218
- STATISTICAL ANALYSIS OF FLOOD PEAKS OF GEORGIA RIVERS ...Data Analysis Applications, Digital Computers, Floods, Georgia, Peak Flow, ...2.0357
- LAKE MICHIGAN WATER QUALITY MODEL ...Hardness-minerals, Lake Michigan, Management, Mathematical Analysis, Water Quality-general, ...6.0198
- CHARACTERISTICS OF UTAH STREAMS ...Flow Characteristics -water, Gaging, Streams, Utah, ...2.1060
- OPEN CHANNEL ROUGHNESS CHARACTERIZATION ...Channel Roughness, Flume, Flume Studies, Open Channel, Open Channel Flow, ...2.1073
- UPPER BEAR CREEK EXPERIMENTAL PROJECT ...Alabama, Cover Crops, Forecasting-prediction, Small Watersheds, Technique Development, ...2.0987
- COMPUTER-ORIENTED MATHEMATICAL MODEL FOR CONTINUOUS STREAMFLOW PREDICTION ...Amount, Computers-general, Development of Models, Prediction Models, ...2.0985
- BASIC RESEARCH IN GEOMORPHOLOGY AND HYDROLOGY ...Control Factors-general, Eastern, Meanders, Outwash Plains, Wisconsin, ...2.0272
- GRAIN SIZE DISTRIBUTION AND BEDLOAD TRANSPORT ...Bed Load, Channels, Flume Studies, Grain Size, Hydraulics-general, ...2.1101
- MISSOURI SPRINGFLOW CHARACTERISTICS ...Aquifers-general, Chemical-general, Physical Features-general, Springs, Water Supply-general, ...2.0701
- HYDROLOGY OF UPPER BUFFALO RIVER BASIN ...Groundwater, River Basins, Surface Water, Tennessee, Water Table Fluctuation, ...2.0996
- FLOOD-FREQUENCY AND BASIN PARAMETER RELATIONSHIPS IN SMALL DRAINAGE AREAS ...Amount, Floods, Morphology-general, Peak Flow, Small Watersheds, ...2.0280
- SUBMARINE SPRINGS ...Bibliography, Marine Geology-general, Ocean Environment, Springs, Subsurface Environments, ...2.0319
- DETERMINATION OF CHANNEL CAPACITY OF THE MERCED RIVER, CALIFORNIA ...California, Channels, Cross-section, Hydrographic, Peak Flow, ...2.0116
- CHANNEL MEANDER STUDIES ...Channels, Grain Size, Indiana, Meanders, Suspension, ...2.0453
- LOW-FLOW ANALYSIS, WASHINGTON STREAMS ...Baseflow, Gaging, Hydrographs, Low Flow, Washington, ...2.1134
- FLOOD INUNDATION MAPPING, NORTHEASTERN ILLINOIS ...Atlases-maps, Data Networks, Floods, Gaging, Illinois, ...4.0093
- LOW FLOW CHARACTERISTICS OF INDIANA STREAMS ...Flow Characteristics -water, Gaging, Indiana, Low Flow, ...2.0455
- FLOOD PROFILES AND FLOOD-PLAIN INFORMATION, LINN COUNTY, IOWA ...Floodplains, Floodproofing, Floods, Iowa, Low Flow, ...2.0491
- FLOODING OF SMALL STREAMS IN NASHVILLE-DAVIDSON CO. AREA, TENN. ...Amount, Floods, Gaging, Tennessee, Urban Environments, ...2.0994
- HYDROLOGIC INVESTIGATIONS OF URBAN AREAS - HOUSTON, TEXAS ...Amount, Floods, Gaging, Texas, Urban Environments, ...4.0233
- HYDROLOGIC EFFECTS OF SMALL RESERVOIR ON NEDERLO CREEK, WISCONSIN ...Hydrology-general, Reservoirs and Impoundments, Runoff, Water Cycle, Wisconsin, ...2.1148

- WATER RESOURCES OF SOUTHEASTERN WISCONSIN - MILWAUKEE RIVER BASIN ...River Basins, Water Quality-general, Water Supply-general, Water Table Fluctuation, ...2.1152
- TIDAL DISCHARGE RESEARCH, NEW JERSEY ...Data Acquisition-general, Other Data Analysis, Sediments, Tides, Water Quality-general, ...2.0769
- WATER MEASUREMENT ...Dyes and Coloring, Fluids, Measurement, Technique Development, Water Quantity-general, ...8.0128
- TURBINE AND PUMP TESTING ...Pump-other, Pumping, Turbine-other, ...8.0077

Discharge-other

- INTERRELATIONSHIP OF SURFACE AND SUB-SURFACE FLOW IN THE NISHNABOTNA DRAINAGE BASIN ...Drift, Groundwater Movement, Iowa, River Basins, Valley, Buried, ...2.0481
- FLUSHING OF SMALL SHALLOW LAKES ...Circulation -water, Lakes, Mixing, Pollution Abatement, Self-purification, ...5.1242
- GENERAL COASTAL INLET STUDIES ...Coastal Engineering-other, Coastlines-shorelines, Model Studies, Synthetic Hydrology-general, Tides, Velocity -water, ...2.0689
- SCOUR AT BRIDGE CROSSINGS IN ALASKA ...Bridges & Culverts, Erosion Control, Scouring, Suspension, ...2.0013
- URBAN HYDROLOGY STUDY - SAN ANTONIO, TEXAS ...Floods, Runoff, Texas, Urban Environments, ...4.0234

Seasonal

- COMPUTER SIMULATION OF ESTUARINE DISPERSION ...Computers-general, Dispersion -water, Estuaries, Model Studies, Tides, ...5.0935
- BASE FLOW ANALYSIS OF SELECTED DRAINAGE BASINS. ...Baseflow, Mathematical Analysis, New Hampshire, Small Watersheds, ...2.0742
- STRUCTURAL CONTROL OF SPRINGS FROM THE MUAV AQUIFER IN WESTERN GRAND CANYON NATIONAL PARK, ARIZONA ...Carbonate Aquifers, Groundwater Movement, Specific Rock Unit, Springs, Tectonics-general, ...2.0054
- WHITE HOLLOW WATERSHED RESEARCH ...Forest Watersheds, Other, Sediment Yield, Tennessee, Water Yield, ...4.0221

Dispersion -water

- THE HYDRAULICS OF GROUND WATER TESTS ...Aquifers-general, Groundwater Movement, Model Studies, Tracers-general, ...2.0288
- WIND EFFECTS ON THE DISPERSION OF PARTICULATE POLLUTANTS IN TURBULENT OPEN-CHANNEL FLOW ...Flow of Dispersed Solids, Open Channel Flow, Sediments, Turbulent Flow, Wind-other, ...2.0220
- COMPUTER SIMULATION OF ESTUARINE DISPERSION ...Computers-general, Estuaries, Model Studies, Seasonal, Tides, ...5.0935
- R.I.-MIXING PROCESSES IN ESTUARIES ...Estuaries, Flume Studies, Mixing, Model Studies, Turbulent Flow, ...5.0063
- AN EXPERIMENTAL STUDY OF VARIABLE PHYSICAL PROPERTY AND NATURAL CONVECTION EFFECTS IN POROUS MEDIA ...Flow of Dispersed Solids, Model Studies, Porous Media - Flow Through, ...3.0358
- GROUND WATER BASIN DYNAMICS ...Groundwater Basins, Mathematical Analysis, Model Studies, Natural Recharge, Ohio, ...2.0851
- HORIZONTAL DISPERSION IN SHALLOW ESTUARIES OF IRREGULAR SHAPE ...Circulation -water, Estuaries, Gulf of Mexico, Model Studies, Water Quality-general, ...2.1013
- EXPERIMENTAL AND THEORETICAL STUDY OF THE HYDRODYNAMICS OF DISPERSION IN RIVERS AND ESTUARIES ...Estuaries, Flow Characteristics -water, Model Studies, Streams, Velocity -water, ...2.0584
- SEDIMENTATION AND CONTAMINANT CRITERIA FOR WATER RESOURCES PLANNING AND MANAGEMENT ...Management, Planning, Pollutants - Path of, Sediment Yield, Sedimentology-general, Watersheds-general, ...4.0066
- ANALYSIS OF THERMAL POLLUTION DISPERSION ...Aeration, Effluents-waste Water, Stratified Flow, Temperature, Thermal Pollution, ...5.0726
- LONGITUDINAL DISPERSION OF THE LOWER KANSAS RIVER BASIN ...Dyes, Kansas, River Basins, ...2.0507
- UNSTEADY FLOW OF GROUNDWATER--DISPERSION AND SALT WATER INTRUSION IN NON-HOMOGENEOUS MEDIA

Dispersion -water

- ...Model Studies, Saline Water Intrusion, Unsteady, Unsteady Flow, ...2.1159
- EDDY DIFFUSION AND BACTERIAL REDUCTION IN WASTE FIELDS** ...Bacterial Pollutant Sources, Diffusion, Dyes, Mixing, Pollutants - Path of, Sewers, ...5.0111
- MIXING AND DISPERSION OF CONTAMINANTS IN RESERVOIRS** ...Currents -water, Mixing, Reservoirs and Impoundments, Tracers-general, Velocity -water, ...5.1153
- SALT WATER ENTRAINMENT FOR DILUTION IN SEWER OUTFALLS** ...Conduit Flow-other, Fluid Flow-other, Fluid Mixing, Ocean, Outlet, Sewers, Two-phase-other, ...5.1265
- PULP MILL EFFLUENT DISPOSAL** ...Bioindicators, Contamination - Water, Industrial Wastes, Pulp and Paper Wastes, ...5.0940
- MOVEMENT AND MIXING OF WATER INJECTED INTO AQUIFERS** ...Aquifers-general, Artificial Recharge, Exchange Capacity, Flow Augmentation, Fluid Mixing, Groundwater Movement, Water Wells, ...5.0527
- DISPERSION DURING FLOW IN HETEROGENEOUS POROUS MEDIA** ...Differential Equations General, Model Studies, Porous Media - Flow Through, Seepage, Statistical Models, ...5.0394
- COMPUTE SIMULATION OF DIFFUSION STUDIES** ...Monte Carlo Methods, Simulation Theory, Turbulent Flow, Velocity -water, ...5.0785
- MECHANICS OF DISPERSION IN ESTUARY POLLUTION** ...Estuaries, Mathematical Analysis, Model Studies, Pollutants - Path of, Tides, ...5.0528
- TEMPERATURE PREDICTION STUDIES RELATING TO THE DEVELOPMENT OF A POWER REACTOR SITE ON THE LOWER COLUMBIA RIVER** ...Atomic Plants, Columbia River, Construction Sites, Data Networks, Thermal Pollution, ...8.0303
- GROUND WATER DISPERSION DURING PUMPING AND RECHARGE OPERATIONS** ...Approximations, Artificial Recharge, Dimension-two, Finite Differences, Groundwater, Porous Media - Flow Through, Steady, ...5.0529
- GROUND WATER RESEARCH** ...Agriculture Industry, Artificial Recharge, California, Groundwater, Groundwater Movement, ...2.0135
- GREAT LAKES RESEARCH - SPOIL DISPOSAL EFFECTS** ...Great Lakes-general, Pollution - Effects of, Sedimentation, Sediments, Spoil Banks, Water Properties-general, ...5.0561
- INVESTIGATIONS IN ISOTOPIC HYDROLOGY** ...Georgia, Radioisotopes, Tritium, Water Cycle, Water Movement-general, ...1.0032
- TRANSPORT PROCESSES IN FLUID FLOWS** ...Clastic Aquifers, Dyes, Mathematical Analysis, Model Studies, Porous Media - Flow Through, ...2.0368
- HYDROLOGY OF COASTAL AREA IN THE VICINITY OF RICEBORO, GEORGIA** ...Artesian Flow, Estuaries, Georgia, Saline Water Intrusion, Water Quality-general, ...5.0205
- DISPERSION PROCESSES IN ESTUARIES AND RIVERS** ...Dyes, Estuaries, Streams, Synthetic Hydrology-general, ...2.0118

Dissoaiation

- A STUDY OF HYPERSONIC WAVES IN WATER AND IN AQUEOUS SOLUTIONS** ...Hypersonic Waves, Inorganic, Relaxation, Ultrasonic, Ultrasonics, Water, ...1.0030

Distillation

Distillation-other

- DEVELOPMENT OF PERMANENT SYSTEMS FOR DROPWISE CONDENSATION** ...Condensation, Films, Heat Transfer, Pilot Plant, Vapor, ...3.0411
- SEPHTON FLASH TUBE (VORTEX TUBE) PROCESS** ...Desalination, Distilling Units, Flexible, Vortex, ...3.0081
- THERMODYNAMICS AND TRANSPORT PROPERTIES OF MULTICOMPONENT INTERFACES** ...Extraction, Interface, Other, Surfactants, Viscosity, ...3.0483
- A STUDY OF THE BENEFITS OF PLASTIC MATERIALS IN DESALINATION PLANTS** ...Desalination, Electrodialysis, Freezing, Plastics - General, Reverse Osmosis, ...3.0153
- TRAINING, TECHNICAL SUPERVISION, AND ASSISTANCE REGARDING THE OPERATION OF A SKID-MOUNTED MSF UNIT** ...Aeration, Foam, Mobile, Other, Pilot Plant, ...3.0491
- DISTILLATION PLANT AND COMPONENT STUDIES** ...Desalination, Distilling Units, Heat Transfer, Reverse Osmosis, ...3.0439

SUBJECT INDEX

- SCALE CONTROL WITH GRAPHITE HEAT-TRANSFER TUBES OF CONTROLLED PERMEABILITY TO STEAM** ...Desalination, Distilling Units, Heat Exchangers, Heat Transfer, Scaling, Encrusting, ...3.0390
- A STUDY OF HEAT TRANSFER IN THE FLUTED VERTICAL TUBE EVAPORATOR** ...Desalination, Distilling Units, Heat Transfer Coefficients, Heat-transfer-other, ...3.0456
- SMALL DESALINATION UNIT TO TEST SCALE REDUCTION ADDITIVES** ...Additives, Desalination, Economic Efficiency, Scale Formation, ...3.0429
- LIGHTWEIGHT WATER PURIFICATION UNIT** ...Brackish Water, Density, Desalination, Distilling Units, Mobile, Plastic Matrix, Technique Development, Waste Water Treatment-general, ...3.0250
- THE DETERMINATION OF THE STRUCTURES OF ORGANIC CONTAMINANTS IN WATER** ...Analyzing, Chem Str Determination, Chemical Identification, Chromatography-other, Spectroscopy-other, ...5.0278
- CHARACTERIZATION OF ORGANIC CONTAMINANTS IN PAPER MILL EASTE EFFLUENTS** ...Chemical Analysis, Chemical Identification, Chemical Treatment, Extraction, Organic, Pulp and Paper Wastes, ...5.0284

Flash Distillation

- FUNDAMENTAL STUDIES IN METASTABLE FLASHING FLOW** ...Desalination, Mass Transfer, Water Movement-general, ...3.0458
- INVESTIGATION OF MULTI-EFFECT MULTI-STAGE (MEMS) EVAPORATOR DESIGN PARAMETERS** ...Evaporation, Heat Transfer, ...3.0159
- THE DEVELOPMENT OF AN ANALYTICAL MODEL OF A FLASH STAGE** ...Desalination, Mathematical Analysis, Model Studies, ...3.0156
- INSTALLATION OF INSTRUMENTATION FOR CLAIR ENGLE PLANT** ...Analyzing, Computers-general, Desalination, Gaging, ...3.0457
- DEMONSTRATION OF ALUMINUM IN SEAWATER DESALTING** ...Aluminum, Desalination, Oxygen Containing, Scale Formation, Sulfate, Sulfite, ...3.0481
- SIMULATION OF MULTISTAGE FLASH TEST MODULI (9-STAGE SAN DIEGO PLANT)** ...Desalination, Development of Models, Digital Computers, Hybrid Computers, Ordinary, ...3.0328
- DEVELOPMENT OF DIRECT CONTACT CONDENSATION MULTISTAGE FLASH (DCC-MSF) DISTILLATION PROCESS** ...Brines, Condensation, Desalination, Film, Heat Transfer, Plastics - General, ...3.0040
- ENGINEERING SERVICES - 50-150 MM GALLON PER DAY MULTISTAGE, MULTIFLASH DESALINATION PROCESS** ...Desalination, Distilling Units, Fluid Flow-other, Gaseous, Removal-inorganics, ...3.0064
- A METHOD FOR SYSTEM EVALUATION AND COST-EFFECTIVENESS OF LARGE MULTISTAGE FLASH DESALTING PLANTS** ...Computers-general, Cost Analysis, Desalination, Research - Development, Systems Analysis, ...3.0166
- COMBINED DESALINATION AND POWER-GENERATION BASED ON COAL ENERGY** ...Coal-general, Cost Analysis, Desalination, Material Recovery, Reverse Osmosis, ...3.0325
- PRELIMINARY FEASIBILITY AND ECONOMICS OF DESALTING BRACKISH WATERS IN CANDIDATE AREAS OF WEST TEXAS** ...Cost Analysis, Desalination, Electrodialysis, Freezing, Reverse Osmosis, Water Costs, ...3.0443
- HYDRAULIC MODEL STUDIES OF A PUMP INLET MANIFOLD** ...Axial Flow, Critical, Desalination, Distilling Units, High Pressure, Models, ...3.0120

Fractionation

- TREATMENT AND DISPOSAL OF CONDENSATE WASTES FROM HIGH LEVEL WASTE SOLIDIFICATION PROCESSES** ...Crystallization-other, Disposal Wastes, Material Recovery Wastes, Nuclear, Precipitation, ...5.1250

Steam Distillation

- METHOD FOR QUANTITATIVE ANALYSIS OF PHENOLS IN FUEL CELL PRODUCT WATER** ...Alcohols, Fuel Cell-other, Quinones, Ultraviolet, Water, ...1.0041

Vacuum Distillation

- ORGANIC SUBSTANCES IN WATER** ...Extraction, Gas, Infrared, Organic Wastes, Pesticides, ...5.0120

SUBJECT INDEX

Drainage

District of Columbia

- STORM WATER INFLOW ...Drainage, Forecasting-prediction, Seepage, Storm Water, ...2.0307
- COMPREHENSIVE PLANNING FOR WATER RESOURCES MANAGEMENT IN METROPOLITAN ENVIRONMENTS ...Administrative Structures, Planning, Policy Making, Public-works, Survey Studies, ...6.0123
- ROCK CREEK PARK CLARIFICATION PROJECT ...Chlorination, Coagulation, Polyelectrolytes, Sediments, Streams, ...4.0044
- COMBINED SEWER STUDY FOR WASHINGTON, D.C. ...Combined Sewer, Effluent-standards, Filtration, Storage-retention-facilities, Water Quality-general, ...5.1005

DNA

- MICROBIOLOGY OF SLUDGE - DNA ANALYSES AND N₂ REMOVAL ...Activated, Denitrification, ...5.0694

Drainage

- EROSION CONTROL CRITERIA FOR DRAINAGE STRUCTURES ...Drainage Systems, Erosion-general, ...2.0681
- STUDY OF RUNOFF FROM SMALL DRAINAGE AREAS ...Runoff, ...2.0520
- FLOOD FREQUENCY OF SMALL STREAMS IN LOUISIANA ...Floods, Louisiana, ...2.0541
- HIGHWAY DRAINAGE STUDY ...Maryland, ...2.0579
- RUNOFF STUDIES ON SMALL DRAINAGE AREAS ...Data Acquisition-general, Discharge-general, Peak Flow, Small Watersheds, West Virginia, ...2.0290
- EROSION CONTROL STUDY ...Cover Crops, Erosion Control, Soil Erosion -non-specific, ...2.0532
- PROGRAM FOR HYDROLOGIC INVESTIGATION OF SMALL DRAINAGE AREAS IN TEXAS ...Design Flow-flood, Floods, Hydraulic Structures, Small Watersheds, Texas, ...2.0296
- SMALL WATERSHED STUDY ...Design-other, Drainage Systems, Hydraulic Structures, ...2.0297
- INVESTIGATION OF WATER RESOURCES. FLOODS IN SMALL STREAMS IN TENNESSEE ...Floods, Tennessee, ...2.0298
- URBAN HYDROLOGIC STUDIES ...Digital Computers, Forecasting-prediction, Louisiana, Peak Flow, Urban Environments, ...2.0551
- PROBABLE MAXIMUM PRECIPITATION FOR SMALL BASIN IN THE TENNESSEE RIVER DRAINAGE SYSTEM ...Amount, Storms-general, Tennessee River, Topographic Influences, Weather Forecasting, ...2.0594
- DRAINAGE INVESTIGATIONS OF PROPOSED IRRIGATED SOILS IN ...Irrigation-general, Permeability, Soil Environment, ...2.0974
- REGION 2 - WEED CONTROL ...Contamination - Water, Irrigation-general, of Aquatic Plants, Plant Pollutants, ...3.0093
- ALTERNATIVE ECONOMIC RESPONSES TO THE ACID MINE DRAINAGE PROBLEM IN SOUTHEASTERN OHIO ...Acidity, Alternative Planning, Benefit-cost Analysis, Mining Activities, Water Treatment - General, ...5.0887
- THE EFFECT OF POTHOLE DRAINAGE UPON GROUND-WATER RESOURCES ...Groundwater, Potholes, Radioisotopes, Unsaturated Flow, ...4.0144
- DEVELOPMENT OF DRAINAGE ASSESSMENT PROCEDURES BASED ON PHYSICAL FEATURES IN ILLINOIS ...Benefit-cost Analysis, Drainage Engineering, Illinois, Mathematical Analysis, Terrain Analysis, ...6.0207
- URBAN HYDROLOGIC RELATIONSHIPS ...Forecasting-prediction, Hydrographs, Runoff, Urban Environments, Variation in Time, ...2.0554
- PHYSICAL, LEGAL AND ECONOMIC ASPECTS OF ASSESSMENT OF COSTS AMONG DRAINAGE DISTRICTS ...Flood-proofing, Floods, Flow Characteristics -water, Legal Review, Routing, ...6.0228
- WATER RESERVOIR SYSTEMS ...Reservoirs and Impoundments, Runoff, Sewerage Systems-other, Storage of Water, Storm Water, Urban Environments, ...4.0031
- EFFECT OF INDUSTRIAL WASTES OF MEMPHIS & SHELBY COUNTY ON PRIMARY PLANKTONIC PRODUCERS ...Cell Cloning, Industrial Wastes, Plankton (non-specific), Primary Productivity, Tennessee, ...5.1134
- GROUND WATER RECHARGE THROUGH PITS AND WELLS ...Aquifers-general, Artificial Recharge, Filtration, Glass, Recharge Pits - Wells, ...2.0514

- PHYSICAL, CHEMICAL AND MICROBIOLOGICAL FACTORS AFFECTING THE DISCHARGE OF WATER INTO DRAIN TILE ...Drainage Engineering, Water Properties-general, ...2.0145

- A GEOGRAPHIC ANALYSIS OF THE HYDROLOGIC RESPONSE IN THE SOUTHEASTERN UNITED STATES ...Atlases-maps, Land Use, Patterns, Southeast, ...2.0346

- THE STORAGE COEFFICIENT AS A FUNCTION OF WATER TABLE CELERITY ...Mathematical Analysis, Permeability, Storage of Water, Unsteady Flow, Water Table Fluctuation, ...2.1121

- WATER QUALITY DEGRADATION BY SEPTIC TANK DRAINAGE ...Degradation, Lakes, Nitrogen, Phosphorus, Septic Tanks, ...5.0468

- OPTIMIZATION AND DEVELOPMENT OF IMPROVED CHEMICAL TECHNIQUES FOR THE TREATMENT OF COAL MINE DRAINAGE ...Acid Mine Wastes, Chemical Treatment, Mining Activities, Optimization, Pilot Plant, Process Design, ...5.0999

- IN-SITU PRECIPITATION OF SLUDGE RESULTING FROM REACTION OF MINE WATER WITH LOW COST ADDITIVES TO PREVENT MINE DRAINAGE POLLUTION ...Acid Mine Wastes, Mining Activities, Neutralization, Precipitation, Treatment-other, ...5.1000

- ENGINEERING PHASES OF SURFACE DRAINAGE ...Deltas, Drainage Engineering, Drainage Systems, ...4.0019

- LABORATORY STUDIES OF CONSERVATION AND DRAINAGE STRUCTURES ...Erosion Control, Pipes, Scouring, Transition Sections, Velocity, ...3.0217

- HYDROLOGIC CHARACTERIZATION OF SMALL WATERSHEDS ...Gravitational Movement -water, Internal Water Movement, Moisture Content, Slopes, Small Watersheds, ...2.0434

- FIELD INVESTIGATIONS OF SUBSURFACE AND SURFACE DRAINAGE ...Corn, Soybean, ...4.0103

- RELATION OF SOIL FERTILITY TO THE EXCHANGE COMPLEX ...Fertilizer Losses, Mineral Nutrition, Missouri, Soil Environment, Soil pH, ...5.0678

- DRAINAGE OF AGRICULTURAL LANDS ...Agricultural Watersheds, Drainage Engineering, Excessive Moisture, Groundwater, Water Table - Depth of, ...4.0153

- SOIL DRAINAGE ...Amount, New Jersey, Soil Morphology, Profiles, Water Table Fluctuation, ...4.0171

- EVALUATION OF SOIL MOISTURE RECHARGE ...Evapotranspiration, Moisture Content, Recharge -general, Water Table - Depth of, Water Table Fluctuation, ...3.0344

- DEVELOPMENT OF CRITERIA FOR ADEQUATE DRAINAGE ...Moisture Levels, Soil-water-plant Relationships, ...4.0186

- THE DISPOSITION OF PESTICIDES IN THE SOIL ...Adsorption Capacity, Movement, Leaching, North Carolina, Persistence in Soils, ...5.0826

- SURFACE AND SUBSURFACE DRAINAGE FOR SLOWLY PERMEABLE SOILS ...Drainage Engineering, Envir. responses (non-specific, Soil Moisture -non-specific, Soil-water-plant Relationships, ...4.0192

- METHODS AND EQUIPMENT FOR SUBSURFACE DRAINAGE ...Drainage Systems, Sedimentation, ...4.0193

- DRAINAGE OF PROPOSED IRRIGATED SOILS IN OAHU UNIT ...Drainage Engineering, Irrigation, Soil-water-plant Relationships, ...4.0217

- THE DRAINAGE OF IRRIGATED LANDS ...Irrigation-general, Permeability, Steady, Subsurface Flow, Water Table Fluctuation, ...4.0251

- IMPROVEMENT OF IRRIGATION MANAGEMENT AND SALINITY CONTROL IN THE IMPERIAL VALLEY ...Drainage Engineering, Management, Saline and Alkaline Soils, Sprinkler Irrigation, Water Table Fluctuation, ...3.0048

- WATER CONTROL FOR FOREST PRODUCTION ...Forests, Irrigation-general, Moisture Content, Palms, Water Table Fluctuation, ...2.0314

- RELATIONSHIP BETWEEN EXCESSIVE SOIL MOISTURE AND CITRUS ROOT DAMAGE ...Citrus, Drainage Engineering, Excessive Moisture, Other Environmental Conditions, Piezometry, ...2.0316

- STREAMFLOW VARIABILITY ...Floodplains, Low Flow, Peak Flow, Reservoirs and Impoundments, Water Supply-general, ...2.0421

- HYDRAULICS OF STORM SEWER JUNCTIONS ...Design Criteria, Drainage Systems, Models, Storm Water, Urban Research, ...5.0356

Drainage

- DURABILITY OF CONCRETE DRAIN TILE AND IRRIGATION PIPE ...Pipes, Plain, Specifications, Strength, Techniques, ...8.0221
- DRAINAGE CORRELATION RESEARCH PROJECT ...Climatology, Floods, Peak Flow, Precipitation-general, Small Watersheds, ...2.0710
- DRAINAGE STUDIES OF NEW YORK SOILS ...Land, Land Use, Production & Processing, Wetlands, ...4.0182
- DRAINAGE OF STRATIFIED FOILS ...Drainage Engineering, Drainage Systems, Soil-water-plant Relationships, ...5.0939
- DRAINAGE OF SUGARCANE LANDS IN THE HUMID SECTIONS OF PUERTO RICO ...Humid, Puerto Rico, Sugar Cane, Water Table - Depth of, Water Table Fluctuation, Yield, ...2.0936
- LAND FORMING FOR DRAINAGE AND FURROW IRRIGATION ...Data Analysis - General, Furrow Irrigation, Irrigation, Irrigation Engineering, Pumping, ...5.1131
- UNSATURATED FLOW THEORY APPLIED TO DRAINAGE AND INFILTRATION ...Groundwater Movement, Infiltration, Internal Water Movement, Runoff, Unsaturated Flow, ...2.0125
- EFFECT OF IRRIGATION ON STREAMFLOW IN CENTRAL SAND PLAINS OF WISCONSIN ...Groundwater, Irrigation-general, Morphology-general, Water Balance-budget, Wisconsin, ...4.0279
- AQUIFERS AND DRAINAGE ...Aquifers-other, Brackish Water, Groundwater Movement, Irrigation-general, Model Studies, ...2.0166
- FILTER CRITERIA FOR DRAINS AND WATER WELLS ...Filters, Filtration, Infiltration, Linings-pavings, Water Wells, ...8.0083
- PREDICTING NITRATE CONTENT OF AGRICULTURAL DRAIN WATER ...Agricultural Watersheds, Computers-general, Model Studies-general, Moisture Content, Nitrate, Nitrite, Nitrogen, ...5.0181
- DEVELOPMENT AND EVALUATION OF SURFACE AND SUBSURFACE DRAINAGE PRACTICES ...Interception, Piezometers, Seepage, Subsurface Flow, Surface Flow, ...4.0132
- DESIGN, INSTALLATION, AND MAINTENANCE OF SURFACE AND SUBSURFACE DRAINAGE SYSTEMS WITH OR WITHOUT LANDFORMING AND CONDITIONING ...Drainage Engineering, Erosion -other, Runoff, Southern, Tillage, Cropping Systems, ...4.0081
- IMPROVEMENT AND MODERNIZATION OF SURFACE AND SUBSURFACE DRAINAGE PRACTICES AND FACILITIES IN THE CORN BELT ...Corn Belt, Drainage Systems, Pipe, Tube, Plastics - General, ...4.0191
- DRAINAGE FACILITIES, METHODS, AND DESIGN CRITERIA FOR PROTECTION AND IMPROVEMENT OF AGRICULTURAL CROPS AND SOILS IN THE NORTHERN PLAINS ...Design Criteria, Drainage Systems, Flow Characteristics -water, Simulation, ...4.0064
- DRAINAGE SYSTEMS FOR THE GREAT BASIN ...Artesian Flow, Drainage Systems, Great Basin, Groundwater Movement, Permeability, ...4.0164
- PRINCIPLES AND PRACTICES FOR SALINITY CONTROL IN THE SOIL-WATER-PLANT SYSTEM ...Irrigation, Salinity, Soil and Rock Leaching, Soil Environment, Soil-water-plant Relationships, ...3.0083
- DRAINAGE SYSTEMS FOR THE IMPERIAL VALLEY ...Analog Computers, Digital Computers, Groundwater Movement, ...4.0026
- ECONOMICS OF IRRIGATION, DRAINAGE AND RELATED PROBLEMS IN THE NORTHWEST ...Benefit-cost Analysis, Irrigation-general, Southern, Water Quality Control-general, Welfare Economics, ...6.0601

Drawdown

- IMPACT OF WINTER DRAWDOWN ON A SLOW-GROWING PANFISH POPULATION AND ASSOCIATED SPECIES ...Aquatic Ecology, Chemical-general, Depth,water Level, Fluctuation, Population Dynamics, ...4.0276
- WELL DRAWDOWN IN UNCONFINED AQUIFERS UNDER NON-STEADY CONDITIONS ...Aquifers-other, Flow Characteristics -water, Seepage, Unsteady Flow, Water Wells, ...2.0862
- FIELD INVESTIGATIONS OF SUBSURFACE AND SURFACE DRAINAGE ...Corn, Drainage, Soybean, ...4.0103
- PERFORMANCE OF DRAINAGE SYSTEMS ...Drainage Systems, Hydraulic Gradient, Observation, Wells, Permeability, Water Table Fluctuation, ...4.0174

SUBJECT INDEX

- INTERRELATIONSHIPS OF SOIL PHYSICAL PROPERTIES AND SOIL WATER MOVEMENTS ...Adsorption Capacity, Internal Water Movement, Moisture Tension, Permeability, Phosphate, Phosphite, ...2.0829
- CORRELATION OF GROUND SUBSIDENCE FEATURES, FOUNDATION FAILURES AND EARTH CRACKS WITH WATER TABLE DRAWDOWN IN ALLUVIAL BASINS ...Alluvial Deposits, Foundations-general, Joints-fractures, Soil Exploration, Soil Settlements, Subsidence, ...3.0016
- HYDRAULICS OF WELLS ...Aquifers-other, Hydraulic Engineering-other, Model Studies, Unsteady Flow, Water Wells, ...7.0077

- RADIOISOTOPE GROUND WATER MEASUREMENTS IN SMALL DIAMETER DRILL HOLES ...Borehole Geophysics, Groundwater, Instrumentation-general, Radioisotopes, Technique Development, ...8.0066

Earth Electrical Properties

Applications

Porosity-permeability

- FEASIBILITY STUDY OF ELECTRICAL GEOPHYSICAL METHODS IN THE DETERMINATION OF SUBSURFACE HYDROGEOLOGIC ENVIRONMENTS IN SOUTH CAROLINA ...Electric Logging, Electronics - Applied, Hydrology-general, Induction, Piedmont Province, Water Table Fluctuation, ...2.0950
- EXPERIMENTAL INVESTIGATION OF HYDROLOGICAL PARAMETERS OF AQUIFERS THROUGH ELECTRICAL RESISTIVITY MEASUREMENTS ...Aquifers-general, Borehole Geophysics, Electric Logging, Hydrology-general, Other Models, ...7.0028

Exploration Methods

Electric Logging

- DEVELOPMENT OF A PRACTICAL METHOD OF LOCATING AND TRACING SEEPAGE WATER IN UNSTABLE SLOPES ...Kentucky, Land and Rock Slides, Loss, Seepage, Slopes, ...2.0519
- INDUCED ELECTRICAL POLARIZATION AND GROUND WATER ...Artificial Recharge, Geophysical Analysis, Groundwater, Groundwater Basins, Polarization, ...7.0007

SUBJECT INDEX

Earth Structures

GEOPHYSICAL INVESTIGATIONS IN ALLUVIAL BASINS IN SOUTHERN ARIZONA ...Arizona, Gravity Surveys, Hydrology-general, Seismic Refraction, ...2.0062

GEOPHYSICAL EXPLORATION FOR HAWAIIAN GROUND WATER - PHASE II ...Electromagnetic Probing, Geophysical Analysis, Groundwater, Hawaii, Seismic Surveys, ...2.0371

PHYSICAL CHARACTERISTICS OF BASALT AQUIFERS ...Flow Characteristics -water, Groundwater Movement, Local Structure, Porosity, Radioactivity Logging, ...2.1117

FEASIBILITY STUDY OF ELECTRICAL GEOPHYSICAL METHODS IN THE DETERMINATION OF SUBSURFACE HYDROGEOLOGIC ENVIRONMENTS IN SOUTH CAROLINA ...Electronics - Applied, Hydrology-general, Induction, Piedmont Province, Porosity-permeability, Water Table Fluctuation, ...2.0950

EVALUATION OF NEW TECHNIQUES IN ELECTRICAL RESISTIVITY SURVEYING IN THE PIEDMONT AREA, ALABAMA ...Alabama, Groundwater, Piedmont Province, Survey Studies, ...2.0005

GEOPHYSICAL EXPLORATION FOR HAWAIIAN GROUND WATER - PHASE III ...Geophysical Analysis, Groundwater, Hawaii, Seismic Surveys, Volcanoes, ...2.0369

INDUCTIVE ELECTROMAGNETIC METHODS FOR MAPPING AND EVALUATING AQUIFERS ...Aquifers-general, California, Geophysical Analysis, Groundwater, Mapping, ...2.0083

EXPERIMENTAL INVESTIGATION OF HYDROLOGICAL PARAMETERS OF AQUIFERS THROUGH ELECTRICAL RESISTIVITY MEASUREMENTS ...Aquifers-general, Borehole Geophysics, Hydrology-general, Other Models, Porosity-permeability, ...7.0028

ELECTRICAL EARTH RESISTIVITY SURVEYS ...Clastic Aquifers, Electrodes, Geophysical Analysis, Groundwater, Illinois, ...7.0033

Electromagnetic Probing

ADVANCE WARNING OF GROUND-WATER POLLUTION HAZARDS, WITH SPECIAL REFERENCE TO AQUIFERS IN GLACIAL OUTWASH ...Electrical, Groundwater, Outwash Plains, Physical Parameters, Unconsolidated Aquifers, ...5.1235

GEOPHYSICAL EXPLORATION FOR HAWAIIAN GROUND WATER - PHASE II ...Electric Logging, Geophysical Analysis, Groundwater, Hawaii, Seismic Surveys, ...2.0371

Field Characteristics

Induction

FEASIBILITY STUDY OF ELECTRICAL GEOPHYSICAL METHODS IN THE DETERMINATION OF SUBSURFACE HYDROGEOLOGIC ENVIRONMENTS IN SOUTH CAROLINA ...Electric Logging, Electronics - Applied, Hydrology-general, Piedmont Province, Porosity-permeability, Water Table Fluctuation, ...2.0950

Polarization

INDUCED ELECTRICAL POLARIZATION AND GROUND WATER ...Artificial Recharge, Electric Logging, Geophysical Analysis, Groundwater, Groundwater Basins, ...7.0007

Earth Magnetism

Exploration Methods

Aeromagnetic

COORDINATION AND LIAISON AT MANNED SPACECRAFT CENTER, HOUSTON ...Aircraft, Geography-physical, Hydrology-general, Infrared Radiation, Ultra - Violet Radiation, ...6.0146

Magnetic Surveys

GEOHERMAL INVESTIGATIONS - YELLOWSTONE PARK ...Gravity Surveys, Hot Springs, Satellites, Seismic Surveys, Terrain Analysis, Yellowstone Plateau, ...6.0147

Earth Structures

Cuts

STABILIZATION OF SLOPES ...Bituminous, Clay, Embankments, Slopes, Soil Stabilization, ...8.0069

Dams

THE EFFECT OF HIGH CONFINING PRESSURE ON THE DEFORMATION OF SOIL ...Deformation, Earth & Rockfill

Dams, Foundations-general, Pressure-other, Shear Strength, ...8.0013

LIQUEFACTION STUDIES OF UKAI DAM SAND ...Earthquakes, India, Sand, Soil Dynamics, Soil Liquefaction, ...8.0186

WATER QUALITY MONITORING STUDIES ...Aquatic Ecology, Chemical-general, Land Use, Monitoring Systems, Survey Studies, Water Quality-general, ...6.0639

INSTRUMENTATION IN EMBANKMENTS AND FOUNDATIONS ...Embankments, Foundations-general, Handbooks, Techniques & Instrumentation, ...7.0062

COMPILATION OF EARTH DAM CRITERIA FOR DESIGN USE ...Abstracts, Design Criteria, Earth & Rockfill Dams, Engineering Structures-general, ...8.0254

EARTH AND ROCKFILL DAM DESIGN PRACTICES ...Design Criteria, Earth & Rockfill Dams, Earthquakes, Engineering Structures-general, Soil Stability Analysis, ...8.0137

GENERAL ROCK MECHANICS INVESTIGATIONS ...Deep, Rock Mechanics, ...8.0102

STABILITY OF EARTH SLOPES ...Earthquakes, Open Channel, Pore Water, Slopes, Soil Stability Analysis, ...8.0071

VIBRATORY COMPACTION OF COHESIVE SOILS ...Cohesive Soil-general, Compaction, Embankments, Field Soils Compaction, Soil Dynamics, ...8.0135

Embankments

SHEAR CHARACTERISTICS OF UNDISTURBED WEAK CLAY ...Clay, Deformation, Disturbed/undisturbed, Pore Water, Shear Strength, ...8.0006

EMBANKMENT AND FOUNDATION MOVEMENTS ON THE INSTRUMENTED SECTIONS OF THE EAST ATCHAFALAYA BASIN PROTECTION LEVEE, ST. MARTIN PARISH, LOUISIANA ...Engineering Properties, Soil Settlements, Soil Stability Analysis, Soil Tests, ...8.0212

TEMPORARY LININGS FOR WATERWAYS AND EMBANKMENTS ...Cover Crops, Design Criteria, Erosion Control, Florida, Hydrology-general, Lining, ...3.0178

OBSERVATION AND EVALUATION OF INSTRUMENTATION IN THE FOUNDATION AND EMBANKMENT OF MORAINES STATE PARK DAM ...Foundations-general, Piezometers, Soil Settlements, Soil Stability Analysis, Uplift, ...3.0170

INSTRUMENTATION IN EMBANKMENTS AND FOUNDATIONS ...Dams, Foundations-general, Handbooks, Techniques & Instrumentation, ...7.0062

ASPHALT BINDING OF COBBLES FOR RIPRAP ...Aggregates, Extenders, Fillers, Binders, Bituminous, Conglomerates, Erosion-general, Slopes, ...8.0106

STABILIZATION OF SLOPES ...Bituminous, Clay, Cuts, Slopes, Soil Stabilization, ...8.0069

VIBRATORY COMPACTION OF COHESIVE SOILS ...Cohesive Soil-general, Compaction, Dams, Field Soils Compaction, Soil Dynamics, ...8.0135

Filters

REVERSE FILTER EROSION PROTECTION ...Connecticut, Control and Protection, Engineering Structures-general, Erosion-general, Lining, ...8.0147

FACTORS INFLUENCING THE FLOW OF SUBSOIL WATER IN THE IMMEDIATE PROXIMITY OF AND INTO DRAINAGE FACILITIES ...Design Criteria, Drainage Systems, Other, Permeability, Seepage, ...4.0200

DRAINAGE SYSTEMS - PIPE AND FILTERS ...Drainage Engineering, Drainage Systems, Hydraulic Gradient, Pipelines, Pipes, ...8.0018

FILTER CRITERIA FOR DRAINS AND WATER WELLS ...Drainage, Filtration, Infiltration, Linings-pavings, Water Wells, ...8.0083

Slopes

DEVELOPMENT OF A PRACTICAL METHOD OF LOCATING AND TRACING SEEPAGE WATER IN UNSTABLE SLOPES ...Electric Logging, Kentucky, Land and Rock Slides, Loss, Seepage, ...2.0519

FLUCTUATION OF RESERVOIR LEVELS AND THE RELATED CAUSE OF LANDSLIDES (THE OHIO RIVER VALLEY) ...Force, Land and Rock Slides, Reservoirs and Impoundments, Soil Stability Analysis, Water Level Fluctuation, ...8.0191

SPECIAL STUDIES FOR CIVIL WORKS SOILS PROBLEMS ...Design Criteria, Earth & Rockfill Dams, Erosion Control, Field Soils Compaction, Wave Action, ...8.0255

Earth Structures

- EVALUATION OF ROCK RIPRAP AND DEVELOPMENT OF SUBSTITUTES ...Aggregates - Crushed Rock, Engineering Structures-general, Erosion Control, Petrography, Soil Cement, Wave Action, ...8.0081
- STABILITY OF EARTH SLOPES ...Dams, Earthquakes, Open Channel, Pore Water, Soil Stability Analysis, ...8.0071
- ASPHALT BINDING OF COBBLES FOR RIPRAP ...Aggregates, Extenders, Fillers, Binders, Bituminous, Conglomerates, Embankments, Erosion-general, ...8.0106
- STABILIZATION OF SLOPES ...Bituminous, Clay, Cuts, Embankments, Soil Stabilization, ...8.0069
- PREVENTING OR CONTROLLING ACCELERATED EROSION OF UNSTABLE FOREST SOILS ...Erosion-general, Mountains-alpine, Movement, Availability, Open Channel, Soil Science - other, Soil Stability Analysis, ...5.0316

Earth Thermal Properties

Exploration Methods

Survey Studies

- GEOHERMAL RESOURCES OF IDAHO ...Chemical-general, Hot Springs, Idaho, Temperature, Water - Hot Water, ...3.0206

Geothermal Gradient

- THERMAL GRADIENTS IN SOUTH CAROLINA ...Groundwater Movement, Heat Flows, Permeability, South Carolina, Temperature, ...2.0964
- DETECTION OF SUBSURFACE CAVITIES OR CONDUITS IN FOUNDATIONS OF PROPOSED RESERVOIRS AND ENGINEERING STRUCTURES ...Carbonates, Cave Studies, Engineering Structures-general, Geology - Engineering, Tritium, ...8.0073

Heat Flows

- THERMAL GRADIENTS IN SOUTH CAROLINA ...Geothermal Gradient, Groundwater Movement, Permeability, South Carolina, Temperature, ...2.0964

Temperature Profiles

- TEMPERATURE PROSPECTING FOR SHALLOW GLACIAL AND ALLUVIAL AQUIFERS ...Deposits, Geothermal, Temperature, Unconsolidated Aquifers, ...4.0095

Ecology (plant)

Applied Ecology

- METHODS OF CONTROLLING CLUBMOSS (SELAGINELLA DENSA RYDB) AND REDEVELOPING THE PRODUCTIVE CAPACITY OF RANGES FOLLOWING CLUBMOSS CONTROL ...Lycopodiaceae, Management and Fertility, Weeds -physiological Studies, ...4.0160
- DEMONSTRATION OF THE CHANNEL AERATION PROCESS IN TREATMENT OF SEWAGE ...Aeration, Enteroviruses of Animals, Enteroviruses of Humans, Nutrients, Salmonella (non-specific & Ot), ...5.0596
- EFFECTS OF POLLUTANTS ON SUBMARINE PLANT SYNECOLOGY ...Industrial Wastes, Nutrients, Plant Prod. (non-specific), Plant Succession, Sedimentation, Sediments, ...5.1221
- PHOSPHATE MINING EFFLUENT IN ESTUARINE ECOLOGY ...Estuaries, Mining Activities, Mounthorillanite, Phosphate, Phosphite, Pollution - Effects of, ...5.0821
- BIOCHEMICAL AND ECOLOGICAL RELATIONSHIPS OF PESTICIDES AND THE BIOLOGICAL CONSTITUENTS OF AQUATIC COMMUNITIES ...Bioenergetics, Cell Injury and Autolysis, Mortality Rates, Pesticides -non-specific, Sterility, ...5.0566
- CRITERIA FOR FUNCTIONAL ANALYSIS OF SOIL-PLANT-WATER SYSTEMS ...Management, Quality -non-specific, Soil-water-plant Relationships, South Carolina, Yield, ...2.0952
- INVESTIGATION OF AQUATIC WEED PROBLEMS AND MEANS OF CONTROL WITH EMPHASIS ON BRAZILIAN WATERWEED ...Herbicides -non-specific, of Aquatic Plants, Screening Potential Pesticides, Water Milfoil, Waterweed... , ...5.0938
- STUDIES ON AQUATIC MYXOBACTERIA ...Bacterial Pollutant Sources, Fresh Water, Myxobacteria, Pollution Abatement, Range Or Territorial Distr. , ...5.0954

Aquatic Plant Group

Amphibious Plants

- STUDIES ON THE PRODUCTIVITY OF VASCULAR HYDROPHYTES AND THEIR ROLE IN MINERAL CYCLING IN AQUATIC ECOSYSTEMS ...Budgets -other, Floating Plants, Freshwater Ecology, Primary Productivity, Submerged Plants, ...6.0469
- INVASION OF THE AQUATIC HABITAT BY AMPHIBIOUS SPECIES OF POLYGONUM ...Clones, Habitat Studies, of Aquatic Plants, Plant Taxonomy, Polygonaceae, ...2.1105
- ECOLOGICAL STUDIES OF MANIPULATED MARSHES AT DELTA, MANITOBA, CANADA ...Canada, Submerged Plants, Swamps-marshes, Water Depth, Water Levels, Water Fowl, N.s. , ...4.0257
- STUDY OF THE DISTRIBUTION OF FOUR ASSOCIATIONS OF AQUATIC PLANTS IN THE VICINITY OF MONTREAL ...Canada, Depth, Freshwater Ecology, Range Or Territorial Distr. , St. Lawrence River, ...4.0047
- WEED CONTROL IN IRRIGATION AND DRAINAGE SYSTEMS ...Aquatic Soils, Herbicides -non-specific, of Aquatic Plants, Plant Pollutants, Submerged Plants, Timing -non-specific, ...3.0094

Aquatic Plants (non-specific)

- CHANGES IN STREAM COMMUNITIES ASSOCIATED WITH EFFLUENT - INDUCED EUTROPHICATION ...Eutrophication, Invertebrates -non-specific, Number Or Density, Pennsylvania, Streams, ...5.1029
- QUANTITATIVE AND QUALITATIVE MEASUREMENT OF AQUATIC VEGETATION-CURRITUCK SOUND ...Mapping, North Carolina, Pollution - Effects of , Saline Water Intrusion, Virginia, ...5.0816
- THE AQUATIC PLANT RESOURCES OF WESTERN MONTANA ...Collections, Montana, Plant Taxonomy, Publications -other, ...2.0717
- BROOD PRODUCTION AND POND PREFERENCE OF DIVING DUCKS IN THE TURTLE MOUNTAINS OF NORTH DAKOTA ...Chemical-general, Habitat Studies, Land Use, Water Fowl, N.s. , Water Utilization -animal, ...6.0410
- INTERRELATIONS OF SEVERAL ABIOTIC FACTORS AND THE HIGHER AQUATIC PLANTS OF A STREAM ECOSYSTEM ...Plant Ecosystems(non-specific), Streams, ...2.0656
- HYDROBIOLOGY OF THE MADISON RIVER AND ITS HEADWATERS ...Montana, Organic-general, Photosynthesis, Physiological Ecology, Respiration, ...5.0697
- AQUATIC PLANTS OF POLLUTED WATERS IN S. W. UNITED STATES ...Habitat Studies, Plant Pollutants, Pollution Sources-general, Southwest, Tables, Compilations, Catalogs, ...5.1184
- AQUATIC PLANT CHEMISTRY-ITS APPLICATION TO ECOLOGY ...Bacterial Pollutant Sources, Bactericides -non-specific, Endogenous Cpd -plants, Water Quality Control-general, ...5.0793
- AQUATIC WEEDS ...Herbicides -non-specific, of Aquatic Plants, Physical-general, Plant Pollutants, Range Or Territorial Distr. , ...5.0735
- FLORA OF THE GENESEE COUNTRY--AQUATIC VASCULAR PLANTS CONESUS LAKE COMMUNITY STUDIES ...Bacterial Pollutant Sources, Budgets -other, Floras, New York, Range Or Territorial Distr. , ...6.0378
- ANTIBIOTIC EFFECTS OF ROOTED AQUATICS ON ZOOPLANKTON SPECIES ...Antibiotics, Environmental Physiology, Physiological Ecology, ...2.0159
- A LIMNOLOGICAL INVENTORY OF IOWA LAKES AND STREAMS ...Aquatic Ecology, Iowa, Lakes, Streams, Survey Studies, Water Properties-general, ...7.0042
- RESULTS OF APPLICATIONS OF KARMEX FOR CONTROL OF PLANTS IN PONDS AND LAKES ...Diuron, Evaluation, Lakes, of Aquatic Plants, Water Quality-general, ...6.0568
- MILWAUKEE RIVER WATERSHED LAKE VEGETATION SURVEY ...Lakes, Mapping, Range Or Territorial Distr. , Survey Studies, Wisconsin, ...2.1144
- THE ROLE OF AQUATIC SOILS IN THE NUTRIENT DYNAMICS OF AQUATIC ECOSYSTEMS ...Floating Plants, Movement, Availability, Soil-water-plant Relationships, ...6.0158

Floating Plants

- STUDIES ON THE PRODUCTIVITY OF VASCULAR HYDROPHYTES AND THEIR ROLE IN MINERAL CYCLING IN AQUATIC ECOSYSTEMS ...Amphibious Plants, Budgets -other, Freshwater Ecology, Primary Productivity, Submerged Plants, ...6.0469

SUBJECT INDEX

Ecology (plant)

EVALUATION OF HERBICIDES FOR CONTROL OF AQUATIC WEEDS ...Application Rates, Evaluation, Herbicides -non-specific, of Aquatic Plants, Submerged Plants, ...5.0247

THE ROLE OF AQUATIC SOILS IN THE NUTRIENT DYNAMICS OF AQUATIC ECOSYSTEMS ...Aquatic Plants (non-specific), Movement, Availability, Soil-water-plant Relationships, ...6.0158

Lower Plants

AMERICAN RIVER HYDROBIOLOGIC POTENTIAL STUDY ...Bioindicators, California, Phytoplankton, Primary Productivity, Water Quality-general, ...5.0143

Riparian Plants

WATER YIELD IMPROVEMENT FROM RIPARIAN AND UPLAND AREA OF RIVER BASINS ...Evapotranspiration, Management, Phreatophytes, River Basins, Sediment Yield, Southwest, ...4.0006

Submerged Plants

STUDIES ON THE PRODUCTIVITY OF VASCULAR HYDROPHYTES AND THEIR ROLE IN MINERAL CYCLING IN AQUATIC ECOSYSTEMS ...Amphibious Plants, Budgets -other, Floating Plants, Freshwater Ecology, Primary Productivity, ...6.0469

DISSOLVED ORGANIC MATTER AND PHOTOSYNTHESIS IN LAKES ...Autotrophic, Lakes, Nutrition, Secretions and Products, ...5.0574

EXPANDED AQUATIC PLANT CONTROL PROJECT ...Amaranthaceae -alligatorweed..., of Aquatic Plants, Translocation, 2,4-d, ...6.0248

AQUATIC VEGETATION STUDIES ...Lakes, Mapping, Water Level Fluctuation, ...4.0127

THE ECOLOGY OF SELECTED SUBMERSED AQUATIC WEEDS ...Depth, Ions and Gases, Nutrients, of Aquatic Plants, Range Or Territorial Distr., ...2.0620

THE ECOLOGY OF SELECTED SUBMERSED AQUATIC WEEDS ...Elodea, Waterweed, Thalassia, Mineral Nutrition, of Aquatic Plants, Potamogeton, Ruppia, Zostera..., Water Milfoil, Waterweed..., ...2.0764

THE ECOLOGY OF SELECTED SUBMERSED AQUATIC WEEDS ...Elodea, Waterweed, Thalassia, of Aquatic Plants, Potamogeton, Ruppia, Zostera..., Water Properties-general, ...2.0305

ECOLOGICAL STUDIES OF MANIPULATED MARSHES AT DELTA, MANITOBA, CANADA ...Amphibious Plants, Canada, Swamps-marshes, Water Depth, Water Levels, Water Fowl, N.s., ...4.0257

EVALUATION OF HERBICIDES FOR CONTROL OF AQUATIC WEEDS ...Application Rates, Evaluation, Floating Plants, Herbicides -non-specific, of Aquatic Plants, ...5.0247

GROWTH SUPPRESSION AND REDUCTION IN REGROWTH POTENTIAL OF AQUATIC WEEDS ...Acerolein, Biological Pollutants -other, Maturity Or Growth Stage of, of Aquatic Plants, Plant Resistance, ...2.0191

FIELD INVESTIGATION OF THE SUBMERSED AQUATIC ENVIRONMENT ...Aquatic Ecology, Canals, Irrigation-general, Plant Pollutants, Reservoirs and Impoundments, Weeds -phenological Studies, ...3.0125

WEED CONTROL IN IRRIGATION AND DRAINAGE SYSTEMS ...Amphibious Plants, Aquatic Soils, Herbicides -non-specific, of Aquatic Plants, Plant Pollutants, Timing -non-specific, ...3.6094

DISTRIBUTION, LIFE HISTORY, AND ECOLOGY OF EURASIAN WATERMILFOIL ...Chesapeake Bay, Range Or Territorial Distr., Water Milfoil, Waterweed..., Weeds -other, ...6.0263

Biomes

Biomes (non-specific)

ANALYSIS OF VEGETATIVE CHANGES RESULTING FROM WATER LEVEL CONTROL ...Mapping, North Carolina, Swamps-marshes, Water Level Fluctuation, ...4.0184

Coniferous Forests

COOPERATIVE WATERSHED MANAGEMENT IN SNOWLANDS AND LOWER CONIFER ZONES OF CALIFORNIA ...California, Forest Watersheds, Management, Moisture Tension, Snowmelt, ...4.0022

A STUDY OF SNOW INTERCEPTED BY CONIFEROUS TREE CROWNS AND ITS DISPOSITION UNDER THE CLIMATIC CONDITIONS OF CENTRAL NEW YORK ...Conifers -non-specific, Interception, New York, Snow, Snow-other, ...2.0787

Deserts, Arid Lands

ARID LAND ECOLOGY AND ENVIRONMENT STUDIES IV. WATER QUANTITY MANAGEMENT ...Arid and Desert, Big Horn, Deserts, Moisture Content, Wyoming, ...4.0281

VEGETATION CHANGES IN SOUTHWESTERN NORTH AMERICA ...Arid and Desert, Climate, Other Water Conditions, Soil-water-plant Relationships, Southwest, ...2.0045

Grasslands

ECOLOGICAL STUDIES OF GRASSLANDS, ETC. ...Kansas, Soil Environment, Soil Moisture -non-specific, ...2.0513

Distribution

Range Or Territorial Distr.

BLUE-GREEN ALGAE POISONING ...Algal Pollutant Sources, Algal Toxins, Arizona, Cyanophyta (non-specific & Ot), Vegetable Origin, ...5.0041

BIOLOGIC AND ENVIRONMENTAL CONTROL OF EURASIAN MILFOIL (MYRIOPHYLLUM SPICATUM L.) IN CHESAPEAKE BAY ...Biocontrol, Chesapeake Bay, Histology and Cytology, Water Milfoil, Waterweed..., ...6.0251

ECOLOGICAL STUDIES OF THE SURFACE WATERS OF THE WHITEWATER CREEK WATERSHED, WALWORTH, ROCK, AND JEFFERSON COUNTIES, WISCONSIN ...Bioindicators, Water Quality-general, Watersheds-general, Wisconsin, ...5.1323

STUDIES ON AQUATIC MYXOBACTERIA ...Bacterial Pollutant Sources, Bioindicators, Degradation, Myxobacteria, Nutrition, Streams, ...5.0952

TAXONOMY AND ECOLOGY OF INSHORE MARINE MICROBIOTA ...Algae- General, Animal Taxonomy, Aquatic Ecology, Plant Taxonomy, Protozoa -other, ...7.0024

A DETAILED STUDY OF LAKE MICHIGAN PLANKTON DIATOMS ...Lake Michigan, Phytoplankton, Planktonic - Floating, Plant Taxonomy, ...5.0554

THE ECOLOGY OF SELECTED SUBMERSED AQUATIC WEEDS ...Depth, Ions and Gases, Nutrients, of Aquatic Plants, Submerged Plants, ...2.0620

AQUATIC WEEDS ...Aquatic Plants (non-specific), Herbicides -non-specific, of Aquatic Plants, Physical-general, Plant Pollutants, ...5.0735

FLORA OF THE GENESEE COUNTRY--AQUATIC VASCULAR PLANTS CONESUS LAKE COMMUNITY STUDIES ...Aquatic Plants (non-specific), Bacterial Pollutant Sources, Budgets -other, Floras, New York, ...6.0378

STUDY OF THE DISTRIBUTION OF FOUR ASSOCIATIONS OF AQUATIC PLANTS IN THE VICINITY OF MONTREAL ...Amphibious Plants, Canada, Depth, Freshwater Ecology, St. Lawrence River, ...4.0047

STUDIES ON AQUATIC MYXOBACTERIA ...Applied Ecology, Bacterial Pollutant Sources, Fresh Water, Myxobacteria, Pollution Abatement, ...5.0954

ECESIS AND STABILIZATION OF PRICKYPEAR (OPUNTIA SPP.) ON THE RIO GRANDE PLAINS ...Angiosperms, Arid and Desert, Cacti, Habitat Studies, of Specific Weeds, ...6.0564

MILWAUKEE RIVER WATERSHED LAKE VEGETATION SURVEY ...Aquatic Plants (non-specific), Lakes, Mapping, Survey Studies, Wisconsin, ...2.1144

DISTRIBUTION, LIFE HISTORY, AND ECOLOGY OF EURASIAN WATERMILFOIL ...Chesapeake Bay, Submerged Plants, Water Milfoil, Waterweed..., Weeds -other, ...6.0263

PLANKTON ECOLOGY ...Estuaries, Eutrophication, Gulf of Mexico, Gynnodinium, Phytoplankton, ...6.0155

NITRIFICATION BY MARINE MICROORGANISMS ...Autotrophic, Bact. morphology (general), Bacterial Culture, Isolation From Nat. environ., Marine Bacteria (non-specific), Nitrification, Nitrogen Bacteria, ...1.0066

THE ECOLOGY OF CLOSTRIDIUM BOTULINUM IN THE TVA LAKES AREA ...Bacterial Exotoxins, Bacterial Pollutant Sources, Clostridium Botulinum, Food, Microbiological, Tennessee, ...2.0990

Temporal Distribution

SEASONAL VARIATIONS IN THE PHYTOPLANKTON - BACTERIA POPULATIONS AND THE NUTRIENT CONCENTRATION IN BEAVER RESERVOIR ...Nitrogen, Phosphorus, Phytoplankton, Reservoirs and Impoundments, Water Bacteria, ...6.0027

ECOLOGICAL PERIODICITIES OF NITROGEN AND PHOSPHORUS IN SALT MARSH FLORA AND SURROUNDING WATERS ...Mineral Composition, Swamps-marshes, ...6.0118

Ecology (plant)

SUBJECT INDEX

THE ROLE OF TEMPERATURE AND ILLUMINATION IN THE BIOLOGY OF OSCILLATORIA RUBESCENS ...Lakes, Ohio, Optical Properties, Temperature, ...6.0435

VIBRIO PARAHAEEMOLYTICUS IN THE ESTUARINE ENVIRONMENT ...Crustacea -non-specific, Estuaries, Isolation From Nat. environ., Mollusks -non-specific & Other, Vibrio N S, ...2.1115

Vertical Distribution

BIOLOGY AND CHEMISTRY OF MARINE PLANKTON POPULATIONS ...Buoys, Chlorophyll, Food Chains, Nutrients, Phytoplankton, Zooplankton, ...6.0289

A STUDY OF COLIFORM BACTERIA AND ESCHERICHIA COLI ON POLLUTED AND UNPOLLUTED OYSTER BOTTOMS OF MISSISSIPPI ...Coliforms (non-specific), Identification, Mississippi River, Sewage, Water Sampling, ...5.0619

BUOYANCY AND SINKING CHARACTERISTICS OF FRESH-WATER PHYTOPLANKTON ...Algal Pollutant Sources, Fresh Water, Herbicides -non-specific, Phytoplankton, Primary Productivity, ...5.1064

ECOLOGY OF CLOSTRIDIUM BOTULINUM TYPE E IN GREEN BAY ...Clostridium Botulinum, Fish -non-specific, Fish, N.s., Great Lakes-general, Microbiological, Repression, ...2.1162

Ecological Types -other

THE MICROBIOLOGY OF FARM PONDS AND OTHER FRESH WATER SYSTEMS ...Bacterial Pollutant Sources, Domestic Wastes-general, Farm Pond, Pollution - Effects of, ...5.1286

ECOLOGY OF YEASTS IN LAKE CHAMPLAIN ...Lakes, Millipore, New York, Plant Taxonomy, Yeast N S, ...6.0395

Ecosystems

Plant Ecosystems(non-specific)

INTERRELATIONS OF SEVERAL ABIOTIC FACTORS AND THE HIGHER AQUATIC PLANTS OF A STREAM ECOSYSTEM ...Aquatic Plants (non-specific), Streams, ...2.0656

COMPUTER SIMULATION OF EFFECTS OF LAND MANAGEMENT AND WEATHER MODIFICATION ON WATERSHED ECOSYSTEMS ...Land Use, Multivariate Analysis, Simulation Theory, Water Yield, Weather Modification-general, ...6.0297

Plant Succession

ENVIRONMENTAL HISTORY OF THE GALAPAGOS ISLANDS ...Floral, Galapagos Islands, Lakes, Plant Taxonomy, Productivity - Food Chain, ...2.0852

STUDIES ON THE MECHANISMS OF COMMUNITY STRUCTURE AND SUCCESSION IN TEMPORARY PONDS ...Freshwater Ecology, Plant Competition -other, Ponds, Productivity - Food Chain, Succession, ...2.0100

SPECIES AND SUCCESSIONAL CONTROL OF UNDESIRABLE VEGETATION ...Control By Burning, Cultural Control, in Wetlands, Physical Control, Swamps-marshes, ...6.0403

DETERMINE ECOLOGICAL CHANGES RESULTING FROM IMPOUNDMENT ...Cover Crops, Flooding, Freshwater Ecology, Mapping, Reservoirs and Impoundments, Water Level Fluctuation, ...6.0355

VEGETATIVE SUCCESSION IN NEWLY CONTROLLED MARSHES ...Environmental Ecology, Growth Rate, South Carolina, Swamps-marshes, Water Level Fluctuation, ...4.0215

DIATOM POPULATIONS CHANGES IN LAKE GEORGE ...Algae- Diatoms, Eutrophication, New York, Plankton Sampling, Recreation Sites, ...2.0816

ADAPTATION BY MICROBIAL POPULATIONS ...Adaptation, Biological Pollutants -general, Microorganisms (non-specific), Waste Water Treatment-general, ...5.0770

SIGNIFICANCE OF ARTHROBACTER IN ECOLOGY OF WATER AND SOIL ...Arthrobacter, Catabolism and Degradation, Cell. env.(non-specific & Ot.), Nucleic Acids, ...5.1302

EFFECTS OF POLLUTANTS ON SUBMARINE PLANT SYNECOLOGY ...Applied Ecology, Industrial Wastes, Nutrients, Plant Prod. (non-specific), Sedimentation, Sediments, ...5.1221

EUTROPHICATION OF NATURAL WATERS ...Data Acquisition-general, Eutrophication, Forecasting-prediction, Lakes, Water Quality Control-general, ...5.1314

TROPHIC TYPOLOGY OF OHIO LAKES ...Eutrophication, Freshwater Ecology, Lakes, Nutrients, Ohio, ...5.0893

ECOLOGICAL SUCCESSION IN A NORTHEASTERN OHIO RESERVOIR ...Eutrophication, Nutrients, Ohio, Plankton (non-specific), Reservoirs and Impoundments, ...5.0894

THE ECOLOGY OF THE MICROBIAL POPULATION OF ACTIVATED SLUDGE ...Activated, Degradation, Industrial

Processes-other, Mechanisms, Toxic Substances -non-specific, ...5.0168

EUTROPHICATION - EFFECT OF WEED HARVESTING ...Eutrophication, Nutrients, of Aquatic Plants, Physical Control, ...5.0970

Eutrophication

AN INVESTIGATION OF APHANIZOMENON FLOS-AQUAE, A TOXIC BY-PRODUCT OF EUTROPHICATION ...Algal Metab.(non-specific & ot), ...5.0717

BASIC RESEARCH IN THE AQUATIC ENVIRONMENT EFFECTS OF EUTROPHICATION ON PLANKTON ALGAE AND BENTHIC PLANTS COMMUNITIES ...Nutrients, ...2.0803

INVESTIGATION AND CONTROL OF ALGAE BLOOMS AND NUISANCE GROWTHS OF WATER WEEDS ...of Aquatic Plants, Phosphate, Phosphite, ...6.0110

PLANKTON ECOLOGY ...Estuaries, Gulf of Mexico, Gymnodinium, Phytoplankton, Range Or Territorial Distr., ...6.0155

EUTROPHICATION - BIOLOGICAL CONTROL USING GRAZERS ...Biocontrol, of Aquatic Plants, Survey Studies, Wisconsin, ...5.0971

Floras

FLORA OF THE GENESEE COUNTRY--AQUATIC VASCULAR PLANTS CONESUS LAKE COMMUNITY STUDIES ...Aquatic Plants (non-specific), Bacterial Pollutant Sources, Budgets -other, New York, Range Or Territorial Distr., ...6.0378

Food Chains

THE ACCUMULATION OF FISSION PRODUCTS BY MARINE FISH AND SHELLFISH ...Chlorideae -other, Contamination - Water, Estuaries, Radioactivity-general, Radioecology, ...5.0805

BIOLOGY AND CHEMISTRY OF MARINE PLANKTON POPULATIONS ...Buoys, Chlorophyll, Nutrients, Phytoplankton, Vertical Distribution, Zooplankton, ...6.0289

A STUDY OF THE ENERGY FLOW THROUGH SELECTED COMPONENTS OF A SMALL AQUATIC ECOSYSTEM ...Aquatic Ecology, Energy Budgets, Farm Pond, Productivity - Food Chain, ...6.0162

ECOLOGICAL RELATIONSHIPS OF ORGANIC MATTER AND BACTERIA IN TUTTLE CREEK RESERVOIR ...Freshwater Ecology, Kansas, Organic Matter, Reservoirs and Impoundments, Water Bacteria, ...5.0428

MICROBIAL INTERVENTION IN THE EUTROPHICATION PROCESS ...Eutrophication, Nutrients, Organic, Phytoplankton, Water Bacteria, ...5.0515

LIMNOLOGICAL INVESTIGATION OF ONEIDA LAKE ...Lakes, New York, Phytoplankton, Primary Productivity, Zooplankton, ...5.0773

Food Pyramids

A QUANTITATIVE STUDY OF TRACE ELEMENTS ON ABIOTIC AND BIOTIC AGGREGATES IN THE MISSOURI RIVER ...Bacterial Pollutant Sources, Missouri River, Silting, Trace Elements, ...5.0688

Food Webs

PLANKTON-PERIPHYTON STUDIES IN THE COLUMBIA RIVER ...Columbia River, Periphyton, Phytoplankton, Radioactivity-general, Radioecology, ...2.1127

ECOLOGY AND DISTRIBUTION OF OYSTERS AND CLAMS ...Chesapeake Bay, Clams, Commercial Fishing, Food Supply, Oysters, ...6.0268

Freshwater Ecology

THE APPLICATION OF RADIOISOTOPES TO STUDIES OF AQUATIC ECOSYSTEMS ...Aquatic Ecology, Benthic Organisms (non-specif), Productivity - Food Chain, Water Properties-general, Wisconsin, ...6.0643

STUDIES ON THE PRODUCTIVITY OF VASCULAR HYDROPHYTES AND THEIR ROLE IN MINERAL CYCLING IN AQUATIC ECOSYSTEMS ...Amphibious Plants, Budgets - other, Floating Plants, Primary Productivity, Submerged Plants, ...6.0469

STUDIES ON THE MECHANISMS OF COMMUNITY STRUCTURE AND SUCCESSION IN TEMPORARY PONDS ...Plant Competition -other, Plant Succession, Ponds, Productivity - Food Chain, Succession, ...2.0100

SUBJECT INDEX

Ecology (plant)

- DETERMINE ECOLOGICAL CHANGES RESULTING FROM IM-
POUNDMENT ...Cover Crops, Flooding, Mapping, Plant Succes-
sion, Reservoirs and Impoundments, Water Level Fluctuation,
...6.0355
- NATURAL WATER SYSTEMS IN WESTERN MONTANA
...Lakes, Montana, Phytoplankton, Streams, Zooplankton,
...2.0719
- ECOLOGICAL RELATIONSHIPS OF ORGANIC MATTER AND
BACTERIA IN TUTTLE CREEK RESERVOIR ...Food Chains,
Kansas, Organic Matter, Reservoirs and Impoundments, Water
Bacteria, ...5.0428
- MANIPULATION OF RESERVOIR WATER FOR IMPROVED
QUALITY AND FISH POPULATION RESPONSE ...Environ-
mental Ecology, Eutrophication, Fish -non-specific, Flow Aug-
mentation, Population Dynamics, Reservoirs and Impoundments,
...5.1294
- AN INVESTIGATION OF APHANIZOMENON FLOS-AQUAE, A
TOXIC BY-PRODUCT OF EUTROPHICATION ...Algal
Metab.(non-specific &ot), Eutrophication, ...5.0717
- EUTROPHICATION OF SHELTERED BAYS IN A LARGE LAKE
...Bays, Chemical-general, Currents -water, Eutrophication, Utah,
...5.1188
- OCCURENCE OF PROSTHECATE BACTERIA IN A
GRADIENT-POLLUTED RIVER ...Bact. morphology(other
Specif), Bacterial Pollutant Sources, Classification Or Taxonomy,
Number, Streams, ...5.0571
- AUTECOLOGICAL STUDIES ON SOME DOMINANT
PHYTOPLANKTON SPECIES OF LAKE CHAMPLAIN ...Algae-
Diatoms, Aphanizomenon, Cyanophyta (non-specific & Ot),
Eutrophication, Vermont, ...2.1084
- ECOLOGICAL STUDIES OF AN EXPERIMENTAL STREAM
...Aquatic Ecology, Contamination - Water, Energy Budgets,
Streams, ...5.0963
- BIOLOGICAL MODELS OF FRESHWATER COMMUNITIES
...Aquatic Ecology, Fresh Water, Model Studies, Nutrients, Urban
Environments, ...5.1270
- MECHANISMS OF BIOLOGICAL PRODUCTION IN STREAMS
...Primary Productivity, Productivity - Food Chain, Secondary
Productivity, Streams, ...4.0145
- THE FRESHWATER ALGAE OF SOUTH CAROLINA -
FLORISTICS AND ECOLOGY ...Algae- General, Plant Taxono-
my, South Carolina, Streams, ...6.0487
- MICROBIAL ECOLOGY OF LAKE CHAMPLAIN AS IN-
FLUENCED BY PESTICIDES ...Biodegradation, Lakes, Microor-
ganisms (non-specific), Nitrogen Bacteria, ...5.1202
- FLORISTIC AND FAUNISTIC SURVEY IN THE CUYAHOGA
RIVER WATERSHED ...Aquatic Ecology, Ohio, Physical-general,
Pollution - Effects of , Survey Studies, ...6.0436
- TROPHIC TYPOLOGY OF OHIO LAKES ...Eutrophication, Lakes,
Nutrients, Ohio, Plant Succession, ...5.0893
- THE ALGAE AND ZOOPLANKTON OF PROTECTED AND EX-
PLOITED LENTIC HABITATS IN NORTHEASTERN OHIO
...Algae- General, Aquatic Ecology, Habitat Studies, Ohio,
Zooplankton, ...6.0431
- STUDY OF THE DISTRIBUTION OF FOUR ASSOCIATIONS OF
AQUATIC PLANTS IN THE VICINITY OF MONTREAL ...Am-
phibious Plants, Canada, Depth, Range Or Territorial Distr. , St.
Lawrence River, ...4.0047
- STUDY OF EUTROPHICATION IN LAKES MAGOG & BROME
...Algal Pollutant Sources, Canada, Eutrophication, Growth and
Differentiation, Nutrition Studies, ...5.0166
- RELATIONSHIPS OF AQUATIC FLORA TO WATER QUALITY
AND POLLUTION ...Plant Pollutants, Pollution - Effects of , Pri-
mary Productivity, Streams, Water Quality-general, ...5.0956
- ARCTIC ECOSYSTEMS ...Alaska, Aquatic Ecology, Energy
Budgets, Polar, Productivity - Food Chain, ...5.0236
- REAERATION IN OPEN CHANNEL FLOW ...Aeration, Degrada-
tion, Open Channel Flow. Oxygen, Oxygen Content -water,
...2.0224

Habitat Studies

- ECOLOGY AND PHYSIOLOGY OF THERMOPHILIC BLUE-
GREEN ALGAE ...Adaptation, Cyanophyta (non-specific & Ot),
High Temp. - 85f Or Above, Hot Springs, ...2.0898
- SYSTEMATIC AND BIOGEOGRAPHIC STUDIES OF AQUATIC
AND SEMI-AQUATIC ORGANISMS IN NORTHERN MEXICO
...Animal Taxonomy, Aquatic Ecology, Mexico, Plant Taxonomy,
...2.0038
- FOREST AND BOG OF SOUTH COASTAL ALASKA - INTRA-
TYPE VARIATION AND ASSOCIATED HABITAT FEATURES
...Alaska, Forests, Peat, Swamps-marshes, Variation, ...2.0023

- INVASION OF THE AQUATIC HABITAT BY AMPHIBIOUS
SPECIES OF POLYGONUM ...Amphibious Plants, Clones, of
Aquatic Plants, Plant Taxonomy, Polygonaceae, ...2.1105
- ECOLOGY OF DIATOMS IN HARDWATER HABITATS ...Algae,
Algae- Diatoms, Environmental Changes, Paleocology, Pollen,
...5.0406
- AQUATIC PLANTS OF POLLUTED WATERS IN S. W. UNITED
STATES ...Aquatic Plants (non-specific), Plant Pollutants, Pollu-
tion Sources-general, Southwest, Tables, Compilations, Catalogs,
...5.1184
- THE ALGAE AND ZOOPLANKTON OF PROTECTED AND EX-
PLOITED LENTIC HABITATS IN NORTHEASTERN OHIO
...Algae- General, Aquatic Ecology, Freshwater Ecology, Ohio,
Zooplankton, ...6.0431
- ECESIS AND STABILIZATION OF PRICKYPEAR (OPUNTIA
SPP.) ON THE RIO GRANDE PLAINS ...Angiosperms, Arid and
Desert, Cacti, of Specific Weeds, Range Or Territorial Distr. ,
...6.0564
- LIMNOLOGICAL INVESTIGATIONS OF PRAIRIE POTHOLES
...Chemical-general, North Dakota, Potholes, Water Fowl, N.s. ,
...2.0850

Mapping

- STUDIES ON THE GEOSCIENCE VALUE OF RADAR
IMAGERY ...Bibliography, Mountains-alpine, Photogrammetry,
Radar, River Basins, ...8.0199
- AN ANALYSIS OF THE VEGETATION AND SOIL CHARAC-
TERISTICS OF RANGE WATERSHEDS IN NEVADA ...Cover
Crops, Infiltration, Runoff, Soil-water-plant Relationships, Species
and Species Evaluation, ...2.0740
- ANALYSIS OF VEGETATIVE CHANGES RESULTING FROM
WATER LEVEL CONTROL ...Biomes (non-specific), North
Carolina, Swamps-marshes, Water Level Fluctuation, ...4.0184
- DETERMINE ECOLOGICAL CHANGES RESULTING FROM IM-
POUNDMENT ...Cover Crops, Flooding, Freshwater Ecology,
Plant Succession, Reservoirs and Impoundments, Water Level
Fluctuation, ...6.0355
- AQUATIC VEGETATION STUDIES ...Lakes, Submerged Plants,
Water Level Fluctuation, ...4.0127
- QUANTITATIVE AND QUALITATIVE MEASUREMENT OF
AQUATIC VEGETATION-CURRITUCK SOUND ...Aquatic
Plants (non-specific), North Carolina, Pollution - Effects of ,
Saline Water Intrusion, Virginia, ...5.0816
- EVALUATION OF HABITAT AND REPRODUCTIVE FACTORS
WHICH INFLUENCE POPULATIONS OF NESTING WATER-
FOWL ...Habitat Studies, Population Dynamics, Spawn Or Nest-
ing Sites, Water Fowl, N.s. , Water Level Fluctuation, ...4.0108
- CLADOPHORA AS RELATED TO POLLUTION IN WESTERN
LAKE ERIE ...Algal Pollutant Sources, Bioindicators, Chemical
Analysis, Cladophora, Lake Erie, ...5.0883
- MUSQUODOBOIT - METERING BASINS NOVA SCOTIA,
CANADA ...Aquatic Ecology, Canada, Mammals -other, Water
Fowl, N.s. , Water Level Fluctuation, Wetlands, ...4.0054
- DEVELOPMENT OF A MODEL RESOURCE ANALYSIS FOR
RANGE WATERSHEDS ...Model Studies, Quality and Utiliza-
tion, Species and Species Evaluation, ...6.0460
- MILWAUKEE RIVER WATERSHED LAKE VEGETATION SUR-
VEY ...Aquatic Plants (non-specific), Lakes, Range Or Territorial
Distr. , Survey Studies, Wisconsin, ...2.1144
- MICROCLIMATIC FACTORS FOR FOUR PLANT COMMUNI-
TIES ON ELK MOUNTAIN ...Artemisia, Elevational Levels, Al-
titude, Energy Budgets, Range, Wyoming, ...2.1170
- BASIC RESEARCH IN VEGETATION AND HYDROLOGY
...Flooding, Groundwater, Land Use, Low Flow, Movement,
Water Quality-general, ...2.1100

Paleocology

- STUDIES OF NEAR-SURFACE SEDIMENTS IN LAKES, AND
RELATIONSHIPS BETWEEN SURFACE SEDIMENT POLLEN
SPECTRA AND VEGETATION ...Canada, Lakes, New England
Province, ...2.0555
- ECOLOGY OF DIATOMS IN HARDWATER HABITATS ...Algae,
Algae- Diatoms, Environmental Changes, Habitat Studies, Pollen,
...5.0406

Phenology

- PHREATOPHYTE CONTROL - LAHONTAN AND HUMBOLDT
BASINS ...Phreatophytes, Reservoirs and Impoundments, Root,
Saltcedar, Tamarisk, Weed Control -other, ...3.0317
- CONTROL OF CANADA THISTLE AND WATER WEEDS
...Evaluation, Kentucky Bluegrass, Montana, of Aquatic Plants,
Reed Canary, ...3.0308

Ecology (plant)

- THE WATER RELATIONS OF DESERT PLANTS ...Arid and Desert, Osmotic and Turgor Pressure, Plant Water Use-other, Seasonal, Xeric, ...2.0737
- CLIMATIC PATTERNS AND THEIR EFFECT ON CALIFORNIA AGRICULTURE ...Agriculture, Applied Climatology, California, Data Analysis - General, Production & Processing, Temperature, Weather, ...2.0095
- AGROCLIMATIC PARAMETERS ...Agricultural Studies -general, Applied Climatology, Climate-general, Nebraska, Seasonal, ...2.0724
- APPLICATION OF CLIMATOLOGY TO NEW JERSEY AGRICULTURE ...Agricultural Studies -general, Climate-general, Northeast, ...2.0762
- CLIMATE AND PHENOLOGICAL PATTERNS FOR AGRICULTURE IN THE WESTERN REGION ...Applied Climatology, Meteorological Averages, Other Water Conditions, Patterns, Tables, Compilations, Catalogs, ...3.0332
- CLIMATE OF THE NORTHEAST - ANALYSIS AND RELATIONSHIP TO PLANT RESPONSE ...Ash Trees, Flowering, New York, Physical Climatology, ...2.0791
- AGRICULTURAL CLIMATOLOGY OF WEST VIRGINIA ...Applied Climatology, Climate, Northeast, Other Water Conditions, ...2.1142
- BIOLOGY AND CONSUMPTIVE WATER USE OF PERENNIAL RANGE PLANTS UNDER DESERT CONDITIONS ...Arid and Desert, Consumptive Use, Flood Irrigation, Management and Fertility, Perennial, Soil-water-plant Relationships, ...3.0231
- LIMNOLOGY OF NEBRASKA ...Lakes, Life History Studies, Nebraska, Reservoirs and Impoundments, Water Properties-general, ...2.0720
- AN ESTIMATION OF THE THERMAL POTENTIAL FOR GROWING IRRIGATED CROPS ON OREGON DRYLAND ...Applied Climatology, Semi - Arid, ...6.0453

Physiological Ecology

- ECOLOGICAL-PHYSIOLOGICAL INVESTIGATIONS OF LITTORAL DIATOM COMMUNITIES OF THE YAQUINA RIVER ESTUARY ...Algae- Diatoms, Environment, Intertidal Areas, Oregon, ...5.0949
- ECOLOGICAL PERIODICITIES OF NITROGEN AND PHOSPHORUS IN SALT MARSH FLORA AND SURROUNDING WATERS ...Mineral Composition, Swamps-marshes, ...6.0118
- NUTRITIONAL ECOLOGY AND COMMUNITY STRUCTURE OF THE PHYTOPLANKTON OF GREEN BAY ...Bays, Mineral Composition, Nutrition Studies, Phytoplankton, Wisconsin, ...5.1290
- HYDROBIOLOGY OF THE MADISON RIVER AND ITS HEADWATERS ...Aquatic Plants (non-specific), Montana, Organic-general, Photosynthesis, Respiration, ...5.0697
- ECOLOGY & NITROGEN CYCLE IN A MARINE PLANT COMMUNITY ...Bering Sea, Nitrogen, Potamogeton, Ruppia, Zostera, Primary Productivity, Sewage, ...5.0035
- THE INCORPORATION OF C¹⁴ BICARBONATE INTO PIGMENTS OF A NATURALLY OCCURRING BLUE-GREEN ALGAE COMMUNITY WITH RESPONSE TO WAVELENGTH ...Chlorophyll, Oscillatoria, Phycobilins, Pigments, Vitamins, ...6.0432
- ANTIBIOTIC EFFECTS OF ROOTED AQUATICS ON ZOOPLANKTON SPECIES ...Antibiotics, Aquatic Plants (non-specific), Environmental Physiology, ...2.0159
- EVAPORATION REDUCTION INVESTIGATIONS STUDY OF THE EFFECTS OF FATTY ALCOHOLS ON THE ECOLOGY OF LAKE HEFNER ...Alcohols, Antitranspirants, Lakes, Plankton (non-specific), Texas, ...3.0130

Plant Ecology (non-specific)

- EVALUATION OF FIVE METHODS FOR SAMPLING DESERT AND WETLAND VEGETATION ...Arid and Desert, Colorado, Deserts, Utah, Wetlands, ...3.0471
- WETLANDS ECOLOGY LITERATURE REVIEW ...Bibliography, Planning, Wetlands, Wisconsin, ...7.0113

Productivity

Plant Prod. (non-specific)

- DISTRIBUTION OF DIATOMS IN DESERT WATERS ...Algae-Diatoms, Branchiopoda -other, Deserts, Playas, Respiratory System, ...2.0138
- EFFECTS OF THERMAL POLLUTION ON PRODUCTIVITY AND STABILITY OF ESTUARINE COMMUNITIES ...Aquatic Ecology, Environmental Ecology, Estuaries, Pollution - Effects of, Thermal Pollution, ...5.0498

SUBJECT INDEX

- COMPARATIVE PRODUCTIVITIES OF SMALL BODIES OF WATER IN DESERT AND MONTANE AREAS OF SOUTHERN NEW MEXICO ...New Mexico, Phytoplankton, Ponds, Productivity - Food Chain, Zooplankton, ...3.0336
- ULTRAVIOLET ABSORPTION IN COASTAL WATERS ...Biological, Marine Plants, Physical Parameters, Sewage, Shoreline - Coastline, ...5.0112
- SENSITIVITY OF BENTHIC MICROFLORA TO POLLUTION GRADIENTS ...Benthic Flora, Bioindicators, Estuaries, Marine Plants, Water Standards, ...5.1059
- EFFECTS OF POLLUTANTS ON SUBMARINE PLANT SYNECOLOGY ...Applied Ecology, Industrial Wastes, Nutrients, Plant Succession, Sedimentation, Sediments, ...5.1221
- THE EFFECTS OF FERTILIZATION ON PRODUCTIVITY OF FARM PONDS ...Farm Pond, Fertilizers, Physical, Productivity - Food Chain, ...6.0549
- BIOLOGICAL PRODUCTIVITY RELATED TO HYDROLOGIC CONDITIONS ...Aquatic Ecology, Productivity - Food Chain, Swamps-marshes, Water Level Fluctuation, Water Quality-general, ...2.0317
- ECOLOGY OF WESTERN GULF ESTUARIES ...Estuaries, Gulf of Mexico, Habitat Studies, Pollution - Effects of, Productivity - Food Chain, ...2.1048

Primary Productivity

- STUDIES ON THE PRODUCTIVITY OF VASCULAR HYDROPHYTES AND THEIR ROLE IN MINERAL CYCLING IN AQUATIC ECOSYSTEMS ...Amphibious Plants, Budgets - other, Floating Plants, Freshwater Ecology, Submerged Plants, ...6.0469
- AMERICAN RIVER HYDROBIOLOGIC POTENTIAL STUDY ...Bioindicators, California, Lower Plants, Phytoplankton, Water Quality-general, ...5.0143
- A STUDY OF THE PRIMARY PRODUCTIVITY OF NEW AND OLDER RESERVOIRS ...Algae- General, Climate-general, Fish - non-specific, ...2.0149
- STUDY OF TURBIDITY - PRODUCTION FACTORS IN LAKE KAMPESKA CODINGTON COUNTY, SOUTH DAKOTA ...Lakes, Productivity - Food Chain, South Dakota, Turbidity, Water - Light Qual. & Quant., Water Properties-general, ...2.0978
- BIOPOTENTIAL OF NATURAL WATERS ...Acidity, Atomic Absorption, Lakes, Phytoplankton, Visible, Wisconsin, ...7.0114
- DETERMINATION OF THE STAGES OF EUTROPHICATION OF SOME OF NEW HAMPSHIRE'S LARGE LAKES PHASE II ...Eutrophication, Lakes, New Hampshire, Phytoplankton, Water Properties-general, Zooplankton, ...2.0746
- LIMNOLOGICAL STUDIES OF LENTIC WATERS IN IDAHO ...Alpine, Idaho, Lakes, Phytoplankton, Productivity - Food Chain, Reservoirs and Impoundments, ...2.0398
- PRIMARY PRODUCTIVITY OF MINNESOTA LAKES ...Chemical-general, Lakes, Plankton (non-specific), Trace Element Analysis, Water Sampling, ...5.0607
- BIOLOGICAL AND CHEMICAL STUDY OF VIRGINIA'S ESTUARIES ...Estuaries, Nitrogen, Phosphorus, Phytoplankton, Population Dynamics, Virginia, ...2.1112
- THE ECOLOGIC IMPACT OF THE INTERACTIONS AMONG MICROORGANISMS AND AQUATIC CONTAMINANTS IN LAKE ERIE ...Environment, Lake Erie, Pollution - Effects of, Sediments, Water Bacteria, ...6.0427
- BUOYANCY AND SINKING CHARACTERISTICS OF FRESHWATER PHYTOPLANKTON ...Algal Pollutant Sources, Fresh Water, Herbicides -non-specific, Phytoplankton, Vertical Distribution, ...5.1064
- EFFECT OF INDUSTRIAL WASTES OF MEMPHIS & SHELBY COUNTY ON PRIMARY PLANKTONIC PRODUCERS ...Cell Cloning, Drainage, Industrial Wastes, Plankton (non-specific), Tennessee, ...5.1134
- BIOLOGICAL PRODUCTIVITY OF THE COEUR D'ALENE RIVER AS RELATED TO WATER QUALITY ...Data Analysis - General, Idaho, Productivity - Food Chain, Streams, Water Quality-general, ...5.0326
- THE EFFECTS OF THERMAL LOADING AND WATER QUALITY ON ESTUARINE PRIMARY PRODUCTION ...Acidity, Estuaries, Nutrients, Standing Crops, Thermal Pollution, ...6.0258
- RESERVOIR WATER QUALITY PREDICTION BASED ON LIMNOLOGICAL PARAMETERS ...Model Studies, Nutrients, Reservoirs and Impoundments, Water Properties-general, ...5.1102
- A STUDY OF PHYTOPLANKTON DYNAMICS IN LAKE FAYETTEVILLE AS A MEANS OF ASSESSING WATER QUALITY ...Algal Culture, Bioindicators, Eutrophication, Growth Rate, Phytoplankton, ...6.0031

EFFECTS OF RIVERS ON THE METABOLISM OF TEXAS BAYS ...Bays, Nutrients, Pollutants-general, Streams, Texas, Water Quality-general, ...5.1182

PRIMARY PRODUCTION AND DECOMPOSITION IN ESTUARINE WATER ...Estuaries, Florida, Methane Bacteria (non-specific), Phaeophyta (non-specific & Ot), Rhodophyta (non-specific & Ot), Turnover (metabolic), ...5.0257

ECOLOGY & NITROGEN CYCLE IN A MARINE PLANT COMMUNITY ...Bering Sea, Nitrogen, Physiological Ecology, Potamogeton, Ruppia, Zostera..., Sewage, ...5.0035

STUDIES ON EFFECTS OF WATERSHED PRACTICES ON STREAMS ...Chemical-general, Discharge-general, Forest Watersheds, Organic Matter, Periphyton, Physical-general, ...5.0948

MECHANISMS OF BIOLOGICAL PRODUCTION IN STREAMS ...Freshwater Ecology, Productivity - Food Chain, Secondary Productivity, Streams, ...4.0145

LIMNOLOGICAL INVESTIGATION OF ONEIDA LAKE ...Food Chains, Lakes, New York, Phytoplankton, Zooplankton, ...5.0773

RELATIONSHIPS OF AQUATIC FLORA TO WATER QUALITY AND POLLUTION ...Freshwater Ecology, Plant Pollutants, Pollution - Effects of, Streams, Water Quality-general, ...5.0956

PRIMARY PRODUCTION ...Plankton (non-specific), Strontium, ...2.1001

PRIMARY PRODUCTIVITY IN LAKE FRANCIS CASE ...Bays, Benthic Fauna, Phytoplankton, Reservoirs and Impoundments, Standing Crops, ...6.0524

PRIMARY PRODUCTION IN LEWIS AND CLARK LAKE ...Photosynthesis, Phytoplankton, Reservoirs and Impoundments, South Dakota, ...6.0525

EUTROPHICATION - PHYSICAL ECOLOGICAL CONTROL ...Destratification, Environment, Eutrophication, of Aquatic Plants, Physical Control, ...5.0972

Secondary Productivity

MECHANISMS OF BIOLOGICAL PRODUCTION IN STREAMS ...Freshwater Ecology, Primary Productivity, Productivity - Food Chain, Streams, ...4.0145

LEVELS OF SECONDARY PRODUCTIVITY IN COLORADO MOUNTAIN STREAMS ...Colorado, Mountains-alpine, Productivity - Food Chain, Streams, ...5.0179

Radioecology

THE ACCUMULATION OF FISSION PRODUCTS BY MARINE FISH AND SHELLFISH ...Chlorideac -other, Contamination - Water, Estuaries, Food Chains, Radioactivity-general, ...5.0805

A DETAILED STUDY OF THE ENERGY FLOW THROUGH THE BIOTA OF DOE RUN, MEADE COUNTY, KENTUCKY ...Energy Budgets, Kentucky, Radioactivity-general, Streams, ...2.0529

PLANKTON-PERIPHYTON STUDIES IN THE COLUMBIA RIVER ...Columbia River, Food Webs, Periphyton, Phytoplankton, Radioactivity-general, ...2.1127

Soil Ecology

GENESIS AND MORPHOLOGY OF PYGMY FOREST-BLACKLOCK SOIL ECOSYSTEM ...California, Douglas Fir, Sequoia, Water Table Fluctuation, Wave-built Terrace, ...6.0041

Standing Crops

DETERMINING CHANGES IN PHYTOPLANKTON POPULATIONS IN CLOUDS OF FLUORESCENT DYE MOVING IN THE MISSISSIPPI RIVER ...Dyes, Fluorometry, Minnesota, Mississippi River, Phytoplankton, ...5.0617

COMPARATIVE STUDY OF THE BENTHIC MICROBIAL BIOTA IN SOME COASTAL AREAS OF PUERTO RICO ...Benthic Flora, Benthonic-bottom, Ocean Environment, Pollution - Effects of, Puerto Rico, ...6.0478

THE EFFECTS OF THERMAL LOADING AND WATER QUALITY ON ESTUARINE PRIMARY PRODUCTION ...Acidity, Estuaries, Nutrients, Primary Productivity, Thermal Pollution, ...6.0258

ANNUAL PHYTOPLANKTON PRODUCTION IN PUGET SOUND WATERS ...Copepods, Invertebrate Cultures, Phytoplankton, Puget Sound, Tides, ...5.1256

FACTORS INFLUENCING THE PRODUCTION OF PLANKTONIC AND BENTHIC PLANTS ...Benthic Flora, Growth Rate, Nutrition, Phytoplankton, Secretions and Products, ...5.1119

PRIMARY PRODUCTIVITY IN LAKE FRANCIS CASE ...Bays, Benthic Fauna, Phytoplankton, Primary Productivity, Reservoirs and Impoundments, ...6.0524

Ecology - Animal

Applied Ecology

Biological Control

ENHANCEMENT OF RECREATIONAL USES OF ESTUARINE WATERS THROUGH STUDY OF POTENTIAL CONTROL METHODS FOR STINGING SEA NETTLES ...Chesapeake Bay, Estuaries, Jelly Fish, Recreation Sites, Water Quality-general, ...6.0256

SEA NETTLE STUDIES IN CHESAPEAKE BAY, LIFE HISTORY AND ECOLOGY ...Aquatic Ecology, Bays, Chesapeake Bay, Jelly Fish, Life History Studies, ...6.0127

Pollution Effects

COLUMBIA RIVER STUDIES ...Columbia River, Contamination - Water, Invertebrates, Oysters, Radioactivity-general, Reproductive System, ...5.1268

OPTIMUM ECOLOGICAL DESIGNS FOR ESTUARINE SYSTEMS OF NORTH CAROLINA ...Domestic Wastes-general, Estuaries, Marine Biology (non-specific), North Carolina, Pollution - Effects of, Productivity - Food Chain, ...2.0820

THE UPTAKE OF DIELDRIN IN THE THREE RIDGED NAIAID, AMBLEMA PLICATA ...Bioindicators, Dieldrin, Freshwater Mussels, Scallops, Metabolism, Ohio River, ...5.0886

ACUTE TOXICITY OF PESTICIDES TO FRESHWATER FISH AND OTHER VERTEBRATES ...Insecticides -non-specific, Maturity & Growth Stages, Mode of Action -animal, Pollution - Effects of, Wildlife, ...5.0649

RESIDENT POPULATION DETERMINATION ...Effluents-waste Water, New Hampshire, Pollution - Effects of, Thermal Pollution, ...5.0709

FISH ECOLOGY AND PHYSIOLOGY IN RELATION TO ACID MINE DRAINAGE ...Acidity, Aquatic Ecology, Fish -non-specific, Mine Drainage Control, Pollution - Effects of, ...5.1277

EFFECTS OF HEATED WATER, ACID MINE DRAINAGE & ALKALINE ASH DRAINAGE ON WATER QUALITY & RESERVOIR COMMUNITY METABOLISM (ABBREV) ...Mine Drainage Control, Mining Activities, Pollution - Effects of, Reservoirs and Impoundments, Thermal Pollution, ...5.0668

THE RELATIONSHIP OF SEWAGE HANDLING PRACTICE TO PESTICIDE RESIDUE LEVELS AND INVERTEBRATE ECOLOGY ...Aquatic Ecology, Aquatic Soils, Insecticides -non-specific, Michigan, Pollutants - Path of, ...5.0572

EFFECTS OF PULP MILL EFFLUENTS ON THE GROWTH AND PRODUCTION OF FISH ...Food Supply, Industrial Wastes, Industry Land Use Effects, Pollution - Effects of, Pulp, Paper, and Logging, ...5.0961

ACTIVITY PATTERNS OF FISH EXPOSED TO TOXIC MATERIALS ...Contamination - Water, Fish -non-specific, Industrial Wastes, Pollution - Effects of, ...5.0421

WATER QUALITY - BENTHIC INVERTEBRATE RELATIONSHIPS IN ESTUARIES ...Benthic Fauna, Benthonic-bottom, Estuaries, Maine, Pollution - Effects of, ...5.0478

EFFECTS OF THERMAL AND OTHER FORMS OF POLLUTION ON SOME ANADROMOUS FISHES ...Alewife, menhaden, shad, herring, Aquatic Ecology, Basses -sea, white, White Perch, Pollution - Effects of, Thermal Pollution, ...5.0739

DISTRIBUTION AND ECOLOGY OF RIVER MOLLUSKS IN CENTRAL AND WESTERN NORTH DAKOTA ...Aquatic Ecology, Mollusks -non-specific & Other, North Dakota, Pollution - Effects of, Streams, ...6.0416

THE INSECT ORDER PLECOPTERA AS A BIOLOGICAL INDEX OF FRESH WATER QUALITY IN RHODE ISLAND ...Bioindicators, Environmental Ecology, Number Or Density, Pollution - Effects of, Stone Flies, Plecoptera, Streams, ...5.1057

DYNAMICS OF CHEMICAL & PHYSICAL CHARACTER OF WATER, BOTTOM MUDS & AQUATIC LIFE IN A LARGE IMPOUNDMENT ON A RIVER PHASE II. Alabama, Aquatic Soils, Chemical-general, Physical-general, Pollution - Effects of, Reservoirs and Impoundments, ...5.0008

LONG-TERM EFFECTS OF PESTICIDES ON AQUATIC INVERTEBRATES ...Endrin, Malathion, Parathion, Pollution - Effects of, Sevin, ...5.0548

COMPARISON OF ENERGY FLOW PARAMETERS OF MIDGE POPULATIONS IN BIOLOGICAL OXIDATION PONDS ...Bloodworms, Aquatic Midges, Energy Budgets, Oklahoma, Productivity - Food Chain, Sewage Lagoons, ...5.0929

SEASONAL AND DIURNAL ASPECTS OF ZOOPLANKTON MICRODISTRIBUTION AND VERTICAL MIGRATION IN RELATION TO WATER POLLUTION ...Environmental Ecology, Fresh Water, Vertical Distribution, Water Quality-general, Zooplankton, ...5.1126

- GROWTH OF THE BROWN BULLHEAD, *ICTALURUS NEBULOSUS* (LESUEUR), IN MINE ACID POLLUTED WATER ...Acidity, Bullheads, Contamination - Water, Growth Rate, Mining Activities, Ph, Acidity -water, ...5.1278
- TOXIC ACTION OF WATER SOLUBLE POLLUTANTS ON FRESHWATER FISH ...Contamination - Water, Mineral Origin, Rainbow Trout, Steelhead Trout, Stress, ...5.0565
- ENTERIC BACTERIA AND VIRUSES IN SEWAGE, WATER, AND SHELLFISH ...Bacterial Pollutant Sources, Coliforms (non-specific), Oysters, Sewage, Viral Pollutant Sources, ...5.0718
- MARINE WASTE DISPOSAL AND SEA URCHIN ECOLOGY ...California, Productivity - Food Chain, Sea Urchins & Other Echinoderm, Sewage, ...5.0130
- THE EFFECT OF INORGANIC SEDIMENT ON STREAM BIOTA ...Aquatic Ecology, Contamination - Water, Pollution - Effects of, Sediments, Streams, ...5.0388
- DEMONSTRATION OF THE LIMITATIONS AND EFFECTS OF WASTE DISPOSAL ON AN OCEAN SHELF ...Marine Plants, Ocean, Outlet, Pollution - Effects of, Sewers, ...5.0248
- SUBLETHAL INFLUENCE OF POLLUTANTS ON FISH METABOLISM ...Contamination - Water, Fish -non-specific, Growth Rate, Metabolism -animal, Pollution - Effects of, ...5.0901
- CYTOPATHOLOGICAL CHANGES IN NATIVE FISH SPECIES EXPOSED TO STREAM POLLUTANTS ...Contamination - Water, Fish -non-specific, Histology and Cytology, Pollution - Effects of, Streams, ...5.1021
- TAXONOMY AND BIOLOGY OF SLUDGE WORMS ...Animal Taxonomy, Bioindicators, Brackish Water, Earthworms, Fresh Water, ...5.0167
- REDUCTION OF HAZARDS ASSOCIATED WITH INSECTICIDAL CHEMICALS IN THE ENVIRONMENT ...Insecticides -non-specific, Persistence in Soils, Pollution - Effects of, Removal of Residues, Residues in Foods, ...5.0359
- FACTORS INFLUENCING INSECTICIDE RESIDUES ON OR IN FOOD AND FORAGE CROPS ...Environmental Effects, Kansas, Organophosphorous Cpd., Persistence of Residues, Persistence in Soils, Physical Degradation, ...5.0429
- ECOLOGY OF PESTICIDES IN AN AQUATIC ECOSYSTEM ...Food Chains, Animal And/or Man, Insecticides -non-specific, Michigan, Pollutants - Path of, Pollution - Effects of, ...5.0563
- ECOLOGY OF COLORADO MOLLUSKS ...Colorado, Mollusks -non-specific & Other, Pollution - Effects of, Pollution -non-specific, Range Or Territorial Distr., ...5.0178
- STUDY OF EFFECTS OF MILL WASTE WATER ON FISH LIFE ...Contamination - Water, Fish -non-specific, Industrial Processes -other, Industrial Wastes, Pollution - Effects of, ...5.1174
- ST. JOHNS RIVER FISHERY PROJECT ...Environmental Ecology, Florida, Mans Activities, Population Dynamics, Streams, ...3.0173
- PEACE RIVER POLLUTION INVESTIGATIONS ...Fish -non-specific, Florida, Industrial Wastes, Phosphate, Phosphite, Pollution - Effects of, Streams, ...5.0273
- OIL CONTAMINATION OF OYSTERS FROM OIL WELL DRILLING MUDS ...Industrial Wastes, Oil, Oysters, Petroleum Industry, ...5.0449
- INFLUENCE OF WATER POLLUTANTS AND WATER QUALITY ON EARLY LIFE HISTORY AND POPULATION DYNAMICS OF MINNESOTA FISHES ...Fish -non-specific, Life History Studies, Minnesota, Pollution - Effects of, Population Dynamics, ...5.0615
- EFFECTS OF KRAFT PULP MILL EFFLUENTS ON THE GROWTH AND PRODUCTION OF FISH ...Industrial Wastes, Pollution - Effects of, Pulp, Paper, and Logging, Salmon & Trout - Non-specific, ...5.0966
- CHEMICAL BIOCIDES IN LAKES ...Lakes, Pesticides -non-specific, Pollution - Effects of, Productivity - Food Chain, South Dakota, ...5.1111
- EFFECT OF PESTICIDES ON WILDLIFE, (SONGBIRDS, HERRING GULLS AND FISH) ...DDT, Wildlife, Wildlife -non-specific, Wisconsin, ...5.1309
- EFFECTS OF HEATED WATER IN A TIDAL ESTUARY ...Bays, Chesapeake Bay, Electric Power Plants, Thermal Pollution, Urban Environments, Water Properties-general, ...4.0078
- MEASUREMENT OF RADIONUCLIDES IN ESTUARINE AND MARINE ENVIRONMENTS (A COOPERATIVE AGREEMENT WITH ATOMIC ENERGY COMMISSION) ...Estuaries, Marine Environments-general, Pollution - Effects of, Radioactivity-general, Reactor Sites & Rad Waste, ...2.0819
- SEDIMENT MINERALOGY ...Adsorption Capacity, Contamination - Water, Estuaries, Productivity - Food Chain, Radioactivity-general, ...5.0806

- ACCUMULATION OF RADIOACTIVITY BY INVERTEBRATES ...Contamination - Water, Metabolism, Productivity - Food Chain, Radioactivity-general, ...5.0804
- ACCUMULATION OF RADIONUCLIDES BY VERTEBRATES ...Contamination - Water, Estuaries, Productivity - Food Chain, Radioactivity-general, ...5.0803
- FAUNAL PRODUCTION ...Estuaries, Pollution-general, Productivity - Food Chain, Vertical Distribution, Water Environment -other, ...6.0154
- BEHAVIOR OF ESTUARINE ANIMALS ...Behavior -animal, Estuaries, Pesticides -non-specific, Pollution - Effects of, ...2.0323
- RATES OF PESTICIDE BUILDUP IN SALMONIDS RECENTLY INTRODUCED IN THE GREAT LAKES ...Insecticides -non-specific, Wildlife, ...5.0545
- MECHANISMS OF PESTICIDE ACCUMULATION IN AQUATIC ORGANISMS ...Chlorinated Hydrocarbons, Food Chains, Animal And/or Man, Insecticides -non-specific, Productivity - Food Chain, ...5.0546
- ESTUARINE ECOSYSTEMS ...Aquatic Or Soil-aquatic Cycles, Estuaries, Pesticides -non-specific, Pollution - Effects of, Water Properties-general, ...2.0324
- EFFECTS OF D.O., TEMPERATURE AND POTENTIAL TOXICANTS UPON SELECTED MACROINVERTEBRATES (EMPHASIZING NON-ARTHROPODS) ...Contamination - Water, Food Supply, Gases, Dissolved -water, Pollution - Effects of, Water Temperature-non-specific, ...5.0589
- PHYSIOLOGICAL EVALUATION OF TREATED TOXIC WASTES ...Bioindicators, Blood Plasma and Serum, Contamination - Water, Pulp, Paper, and Logging, Tissues -biological, ...5.0976
- HISTOPATHOLOGIC EFFECTS OF POLLUTANTS ON CELLS AND TISSUES OF MARINE FISHES ...Computer Matching Code, Contamination - Water, Killfishs - Cyprinodon, Pollution - Effects of, ...5.1080
- HISTOPATHOLOGIC EFFECTS OF POLLUTANTS ON CELLS AND TISSUES OF MARINE INVERTEBRATES ...Clams, Computer Matching Code, Contamination - Water, Invertebrate Pathology, Pollution - Effects of, Pollution-other, ...5.1081
- USE OF MARINE PLANKTONIC ORGANISMS FOR EVALUATING THE QUALITY OF MARINE AND ESTUARINE WATERS ...Bioassays, Estuaries, Phytoplankton, Pollution - Effects of, Zooplankton, ...5.1093
- THE NORMAL ANATOMY AND HISTOLOGY OF SOME MARINE INVERTEBRATES ...Clams, Histology and Cytology, Invertebrate Anatomy, Water Quality-general, ...5.1095
- TOXICOLOGY OF PESTICIDES IN THE ENVIRONMENT ...Air Pollution -other, Contamination - Water, Food Chains, Animal And/or Man, Pesticides -non-specific, Soil Contamination -other, ...5.0945
- THE EFFECT OF SELECTED PESTICIDES ON INTERTIDAL BIOTA ...Insecticides -non-specific, Intertidal Areas, Pesticides -non-specific, Pollutants-general, Productivity - Food Chain, Swamps-marshes, ...5.0522
- ENVIRONMENT AND VIRUS-HOST INTERACTIONS IN FISHES ...Agricultural Chemicals-general, Environmental Ecology, Pathology, Pollution - Effects of, Viral Pollutant Sources, ...5.0786
- PESTICIDE RESISTANT FISH IN NATURAL ECOSYSTEMS ...Animal Resistance, Endrin, Food Chains, Animal And/or Man, Tolerance Rates, Wildlife, ...5.0624
- MICROBIOLOGY OF ESTUARINE AND SHELLFISH POLLUTION ...Bioindicators, Clams, Estuaries, Oysters, Shellfish Depuration, Waste Water Treatment-general, ...5.0719
- EFFECT OF THE EFFLUENT FROM AN ATOMIC POWER PLANT ON THE ADJACENT PORTION OF BARNEGAT BAY, NEW JERSEY ...Bays, New Jersey, Pollution - Effects of, Reactor Sites & Rad Waste, Thermal Pollution, Water Temperature-non-specific, ...5.1076

Public Health Ecology

- COOPERATIVE STUDIES WITH FEDERAL AND STATE AGENCIES ...Bioassays, Crustacea -non-specific, Mollusks -non-specific & Other, Survey Studies, Water Quality-general, ...7.0111

Reactor Sites & Rad Waste

- RADIONUCLIDE METABOLISM IN AQUATIC ANIMALS ...Clams, Contamination - Water, Fish -non-specific, Metabolism, Radiation Effects-non-specific, ...5.0101
- MEASUREMENT OF RADIONUCLIDES IN ESTUARINE AND MARINE ENVIRONMENTS (A COOPERATIVE AGREEMENT WITH ATOMIC ENERGY COMMISSION) ...Estuaries, Marine

SUBJECT INDEX

Ecology - Animal

Environments-general, Pollution - Effects of , Pollution Effects, Radioactivity-general, ...2.0819

EFFECT OF THE EFFLUENT FROM AN ATOMIC POWER PLANT ON THE ADJACENT PORTION OF BARNEGAT BAY, NEW JERSEY ...Bays, New Jersey, Pollution - Effects of , Pollution Effects, Thermal Pollution, Water Temperature-non-specific, ...5.1076

Aquatic Ecology

THE APPLICATION OF RADIOISOTOPES TO STUDIES OF AQUATIC ECOSYSTEMS ...Benthic Organisms (non-specif), Freshwater Ecology, Productivity - Food Chain, Water Properties-general, Wisconsin, ...6.0643

AQUATIC COMMUNITIES ...Environmental Ecology, Lakes, Productivity - Food Chain, Salinity, Water Salinity, ...6.0625

COMPETITION, PREDATION, AND BODY SIZE IN LAKE ZOOPLANKTON ...Competition, Lakes, Predation, Size, Zooplankton, ...6.0115

REPOPULATION OF EXPERIMENTALLY DECIMATED AREAS BY STREAM FISHES ...Control of Nuisance Species, Fish -non-specific, Louisiana, Population Dynamics, Stream Rehabilitation, Streams, ...5.0460

SYSTEMATIC AND BIOGEOGRAPHIC STUDIES OF AQUATIC AND SEMI-AQUATIC ORGANISMS IN NORTHERN MEXICO ...Animal Taxonomy, Habitat Studies, Mexico, Plant Taxonomy, ...2.0038

ECOLOGICAL SIGNIFICANCE OF ORGANIC RELEASE PRODUCTS OF MARINE AND FRESHWATER ANIMALS ...Biological Rhythms, Metabolism, Mucus, Productivity - Food Chain, ...2.0342

FEEDING PATTERNS OF THE FRESHWATER ISOPOD LIRCEUS BRACHYURUS ...Behavioral Ecology, Food Supply, Isopods, Nutrition - Invertebrate, Pennsylvania, Streams, ...7.0093

FOOD HABITS OF LARVAL AND JUVENILE SHAD IN THE CONNECTICUT RIVER ...Alewife,menhaden,shad,herring, Connecticut River, Food Supply, Massachusetts, Recreation Sites, ...3.0272

THE EFFECT OF EVAPORATION BARRIERS ON FISH GROWTH AND LIMNOLOGY ...Antitranspirants, Environmental Ecology, Fish -non-specific, Growth Rate, ...2.0060

ZOOPLANKTON STANDING CROPS IN A SOUTH DAKOTA PRAIRIE LAKE ...Animal Pollutant Sources, Lakes, Population Dynamics, South Dakota, Zooplankton, ...5.1110

INVESTIGATION OF THE RELATIONSHIP OF THE AMERICAN SMELT, OSMERUS MORDAX - MITCHILL, TO THE WEWEANTIC RIVER ESTUARY, WAREHAM, MASSACHUSETTS ...Environmental Ecology, Estuaries, Smelts, Spawn Or Nesting Sites, Temperature, ...5.0510

FOOD HABITS OF LARGEMOUTH BASS LARVAE ...Behavior - animal, Food Supply, Largemouth Bass, Ponds, Zooplankton, ...7.0082

A BENTHIC COMMUNITY OF THE PENOBSCOT RIVER ESTUARY ...Benthic Organisms (non-specif), Estuaries, Industrial Wastes, Maine, Productivity - Food Chain, ...5.0473

STUDY OF STRIPED BASS POPULATIONS IN MAINE COASTAL WATERS ...Basses -sea,white, White Perch, Estuaries, Maine, Migration, ...5.0470

INVESTIGATION OF RELATIONSHIP OF CUNNER, TAUTOGLABRUS ADSPERSUS -(WALBAUM), TO WEWEANTIC RIVER ESTUARY, WAREHAM, MASSACHUSETTS ...Estuaries, Fish -other, Massachusetts, Swamps-marshes, Water Environment -other, ...5.0511

OBSERVATIONS ON RED SALMON IN THE KVICHAK RIVER SYSTEM ...Alaska, Population Dynamics, Reproduction Studies (general), Salmon -coho,chinook,sockeye..., Streams, ...6.0628

ESTUARINE DREDGE HOLE INVESTIGATIONS ...Estuaries, Fish -non-specific, Habitat Studies, Ocean Coring and Dredging, ...6.0354

CHEMICAL TREATMENT OF NEBISH LAKE ...Chemical Treatment-general, Control of Nuisance Species, Data Analysis - General, Lakes, Stocking of Fish & Shellfish, ...5.1293

WALLEYE FRY - ZOOPLANKTON RELATIONSHIPS IN SOUTHEASTERN WISCONSIN LAKES ...Food Supply, Lakes, Plankton Sampling, Walleyes, Zooplankton, ...6.0640

COMPILATION OF WATER QUALITY DATA ...Basses -sea,white, White Perch, Data Acquisition-general, Data Analysis - General, Lakes, Water Quality-general, ...5.0459

IMPACT OF WINTER DRAWDOWN ON A SLOW-GROWING PANFISH POPULATION AND ASSOCIATED SPECIES ...Chemical-general, Depth,water Level, Fluctuation, Drawdown, Population Dynamics, ...4.0276

EFFECTS OF CHANGES IN WATER QUALITY ON FRY AND FINGERLINGS ...Basses -sea,white, White Perch, Chemical-general, Environmental Ecology, Louisiana, Water Quality-general, ...5.0454

FOOD HABITS STUDY ...Benthic Organisms (non-specif), Food Supply, Lakes, Mississippi, Plankton (non-specific), ...6.0314

DETERMINATION OF THE MAGNITUDE AND AGE COMPOSITION OF THE HARVEST, HABITAT PREFERENCES AND FOOD HABITS ...Cutthroat Trout, Number Or Density, Snake River, Wyoming, ...6.0649

WALLEYE AND NORTHERN PIKE STUDY ...Life History Studies, Pikes, Pickerel, Muskellunge, Spawn Or Nesting Sites, Texas, Walleyes, ...6.0541

FLATHEAD CATFISH STUDY ...Behavior -animal, Food Supply, Growth Rate, Ictaluridae -other, Reproduction Studies (general), Texas, ...6.0539

FISH POPULATION STUDIES. (DEWEY RESERVOIR) ...Alewife,menhaden,shad,herring, Fertilizers -aquatic, Kentucky, Population Dynamics, Reservoirs and Impoundments, ...5.0437

LIMESTONE DRUM PRODUCTIVITY STUDY JOB NUMBER 1 - LIMNOLOGICAL STUDY ...Acidity, Biological-general, Chemical-general, Limestone - General, Stream Rehabilitation, ...5.1275

LIMESTONE DRUM PRODUCTIVITY STUDY ...Chemical-general, Limestone - General, Ph, Acidity -water, Population Dynamics, Productivity (agricultural), ...5.1273

A STUDY OF A POLLUTED RIVER, THE ILLINOIS ...Bioindicators, Contamination - Water, Fish -non-specific, Illinois River, Mollusks -non-specific & Other, ...2.0408

RESTORATION AND REHABILITATION OF EARTHQUAKE DAMAGED PINK AND CHUM SALMON STUDIES IN PRINCE WILLIAM SOUND ...Alaska, Data Acquisition-general, Earthquakes, Flow Characteristics -water, Salmon -coho,chinook,sockeye..., Spawn Or Nesting Sites, Stream Rehabilitation, Tectonics-general, ...2.0026

PHYSICAL AND CHEMICAL PROPERTIES OF ALABAMA WATERS LIKELY TO SUPPORT STRIPED BASS, ROCCUS SAXATILIS ...Basses -sea,white, White Perch, Chemical Measurements -water, Chemical-general, Physical Measurements -water, Physical-general, ...6.0003

THE EFFECTS OF ENGINEERING PROJECTS ON THE ECOLOGY OF JONES BAY ...Bays, Construction, Engineering Structures-general, Texas, Water Properties-general, ...6.0543

THE EFFECTS OF ENGINEERING PROJECTS ON THE ECOLOGY OF MOSES LAKE ...Construction, Engineering Structures-general, Lakes, Texas, Water Properties-general, ...6.0544

STUDY OF THE RIVER PHASE OF THE LIFE HISTORIES OF ALOSA PSEUDOHARENGUS AND AESTIVALIS ...Alewife,menhaden,shad,herring, Connecticut River, Environmental Ecology, Life History Studies, Spawn Or Nesting Sites, ...6.0111

COOPERATIVE GULF OF MEXICO INVENTORY AND STUDY - II HYDROLOGY ...Atlases-maps, Environmental Ecology, Estuaries, Gulf of Mexico, Water Properties-general, ...2.0670

COOPERATIVE GULF OF MEXICO INVENTORY AND STUDY - III SEDIMENTOLOGY ...Atlases-maps, Distribution, Environmental Ecology, Estuaries, Gulf of Mexico, ...2.0671

COOPERATIVE GULF OF MEXICO INVENTORY AND STUDY - IV BIOLOGY ...Atlases-maps, Environmental Ecology, Estuaries, Gulf of Mexico, Mississippi River, ...2.0672

ECOLOGY OF LOUISIANAS ESTUARINE WATERS - MARINE LABORATORY ...Estuaries, Louisiana, Marine Biology (non-specific), Shoreline - Coastline, ...2.0542

LAKEBORGNE-CHANDELEUR SOUND SYSTEM ...Louisiana, Nets, Number Or Density, Plankton Sampling, Tides, ...2.0543

BRETON SOUND - MOUTH OF MISSISSIPPI RIVER SYSTEM ...Mississippi River, Nets, Number Or Density, Plankton Sampling, ...2.0544

VERMILION - CALCASIEU - SABINE SYSTEM ...Data Acquisition-general, Louisiana, Nets, Number Or Density, Plankton Sampling, ...2.0546

TIMBALIER - TERREBONNE BAYS SYSTEM ...Data Acquisition-general, Louisiana, Nets, Number Or Density, Plankton Sampling, ...2.0547

WATER RESOURCES NEMATOLOGY ...Animal Pollutant Sources, Environmental Ecology, Mans Activities, Nematoda - other, Productivity - Food Chain, ...5.0001

FISH ECOLOGY AND PHYSIOLOGY IN RELATION TO ACID MINE DRAINAGE ...Acidity, Fish -non-specific, Mine Drainage Control, Pollution - Effects of , Pollution Effects, ...5.1277

THE ECOLOGY OF THE YOUNG FISHES OF THE WEWEANTIC RIVER ESTUARY ...Estuaries, Massachusetts, Pesticides -

non-specific, Pollution - Effects of , Population Dynamics, ...2.0607

STUDIES ON THE INTERACTIONS OF BACTERIA AND AQUATIC NEMATODES ...Animal Pollutant Sources, Bacteria (non-specific), Bacterial Pollutant Sources, Interbiotic Relat.(non-specific), Nematoda -other, ...5.0013

FLUSHING PATTERN OF CERTAIN TIDAL STREAMS IN DELAWARE ...Circulation -water, Delaware, Discharge-general, Industrial-general, Tidal Streams, ...2.0250

A STUDY OF THE ENERGY FLOW THROUGH SELECTED COMPONENTS OF A SMALL AQUATIC ECOSYSTEM ...Energy Budgets, Farm Pond, Food Chains, Productivity - Food Chain, ...6.0162

THE RELATIONSHIP OF SEWAGE HANDLING PRACTICE TO PESTICIDE RESIDUE LEVELS AND INVERTEBRATE ECOLOGY ...Aquatic Soils, Insecticides -non-specific, Michigan, Pollutants - Path of , Pollution Effects, ...5.0572

EFFECTS OF THERMAL POLLUTION ON PRODUCTIVITY AND STABILITY OF ESTUARINE COMMUNITIES ...Environmental Ecology, Estuaries, Plant Prod. (non-specific), Pollution - Effects of , Thermal Pollution, ...5.0498

IMPROVEMENT OF QUALITY OF WATER RESOURCES BY A THREE-FOLD ATTACK - ADSORPTION, SEDIMENTATION AND MIXING ...Adsorption, Adsorption Capacity, Flocculation, Pollution Abatement, Sedimentation, ...5.0502

EFFECTS OF THERMAL AND OTHER FORMS OF POLLUTION ON SOME ANADROMOUS FISHES ...Alewife,menhaden,shad,herring, Basses -sea,white, White Perch, Pollution - Effects of , Pollution Effects, Thermal Pollution, ...5.0739

EFFECT OF WATER QUALITY ON FIRST-YEAR MORTALITY OF LARGEMOUTH BASS ...Environmental Ecology, Largemouth Bass, Mortality Rates, Pollution - Effects of , Water Properties-general, ...5.0772

A STUDY OF THE ECOLOGY OF THE NAVASOTA RIVER, TEXAS ...Fish -non-specific, Pre-impoundment Sites, Texas, Water Properties-general, Zooplankton, ...6.0547

DISTRIBUTION AND ECOLOGY OF RIVER MOLLUSKS IN CENTRAL AND WESTERN NORTH DAKOTA ...Mollusks - non-specific & Other, North Dakota, Pollution - Effects of , Pollution Effects, Streams, ...6.0416

THE LIMNOBIOCHEMISTRY OF DEVILS LAKE, NORTH DAKOTA ...Benthic Organisms (non-specific), Biological-general, Lakes, North Dakota, Salinity, ...6.0417

AQUATIC ENVIRONMENT AND FOOD HABITS OF MAYFLIES ...Chemical-general, Environmental Ecology, Mayflies, Nutrition and Metabolism, Physical-general, ...5.0323

ECOLOGY OF SOME WADING BIRD POPULATIONS AFFECTED BY THE INVASION OF THE CATTLE EGRET INTO ALABAMA ...Behavioral Ecology, Ciconiiformes - Wading Birds, Mark, Tag Or Capture -other, Migration, Water Utilization - animal, ...6.0001

INVESTIGATION OF PHOSPHORUS AVAILABILITY IN OLIGOTROPHIC LAKES ...Adsorption Capacity, Chemical, Exchange Capacity, Lakes, Phosphorus, ...2.0807

A SYSTEMS ANALYSIS OF THE WESTERN BASIN OF LAKE ERIE ...Economic Impact, Great Lakes-general, Pollution - Effects of , Systems Analysis, Water Quality Control-general, ...6.0426

DISPERSAL OF VIABLE ALGAE AND PROTOZOA BY AQUATIC INSECTS ...Algae- General, Insects -non-specific, Interbiotic Relat.(non-specific), Invertebrates, Protozoa -other, ...5.1170

FACTORS INFLUENCING FREE-LIVING NEMATODES IN WATER SUPPLIES ...Chemical Treatment-general, Evaluation, Mode of Action -animal, Nematoda -other, Sand, ...5.0368

DISSOLVED OXYGEN REQUIREMENTS OF FRESHWATER FISH ...Environmental Ecology, Fish -non-specific, Gases, Dissolved -water, Ions and Gases, Oxygen, ...5.0962

THE MICRODISTRIBUTION OF STREAM BENTHOS ...Benthic Fauna, Organic-general, Productivity - Food Chain, Streams, Vertical Distribution, ...5.1020

THE BIOLOGY OF THE INFAUNA OF A TROPICAL SOFT BOTTOM AREA ...Benthic Fauna, Estuaries, Florida, Intertidal Areas, Pollution - Effects of , ...5.0263

TAXONOMY AND ECOLOGY OF INSHORE MARINE MICROBIOTA ...Algae- General, Animal Taxonomy, Plant Taxonomy, Protozoa -other, Range Or Territorial Distr. , ...7.0024

ECOLOGICAL STUDIES OF AN EXPERIMENTAL STREAM ...Contamination - Water, Energy Budgets, Freshwater Ecology, Streams, ...5.0963

THE EFFECT OF INORGANIC SEDIMENT ON STREAM BIOTA ...Contamination - Water, Pollution - Effects of , Pollution Effects, Sediments, Streams, ...5.0388

BIOLOGICAL SURVEY OF STREAMS OF COLES COUNTY, ILLINOIS ...Contamination - Water, Environmental Ecology, Fish - non-specific, Illinois, Streams, ...5.0333

STUDIES OF THERMAL POLLUTION IN BISCAYNE BAY ...Bays, Florida, Pollution - Effects of , Thermal Pollution, Warm Water, ...5.0265

BIOLOGICAL MODELS OF FRESHWATER COMMUNITIES ...Fresh Water, Freshwater Ecology, Model Studies, Nutrients, Urban Environments, ...5.1270

WATER QUALITY REQUIREMENTS FOR AQUATIC INSECTS ...Growth Rate, Oxygen, ...5.0699

DISTRIBUTION AND ECOLOGY OF AQUATIC INSECTS OF IDAHO ...Bottom Sampling, Chemical-general, Idaho, Insects - non-specific, Physical-general, ...2.0393

BEHAVIOR AND FOOD PREFERENCES OF INTRODUCED ANNUAL FISHES IN RELATION TO MOSQUITOES ...Behavioral Ecology, Food Supply, Killifish - Cyprinodon, Mosquitoes -non-specific, Predators and Parasite, ...2.0575

EPIDEMIOLOGICAL RELATIONSHIPS OF PESTICIDE APPLICATION TO PESTICIDE RESIDUES IN WILDLIFE TISSUES AND HABITATS ...Habitat Studies, Oregon, Terrestrial -other, Wildlife -non-specific, ...5.0960

FLORISTIC AND FAUNISTIC SURVEY IN THE CUYAHOGA RIVER WATERSHED ...Freshwater Ecology, Ohio, Physical-general, Pollution - Effects of , Survey Studies, ...6.0436

THE ALGAE AND ZOOPLANKTON OF PROTECTED AND EXPLOITED LENTIC HABITATS IN NORTHEASTERN OHIO ...Algae- General, Freshwater Ecology, Habitat Studies, Ohio, Zooplankton, ...6.0431

ECOLOGICAL STUDIES OF LARVAL TREMATODES AND THEIR SNAIL-HOSTS IN THE LAKE CHAMPLAIN WATERSHED ...Aquatic, Digenea -other, Effect of Parasite on Host, Gastropods -slugs,conch,snails, Survey Studies, ...6.0396

BOTTOM FAUNA IN THE NORTH ST. VRAIN CREEK, COLORADO ...Benthic Fauna, Colorado, Mountains-alpine, Streams, Vertical Distribution, ...2.0158

CHEMICAL ECOLOGY OF DIAPYCNID COPEPODS OF COLORADO ...Chemical Measurements -water, Colorado, Copepods, Environmental Ecology, Fresh Water, ...6.0088

A PARASITOLOGICAL STUDY OF FISHES FROM THE PINE HILLS AREA ...Fish -non-specific, Helminths, Illinois, Low Temp. -but Above 32f, Springs, ...6.0180

OPTIMUM ESCAPEMENT STUDIES OF CHIGNIK SOCKEYE SALMON ...Alaska, General Synoptic Observations, Lakes, Salmon -coho,chinook,sockeye..., Water Properties-general, ...6.0623

ESTUARINE ECOLOGY ...Contamination - Water, Estuaries, Mathematical Analysis, Washington, Water Quality-general, ...6.0620

STUDY OF TEMPERATURE EFFECTS IN COOLING WATER LAKE ...Lakes, Pollution - Effects of , Temperature, Thermal Pollution, Water Temperature-non-specific, ...6.0566

INTER-DISCIPLINARY RESEARCH IN THE AREA OF THE KANO PLAINS, WESTERN KENYA ...Geography-cultural, Geomorphology-general, Kenya, ...3.0246

MUSQUODOBOIT - METERING BASINS NOVA SCOTIA, CANADA ...Canada, Mammals -other, Mapping, Water Fowl, N.s. , Water Level Fluctuation, Wetlands, ...4.0054

THERMAL EFFECTS ON MARINE AND ESTUARINE SHELLFISH ...Crustacea -non-specific, Environmental Physiology, Mollusks -non-specific & Other, Pollution - Effects of , Water Temperature -non-specific, ...5.1251

A LIMNOLOGICAL INVENTORY OF IOWA LAKES AND STREAMS ...Aquatic Plants (non-specific), Iowa, Lakes, Streams, Survey Studies, Water Properties-general, ...7.0042

INFLUENCES OF WATER QUALITY AND OTHER ENVIRONMENTAL CHANGES ON FISH AND ASSOCIATED ORGANISMS IN INLAND WATERS ...Environmental Ecology, Fish - non-specific, Mans Activities, Pollution - Effects of , Social Aspects, Water Quality-general, ...5.0965

ECOLOGY OF SPRING CHINOOK SALMON ...Life History Studies, Oregon, Productivity - Food Chain, Salmon -coho,chinook,sockeye..., Streams, ...6.0447

FACTORS INFLUENCING THE FRESHWATER RESIDENCE OF JUVENILE FALL CHINOOK SALMON ...Fresh Water, Life History Studies, Oregon, Salmon -coho,chinook,sockeye..., Streams, ...6.0448

ECOLOGY OF RECREATIONALLY IMPORTANT ESTUARINE FISHES IN OREGON ...Environmental Ecology, Estuaries, Fishing, Migration, Oregon, Population Dynamics, ...6.0458

SUBJECT INDEX

Ecology - Animal

- EVALUATION OF ANADROMOUS FISH PASSAGE FACILITIES AT FALL CREEK DAM, BIG FALL CREEK, OREGON ...Engineering Structures-general, Migration, Oregon, Rainbow Trout, Steelhead Trout, Salmon & Trout - Non-specific, ...8.0280
- SIGNIFICANCE OF STOCKING SUB-ADULT FIN CLIPPED CATFISH IN HUNTSVILLE STATE PARK LAKE ...Channel Catfish, Lakes, Other, Population Dynamics, Stocking of Fish & Shellfish, ...6.0569
- ECOLOGICAL STUDIES OF CHUM AND COHO SALMON AT BIG BEEF CREEK ...Chemical-general, Reservoirs and Impoundments, Salmon -coho, chinook, sockeye..., Streams, Washington, ...6.0629
- IMPACT OF LAGOONS AND SAND BLANKETS ON FISH, AQUATIC LIFE AND WATER EQUALITY ...Blankets, Lagoons, Lakes, Submergent, Water Quality-general, ...6.0637
- WATER QUALITY MONITORING STUDIES ...Chemical-general, Dams, Land Use, Monitoring Systems, Survey Studies, Water Quality-general, ...6.0639
- RADIONUCLIDE CYCLING IN AQUATIC ECOSYSTEMS AND THE USE OF ISOTOPES TO DELINEATE AND QUANTIFY BASIC ECOLOGICAL PROCESSES ...Environmental Ecology, Lakes, Productivity - Food Chain, Radioactive Pollution -ns, Strontium, ...2.1000
- RADIATION EFFECTS IN AQUATIC SYSTEMS ...Chronic Radiation, Contamination - Water, Fish -non-specific, Low Level Radiation, Radiation Effects-non-specific, Radiation Treatment, Radioactivity-general, ...5.1248
- COAL STRIP MINE WATERSHED STUDY ...Coal-general, Mining Activities, Pollution - Effects of, Soil Management -non-specific, Stream Rehabilitation, Strip Mines, ...2.0980
- COAL STRIP MINE WATERSHED DEMONSTRATION--JACKSON COUNTY, ALABAMA ...Alabama, Coal-general, Mining Industry, Pollution - Effects of, Water Quality-general, ...5.1124
- EFFECTS OF TEMPERATURE ON AQUATIC LIFE ...Fish -non-specific, Model Studies, Productivity - Food Chain, Temperature, Warm Water, ...5.1121
- SEA NETTLE STUDIES IN CHESAPEAKE BAY, LIFE HISTORY AND ECOLOGY ...Bays, Biological Control, Chesapeake Bay, Jelly Fish, Life History Studies, ...6.0127
- ARCTIC ECOSYSTEMS ...Alaska, Energy Budgets, Freshwater Ecology, Polar, Productivity - Food Chain, ...5.0236
- POPULATION ECOLOGY OF FORAMINIFERA IN THE CHOPTANK RIVER ...Environmental Ecology, Foraminifera, Maryland, Population Dynamics, Water Properties-general, ...6.0126
- BIOLOGICAL PRODUCTIVITY RELATED TO HYDROLOGIC CONDITIONS ...Plant Prod. (non-specific), Productivity - Food Chain, Swamps-marshes, Water Level Fluctuation, Water Quality-general, ...2.0317
- FIELD INVESTIGATION OF THE SUBMERSED AQUATIC ENVIRONMENT ...Canals, Irrigation-general, Plant Pollutants, Reservoirs and Impoundments, Submerged Plants, Weeds - phenological Studies, ...3.0125
- THE EFFECT OF OCEAN WATER INTRUSION INTO BACK BAY, VIRGINIA, AND CURRITUCK SOUND, NORTH CAROLINA, ON THE WATERFOWL AND FISH HABITAT ...Brackish Water, Fish -non-specific, Habitat Studies, Saline Water Intrusion, Water Fowl, N.s., Water Salinity, ...2.0585
- FISH POPULATION OR ABUNDANCE STUDIES IN LEWIS AND CLARK LAKE ...Fish -non-specific, Habitat Studies, Population Dynamics, Reservoirs and Impoundments, South Dakota, ...6.0529
- DISTRIBUTION AND RELATIVE ABUNDANCE OR POPULATION OF YOUNG FISHES IN LAKE SHARPE RESERVOIR ...Fish -non-specific, Population Dynamics, Reservoirs and Impoundments, South Dakota, Vertical Distribution, ...6.0500
- ABUNDANCE AND COMPOSITION OF ADULT FISH STOCK IN LAKE SHARPE ...Fish -non-specific, Number Or Density, Population Dynamics, Reservoirs and Impoundments, South Dakota, ...6.0501
- GROWTH AND MORTALITY RATES OF YOUNG YELLOW PERCH IN OAHE RESERVOIR ...Growth Rate, Mortality Rates, Reservoirs and Impoundments, South Dakota, Yellow Perch, Darters, ...6.0498
- ABUNDANCE OF YOUNG-OF-THE-YEAR FISHES IN OAHE RESERVOIR ...Age, Fish -non-specific, Population Dynamics, Reservoirs and Impoundments, South Dakota, ...6.0499
- EARLY LIFE HISTORY OF WALLEYE IN LAKE FRANCIS CASE ...Life History Studies, Maturity & Growth Stages, Reservoirs and Impoundments, South Dakota, Walleyes, ...6.0506
- ENVIRONMENTAL FACTORS AND YOUNG NORTHERN PIKE SURVIVAL IN RESERVOIRS ...Environmental Physiology, Pikes, Pickeral, Muskellunge, Reservoirs and Impoundments, Stocking of Fish & Shellfish, Temperature, ...6.0510
- ENVIRONMENTAL FACTORS AND YOUNG YELLOW PERCH SURVIVAL IN RESERVOIRS ...Environmental Physiology, Reservoirs and Impoundments, Stocking of Fish & Shellfish, Temperature, Yellow Perch, Darters, ...6.0511
- BENTHOS IN LEWIS AND CLARK LAKE ...Bloodworms, Aquatic Midges, Mayflies, Number Or Density, Reservoirs and Impoundments, South Dakota, ...6.0514
- BENTHOS IN LAKE FRANCIS CASE ...Benthic Fauna, Reservoirs and Impoundments, South Dakota, ...6.0515
- POPULATION ESTIMATES FROM MIDWATER TRAWL SAMPLING ...Alewife, menhaden, shad, herring, Arkansas, Nets, Population Dynamics, Reservoirs and Impoundments, ...6.0019
- EARLY LIFE HISTORY STAGES OF OAHE AND BIG BEND RESERVOIR FISHES ...Animal Taxonomy, Life History Studies, Plankton Sampling, Reservoirs and Impoundments, South Dakota, ...6.0522
- LIFE HISTORY OF RESERVOIR FISHES, SPAWNING OF OAHE AND BIG BEND RESERVOIR FISHES ...Biological Rhythms, Life History Studies, Reservoirs and Impoundments, South Dakota, Spawn Or Nesting Sites, ...6.0523
- ESTIMATES OF COMPOSITION, ABUNDANCE AND FLUCTUATION IN FISH POPULATIONS IN BULL SHOALS AND BEAVER RESERVOIRS ...Arkansas, Fish -non-specific, Number Or Density, Population Dynamics, Reservoirs and Impoundments, ...4.0017
- LIFE HISTORY OF WHITE BASS IN LEWIS AND CLARK LAKE ...Basses -sea, white, White Perch, Life History Studies, Reservoirs and Impoundments, South Dakota, ...6.0528
- LIFE HISTORY OF CYCLOPS BICUSPIDATUS ...Copepods, Life History Studies, Number Or Density, Reservoirs and Impoundments, South Dakota, ...6.0527
- FISH POPULATION IN TAILWATER OF LEWIS AND CLARK LAKE ...Fish -non-specific, Population Dynamics, Reservoirs and Impoundments, South Dakota, ...6.0531
- PHYSIOLOGY AND BEHAVIOR OF LARVAE (PHYSIOECOLOGY OF SHELLFISH PROGRAM) ...Biological Rhythms, Environmental Ecology, Environmental Physiology, Water Properties-general, ...6.0113
- ESTUARINE BIOLOGY--RESPONSE OF LARVAE TO TEMPERATURE AND SALINITY ...Alewife, menhaden, shad, herring, Environmental Ecology, Estuaries, Salinity, Temperature, ...2.0817
- PINK SALMON INVESTIGATIONS - FRESHWATER ECOLOGY ...Environmental Ecology, Estuaries, Mortality Rates, Physical-general, Salmon -coho, chinook, sockeye..., ...4.0002
- PHYSIOLOGY AND BEHAVIOR ...Biological-general, Environmental Physiology, Productivity - Food Chain, ...6.0290
- LIFE HISTORY AND ABUNDANCE OF THE WALLEYE ...Commercial Fishing, Environmental Ecology, Life History Studies, Walleyes, Water Properties-general, ...6.0440
- LIFE HISTORY AND ABUNDANCE OF THE YELLOW PERCH ...Environmental Ecology, Life History Studies, Population Dynamics, Water Properties-general, Yellow Perch, Darters, ...6.0439
- ENVIRONMENTAL CHANGES IN LAKE ERIE ...Environmental Changes, Environmental Ecology, Ions and Gases, Lake Erie, Nutrients, ...5.0540
- ASSESSMENT OF LAKE SUPERIOR LAKE TROUT ...Commercial Fishing, Lake Trout, Brook Trout, Lampreys, Life History Studies, ...6.0636
- MONITORING FISH STOCKS AND ENVIRONMENTAL CONDITIONS ...Biological-general, Environmental Effects-geologic, Population Dynamics, Water Properties-general, ...6.0635
- RELATION OF ENVIRONMENTAL FACTORS TO THE PRODUCTIVITY OF ESTUARINE SEDENTARY FAUNA ...Environmental Ecology, Estuaries, Florida, Productivity - Food Chain, ...5.0269
- RESEARCH ON THE MACROBENTHOS OF THE GREAT LAKES ...Benthic Fauna, Earthworms, Food Supply, Great Lakes-general, Water Quality-general, ...6.0292
- DISTRIBUTION AND ABUNDANCE OF ZOOPLANKTON IN LAKE ERIE ...Computers-general, Environmental Ecology, Interbiotic Relat.(non-specif), Lake Erie, Other Computers, Population Dynamics, ...6.0294
- RELATION OF RIVER-RUN IMPOUNDMENTS TO SALMON PRODUCTION ...Engineering Structures-general, Environmental Changes, Environmental Ecology, Mans Activities, Pollution - Effects of, Salmon & Trout - Non-specific, ...6.0616

- SALMON PRODUCTION IN AREAS MADE INACCESSIBLE BY DAMS ...Columbia River, Engineering Structures-general, Environmental Ecology, Salmon & Trout - Non-specific, Spawn Or Nesting Sites, ...8.0309
- PINK SALMON INVESTIGATIONS - FRESHWATER ECOLOGY ...Alaska, Salmon -coho, chinook, sockeye..., Spawn Or Nesting Sites, Streams, Water Properties-general, ...6.0005
- ADULT SALMON BEHAVIOR STUDIES IN RIVERS AND AT DAMS (SONIC TRACKING) ...Behavioral Ecology, Columbia River, Migration, Salmon & Trout - Non-specific, Tags, ...8.0305
- FISH TRANSPORTATION ...Management -other, Migration, Salmon & Trout - Non-specific, Streams, Tags, ...8.0304
- THE INVESTIGATION AND ANALYSIS OF BIOCHEMICAL PROCESSES OF AQUATIC ORGANISMS UNDER STRESS ...Animal Origin, Fish -non-specific, Metabolism -animal, Other, Stress, ...5.0585
- EFFECTS OF HIGH TEMPERATURE, LOW OXYGEN, AND PH EXTREMES ON THE SURVIVAL OF AQUATIC INSECTS AND CRUSTACEA IMPORTANT AS TROUT FOOD ...Food Supply, Gases, Dissolved -water, High Temp. -85f Or Above, Lake Superior, Ph, Acidity -water, ...5.0593
- DEVELOPMENT OF CULTURE METHODS FOR ECOLOGICALLY IMPORTANT MARINE ZOOPLANKTON SPECIES ...Copepods, Environmental Physiology, Invertebrate Cultures, Zooplankton, ...5.1096
- RELATIONSHIP OF WATER AND LAND MANAGEMENT TO MOSQUITO BREEDING IN WATER IMPOUNDMENTS AND IRRIGATED FARM AREAS ...Computer Matching Code, Diseases, Management, Mosquitoes -non-specific, Predators and Parasite, Rearing, Water, ...6.0255
- BIOLOGY AND CONTROL OF SALT-MARSH AND RICE-FIELD MOSQUITOES IN GULF COAST AREAS ...Computer Matching Code, Louisiana, Mosquitoes -non-specific, Predators and Parasite, Swamps-marshes, ...2.0576
- THE EFFECT OF PREDATORS AND PARASITES ON THE BREEDING POTENTIAL OF MOSQUITOES ...Aedes Mosquitoes, Disease, Predators, Diseases, Louisiana, Predators and Parasite, ...2.0577

Distribution

Animal Distr. (non-specific)

- FISHES OF THE SOUTH PLATTE RIVER BASIN, COLORADO ...Colorado, Environmental Changes Environmental Ecology, Fish -non-specific, Pollution - Effects of , River Basins, ...5.0194
- FISH GUIDING ...Fish -non-specific, Guidance, Instrumental Services, Management -other, Water Environment -other, ...8.0307

Range Or Territorial Distr.

- ECOLOGICAL STUDIES OF THE SURFACE WATERS OF THE WHITEWATER CREEK WATERSHED, WALWORTH, ROCK, AND JEFFERSON COUNTIES, WISCONSIN ...Bioindicators, Water Quality-general, Watersheds-general, Wisconsin, ...5.1323
- EFFECT OF RANGE AND WATER ON MULE DEER POPULATION ...New Mexico, Odocoileus, Population Dynamics, Relations - Forage - Timber, Water Utilization -animal, ...3.0538
- ECOLOGY OF COLORADO MOLLUSKS ...Colorado, Mollusks -non-specific & Other, Pollution - Effects of , Pollution -non-specific, Pollution Effects, ...5.0178
- INFLUENCE OF THE PHYSICAL ENVIRONMENT ON DISTRIBUTION OF YOUNG STAGES OF COASTAL GAME FISH ...Continental Shelf, Environmental Ecology, Fish -non-specific, Maturity & Growth Stages, Physical-general, ...6.0346
- DISTRIBUTION, ABUNDANCE, TAXONOMY, AND BIOLOGY OF MOSQUITOES AFFECTING AGRICULTURE ...Animal Taxonomy, Insect Chemosterilants, N.s. , Mosquitoes -non-specific, Number Or Density, Radiation, ...6.0148

Temporal Distribution

- DISTRIBUTION AND GROWTH PATTERNS OF THE GIZZARD SHAD (DOROSOMA CEPEDIANU) AND THREADFIN SHAD (DOROSOMA PETENENSE) IN RESERVOIRS ...Alewife, menhaden, shad, herring, Arkansas, Growth Rate, Number Or Density, Reservoirs and Impoundments, ...6.0029

Vertical Distribution

- BIOLOGY AND CHEMISTRY OF MARINE PLANKTON POPULATIONS ...Buoys, Chlorophyll, Food Chains, Nutrients, Phytoplankton, Zooplankton, ...6.0289
- ABUNDANCE AND DISTRIBUTION OF BENTHIC MACRO-INVERTEBRATES IN A STREAM RECEIVING OILFIELD WASTEWATERS ...Benthic Fauna, Bioindicators, Contamination - Water, Industrial Wastes, Number Or Density, ...5.1028

- STREAM BIOLOGY AND ITS RELATION TO FISH PRODUCTION ...Food Supply, Growth Rate, Mississippi River, Shiners, Streams, ...6.0223

- ATCHAFALAYA RIVER - CALLIOU LAKE SYSTEM ...Lakes, Louisiana, Number Or Density, Physical-general, Plankton (non-specific), ...2.0545

- SEASONAL AND DIURNAL ASPECTS OF ZOOPLANKTON MICRODISTRIBUTION AND VERTICAL MIGRATION IN RELATION TO WATER POLLUTION ...Environmental Ecology, Fresh Water, Pollution Effects, Water Quality-general, Zooplankton, ...5.1126

- INFLUENCE OF WATER POLLUTANTS AND WATER QUALITY ON EARLY LIFE HISTORY AND POPULATION DYNAMICS OF MINNESOTA FISHES ...Fish -non-specific, Life History Studies, Minnesota, Pollution - Effects of, Pollution Effects, ...5.0615
- ECOLOGY OF RECREATIONALLY IMPORTANT ESTUARINE FISHES IN OREGON ...Aquatic Ecology, Environmental Ecology, Estuaries, Fishing, Migration, Oregon, ...6.0458
- SIGNIFICANCE OF STOCKING SUB-ADULT FIN CLIPPED CATFISH IN HUNTSVILLE STATE PARK LAKE ...Aquatic Ecology, Channel Catfish, Lakes, Other, Stocking of Fish & Shellfish, ...6.0569
- WILD RIVERS ECOLOGY STUDIES ...Acidity, Fish -non-specific, Invertebrates -non-specific, Wild Rivers, Wisconsin, ...6.0638
- COLUMBIA RIVER CHINOOK SALMON ...Columbia River, Construction Land Use Effects, Habitat Studies, Salmon -coho,chinook,sockeye..., Spawn Or Nesting Sites, ...2.1129
- POPULATION ECOLOGY OF FORAMINIFERA IN THE CHOPTANK RIVER ...Aquatic Ecology, Environmental Ecology, Foraminifera, Maryland, Water Properties-general, ...6.0126
- FISH POPULATION OR ABUNDANCE STUDIES IN LEWIS AND CLARK LAKE ...Aquatic Ecology, Fish -non-specific, Habitat Studies, Reservoirs and Impoundments, South Dakota, ...6.0529
- DISTRIBUTION AND RELATIVE ABUNDANCE OR POPULATION OF YOUNG FISHES IN LAKE SHARPE RESERVOIR ...Aquatic Ecology, Fish -non-specific, Reservoirs and Impoundments, South Dakota, Vertical Distribution, ...6.0500
- ABUNDANCE AND COMPOSITION OF ADULT FISH STOCK IN LAKE SHARPE ...Aquatic Ecology, Fish -non-specific, Number Or Density, Reservoirs and Impoundments, South Dakota, ...6.0501
- VITAL STATISTICS OF NORTHERN PIKE IN LAKE SHARPE ...Growth Rate, Mortality Rates, Pikes, Pickeral, Muskellunge, Reservoirs and Impoundments, South Dakota, ...6.0502
- VITAL STATISTICS OF WALLEYE IN LAKE SHARPE ...Growth Rate, Mortality Rates, Reservoirs and Impoundments, South Dakota, Walleyes, ...6.0503
- ABUNDANCE OF YOUNG-OF-THE-YEAR FISHES IN OAHE RESERVOIR ...Age, Aquatic Ecology, Fish -non-specific, Reservoirs and Impoundments, South Dakota, ...6.0499
- EXPLORATORY SAMPLING PROGRAM FOR YOUNG-OF-THE-YEAR FISH ...Age, Fish -non-specific, Nets, Reservoirs and Impoundments, ...6.0022
- POPULATION ESTIMATES FROM MIDWATER TRAWL SAMPLING ...Alewife,menhaden,shad,herring, Aquatic Ecology, Arkansas, Nets, Reservoirs and Impoundments, ...6.0019
- MORTALITY RATES AND RECRUITMENT ...Arkansas, Fish -non-specific, Growth Rate, Mortality Rates, Reservoirs and Impoundments, ...4.0014
- DESIGN AND CONSTRUCTION OF GEAR FOR MIDWATER TRAWLING ...Alewife,menhaden,shad,herring, Arkansas, Nets, Reservoirs and Impoundments, ...4.0016
- ESTIMATES OF COMPOSITION, ABUNDANCE AND FLUCTUATION IN FISH POPULATIONS IN BULL SHOALS AND BEAVER RESERVOIRS ...Aquatic Ecology, Arkansas, Fish -non-specific, Number Or Density, Reservoirs and Impoundments, ...4.0017
- FISH POPULATION IN TAILWATER OF LEWIS AND CLARK LAKE ...Aquatic Ecology, Fish -non-specific, Reservoirs and Impoundments, South Dakota, ...6.0531
- EFFECT OF ENVIRONMENTAL CHANGES ON BLUE CRAB ABUNDANCE ...Crabs, All, Environmental Changes, Life History Studies, Migration, North Carolina, ...6.0400
- LIFE HISTORY AND ABUNDANCE OF THE YELLOW PERCH ...Aquatic Ecology, Environmental Ecology, Life History Studies, Water Properties-general, Yellow Perch, Darters, ...6.0439
- MONITORING FISH STOCKS AND ENVIRONMENTAL CONDITIONS ...Aquatic Ecology, Biological-general, Environmental Effects-geologic, Water Properties-general, ...6.0635
- PHYSICAL, CHEMICAL, AND BIOLOGICAL LIMNOLOGY OF OAHE RESERVOIR ...Fish -non-specific, Physical Properties-general, Reservoirs and Impoundments, South Dakota, Water Properties-general, ...6.0497
- DISTRIBUTION AND ABUNDANCE OF ZOOPLANKTON IN LAKE ERIE ...Aquatic Ecology, Computers-general, Environmental Ecology, Interbiotic Relat.(non-specif), Lake Erie, Other Computers, ...6.0294

EXPERIMENTAL SEEDING (SHRIMP AQUACULTURE PROGRAM) ...Captive Rearing, Florida, Shrimps - Common, Spawn Or Nesting Sites, Stocking of Fish & Shellfish, ...6.0565

Productivity - Food Chain

THE APPLICATION OF RADIOISOTOPES TO STUDIES OF AQUATIC ECOSYSTEMS ...Aquatic Ecology, Benthic Organisms (non-specif), Freshwater Ecology, Water Properties-general, Wisconsin, ...6.0643

FIELD EXPERIMENTS ON THE FLUX OF RADIONUCLIDES THROUGH A SALT MARSH ECOSYSTEM, RENEWAL ...Chlorideac -other, Georgia, Model Studies, Swamps-marshes, Water Cycle, ...2.0345

BIOLOGY AND CHEMISTRY OF MARINE PLANKTON POPULATIONS ...Buoys, Chlorophyll, Food Chains, Nutrients, Phytoplankton, Vertical Distribution, Zooplankton, ...6.0289

THE BIOLOGY AND CHEMISTRY OF TRACE ELEMENTS IN MARINE AND ESTUARINE WATERS ...Chesapeake Bay, Estuaries, Phytoplankton, Trace Element Analysis, Zooplankton, ...2.0556

RADIOACTIVE FOOD-CHAINS IN THE SUBARCTIC ENVIRONMENT ...Radioactive Fallout, Radioactive Isotopes, Radiologic Health, Sub - Polar, Toxicological and Allergy, ...2.0308

AQUATIC COMMUNITIES ...Aquatic Ecology, Environmental Ecology, Lakes, Salinity, Water Salinity, ...6.0625

FERN LAKE MINERAL METABOLISM PROGRAM ...Fertilizers - aquatic, Hardness-minerals, Lakes, Mineral Content -water, Washington, ...6.0624

ZOOPLANKTON NUTRITION IN LARGE RESERVOIRS ...Nutrition - Invertebrate, Population Dynamics, Reservoirs and Impoundments, Water Bacteria, Zooplankton, ...2.0515

ENVIRONMENTAL HISTORY OF THE GALAPAGOS ISLANDS ...Floral, Galapagos Islands, Lakes, Plant Succession, Plant Taxonomy, ...2.0852

STUDIES ON THE MECHANISMS OF COMMUNITY STRUCTURE AND SUCCESSION IN TEMPORARY PONDS ...Freshwater Ecology, Plant Competition -other, Plant Succession, Ponds, Succession, ...2.0100

FACTORS AFFECTING PRIMARY AND SECONDARY PRODUCTION IN TEMPERATE LAKES ...Lakes, Minnesota, Regression Analysis, Temperate, Zooplankton, ...2.0157

ECOLOGICAL SIGNIFICANCE OF ORGANIC RELEASE PRODUCTS OF MARINE AND FRESHWATER ANIMALS ...Aquatic Ecology, Biological Rhythms, Metabolism, Mucus, ...2.0342

OPTIMUM ECOLOGICAL DESIGNS FOR ESTUARINE SYSTEMS OF NORTH CAROLINA ...Domestic Wastes-general, Estuaries, Marine Biology (non-specific), North Carolina, Pollution - Effects of, Pollution Effects, ...2.0820

AN ECOLOGICAL STUDY OF AN ALKALINE STREAM WITH HEAVY IRON DEPOSITS ORIGINATING FROM TREATMENT OF MINE ACID WATER ...Alkalinity, Lake Trout, Brook Trout, Mineral Content -water, Mining Activities, Susquehanna River, Water Alkalinity, ...5.1025

FACTORS AFFECTING ZOOPLANKTON PRODUCTION IN FOUR ARIZONA LAKES ...Environmental Ecology, Lakes, Trace Element Analysis, Water Bacteria, Zooplankton, ...5.0047

COLONIZATION RATES OF BENTHIC INVERTEBRATES IN AN OHIO RESERVOIR ...Benthic Fauna, Intertidal Areas, Ohio, Reservoirs and Impoundments, Water Level Fluctuation, ...6.0424

A BENTHIC COMMUNITY OF THE PENOBSCOT RIVER ESTUARY ...Aquatic Ecology, Benthic Organisms (non-specif), Estuaries, Industrial Wastes, Maine, ...5.0473

A STUDY OF THE BENTHIC FAUNA OF MERLE COLLINS RESERVOIR (VIRGINIA RANCH RESERVOIR) ...California, Food Supply, Number Or Density, Reservoirs and Impoundments, ...6.0071

STUDY OF TURBIDITY - PRODUCTION FACTORS IN LAKE KAMPESKA CODINGTON COUNTY, SOUTH DAKOTA ...Lakes, Primary Productivity, South Dakota, Turbidity, Water - Light Qual. & Quant., Water Properties-general, ...2.0978

WATER RESOURCES NEMATOLOGY ...Animal Pollutant Sources, Aquatic Ecology, Environmental Ecology, Mans Activities, Nematoda -other, ...5.0001

THE EFFECTS OF NUTRIENTS ADDITIONS AND STREAM DYNAMICS ON STREAM EUTROPHICATION ...Energy-dynamics, Eutrophication, Nutrients, of Aquatic Plants, Streams, ...5.1040

A STUDY OF THE ENERGY FLOW THROUGH SELECTED COMPONENTS OF A SMALL AQUATIC ECOSYSTEM ...Aquatic Ecology, Energy Budgets, Farm Pond, Food Chains, ...6.0162

LIMNOLOGICAL STUDIES OF LENTIC WATERS IN IDAHO ...Alpine, Idaho, Lakes, Phytoplankton, Primary Productivity, Reservoirs and Impoundments, ...2.0398

PRIMARY PRODUCTIVITY, AND STANDING CROPS IN RELATION TO WATER QUALITY IN LAKE ASHTABULA RESERVOIR, NORTH DAKOTA ...North Dakota, Phytoplankton, Reservoirs and Impoundments, Water Quality-general, Zooplankton, ...6.0414

RELATION OF FLOODPLAIN POOLS TO THE BIOLOGICAL PRODUCTION OF THE KASKASKIA RIVER AND ITS MAIN-STEM RESERVOIRS ...Food Supply, Habitat Studies, Illinois, Reservoirs and Impoundments, Streams, ...2.0411

COMPARATIVE PRODUCTIVITIES OF SMALL BODIES OF WATER IN DESERT AND MONTANE AREAS OF SOUTHERN NEW MEXICO ...New Mexico, Phytoplankton, Plant Prod. (non-specific), Ponds, Zooplankton, ...3.0336

COMPARISON OF ENERGY FLOW PARAMETERS OF MIDGE POPULATIONS IN BIOLOGICAL OXIDATION PONDS ...Bloodworms, Aquatic Midges, Energy Budgets, Oklahoma, Pollution Effects, Sewage Lagoons, ...5.0929

THE EFFECTS OF EXTREME FLOODS AND PLACER MINING ON THE BASIC PRODUCTIVITY OF SUBARCTIC STREAMS ...Alaska, Benthic Fauna, Bottom Sampling, Floods, Meteorological Extremes, Placer, ...2.0022

BIOLOGICAL PRODUCTIVITY OF THE COEUR D'ALENE RIVER AS RELATED TO WATER QUALITY ...Data Analysis - General, Idaho, Primary Productivity, Streams, Water Quality-general, ...5.0326

EVALUATION OF NATURAL RIVER ENVIRONMENTS ...Regimen, Streams, Succession, Water Quality-general, Wild Rivers, ...6.0441

THE MICRODISTRIBUTION OF STREAM BENTHOS ...Aquatic Ecology, Benthic Fauna, Organic-general, Streams, Vertical Distribution, ...5.1020

MARINE WASTE DISPOSAL AND SEA URCHIN ECOLOGY ...California, Pollution Effects, Sea Urchins & Other Echinoderm, Sewage, ...5.0130

FARM FISH POND MANAGEMENT ...Farm Pond, Fertilizers - aquatic, Food Supply, Management, Nutrients, ...6.0300

MECHANISMS OF BIOLOGICAL PRODUCTION IN ST'K AMS ...Freshwater Ecology, Primary Productivity, Secondary Productivity, Streams, ...4.0145

LIMNOLOGY AND MANAGEMENT OF OREGON FARM PONDS AND SMALL IMPOUNDMENTS ...Aquaculture & Fish-farming, Farm Pond, Management, Reservoirs and Impoundments, Trifluralin, Wildlife, ...6.0449

BIONOMICS OF FISHES AND SHELLFISHES ...Aquaculture & Fish-farming, Bays, Economics-general, Environmental Ecology, Oregon, ...2.0896

PHARMACOLOGICAL AND ECOLOGICAL EFFECTS OF PESTICIDES ...Food Chains, Animal And/or Man, Fresh Water, Pollution - Effects of, ...5.0964

THE EFFECTS OF FERTILIZATION ON PRODUCTIVITY OF FARM PONDS ...Farm Pond, Fertilizers, Physical, Plant Prod. (non-specific), ...6.0549

SEASONAL VARIATIONS OF SOME LIMNOLOGICAL FACTORS IN LITTLE SODUS BAY, NEW YORK ...Bays, Chemical-general, Eutrophication, Lake Ontario, New York, ...3.0355

LEVELS OF SECONDARY PRODUCTIVITY IN COLORADO MOUNTAIN STREAMS ...Colorado, Mountains-alpine, Secondary Productivity, Streams, ...5.0179

STUDIES OF SOCKEYE SALMON, ONCORHYNCHUS NERKA, IN THE KVICHAK RIVER SYSTEM, ALASKA ...Alaska, Commercial Fishing, Salmon -coho, chinook, sockeye..., Watersheds-other, ...6.0627

AQUATIC ECOSYSTEM ...Acidity, Cladocera, Environment Resistance, Ph, Acidity -water, Pollution - Effects of, ...6.0084

A COMPARATIVE STUDY OF THE MACROSCOPIC BENTHIC FAUNA OF TWO CENTRAL ADIRONDACK LAKES ...Animal Taxonomy, Benthic Fauna, Comparative Physiology, Lakes, New York, ...2.0814

ECOLOGY OF SPRING CHINOOK SALMON ...Aquatic Ecology, Life History Studies, Oregon, Salmon -coho, chinook, sockeye..., Streams, ...6.0447

CHEMICAL BIOCIDES IN LAKES ...Lakes, Pesticides -non-specific, Pollution - Effects of, Pollution Effects, South Dakota, ...5.1111

EFFECTS OF REGULATED GRAZING ON WATERFOWL PRODUCTION ...Cutting &/or Grazing Effects, Soil (wildlife) Cover, Swamps-marshes, Water Fowl, N.s., ...6.0584

RADIONUCLIDE CYCLING IN AQUATIC ECOSYSTEMS AND THE USE OF ISOTOPES TO DELINEATE AND QUANTIFY

SUBJECT INDEX

Economics

BASIC ECOLOGICAL PROCESSES ...Aquatic Ecology, Environmental Ecology, Lakes, Radioactive Pollution -ns, Strontium, ...2.1000

BIOLOGICAL AVAILABILITY OF NUCLEAR DEBRIS TO AQUATIC ANIMALS ...Contamination - Water, Food, Radioactivity-general, Radiologic Health, ...5.0102

EFFECTS OF TEMPERATURE ON AQUATIC LIFE ...Aquatic Ecology, Fish -non-specific, Model Studies, Temperature, Warm Water, ...5.1121

ARCTIC ECOSYSTEMS ...Alaska, Aquatic Ecology, Energy Budgets, Freshwater Ecology, Polar, ...5.0236

EVALUATION OF PHYSICAL AND ECONOMIC EFFECTS OF IMPOUNDMENTS AND RELEASES ON UPSTREAM AND DOWNSTREAM WATER QUALITY ...Benefit-cost Analysis, Reservoirs and Impoundments, Storage of Water, Stratification, Water Quality Control-general, ...6.0128

BIOLOGICAL PRODUCTIVITY RELATED TO HYDROLOGIC CONDITIONS ...Aquatic Ecology, Plant Prod. (non-specific), Swamps-marshes, Water Level Fluctuation, Water Quality-general, ...2.0317

COLLECTION AND COLLATION OF AVAILABLE BIOLOGICAL, PHYSICAL AND CHEMICAL DATA ON U. S. RESERVOIRS ...Document and Literature Center, Fish -non-specific, Reservoirs and Impoundments, River Basins, Survey Studies, ...6.0020

PRODUCTIVITY OF ESTUARINE AND MARINE ECOSYSTEMS (A COOPERATIVE AGREEMENT WITH THE ATOMIC ENERGY COMMISSION) ...Estuaries, Ions and Gases, Plankton Sampling, Radioactivity, Radioactivity-general, ...2.9818

SEDIMENT MINERALOGY ...Adsorption Capacity, Contamination - Water, Estuaries, Pollution Effects Radioactivity-general, ...5.0806

ACCUMULATION OF RADIOACTIVITY BY INVERTEBRATES ...Contamination - Water, Metabolism, Pollution Effects, Radioactivity-general, ...5.0804

ACCUMULATION OF RADIONUCLIDES BY VERTEBRATES ...Contamination - Water, Estuaries, Pollution Effects, Radioactivity-general, ...5.0803

FAUNAL PRODUCTION ...Estuaries, Pollution Effects, Pollution-general, Vertical Distribution, Water Environment -other, ...6.0154

Dynamic Programming

OPTIMIZATION OF WATER RESOURCES DEVELOPMENT--II ...Optimization, Optimization Technique, Systems Analysis, Water Resources Development, ...6.0064

OPTIMIZATION OF STEP AERATION WASTE TREATMENT PROCESSES ...Aeration, Development of Models, Optimization, Process Design, Systems Analysis, ...5.0426

CANNERY WASTE RESEARCH PROJECT ...Canning Wastes, in Plant Treatment Wastes, Process Design, Systems Analysis, Waste Treatment-economics, ...5.0099

Other Programming

OPTIMAL DESALINATION BY GEOMETRIC PROGRAMMING AND MATHEMATICAL DECOMPOSITION ...Cost Analysis, Decompositions, Desalination, Mathematical Analysis, Optimal Statistics, ...3.0077

Quality Control

WATER QUALITY MODELING AND PREDICTION ...Dynamic, Pollutants - Path of, Prediction Models, Waste Water Treatment-other, ...5.0432

Regional

Base Studies

AN ECONOMIC ANALYSIS OF SOUTHERN ILLINOIS ...Economics-general, Finance, Illinois, Trends,projections, ...6.0179

A STUDY OF THE SOCIAL MECHANISM OF RURAL-URBAN WATER TRANSFERS WITH SPECIAL REFERENCE TO EXTERNAL EFFECTS ...Administrative Structures, Agriculture, Economic Efficiency, Fiscal, Model Studies, Social Aspects, Water Allocation, Water Transfer, Welfare Economics, ...6.0105

AGRICULTURAL AND INDUSTRIAL DEVELOPMENT IN RELATION TO IOWAS ECONOMIC GROWTH ...Agriculture, Economics-general, Income, Iowa, Model Studies, Requirement and Resources, Water Resources Development, ...7.0043

Impact

A COMPREHENSIVE WATER RESOURCES ANALYSIS OF A TYPICAL OVERDRAWN BASIN IN AN IRRIGATED SEMIARID AREA - PECOS RIVER BASIN, NEW MEXICO ...Land, Management, New Mexico River Basins, Systems Analysis, ...6.0366

A COMPREHENSIVE ANALYSIS OF THE TULAROSA BASIN SALINE WATER RESOURCES - THEIR AVAILABILITY AND POTENTIAL ECONOMIC DEVELOPMENT ...Atomic Plants, Brines, Desalination, Electric Power Plants, New Mexico, ...7.0076

ECONOMIC AND LEGAL FACTORS IN PROVIDING, USING AND MANAGING WATER RESOURCES IN AGRICULTURE ...Administrative Structures, Economic Impact, Model Studies, Policy Making, Recreation Sites, Social Aspects, Water Rights-general, ...6.0646

Economics

SUBJECT INDEX

- SOUTHERN ILLINOIS REGIONAL ECONOMIC DATA SYSTEM ...Data Networks, Economics-general, Illinois, Industrial-general, Regional Areas, ...7.0030
- ECONOMIC IMPACTS OF WATER RESOURCE DEVELOPMENT ...Economic Impact, Forecasting-prediction, Water Resources Development, ...6.0413
- THE EXTENT OF IRRIGATION DEVELOPMENT IN NORTH DAKOTA AND ITS ECONOMIC IMPACT ...Economic Impact, Irrigation-general, Model Studies, Production & Processing, Water - Alternative Uses, Water Resources Development, ...3.0380
- THE HISTORY AND ECONOMICS OF RECLAMATION PROJECTS IN UTAH ...Economic Impact, History, Social Aspects, Water Resources Development, ...6.0573
- ECONOMIC ANALYSIS OF RECREATIONAL USE OF RESERVOIRS CONSTRUCTED BY PRIVATE POWER COMPANIES ...Frequency of Use, Private Enterprise, Recreation Sites, Reservoirs and Impoundments, User Characteristics -other, ...6.0604
- ECONOMIC ANALYSIS OF AGRICULTURAL WATER MANAGEMENT IN THE SOUTHEAST ...Agriculture, Benefit-cost Analysis, Economic Impact, Irrigation-general, Water Demand, ...6.0169
- ECONOMICS OF WATER MANAGEMENT TECHNIQUES IN SOUTH DAKOTA ...Economic Impact, Input - Output Analysis, Irrigation-general, Management, Optimization, Production & Processing, South Dakota, Water Allocation, ...6.0136

Reliability

- DECISION MODELS FOR MINIMIZING COST OF INFORMATION OR ERROR IN ESTIMATING BENEFIT-WATER RELATIONSHIPS IN IRRIGATION. (ABBREV) ...Benefit-cost Analysis, Irrigation-general, Mathematical Analysis, Model Studies, Systems Analysis, ...6.0359
- ANALYSIS AND SYNTHESIS OF BEDLOAD FORMULAS ...Bed Load, Graphs and Matroids, Survey Studies, ...2.0916

Risk & Uncertainty

- INTRODUCTION OF RISK AND UNCERTAINTY CONCEPTS TO OPTIMIZATION OF WATER RESOURCE SYSTEM DESIGN ...Application, Optimization, Optimization Technique, Other Model Modif, Water Resources Development, ...6.0548
- THE ECONOMIC IMPLICATIONS OF THE INTERCONNECTION OF URBAN WATER SYSTEMS ...Policy Making, Production & Processing, Public-works, Urban Environments, Water Demand, Water Transfer, ...6.0466
- ECONOMIC CONSIDERATIONS IN RESOURCES UTILIZATION CONFLICTS WITH PARTICULAR REGARD TO THE COOK INLET BASIN ...Alaska, Benefit-cost Analysis, Conflicts, Economic Efficiency, Economics-general, Survey Studies, Water Resources Development, ...6.0008
- RECLAMATION OF BIOLOGICALLY, MECHANICALLY & CHEMICALLY TREATED WASTEWATER FOR POTABLE WATER SUPPLY USES (ABBREV) ...Activated Carbon, Chlorination, Electrodialysis, Ion Exchange-other, Waste Water Pre-treatment, ...5.0159
- DEVELOPMENT OF METHODS FOR PLANNING AND TIMING OF WATER RESOURCES INVESTMENTS ...Finance, Multiple-purpose Projects, Operations Research, Planning, Water Resources Development, ...6.0065
- ECONOMICS OF CLIMATE ...Applied Climatology, Economic Impact, Kansas, Weather, Yield, ...2.0511
- POST CONSTRUCTION AUDITS OF THE ECONOMIC PERFORMANCE OF PUBLIC WATER RESOURCES INVESTMENT ...Benefit-cost Analysis, Fiscal, Other, Water Resources Development, ...6.0230
- CORRELATION OF ECONOMIC PHYSICAL FACTORS AFFECTING SELECTION OF LANDS FOR IRRIGATION ...Economic Impact, Irrigation-general, Projections and Estimations, ...6.0091

Specialty Crops

- IMPLICATIONS OF IRRIGATION TO THE MARKETING OF SPECIALTY CROPS ...Irrigation-general, Kansas, Production & Processing, ...6.0237

Systems Analysis

- A METHOD FOR SYSTEM EVALUATION AND COST-EFFECTIVENESS OF LARGE MULTISTAGE FLASH DESALTING PLANTS ...Computers-general, Cost Analysis, Desalination, Flash Distillation, Research - Development, ...3.0166

- OPTIMIZATION OF WATER RESOURCES DEVELOPMENT--II ...Dynamic Programming, Optimization, Optimization Technique, Water Resources Development, ...6.0064
- PHASE II-STUDY OF A RIVER SYSTEM AS A CHEMICAL REACTOR ...Industrial Wastes, Maine, Other O.r. , Reactors-other, Water Quality Control-general, ...5.0466
- THE USE OF SYSTEMS ANALYSIS IN THE DEVELOPMENT OF WATER RESOURCES MANAGEMENT PLANS FOR NEW YORK STATE ...Management, Model Studies, New York, Planning, ...6.0373
- THE MODIFICATION OF A PREDICTIVE RIVER BASIN MODEL ...Economic Impact, Missouri, Other Models, River Basins, ...6.0493
- THE ENGINEERING APPLICATIONS OF DISTRIBUTED AND MULTIVARIABLE SYSTEM THEORY TO THE DYNAMICS OF WATER POLLUTION CONTROL ...Optimization, ...5.0728
- EFFICIENCY OF DATA COLLECTION SYSTEMS IN HYDROLOGY AND WATER RESOURCES FOR PREDICTION AND CONTROL ...Control and Protection, Economic Efficiency, Hybrid Computers, Hydrology-general, ...7.0004
- STOCHASTIC BASIS FOR COMPREHENSIVE RIVER BASIN PLANNING ...Development of Models, Digital Computers, Monte Carlo Methods, New York, Planning, Stochastic Processes, ...6.0374
- SYSTEM IDENTIFICATION AND MULTI-LEVEL OPTIMIZATION OF INTEGRATED GROUND WATER SYSTEMS ...Aquifers-general, Mathematical Analysis, Model Studies, ...6.0062
- THE ECONOMICS OF WATER TRANSFER - AN APPRAISAL OF INSTITUTIONS ...Administrative Structures, Water C. its, Water Distribution Systems, Water Transfer, Water Utilization - general, ...6.0055
- CANNERY WASTE RESEARCH PROJECT ...Canning Wastes, Dynamic Programming, in Plant Treatment Wastes, Process Design, Waste Treatment-economics, ...5.0099
- GEOHYDROLOGIC SYSTEM ANALYSIS WITH AN ELECTRIC ANALOG COMPUTER ...Analog, Analog Computers, Aquifers-general, Digital Computers, Groundwater, Induced Infiltration, Network Synthesis, ...2.0417
- AN ECONOMIC EVALUATION OF WATER POLLUTION CONTROL, YAQUINA BAY, ORE ...Alternative Planning, Bays, Benefit-cost Analysis, Model Studies, Oregon, Water Quality Control-general, ...6.0454

Theory

- THE DEVELOPMENT OF METHODS USED IN EVALUATING RECREATIONAL BENEFITS OF MULTIPLE-PURPOSE WATER RESOURCE PROJECTS ...Benefit-cost Analysis, Consumption, Demand Analysis, Methods, Multiple-purpose Projects, Recreation Sites, ...6.0534

Types

Agri Business

- ECONOMIC AND ENGINEERING ASPECTS OF WATER IN DELAWARES AGRI-BUSINESS INDUSTRY ...Disposal Wastes, Food Processing Industry, Irrigation-general, Optimization, Projections and Estimations, Water Resources Development, ...6.0120

Agriculture

- A PHYSICAL AND ECONOMIC ANALYSIS OF ALTERNATIVE IRRIGATION METHODS IN A SUB-HUMID CLIMATE ...Irrigation-general, North Dakota, Production & Processing, Sub - Humid, ...6.0415
- ECONOMIC ANALYSIS OF IRRIGATION SYSTEMS APPLICABLE TO THE NORTHERN GREAT PLAINS ...Economic Efficiency, Great Plains Province, Irrigation Engineering, Irrigation-general, Systems Analysis, ...6.0496
- CLIMATIC PATTERNS AND THEIR EFFECT ON CALIFORNIA AGRICULTURE ...Applied Climatology, California, Data Analysis - General, Phenology, Production & Processing, Temperature, Weather, ...2.0095
- ECONOMIC AND LEGAL FACTORS IN PROVIDING, USING, AND MANAGING WATER RESOURCES IN AGRICULTURE ...Irrigation-general, Legal Review, Management, North Central, Optimization, ...6.0323
- LAND AND WATER USE, CONSERVATION, AND DEVELOPMENT IN OKLAHOMA WATERSHEDS ...Administrative Structures, Floodplains, Floodproofing, Land, Land Use, Model Studies, ...6.0443
- RURAL LAND USAGE ...Land, Land Use, Land Use -non-specific, Rural Areas, Social Aspects, Types of Resources, ...6.0471

SUBJECT INDEX

Economics

- A FORECAST OF AGRICULTURAL DEVELOPMENT IN THE IRRIGATED AREAS OF SPAIN ...Benefit-cost Analysis, Irrigation, Irrigation-general, Production & Processing, Spain, ...6.0532
- JORDANS EAST GHOR DEVELOPMENT PROJECT ...Income, Irrigation-general, Jordan, Land, Land & Water Use -other, ...4.0180
- EFFECTS OF ON-FARM IRRIGATION WATER SUPPLIES AND COSTS ON CROPPING SYSTEMS AND PRODUCTION ADJUSTMENTS ...California, Irrigation-general, Production & Processing, Water Costs, Water Demand, ...6.0052
- CALIFORNIA-ARIZONA ECONOMIC INTERDEPENDENCE AND THE COLORADO RIVER CONFLICT WITH PARTICULAR REFERENCE TO AGRICULTURE ...Agriculture Industry, Colorado River, Economic Impact, Income, Input - Output Analysis, Water Allocation, ...6.0050
- A STUDY OF THE SOCIAL MECHANISM OF RURAL-URBAN WATER TRANSFERS WITH SPECIAL REFERENCE TO EXTERNAL EFFECTS ...Administrative Structures, Base Studies, Economic Efficiency, Fiscal, Model Studies, Social Aspects, Water Allocation, Water Transfer, Welfare Economics, ...6.0105
- AN ECONOMIC AND LEGAL APPRAISAL OF THE USE OF WATER FOR IRRIGATION AND OTHER PURPOSES ON ILLINOIS FARMS ...Illinois, Irrigation-general, Legal Review, Legislative Processes, Water Law-general, ...6.0214
- AGRICULTURAL AND INDUSTRIAL DEVELOPMENT IN RELATION TO IOWAS ECONOMIC GROWTH ...Base Studies, Economics-general, Income, Iowa, Model Studies, Requirement and Resources, Water Resources Development, ...7.0043
- THE POTENTIAL DEMAND FOR WATER AND LAND IN SELECTED AREAS OF UTAH ...Economic Impact, Income, Industry, Utah, Water Demand, ...6.0578
- ECONOMIC ANALYSIS OF AGRICULTURAL WATER MANAGEMENT IN THE SOUTHEAST ...Benefit-cost Analysis, Economic Impact, Impact, Irrigation-general, Water Demand, ...6.0169
- ANALYSIS OF RURAL ZONING ENABLING STATUTES AND ORDINANCES ...Cmc, Intergovernmental Relations, Legislation, ...6.0138
- Extractive Natural Resources**
- INDUSTRIAL WATER USE IN THE UNITED STATES ...Economics-general, Industry, Manufacturing, Multiple-purpose Projects, Water Utilization -general, ...5.0239
- Industry**
- ECONOMIC EFFECTS OF WATER ALLOCATION AMONG ALTERNATIVE INDUSTRIAL (NON-AGRICULTURAL) USES ...Economic Impact, Mineral Processing Industry, Model Studies, Water - Alternative Uses, Water Allocation, ...6.0597
- THE POTENTIAL DEMAND FOR WATER AND LAND IN SELECTED AREAS OF UTAH ...Agriculture, Economic Impact, Income, Utah, Water Demand, ...6.0578
- INDUSTRIAL WATER USE IN THE UNITED STATES ...Economics-general, Extractive Natural Resources, Manufacturing, Multiple-purpose Projects, Water Utilization -general, ...5.0239
- Manufacturing**
- INDUSTRIAL WATER USE IN THE UNITED STATES ...Economics-general, Extractive Natural Resources, Industry, Multiple-purpose Projects, Water Utilization -general, ...5.0239
- INVESTIGATION OF LINKAGES OF WATERFRONT MANUFACTURING ...Economic Impact, Industrial-general, Input - Output Analysis, Tennessee River, ...6.0533
- Value Analysis**
- A MATHEMATICAL MODEL FOR REGIONAL TREATMENT OF WATER POLLUTION SYSTEMS ...Estuaries, Mathematical Analysis, Public Utilities, Public Works, Regional Areas, Sewerage Systems-other, ...5.0114
- Water Costs**
- HIDDEN COSTS OF USING SUBSTANDARD QUALITY WATER, AS EXPERIENCED BY WATER USERS IN WEBSTER, SOUTH DAKOTA ...Brackish Water, Desalination, Economic Impact, Potable Water, South Dakota, ...6.0495
- DESIGN AND ECONOMIC STUDY OF A GAS TURBINE POWERED VAPOR COMPRESSION PLANT FOR EVAPORATION OF SEAWATER ...Compressors, Desalination, Evaporation, Gas, Heat Recovery, ...3.0421
- APPLICATION OF THE HIGH TEMPERATURE WATER JET COMPRESSOR TO THREE MAJOR DESALINATION PROCESSES ...Compressors, Desalination, Distilling Units, ...3.0346
- PARAMETRIC ECONOMIC AND ENGINEERING STUDY OF THE REVERSE OSMOSIS PROCESS ...Cost Analysis, Desalination, Membranes-other, Other, Rate Determination, Reverse Osmosis, ...3.0073
- THE ECONOMICS AND ADMINISTRATION OF WATER RESOURCES ...Administrative Structures, Alternative Planning, Colorado, Water - Alternative Uses, Watersheds-general, ...6.0107
- ON-FARM IRRIGATION WATER SUPPLIES AND COSTS IN RELATION TO CROPPING SYSTEMS AND PRODUCTION ADJUSTMENTS IN THE SACRAMENTO VALLEY ...California, Economic Efficiency, Irrigation-general, Water - Alternative Uses, Water Quantity-general, ...6.0051
- VALUE OF WATER FOR IRRIGATION IN THE KANSAS RIVER VALLEY ...Benefit-cost Analysis, Consumptive Use, Irrigation-general, Projections and Estimations, Water Demand, ...6.0236
- THE DEMAND AND PRICE STRUCTURES FOR WATER IN A HUMID AREA ...Consumptive Use, Georgia, Humid, Price & Value, Water Demand, ...6.0161
- BRACKISH WATER PURIFICATION BY BIOLOGICAL FUEL CELL, POWERED ELECTRODIALYSIS ...Biological, Brackish Water, Cellulose Acetate, Desalination, Electrodialysis, ...5.0704
- THE DEMAND FOR MUNICIPAL WATER IN CENTRAL ARIZONA ...Consumption, Income, Other, Price & Value, Water Demand, Water Sources -general, ...6.0010
- THE ENGINEERING AND ECONOMIC ASPECTS OF USING SEWAGE EFFLUENT FOR IRRIGATION ...Irrigation-general, Louisiana, Sewage, Use of Impaired Water, ...5.0463
- POLLUTION TAXES AND THE COSTS OF WATER QUALITY MANAGEMENT ...Benefit-cost Analysis, Economic Efficiency, Management, Self-purification, Water Quality Control-general, ...6.0423
- A CONTINUATION OF THE STUDY TO DETERMINE THE COSTS OF WATER IN INDUSTRIAL USES ...Benefit-cost Analysis, Computers-general, Industrial-general, Model Studies, Water Demand, ...6.0468
- APPLIED CRITERIA FOR MUNICIPAL WATER RATE STRUCTURES ...Economic Efficiency, Finance, Price & Value, Water Demand, Welfare Economics, ...6.0119
- IRRIGABLE ACREAGE IN NEW MEXICO AND PROJECTED DEMANDS FOR IRRIGATION WATER ...Economics-general, Irrigation, Irrigation-general, New Mexico, Water Demand, ...6.0360
- TEXTILE WASTE TREATMENT PRACTICE ...Loading, Textile Wastes, Waste Treatment-economics, Waste Water Treatment-general, ...5.0005
- RELATIONSHIP OF PUMPING LIFT TO ECONOMIC USE OF GROUND WATER FOR IRRIGATION ...Groundwater, Irrigation-other, Optimization, Pumping, Water Allocation, ...6.0177
- ECONOMIC AND ENGINEERING ASPECTS OF WATER IN DELAWARE'S AGRI-BUSINESS INDUSTRY ...Industrial Wastes, ...6.0121
- AN ANALYSIS OF PRICING PRACTICES AND POLICIES OF WATER SERVICE UTILITIES IN SMALL COMMUNITIES IN MISSISSIPPI ...Finance, Planning, Price & Value, Urban Environments, ...6.0317
- ECONOMIC EVALUATION OF CHANGES IN LAND USE OF A MUNICIPAL WATERSHED AS A GUIDE TO DECISION-MAKING ...Discharge-general, Land Use, North Carolina, Reservoirs and Impoundments, Urban Environments, ...6.0408
- EFFECT OF WATER QUALITY ON RESIDENTIAL LOCATION DECISIONS ...Economic Impact, Location Choice, New Jersey, Pollution - Effects of, ...6.0348
- CHARACTERIZATION OF STREAM REAERATION CAPACITY ...Aeration, Industrial Wastes, Pollution - Effects of, Tracers-other, ...5.0303
- THE ECONOMICS OF WATER TRANSFER - AN APPRAISAL OF INSTITUTIONS ...Administrative Structures, Systems Analysis, Water Distribution Systems, Water Transfer, Water Utilization -general, ...6.0055
- ECONOMICS OF WATER SUPPLY-PORTALES VALLEY, NEW MEXICO ...Alternative Planning, Available Water, Economic Impact, Projections and Estimations, Water Transfer, ...6.0363
- ECONOMIC AND LEGAL FACTORS IN PROVIDING, USING, AND MANAGING WATER RESOURCES IN AGRICULTURE ...Agriculture Industry, Economics-general, Management, Water Law-general, ...6.0429
- WATER IN RELATION TO ECONOMIC GROWTH IN AN ARID ENVIRONMENT ...Arid and Desert, Arizona, Economic Impact, Groundwater, Model Studies, ...6.0013
- DEMAND FOR WATER UNDER DYNAMIC CONDITIONS ...Colorado, Public Utilities, Social Aspects, Water Demand, ...6.0087

- DOMESTIC WATER USE IN EAST AFRICA ...Kenya, Tanzania, Uganda, Water Sources -general, Water Utilization -domestic, ...4.0092
- EFFECTS OF ON-FARM IRRIGATION WATER SUPPLIES AND COSTS ON CROPPING SYSTEMS AND PRODUCTION ADJUSTMENTS ...Agriculture, California, Irrigation-general, Production & Processing, Water Demand, ...6.0052
- IRRIGATION IN RELATION TO CROPPING SYSTEMS ...Irrigation-general, Model Studies, Water Allocation, Water Sources -general, Water Yield, ...6.0053
- TURF RESEARCH ...Irrigation, Management, Species and Variety Evaluation, Sprinkler Irrigation, ...4.0065
- DEVELOPMENT OF COST CRITERIA FOR WATER SUPPLY ...Model Studies, Reservoirs and Impoundments, Water - Alternative Uses, Water Supply-general, Water Transfer, Water Wells, ...4.0098
- LAND AND WATER VALUES IN EASTERN NEW MEXICO ...Groundwater, Irrigation-general, Land, New Mexico, Price & Value, ...6.0361
- WATER REQUIREMENTS FOR CROP PRODUCTION IN THE ROSWELL UNDERGROUND WATER BASIN ...Groundwater Basins, Irrigation, Irrigation-general, Requirements for Water, Tillage, Cropping Systems, ...3.0334
- SUPPLY AND DEMAND FOR WATER ...Model Studies, Projections and Estimations, Water Demand, Water Supply-general, Water Transfer, ...6.0385
- IRRIGATION FEASIBILITY ON THE DAYTON, AMITY, WOODBURN, WILLAMETTE AND RELATED SOILS OF THE WILAMETTE VALLEY ...Benefit-cost Analysis, Irrigation-general, Modified Water Use, Soil Environment, Tillage, Cropping Systems, ...2.0888
- FARM MANAGEMENT STUDY OF THE SUGARCANE FARMS SERVED BY THE LAJAS VALLEY IRRIGATION DISTRICT ...Costs, Irrigation-general, Production & Processing, Puerto Rico, Sugar Cane, ...3.0427
- THE EFFECT OF BENCH LEVELING AND CONTRIBUTING WATERSHED AREAS ON SOIL MOISTURE STORAGE AND CROP YIELDS IN THE ROLLING PLAINS ...Agricultural Watersheds, Clay, Conservation & Management Eng, Soil Management -other, Yield, ...3.0449
- ECONOMICS OF AGRICULTURAL WATER USE NORTH OF CANADIAN RIVER ...Agriculture Industry, Application, Cost Analysis, Regression Analysis, Texas, ...6.0559
- VARIABLE ROW SPACING AS A MEANS FOR REDUCING COSTS AND CONSERVING WATER IN IRRIGATED COTTON PRODUCTION ...Cotton, Irrigation, Irrigation-general, Modified Water Use, Space Competition, ...3.0448
- ECONOMIC ANALYSIS OF ALTERNATIVE WATER USE TECHNIQUES IN PRODUCTION OF COTTON, GRAIN SORGHUM & RELATED CROPS - SOUTHERN HIGH PLAINS OF TEXAS ...Conjunctive Use, Conservation-general, Economic Efficiency, Irrigation-general, Water - Alternative Uses, ...6.0571
- PRELIMINARY FEASIBILITY AND ECONOMICS OF DESALTING BRACKISH WATERS IN CANDIDATE AREAS OF WEST TEXAS ...Cost Analysis, Desalination, Electrodialysis, Flash Distillation, Freezing, Reverse Osmosis, ...3.0443
- METHODOLOGY FOR DETERMINING VALUATIONS OF WATER FOR ALTERNATIVE USES ...Economic Efficiency, Input - Output Analysis, Model Studies, Water - Alternative Uses, Water Allocation, ...6.0592
- STUDY OF THE APPLICABILITY OF EFFLUENT CHARGES TO WATER QUALITY MANAGEMENT IN THE STATE OF WISCONSIN ...Economic Impact, Effluents-waste Water, Survey Studies, Water Quality Control-general, Wisconsin, ...5.1307
- DESALINIZATION AND INTERREGIONAL STUDIES ...Atomic Plants, Benefit-cost Analysis, Desalination, Marketing, Radioactive Isotope, ...6.0099
- VALUE OF DESALTED WATER FOR IRRIGATION ...Brackish Water, Desalination, Electrodialysis, Irrigation-general, Saline Soils, ...3.0128
- IRRIGATION AND OTHER PRODUCTION RELATIONS IN FLORIDA CITRUS ENTERPRISES ...Benefit-cost Analysis, Citrus, Florida, Input - Output Analysis, Irrigation-general, Water Demand, ...6.0135
- OPTIMUM PATTERNS OF DIVERSIFIED CROP PRODUCTION ON THE MOLOKAI DIVERSION PROJECT ...Economic Feasibility, Irrigation, Land Use, Water Demand, Yield, ...6.0173
- VALUE OF IRRIGATION WATER FOR THE PRODUCTION OF SUGAR CANE ...Economic Feasibility, Irrigation, Irrigation-general, Sugar Cane, Water Allocation, ...6.0174

Welfare Economics

- USE OF THE COASTAL ZONE FOR THE U. S. COASTLINE OF LAKE ERIE AND LAKE SUPERIOR ...Lake Erie, Lake Superior, Lakeshores-inlets, Land Use, Social Aspects, ...6.0125
- ECONOMIC EVALUATION OF NAVIGATION IMPROVEMENTS ...Benefit-cost Analysis, Modes, Navigation, Optimization, Price & Value, Water Transportation, ...6.0190
- APPLIED CRITERIA FOR MUNICIPAL WATER RATE STRUCTURES ...Economic Efficiency, Finance, Price & Value, Water Costs, Water Demand, ...6.0149
- ESTIMATION OF RECREATIONAL BENEFITS AT SOME EXISTING WATER DEVELOPMENT SITES IN CALIFORNIA ...California, Projected Demand, Recreation Sites, Recreation Types -non-specific, ...6.0081
- STREAM POLLUTION AND RECREATION ...Consumption, Pollution - Effects of, Recreation Sites, Social Aspects, Water Standards, ...6.0473
- A COMPARATIVE STUDY OF THE USE TAX AS A MEANS OF ALLOCATION OF WATER RESOURCES IN A CONJUNCTIVE USE SYSTEM ...Benefit-cost Analysis, Conjunctive Use, Fiscal, Groundwater, Water Allocation, ...6.0056
- THE URBAN SNOW HAZARD ...Economic Impact, Snow-general, Social Aspects, Urban Environments, Weather, ...6.0186
- CRITERIA FOR DETERMINING ECONOMIC PRIORITIES IN AWARDED SEWAGE FACILITY CONSTRUCTION GRANTS ...Fiscal, Pennsylvania, Waste Treatment-economics, Water Quality Control-general, ...6.0475
- AN ECONOMIC EVALUATION OF THE TOLEDO BEND RESERVOIR PROJECT ...Benefit-cost Analysis, Louisiana, Multiple-purpose Projects, Policy Making, Reservoirs and Impoundments, Texas, Water Law-general, ...6.0246
- EFFECTS OF WATER POLLUTION IN SAN FRANCISCO BAY ...Bays, Economic Impact, Pollution - Effects of, Recreation Sites, San Francisco Bay, Social Aspects, Water Utilization - domestic, ...5.0125
- THE ECONOMICS OF WATER TRANSFER - AN APPRAISAL OF INSTITUTIONS ...Administrative Structures, Economic Efficiency, Water - Alternative Uses, Water Allocation, Water Rights-general, Water Transfer, ...6.0012
- THE ECONOMICS OF WATER TRANSFER - AN APPRAISAL OF INSTITUTIONS ...Administrative Structures, Alternative Planning, Economic Efficiency, Legal Review, Model Studies, Water Transfer, ...4.0169
- ECONOMICS OF WATER TRANSFER - APPRAISAL OF INSTITUTIONS ...Administrative Structures, Economic Efficiency, Legal Review, Water Allocation, Water Transfer, ...4.0176
- A STUDY OF THE SOCIAL MECHANISM OF RURAL-URBAN WATER TRANSFERS WITH SPECIAL REFERENCE TO EXTERNAL EFFECTS ...Administrative Structures, Agriculture, Base Studies, Economic Efficiency, Fiscal, Model Studies, Social Aspects, Water Allocation, Water Transfer, ...6.0105
- ECONOMICS OF IRRIGATION, DRAINAGE AND RELATED PROBLEMS IN THE NORTHWEST ...Benefit-cost Analysis, Drainage, Irrigation-general, Southern, Water Quality Control-general, ...6.0601
- ECONOMICS OF WATER MANAGEMENT ON THE TEXAS HIGH PLAINS ...Aquifers-general, Economic Impact, Groundwater, Production & Processing, Texas, Water Allocation, Water Yield, ...6.0137

Education and Training

- UNDERGRADUATE TRAINING FOR CAREERS IN WATER SUPPLY AND POLLUTION CONTROL ...Pollutant-other, Pollutants-general, Water Quality Control-general, Water Supply-general, ...6.0312
- THE APPLICATION OF PROGRAMMED LEARNING TECHNIQUES TO WATER CHEMISTRY ...Chemical-general, Water Chemistry, Water Quality Control-general, ...9.0010
- SCHOOLS FOR CITIZENS ON WATER USE FOR TOMORROWS LIVING ...Citizen's Participation, Handbooks, Water Quality Control-general, Water Utilization -domestic, ...6.0124
- FLUID MECHANICS INSTRUCTIONAL EQUIPMENT ...Fluid Dynamics, Model Apparatus-other, ...8.0188
- HYDROLOGY TRAINING AND METHODOLOGY ...Computers-general, Hydraulic Engineering-other, Hydrology-general, Meetings, ...9.0001
- CONFERENCE ON SANITARY ENGINEERING EDUCATION ...Air Pollution Control, Atmospheric Pollution-general, Management, Meetings, Water Quality-general, ...5.1152

Electrical Components

Cables and Transmission Lines

UNDERGROUND TRANSMISSION AND EQUIPMENT DIELECTRICS--SOLID, LIQUID, AND INERT GAS ...Electric Power Plants, Evaluation Other, Field Testing, Insulators, Power Transmission, ...8.0123

Capacitors

CAPACITOR SWITCHING DUTY EVALUATION ...Control, Evaluation Other, Field Testing, Switching, Switching Circuits, ...8.0055

Diodes

Silicon-controlled-rectifiers

HIGH-VOLTAGE D-C TRANSMISSION INVESTIGATIONS ...Ac-dc, De-ac, Digital Computers, Electrical Engineering-general, Power Regulator, Power Transmission, ...8.0054

Insulators

UNDERGROUND TRANSMISSION AND EQUIPMENT DIELECTRICS--SOLID, LIQUID, AND INERT GAS ...Cables and Transmission Lines, Electric Power Plants, Evaluation Other, Field Testing, Power Transmission, ...8.0123

Switches
